Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 16738

115.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask in the given area.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.51 CopyPictureWithMask as picture 16738

115.2.53 CopyPixels(source as PictureMBS) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies all pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
// create new picture:
// can be any image format: ImageFormatRGB, ImageFormatG, ImageFormatBGR, etc.
Var d as new PictureMBS(l.Width, l.Height, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to CMYK
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 16739
- 115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 16740

115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)
```

```
if d.CopyPixels(p,100,100,500,500) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: DestWidth and DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.

- 115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 16740

115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500,0,0) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: SourceX/SourceY is the position in the source picture.
DestWidth/DestHeight specify how many pixels are copied.

DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.

- 115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 16739

115.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the Factory on the current ImageMBS object (self) is asked to create the picture.
Second the global Factory object is asked.
Third the normal PictureMBS constructor is used.
See also:

- 115.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS 16741

115.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the global factory object is asked to create the picture.
Second the normal PictureMBS constructor is used.
See also:

- 115.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS 16741

115.2.58 CyanChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cyan channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.59 DiffuseFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a diffuse filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Level must be between 0 and min(width,height).

115.2.60 DitherFilter(dest as PictureMBS, matrix as Integer, levels as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the dither filter to the picture.
Notes: Use for the matrix parameter one of the Dither* constants.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels is a number between 2 and 256 and specifies how many color levels are in the final picture.

Returns nil on any error.

115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 16743
- 115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 16744
- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16744

115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16743

- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16744

115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16743

- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16744

115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16743
- 115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 16743
- 115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 16744

115.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

115.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.70 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16748

115.2.70 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16747

115.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16748

115.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16748

115.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16749

115.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16749

115.2.75 DrawPictureRGB(pic as picture)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 16750
- 115.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16750
- 115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16751

115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16751

115.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red

Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

115.2.79 EngraveFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an engrave filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.

If dest is not nil, it must match the size of the original picture.

Level must be between 0 and min(width,height).

Returns nil on any error.

115.2.80 FillRect(value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(200)
window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16752
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16753
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16753

115.2.81 FillRect(Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16752
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16753
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16753

115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(10, 10, 20, 20, 200)
window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16752
- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16752
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16753

115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16752
- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16752
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16753

115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Example:

```
Var p as new PictureMBS(300, 300, PictureMBS.ImageFormatRGB)

p.FillRectRGB &cFF0000

call p.FillRectApply 0, 0, 50, 100, &c00FF00, 0
call p.FillRectApply 50, 0, 50, 100, &c00FF00, 255*1/5
call p.FillRectApply 100, 0, 50, 100, &c00FF00, 255*2/5
call p.FillRectApply 150, 0, 50, 100, &c00FF00, 255*3/5
call p.FillRectApply 200, 0, 50, 100, &c00FF00, 255*4/5
call p.FillRectApply 250, 0, 50, 100, &c00FF00, 255*5/5

Backdrop = p.CopyPicture
```

Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16754
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16755
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16755

115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16753
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16755
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16755

115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16753
- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16754
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16755

115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16753
- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16754
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16755

115.2.88 FillRectRandom

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

p.FillRectRandom
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer) 16756

115.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom(0,0,100,100)
Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.88 FillRectRandom 16755

115.2.90 FillRectRGB(FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
See also:

- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16757
- 115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 16758
- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16758

- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16759
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16760
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16760
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16761

115.2.91 FillRectRGB(FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of aloha is 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16756
- 115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 16758
- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16758
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16759
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16760
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16760
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16761

115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
The ranges of red, green and blue are 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16756
- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16757

- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16759
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16760
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16760
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16761

115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.

The ranges of alpha, red, green and blue are 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16756
- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16757

- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16758
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16759
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16760
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16761

115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10, 10, 20, 20, 255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16756

- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16758
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16759

- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16760
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16760

115.2.98 GainFilter(dest as PictureMBS, gain as Double, bias as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the gain filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
See also:

- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16762
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16763
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16764

115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16762
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16763
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16764

115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16762
- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16762
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16764

115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16762
- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16762
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16763

115.2.103 GrayChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GrayChannel
r.fillrect(100) // fill only gray channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.104 GreenChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GreenChannel
r.fillrect(100) // fill only green channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.105 HMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content horizontally (flip).
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.HMirror
```

```
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.106 Invert

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer) 16766

115.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data in the given area.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.106 Invert 16766

115.2.108 MagentaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magenta channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.109 MapInRows(FirstRow as Integer, LastRow as Integer) as boolean

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps in given row range.
Notes: This function does nothing if given rows are already mapped in.

Fails if range is invalid, image is invalid or mapping is not possible.
Returns true if not a mapped image.

Will resize memory buffer size to be big enough for those rows.

115.2.110 MirroredView as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws into the existing on, but has all rows vertically mirrored.
Notes: So if the new picture draws into the first row, the change will be in the last row of the original picture.

115.2.111 Multiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.112 Multiply(x as integer, y as integer, width as integer, height as integer) 16767

115.2.112 Multiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of a rectangle of the picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.111 Multiply 16767

115.2.113 NeonFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a neon filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.NeonFilter(nil)
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.114 OilFilter(dest as PictureMBS, levels as Integer, range as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a oil filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.OilFilter(nil,5,5)
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels must be between 0 and 256.
Range must be between 0 and min(width,height).

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.115 RawRow(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RawRow(10)
// modify directly
m.FillBytesMBS(10,100,200)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: This memoryblock is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this memoryblock can become invalid for the next call to any PictureMBS method!

115.2.116 RawRowPtr(index as Integer) as Ptr

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Ptr pointing to the data of this row.
Notes: This ptr is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this ptr can become invalid for the next call to any PictureMBS method!

115.2.117 RedChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.RedChannel
r.fillrect(100) // fill only red channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.118 RGBChannels as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB channels as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBA)
Var r as PictureMBS = p.RGBChannels
r.fillrect(100) // fill only color channels
```

Notes: Returns nil if the image is not a RGB picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the RGB pixels directly without modifying an alpha channel
The resulting PictureMBS object is a RGB picture.

115.2.119 RGBToGray(mode as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Turns picture into grayscale.
Notes: Only for RGB pictures and picture stays RGB, but all channels have same color.
Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601
4	y = 0.300 * R + 0.588 * G + 0.112 * B	Faster version of 3

Mode 2 and 3 uses doubles and mode 0, 4 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

e.g. a red pixel (FF0000) will turn to 555555 in Mode 0, 5F5F5F in Mode 1, 363636 in Mode 2 and 4C4C4C in Mode 3 and 4.

115.2.120 Rotate(angle as Double, Red as Integer = 0, Green as Integer = 0, Blue as Integer = 0, Alpha as Integer = 0, Gray as Integer = 0, Cyan as Integer = 0, Magenta as Integer = 0, Yellow as Integer = 0, Black as Integer = 0) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by the given degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate(30, 255, 255, 255, 255, 255)
window1.Backdrop = p.CopyPicture
```

Notes: With Red, Blue, Green, Alpha and Gray specify the color of the fill color.

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.121 Rotate180

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes: Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does not make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS 16772

115.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.121 Rotate180 16771

115.2.123 Rotate270(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.124 Rotate270slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270slow
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.125 Rotate90(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.126 Rotate90slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90slow
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

The Rotate90slow function is the older implementation. Please use Rotate90 unless you need the old behavior.

115.2.127 Scale(source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the given size.
Notes: The final image is stored in the PictureMBS object you call this method on.
On low memory this function can fail or the image may look bad. (e.g. all black)

The size of the temporary picture must have the size of the destination width and the source height. Use ImageFormatScaling when you create the temp image to give it the correct size. Temp picture may not be mapped.

For scaling with the same size as the picture already has, the scaling is still performed.

Returns true on success and false on any error. (e.g. width=0)

Use the constants for the mod:

ScaleTriangle	triangle
ScaleBox	box, nereast neighbor
ScaleLanczos3	lanczos 3
ScaleLanczos8	lanczos 8
ScaleMitchell	mitchell
ScalePoly3	poly 3
ScaleCubic	cubic

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

115.2.128 ScaleFast(source as PictureMBS, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size fast.
Notes: The final image is stored in the PictureMBS object you call this method on.

Returns true on success and false on failure.

This is a low quality algorithm, but it is fast.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

115.2.129 ScaleMT(threads as Integer, source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multithreaded variant of Scale function.
Notes: Same as Scale, but with additional multithreading.

Threads parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

If one of the pictures used has IsMapping = true, the plugin calls Scale() function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

115.2.130 SolarizeFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the solarize filter to the picture.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
```

```
Var p as new PictureMBS(l)
// add filter
p = p.SolarizeFilter(nil)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.131 StampFilter(dest as PictureMBS, radius as Double, threshold as Double, softness as Double, Black as Color, White as Color) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the stamp filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray and RGB pictures and supports alpha channel.

115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given array.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var gray(256) as Integer

for i as Integer = 0 to 255
gray(i)=255-i // invert
next
```

```
// inverts the picture
Var d as PictureMBS = p.TransferFilter(nil,gray)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The array for gray must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.

Returns nil on any error.
See also:

- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16777
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16778
- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16779

115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for gray and alpha must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16776
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16778

- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16779

115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var red(256) as Integer
Var green(256) as Integer
Var blue(256) as Integer

for i as Integer = 0 to 255
red(i)=i
green(i)=i
blue(i)=255-i // invert blue
next

Var d as PictureMBS = p.TransferFilter(nil,red,green,blue)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green and blue must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16776
- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16777
- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16779

115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green, blue and alpha must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16776
- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16777
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16778

115.2.136 Unmultiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer) 16779

115.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for given rectangle in picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.136 Unmultiply 16779

115.2.138 UnsharpFilter(origpixels as PictureMBS, Amount as Double, Threshold as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the unsharp filter.
Notes: You may want to run the BoxBlur filter first before using the unsharp filter.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.139 VMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content vertically.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.VMirror
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.140 YellowChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The yellow channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.

The resulting PictureMBS object is a grayscale picture.

115.2.141 Properties

115.2.142 AlphaOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.AlphaOffset)
```

Notes: (Read and Write property)

115.2.143 BitsPerComponent as Integer

MBS Images Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits per component.
Notes: Value is 8 for most pictures except those with format ImageFormatGray16 which use 16.
(Read only property)

115.2.144 BlackOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the black channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.BlackOffset)
```

Notes: (Read only property)

115.2.145 BlueOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.BlueOffset)
```

Notes: (Read and Write property)

115.2.146 Channel as String

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channel.
Example:

```
Var p as new Picture(100,100,32)
Var q as new PictureMBS(p)

Var channels() as string = q.Channels

Var cr as PictureMBS = q.RedChannel
Var cg as PictureMBS = q.GreenChannel
Var cb as PictureMBS = q.BlueChannel
Var c0 as pictureMBS = q.Channel(0)
Var c1 as pictureMBS = q.Channel(1)
Var c2 as pictureMBS = q.Channel(2)

Var crn as string = cg.Channel
Var cgn as string = cg.Channel
Var cbn as string = cg.Channel
Var c0n as string = c0.Channel
Var c1n as string = c1.Channel
Var c2n as string = c2.Channel

Break // check in debugger
```

Notes: For pictures which represent a channel of a bigger picture.
(Read only property)
See also:

- 115.2.18 Channel(index as Integer) as PictureMBS 16706

115.2.147 ChannelCount as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels in this picture.
Notes: 1 for gray, 2 for gray+alpha, 3 for RGB, 4 for RGB+alpha or CMYK and 5 for CMYK+alpha.
(Read only property)

115.2.148 CyanOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the cyan channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.CyanOffset)
```

Notes: (Read only property)

115.2.149 DebugPicture as Picture

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture content to view in the debugger.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read only property)

115.2.150 DebugPictureEnabled as Boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want to use the DebugPicture property.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read and Write property)

115.2.151 Factory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local factory to be used for pictures created in this picture.
Notes: If one of the functions in this PictureMBS instance needs a new PictureMBS object, this factory is asked first.
(Read and Write property)

115.2.152 FilePath as String

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path to temporary file.
Notes: Only set when we have one, e.g. using mapped memory.
(Read only property)

115.2.153 GrayOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
MsgBox str(p.GrayOffset)
```

Notes: (Read and Write property)

115.2.154 GreenOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.GreenOffset)
```

Notes: (Read and Write property)

115.2.155 HasAlpha as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has an alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasAlpha)
```

Notes: (Read only property)

115.2.156 HasBlack as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasBlack)
```

Notes: (Read only property)

115.2.157 HasBlue as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasBlue)
```

Notes: (Read only property)

115.2.158 HasCyan as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasCyan)
```

Notes: (Read only property)

115.2.159 HasGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasGray)
```

Notes: (Read only property)

115.2.160 HasGreen as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasGreen)
```

Notes: (Read only property)

115.2.161 HasMagenta as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
```

MsgBox str(p.HasMagenta)

Notes: (Read only property)

115.2.162 HasRed as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasRed)
```

Notes: (Read only property)

115.2.163 HasYellow as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasYellow)
```

Notes: (Read only property)

115.2.164 Height as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Height)
```

Notes: (Read only property)

115.2.165 ImageFormat as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image format of this picture object.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.ImageFormat)
```

Notes: See the ImageFormat* constants.
(Read only property)

115.2.166 ImageFormatString as String

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of this picture as a string.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox p.ImageFormatString
```

Notes: Returns for example "RGB" for ImageFormatRGB.
(Read only property)

115.2.167 IsCMYK as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a CMYK picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.IsCMYK)
```

Notes: HasCyan, HasMagenta, HasYellow and HasBlack are true if IsRGB is true.
(Read only property)

115.2.168 IsGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture is a grayscale picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.IsGray)
```

Notes: HasGray is true if IsGray is true.
(Read only property)

115.2.169 IsMapping as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture uses virtual memory.
Notes: If IsMapping is true you should not use the Memory property or the Clone function.
(Read only property)

115.2.170 IsRGB as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a RGB picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.IsRGB)
```

Notes: HasRed, HasBlue and HasGreen are true if IsRGB is true.
(Read only property)

115.2.171 MagentaOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the magenta channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.MagentaOffset)
```

Notes: (Read only property)

115.2.172 MappingBlockSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The block size for a picture using virtual memory.
Notes: (Read and Write property)

115.2.173 MappingFirstRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

115.2.174 MappingLastRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

115.2.175 MappingRows as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rows for mapping.
Notes: For a mapped image how many rows fit in the mapping buffer.
(Read only property)

115.2.176 Memory as Memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock without size pointing to the current pixel buffer.
Notes: Use only if IsMapping is false.
If size is -1, it's a memoryblock referencing the pixel data.
If size is >0, you got the original memoryblock used to allocate the memory.
(Read only property)

115.2.177 MemoryTarget as Memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this picture stores its pixels in a memoryblock, you can access the memory block using this property.
Notes: (Read only property)

115.2.178 Parent as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent PictureMBS object.
Notes: One PictureMBS can reference the pixels of another PictureMBS. The parent is referenced in this property so it is not released.
(Read only property)

115.2.179 PixelSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of a pixel in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.PixelSize)
```

Notes: For example:
1 for Gray
2 for Gray with Alpha
3 for RGB
4 for RGB with Alpha

(Read only property)

115.2.180 RedOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the red channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.RedOffset)
```

Notes: (Read and Write property)

115.2.181 RowOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal row offset.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var q as PictureMBS = p.ClipImage(10,10,80,80)

MsgBox str(q.width)+" x "+str(q.height)+" with row offset: "+str(q.RowOffset)
```

Notes: Only used with clipping images.
(Read only property)

115.2.182 RowSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of one row in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.RowSize)
```

Notes: Additional bytes may be needed per row for better alignment of the data.
Also using virtual memory functions requires alignment.
(Read only property)

115.2.183 Target as Picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

window1.Backdrop = p.Target
```

Notes: if this PictureMBS references the pixels of a Xojo picture, this property keeps a reference to this target picture.
(Read only property)

115.2.184 TotalSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of this picture in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

MsgBox str(p.TotalSize)
```

Notes: The result is Height*RowSize.
(Read only property)

115.2.185 UnclippedHeight as Integer

MBS Images Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: Without clipping, the full height of the image.
(Read only property)

115.2.186 Valid as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this instance is a valid picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Valid)
```

Notes: Valid is false if the constructor failed to create a picture.
(Read only property)

115.2.187 Width as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Width)
```

Notes: (Read only property)

115.2.188 YellowOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the yellow channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.YellowOffset)
```

Notes: (Read only property)

115.2.189 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var p as PictureMBS // your picture

p.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

115.2.190 DataStringInFormat(ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this picture as a string.
Notes: Strings are limit to 2 GB, but the actual limit is certainly smaller.

You can get and set the image data with this method in the native format.
If you set the data, use a string with at least RowSize bytes.
If you query the data, you will get a copy of the data bytes in a string.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.

Version 18.1 or later will raise an out of memory exception for 32-bit applications if the memory needed will exceed 2 GB in memory. Allocating that many memory will be impossible.
(Read and Write computed property)

115.2.191 Row(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.Row(10)
// modify
m.FillBytesMBS(10,100,200)
```

```
// copy back
p.row(10)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

115.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRofRGB)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRofRGB)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
See also:

- 115.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

115.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB, true)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRGB, true)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
If InvertAlpha is true, the alpha values are inverted by using A=255-A.
(Read and Write computed property)
See also:

- 115.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock 16796

115.2.194 RowStringInFormat(index as Integer, ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The row as a string.
Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a string.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

115.2.195 Constants

Constants

Constant	Value	Description
Dither90Halftone6x6Matrix	5	One of the dither modes for the DitherFilter method.
DitherCluster3Matrix	8	One of the dither modes for the DitherFilter method.
DitherCluster4Matrix	9	One of the dither modes for the DitherFilter method.
DitherCluster8Matrix	10	One of the dither modes for the DitherFilter method.
DitherLines4x4Matrix	4	One of the dither modes for the DitherFilter method.
DitherMagic2x2Matrix	1	One of the dither modes for the DitherFilter method.
DitherMagic4x4Matrix	2	One of the dither modes for the DitherFilter method.
DitherOrdered4x4Matrix	3	One of the dither modes for the DitherFilter method.
DitherOrdered6x6Matrix	6	One of the dither modes for the DitherFilter method.
DitherOrdered8x8Matrix	7	One of the dither modes for the DitherFilter method.
ScaleBox	2	One of the scale modes for the Scale function.
ScaleCubic	7	One of the scale modes for the Scale function.
ScaleLanczos3	3	One of the scale modes for the Scale function.
ScaleLanczos8	4	One of the scale modes for the Scale function.
ScaleMitchell	5	One of the scale modes for the Scale function.
ScalePoly3	6	One of the scale modes for the Scale function.
ScaleTriangle	1	One of the scale modes for the Scale function.

Image Formats

Constant	Value	Description
ImageFormat1of3	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=3.
ImageFormat1of4	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=4.
ImageFormat2of3	16	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=3.
ImageFormat2of4	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=4.
ImageFormat3of3	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=3.
ImageFormat3of4	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=4.
ImageFormat4of4	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the forth byte with pixelsize=4.
ImageFormatABGR	9	
ImageFormatACMYK	25	
ImageFormatAG	13	
ImageFormatAKYMC	30	
ImageFormatAofABGR	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofARGB	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofBGRA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofRGBA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatARGB	4	
ImageFormatBGR	6	
ImageFormatBGRA	7	
ImageFormatBGRX	8	
ImageFormatBofABGR	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofARGB	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGR	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGRA	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGB	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGBA	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBuffer	22	This format is for PixelSize = 1 and no channels.
ImageFormatCMYK	23	
ImageFormatCMYKA	24	
ImageFormatCMYKX	26	
ImageFormatG	11	
ImageFormatG1	11	One gray channel.
ImageFormatG2	42	Two gray channels.
ImageFormatG3	43	Three gray channels.
ImageFormatG4	44	Four gray channels.

Chapter 116

Launch Services

116.1 class LaunchServicesApplicationListMBS

116.1.1 class LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a list of folderitems.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2

116.1.2 Methods

116.1.3 Constructor

MBS MacOSX Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The private constructor.

116.1.4 Item(index as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

116.1.5 Properties

116.1.6 Count as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

116.2 class LaunchServicesItemInfoMBS

116.2.1 class LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class to represent several details about an application folderitem.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.2.2 Methods

116.2.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

116.2.4 Properties

116.2.5 AppIsScriptable as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the application can be scripted.
Notes: (Read only property)

116.2.6 AppPrefersClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched in the Classic environment.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

116.2.7 AppPrefersNative as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched natively.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

116.2.8 Extension as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The extension for the folderitem.
Notes: You need to specify the kLSRequestExtension flag to get this information.
(Read only property)

116.2.9 ExtensionIsHidden as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem has a hidden extension.
Notes: (Read only property)

116.2.10 IconFilename as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The optional filename string for the icon of this application.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

116.2.11 IsAliasFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the folderitem is an alias file (includes sym links)
Notes: (Read only property)

116.2.12 IsApplication as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a Single-file or packaged application.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=ApplicationsFolderMBS(0).Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then
MsgBox "Is an application!"
end if
```

Notes: This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.13 IsClassicApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a CFM Classic application.
Notes: (Read only property)

116.2.14 IsContainer as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The fodleritem is a directory (includes packages) or a volume.
Notes: (Read only property)

116.2.15 IsInvisible as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is invisible.
Notes: Does not include '.' files or '.hidden' entries.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.16 IsNativeApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application is a Carbon or Cocoa native application.
Notes: (Read only property)

116.2.17 IsPackage as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem is an Application, document, or bundle package.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsPackage then
MsgBox "Is a package!"
end if
```

Notes: The item is a packaged directory.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.18 IsPlainFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: None of the other attributes is true.
Notes: The item is not a directory, volume, or symlink.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.19 IsSymlink as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is only an UNIX symbolic link.
Notes: (Read only property)

116.2.20 IsVolume as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a volume.
Notes: (Read only property)

116.2.21 KindID as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The kind ID of this folderitem.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

116.2.22 MacCreator as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS creator code.
Example:

```
Var f as FolderItem = SpecialFolder.Applications.Child("Firefox.app")

Var l As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(&h02)

if l <>nil Then
MsgBox l.MacCreator // shows "MOZB"
end
```

Notes: You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)

116.2.23 MacType as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS type code.
Notes: You need to specify the kLSRequestTypeCreator flag to get this information.

(Read only property)

116.3 class LaunchServicesLaunchParameterMBS

116.3.1 class LaunchServicesLaunchParameterMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for parameters which can be used to launch an application.
Example:

```
Var f(0) as FolderItem
Var a as FolderItem
Var p as LaunchServicesLaunchParameterMBS

p=new LaunchServicesLaunchParameterMBS

p.Defaults=true
p.Hide=true
f.Append SpecialFolder.Desktop.Child("picture.tiff")

a=LaunchServicesOpenXMBS(f,p)

MsgBox a.Name
```

116.3.2 Methods

116.3.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

116.3.4 Properties

116.3.5 Application as FolderItem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application to use to open documents.
Notes: (Read and Write property)

116.3.6 Defaults as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Default settings should be used.
Notes: default means: open, async, use Info.plist, start Classic.
(Read and Write property)

116.3.7 DontAddToRecents as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Do not add application or documents to recents menus.
Notes: (Read and Write property)

116.3.8 DontSwitch as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Don't bring new app to the foreground.
Example:

```
Var l as new LaunchServicesLaunchParameterMBS

l.DontSwitch=true

Var files(0) as FolderItem

files(0)=GetFolderItem("/Applications/iTunes.app", FolderItem.PathTypeShell)

call LaunchServicesOpenXMBS(files,l)
```

Notes: (Read and Write property)

116.3.9 Hide as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Send child a "hide" request as soon as it checks in.
Notes: (Read and Write property)

116.3.10 HideOthers as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Hide all other apps when child checks in.
Notes: (Read and Write property)

116.3.11 InClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Force app to launch in Classic environment.
Notes: (Read and Write property)

116.3.12 InhibitBGOnly as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Causes launch to fail if target is background-only.
Notes: (Read and Write property)

116.3.13 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The last error value from the LaunchServicesOpenXMBS function.
Notes: Values for errors:

kLSUnknownErr	= -10810	
kLSNotAnApplicationErr	= -10811	
kLSNotInitializedErr	= -10812	
kLSDataUnavailableErr	= -10813	e.g. no kind string
kLSApplicationNotFoundErr	= -10814	e.g. no application claims the file
kLSUnknownTypeErr	= -10815	
kLSDataTooOldErr	= -10816	
kLSDataErr	= -10817	
kLSLaunchInProgressErr	= -10818	e.g. opening an alreay opening application
kLSNotRegisteredErr	= -10819	
kLSAppDoesNotClaimTypeErr	= -10820	
kLSAppDoesNotSupportSchemeWarning	= -10821	not an error, just a warning
kLSServerCommunicationErr	= -10822	cannot set recent items
kLSCannotSetInfoErr	= -10823	you may not set item info for this item

(Read and Write property)

116.3.14 NewInstance as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Instantiate app even if it is already running.
Notes: (Read and Write property)

116.3.15 NoParams as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Use Info.plist to determine launch parameters.
Notes: (Read and Write property)

116.3.16 Print as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Print items instead of opening them.
Notes: (Read and Write property)

116.3.17 StartClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Start up Classic environment if required for this application.
Notes: (Read and Write property)

116.4 class LaunchServicesStringListMBS

116.4.1 class LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: A class for a list of strings.

116.4.2 Methods

116.4.3 Item(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

116.4.4 Properties

116.4.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

116.5 Globals

116.5.1 LaunchServicesAllHandlersForURLSchemeMBS(URLScheme as string) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified URL scheme.
Example:

```
Var l as LaunchServicesStringListMBS
Var s(-1) as string
Var i,c as Integer

l=LaunchServicesAllHandlersForURLSchemeMBS("http")
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes: URL handling capability is determined according to the kCFBundleURLTypes listed in an application's Info.plist).
Returns nil if no handlers are available.

Example output from the code above:
org.videolan.vlc, com.RealNetworks.RealPlayer, org.mozilla.firefox, com.apple.safari, de.icab.iCab, com.microsoft.explorer

Requires Mac OS X 10.4 to work correct. Returns always nil on older systems.

116.5.2 LaunchServicesAllRoleHandlersForContentTypeMBS(ContentType as string, role as Integer) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified content type (UTI) with the specified role(s).
Example:

```
Var l as LaunchServicesStringListMBS
```

```
Var s(-1) as string
Var i,c as Integer

const kLSRolesAll=-1

l=LaunchServicesAllRoleHandlersForContentTypeMBS("com.adobe.pdf",kLSRolesAll)
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes: Application content handling capabilities are determined according to the kCFBundleDocumentTypes listed in an application's Info.plist). For any role, specify kLSRolesAll.
Returns nil if no handlers are available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Example output for code above is:
com.adobe.Reader, com.apple.preview, com.adobe.acrobat.reader, com.apple.MDIimporter.PDF

116.5.3 LaunchServicesApplicationForInfoMBS(type as string, creator as string, extension as string, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open items with particular data.
Example:

```
MsgBox LaunchServicesApplicationForInfoMBS("","R*ch","txt",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("TEXT","","",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("","","txt",-1).name
```

Notes: Consults the binding tables to return the application that would be used to open items with type,

creator, and/or extension as provided if they were double-clicked in the Finder. This application will be the default for items like this if one has been set. If no application is known to LaunchServices suitable for opening such items, nil (kLSApplicationNotFoundErr) will be returned. Not all three input parameters can be "" at the same time nor can both output parameters be "" at the same time.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

- MBS Plugins updated for Xojo 2019r2

116.5.4 LaunchServicesApplicationForItemMBS(file as folderitem, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open an item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var appfile As FolderItem = LaunchServicesApplicationForItemMBS(file, kLSRolesEditor)

// shows Xojo
MsgBox appfile.NativePath
```

Notes: Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

- MBS Xojo Plugins, version 19.5pr1

116.5.5 LaunchServicesCanApplicationAcceptItemMBS(item as folderitem, targetapp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Determine whether an item can accept another item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var accept As Boolean = LaunchServicesCanApplicationAcceptItemMBS(file, a, kLSRolesEditor, 0)

MsgBox "accept by Xojo: "+Str(accept)
```

Notes: Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Values for the flags:

```
kLSAcceptDefault          = 1
kLSAcceptAllowLoginUI     = 2   show UI to log in if necessary
```

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.6 LaunchServicesDefaultHandlerForURLSchemeMBS(URLScheme as string) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns the bundle identifier of the default handler for the specified URL scheme.
Example:

```
MsgBox LaunchServicesDefaultHandlerForURLSchemeMBS("http") // shows here: com.apple.safari
```

Notes: Returns "" if no handler is available.
Requires Mac OS X 10.4 to work correct. Returns always "" on older systems.

116.5.7 LaunchServicesDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns the application bundle identifier of the default handler for the specified content type (UTI), in the specified role(s).
Example:

```
const type="com.adobe.pdf"
msgbox LaunchServicesDefaultRoleHandlerForContentTypeMBS(type,-1)
```

Notes: For any role, specify kLSRolesAll. Returns "" if no handler is available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

116.5.8 LaunchServicesDisplayNameForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the display name for an url handle.
Notes: Return a copy of the display name for an url handle. Takes into consideration whether this item has a hidden extension or not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

116.5.9 LaunchServicesFindApplicationForInfoMBS(creator as string, bundleID as string, name as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Locate a specific application.
Example:

```
MsgBox LaunchServicesFindApplicationForInfoMBS("prvw","","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","com.apple.iTunes","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","","Safari.app").Name
```

Notes: Returns the application with the corresponding input information. The registry of applications is consulted first in order of bundleID, then creator, then name. All comparisons are case insensitive and 'ties' are decided first by version, then by native vs. Classic.

Parameters can be "". The name of the application must be the name with the extension.

- MBS Xojo Plugins, version 19.4pr1
- Tip of the day: How to launch Disc Utility?

116.5.10 LaunchServicesItemInfoForCFURLMBS(cfurlhandle as Integer, WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return information about an item.
Notes: Returns as much or as little information as requested about the url. Some information is available in a thread-safe manner, some is not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

Possible values you can combine for the WhichInfo parameter:

kLSRequestExtension	= &h01	Requests the item's filename extension.
kLSRequestTypeCreator	= &h02	Requests the item's file type and creator signature.
kLSRequestBasicFlagsOnly	= &h04	Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAppTypeFlags	= &h08	Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAllFlags	= &h10	Requests all item-information flags.
kLSRequestIconAndKind	= &h20	Not used.
kLSRequestExtensionFlagsOnly	= &h40	Requests only the kLSItemInfoExtensionIsHidden item-information flag.
kLSRequestAllInfo	= -1	

116.5.11 LaunchServicesKindStringForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the kind string for an item.
Notes: Returns the kind string as used in the Finder and elsewhere for the given folderitem.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

116.5.12 LaunchServicesOpenMBS(item as folderitem) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Open an application, document, or folder.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)
```

MsgBox a.NativePath

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder. Use the more specific LaunchServicesOpenXMBS for more control over launching.

Returns a folderitem to the application which was launched.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.13 LaunchServicesOpenXMBS(documents() as folderitem, parameter as LaunchServicesLaunchParameterMBS) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Opens an application or one or more documents or folders.
Example:

```
// Open a file in Preview (Mac OS X).
Sub OpenWithPreview(f as folderitem)
Var p as FolderItem
Var d(0) as FolderItem
Var r as FolderItem
Var param as LaunchServicesLaunchParameterMBS

// Find preview
p=LaunchServicesFindApplicationForInfoMBS("prvw","com.apple.Preview","Preview.app")

if p<>Nil then
d(0)=f

param=new LaunchServicesLaunchParameterMBS
param.Application=p
param.Defaults=true // just default settings

r=LaunchServicesOpenXMBS(d, param)
if r<>nil then
Return //Success
end if
end if

// On failure, just launch normally:
```

```
f.Launch true
End Sub
```

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder.

Returns a folderitem to the application which was launched.
Currently this function is not available to RB versions before 3.5.
Note that the documents parameter is an array of folderitem and not just one.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.14 LaunchServicesSetDefaultHandlerForURLSchemeMBS(URLScheme as string, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified URL scheme.
Example:

```
Var e as Integer
Var old as string

old=LaunchServicesDefaultHandlerForURLSchemeMBS("http")

MsgBox "Before: "+old

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http","com.microsoft.explorer")

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "Between: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http",old)

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "After: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")
```

Notes: Returns Mac OS error code with 0 for success.
The handler is specified as an application bundle identifier.

Requires Mac OS X 10.4 to work correct. Returns always -1 on older systems.

116.5.15 LaunchServicesSetDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified content type (UTI) in the specified role(s).
Example:

```
Var e as Integer

// makes Acrobat the default pdf reader
'e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.adobe.Reader")

// makes preview the default pdf reader
e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.apple.preview")

msgbox str(e)
```

Notes: For all roles, specify kLSRolesAll. The handler is specified as an application bundle identifier.
Returns a Mac OS error code or -1 if the function is not available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

116.6 module UTTypeMBS

116.6.1 module UTTypeMBS

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: The module to wrap all the Apple UTI functions.
Notes: See this webpage for a list of all the predefined types:

http://developer.apple.com/documentation/Carbon/Conceptual/understanding_utis/utilist/chapter_4_section_1.html

116.6.2 Methods

116.6.3 ConformsTo(UTI as string, ConformsToUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether a type is a subtype of the second type.
Example:

```
if UTTypeMBS.ConformsTo("public.jpeg","public.image") then
MsgBox "ConformsTo"
else
MsgBox "not ConformsTo"
end if
```

116.6.4 CreateAllIdentifiersForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string()

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates an array of all uniform type identifiers indicated by the specified tag.
Example:

```
MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "txt",
""))
// shows "public.plain-text"

MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "xml",
""))
// shows "public.xml com.apple.dashcode.xml"
```

Notes: An overloaded tag (e.g., an extension used by several applications for different file formats) may indicate multiple types. If no declared type identifiers have the specified tag, then a single dynamic type

identifier will be created for the tag. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type).

116.6.5 CreatePreferredIdentifierForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates a uniform type identifier for the type indicated by the specified tag.
Example:

```
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameExtension, "jpg", "")
// shows "public.jpeg"
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassOSType, "TIFF", "public.image")
// shows "public.tiff"
```

Notes: This is the primary function to use for going from tag (extension/MIMEType/OSType) to uniform type identifier. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type). If more than one type is indicated, preference is given to a public type over a non-public type on the theory that instances of public types are more common, and therefore more likely to be correct. When there a choice must be made between multiple public types or multiple non-public types, the selection rules are undefined. Clients needing finer control should use CreateAllIdentifiersWithTag. If no declared type is indicated, a dynamic type identifier is generated which satisfies the parameters.

116.6.6 DeclaringBundleURL(UTI as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the folderitem of the bundle containing the type declaration of the identified type.
Example:

```
MsgBox UTTypeMBS.DeclaringBundleURL("public.jpeg").NativePath
```

116.6.7 Description(UTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the localized, user-readable type description string.
Example:

```
MsgBox UTTypeMBS.Description("public.jpeg") // "JPEG-Bild" in German
```

116.6.8 Equal(UTI as string, SecondUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether two types are equal.
Example:

```
if UTTypeMBS.Equal("public.jpeg","public.jpeg") then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes: Returns true if both UTIs are equal.

116.6.9 kUTExportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTExportedTypeDeclarationsKey // "UTExportedTypeDeclarations"
```

116.6.10 kUTImportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTImportedTypeDeclarationsKey // "UTImportedTypeDeclarations"
```

116.6.11 kUTTagClassFilenameExtension as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassFilenameExtension // "public.filename-extension"

116.6.12 kUTTagClassMIMEType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassMIMEType // "public.mime-type"

116.6.13 kUTTagClassNSPboardType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassNSPboardType // "com.apple.nspboard-type"

116.6.14 kUTTagClassOSType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassOSType // "com.apple.ostype"

116.6.15 kUTTypeAliasFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.16 kUTTypeAliasRecord as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.17 kUTTypeAppleICNS as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.18 kUTTypeAppleProtectedMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.19 kUTTypeApplication as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.20 kUTTypeApplicationBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.21 kUTTypeApplicationFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.22 kUTTypeArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.23 kUTTypeAudio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.24 kUTTypeAudiovisualContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.25 kUTTypeBMP as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.26 kUTTypeBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.27 kUTTypeCHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.28 kUTTypeCompositeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.29 kUTTypeConformsToKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTTypeConformsToKey // "UTTypeConformsTo"

116.6.30 kUTTypeContact as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.31 kUTTypeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.32 kUTTypeCPlusPlusHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.33 kUTTypeCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.34 kUTTypeCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.35 kUTTypeData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.36 kUTTypeDescriptionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeDescriptionKey // "UTTypeDescription"
```

116.6.37 kUTTypeDirectory as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.38 kUTTypeDiskImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.39 kUTTypeFileURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.40 kUTTypeFlatRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.41 kUTTypeFolder as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.42 kUTTypeFramework as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.43 kUTTypeGIF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.44 kUTTypeHEIC as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image Coding images.
The identifier for this type is public.heic.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

116.6.45 kUTTypeHEIF as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image File Format images.

The identifier for this type is public.heif.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

116.6.46 kUTTypeHTML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.47 kUTTypeICO as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.48 kUTTypeIconFileKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeIconFileKey // "UTTypeIconFile"
```

116.6.49 kUTTypeIdentifierKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeIdentifierKey // "UTTypeIdentifier"
```

116.6.50 kUTTypeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.51 kUTTypeInkText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.52 kUTTypeItem as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.53 kUTTypeJavaSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.54 kUTTypeJPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.55 kUTTypeJPEG2000 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.56 kUTTypeJPEGXL as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A JPEG-XL encoded image.
The UTI is public.jpeg-xl

116.6.57 kUTTypeMessage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.58 kUTTypeMountPoint as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.59 kUTTypeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.avi")
Var u as string = UTTypeMBS.UTI(f)

if UTTypeMBS.ConformsTo(u, UTTypeMBS.kUTTypeMovie) then
MsgBox u+" is movie"
else
MsgBox u+" is not movie."
end if
```

116.6.60 kUTTypeMP3 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.61 kUTTypeMPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.62 kUTTypeMPEG4 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.63 kUTTypeMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.64 kUTTypeObjectiveCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.65 kUTTypeObjectiveCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.66 kUTTypePackage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.67 kUTTypePDF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.68 kUTTypePICT as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.69 kUTTypePlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.70 kUTTypePNG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.71 kUTTypeQuickTimeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.72 kUTTypeQuickTimeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.73 kUTTypeReferenceURLKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeReferenceURLKey // "UTTypeReferenceURL"
```

116.6.74 kUTTypeResolvable as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.75 kUTTypeRTF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.76 kUTTypeRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.77 kUTTypeSourceCode as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.78 kUTTypeSymLink as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.79 kUTTypeTagSpecificationKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeTagSpecificationKey // "UTTypeTagSpecification"
```

116.6.80 kUTTypeText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.81 kUTTypeTIFF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.82 kUTTypeTXNTextAndMultimediaData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.83 kUTTypeURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.84 kUTTypeUTF16ExternalPlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.85 kUTTypeUTF16PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.86 kUTTypeUTF8PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.87 kUTTypeVCard as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.88 kUTTypeVersionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeVersionKey // "UTTypeVersion"
```

116.6.89 kUTTypeVideo as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.90 kUTTypeVolume as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.91 kUTTypeWebArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.92 kUTTypeXML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.93 PreferredTagWithClass(inUTI as string, inTagClass as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the identified type's preferred tag with the specified tag class as a String.
Example:

```
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassMIMEType)
// shows "image/jpeg"
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassFilenameExtension)
// shows "jpeg"
```

Notes: This is the primary function to use for going from uniform type identifier to tag. If the type declaration included more than one tag with the specified class, the first tag in the declared tag array is the preferred tag.

116.6.94 UTI(file as folderitem) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Queries the UTI for a given file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
MsgBox UTTypeMBS.UTI(f) // shows com.xojo.project.binary
```

Notes: Returns "" if no UTI is available.

Chapter 117

LCMS2

117.1 class LCMS2BitmapMBS

117.1.1 class LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap.
Notes: You can pass bitmap data as raw memoryblock or fill it using a Xojo picture.
In our LCMS 1.x plugin, the bitmap was always 16 bit. This plugin also can also use 8 bit or 32 bit.

- MBS Xojo / Real Studio Plugins, version 13.2pr3

117.1.2 Methods

117.1.3 Constructor

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty bitmap object.
See also:

- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16844
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16844

- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16845
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16845
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16846

117.1.4 Constructor(p as picture, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert picture to bitmap
Var b as new LCMS2BitmapMBS(pic)
// convert to picture
Backdrop = b.Picture
```

Notes: Bits can be 8, 16 or 32 bit integers.
See also:

- 117.1.3 Constructor 16843
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16844
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16845
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16845
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16846

117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic, 50, 50, 100, 100)
// convert to picture
Backdrop = b.Picture
```

Notes: Picks only the provided area from the source picture.
Bits can be 8, 16 or 32 bit integers.
See also:

- 117.1.3 Constructor 16843
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16844
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16845
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16845
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16846

117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the color space signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16843
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16844
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16844
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16845
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16846

117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the colorspace signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16843

- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16844
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16844
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16845
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16846

117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16843
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16844
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16844
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16845
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16845

117.1.9 CopyToPicture(pic as picture, x as Integer = 0, y as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data into an existing picture.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic)

// create destination picture
Var pic as new Picture(500, 500, 32)

// copy pixels and show
if b.CopyToPicture(pic, 50, 50) then
```

```
Backdrop = pic
end if
```

Notes: This may be more efficient for you if you process a lot of image data as you can avoid creating new picture objects with using Picture method in this class.
May not work for all pictures, especially may fail on Linux.
Returns true on success.

117.1.10 Invert

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the bitmap data.
Notes: Requires correct settings for rowbytes, height and data properties.

117.1.11 Picture(HasAlpha as Boolean = false) as picture

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the picture.
Example:

```
// get some picture
Var logo as Picture = LogoMBS(500)

// let us convert it to a 16 bit memory block
Var l as new LCMS2BitmapMBS(logo, 16)

// check bit depth
Title = str(l.Bits)

// convert back
Var p as Picture = l.Picture

// and display
Backdrop = p
```

Notes: This method works with 8, 16 and 32 bit integer pictures. Make sure bits property is set.

117.1.12 Properties

117.1.13 Bits as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits.
Notes: Can be 8, 16 or 32 and is used for conversion to and from Xojo picture objects.
(Read and Write property)

117.1.14 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space type.
Notes: Only used to let Picture function know what format the data is.
Typically kcmsSigRgbData.
(Read and Write property)

117.1.15 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the actual image data.
Notes: Data can be stored in 8, 16 or 32 bit Integers or 32bit Floats.
(Read and Write property)

117.1.16 Height as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the Bitmap in Pixels.
Notes: (Read and Write property)

117.1.17 RowBytes as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes: Normally: rowbytes=pixelsize*width+padding
Where padding is some extra bytes.

(Read and Write property)

117.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the Bitmap in Pixels.
Notes: (Read and Write property)

117.2 class LCMS2CIECAM02MBS

117.2.1 class LCMS2CIECAM02MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to evaluated viewing conditions.
Notes: Viewing conditions. Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming LCMS2ICCViewingConditionsMBS to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr5

117.2.2 Methods

117.2.3 Constructor(context as LCMS2ContextMBS, VC as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a CAM02 object based on given viewing conditions.
Notes: Such object may be used as a color appearance model and evaluated in forward and reverse directions. Viewing conditions is defined by LCMS2ViewingConditionsMBS class. The surround member has to be one of this values: kAVG_SURROUND, kDIM_SURROUND, kDARK_SURROUND or kCUTSHEET_SURROUND. Degree of chromatic adaptation (d), can be specified in 0...1.0 range, or the model can be instructed to calculate it by using D_CALCULATE constant (-1).

Context: user-defined context cargo.
VC: A structure holding viewing conditions.

117.2.4 Forward(value as LCMS2CIEXYZMBS) as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the forward direction: XYZ to JCh
Notes: value: the input XYZ value.
Returns the output JCh value.

117.2.5 Reverse(value as LCMS2JChMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the reverse direction: JCh to XYZ
Notes: Values: The input JCh value.
Returns the output XYZ value

117.2.6 Properties

117.2.7 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the conversion engine.
Notes: (Read and Write property)

117.3 class LCMS2CIELabMBS

117.3.1 class LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Lab color.

117.3.2 Methods

117.3.3 BFDdeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates BFD delta E metric.

117.3.4 CIE2000DeltaE(Other as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

117.3.5 CIE94DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

117.3.6 Clone as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.
Example:

```
Var l as new LCMS2CIELabMBS(0.1, 0.2, 0.3)
Var k as LCMS2CIELabMBS = l.Clone
MsgBox str(k.L)+" "+str(k.a)+" "+str(k.b)
```

117.3.7 CMCdeltaE(Other as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

117.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lab color with the given values.
See also:

- 117.3.9 Constructor(other as LCMS2CIELabMBS) 16853

117.3.9 Constructor(other as LCMS2CIELabMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the color value.
See also:

- 117.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0) 16853

117.3.10 DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes: You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

117.3.11 DesaturateLab(amax as Double, amin as Double, bmax as Double, bmin as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does poor man's gamut mapping.
Notes: See also cmsDesaturateLab in LCMS manual.

117.3.12 XYZ(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

117.3.13 Properties

117.3.14 A as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The a value.
Notes: (Read and Write property)

117.3.15 B as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The b value.
Notes: (Read and Write property)

117.3.16 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

117.3.17 LCh as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to LCh value.
Notes: (Read only property)

117.4 class LCMS2CIELChMBS

117.4.1 class LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class for CIE LCh values.
Example:

```
Var c as new LCMS2CIELChMBS(1,2,3)
MsgBox str(c.L)+" "+str(c.C)+" "+str(c.h)
```

117.4.2 Methods

117.4.3 Clone as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.

117.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.
See also:

- 117.4.5 Constructor(other as LCMS2CIELChMBS) 16856

117.4.5 Constructor(other as LCMS2CIELChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 117.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0) 16856

117.4.6 Properties

117.4.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

117.4.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

117.4.9 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

117.4.10 Lab as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the LCh value to a Lab value.
Example:

```
Var c as new LCMS2CIELChMBS(0.1, 0.2, 0.3)
Var lab as LCMS2CIELabMBS = c.Lab
MsgBox str(lab.L)+" "+str(lab.a)+" "+str(lab.b)
```

Notes: (Read only property)

117.5 class LCMS2CIExyYMBS

117.5.1 class LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE xyY value.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: As Xojo is case insensitive, we have to name the big Y as YY.

117.5.2 Methods

117.5.3 Clone as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color.

117.5.4 Constructor(other as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the object with values from other object.
See also:

- 117.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0) 16858

117.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new xyY object with the given values.
See also:

- 117.5.4 Constructor(other as LCMS2CIExyYMBS) 16858

117.5.6 TempFromWhitePoint as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the temperature from using this xyY point as the white point.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.TempFromWhitePoint)
```

117.5.7 Properties

117.5.8 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

117.5.9 XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the xyY value to XYZ.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
Var n as LCMS2CIEXYZMBS = c.XYZ
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
Var x as LCMS2CIExyYMBS = n.xyY
MsgBox str(x.x)+" "+str(x.y)+" "+str(x.yy)
```

Notes: (Read only property)

117.5.10 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

117.5.11 YY as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: As Xojo is case insensitive, we have to name the big Y as YY.
(Read and Write property)

117.6 class LCMS2CIExyYTripleMBS

117.6.1 class LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a xyY color triple.

117.6.2 Methods

117.6.3 Clone as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the xyY triple.

117.6.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with zero values.
See also:

- 117.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 16861
- 117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 16862

117.6.5 Constructor(other as LCMS2CIExyYTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with values from other object.
See also:

- 117.6.4 Constructor 16861
- 117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 16862

117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with given values.
See also:

- 117.6.4 Constructor 16861
- 117.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 16861

117.6.7 Properties

117.6.8 Blue as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

117.6.9 Green as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

117.6.10 Red as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

117.7 class LCMS2CIEXYZMBS

117.7.1 class LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE XYZ values.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
```

117.7.2 Methods

117.7.3 Constructor(x as Double=0.0, y as Double=0.0, z as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.

117.7.4 Lab(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a lab value using the given whitepoint.
Notes: Setting WhitePoint to nil forces D50 as white point.

117.7.5 Properties

117.7.6 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

117.7.7 xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a xyY value.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
Var l as LCMS2CIExyYMBS = n.xyY
MsgBox str(l.x)+" "+str(l.y)+" "+str(l.yy)
```

Notes: (Read only property)

117.7.8 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

117.7.9 z as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The z value.
Notes: (Read and Write property)

117.8 class LCMS2CIEXYZTripleMBS

117.8.1 class LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XYZ color triple.

117.8.2 Methods

117.8.3 Clone as LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the XYZ triple.

117.8.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with zero values.
See also:

- 117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 16865
- 117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 16866

117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with values from other object.
See also:

- 117.8.4 Constructor 16865
- 117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 16866

117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with given values.
See also:

- 117.8.4 Constructor 16865
- 117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 16865

117.8.7 Properties

117.8.8 Blue as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

117.8.9 Green as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

117.8.10 Red as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

117.9 class LCMS2ContextMBS

117.9.1 class LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 context.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

117.9.2 Methods

117.9.3 Clone as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the context object.
Notes: You can assign a new tag to the copy.

117.9.4 Constructor(other as LCMS2ContextMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with a copy of the existing one.
See also:

- 117.9.5 Constructor(tag as Variant = nil) 16867

117.9.5 Constructor(tag as Variant = nil)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with given tag.
See also:

- 117.9.4 Constructor(other as LCMS2ContextMBS) 16867

117.9.6 Properties

117.9.7 Handle as Integer

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle value.
Notes: (Read and Write property)

117.9.8 Tag as Variant

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: (Read and Write property)

117.10 class LCMS2CurveSegmentMBS

117.10.1 class LCMS2CurveSegmentMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a curve segment.
Notes: Segmented curves are formed by several segments.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

117.10.2 Methods

117.10.3 Constructor(nGridPoints as Integer = 0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object and allocates sample points.
Notes: Pass number of sample points you want to fill.

117.10.4 Properties

117.10.5 nGridPoints as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of grid points if Type = 0.
Notes: (Read only property)

117.10.6 Type as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of curve segment.
Notes: Parametric type, Type = 0 means sampled segment.
Negative values are reserved.
(Read and Write property)

117.10.7 x0 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x0 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

117.10.8 x1 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

117.10.9 Params(index as Integer) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameters if Type != 0.
Notes: Index from 0 to 9.
(Read and Write computed property)

117.10.10 SampledPoints(index as Integer) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of floats if Type = 0.
Notes: Index from 0 to nGridPoints-1.
(Read and Write computed property)

117.11 class LCMS2DateMBS

117.11.1 class LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a date.

117.11.2 Properties

117.11.3 Date as Date

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date as a Xojo date object.
Notes: (Read only property)

117.11.4 DateTime as DateTime

MBS Images Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date as a Xojo dateTime object.
Notes: (Read only property)

117.11.5 Day as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: (Read only property)

117.11.6 Daylight as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether it is daylight saving time.
Notes: (Read only property)

117.11.7 DayOfWeek as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the week.
Notes: (Read only property)

117.11.8 DayOfYear as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the year.
Notes: (Read only property)

117.11.9 Hour as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour value.
Notes: (Read only property)

117.11.10 Minute as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minute value.
Notes: (Read only property)

117.11.11 Month as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: (Read only property)

117.11.12 Second as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read only property)

117.11.13 Year as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read only property)

117.12 class LCMS2DictionaryEntryMBS

117.12.1 class LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an entry of the dictionary.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.12.2 Methods

117.12.3 Constructor

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

117.12.4 NextEntry as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the next element in linked list.

117.12.5 Properties

117.12.6 DisplayName as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display name multi language unicode string.
Notes: (Read only property)

117.12.7 DisplayValue as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display value multi language unicode string.
Notes: (Read only property)

117.12.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

117.12.9 Name as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

117.12.10 Parent as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent dictionary.
Notes: (Read only property)

117.12.11 Value as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

117.13 class LCMS2DictionaryMBS

117.13.1 class LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The LCMS 2 class for a dictionary of values.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is a simple linked list used to store pairs Name,ÄêValue for the dictionary metatag, as described in http://www.color.org/ICCSpecRevision_25,Äê02,Äê10_dictType.pdf

117.13.2 Methods

117.13.3 AddEntry(Name as String, Value as String, DisplayName as LCMS2MLUMBS, DisplayValue as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to a dictionary linked list object.
Notes: No check for duplicity is made. Dictionary and Name parameters a required, rest is optional and nil may be used.

Name, Value: Strings. Value may be empty.
DisplayName, Display Value: Multilocalized Unicode objects. May be nil.
Returns true on success.

117.13.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty dictionary linked list object.

117.13.5 EntryList as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first element in linked list.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

117.13.6 Properties

117.13.7 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.13.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.14 class LCMS2GamutBoundaryDescriptionMBS

117.14.1 class LCMS2GamutBoundaryDescriptionMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class allows you to create gamut boundary, add points, compute and check points.
Example:

```
Var n1,n2 as Integer
Var h as new LCMS2GamutBoundaryDescriptionMBS

// Fill all Lab gamut as valid

for L as Integer = 0 to 100 step 10
for a as Integer = -128 to 128 step 5
for b as Integer = -128 to 128 step 5

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.AddPoint(lab) then
n1 = n1 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
next
next

// Complete boundaries
call h.Compute

// All points should be inside gamut

for L as Integer = 10 to 90 step 25
for a as Integer = -120 to 120 step 25
for b as Integer = -120 to 120 step 25

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.CheckPoint(lab) then
n2 = n2 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
```

next
next

MsgBox str(n1)+" points added and "+str(n2)+" other points found."

Notes: Please check LittleCMS API and tutorial documentation for more details.

- MBS Real Studio Plugins, version 12.1pr6

117.14.2 Methods

117.14.3 AddPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sample point for computing the gamut boundary descriptor.
Notes: This function can be called as many times as known points. No memory or other resurces are wasted by adding new points. The gamut boundary descriptor cannot be checked until Compute() is called.

Lab: Lab value.
Returns true on success, false on error.

117.14.4 CheckPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whatever a Lab value is inside a given gamut boundary descriptor.
Notes: Lab: Lab value.
Returns: True if point is inside gamut, false otherwise.

117.14.5 Compute(options as UInt32 = 0) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the gamut boundary descriptor using all know points and interpolating any missing sector(s).
Notes: Call this function after adding all know points with AddPoint() and before using CheckPoint().
Flags: reserved (unused). Set it to 0.
Returns true on success, false on error

117.14.6 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object.

117.14.7 Properties

117.14.8 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.14.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

117.15 class LCMS2ICCDataMBS

117.15.1 class LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC data.
Notes: This is used for some tags where no dedicated class is available. This way you can modify the data directly in the memoryblock.

117.15.2 Properties

117.15.3 Data as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the data.
Notes: (Read only property)

117.15.4 Flags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

117.15.5 Size as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data.
Notes: (Read and Write property)

117.16 class LCMS2ICCMeasurementConditionsMBS

117.16.1 class LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC measurement conditions.

117.16.2 Methods

117.16.3 Constructor(Observer as UInt32 = 0, Backing as LCMS2CIEXYZMBS = nil, Geometry as UInt32 = 0, Flare as Double = 0.0, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

117.16.4 Properties

117.16.5 Backing as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Backing value.
Notes: (Read and Write property)

117.16.6 Flare as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flare value.
Notes: Range 0..1.0.
(Read and Write property)

117.16.7 Geometry as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry value.
Notes: 0=unknown, 1=45/0, 0/45 2=0d, d/0.
(Read and Write property)

117.16.8 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant type.
Notes: (Read and Write property)

117.16.9 Observer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The observer value.
Notes: 0 = unknown, 1=CIE 1931, 2=CIE 1964
(Read and Write property)

117.17 class LCMS2ICCViewingConditionsMBS

117.17.1 class LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a ICC viewing conditions tag stored in the profile.

117.17.2 Methods

117.17.3 Constructor(IlluminantXYZ as LCMS2CIEXYZMBS = nil, Backing as LCMS2CIEXYZMBS = nil, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC viewing conditions object.

117.17.4 Properties

117.17.5 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

117.17.6 IlluminantXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

117.17.7 SurroundXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround.
Notes: (Read and Write property)

117.18 class LCMS2IT8MBS

117.18.1 class LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for IT8 handling.
Notes: ANSI CGATS.17 is THE standard text file format for exchanging color measurement data. This standard text format (the ASCII version is by far the most common) is the format accepted by most color measurement and profiling applications.
It consists of a Preamble section containing originator information, keyword definitions, etc and then one or more data sections, each consisting of header and data subsections. The header subsection is where the BEGIN_DATA_FORMAT and END_DATA_FORMAT delimiters define the actual data types / units contained in the following tables. The data subsection contains the BEGIN_DATA and END_DATA delimiters which contain the actual color information in tabular form.
CGATS.17 text files can contain device (RGB, CMYK, etc), colorimetric (Lab, XYZ, etc), densitometric, spectral, naming and other information so it is a fairly comprehensive storage and exchange format.

- LCMS 2.4

117.18.2 Methods

117.18.3 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty CGATS.17 object.

117.18.4 DefineDblFormat(Formatter as string)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the format string for float numbers.
Notes: It uses the "C" sprintf convention. The default format string is "%.10g".

117.18.5 EnumDataFormat as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with pointers to the column names in current table.
Notes: Return the column names in table.

117.18.6 EnumProperties as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all properties in current table.
Notes: Returns array of property name string.

117.18.7 EnumPropertyMulti(Prop as string) as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all the identifiers found in a multi,Äêvalue property in current table.
Notes: Prop: A string holding property name
Returns an array with property names.

117.18.8 FindDataFormat(Sample as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the position (column) of a given data sample name in current table.
Notes: First column is 0 (SAMPLE_ID).
Returns column number if found, ,Äê1 if not found

117.18.9 GetData(Patch as string, Sample as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell on success, "" on error.

117.18.10 GetDataAsDouble(Patch as string, Sample as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell interpreted as Double on success, 0 on error.

117.18.11 GetDataRowCol(Row as Integer, Col as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.

Returns the data for the intended cell on success, "" on error.

117.18.12 GetDataRowColAsDouble(Row as Integer, Col as Integer) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.
row, col: The position of the cell.

Returns the data for the intended cell interpreted as Double on success, 0 on error.

117.18.13 GetPatchByName(Patch as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lookups patch index by name.

117.18.14 GetPatchName(nPatch as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills buffer with the contents of SAMPLE_ID column for the set given in nPatch.
Notes: That usually corresponds to patch name. Buffer may be NULL to get the internal memory block

used by the CGATS.17 object. If specified, buffer gets a copy of such block. In this case it should have space for at least 1024 characters.

nPatch: set number to retrieve name

Returns the patch name. "" if error.

117.18.15 GetProperty(Prop as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a literal string in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property on success, "" on error.

117.18.16 GetPropertyAsDouble(Prop as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a double in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property interpreted as Double on success, 0 on error.

117.18.17 GetPropertyMulti(Key as string, SubKey as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries property.

117.18.18 GetSheetType as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the type of the IT8 object.

117.18.19 HeaderIsDictionary(HeaderName as string) as boolean

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a header entry has subkeys, so it has a dictionary with keys and values.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.20 HeaderList as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of header properties.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.21 HeadersAsDictionary as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header keys and values as dictionary.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

117.18.22 HeaderSubDictionary(HeaderName as string) as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with subkeys for a given header entry.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

117.18.23 HeaderValue(HeaderName as string) as string

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header value for the given header.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.24 LoadFromFile(context as LCMS2ContextMBS, file as folderitem) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function allocates a CGATS.17 object and fills it with the contents of file.
Notes: Used for reading existing CGATS files.

Context: The context value.
File: The CGATS.17 file name to read/parse

Returns a CGATS.17 object on success, nil on error.

117.18.25 LoadFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a memory block.
Notes: Returns nil on failure.

117.18.26 LoadFromString(context as LCMS2ContextMBS, data as string) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a string.
Notes: Returns nil on failure.

117.18.27 SaveToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a file.
Notes: File: Destination file. Existing file will be overwritten if possible.

Returns true on success, false on error

117.18.28 SaveToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

117.18.29 SaveToString as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

117.18.30 SetComment(comment as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is intended to provide a way automated IT8 creators can embed comments into the file.
Notes: Comments have no effect, and its only purpose is to document any of the file meaning. On this function the calling order is important; as successive calls to SetComment do embed comments in the same order the function is being called.

Comment: The comment to inserted

Returns true on success, false on error.

117.18.31 SetData(Patch as string, Sample as string, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a literal

Returns true on success, false on error.

117.18.32 SetDataAsDouble(Patch as string, Sample as string, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

117.18.33 SetDataFormat(n as Integer, Sample as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets column names in current table.
Notes: First column is 0 (SAMPLE_ID). Special property NUMBER_OF_FIELDS must be set before calling this function.

n: Column to set name
Sample: Name of data

Returns true on success, false on error.

117.18.34 SetDataRowCol(Row as Integer, Col as Integer, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a literal string.

Returns true on success, false on error.

117.18.35 SetDataRowColAsDouble(Row as Integer, Col as Integer, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

117.18.36 SetIndexColumn(Sample as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the index column.

117.18.37 SetPropertyDouble(Prop as string, Value as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a double in current table.
Notes: Prop: A string holding property name.
Value: The data for the intended property as Double.

Returns true on success, false on error.

117.18.38 SetPropertyHex(Prop as string, Value as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as an hexadecimal constant (appends 0x) in current table.
Notes: Prop: A string holding property name.
Value: The value to be set (32 bits max)

Returns true on success, false on error.

117.18.39 SetPropertyMulti(Key as string, SubKey as string, Value as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sub,Äêproperty to the property Key.
Notes: Value of buffer is interpreted literally.

Key: A string holding property name.
SubKey: A string holding the sub,Äêproperty name.
Buffer: A string holding the uncooked value of sub,Äêproperty.

Returns true on success, false on error.

117.18.40 SetPropertyString(Prop as string, Value as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a literal string in current table.
Notes: The string is enclosed in quotes "".
Returns true on success, false on error.

117.18.41 SetPropertyUncooked(Prop as string, Value as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property with no interpretation in current table.
Notes: No quotes "" are added. No checking is performed, and it is up to the programmer to make sure the string is valid.
Special prefixes:
0b: Binary
0x : Hexadecimal

Parameters:
cProp: A string holding property name.
Buffer: A string holding the uncooked value to place in the CGATS file.

Returns true on success, false on error.

117.18.42 SetSheetType(type as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets the type of a CGATS.17 object to the new type.
Notes: Returns true on success, false on error.

117.18.43 SetTable(nTable as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function positions the IT8 object in a given table, identified by its position.
Notes: Setting nTable to Table Count + 1 does allocate a new empty table.
Returns the current table number on success, ,Äê1 on error.

117.18.44 SetTableByLabel(Set as string, Field as string, ExpectedType as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets table by label.

117.18.45 TableCount as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the number of tables found in the current CGATS object.
Notes: Returns the number of tables on success, 0 on error.

117.18.46 ValidKeywords as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid keywords.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.47 ValidSampleIDs as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid sample IDs.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.48 Properties

117.18.49 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.18.50 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.19 class LCMS2JChMBS

117.19.1 class LCMS2JChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a JCh value.

117.19.2 Methods

117.19.3 Clone as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of this object.

117.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new JCh value.
See also:

- 117.19.5 Constructor(other as LCMS2JChMBS) 16898

117.19.5 Constructor(other as LCMS2JChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes new JCh color object with values from existing object.
See also:

- 117.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0) 16898

117.19.6 Properties

117.19.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

117.19.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

117.19.9 J as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The J value.
Notes: (Read and Write property)

117.20 class LCMS2Mat3MBS

117.20.1 class LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a 3 by 3 matrix.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

117.20.2 Methods

117.20.3 Clone as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the matrix.

117.20.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix.
See also:

- 117.20.5 Constructor(other as LCMS2Mat3MBS) 16900
- 117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 16901

117.20.5 Constructor(other as LCMS2Mat3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given matrix.
See also:

- 117.20.4 Constructor 16900
- 117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 16901

117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix with the given three vectors.
See also:

- 117.20.4 Constructor 16900
- 117.20.5 Constructor(other as LCMS2Mat3MBS) 16900

117.20.7 Properties

117.20.8 V0 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for first vector.
Notes: (Read and Write property)

117.20.9 V1 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for second vector.
Notes: (Read and Write property)

117.20.10 V2 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for third vector.
Notes: (Read and Write property)

117.20.11 value(index as UInt32) as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the vector by index.
Notes: Index from 0 to 2.
(Read and Write computed property)

117.21 module LCMS2MBS

117.21.1 module LCMS2MBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central LCMS module with all the global methods and constants.

117.21.2 Methods

117.21.3 AdaptationMatrix(ConeMatrix as LCMS2Mat3MBS, FromIll as LCMS2CIEXYZM ToIll as LCMS2CIEXYZMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates adaptation matrix.
Notes: Returns the final chromatic adaptation from illuminant FromIll to Illuminant ToIll.
The cone matrix can be specified in ConeMatrix. If nil, Bradford is assumed.

ConeMatrix: the cone matrix.
FromIll: Source illuminant.
ToIll: Destination illuminant.

Returns matrix on success or nil on failure.

117.21.4 AdaptToIlluminant(SourceWhitePt as LCMS2CIEXYZMBS, Illuminant as LCMS2CIEXYZMBS, Value as LCMS2CIEXYZMBS) as LCMS2CIEXYZM

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromatic adaptation.
Notes: Adapts a color to a given illuminant. Original color is expected to have a SourceWhitePt white point.

117.21.5 BFDdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the dE between two Lab values.

117.21.6 BIT15_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Bit15 flag

117.21.7 BuildRGB2XYZtransferMatrix(WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds RGB to XYZ transfer matrix.
Notes: Build a White point, primary chromas transfer matrix from RGB to CIE XYZ.
This is just an approximation, I am not handling all the non-linear aspects of the RGB to XYZ process, and assumming that the gamma correction has transitive property in the tranformation chain.

The algorithm:

- First I build the absolute conversion matrix using primaries in XYZ. This matrix is next inverted
- Then I eval the source white point across this matrix obtaining the coeficients of the transformation
- Then, I apply these coeficients to the original matrix

WhitePoint: The white point.
Primaries: The primaries.
Returns matrix on success or nil on failure.

117.21.8 BYTES_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: bytes per sample

117.21.9 ChannelsOf(ColorSpaceSignature as Integer) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels in a color space signature.
Example:

MsgBox "RGB has "+str(LCMS2MBS.ChannelsOf(LCMS2MBS.kcmsSigRgbData))+" channels"

117.21.10 CHANNELS_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Channels (Samples per pixel)

117.21.11 CIE2000DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

117.21.12 CIE94DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

117.21.13 CMCdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

117.21.14 ColorSpaceICCtoLCMS(ICCColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from ICC color space notation to Little CMS color space notation.

117.21.15 ColorSpaceLCMStoICC(LCMSColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from Little CMS color space notation to ICC color space notation.

117.21.16 COLORSPACE_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Pixeltype.

117.21.17 CreateBitmapFromPicture(p as picture, bits as Integer = 8) as LCMS2BitmapMB

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Notes: Bits can be 8, 16 or 32 bit integers.

117.21.18 D50_xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as xyY color.

117.21.19 D50_XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as XYZ color.

117.21.20 DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes: You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers

from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

117.21.21 DITHER_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: dither flag

117.21.22 DOSWAP_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Do swap? ie, BGR, KYMC

117.21.23 EnableFastFloatExtensions

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables fast float extension for Little CMS 2.10.
Notes: Originally this is GPLv3 licensed, but MBS bought a commercial license for all our plugins, so you

don't need to worry about the license.

117.21.24 EncodedCMMversion as Integer

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of LCMS library.
Example:

```
Var e as Integer = LCMS2MBS.EncodedCMMversion
MsgBox str(e \1000)+"."+str((e\10) mod 100)+"."+str(e mod 10)
```

Notes: Returns 2070 for version 2.7.

117.21.25 ENDIAN16_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: swap 16 bps endianess?

117.21.26 EXTRA_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Extra samples

117.21.27 FLAVOR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla).

117.21.28 Float2LabEncoded(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value.
Notes: Returns array of 3 encoded UInt16 values.

117.21.29 Float2LabEncodedV2(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value to ICC v2 convention.
Notes: Returns array of 3 encoded UInt16 values.

117.21.30 Float2XYZEncoded(c as LCMS2CIEXYZMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a XYZ value to ICC convention.
Notes: Returns three UInt16 values as Integer array.

117.21.31 FLOAT_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int.

117.21.32 GetAlarmCodes as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
Returns array with 16 integer values.
See also:

- 117.21.33 GetAlarmCodes(context as LCMS2ContextMBS) as Integer() 16909

117.21.33 GetAlarmCodes(context as LCMS2ContextMBS) as Integer()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.

Returns array with 16 integer values.
See also:

- 117.21.32 GetAlarmCodes as Integer() 16909

117.21.34 GetSupportedIntentCodes as UInt32()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id,Äênumbers for all supported intents.
Example:

```
Var names() as string = LCMS2MBS.GetSupportedIntentDescriptions
Var codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

Var u as Integer = UBound(names)
for i as Integer = 0 to u
MsgBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.
See also:

- 117.21.35 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32() 16910

117.21.35 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id,Äênumbers for all supported intents.
Example:

```
Var names() as string = LCMS2MBS.GetSupportedIntentDescriptions
Var codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

Var u as Integer = UBound(names)
for i as Integer = 0 to u
MsgBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.
See also:

- 117.21.34 GetSupportedIntentCodes as UInt32() 16910

117.21.36 GetSupportedIntentDescriptions as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with descriptions for all supported intents.
Example:

MsgBox Join(LCMS2MBS.GetSupportedIntentDescriptions, EndOfLine)

Notes: Little CMS plug,Äêin architecture allows to implement user,Äêdefined intents; use this function to get info about such extended functionality.

117.21.37 GridPoints(n as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates grid points.
Example:

MsgBox str(LCMS2MBS.GridPoints(2))

117.21.38 kcmsD50X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value of D50 XYZ normalized to Y=1.0.

117.21.39 kcmsD50Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value of D50 XYZ normalized to Y=1.0.

117.21.40 kcmsD50Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z value of D50 XYZ normalized to Y=1.0.

117.21.41 kcmsPERCEPTUAL_BLACK_X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X of V4 perceptual black.

117.21.42 kcmsPERCEPTUAL_BLACK_Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y of V4 perceptual black.

117.21.43 kcmsPERCEPTUAL_BLACK_Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z of V4 perceptual black.

117.21.44 Lab2LCh(p as LCMS2CIELabMBS) as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts lab color to LCh value.

117.21.45 Lab2XYZ(p as LCMS2CIELabMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

117.21.46 LabEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v4 convention to a lab value.
Notes: w0, w1 and w2: Array of 3 UInt16 holding the encoded values.

Returns lab color.

117.21.47 LabEncoded2FloatV2(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v2 convention to a Lab value.
Notes: w0, w1 and w2: 3 UInt16 numbers holding the encoded values.

117.21.48 LCh2Lab(p as LCMS2CIELChMBS) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from LCh to Lab.

117.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 117.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 16913
- 117.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 16914

117.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 117.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 16913
- 117.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 16914

117.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
See also:

- 117.21.49 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 16913
- 117.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 16913

117.21.52 OPTIMIZED_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value.

117.21.53 PixelFormat(FloatingPoint as boolean, Optimized as boolean, ColorSpace as UInt32, MinIsWhite as boolean, Planar as boolean, EndianSwap as boolean, DoSwap as boolean, ExtraSamples as UInt32, Channels as UInt32, BytesPerSample as UInt32, SwapFirst as boolean) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Utility function to create a pixel format.
Notes: Format of pixel is defined by one UInt32, using bit fields as follows

A O TTTTT U Y F P X S EEE CCCC BBB

FloatingPoint: With this flag we can differentiate 16 bits as float and as int
Optimized: Previous optimization already returns the final 8-bit value
ColorSpace: Pixeltype
MinIsWhite: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)
Planar: Planar? 0=Chunky, 1=Planar
EndianSwap: swap 16 bps endianess?
DoSwap: Do swap? ie, BGR, KYMC
ExtraSamples: Extra samples

Channels: Channels (Samples per pixel)
BytesPerSample: bytes per sample
SwapFirst: Swap first - changes ABGR to BGRA and KCMY to CMYK

117.21.54 PLANAR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Planar? 0=Chunky, 1=Planar

117.21.55 PREMUL_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Premultiplied? 0=No, 1=Yes

117.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes: Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 117.21.57 SetAdaptationState(d as Double) as Double 16915

117.21.57 SetAdaptationState(d as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes: Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 117.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double 16915

117.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 117.21.59 SetAlarmCodes(values() as Integer) 16916

117.21.59 SetAlarmCodes(values() as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes: Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 117.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer) 16916

117.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes: Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 117.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS) 16917

117.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes: Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 117.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS) 16916

117.21.62 SWAPFIRST_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK

117.21.63 TagInteger(tag as string) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag integer to string.
Example:

```
MsgBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(&h64657673)
```

117.21.64 TagString(tag as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag string to integer.
Example:

```
MsgBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(&h64657673)
```

117.21.65 TempFromWhitePoint(TempK as LCMS2CIExyYMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body temperature in K from given chromaticity.
Example:

```
Var c as new LCMS2CIExyYMBS

c.x = 0.32
c.y = 0.32
c.YY = 1.0

MsgBox str(LCMS2MBS.TempFromWhitePoint(c))
```

Notes: Returns temperature. Or zero on any error.

117.21.66 T_BIT15(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Bit15 flag

117.21.67 T_BYTES(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: bytes per sample

117.21.68 T_CHANNELS(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Channels (Samples per pixel)

117.21.69 T_COLORSPACE(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Pixeltype

117.21.70 T_DITHER(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: dither flag

117.21.71 T_DOSWAP(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Do swap? ie, BGR, KYMC

117.21.72 T_ENDIAN16(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: swap 16 bps endianess?

117.21.73 T_EXTRA(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Extra samples

117.21.74 T_FLAVOR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)

117.21.75 T_FLOAT(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int

117.21.76 T_OPTIMIZED(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value

117.21.77 T_PLANAR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Planar? 0=Chunky, 1=Planar

117.21.78 T_PREMUL(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Premultiplied? 0=Yes, 1=No

117.21.79 T_SWAPFIRST(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK.

117.21.80 Version as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version number of LCMS2.
Example:

```
MsgBox LCMS2MBS.Version
```

117.21.81 WhitePointFromTemp(TempK as Double) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body chromaticity from given temperature in K.
Example:

```
Var c as LCMS2CIExyYMBS = LCMS2MBS.WhitePointFromTemp(6500)

MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: Valid range is 4000K-25000K.
TempK: Temperature in oK
Returns white point or nil in case of error.

117.21.82 xyY2XYZ(p as LCMS2CIExyYMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from xyY to XYZ.

117.21.83 XYZ2Lab(p as LCMS2CIEXYZMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts XYZ color to Lab.
Notes: Setting WhitePoint to nil forces D50 as white point.

117.21.84 XYZ2xyY(p as LCMS2CIEXYZMBS) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from XYZ to xyY.

117.21.85 XYZEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a XYZ value, encoded on ICC convention to a LCMS2CIEXYZMBS value.
Notes: w0,w1 and w2: Array of 3 UInt16 values holding the encoded valkues.
Returns XYZ color on success or nil on failure.

117.21.86 Constants

Constants

Constant	Value	Description
kcmsMagicNumber	&h61637370	Magic number to identify an ICC profile.
kcmsMAXCHANNELS	16	Maximum number of channels in ICC profiles.
kD_CALCULATE	-1	Special value for D Value of ViewingConditions.
klcmsSignature	&h6C636D73	Little CMS signature.

Surround Constants

Constant	Value	Description
kAVG_SURROUND	1	
kCUTSHEET_SURROUND	4	
kDARK_SURROUND	3	
kDIM_SURROUND	2	

Header Flag Constants

Constant	Value	Description
kcmsEmbeddedProfileFalse	0	
kcmsEmbeddedProfileTrue	1	
kcmsUseAnywhere	0	
kcmsUseWithEmbeddedDataOnly	2	

Error Constants

Constant	Value	Description
kcmsERROR_ALREADY_DEFINED	10	Already defined
kcmsERROR_BAD_SIGNATURE	11	Bad signature
kcmsERROR_COLORSPACE_CHECK	9	Colorspace Check
kcmsERROR_CORRUPTION_DETECTED	12	Corruption detected
kcmsERROR_FILE	1	File error
kcmsERROR_INTERNAL	3	Internal error
kcmsERROR_NOT_SUITABLE	13	Not suitable
kcmsERROR_NULL	4	NULL passed
kcmsERROR_RANGE	2	Range error
kcmsERROR_READ	5	Read error
kcmsERROR_SEEK	6	Seek error
kcmsERROR_UNDEFINED	0	Undefined error
kcmsERROR_UNKNOWN_EXTENSION	8	Unknown extension
kcmsERROR_WRITE	7	Write error

Flag Constants

Constant	Value	Description
kcmsFLAGS_8BITS_DEVICELINK	8	Create 8 bits devicelinks
kcmsFLAGS_BLACKPOINTCOMPENSATION	&h00002000	Black point compensation.
kcmsFLAGS_CLUT_POST_LINEARIZATION	1	Create postlinearization tables if possible
kcmsFLAGS_CLUT_PRE_LINEARIZATION	16	Create prelinearization tables if possible
kcmsFLAGS_COPY_ALPHA	&h04000000	Whether to copy alpha.
kcmsFLAGS_FORCE_CLUT	2	Force CLUT optimization
kcmsFLAGS_GAMUTCHECK	&h00001000	Out of Gamut alarm
kcmsFLAGS_GUESSDEVICECLASS	32	Guess device class (for transform2devicelink)
kcmsFLAGS_HIGHRESPRECALC	&h00000400	Use more memory to give better accuracy.
kcmsFLAGS_KEEP_SEQUENCE	&h00000080	Keep profile sequence for devicelink creation
kcmsFLAGS_LOWRESPRECALC	&h00000800	Use less memory to minimize resouces
kcmsFLAGS_NOCACHE	64	Inhibit 1-pixel cache
kcmsFLAGS_NODEFAULTRESOURCEDEF	&h01000000	
kcmsFLAGS_NONEGATIVES	&h00008000	Prevent negative numbers in floating point transforms
kcmsFLAGS_NOOPTIMIZE	&h00000100	Inhibit optimizations
kcmsFLAGS_NOWHITEONWHITEFIXUP	4	Don't fix scum dot
kcmsFLAGS_NULLTRANSFORM	&h00000200	Don't transform anyway
kcmsFLAGS_SOFTPROOFING	&h00004000	Do softproofing

Screening Flag Constants

Constant	Value	Description
kcmsFREQUENCE_UNITS_LINES_CM	0	
kcmsFREQUENCE_UNITS_LINES_INCH	2	
kcmsPRINTER_DEFAULT_SCREENS	1	

Device Attribute Constants

Constant	Value	Description
kcmsGlossy	0	
kcmsMatte	2	
kcmsReflective	0	
kcmsTransparency	1	

Illuminant Constants

Constant	Value	Description
kcmsILLUMINANT_TYPE_A	6	A
kcmsILLUMINANT_TYPE_D50	1	D50
kcmsILLUMINANT_TYPE_D55	5	D55
kcmsILLUMINANT_TYPE_D65	2	D65
kcmsILLUMINANT_TYPE_D93	3	D93
kcmsILLUMINANT_TYPE_E	7	E
kcmsILLUMINANT_TYPE_F2	4	F2
kcmsILLUMINANT_TYPE_F8	8	F8
kcmsILLUMINANT_TYPE_UNKNOWN	0	Unknown

Colorspace Signature Constants

Constant	Value	Description

kTYPE_ABGR_8_DITHER	&h08040499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, dither, chunky, 4 bytes in total.
kTYPE_ABGR_8_PLANAR	&h00041499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, planar, sw bytes in total.
kTYPE_ABGR_8_PREMUL	&h00840499	RGB, 3 channels, 1 bytes, 1 extra samples, integer, premultiplied, output, 4 bytes in total.
kTYPE_ABGR_FLT	&h0044049C	RGB, 3 channels, 4 bytes, 1 extra samples, single, chunky, swa bytes in total.
kTYPE_ABGR_FLT_PREMUL	&h00C4049C	RGB, 3 channels, 4 bytes, 1 extra samples, single, premultiplied, output, 16 bytes in total.
kTYPE_ABGR_HALF_FLT	&h0044041A	RGB, 3 channels, 2 bytes, single, chunky, swap output, 6 bytes in
kTYPE_ACMYK_16	&h000640A2	CMYK, 4 channels, 2 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ACMYK_8	&h000640A1	CMYK, 4 channels, 1 bytes, 1 extra samples, integer, chunky, s bytes in total.
kTYPE_AGRAY_16	&h0003048A	GRAY, 1 channels, 2 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_AGRAY_16_PLANAR	&h0003508A	GRAY, 1 channels, 2 bytes, 1 extra samples, integer, planar, s bytes in total.
kTYPE_AGRAY_8	&h00030489	GRAY, 1 channels, 1 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_AGRAY_8_PLANAR	&h00035089	GRAY, 1 channels, 1 bytes, 1 extra samples, integer, planar, s bytes in total.
kTYPE_AGRAY_DBL	&h00430488	GRAY, 1 channels, 8 bytes, 1 extra samples, double, chunky, swa bytes in total.
kTYPE_AGRAY_DBL_PLANAR	&h00435088	GRAY, 1 channels, 8 bytes, 1 extra samples, double, planar, sw bytes in total.
kTYPE_AGRAY_FLT	&h0043048C	GRAY, 1 channels, 4 bytes, 1 extra samples, single, chunky, sw bytes in total.
kTYPE_AGRAY_FLT_PLANAR	&h0043508C	GRAY, 1 channels, 4 bytes, 1 extra samples, single, planar, swap i in total.
kTYPE_AKYMC_16	&h000604A2	CMYK, 4 channels, 2 bytes, 1 extra samples, integer, chunky, swa bytes in total.
kTYPE_AKYMC_8	&h000604A1	CMYK, 4 channels, 1 bytes, 1 extra samples, integer, chunky, sw bytes in total.
kTYPE_ALabV2_8	&h001E4099	LabV2, 3 channels, 1 bytes, 1 extra samples, integer, chunky, s bytes in total.
kTYPE_ALab_8	&h000A4099	Lab, 3 channels, 1 bytes, 1 extra samples, integer, chunky, swap i in total.
kTYPE_ARGB_15	&h0404409A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap i 8 bytes in total.
kTYPE_ARGB_16	&h0004409A	RGB, 3 channels, 2 bytes, 1 extra samples, integer, chunky, swap i

117.22 class LCMS2MLUMBS

117.22.1 class LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a multi localized unicode string.
Notes: MLU funtions are the low-level interface to access the localization features of V4 ICC profiles. Little CMS does offer a high-level interface for easy operation. You may want, however, handle those objects by yourself.

Obtaining localized info from profiles
In versions prior to 4.0, the ICC format defined a required tag 'desc' which stored ASCII, Unicode, and Script Code versions of the profile description for display purposes. However, this structure allowed the profile to be localized for one language only through Unicode or Script Code. Profile vendors had to ship many localized versions to different countries. It also created problems when a document with localized profiles embedded in it was shipped to a system using a different language. With the adoption of V4 spec as basis, Little CMS solves all those issues honoring a new tag type: ‚Äòmluc' and multi localized Unicode. There is a full part of the API to deal with this stuff, but if you don't care about the details and all you want is to display the right string, Little CMS provides a simplified interface for that purpose.
Note that ASCII is strictly 7 bits, so you need to use wide chars if you want to preserve the information in the profile. The localization trick is done by using the lenguage and country codes, which you are supposed to supply. Those are two or three ASCII letters. A list of codes may be found here:

Language Code:
http://lcweb.loc.gov/standards/iso639-2/iso639jac.html

Country Codes:
http://www.iso.ch/iso/en/prods-services/iso3166ma/index.html

In practice, "en" for "english" and "US" for "united states" are implemented in most profiles. It is Ok to set a language and a country even if the profile does not implement such specific language and country. Little CMS will search for a proper match.
If you don't care and want just to take the first string in the profile, you can use:

For the language:
kcmsNoLanguage

For the country:
kcmsNoCountry

This will force to get the very first string, without any searching. A note of warning on that: you will get an string, but the language would be any, and probably that is not what you want. It is better to specify

a default for language, and let LittleCMS to choose any other country (or language!) if what you ask for is not available.
Blog Entries

- MBS Xojo Plugins, version 23.5pr7

117.22.2 Methods

117.22.3 Constructor(context as LCMS2ContextMBS, items as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty multilocalized unicode object.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )
```

117.22.4 getASCII(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an ASCII (7 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes: Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country.

Returns the string.

117.22.5 getTranslation(LanguageCode as string, CountryCode as string, byref ObtainedLanguageCode as string, byref ObtainedCountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtains the translation rule for given multilocalized unicode object.
Notes: Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country
ObtainedLanguage: 3 chars to get the language translation.
ObtainedCode: 3 chars to get the country translation.

Returns true on success, false on error

117.22.6 getUnicode(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an unicode (16 bit) entry for the given Language and country.
Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country

Returns the string value.

117.22.7 setASCII(LanguageCode as string, CountryCode as string, ASCIIString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an ASCII (7 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
ASCIIString: String to add.

Returns true on success, false on error.

117.22.8 setUnicode(LanguageCode as string, CountryCode as string, UnicodeString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills a UNICODE wide char (16 bit) entry for the given Language and country.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)
call c.setUnicode("de", "DE", "K√§tzchen" )
Var u as string = c.getUnicode("de", "DE")
MsgBox u
```

Notes: Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
WideString: String to add.

Returns true on success, false on error.

117.22.9 translationsCodes(index as Integer, byref LanguageCode as string, byref CountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries language and country code for the given index.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

Var u as Integer = c.TranslationsCount-1
for i as Integer = 0 to u
Var LanguageCode as string
Var CountryCode as string

if c.translationsCodes(i, LanguageCode, CountryCode) then
MsgBox LanguageCode+" "+CountryCode
end if
```

next

Notes: Index is from 0 to TranslationsCount-1.

117.22.10 UnicodeStrings as String()

MBS Images Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all available strings.

117.22.11 Properties

117.22.12 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.22.13 TranslationsCount as Integer

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of stored translations.
Example:

```
Var c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox str(c.TranslationsCount)+" translations"
```

Notes: (Read only property)

117.22.14 Constants

Constants

Constant	Value	Description
kNoCountry	""	One of the possible country constants. Any country.
kNoLanguage	""	One of the possible language constants. Any language.

117.23 class LCMS2NamedColorListMBS

117.23.1 class LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specialized dictionaries for dealing with named color profiles.

117.23.2 Methods

117.23.3 Append(name as string) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 117.23.4 Append(name as string, PCS() as Integer) as Boolean 16940
- 117.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 16941

117.23.4 Append(name as string, PCS() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 117.23.3 Append(name as string) as Boolean 16940
- 117.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 16941

117.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes: If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 117.23.3 Append(name as string) as Boolean 16940
- 117.23.4 Append(name as string, PCS() as Integer) as Boolean 16940

117.23.6 Colorant(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded colorants of nth color.
Notes: Array has 16 entries, but not all may be in use.

117.23.7 ColorIndex(name as string) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a look-up in the dictionary and returns an index on the given color name.
Notes: Returns index on name, or -1 if the spot color is not found.

117.23.8 Constructor(context as LCMS2ContextMBS, n as UInt32, ColorantCount as UInt32, Prefix as string = "", Suffix as string = "")

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new named color list.
Notes: Allocates an empty named color dictionary.

Context: The user-defined context cargo.
N: Initial number of spot colors in the list
Colorant count: Number of channels of device space (i.e, 3 for RGB, 4 for CMYK, etc,)
Prefix, Suffix: fixed strings for all spot color names, e.g., "coated", "system", ...

On success handle is not zero.

117.23.9 Name(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of nth color.

117.23.10 PCS(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded PCS of nth color.
Notes: Array has 3 entries.

117.23.11 Prefix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns prefix of nth color.

117.23.12 Suffix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns suffix of nth color.

117.23.13 Properties

117.23.14 Count as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of spot colors in a named color list.
Notes: Returns the number of spot colors on success, 0 on error.
(Read only property)

117.23.15 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.24 class LCMS2PipelineMBS

117.24.1 class LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a pipeline.
Notes: Pipelines are a convenient way to model complex operations on image data. Each pipeline may contain an arbitrary number of stages. Each stage performs a single operation. Pipelines may be optimized to be executed on a certain format (8 bits, for example) and can be saved as LUTs in ICC profiles.

117.24.2 Methods

117.24.3 Append(p as LCMS2PipelineMBS) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends pipeline l2 at the end of pipeline l1.
Notes: Channel count must match.
Returns true on success and false on failure.

117.24.4 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 117.24.5 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean 16945

117.24.5 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 117.24.4 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean 16944
- 117.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean 16945

117.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Example:

```
// load a profile
Var file As FolderItem = SpecialFolder.Desktop.child("test.icc")
Var profile As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile( file, False )

// get the pipeline
Var pipeline As LCMS2PipelineMBS = profile.ReadPipeline( LCMS2MBS.kcmsSigBToA1Tag )

// get curves
Var CurveIn As LCMS2StageMBS
Var CLUT As LCMS2StageMBS
Var CurveOut As LCMS2StageMBS

Var ok As Boolean = pipeline.CheckAndRetreiveStages(_
LCMS2MBS.kcmsSigCurveSetElemType, _
LCMS2MBS.kcmsSigCLutElemType, _
LCMS2MBS.kcmsSigCurveSetElemType, _
CurveIn, CLUT, CurveOut)
```

```
Break // check the three entries
```

Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 117.24.4 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean 16944
- 117.24.5 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean 16945

117.24.7 Constructor(context as LCMS2ContextMBS, InputChannels as UInt32, OutputChannels as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty pipeline.
Notes: Final Input and output channels must be specified at creation time.

context: A user-defined context cargo.
InputChannels, OutputChannels: Number of channels on input and output.

117.24.8 Eval16(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline usin 16-bit numbers, optionally using the optimized path.
Notes: In: Input values.
Out: Output values.

For in and out you can use memoryblocks with UInt16 values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. An UInt16 value has 2 bytes.

117.24.9 EvalFloat(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline using floating point numbers.
Notes: In: Input values.
Out: Output values.

For in and out you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

117.24.10 EvalReverseFloat(Target as Ptr, Result as Ptr, Hint as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline in the reverse direction, using Newton's method.
Notes: Target: Input values.
Result: Output values.
Hint: Where begin the search.

For target, result and hint you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

Returns true on success, false on error.

117.24.11 InsertStage(where as Integer, stage as LCMS2StageMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a stage on either the head or the tail of a given pipeline.
Notes: where: enumerated constant, either kAtBegin or kAtEnd.
stage: Pointer to a stage object

117.24.12 SetSaveAs8bitsFlag(save8bit as boolean) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an internal flag that marks the pipeline to be saved in 8 bit precision.
Notes: By default all pipelines are saved on 16 bits precision on AtoB/BToA tags and in floating point precision on DToB/BToD tags.

save8bit: State of the flag, true=Save as 8 bits, false=Save as 16 bits

Returns true on success, false on error

117.24.13 Stages as LCMS2StageMBS()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with all stage objects.

117.24.14 UnlinkStage(where as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the stage from the pipeline.
Notes: Returns the removed stage object.
where can be kAtBegin or kAtEnd values.

117.24.15 Properties

117.24.16 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

117.24.17 FirstStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the first stage in the pipeline, or nil if pipeline is empty.
Notes: Intended for iterators.
(Read only property)

117.24.18 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.24.19 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given pipeline.
Notes: Number of channels on success, 0 on error.
(Read only property)

117.24.20 LastStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the last stage in the pipeline, or nil if pipeline is empty.
Notes: Intended for iterators.
(Read only property)

117.24.21 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of output channels of a given pipeline.
Notes: Number of channels on success, 0 on error.
(Read only property)

117.24.22 StageCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of stages of a given pipeline.
Notes: (Read only property)

117.24.23 Constants

Location Constants for UnlinkStage

Constant	Value	Description
kAtBegin	0	At the beginning.
kAtEnd	1	At the end.

117.25 class LCMS2ProfileMBS

117.25.1 class LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 profile.
Blog Entries

117.25.2 Methods

117.25.3 cmsV2Unicode as String

MBS Images Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns special constant to access unicode string for V2 profiles.
Example:

```
// special v2 unicode string
Var ProfileVersion As Integer = MyProfile.ProfileVersion

If ProfileVersion = 2 Then
Var cmsV2Unicode As String = LCMS2ProfileMBS.cmsV2Unicode
Var s2 As String = MyMLU.getUnicode(cmsV2Unicode, cmsV2Unicode)

If s2<>"" Then
List.AddRow "V2 Unicode Text", s2
End If
End If
```

117.25.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty profile.
Notes: On success the handle property is not zero.
See also:

- 117.25.5 Constructor(file as folderitem, write as boolean = false) 16951

117.25.5 Constructor(file as folderitem, write as boolean = false)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates profile by reading in an existing profile or creating a new profile at the given location.
Notes: file: file location.
write: Whether to create new profile.

On success the handle property is not zero.
See also:

- 117.25.4 Constructor(context as LCMS2ContextMBS = nil) 16951

117.25.6 CreateBCHSWabstractProfile(context as LCMS2ContextMBS, nLUTPoints as UInt32, Bright as double, Contrast as double, Hue as double, Saturation as double, TempSrc as UInt32, TempDest as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an abstract devicelink operating in Lab for Bright/Contrast/Hue/Saturation and white point translation.
Notes: White points are specified as temperatures degree of Kelvin.

context: optional context object.
nLUTPoints: Resulting colormap resolution
Bright: Bright increment. May be negative
Contrast: Contrast increment. May be negative.
Hue: Hue displacement in degree.
Saturation: Saturation increment. May be negative
TempSrc: Source white point temperature
TempDest: Destination white point temperature.

Returns an ICC profile object on success, nil on error.

117.25.7 CreateGrayProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyY TransferFunction as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a gray profile based on White point and transfer function.
Notes: It populates followingtags; this conform a standard gray display profile:

1 cmsSigProfileDescriptionTag
2 cmsSigMediaWhitePointTag
3 cmsSigGrayTRCTag

Context: Optional context object.
WhitePoint: The white point of the gray device or space.
TransferFunction: tone curve describing the device or space gamma.

Returns an ICC profile object on success, NULL on error.

117.25.8 CreateInkLimitingDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, Limit as Double) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in CMYK for ink-limiting.
Notes: Space: any color space signature. Currently only kcmsSigCmykData is supported.
Limit: Amount of ink limiting in % (0..400%)

Returns new profile or nil on error.

117.25.9 CreateLab2Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYM = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v2 ICC profile.
Notes: Adjustments for accomodating PCS endoing shall be done by Little CMS when using this profile.

Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

117.25.10 CreateLab4Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v4 ICC profile.
Notes: Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

117.25.11 CreateLinearizationDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in the target colorspace with as many transfer functions asÔøº-components.
Notes: Space: The desired color space signature. Like &h52474220 for RGB.
TransferFunction: tone curves describing the device or space linearization.

Please make sure you pass right number of transfer functions matching number of channels of color space.

A handle to an ICC profile object on success, NULL on error.

117.25.12 CreateNULLProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a fake NULL profile.
Notes: This profile return 1 channel as always 0. Is useful only for gamut checking tricks.
Returns an ICC profile object on success, nil on error.

117.25.13 CreateProfilePlaceholder(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty profile object, to be populated by the programmer.
Notes: WARNING: The profile without adding any information is not directly useable.

Context: The context object.
Returns an ICC profile object on success, nil on error.

117.25.14 CreateRGBProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a RGB profile based on White point, primaries and transfer functions.
Notes: It populates following tags; this conform a standard RGB Display Profile, and then I add (As per addendum II) chromaticity tag.

1 cmsSigProfileDescriptionTag
2 cmsSigMediaWhitePointTag
3 cmsSigRedColorantTag
4 cmsSigGreenColorantTag
5 cmsSigBlueColorantTag
6 cmsSigRedTRCTag
7 cmsSigGreenTRCTag
8 cmsSigBlueTRCTag
9 Chromatic adaptation Tag
10 cmsSigChromaticityTag

Context: Optional context object.
WhitePoint: The white point of the RGB device or space.
Primaries: The primaries in xyY of the device or space.
TransferFunction: 3 tone curves describing the device or space gamma. (if you pass just one, the plugin uses it for all three channels)

Returns the new ICC profile object or nil on any error.

117.25.15 CreateSRGBProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an ICC virtual profile for sRGB space.
Notes: sRGB is a standard RGB color space created cooperatively by HP and Microsoft in 1996 for use on monitors, printers, and the Internet.

sRGB white point is D65.
xyY 0.3127, 0.3291, 1.0
ÔøºÔøºÔøº

Returns the new profile on success or nil on failure.

117.25.17 DetectBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimate the black point.

117.25.18 DetectDestinationBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the black point of a destination profile.
Notes: This algorithm comes from the Adobe paper disclosing its black point compensation method.

117.25.19 DetectRGBProfileGamma(threshold as double) as double

MBS Images Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimate gamma space, always positive.
Notes: Returns -1 on error.
threshold e.g. 0.01.

117.25.20 DetectTAC as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detects total area coverage.
Notes: When several colors are printed on top of each other, there is a limit to the amount of ink that can be put on paper. This maximum total dot percentage is referred to as either TIC (Total Ink Coverage) or TAC (Total Area Coverage). This function does estimate total area coverage for a given profile in %. Only works on output profiles. On RGB profiles, 400% is returned. TAC is detected by subsampling Lab color space on 6x74x74 points.

Returns estimated area coverage in % on success, 0 on error.

117.25.21 FormatterForBitmap(BitCount as Integer = 8) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: This is a convenience function which prepares you a pixel format for use with LCMS2BitmapMBS class.
Formatters are used to describe how bitmap buffers are organized.

117.25.22 FormatterForColorspace(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: nBytes is number of bytes per color value. For 3 byte RGB, you pass 1 here.
Formatters are used to describe how bitmap buffers are organized.

e.g.
nBytes = 1 and isfloat = false gives UInt8.
nBytes = 2 and isfloat = false gives UInt16.
nBytes = 4 and isfloat = true gives 32-bit float, which is Single in Xojo.
nBytes = 8 and isfloat = true gives 64-bit float, which is Double in Xojo.

117.25.23 FormatterForPCS(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: Formatters are used to describe how bitmap buffers are organized.

117.25.24 GetProfileInfo(Info as Integer, LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets several information strings from the profile, dealing with localization.
Notes: Info: A selector of which info to return. (kInfoCopyright, kInfoDescription, kInfoManufacturer or kInfoModel)
Language Code: first name language code from ISO-639/2.

Country Code: first name region code from ISO-3166.

Returns the string. (empty string on error)

117.25.25 IsCLUT(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a CLUT is present in the profile for the given intent and direction.
Notes: Intent: The intent code.
UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true CLUT is present for given intent and direction, false otherwise.

117.25.26 IsIntentSupported(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the requested intent is implemented in the given direction.
Notes: Little CMS has a fallback strategy that allows to specify any rendering intent when creating the transform, but the intent really being used may be another if the requested intent is not implemented.

UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true if the intent is implemented, false otherwise.

117.25.27 IsTag(TagSignature as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if a tag with signature sig is found on the profile.
Notes: Useful to check if a profile contains a given tag.
Returns true if the tag is found or false otherwise.

117.25.28 LinkTag(sig as Integer, dest as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a directory entry on tag sig that points to same location as tag dest.
Notes: Using this function you can collapse several tag entries to the same block in the profile.

sig: Signature of linking tag.
dest: Signature of linked tag.

Returns ture on success, false on error

117.25.29 MD5computeID as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes a MD5 checksum and stores it as Profile ID in the profile header.
Notes: Returns true on success or false on failure.

117.25.30 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Notes: context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 117.25.31 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS 16959

117.25.31 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Example:

```
Var path As String = "/Library/ColorSync/Profiles/Blue Tone.icc"
Var file as new FolderItem(path, FolderItem.PathModes.Native)
Var p As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(file)

MessageBox p.TagCount.ToString+" tags"
```

Notes: context: Optional context object.

file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 117.25.30 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS 16959

117.25.32 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 117.25.33 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS 16960

117.25.33 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 117.25.32 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS 16960

117.25.34 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 117.25.35 OpenProfileFromString(data as string) as LCMS2ProfileMBS 16961

117.25.35 OpenProfileFromString(data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes: Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 117.25.34 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS 16961

117.25.36 PostScriptCRD(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CRD generation.
Notes: context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.
Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

117.25.37 PostScriptCSA(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CSA generation.
Notes: context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.
Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

117.25.38 ReadChromaticAdaptation as LCMS2CIEXYZMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a chromatic adaptation.
Notes: On success returns an array of 3 XYZ values.

117.25.39 ReadChromaticity as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads chromaticity tag.
Notes: For kcmsSigChromaticityTag.
Returns nil on error.

117.25.40 ReadCIEXYZ(tag as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as CIE XYZ value.
Notes: Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhite-PointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.
Returns nil on any error.

117.25.41 ReadColorantOrder as Memoryblock

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads colorant order.
Notes: For kcmsSigColorantOrderTag.
Returns nil on any error.

117.25.42 ReadDate(tag as Integer) as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as date.
Notes: Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.
Returns nil on any error.

117.25.43 ReadDict(tag as Integer) as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as Dictionary value.
Notes: Works with kcmsSigMetaTag.
Returns nil on any error.

117.25.44 ReadICCData(tag as Integer) as LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICC Data.
Notes: Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.
Returns nil on any error.

117.25.45 ReadICCMeasurementConditions as LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads IIC measurement conditions.
Notes: for kcmsSigMeasurementTag.
Returns nil on any error.

117.25.46 ReadICCViewingConditions as LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICCViewingConditions value.
Notes: Works with kcmsSigViewingConditionsTag.

117.25.47 ReadMLU(tag as Integer) as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as MLU.
Notes: Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.
Returns nil on any error.

117.25.48 ReadNamedColorList(tag as Integer) as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as named color list.
Notes: Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.
Returns nil on any error.

117.25.49 ReadPipeline(tag as Integer) as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as pipeline.
Notes: Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.
Returns nil on any error.

117.25.50 ReadRawTag(sig as Integer) as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads raw tag.
Notes: Similar to ReadTag*, but different in two important aspects. The important point is, this is raw data. No processing is performed, so you can effectively read wrong or broken profiles with this function. Obviously, then you have to interpret all those bytes!

sig: Signature of tag to be read

Returns memoryblock with data or nil on any error.

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

Returns nil on any error.

117.25.51 ReadScreening as LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as screening.
Notes: Works with kcmsSigScreeningTag.
Returns nil on any error.

117.25.52 ReadSequence(tag as Integer) as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as sequence.
Notes: Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.
Returns nil on any error.

117.25.53 ReadSignature(tag as Integer) as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signature tag.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

117.25.54 ReadTag(tag as Integer) as Variant

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a tag.
Notes: This is a convenience function which gives you the tag in whatever class the plugin thing is suitable. Check with isa what class you get.
Returns nil on any error.

117.25.55 ReadToneCurve(tag as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ToneCurve.
Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRC-Tag.

117.25.56 ReadUcrBg as LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads UcrBg tag.

117.25.57 SaveProfileToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a given file.
Notes: Returns true on success and false on failure.

117.25.58 SaveProfileToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a memoryblock.
Notes: Returns memoryblock on success and nil on failure.

117.25.59 SaveProfileToString as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a string.
Notes: Returns string with profile data on success and "" on failure.

117.25.60 TagLinkedTo(sig as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the tag linked to sig, in the case two tags are sharing same resource, or nil if the tag is not linked to any other tag.
Notes: sig: Signature of linking tag.

Returns signature of linked tag, or 0 if no tag is linked.

117.25.61 TagSignature(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the signature of a tag located in n position being n a 0-based index: i.e., first tag is indexed with n=0.
Notes: index: index to a tag position (0-based)

Returns the tag signature on success, 0 on error.
Changed in v23.5 to raise exception for invalid index.

117.25.62 TagSignatures as Integer()

MBS Images Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the array of tag signatures.
Example:

```
Var path As String = "/Library/ColorSync/Profiles/Blue Tone.icc"
Var file as new FolderItem(path, FolderItem.PathModes.Native)
Var p As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(file)

Var tags() As Integer = p.TagSignatures
Break // inspect array in debugger
```

Notes: The array contains all tags and you can loop over the array and use ReadTag()

117.25.63 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes: Variant of the function which takes matrix of values.
See also:

- 117.25.64 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean 16968

117.25.64 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes: Pass array with 3 XYZ colors.
Returns true on success.
See also:

- 117.25.63 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean 16968

117.25.65 WriteChromaticity(o as LCMS2CIExyYTripleMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromaticity tag.
Notes: For kcmsSigChromaticityTag.
Returns true on success and false on error.

117.25.66 WriteCIEXYZ(tag as Integer, o as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes CIE XYZ tag.
Notes: Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhite-PointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.

117.25.67 WriteColorantOrder(data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes colorant order.
Notes: For kcmsSigColorantOrderTag.

Data should be 16 byte long.
Returns true on success or false on failure.

117.25.68 WriteDate(tag as Integer, o as LCMS2DateMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes date tag.
Notes: Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.

117.25.69 WriteDict(tag as Integer, o as LCMS2DictionaryMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes Dictionary tag.
Notes: Works with kcmsSigMetaTag.

117.25.70 WriteICCData(tag as Integer, o as LCMS2ICCDataMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Data tag.
Notes: Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.

117.25.71 WriteICCMeasurementConditions(value as LCMS2ICCMeasurement-ConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes IIC measurement conditions.
Notes: for kcmsSigMeasurementTag.
Writes data and returns true on success or false on failure.

117.25.72 WriteICCViewingConditions(o as LCMS2ICCViewingConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Viewing conditions tag.
Notes: Works with kcmsSigViewingConditionsTag.

117.25.73 WriteMLU(tag as Integer, o as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes MLU tag.
Notes: Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.

117.25.74 WriteNamedColorList(tag as Integer, o as LCMS2NamedColorListMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes named color list tag.
Notes: Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.

117.25.75 WritePipeline(tag as Integer, o as LCMS2PipelineMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes pipeline tag.
Notes: Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.

117.25.76 WriteRawTag(sig as Integer, data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes raw tag.
Notes: The RAW version does the same as WriteTag* but without any interpretation of the data. Please note it is fair easy to deal with "cooked" structures, since there are primitives for allocating, deleting and modifying data. For RAW data you are responsible of everything. If you want to deal with a private tag, you may want to write a plug-in instead of messing up with raw data.

sig: Signature of tag to be written
data: memory block holding the data.

Returns true on success, false on error

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

117.25.77 WriteScreening(o as LCMS2ScreeningMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes screening tag.
Notes: Works with kcmsSigScreeningTag.

117.25.78 WriteSequence(tag as Integer, o as LCMS2SequenceMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes sequence tag.
Notes: Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.

117.25.79 WriteSignature(tag as Integer, o as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a signature tag with the given values.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

117.25.80 WriteToneCurve(tag as Integer, o as LCMS2ToneCurveMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes tone curve tag.
Example:

```
// read a profile
Var f as FolderItem = SpecialFolder.Desktop.Child("myprofile.icc")
```

```
Var p as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(f)

// find gray level tone curve
Var t as LCMS2ToneCurveMBS = p.ReadToneCurve(LCMS2MBS.kcmsSigGrayTRCTag)
if t<>nil then

// let's make a new one with half of old values
Var values(1000) as single

for i as Integer = 0 to 1000
values(i) = t.EvalToneCurveFloat(i/1000.0) * 0.5
next

// build new curve with that values
Var n as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

// write back
if not p.WriteToneCurve(LCMS2MBS.kcmsSigGrayTRCTag, n) then
MsgBox "failed to write tone curve"
end if
end if

// write profile
f = SpecialFolder.Desktop.Child("test.icc")
call p.SaveProfileToFile(f)
```

Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRC-Tag.

117.25.81 WriteUcrBg(o as LCMS2UcrBgMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes UcrBg tag.

117.25.82 Properties

117.25.83 ChannelCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels used for the colorspace of this profile.
Example:

```
Var p as LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
MsgBox str(p.ChannelCount)
```

Notes: (Read only property)

117.25.84 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the color space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

117.25.85 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read only property)

117.25.86 DeviceClass as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/sets the device class signature from profile header.
Notes: Device Classes:
Ôøº

kcmsSigInputClass	&h73636E72	scnr
kcmsSigDisplayClass	&h6D6E7472	mntr
kcmsSigOutputClass	&h70727472	prtr
kcmsSigLinkClass	&h6C696E6B	link
kcmsSigAbstractClass	&h61627374	abst
kcmsSigColorSpaceClass	&h73706163	spac
kcmsSigNamedColorClass	&h6e6d636c	nmcl

(Read and Write property)

117.25.87 File as FolderItem

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file reference.
Notes: Only set for file based profiles, so you can later know what file you used to create the profile object.
(Read and Write property)

117.25.88 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

117.25.89 HeaderAttributes as UInt64

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set header attribute flags.
Notes: Flags can be a combination of kcmsReflective,ÔøºkcmsTransparency,ÔøºkcmsGlossy or kcmsMatte.
(Read and Write property)

117.25.90 HeaderCreationDateTime as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the date and time when profile was created.
Notes: This is a field stored in profile header.
Returns nil on any error.
(Read only property)

117.25.91 HeaderCreator as UInt32

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the creator signature as described in the header.
Notes: (Read only property)

117.25.92 HeaderFlags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set header flags of given ICC profile object.
Notes: The profile flags field does contain flags to indicate various hints for the CMM such as distributed processing and caching options. The least-significant 16 bits are reserved for the ICC. Flags in bit positions 0 and 1 shall be used as indicated below.

Position	Field Length (bits)	Field Contents
0	1	Embedded Profile (kcmsEmbeddedProfileFalse if not embedded, kcmsEmbeddedProfileTrue if embedded in file)
1	1	Profile cannot be used independently from the embedded color data (set to kcmsUseWithEmbeddedDataOnly if true, kcmsUseAnywhere if false)

(Read and Write property)

117.25.93 HeaderManufacturer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the manufacturer signature as described in the header.
Notes: This funcionality is widely superseded by the manufaturer tag. Of use only in elder profiles.
(Read and Write property)

117.25.94 HeaderModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the model signature as described in the header.
Notes: This funcionality is widely superseded by
the model tag. Of use only in elder profiles.
(Read and Write property)

117.25.95 HeaderProfileID as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set header profile ID.
Notes: Profile ID must be a 16 byte long string.
(Read and Write property)

117.25.96 IsMatrixShaper as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a matrix-shaper is present in the profile.
Notes: Note that a profile may hold matrix-shaper and CLUT as well.
Returns true if the profile holds a matrix-shaper, false otherwise.
(Read only property)

117.25.97 Name as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the profile name.
Notes: This is a convenience function. The plugin builds this name from manufacturer, model and description strings.
(Read only property)

117.25.98 PCS as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile connection space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

117.25.99 ProfileICCversion as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the profile ICC version in the same format as it is stored in the header.
Notes: (Read and Write property)

117.25.100 ProfileVersion as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the ICC version in profile header.
Notes: The version given as to this function as a float n.m is properly encoded.
(Read and Write property)

117.25.101 RenderingIntent as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile header rendering intent.
Notes: From the ICC spec: "The rendering intent field shall specify the rendering intent which should be used (or, in the case of a Devicelink profile, was used) when this profile is (was) combined with another profile. In a sequence of more than two profiles, it applies to the combination of this profile and the next profile in the sequence and not to the entire sequence. Typically, the user or application will set the rendering intent dynamically at runtime or embedding time. Therefore, this flag may not have any meaning until the profile is used in some context, e.g. in a Devicelink or an embedded source profile."
(Read and Write property)

117.25.102 TagCount as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of tags of a given profile.
Notes: Returns number of tags on success, -1 on error.
(Read only property)

117.25.103 Constants

Info selector.

Constant	Value	Description
kInfoCopyright	3	The copyright string.
kInfoDescription	0	The description string.
kInfoManufacturer	1	The manufacturer string.
kInfoModel	2	The model string.

117.26 class LCMS2ScreeningChannelMBS

117.26.1 class LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for one channel.

117.26.2 Methods

117.26.3 Clone as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the screening channel object.

117.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
See also:

- 117.26.5 Constructor(other as LCMS2ScreeningChannelMBS) 16978

117.26.5 Constructor(other as LCMS2ScreeningChannelMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 117.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0) 16978

117.26.6 Properties

117.26.7 Frequency as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frequency.
Notes: (Read and Write property)

117.26.8 ScreenAngle as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screen angle.
Notes: (Read and Write property)

117.26.9 SpotShape as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The spot shape.
Notes: See kcmsSpot* constants.
(Read and Write property)

117.27 class LCMS2ScreeningMBS

117.27.1 class LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for screening parameters.

117.27.2 Properties

117.27.3 Channels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels.
Notes: (Read and Write property)

117.27.4 Flag as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for screening.
Notes: See flags kcmsPRINTER_DEFAULT_SCREENS, kcmsFREQUENCE_UNITS_LINES_CM and kcmsFREQUENCE_UNITS_LINES_INCH.
(Read and Write property)

117.27.5 Channel(index as Integer) as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for each channel.
Notes: Index from 0 to 15.
(Read and Write computed property)

117.28 class LCMS2SequenceDescriptionMBS

117.28.1 class LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a sequence description.

117.28.2 Properties

117.28.3 AttributeFlags as UInt64

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute flags.
Notes: (Read and Write property)

117.28.4 Description as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read only property)

117.28.5 DeviceMfg as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device Mfg.
Notes: (Read and Write property)

117.28.6 DeviceModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device model.
Notes: (Read and Write property)

117.28.7 Manufacturer as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer name.
Notes: (Read only property)

117.28.8 Model as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model string.
Notes: (Read only property)

117.28.9 ProfileID as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profile ID.
Notes: 16 bytes and typically the result of a MD5.
(Read only property)

117.28.10 Technology as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The technology value.
Notes: Use one of the following constants: kcmsSigDigitalCamera, kcmsSigFilmScanner, kcmsSigReflectiveScanner, kcmsSigInkJetPrinter, kcmsSigThermalWaxPrinter, kcmsSigElectrophotographicPrinter, kcmsSigElectrostaticPrinter, kcmsSigDyeSublimationPrinter, kcmsSigPhotographicPaperPrinter, kcmsSigFilmWriter, kcmsSigVideoMonitor, kcmsSigVideoCamera, kcmsSigProjectionTelevision, kcmsSigCRTDisplay, kcmsSigPMDisplay, kcmsSigAMDisplay, kcmsSigPhotoCD, kcmsSigPhotoImageSetter, kcmsSigGravure, kcmsSigOffsetLithography, kcmsSigSilkscreen, kcmsSigFlexography, kcmsSigMotionPictureFilmScanner, kcmsSigMotionPictureFilmRecorder, kcmsSigDigitalMotionPictureCamera or kcmsSigDigitalCinemaProjector.
(Read and Write property)

117.29 class LCMS2SequenceMBS

117.29.1 class LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Profile sequence descriptors.
Notes: Profile sequence can be read/written by using cmsReadTag and cmsWriteTag functions.

117.29.2 Methods

117.29.3 Constructor(context as LCMS2ContextMBS, Count as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new sequence with the given number of entries.
Example:

```
Var d as new LCMS2SequenceMBS(nil, 5)
MsgBox str(d.Count)
```

Notes: On success the handle property is not zero.

117.29.4 Properties

117.29.5 Count as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of sequence descriptions used in this class.
Notes: (Read only property)

117.29.6 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.29.7 Description(index as Integer) as LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sequence descriptions.
Notes: Index from 0 to count-1.
(Read and Write computed property)

117.30 class LCMS2StageMBS

117.30.1 class LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A pipeline stage.
Notes: Stages are single-step operations that can be chained to create pipelines. Actual stage types does include matrices, tone curves, Look-up interpolation and user-defined. There are functions to create new stage types and a plug-in type to allow stages to be saved in multi profile elements tag types. See the plug-in API for further details.

117.30.2 Methods

117.30.3 CLutFloatValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = true.

117.30.4 CLutParamsSamples as UInt32()

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sample counts in the CLut parameters.
Notes: Valid on all kinds of tables.

117.30.5 CLutUInt16Values as UInt16()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut integer values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = false.

117.30.6 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes: Each dimension has same resolution.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 117.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 16986
- 117.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 16987

117.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter. The recommended way is to set Table to nil and use StageSampleCLut16bit with a event, because this way the implementation is independent of the selected number of grid points.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Memoryblock with a table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 117.30.6 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan

as UInt32, outputChan as UInt32) as LCMS2StageMBS 16986

- 117.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 16987

117.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

Var data() as UInt16

// fill all the data into the table upfront, RGB to CMYK

Var c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
Var r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
Var g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
Var b as Double = Grid0 / 16

// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Append 65535 * c
data.Append 65535 * m
data.Append 65535 * y
data.Append 65535 * k

next
next
next

Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bit(nil, 17, 3, 4, data)
break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: array of UInt16, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 117.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 16986

117.30.9 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 117.30.10 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 16989
- 117.30.11 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 16989

117.30.10 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Memoryblock with table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 117.30.9 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 16988
- 117.30.11 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 16989

117.30.11 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
Var ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

Var noData() as UInt16 = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bitGranular(nil, ChannelGridPoints, 3, 4, noData)
```

break

Notes: Context: user-defined context cargo.
clutPoints: Array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Table of UInt16, holding initial values for nodes. If nil/empty the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 117.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 16992

117.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels and 4 output channels
Var noData() as Double = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, noData)

break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of double values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 117.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 16992

117.30.15 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

Var data() as Single

// fill all the data into the table upfront, RGB to CMYK

Var c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
Var r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
Var g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
Var b as Double = Grid0 / 16

// some bad conversion
```

```
c = r
m = g
y = b
k = 0

// fill array with values
data.Append c
data.Append m
data.Append y
data.Append k

next
next
next

Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, data)

break
```

Notes: Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of single (Float32) values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 117.30.13 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 16991

- 117.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS 16991

117.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 117.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 16994
- 117.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 16995

117.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Notes: Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a pointer to a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 117.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 16994
- 117.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 16995

117.30.18 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
Var ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

Var noData() as Single = nil
Var CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloatGranular(nil, ChannelGridPoints, 3, 4, noData)
Break
```

Notes: Context: user-defined context cargo.
clutPoints: Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 117.30.16 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 16994
- 117.30.17 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 16994

117.30.19 CreateStageWithIdentity(context as LCMS2ContextMBS, Channels as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty (identity) stage that does no operation.
Notes: May be needed in order to save the pipeline as AToB/BToA tags in ICC profiles.

Context: user-defined context cargo.

Channels: Number of channels

Returns a pipeline stage on success, nil on error.

117.30.20 CreateStageWithMatrix(context as LCMS2ContextMBS, Rows as UInt32, Cols as UInt32, Matrix as Memoryblock, Offset as Memoryblock = nil) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a matrix plus an optional offset.
Notes: Note that Matrix is specified in double precision, whilst CLUT has only float precision. That is because an ICC profile can encode matrices with far more precision that CLUTS.

Context: user-defined context cargo.
Rows, Cols: Dimensions of matrix
Matrix: Memoryblock with a matrix of [Rows, Cols] (double values, 8 byte per value)
Offset: Memoryblock with a vector of [Cols] , nil if no offset is to be applied.

Returns a pipeline stage on success, nil on error.

117.30.21 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes: Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 117.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

117.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes: Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 117.30.21 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS 16996

117.30.23 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bitGranular or CreateStageWithCLutFloatGranular must be.
See also:

- 117.30.24 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 16997

117.30.24 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bit or CreateStageWithCLutFloat must be.
See also:

- 117.30.23 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 16997

117.30.25 MatrixOffsets as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix offsets.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

117.30.26 MatrixValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix values.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

117.30.27 SampleCLut16bit(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a 16-bit sampler on each node.
Notes: Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

117.30.28 SampleCLutFloat(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a float sampler on each node.
Notes: Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages

in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

117.30.29 ToneCurves as LCMS2ToneCurveMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with tone curves.
Notes: Only if stage is from type kcmsSigCurveSetElemType and.

117.30.30 Properties

117.30.31 CLutEntries as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the CLut.
Notes: Only if stage is from type kcmsSigCLutElemType.
(Read only property)

117.30.32 CLutHasFloatValues as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this CLut has floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType.
(Read only property)

117.30.33 CLutParamsInputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of input parameters for in the CLut parameters.
Notes: Value is <>1 only in 3D interpolation.
(Read only property)

117.30.34 CLutParamsOutputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of output parameters for in the CLut parameters.
Notes: Value is <>1 only in 3D interpolation.
(Read only property)

117.30.35 Data as Ptr

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw stage data.
Notes: (Read only property)

117.30.36 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.30.37 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given stage object.
Notes: (Read only property)

117.30.38 NextItem as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns next stage in pipeline list, or nil if end of list.
Notes: Intended for iterators.
(Read only property)

117.30.39 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of output channels of a this stage object.
Notes: (Read only property)

117.30.40 Type as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the type of a given stage object.
Notes: Use this type constants: kcmsSigCurveSetElemType, kcmsSigMatrixElemType, kcmsSigCLutElemType, kcmsSigBAcsElemType, kcmsSigEAcsElemType, kcmsSigXYZ2LabElemType, kcmsSigLab2XYZElemType, kcmsSigNamedColorElemType, kcmsSigLabV2toV4, kcmsSigLabV4toV2, kcmsSigIdentityElemType.
(Read only property)

117.30.41 Constants

Constants

Constant	Value	Description
kSamplerInspect	&h01000000	One of the flags for Sampling. Use this flag to prevent changes being written to destination when using SampleCLutFloat or SampleCLut16bit.

117.31 class LCMS2StageSamplerMBS

117.31.1 class LCMS2StageSamplerMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for getting sampler callback.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

117.31.2 Methods

117.31.3 SliceSpaceFloat(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a floating point callback of type cmsSAMPLERFLOAT.
Notes: Parameters:
Inputs: Number of components in target space.
clutPoints: Array [nInputs] holding the division slices for each component.
Calls Floating point sample event to execute on each slice.

Returns true on success, false on error.

117.31.4 SliceSpaceInteger(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a 16 bits callback of type cmsSAMPLER16.
Notes: Parameters:
Inputs: Number of components in target space.
values: Array [nInputs] holding the division slices for each component.

Calls 16 bit Sample event to execute on each slice.

Returns true on success, false on error.

117.31.5 Events

117.31.6 SamplerFloat(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sampler event called by SampleCLutFloat.
Notes: In and Out point to 32 bit float values, so please use Single property to access.
InputChannels and OutputChannels are the number of channels.

117.31.7 SamplerInteger(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sampler event called by SampleCLut16bit.
Notes: In and Out point to 16 bit unsigned integer values, so please use UInt16 property to access.
InputChannels and OutputChannels are the number of channels.

117.32 class LCMS2ToneCurveMBS

117.32.1 class LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a tone curve or gamma.
Blog Entries

- MBS Releases the MBS Real Studio plug-ins in version 12.0
- MBS Real Studio Plugins, version 12.0pr4

117.32.2 Methods

117.32.3 BuildGamma(context as LCMS2ContextMBS, gamma as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simplified wrapper to BuildParametricToneCurve.
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

Notes: Builds a parametric curve of type 1.

Context: user-defined context object.
Gamma: Value of gamma exponent

Returns a newly created tone curve object on success, nil on error.

117.32.4 BuildParametricToneCurve(context as LCMS2ContextMBS, Type as Integer, params() as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a parametric tone curve.
Notes: Parameters:
context: user-defined context object.
Type: Number of parametric tone curve. (see LCMS2 manual)
Params: Array of tone curve parameters.

Returns a newly created tone curve object on success, nil on error.

117.32.5 BuildSegmentedToneCurve(context as LCMS2ContextMBS, Segments() as LCMS2CurveSegmentMBS) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve from given segment information.
Notes: context: Puser-defined context object
Segments: Array of segments

Returns a newly created tone curve object on success, nil on error.

117.32.6 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of floating point values.
Example:

```
Var values(-1) as Single

for i as Integer = 0 to 9
values.Append 0.5 + i*0.02
next

Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

Var items(-1) as string
for i as Integer = 0 to 10
Var v as Single = t.EvalToneCurveFloat(i/10.0)
items.Append str(i/10.0)+" ->"+str(v)
next

MsgBox Join(items,EndOfLine)
```

Notes: Tone curves built with this function are not restricted to 0...1.0 domain.

context: user-defined context object.
values: Array of samples. Domain of samples is 0...1.0

Returns a newly created tone curve object on success, nil on error.
See also:

- 117.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS 17006

117.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of 16-bit values. Tone curves built with this function are restricted to 0...1.0 domain.
Notes: context: user-defined context object.
values: Array of samples. Domain is 0...65535 (UInt32).

Returns a newly created tone curve object on success, nil on error.
See also:

- 117.32.6 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS 17005

117.32.8 EstimatedTable as UInt16()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low,Äêresolution tabulated representation of the curve. This function returns an array with this table.

117.32.9 EstimatedTableEntries as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low,Äêresolution tabulated representation of the curve. This function returns the number of entries such table has.

117.32.10 EstimateGamma(Precision as Double = 0.01) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimates the apparent gamma of the tone curve by using least squares fitting to a pure exponential expression in the f(ùë •) = ùë • .
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

Notes: Precision: The maximum standard deviation allowed on the residuals, 0.01 is a fair value, set it to a big number to fit any curve, mo matter how good is the fit.

Returns the estimated gamma at given precision, or -1.0 if the fitting has less precision.

117.32.11 EvalToneCurve16(value as UInt16) as UInt16

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given 16-bit number across the given tone curve.
Notes: This function is significantly faster than EvalToneCurveFloat, since it uses a pre-computed 16-bit lookup table.
Value: 16 bit Number to evaluate
Returns operation result

117.32.12 EvalToneCurveFloat(value as Single) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given floating-point number across the given tone curve.
Example:

```
Var t1 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 1.0)
Var t2 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.0)
Var t3 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 3.0)

Var v1 as Double = t1.EvalToneCurveFloat(0.5)
Var v2 as Double = t2.EvalToneCurveFloat(0.5)
Var v3 as Double = t3.EvalToneCurveFloat(0.5)

MsgBox str(v1)+" "+str(v2)+" "+str(v3)
```

Notes: Value: floating point number to evaluate
Returns the result.

117.32.13 IsDescending as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if f(0) >f(1) , false otherwise.
Notes: Does not take unbounded parts into account.

117.32.14 IsLinear as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of cube being an identity (1:1) in the [0..1] domain.
Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

117.32.15 IsMonotonic as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of monotonicity of curve in the [0..1] domain.
Example:

```
Var t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox "IsMonotonic: "+str(t.IsMonotonic)
```

Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

117.32.16 IsMultisegment as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the tone curve contains more than one segment, false if it has only one segment.

117.32.17 JoinToneCurve(context as LCMS2ContextMBS, X as LCMS2ToneCurveMBS, Y as LCMS2ToneCurveMBS, nPoints as UInt32) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composites two tone curves in the form ùëå,àí1(ùëã(ùë°)).
Notes: context: user-defined context object.
X, Y : Tone curve objects.
nPoints: Sample rate for resulting tone curve.

Returns a newly created tone curve object on success, nil on error.

117.32.18 ParametricType as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the parametric type.

117.32.19 Reverse as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes: Returns a newly created tone curve object on success, nil on error.
See also:

- 117.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS 17009

117.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes: In the case it couldn't be analytically reversed, a tablulated curve of nResultSamples is created.
nResultSamples: Number of samples to use in the case origin tone curve couldn't be analytically reversed
Returns a newly created tone curve object on success, nil on error.
See also:

- 117.32.19 Reverse as LCMS2ToneCurveMBS 17009

117.32.21 Smooth(lambda as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smoothes tone curve according to the lambda parameter.
Notes: Lambda: degree of smoothing.
Returns true on success, false on error.

117.32.22 Properties

117.32.23 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.33 class LCMS2TransformMBS

117.33.1 class LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS 2.x transformation.

117.33.2 Methods

117.33.3 ChangeBuffersFormat(InputFormat as UInt32, OutputFormat as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function does change the encoding of buffers in a yet-existing transform.
Notes: Not all transforms can be changed, cmsChangeBuffersFormat only works on transforms created originally with at least 16 bits of precision. This function is provided for backwards compatibility and should be avoided whenever possible, as it prevents transform optimization.

InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.

Returns true on success and false on failure.

117.33.4 CreateExtendedTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, BPC() as boolean, Intents() as UInt32, AdaptationStates() as Double, GamutProfile as LCMS2ProfileMBS, GamutPCSposition as UInt32, InputFormat as UInt32, OutputFormat as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended form of multiprofile color transform creation, exposing all parameters for each profile in the chain.
Notes: All other transform cration functions are wrappers to this call.

Parameters:
context: Pointer to a user-defined context cargo.
Profiles: Array of handles to open profile objects.
BPC: Array of black point compensation states
GamutProfile: A profile holding gamut information for gamut check. Only used if cmsFLAGS_GAMUTCHECK specified. Set to nil for no gamut check.
GamutPCSPosition: Position in the chain of Lab/XYZ PCS to check against gamut profile Only used if cmsFLAGS_GAMUTCHECK specified.
InputFormat: Input format.
OutputFormat: Output format.
Intents: An array holding the intent codes.
Flags: Some flags to control it.

Returns a transform object on success, NULL on error.
See also cmsCreateExtendedTransform in the LCMS2 manual.

117.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes: User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.

Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 117.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17013

117.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes: User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 117.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17012

117.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as CreateTransform(), but including soft-proofing.
Notes: A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my

little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcmsSetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.
See also:

- 117.33.8 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17014

117.33.8 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as CreateTransform(), but including soft-proofing.
Notes: A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.
See also:

- 117.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17013

117.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes: context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 117.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17016

117.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes: context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 117.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 17015

117.33.11 ToDeviceLink(Version as Double, Flags as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a device-link profile from a given color transform.
Notes: This profile can then be used by any other function accepting profile handle. Depending on the specified version number, the implementation of the devicelink may vary. Accepted versions are in range 1.0...4.3

Version: The target devicelink version number.
Flags: A combination of bit-field constants kcmsFLAGS_*.

Returns an ICC profile object on success, nil on error.

117.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes: bitmap: the input and output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the one in the bitmap.
See also:

- 117.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 17017
- 117.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 17017

117.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: inBitmap: the input bitmap.
outBitmap: the output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the those in the bitmaps.
See also:

- 117.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean 17017
- 117.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 17017

117.33.14 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: InputBuffer: A pointer to the input bitmap.

OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.

Returns true on success.
See also:

- 117.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean 17017
- 117.33.13 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 17017

117.33.15 TransformLineStride(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32) as boolean

MBS Images Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Each bitmap may contain several lines, and every may have padding. The distance from one line to the next one is BytesPerLine { In/Out } . In planar formats, each line may hold several planes, each plane may have padding. Padding of lines and planes should be same across all bitmap. I.e. all lines in same bitmap have to be padded in same way. This function may be more efficient that repeated calls to Transform(), especially when customized plug-ins are being used.

Parameters:
InputBuffer: A pointer to the input bitmap
OutputBuffer: A pointer to the output bitmap.
PixelsPerLine: The number of pixels for line, which is same on input and in output.
LineCount: The number of lines, which is same on input and output
BytesPerLine { In,Out } : The distance in bytes from one line to the next one.
BytesPerPlaneIn { In,Out } : The distance in bytes from one plane to the next one inside a line. Only applies in planar formats.

Returns true on success.

117.33.16 TransformLineStrideMT(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Same as TransformLineStride, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

117.33.17 TransformMT(bitmap as LCMS2BitmapMBS, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes: Same as Transform, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

117.33.20 TransformRGB(c as color) as color

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to convert one RGB color.
Notes: Works for input/output data with Float (4 or 8 byte) or Integer (1, 2 or 4 bytes).

117.33.21 TransformStride(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes: On planar-organized buffers, the parameter stride specifies the separation between planes, which may be different of the number of pixels to transform. The main application of this function is when several threads are transforming pixels from different zones of same planar buffer. Otherwise it is identical to other Transform functions.

InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.
Stride: Plane separation on planar formats

Returns true on success.

117.33.22 TransformStrideMT(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes: Same as TransformLineStride, but with thread support.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

117.33.23 Properties

117.33.24 AdaptationState as Double

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adaptation state.
Notes: (Read only property)

117.33.25 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

117.33.26 EntryColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry colorspace.
Notes: (Read only property)

117.33.27 EntryWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry white points.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.28 ExitColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit colorspace.
Notes: (Read only property)

117.33.29 ExitWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit white points.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.30 GamutCheck as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the gamut check. It goes from the input space to bilevel.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.31 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.33.32 InputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input Colorant table.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.33 InputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the input format associated with a given transform.
Notes: (Read only property)

117.33.34 Lut as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the full (optimized) transform.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.35 NamedColorList as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a named color list from a given color transform.
Notes: Returns named color list dictionary on success, nil on error.

Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.36 OriginalFlags as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original flags used to create transform.
Notes: (Read only property)

117.33.37 OutputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output Colorant table (for n chans >CMYK)
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.38 OutputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the output format associated with a given transform.
Notes: (Read only property)

117.33.39 RenderingIntent as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent of this transform. That is usually the last intent in the profilechain, but may differ.
Notes: (Read only property)

117.33.40 Sequence as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profiles used to create the transform.
Notes: Only for information, so plugin may return a copy of the data.
(Read only property)

117.33.41 YieldToRB as Boolean

MBS Images Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the MT methods should yield.
Notes: If true (default), we yield to keep other threads running.
Can be set to false to disable yielding.
(Read and Write property)

117.34 class LCMS2UcrBgMBS

117.34.1 class LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the cmsSigUcrBgType tag.
Notes: This is for Undercolorremoval and black generation.

- MBS Real Studio Plugins, version 12.0pr4

117.34.2 Methods

117.34.3 Constructor(Ucr as LCMS2ToneCurveMBS = nil, Bg as LCMS2ToneCurveMBS = nil, Desc as LCMS2MLUMBS = nil)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

117.34.4 Properties

117.34.5 Bg as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black generation value.
Notes: (Read and Write property)

117.34.6 Desc as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read and Write property)

117.34.7 Ucr as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The undercolor removal setting.
Notes: (Read and Write property)

117.35 class LCMS2Vec3MBS

117.35.1 class LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a three dimension vector.
Example:

```
Var v as new LCMS2Vec3MBS(1,2,3)
MsgBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

117.35.2 Methods

117.35.3 Clone as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the vector.

117.35.4 Constructor(other as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copy constructor.
Example:

```
// make a vector
Var v as new LCMS2Vec3MBS(1,2,3)

// create a copy
Var w as new LCMS2Vec3MBS(v)

// show values
MsgBox str(w.X)+" "+str(w.y)+" "+str(w.z)
```

117.35.5 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to initialize the object with the given values.
Example:

```
Var v as new LCMS2Vec3MBS(1,2,3)
MsgBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

117.35.6 Properties

117.35.7 X as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first value.
Notes: (Read and Write property)

117.35.8 Y as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read and Write property)

117.35.9 Z as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The third value.
Notes: (Read and Write property)

117.35.10 value(index as UInt32) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The values by index.
Notes: Index from 0 to 2.
(Read and Write computed property)

117.36 class LCMS2ViewingConditionsMBS

117.36.1 class LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Viewing conditions.
Notes: From LCMS documenation: Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming cmsICCViewingConditions to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

117.36.2 Methods

117.36.3 Clone as LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the object.

117.36.4 Constructor(other as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 117.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0) 17031

117.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new viewing conditions object.
See also:

- 117.36.4 Constructor(other as LCMS2ViewingConditionsMBS) 17031

117.36.6 Properties

117.36.7 D_value as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The D value value.
Notes: (Read and Write property)

117.36.8 La as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The La value.
Notes: (Read and Write property)

117.36.9 Surround as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround value.
Notes: Use this constants:
kAVG_SURROUND = 1
kDIM_SURROUND = 2
kDARK_SURROUND = Ôøº3
kCUTSHEET_SURROUND = 4
(Read and Write property)

117.36.10 whitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The white point.
Notes: (Read and Write property)

117.36.11 Yb as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Yb value.
Notes: (Read and Write property)

Chapter 118

LDAP

118.1 class LDAPMBS

118.1.1 class LDAPMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for LDAP connection.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
```

```
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes: On Windows we use Microsoft's WinLDAP Library.
For Mac OS X and Linux we link to OpenLDAP, so be sure to have the right package installed on Linux.

118.1.2 Methods

118.1.3 Add(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds attributes.
Example:

```
// add like this
```

```
Var m1 as new LDAPModMBS
Var m2 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"

m2.Operation = m1.kOperationAdd
m2.Type = "cn"
m2.addValue "xxx"

Var attr() as LDAPModMBS
attr.Append m1
attr.Append m2

l.Add("test", attr)
```

Notes: The Add function initiates a synchronous add operation that adds an entry to a tree. The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Before calling Add, you must create an entry by specifying its attributes in LDAPModMBS objects. Set the Operator member of each structure to kOperationAdd, and set the Type and Value members as appropriate for your entry.

118.1.4 Bind(Who as String, Cred as String, AuthMethod as Integer, Domain as String = "")

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds to a server with given credentials and authorization method.
Notes: Synchronously authenticates a client to the LDAP server.

Added domain parameter in plugin version 17.1, Windows only.

118.1.5 Connect(TimeOutSeconds as Double = 1.0)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to server.
Notes: On Mac does nothing.

118.1.6 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Targets: All.

Function: Default constructor.
Notes: Creates a new connection without connecting.
See also:

- 118.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 17038
- 118.1.8 Constructor(URL as string) 17039

118.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
Var ldap as LDAPMBS

#if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
#else
ldap = new LDAPMBS("ldaps://192.168.1.123")
#endif
```

Notes: If open is true, we connect directly to server.
Secure: For Windows Vista and newer. Set to true for a secure connection with SSL. (only for open=false)

For connecting via SSL, please use on Mac OS X the Constructor taking the URL and specify ldaps protocol. For Windows use this constructor with secure parameter set to true.

Changed with 16.0 to work on Mac with secure = true. For Windows we switch to Open = false if secure is true.
See also:

- 118.1.6 Constructor 17038
- 118.1.8 Constructor(URL as string) 17039

118.1.8 Constructor(URL as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
Var ldap as LDAPMBS

#if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
#else
ldap = new LDAPMBS("ldaps://192.168.1.123")
#endif
```

Notes: Added Windows support in 16.0 plugins.
See also:

- 118.1.6 Constructor 17038
- 118.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 17038

118.1.9 Delete(distinguishedName as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an entry.

118.1.10 ErrorString(error as Integer) as string

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an error message for an error code.

118.1.11 Modify(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modifies an entry.
Notes: Please pass one LDAPModMBS for each attribute to change.

The Modify function initiates a synchronous operation to modify an existing entry. If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain. All modifications are performed in the order in which they are listed.

When connecting to an LDAP 2 server, the application must perform a bind operation (by calling one of the Bind or SimpleBind routines) before attempting any other operations.

118.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item.
See also:

- 118.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean) 17040

118.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item and can move it to other parent.
See also:

- 118.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean) 17040

118.1.14 Search(distinguishedName as string, Scope as Integer, Filter as String, Attrs() as String = nil, AttributesOnly as boolean = false, timeout as Double = 1.0, SizeLimit as Integer = 0) as Dictionary()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Search for something.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
```

```
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes: The plugin will return result as array of Dictionaries, one for each item. Dictionary contains attributes with their values. A special entry has key = nil and as value the distinguish name of the item.

118.1.15 SimpleBind(Who as String, Cred as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simple bind call.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
Var l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
```

```
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
Var error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

Var results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

118.1.16 StartTLS

MBS Network Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a StartTLS request to a server, waits for the reply, and then installs TLS handlers on the session if the request succeeded.
Notes: Lasterror is set.

118.1.17 Properties

118.1.18 CACertFile as FolderItem

MBS Network Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Targets: All.

Function: The path for CACert file.
Notes: Should be PEM format.
Lasterror is set.
(Read and Write property)

118.1.19 Handle as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.

Notes: (Read and Write property)

118.1.20 Lasterror as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

118.1.21 NetworkTimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The network timeout.
Example:

```
Var l as LDAPMBS
l.NetworkTimeOut = 2.5 // 2.5 seconds
```

Notes: This is the timeout for the underlaying sockets.
Value is in seconds with resolution to microseconds.
(Read and Write property)

118.1.22 ProtocolVersion as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the protocol version to use.
Notes: (Read and Write property)

118.1.23 Referrals as Integer

MBS Network Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether to automatically follow referrals returned by the LDAP server.
Notes: (Read and Write property)

118.1.24 TimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The default timeout.
Example:

```
Var l as LDAPMBS
l.TimeOut = 2.5 // 2.5 seconds
```

Notes: Value is in seconds with resolution to microseconds.
(Read and Write property)

118.1.25 Events

118.1.26 Error(ErrorCode as Integer, ErrorMessage as String, FunctionName as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error event.
Notes: Called for any function which got an error. Provides for your convenience the error code, message and function name.

118.1.27 Constants

Auth Modes

Constant	Value	Description
kAuthDigest	&h4086	Only for Windows.
kAuthDPA	&h2086	Only for Windows.
kAuthExternal	&hA6	
kAuthKRBV4	&hFF	Only for Mac OS X and Linux.
kAuthKRBV41	&h81	Only for Mac OS X and Linux.
kAuthKRBV42	&h82	Only for Mac OS X and Linux.
kAuthMSN	&h0886	Only for Windows.
kAuthNegotiate	&h4FF	Only for Windows.
kAuthNegotiateWin	&h0486	Only for Windows.
kAuthNone	0	No auth.
kAuthNTLM	&h1086	Only for Windows.
kAuthSASL	&hA3	Only for Mac OS X and Linux.
kAuthSASLWin	&h83	Only for Windows.
kAuthSicily	&h0286	Only for Windows.
kAuthSimple	&h80	Simple authentication.
kAuthSSPI	&h4FF	Only for Windows.

Scopes

Constant	Value	Description
kScopeBase	0	
kScopeDefault	-1	
kScopeOneLevel	1	
kScopeSubordinate	3	
kScopeSubtree	2	

Versions

Constant	Value	Description
kVersion1	1	
kVersion2	2	
kVersion3	3	

118.2 class LDAPModMBS

118.2.1 class LDAPModMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold values being added/modified.
Example:

```
Var m1 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"
```

118.2.2 Methods

118.2.3 addValue(value as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value.
Notes: An item may have one value or several, so the plugin manages an array for you.

118.2.4 clearValues

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all values.

118.2.5 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

118.2.6 setValues(values() as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the values array to be the one passed.
Notes: Does not make a copy of the array, but references it.

118.2.7 Values as String()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the array with values.
Notes: Returns not a copy, but the array used to store values.

118.2.8 Properties

118.2.9 Operation as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation to perform.
Notes: Can be kOperationAdd, kOperationDelete or kOperationReplace.
(Read and Write property)

118.2.10 Type as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: String that specifies the name of the attribute to modify.
Notes: (Read and Write property)

118.2.11 Value as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first value.
Notes: Some items only have one value, so this is the value.
(Read only property)

118.2.12 Constants

Operations

Constant	Value	Description
kOperationAdd	0	Adds a value to the entry. The supplied values are appended to the existing values in the attribute.
kOperationDelete	1	Deletes a value in the entry. The supplied values are deleted from the current attribute values.
kOperationReplace	2	Replaces a value in the entry. The supplied values replace the existing attribute values.

Chapter 119

Licenses

119.1 Licenses

119.1.1 bzip2

Platforms: macOS, Linux, Windows, Targets: .

Function: The bzip2 1.0.5 license
Notes: This program, "bzip2", the associated library "libbzip2", and all documentation, are copyright (C) 1996-2007 Julian R Seward. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright
notice, this list of conditions and the following disclaimer.

2. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.

3. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

4. The name of the author may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED

WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY,
WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Julian Seward, jseward@bzip.org bzip2/libbzip2 version 1.0.5 of 10 December 2007

119.1.2 ChartDirector

Platforms: macOS, Linux, Windows, Targets: .

Function: The ChartDirector 5.0 license
Notes: Please note: The license for the ChartDirector is included when you purchase the plugin as we pay royalties. So you do not need to buy an additional license from Advanced Software Engineering Limited.

The original license for the C library:

ChartDirector Version 5.0
Copyright (C) 2008 Advanced Software Engineering Limited
All Rights Reserved

********** LICENSE AGREEMENT **********

You should carefully read the following terms and conditions before using the ChartDirector software. Your use of the ChartDirector software indicates your acceptance of this license agreement. Do not use the ChartDirector software if you do not agree with the license agreement.

Disclaimer of Warranty

The ChartDirector software and the accompanying files are distributed and licensed "as is". Advanced Software Engineering Limited disclaims all warranties, either express or implied, including, but not limited to implied warranties of merchantability and fitness for a particular purpose. Should the ChartDirector software prove defective, the licensee assumes the risk of paying the entire cost of all necessary servicing, repair, or correction and any incidental or consequential damages. In no event will Advanced Software Engineering Limited be liable for any damages whatsoever (including without limitation damages for loss of business profits, business interruption, loss of business information and the like) arising out of the use or the inability to use the ChartDirector software even if Advanced Software Engineering Limited has been advised of the

possibility of such damages.

Intellectual Property

The ChartDirector software is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The ChartDirector software is licensed, not sold. Title to the ChartDirector software shall at all times remain with Advanced Software Engineering Limited.

You agree not to modify, decompile, reverse engineer, disassemble or otherwise attempt to derive source code from the ChartDirector software.

Trial Version

The trial version of the ChartDirector software will produce yellow banner messages at the bottom of the chart images generated by it. You agree to not remove, obscure, or alter this message.

Subjected to the conditions in this license agreement:

- You may use the unmodified trial version of the ChartDirector software without charge.

- You may redistribute the unmodified trial version of the ChartDirector software, provided you do not charge for it.

- You may embed the unmodified trial version of the ChartDirector software (or part of it), in a product and distribute the product, provided you do not charge for the product.

If you do not want the yellow banner messages appearing in the charts, or you want to embed the ChartDirector software (or part of it) in a product that is not free, you must purchase a commercial license to use the ChartDirector software from Advanced Software Engineering Limited. Please refer to Advanced Software Engineering's web site at www.advsofteng.com for details.

Credits

The ASP/COM/VB, PHP, Perl, Python, Ruby and C++ editions of ChartDirector contains code from the Independent JPEG Group and the FreeType team. Any software that is derived from these editions of ChartDirector must include the following text in its documentation. This applies to both the trial version as well as to the commercial licensed version of ChartDirector.

- This software is based in part on the work of the Independent JPEG Group

- This software is based in part of the work of the FreeType Team

119.1.3 CUPS

Platforms: macOS, Linux, Windows, Targets: .

Function: The CUPS 1.4.4 license
Notes: CUPS License Agreement

Copyright 2007-2009 by Apple Inc.
1 Infinite Loop
Cupertino, CA 95014 USA

WWW: http://www.cups.org/

INTRODUCTION

CUPS(tm) is provided under the GNU General Public License ("GPL")
and GNU Library General Public License ("LGPL"), Version 2, with
exceptions for Apple operating systems and the OpenSSL toolkit. A
copy of the exceptions and licenses follow this introduction.

The GNU LGPL applies to the CUPS and CUPS Imaging libraries
located in the "cups" and "filter" subdirectories of the CUPS
source distribution and in the "cups" include directory and
library files in the binary distributions. The GNU GPL applies to
the remainder of the CUPS distribution, including the "pdftops"
filter which is based upon Xpdf.

For those not familiar with the GNU GPL, the license basically
allows you to:

- Use the CUPS software at no charge.
- Distribute verbatim copies of the software in source or
binary form.
- Sell verbatim copies of the software for a media fee, or
sell support for the software.

What this license *does not* allow you to do is make changes or
add features to CUPS and then sell a binary distribution without
source code. You must provide source for any changes or additions

to the software, and all code must be provided under the GPL or LGPL as appropriate. The only exceptions to this are the portions of the CUPS software covered by the Apple operating system license exceptions outlined later in this license agreement.

The GNU LGPL relaxes the "link-to" restriction, allowing you to develop applications that use the CUPS and CUPS Imaging libraries under other licenses and/or conditions as appropriate for your application, driver, or filter.

LICENSE EXCEPTIONS

In addition, as the copyright holder of CUPS, Apple Inc. grants the following special exceptions:

1. Apple Operating System Development License Exception;

a. Software that is developed by any person or entity for an Apple Operating System ("Apple OS-Developed Software"), including but not limited to Apple and third party printer drivers, filters, and backends for an Apple Operating System, that is linked to the CUPS imaging library or based on any sample filters or backends provided with CUPS shall not be considered to be a derivative work or collective work based on the CUPS program and is exempt from the mandatory source code release clauses of the GNU GPL. You may therefore distribute linked combinations of the CUPS imaging library with Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software. You may also use sample filters and backends provided with CUPS to develop Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software.

b. An Apple Operating System means any operating system software developed and/or marketed by Apple Computer, Inc., including but not limited to all existing releases and versions of Apple's Darwin, Mac OS X, and Mac OS X Server products and all follow-on releases and future versions thereof.

c. This exception is only available for Apple OS-Developed Software and does not apply to software

that is distributed for use on other operating systems.

d. All CUPS software that falls under this license exception have the following text at the top of each source file:

This file is subject to the Apple OS-Developed Software exception.

2. OpenSSL Toolkit License Exception;

a. Apple Inc. explicitly allows the compilation and distribution of the CUPS software with the OpenSSL Toolkit.

No developer is required to provide these exceptions in a derived work.

KERBEROS SUPPORT CODE

The Kerberos support code ("KSC") is copyright 2006 by Jelmer Vernooij and is provided 'as-is', without any express or implied warranty. In no event will the author or Apple Inc. be held liable for any damages arising from the use of the KSC.

Sources files containing KSC have the following text at the top of each source file:

This file contains Kerberos support code, copyright 2006 by Jelmer Vernooij.

The KSC copyright and license apply only to Kerberos-related feature code in CUPS. Such code is typically conditionally compiled based on the present of the HAVE_GSSAPI preprocessor definition.

Permission is granted to anyone to use the KSC for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of the KSC must not be misrepresented; you must not claim that you wrote the original software. If you use the KSC in a product, an acknowledgment in the product documentation would be appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

TRADEMARKS

CUPS and the CUPS logo (the "CUPS Marks") are trademarks of Apple Inc. Apple grants you a non-exclusive and non-transferable right to use the CUPS Marks in any direct port or binary distribution incorporating CUPS software and in any promotional material therefor. You agree that your products will meet the highest levels of quality and integrity for similar goods, not be unlawful, and be developed, manufactured, and distributed in compliance with this license. You will not interfere with Apple's rights in the CUPS Marks, and all use of the CUPS Marks shall inure to the benefit of Apple. This license does not apply to use of the CUPS Marks in a derivative products, which requires prior written permission from Apple Inc.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software

Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium

customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the

original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate

parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

GNU LIBRARY GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the library GPL. It is numbered 2 because it goes with version 2 of the ordinary GPL.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users.

This license, the Library General Public License, applies to some specially designated Free Software Foundation software, and to any

other libraries whose authors decide to use it. You can use it for your libraries, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library, or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link a program with the library, you must provide complete object files to the recipients so that they can relink them with the library, after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

Our method of protecting your rights has two steps: (1) copyright the library, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the library.

Also, for each distributor's protection, we want to make certain that everyone understands that there is no warranty for this free library. If the library is modified by someone else and passed on, we want its recipients to know that what they have is not the original version, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that companies distributing free software will individually obtain patent licenses, thus in effect transforming the program into proprietary software. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License, which was designed for utility programs. This license, the GNU Library General Public License, applies to certain

designated libraries. This license is quite different from the ordinary one; be sure to read it in full, and don't assume that anything in it is the same as in the ordinary license.

The reason we have a separate public license for some libraries is that they blur the distinction we usually make between modifying or adding to a program and simply using it. Linking a program with a library, without changing the library, is in some sense simply using the library, and is analogous to running a utility program or application program. However, in a textual and legal sense, the linked executable is a combined work, a derivative of the original library, and the ordinary General Public License treats it as such.

Because of this blurred distinction, using the ordinary General Public License for libraries did not effectively promote software sharing, because most developers did not use the libraries. We concluded that weaker conditions might promote sharing better.

However, unrestricted linking of non-free programs would deprive the users of those programs of all benefit from the free status of the libraries themselves. This Library General Public License is intended to permit developers of non-free programs to use free libraries, while preserving your freedom as a user of such programs to change the free libraries that are incorporated in them. (We have not seen how to achieve this as regards changes in header files, but we have achieved it as regards changes in the actual functions of the Library.) The hope is that this will lead to faster development of free libraries.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, while the latter only works together with the library.

Note that it is possible for a library to be covered by the ordinary General Public License rather than by this special one.

GNU LIBRARY GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Library General Public License (also called "this License"). Each licensee is

addressed as ”you”.

A ”library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The ”Library”, below, refers to any such software library or work which has been distributed under these terms. A ”work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term ”modification”.)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under

the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also compile or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

c) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

d) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any

patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Library General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and ”any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Library General Public License as published by the Free Software Foundation; either

version 2 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
Library General Public License for more details.

You should have received a copy of the GNU Library General Public
License along with this library; if not, write to the Free
Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

119.1.4 CURL

Platforms: macOS, Linux, Windows, Targets: .

Function: The CURL 7.20.0 license
Notes: CURL links to libssl, libcrypto, libssh2 and other libraries.

COPYRIGHT AND PERMISSION NOTICE

Copyright (c) 1996 - 2009, Daniel Stenberg, <daniel@haxx.se>.

All rights reserved.

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Except as contained in this notice, the name of a copyright holder shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Software without prior written authorization of the copyright holder.

119.1.5 expat

Platforms: macOS, Linux, Windows, Targets: .

Function: The expat 2.0.1 license
Notes: Copyright (c) 1998, 1999, 2000 Thai Open Source Software Center Ltd and Clark Cooper Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Expat maintainers.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

119.1.6 FreeType

Platforms: macOS, Linux, Windows, Targets: .

Function: The FreeType 2.3.9 license

Notes: The FreeType 2 font engine is copyrighted work and cannot be used legally without a software license. In order to make this project usable to a vast majority of developers, we distribute it under two mutually exclusive open-source licenses.

This means that *you* must choose *one* of the two licenses described below, then obey all its terms and conditions when using FreeType 2 in any of your projects or products.

- The FreeType License, found in the file 'FTL.TXT', which is similar to the original BSD license *with* an advertising clause that forces you to explicitly cite the FreeType project in your product's documentation. All details are in the license file. This license is suited to products which don't use the GNU General Public License.

- The GNU General Public License version 2, found in 'GPL.TXT' (any later version can be used also), for programs which already use the GPL. Note that the FTL is incompatible with the GPL due to its advertisement clause.

The contributed PCF driver comes with a license similar to that of the X Window System. It is compatible to the above two licenses (see file src/pcf/readme).

— end of LICENSE.TXT —

The FreeType Project LICENSE
————————————————-

2006-Jan-27

Copyright 1996-2002, 2006 by
David Turner, Robert Wilhelm, and Werner Lemberg

Introduction
==========

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project.

This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least.

This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that:

o We don't promise that this software works. However, we will be interested in any kind of bug reports. ('as is' distribution)

o You can use this software for whatever you want, in parts or full form, without having to pay us. ('royalty-free' usage)

o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. ('credits')

We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products. We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project.

Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"""
Portions of this software are copyright ©<year>The FreeType Project (www.freetype.org). All rights reserved.
"""

Please replace <year>with the value from the FreeType version you actually use.

Legal Terms
==========

0. Definitions

Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType Project', be they named as alpha, beta or final release.

'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'. This program is referred to as 'a program using the FreeType engine'.

This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this.

The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty

THE FREETYPE PROJECT IS PROVIDED 'AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN false EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT.

2. Redistribution

This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code

forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions:

o Redistribution of source code must retain this license file ('FTL.TXT') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files.

o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory.

These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising

Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission.

We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: 'FreeType Project', 'FreeType Engine', 'FreeType library', or 'FreeType Distribution'.

As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

4. Contacts

There are two mailing lists related to FreeType:

o freetype@nongnu.org

Discusses general use and applications of FreeType, as well as
future and wanted additions to the library and distribution.
If you are looking for support, start in this list if you
haven't found anything to help you in the documentation.

o freetype-devel@nongnu.org

Discusses bugs, as well as engine internals, design issues,
specific licenses, porting, etc.

Our home page can be found at

http://www.freetype.org

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software–to make sure the software is free for all its users. This
General Public License applies to most of the Free Software
Foundation's software and to any other program whose authors commit to
using it. (Some other Free Software Foundation software is covered by
the GNU Library General Public License instead.) You can apply it to
your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The ”Program”, below, refers to any such program or work, and a ”work based on the Program” means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term ”modification”.) Each licensee is addressed as ”you”.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an

announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer

to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to

this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will

be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License
along with this program; if not, write to the Free Software
Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

119.1.7 GraphicsMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The GraphicsMagick license
Notes: GraphicsMagick links to Tiff, zlib, LCMS, JPEG, FreeType, XML, iconv and PNG.

.. This text is in reStucturedText format, so it may look a bit odd.
.. See http://docutils.sourceforge.net/rst.html for details.

==========
GraphicsMagick Copyrights and Licenses
==========

This file is part of the GraphicsMagick software distributed by the GraphicsMagick Group.

[*Please note that the legal community considers 15 or more total lines of code or text (not necessarily contiguous) to be significant for the purposes of copyright. Repeated changes such as renaming a symbol has similar significance to changing one line of code.*]

The licenses which components of this software fall under are as follows.

1)
In November 2002, the GraphicsMagick Group created GraphicsMagick from ImageMagick Studio's ImageMagick and applied the "MIT" style license:

Copyright (C) 2002 - 2010 GraphicsMagick Group

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

2)
In October 1999, ImageMagick Studio assumed the responsibility for the development of ImageMagick (forking from the distribution by E. I. du Pont de Nemours and Company) and applied a new license:

Copyright (C) 2002 ImageMagick Studio, a non-profit organization dedicated to making software imaging solutions freely available.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files ("ImageMagick"), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in

all copies or substantial portions of ImageMagick.

The software is provided ”as is”, without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall ImageMagick Studio be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the ImageMagick Studio shall not be used in advertising or otherwise to promote the sale, use or other dealings in ImageMagick without prior written authorization from the ImageMagick Studio.

3)
From 1991 to October 1999 (through ImageMagick 4.2.9), ImageMagick was developed and distributed by E. I. du Pont de Nemours and Company:

Copyright 1999 E. I. du Pont de Nemours and Company

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (”ImageMagick”), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of ImageMagick.

The software is provided ”as is”, without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall E. I. du Pont de Nemours and Company be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the E. I. du Pont de Nemours and Company shall not be used in advertising or otherwise to

promote the sale, use or other dealings in ImageMagick without prior
written authorization from the E. I. du Pont de Nemours and Company.

4)
The GraphicsMagick Base64Decode() and Base64Encode() functions are
based on source code obtained from OpenSSH. This source code is
distributed under the following license:

Copyright (c) 2000 Markus Friedl. All rights reserved.

Redistribution and use in source and binary forms, with or without
modification, are permitted provided that the following conditions
are met:

1. Redistributions of source code must retain the above copyright
notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright
notice, this list of conditions and the following disclaimer in the
documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR \'\'AS IS\'\' AND ANY EXPRESS OR
IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES
OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED.
IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT,
INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT
NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE,
DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY
THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT
(INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF
THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

5)
Many of the pattern images in coders/logo.c are derived from XFig,
which is distributed under the following license:

| FIG : Facility for Interactive Generation of figures
| Copyright (c) 1985-1988 by Supoj Sutanthavibul
| Parts Copyright (c) 1989-2000 by Brian V. Smith
| Parts Copyright (c) 1991 by Paul King

Any party obtaining a copy of these files is granted, free of charge, a

full and unrestricted irrevocable, world-wide, paid up, royalty-free, nonexclusive right and license to deal in this software and documentation files (the "Software"), including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons who receive copies from any such party to do so, with the only requirement being that this copyright notice remain intact.

6)
The documentation for the composition operators is copied from the rlecomp manual page, which is authored by Rod Bogart and John W. Peterson. Rlecomp is part of the Utah Raster Toolkit distributed by the University of Michigan and the University of Utah. The copyright for this manual page is as follows:

Copyright (c) 1986, University of Utah

This software is copyrighted as noted below. It may be freely copied, modified, and redistributed, provided that the copyright notice is preserved on all copies.

There is no warranty or other guarantee of fitness for this software, it is provided solely "as is". Bug reports or fixes may be sent to the author, who may or may not act on them as he desires.

You may not include this software in a program or other software product without supplying the source, or without informing the end-user that the source is available for no extra charge.

If you modify this software, you should include a notice giving the name of the person performing the modification, the date of modification, and the reason for such modification.

7)
The source code comprising swab.c is originally derived from libtiff which has the following license:

| Copyright (c) 1988-1997 Sam Leffler
| Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or

publicity relating to the software without the specific, prior written
permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND,
EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY
WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR
ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND,
OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS,
WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF
LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE
OF THIS SOFTWARE.

8)
The C++ API known as "Magick++", and which resides in the Magick++
directory, is distributed under the following license:

Copyright 1999 - 2003 Bob Friesenhahn <bfriesen@simple.dallas.tx.us>

Permission is hereby granted, free of charge, to any person
obtaining a copy of the source files and associated documentation
files ("Magick++"), to deal in Magick++ without restriction,
including without limitation of the rights to use, copy, modify,
merge, publish, distribute, sublicense, and/or sell copies of
Magick++, and to permit persons to whom the Magick++ is furnished
to do so, subject to the following conditions:

This copyright notice shall be included in all copies or
substantial portions of Magick++. The copyright to Magick++ is
retained by its author and shall not be subsumed or replaced by any
other copyright.

The software is provided "as is", without warranty of any kind,
express or implied, including but not limited to the warranties of
merchantability, fitness for a particular purpose and
noninfringement. In no event shall Bob Friesenhahn be liable for
any claim, damages or other liability, whether in an action of
contract, tort or otherwise, arising from, out of or in connection
with Magick++ or the use or other dealings in Magick++.

9)
The GraphicsMagick HaldClutImagePixels() function in magick/hclut.c
is based on source code from the HaldCLUT package by Eskil Steenberg

(http://www.quelsolaar.com/technology/clut.html) which is distributed under the following license:

Copyright (c) 2005 Eskil Steenberg. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR \'\'AS IS\'\' AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

10)
GraphicsMagick makes use of third-party "delegate" libraries to support certain optional features. These libraries bear their own copyrights and licenses, which may be more or less restrictive than the GraphicsMagick license. For convenience, when GraphicsMagick is bundled with (or compiled with) "delegate" libraries, a copy of the licenses for these libraries is provided in a "licenses" directory.

| Copyright (C) 2002 - 2010 GraphicsMagick Group

119.1.8 HASP

Platforms: macOS, Linux, Windows, Targets: .

Function: The HASP license
Notes: Aladdin Knowledge Systems Ltd. (c) 1985 - 2005. All rights reserved.

Exact license details are available with the HASP SDKs.

119.1.9 ImageMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The ImageMagick license
Notes: The authoratitive ImageMagick license can be found at
http://www.imagemagick.org/script/license.php and ImageMagick notices at
http://www.imagemagick.org/script/notice.php.

Before we get to the text of the license lets just review what the license says in simple terms:

It allows you to:

* freely download and use ImageMagick software, in whole or in part, for personal, company internal, or commercial purposes;
* use ImageMagick software in packages or distributions that you create.

It forbids you to:

* redistribute any piece of ImageMagick-originated software without proper attribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that ImageMagick Studio LLC endorses your distribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that you created the ImageMagick software in question.

It requires you to:

* include a copy of the license in any redistribution you may make that includes ImageMagick software;
* provide clear attribution to ImageMagick Studio LLC for any distributions that include ImageMagick software.

It does not require you to:

* include the source of the ImageMagick software itself, or of any modifications you may have made to it, in any redistribution you may assemble that includes it;
* submit changes that you make to the software back to the ImageMagick Studio LLC (though such feedback is encouraged).

A few other clarifications include:
* ImageMagick is freely available without charge;
* you may include ImageMagick on a CD-ROM as long as you comply with the terms of the license;
* you can give modified code away for free or sell it under the terms of the ImageMagick license or distribute the result under a different license, but you need to acknowledge the use of the ImageMagick software;
* the license is compatible with the GPL.

The legally binding and authoritative terms and conditions for use, reproduction, and distribution of ImageMagick follow:

Copyright 1999-2007 ImageMagick Studio LLC, a non-profit organization dedicated to making software imaging solutions freely available.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

”Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, ”submitted” means any form of electronic, verbal, or written communication intentionally sent to the Licensor by its copyright holder or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as ”Not a Contribution.”

”Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

a. You must give any other recipients of the Work or Derivative Works a copy of this License; and

b. You must cause any modified files to carry prominent notices stating that You changed the files; and

c. You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

d. If the Work includes a ”NOTICE” text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks,

or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

119.1.10 iMedia Browser

Platforms: macOS, Linux, Windows, Targets: .

Function: The iMedia Browser license
Notes: iMedia Browser <http://karelia.com/imedia/>
Copyright (c) 2005-2007 by Karelia Software et al.
iMedia Browser is based on code originally developed by Jason Terhorst, further developed for Sandvox by Greg Hulands, Dan Wood, and Terrence Talbot. Contributions have also been made by Matt Gough, Martin Wennerberg and others as indicated in source files.
iMedia Browser is licensed under the following terms:
Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in all or substantial portions of the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:
Redistributions of source code must retain the original terms stated here, including this list of conditions, the disclaimer noted below, and the following copyright notice: Copyright (c) 2005-2007 by Karelia Software et al.
Redistributions in binary form must include, in an end-user-visible manner, e.g., About window, Acknowledgments window, or similar, either a) the original terms stated here, including this list of conditions, the disclaimer noted below, and the aforementioned copyright notice, or b) the aforementioned copyright notice and a link to karelia.com/imedia.
Neither the name of Karelia Software, nor Sandvox, nor the names of contributors to iMedia Browser may be used to endorse or promote products derived from the Software without prior and express written permission from Karelia Software or individual contributors, as appropriate.
Disclaimer: THE SOFTWARE IS PROVIDED BY THE COPYRIGHT OWNER AND CONTRIBUTORS

”AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES, OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT, OR OTHERWISE, ARISING FROM, OUT OF, OR IN CONNECTION WITH, THE SOFTWARE OR THE USE OF, OR OTHER DEALINGS IN, THE SOFTWARE.

119.1.11 lcms

Platforms: macOS, Linux, Windows, Targets: .

Function: The lcms 1.19 license
Notes: Little CMS
Copyright (c) 1998-2007 Marti Maria Saguer

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the ”Software”), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED ”AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

119.1.12 libjpeg

Platforms: macOS, Linux, Windows, Targets: .

Function: The libjpeg license
Notes: In plain English:

1. We don’t promise that this software works. (But if you find any bugs,
please let us know!)
2. You can use this software for whatever you want. You don’t have to pay us.
3. You may not pretend that you wrote this software. If you use it in a

program, you must acknowledge somewhere in your documentation that
you've used the IJG code.

In legalese:

The authors make false WARRANTY or representation, either express or implied,
with respect to this software, its quality, accuracy, merchantability, or
fitness for a particular purpose. This software is provided "AS IS", and you,
its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1991-2010, Thomas G. Lane, Guido Vollbeding.
All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this
software (or portions thereof) for any purpose, without fee, subject to these
conditions:
(1) If any part of the source code for this software is distributed, then this
README file must be included, with this copyright and no-warranty notice
unaltered; and any additions, deletions, or changes to the original files
must be clearly indicated in accompanying documentation.
(2) If only executable code is distributed, then the accompanying
documentation must state that "this software is based in part on the work of
the Independent JPEG Group".
(3) Permission for use of this software is granted only if the user accepts
full responsibility for any undesirable consequences; the authors accept
false LIABILITY for damages of any kind.

These conditions apply to any software derived from or based on the IJG code,
not just to the unmodified library. If you use our work, you ought to
acknowledge us.

Permission is NOT granted for the use of any IJG author's name or company name
in advertising or publicity relating to this software or products derived from
it. This software may be referred to only as "the Independent JPEG Group's
software".

We specifically permit and encourage the use of this software as the basis of
commercial products, provided that all warranty or liability claims are
assumed by the product vendor.

ansi2knr.c is included in this distribution by permission of L. Peter Deutsch,
sole proprietor of its copyright holder, Aladdin Enterprises of Menlo Park, CA.
ansi2knr.c is NOT covered by the above copyright and conditions, but instead

by the usual distribution terms of the Free Software Foundation; principally, that you must include source code if you redistribute it. (See the file ansi2knr.c for full details.) However, since ansi2knr.c is not needed as part of any program generated from the IJG code, this does not limit you more than the foregoing paragraphs do.

The Unix configuration script "configure" was produced with GNU Autoconf. It is copyright by the Free Software Foundation but is freely distributable. The same holds for its supporting scripts (config.guess, config.sub, ltmain.sh). Another support script, install-sh, is copyright by X Consortium but is also freely distributable.

The IJG distribution formerly included code to read and write GIF files. To avoid entanglement with the Unisys LZW patent, GIF reading support has been removed altogether, and the GIF writer has been simplified to produce "uncompressed GIFs". This technique does not use the LZW algorithm; the resulting GIF files are larger than usual, but are readable by all standard GIF decoders.

We are required to state that
"The Graphics Interchange Format(c) is the Copyright property of CompuServe Incorporated. GIF(sm) is a Service Mark property of CompuServe Incorporated."

119.1.13 libpng

Platforms: macOS, Linux, Windows, Targets: .

Function: The libpng 1.4.3 license.
Notes: This copy of the libpng notices is provided for your convenience. In case of any discrepancy between this copy and the notices in the file png.h that is included in the libpng distribution, the latter shall prevail.

COPYRIGHT NOTICE, DISCLAIMER, and LICENSE:

If you modify libpng you may insert additional notices immediately following this sentence.

This code is released under the libpng license.

libpng versions 1.2.6, August 15, 2004, through 1.4.3, June 26, 2010, are Copyright (c) 2004, 2006-2007 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.2.5 with the following individual added to the list of Contributing Authors

Cosmin Truta

libpng versions 1.0.7, July 1, 2000, through 1.2.5 - October 3, 2002, are Copyright (c) 2000-2002 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.0.6 with the following individuals added to the list of Contributing Authors

Simon-Pierre Cadieux
Eric S. Raymond
Gilles Vollant

and with the following additions to the disclaimer:

There is no warranty against interference with your enjoyment of the
library or against infringement. There is no warranty that our
efforts or the library will fulfill any of your particular purposes
or needs. This library is provided with all faults, and the entire
risk of satisfactory quality, performance, accuracy, and effort is with
the user.

libpng versions 0.97, January 1998, through 1.0.6, March 20, 2000, are Copyright (c) 1998, 1999 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-0.96,
with the following individuals added to the list of Contributing Authors:

Tom Lane
Glenn Randers-Pehrson
Willem van Schaik

libpng versions 0.89, June 1996, through 0.96, May 1997, are Copyright (c) 1996, 1997 Andreas Dilger Distributed according to the same disclaimer and license as libpng-0.88,
with the following individuals added to the list of Contributing Authors:

John Bowler
Kevin Bracey
Sam Bushell
Magnus Holmgren
Greg Roelofs
Tom Tanner

libpng versions 0.5, May 1995, through 0.88, January 1996, are Copyright (c) 1995, 1996 Guy Eric Schalnat, Group 42, Inc.

For the purposes of this copyright and license, "Contributing Authors"

is defined as the following set of individuals:

Andreas Dilger
Dave Martindale
Guy Eric Schalnat
Paul Schmidt
Tim Wegner

The PNG Reference Library is supplied "AS IS". The Contributing Authors and Group 42, Inc. disclaim all warranties, expressed or implied,
including, without limitation, the warranties of merchantability and of fitness for any purpose. The Contributing Authors and Group 42, Inc.
assume no liability for direct, indirect, incidental, special, exemplary,
or consequential damages, which may result from the use of the PNG Reference Library, even if advised of the possibility of such damage.

Permission is hereby granted to use, copy, modify, and distribute this source code, or portions hereof, for any purpose, without fee, subject to the following restrictions:

1. The origin of this source code must not be misrepresented.
2. Altered versions must be plainly marked as such and must not be misrepresented as being the original source.
3. This Copyright notice may not be removed or altered from any source or altered source distribution.

The Contributing Authors and Group 42, Inc. specifically permit, without fee, and encourage the use of this source code as a component to supporting the PNG file format in commercial products. If you use this source code in a product, acknowledgment is not required but would be appreciated.

A "png_get_copyright" function is available, for convenient use in "about"
boxes and the like:

printf("%s",png_get_copyright(NULL));

Also, the PNG logo (in PNG format, of course) is supplied in the files "pngbar.png" and "pngbar.jpg (88x31) and "pngnow.png" (98x31).

Libpng is OSI Certified Open Source Software. OSI Certified Open Source is a certification mark of the Open Source Initiative.

Glenn Randers-Pehrson glennrp at users.sourceforge.net June 26, 2010

119.1.14 libssh2

Platforms: macOS, Linux, Windows, Targets: .

Function: The ssh2 1.2.4 license
Notes: Copyright (c) 2004-2007 Sara Golemon <sarag@libssh2.org>
Copyright (c) 2006-2007 The Written Word, Inc.
Copyright (c) 2009 Daniel Stenberg Copyright (C) 2008, 2009 Simon Josefsson All rights reserved.

Redistribution and use in source and binary forms,

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
- Neither the name of the copyright holder nor the names of any other contributors may be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE COPYRIGHT OWNER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

119.1.15 LibTesseract

Platforms: macOS, Linux, Windows, Targets: .

Function: The LibTesseract 2.04 license
Notes: This package contains the Tesseract Open Source OCR Engine.
Orignally developed at Hewlett Packard Laboratories Bristol and
at Hewlett Packard Co, Greeley Colorado, all the code
in this distribution is now licensed under the Apache License:

- Licensed under the Apache License, Version 2.0 (the "License");

- you may not use this file except in compliance with the License.
- You may obtain a copy of the License at
- http://www.apache.org/licenses/LICENSE-2.0
- Unless required by applicable law or agreed to in writing, software
- distributed under the License is distributed on an "AS IS" BASIS,
- WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
- See the License for the specific language governing permissions and
- limitations under the License.

Other Dependencies and Licenses:
==========
The Aspirin/MIGRAINES system is no longer used.

Tesseract can also make use of the libtiff library. (www.libtiff.org)
Without libtiff, Tesseract can only read uncompressed and G3 compressed
TIFF files.

119.1.16 libtiff

Platforms: macOS, Linux, Windows, Targets: .

Function: The libtiff 3.9.4 license
Notes: Use and Copyright

Silicon Graphics has seen fit to allow us to give this work away. It is free. There is no support or guarantee of any sort as to its operations, correctness, or whatever. If you do anything useful with all or parts of it you need to honor the copyright notices. I would also be interested in knowing about it and, hopefully, be acknowledged.

The legal way of saying that is:

Copyright (c) 1988-1997 Sam Leffler
Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or publicity relating to the software without the specific, prior

written permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

119.1.17 libunimotion

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunimotion 0.4.1 license
Notes: The plugin loads the unimotion library. So the library is LGPL and your commercial app can load it.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1.]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software–to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some
specially designated software packages–typically libraries–of the
Free Software Foundation and other authors who decide to use it. You

can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the

ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a

”work based on the library” and a ”work that uses the library”. The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called ”this License”). Each licensee is addressed as ”you”.

A ”library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The ”Library”, below, refers to any such software library or work which has been distributed under these terms. A ”work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term ”modification”.)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any

warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the

entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the

Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally

accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and ”any later version”, you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY ”AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the ”copyright” line and a pointer to where the full notice is found.

<one line to give the library’s name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a ”copyright disclaimer” for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library ’Frob’ (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

119.1.18 libunzip

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunzip 1.01e license
Notes: unzip.h – IO for uncompress .zip files using zlib
Version 1.01e, February 12th, 2005

Copyright (C) 1998-2005 Gilles Vollant

This unzip package allow extract file from .ZIP file, compatible with PKZip 2.04g
WinZip, InfoZip tools and compatible.

Multi volume ZipFile (span) are not supported.
Encryption compatible with pkzip 2.04g only supported
Old compressions used by old PKZip 1.x are not supported

I WAIT FEEDBACK at mail info@winimage.com
Visit also http://www.winimage.com/zLibDll/unzip.htm for evolution

Condition of use and distribution are the same than zlib :

This software is provided 'as-is', without any express or implied
warranty. In no event will the authors be held liable for any damages
arising from the use of this software.

Permission is granted to anyone to use this software for any purpose,
including commercial applications, and to alter it and redistribute it
freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not
claim that you wrote the original software. If you use this software
in a product, an acknowledgment in the product documentation would be
appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be
misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

119.1.23 optipng

Platforms: macOS, Linux, Windows, Targets: .

Function: The optipng 0.6.2 license
Notes: Copyright (C) 2001-2010 Cosmin Truta.

This software is provided 'as-is', without any express or implied warranty. In no event will the author(s) be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

119.1.24 PCRE

Platforms: macOS, Linux, Windows, Targets: .

Function: The PCRE 8.0.1 license (RegEx)
Notes: PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax
and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as specified below. The documentation for PCRE, supplied in the "doc" directory, is distributed under the same terms as the software itself.

The basic library functions are written in C and are freestanding. Also included in the distribution is a set of C++ wrapper functions.

THE BASIC LIBRARY FUNCTIONS

119.1.28 SecureDongle X

Platforms: macOS, Linux, Windows, Targets: .

Function: The SecureDongle X license
Notes: Software Developer's Agreement

All Products of SecureMetric Technology Sdn. Bhd. (SecureMetric) including, but not limited to, evaluation copies, diskettes, CD-ROMs, hardware and documentation, and all future orders, are subject to the terms of this Agreement. If developers do not agree with the terms herein, please return the evaluation package to us, postage and insurance prepaid, within seven days of their receipt, and we will reimburse developers the cost of the Product, less freight and reasonable handling charges.

1. Allowable Use - Developers may merge and link the Software with other programs for the sole purpose of protecting those programs in accordance with the usage described in the Developer's Guide. Developers may make archival copies of the Software.

2. Prohibited Use - The Software or hardware or any other part of the Product may not be copied, reengineered, disassembled, decompiled, revised, enhanced or otherwise modified, except as specifically allowed in item 1. Developers may not reverse engineer the Software or any part of the product or attempt to discover

the Software's source code. Developers may not use the magnetic or optical media included with the Product for the purposes of transferring or storing data that was not either an original part of the Product, or a SecureMetric provided enhancement or upgrade to the Product.

3. Warranty - SecureMetric warrants that the hardware and Software storage media are substantially free from significant defects of workmanship or materials for a time period of twelve (12) months from the date of delivery of the Product to developers.

4. Breach of Warranty - In the event of breach of this warranty, SecureMetric's sole obligation is to replace or repair, at the discretion of SecureMetric, any Product free of charge. Any replaced Product becomes the property of SecureMetric. Warranty claims must be made in writing to SecureMetric during the warranty period and within fourteen (14) days after the observation of the defect. All warranty claims must be accompanied by evidence of the defect that is deemed satisfactory by SecureMetric. Any Products that developers return to SecureMetric, or a SecureMetric authorized distributor, must be sent with freight and insurance prepaid.
EXCEPT AS STATED ABOVE, THERE IS false OTHER WARRANTY OR REPRESENTATION OF THE PRODUCT, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5. Limitation of SecureMetric's Liability - SecureMetric's entire liability to developers or any other party for any cause whatsoever, whether in contract or in tort, including negligence, shall not exceed the price developers paid for the unit of the Product that caused the damages or are the subject of, or indirectly related to the cause of action. In no event shall SecureMetric be liable for any damages caused by developers failure to meet developer's obligations, nor for any loss of data, profit or savings, or any other consequential and incidental damages, even if SecureMetric has been advised of the possibility of damages, or for any claim by developers based on any third-party claim.

6. Termination - This Agreement shall terminate if developers fail to comply with the terms herein. Items 2, 3, 4 and 5 shall survive any termination of this Agreement.

119.1.29 SQLAPI

Platforms: macOS, Linux, Windows, Targets: .

Function: The SQLAPI 3.7.33 license
Notes: Note: Once you buy a SQL Plugin license, you get automatically a SQLAPI license from use with our plugin. No extra license fee required.

****
SQLAPI++ Library - LICENSE AGREEMENT and WARRANTY
****

You should carefully read the following terms and conditions

before using this software. Your use of this software
indicates your acceptance of this license agreement
and warranty.

LICENSE AGREEMENT:
==========
You have the non-exclusive right to use the Library.
The Company retains all title and ownership of the Library.

EVALUATION:
==========
The SQLAPI++ Library is distributed as shareware. You can use the Library
for evaluation purposes without charge for unlimited period. The evaluation
version has no limits or functional differences from registered version,
but it will display registration messages occasionally.
While in evaluation you MAY NOT distribute your applications written with
trial version of SQLAPI++ library.

REGISTERED VERSIONS:
==========
You have to purchase SQLAPI++ Personal license for every developer,
or one Site license for up to 10 developers in your company
or one Site+ license for unlimited number of developers in your company.
You MAY distribute applications written with SQLAPI++ (including SQLAPI++
run-time) without any additional charge.
You MAY NOT distribute SQLAPI++ source codes (original or modified).

REGISTERED VERSION (Personal license):
One registered copy of SQLAPI++ Library may be used by a single person
who uses it personally on one or more computers.
You may access the registered version of SQLAPI++ Library through a network,
provided that you have obtained individual licenses for the software covering
all developers that will access the software through the network.

REGISTERED VERSION (Site license):
One registered copy of SQLAPI++ may be used by up to 10 developers
WORKING IN ONE COMPANY on one or more computers.

REGISTERED VERSION (Site+ license):
One registered copy of SQLAPI++ may be used by any number of developers
WORKING IN ONE COMPANY on one or more computers.

WARRANTY AND LIMITATION OF LIABILITY
==========

We warrant that you will receive life-time FREE e-mail support, FREE bugs fixing and FREE new version updates.

119.1.34 zlib

Platforms: macOS, Linux, Windows, Targets: .

Function: The zlib 1.2.3 license
Notes: (C) 1995-2004 Jean-loup Gailly and Mark Adler

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

Jean-loup Gailly Mark Adler
jloup@gzip.org madler@alumni.caltech.edu

If you use the zlib library in a product, we would appreciate *not* receiving lengthy legal documents to sign. The sources are provided for free but without warranty of any kind. The library has been entirely written by Jean-loup Gailly and Mark Adler; it does not include third-party code.

If you redistribute modified sources, we would appreciate that you include in the file ChangeLog history information documenting your changes. Please read the FAQ for more information on the distribution of modified source versions.

Chapter 120

Linguistic

120.1 class NSLinguisticTaggerMBS

120.1.1 class NSLinguisticTaggerMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Analyze natural language to tag part of speech and lexical class, identify proper names, perform lemmatization, and determine the language and script (orthography) of text.
Example:

```
Var TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
Var TagSchemes() as string = array(TagScheme)
Var t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"

Var tokenRange as NSRangeMBS
Var sentenceRange as NSRangeMBS
Var tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

MsgBox "Language: "+tag // should be "de" for German
```

Notes: The NSLinguisticTaggerMBS class provides a uniform interface to a variety of natural language processing functionality with support for many different languages and scripts. You can use NSLinguistic-TaggerMBS to segment natural language text into paragraphs, sentences, or words, and tag information about those tokens, such as part of speech, lexical class, lemma, script, and language.
When you create a linguistic tagger, you specify what kind of information you're interested in by passing one or more
NSLinguisticTagScheme values. Set the string property to the natural language text you want to analyze, and the linguistic tagger processes it according to the specified tag schemes. You can then enumerate over

the tags in a specified range, using the methods described in Enumerating Linguistic Tags, to get the information requested for a given scheme and unit.
Blog Entries

- MBS Xojo Plugins, version 21.1pr6
- MBS Xojo Plugins, version 17.3pr3

120.1.2 Methods

120.1.3 availableTagSchemesForLanguage(Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes available for a particular language on the current device.
Notes: language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the available tag schemes. For possible values, see NSLinguisticTagScheme.

This is a convenience method for calling the availableTagSchemesForUnit, passing NSLinguisticTaggerUnitWord as the linguistic unit.

120.1.4 availableTagSchemesForUnit(unit as Integer, Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes available for a particular unit and language on the current device.
Notes: unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the supported tag schemes. For possible values, see NSLinguisticTagScheme.

Available in macOS 10.13 and newer.

120.1.5 Constructor(tagSchemes() as String, options as integer = 0)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates a linguistic tagger instance using the specified tag schemes and options.
Notes: tagSchemes: An array of tag schemes. See NSLinguisticTagScheme for the possible values.
options: Reserved for future use. Specify 0 for this parameter.

120.1.6 dominantLanguageForString(text as String) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language for the specified string.
Notes: string: The string for which the dominant language is determined.

Returns the BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.

This is a convenience method for creating a new linguistic tagger, setting the string property, and getting the dominantLanguage property. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

120.1.7 NSLinguisticTagAdjective as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an adjective.

120.1.8 NSLinguisticTagAdverb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an adverb.

120.1.9 NSLinguisticTagClassifier as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.

Notes: This token is a classifier.

120.1.10 NSLinguisticTagCloseParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a close parenthesis.

120.1.11 NSLinguisticTagCloseQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a close quote.

120.1.12 NSLinguisticTagConjunction as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a conjunction.

120.1.13 NSLinguisticTagDash as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a dash.

120.1.14 NSLinguisticTagDeterminer as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a determiner.

120.1.15 NSLinguisticTagIdiom as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an idiom.

120.1.16 NSLinguisticTagInterjection as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an interjection.

120.1.17 NSLinguisticTagNoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: The token is a noun.

120.1.18 NSLinguisticTagNumber as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a number.

120.1.19 NSLinguisticTagOpenParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an open parenthesis.

120.1.20 NSLinguisticTagOpenQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is an open quote.

120.1.21 NSLinguisticTagOrganizationName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is an organization name.

120.1.22 NSLinguisticTagOther as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates a non-linguistic item, such as a symbol.

120.1.23 NSLinguisticTagOtherPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is punctuation other than a kind described by other lexical classes (sentence terminator, open or close quote, open or close parenthesis, word joiner, and dash).

120.1.24 NSLinguisticTagOtherWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is whitespace other than a kind described by other lexical classes (paragraph break).

120.1.25 NSLinguisticTagOtherWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a word other than a kind described by other lexical classes (noun, verb, adjective, adverb, pronoun, determiner, particle, preposition, number, conjunction, interjection, classifier, and idiom).

120.1.26 NSLinguisticTagParagraphBreak as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a paragraph break.

120.1.27 NSLinguisticTagParticle as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a particle.

120.1.28 NSLinguisticTagPersonalName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is a personal name.

120.1.29 NSLinguisticTagPlaceName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the Name Types.
Notes: This token is a place name.

120.1.30 NSLinguisticTagPreposition as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a preposition.

120.1.31 NSLinguisticTagPronoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a pronoun.

120.1.32 NSLinguisticTagPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates punctuation.

120.1.33 NSLinguisticTagSchemeLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies a BCP-47 language identifier for a token.
Notes: For example, the language identifier for English is "en" and the identifier for Chinese written using the Simplified Chinese script is "zh-Hans". The identifier "und" is used if a specific language cannot be determined.
The tagger generally attempts to determine the language of text at the level of an entire sentence, paragraph, or document, rather than word by word.

120.1.34 NSLinguisticTagSchemeLemma as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies a stem form of a word token, if known.

120.1.35 NSLinguisticTagSchemeLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to class: part of speech for words, type of punctuation, or whitespace.

120.1.36 NSLinguisticTagSchemeNameType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to whether they are part of a named entity.

120.1.37 NSLinguisticTagSchemeNameTypeOrLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens corresponding to names according to NSLinguisticTagSchemeNameType and tokens all other tokens according to NSLinguisticTagSchemeLexicalClass.

120.1.38 NSLinguisticTagSchemeScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Supplies an ISO 15924 script identifier for a token.
Notes: For example, the identifier for Latin script is "Latn" and the identifier for Simplified Chinese script is "Hans". The identifier "Zyyy" is used if a specific script cannot be determined.

120.1.39 NSLinguisticTagSchemeTokenType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Classifies tokens according to their broad type: word, punctuation, or whitespace.
Notes: To classify tokens by a more specific type, for example, distinguishing words between nouns and verbs, use the
NSLinguisticTagSchemeLexicalClass scheme.

120.1.40 NSLinguisticTagSentenceTerminator as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a sentence terminator.

120.1.41 NSLinguisticTagVerb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a verb.

120.1.42 NSLinguisticTagWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates white space of any sort.

120.1.43 NSLinguisticTagWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the token types.
Notes: The token indicates a word.

120.1.44 NSLinguisticTagWordJoiner as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: One of the lexical classes.
Notes: This token is a word joiner.

120.1.45 orthographyAtIndex(charIndex as integer, byref effectiveRange as NSRangeMBS) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the orthography at the index and also returns the effective range.
Example:

```
Var TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
Var TagSchemes() as string = array(TagScheme)
Var t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"

Var tokenRange as NSRangeMBS
Var sentenceRange as NSRangeMBS
Var tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

Var effectiveRange as NSRangeMBS
Var o as NSOrthographyMBS = t.orthographyAtIndex(0, effectiveRange)

MsgBox o.dominantLanguage+" "+o.dominantScript
```

Notes: charIndex: The character index to begin examination.
effectiveRange: An NSRangeMBS that, upon completion, contains the range of the orthography containing charIndex.

Returns the orthography for the location.

120.1.46 sentenceRangeForRange(range as NSRangeMBS) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the range of a sentence containing the specified range.
Notes: charRange: The character range.

Returns the range of the sentence.

This is a convenience method for calling tokenRangeAtIndex, passing the NSLinguisticTaggerUnitSentence unit and the first position of the provided range.

120.1.47 setOrthography(orthography as NSOrthographyMBS, range as NSRangeMBS)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Sets the orthography for the specified range.
Notes: orthography: The orthography.
charRange: The range.

If the orthography of the linguistic tagger is not set, it will determine it automatically from the contents of the text. You should call this method only if you know the orthography of the text by some other means.

120.1.48 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme at the specified character position.
Notes: charIndex: The position of the initial character.
tagScheme: The tag scheme. See NSLinguisticTagScheme for the possible values.
tokenRange: The token range for output.
sentenceRange: The range of the sentence for output.

Returns the tag for the requested tag scheme, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange, and the range of the enclosing sentence to sentenceRange, if applicable.

This is a convenience method for calling tagAtIndex and passing NSLinguisticTaggerUnitWord as the linguistic unit.

Available in macOS 10.7 and newer.
See also:

- 120.1.49 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String 17150

120.1.49 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position.
Notes: charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

Available in macOS 10.13 and newer.
See also:

- 120.1.48 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String 17149

120.1.50 tagForString(text as string, charIndex as Integer, unit as Integer, Scheme as String, orthography as NSOrthographyMBS, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position in a string.
Notes: charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.

tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

This is a convenience method for initializing a linguistic tagger, setting the string property, and calling the tagForString method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

120.1.51 tagSchemes as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the tag schemes configured for this linguistic tagger.
Notes: For possible values, see NSLinguisticTagScheme.

120.1.52 TagsForString(text as string, range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer, orthography as NSOrthographyMBS) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range from which to return tags.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

An array of the values in the requested range (tag and tokenRange set).

When the returned array contains an entry that doesn't have a corresponding tag scheme, that entry is an empty string ("").
This is a convenience method for initializing a linguistic tagger, setting the
string property, and calling the tagsInRange method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

120.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range to analyze.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.7 and newer.
See also:

- 120.1.54 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS() 17152

120.1.54 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array of linguistic tags and token ranges.
Notes: range: The range to analyze.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.13 and newer.

Returns all tokens intersecting a given range, supplying tags and ranges. The tagger segments the string into sentences and tokens as necessary, and return those ranges along with a tag for any scheme in its array of tag schemes. For example, if the tag scheme is NSLinguisticTagSchemeLexicalClass, the tags specify the part of speech (for word tokens) or the type of whitespace or punctuation (for whitespace or punctuation tokens). If the tag scheme is NSLinguisticTagSchemeLemma, the tags specify the stem form of the word (if known) for each word token.
See also:

- 120.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS() 17152

120.1.55 tokenRangeAtIndex(charIndex as Integer, Unit as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the range of the linguistic unit containing the specified character index.
Notes: charIndex: The character index to begin examination.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.

Returns the range of the substring for the linguistic unit.
Available in macOS 10.13 and newer.

120.1.56 Properties

120.1.57 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language of the string set for the linguistic tagger.
Notes: The BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.
Available in macOS 10.13 and newer.
(Read only property)

120.1.58 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

120.1.59 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The string being analyzed by the linguistic tagger.
Notes: (Read and Write property)

120.1.60 Constants

Options

Constant	Value	Description
NSLinguisticTaggerJoinNames	16	Typically, multiple-word names will be returned as multiple tokens, follo the standard tokenization practice of the tagger. If this option is set, multiple-word names will be joined together and returned as a single toke
NSLinguisticTaggerOmitOther	8	Omit tokens of type NSLinguisticTagOther (non-linguistic items, such as s bols).
NSLinguisticTaggerOmitPunctuation	2	Omit tokens of type NSLinguisticTagPunctuation (all punctuation).
NSLinguisticTaggerOmitWhitespace	4	Omit tokens of type NSLinguisticTagWhitespace (whitespace of all sorts)
NSLinguisticTaggerOmitWords	1	Omit tokens of type NSLinguisticTagWord (items considered to be words

Units

Constant	Value	Description
NSLinguisticTaggerUnitDocument	3	The document in its entirety.
NSLinguisticTaggerUnitParagraph	2	An individual paragraph.
NSLinguisticTaggerUnitSentence	1	An individual sentence.
NSLinguisticTaggerUnitWord	0	An individual word.

120.2 class NSLinguisticValueMBS

120.2.1 class NSLinguisticValueMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The class for linguistic tokens.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 21.1pr6
- MBS Xojo Plugins, version 17.3pr3

120.2.2 Methods

120.2.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The private constructor.

120.2.4 Properties

120.2.5 sentenceRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The sentence range.
Notes: Only filled by tagAtIndex when used without unit.
(Read and Write property)

120.2.6 Tag as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The linguistic tag.
Notes: (Read and Write property)

120.2.7 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The text for the token.
Notes: (Read and Write property)

120.2.8 tokenRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The token range.
Notes: (Read and Write property)

120.3 class NSOrthographyMBS

120.3.1 class NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: A description of the linguistic content of a piece of text typically used for spelling and grammar checking.
Notes: An NSOrthography instance describes:

- Which scripts the text contains.
- A dominant language and possibly other languages for each of these scripts.
- A dominant script and language for the text as a whole.

Scripts are uniformly described by standard four-letter tags (Latn, Grek, Cyrl, etc.) with the supertags Jpan and Kore typically used for Japanese and Korean text, Hans and Hant for Chinese text; the tag Zyyy is used if a specific script cannot be identified. See Internationalization and Localization Guide for more information on internationalization.

Languages are uniformly described by BCP-47 tags , preferably in canonical form; the tag und is used if a specific language cannot be determined.

120.3.2 Methods

120.3.3 allLanguages as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array containing all the languages appearing in the values of the language map.
Notes: Available in macOS 10.6 and newer.

120.3.4 allScripts as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns an array containing all the scripts appearing as keys in the language map.
Notes: Available in macOS 10.6 and newer.

120.3.5 Constructor(script as string, map as dictionary)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes: script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

120.3.6 copy as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Create a copy of the object.

120.3.7 defaultOrthographyForLanguage(language as string) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Queries default orthography for a language.
Notes: Available in macOS 10.13 and newer.

120.3.8 dominantLanguageForScript(script as string) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the dominant language for the specified script.
Notes: Available in macOS 10.6 and newer.

120.3.9 languagesForScript(script as string) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the list of languages for the specified script.
Notes: Available in macOS 10.6 and newer.

120.3.10 orthographyWithDominantScript(script as string, map as dictionary) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes: script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

120.3.11 Properties

120.3.12 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: Returns the first language in the list of languages for the dominant script.
Notes: Available in macOS 10.6 and newer.
(Read only property)

120.3.13 dominantScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The dominant script for the text.
Notes: The dominant script should be a script tag, such as Latn, Cyrl, etc.
Available in macOS 10.6 and newer.
(Read only property)

120.3.14 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

120.3.15 languageMap as Dictionary

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: All.

Function: A dictionary that map script tags to arrays of language tags.
Notes: The dictionary,Äôs keys are script tags (such as Latn, Cyrl, and so forth) and whose values are arrays of language tags (such as en, fr, de, etc.)
(Read only property)

Chapter 121

Linux

121.1 module LinuxIconMBS

121.1.1 module LinuxIconMBS

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The module for linux icons.

121.1.2 Methods

121.1.3 FileIcon(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries file icon for file.
Example:

```
Var f2 as FolderItem = SpecialFolder.Desktop
Canvas2.Backdrop = LinuxIconMBS.FileIcon(f2, Canvas2.Width)
```

Notes: Returns nil in case of error.

121.1.4 FilePreview(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries preview icon for file.
Notes: Returns nil in case of error.

121.1.5 FileThumbnail(file as FolderItem) as FolderItem

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries thumbnail path for a given file.
Example:

```
// make an image file
Var p as picture = logoMBS(500) // from Main plugin
Var f as FolderItem = SpecialFolder.Desktop.Child("MBS.jpg")
p.Save(f, p.SaveAsJPEG, 90)

// show thumbnail
Var ThumbnailFile as FolderItem = LinuxIconMBS.FileThumbnail(f)
if ThumbnailFile <>nil then
Canvas6.Backdrop = Picture.Open(ThumbnailFile)
end if
```

Notes: Returns nil in case of error.
Otherwise this may be URL for png file with thumbnail.

121.1.6 GenericIconName(MimeType as String) as String

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries generic icon name for mime type.

121.1.7 Icon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries icon for mime type.
Example:

Canvas1.Backdrop = LinuxIconMBS.Icon("image/jpeg", Canvas1.Width)

Notes: Returns nil in case of error.

121.1.8 SymbolicIcon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries symbolic icon for given mime type.
Example:

Canvas3.Backdrop = LinuxIconMBS.SymbolicIcon("image/jpeg", Canvas3.Width)

Notes: Returns nil in case of error.

121.2 class LinuxProcessMBS

121.2.1 class LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for querying linux process details.
Example:

```
// show the path of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.path
```

Notes: If your app has not enough permission to read info about other app, values may be missing.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 12.3, page 10: News

121.2.2 Methods

121.2.3 Constructor

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

121.2.4 PID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The Process ID of the current process (your app).
Example:

```
Var myPID as Integer = LinuxProcessMBS.PID
MsgBox "my process ID is: "+str(myPID)
```

121.2.5 ProcessByPID(ProcessID as Integer) as LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries the information for a process with given ID.
Example:

```
// show the name of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.name
```

Notes: Returns nil on error.

121.2.6 Processes as LinuxProcessMBS()

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns array with all processes.
Example:

```
// shows all process names in listbox
Var Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
listbox1.addrow p.name
next
```

121.2.7 Properties

121.2.8 CommandLine as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command line used to create this process.
Example:

```
// show the command line of current process
Var myPID as Integer = LinuxProcessMBS.PID
```

```
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.CommandLine
```

Notes: (Read only property)

121.2.9 CurrentWorkingDirectory as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The current working directory.
Example:

```
// show the current working directory of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.CurrentWorkingDirectory
```

Notes: (Read only property)

121.2.10 Environment as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The environment variables.
Notes: (Read only property)

121.2.11 Name as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The name of the process.
Example:

```
// shows all process names in listbox
Var Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
listbox1.addrow p.name
next
```

Notes: (Read only property)

121.2.12 NumberOfThreads as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of threads used by this process.
Notes: (Read only property)

121.2.13 OpenFiles as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries details about open files.
Example:

```
// show the paths of open files of current process in listbox
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
Var OpenFiles as Dictionary = myProcess.OpenFiles

for each key as Variant in OpenFiles.keys
listbox1.addrow OpenFiles.Value(key).StringValue
next
```

Notes: This dictionary contains the file descriptor number as key and the path to the file as text.
(Read only property)

121.2.14 ParentProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The parent process ID.
Notes: (Read only property)

121.2.15 Path as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The path for this process.
Example:

```
// show the path of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.Path
```

Notes: (Read only property)

121.2.16 ProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The process ID.
Notes: (Read only property)

121.2.17 StartTime as Date

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The start time of the process.
Example:

```
// show the start time of current process
Var myPID as Integer = LinuxProcessMBS.PID
Var myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
Var d as date = myProcess.StartTime
MsgBox d.LongDate+" "+d.LongTime
```

Notes: (Read only property)

121.2.18 State as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The state of the process.
Notes: Can be Running, Sleeping, Disk Sleep, Zombie, Trace or Writing pages.
(Read only property)

121.3 class LinuxSuMBS

121.3.1 class LinuxSuMBS

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to run stuff with sudo.
Example:

```
Var s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MsgBox "OK"
else
MsgBox s.LastErrorMessage
end if
```

Notes: Uses the gksu library.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr1
- Sudo on Linux

121.3.2 Methods

121.3.3 AskPassword(prompt as String) as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Asks for the password.
Notes: Returns password.
Stores error in LastError and LastErrorMessage properties.
See also:

- 121.3.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string 17173

121.3.4 Available as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the gksu library was found and loaded.
Notes: Should return true on linux.
If missing, install the libgksu2-0 library.

121.3.5 ExecuteRun as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command.
Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

121.3.6 ExecuteSu as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with su.
Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

121.3.7 ExecuteSudo as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with sudo.
Example:

```
Var s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MsgBox "OK"
else
MsgBox s.LastErrorMessage
end if
```

Notes: Returns true on success.
Stores error in LastError and LastErrorMessage properties.

121.3.8 Properties

121.3.9 Alert as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The alert message.
Notes: (Read and Write property)

121.3.10 AlwaysAskPassword as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether to always ask for a password.
Notes: (Read and Write property)

121.3.11 Command as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command will run with the target user.
Notes: (Read and Write property)

121.3.12 Debug as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether debuging information should be printed.
Notes: (Read and Write property)

121.3.13 Description as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The description text.
Notes: (Read and Write property)

121.3.14 ExitCode as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The exit code of the last command run.
Notes: (Read and Write property)

121.3.15 Grab as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Grab?
Notes: (Read and Write property)

121.3.16 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

121.3.17 KeepEnvironment as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Should the environment be kept as it is?
Notes: Defaults to true. Notice that setting this to false may cause the X authorization stuff to fail. (Read and Write property)

121.3.18 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

121.3.19 LastErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

121.3.20 LoginShell as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The shell in which the command will be run be a login shell?
Notes: Finds out if the shell created by the underlying su process will be a login shell.
(Read and Write property)

121.3.21 Message as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The message text.
Notes: (Read and Write property)

121.3.22 User as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: What user the command will be run as.
Notes: The default is root, but you can run the command as any user.
(Read and Write property)

121.3.23 Events

121.3.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The event to ask for password.
Notes: If you prefer your own dialog.
Return password or set error parameters.
See also:

- 121.3.3 AskPassword(prompt as String) as String 17169

121.3.25 PasswordNoNeeded

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: No password is needed.

121.3.26 Constants

Error Codes

Constant	Value	Description
ErrorCanceled	11	The user cancelled.
ErrorChildFailed	9	Child failed.
ErrorExec	5	Execution failed.
ErrorFork	4	Forking failed.
ErrorHelper	1	The helper tool failed.
ErrorNoCommand	2	Missing command.
ErrorNoPassword	3	Missing password.
ErrorNotAllowed	10	Not allowed.
ErrorPipe	6	Pipe failed.
ErrorPiperead	7	Pipe read error.
ErrorWrongAutoPass	12	Wrong auto Password.
ErrorWrongPass	8	Wrong Password
ErrorXauth	0	XAuth failed.

Chapter 122

Llama

122.1 class LlamaBackendMBS

122.1.1 class LlamaBackendMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 26.1
- MBS Xojo Plugins, version 26.1pr3

122.1.2 Methods

122.1.3 Constructor

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

122.1.4 Devices as LlamaDeviceMBS()

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the array with devices.

122.1.5 Properties

122.1.6 Features as Dictionary

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Some additional feature flags.
Notes: Not always available.
(Read only property)

122.1.7 Name as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name of the backend.
Notes: (Read only property)

122.2 class LlamaBatchMBS

122.2.1 class LlamaBatchMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A batch of tokens.
Blog Entries

- MBS Xojo Plugins, version 25.5pr4

122.2.2 Methods

122.2.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Creates an empty batch.
See also:

- 122.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32) 17177
- 122.2.5 Constructor(tokens() as Int32) 17177

122.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new batch with one token.
See also:

- 122.2.3 Constructor 17177
- 122.2.5 Constructor(tokens() as Int32) 17177

122.2.5 Constructor(tokens() as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new batch based on the tokens.
Notes: We avoid copying the tokens array and reference it.
Please don't modify the array later.
See also:

- 122.2.3 Constructor 17177

- 122.2.4 Constructor(tokens as Int32, embd as Int32, n_seq_max as Int32) 17177

122.2.6 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.2.7 Tokens as Int32()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the tokens array.
Notes: This may return the same array passed to the constructor.

122.2.8 Properties

122.2.9 embd as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token embeddings.
Notes: i.e. float vector of size n_embd.

Used when token is nil.
(Read only property)

122.2.10 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

122.2.11 logits as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The pointer to the logits.
Notes: if zero, the logits (and/or the embeddings) for the respective token will not be output

(if set to nil:
- if embeddings: all tokens are output
- if not: only the last token is output
(Read only property)

122.2.12 n_tokens as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of tokens.
Notes: (Read only property)

122.3 class LlamaChatMessageMBS

122.3.1 class LlamaChatMessageMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a chat message.
Blog Entries

- Use Llama.cpp in Xojo

122.3.2 Methods

122.3.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
See also:

- 122.3.4 Constructor(Role as String, Content as String) 17180

122.3.4 Constructor(Role as String, Content as String)

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The convenience constructor to set the properties.
See also:

- 122.3.3 Constructor 17180

122.3.5 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.3.6 Properties

122.3.7 Content as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content of the message.
Notes: (Read and Write property)

122.3.8 Role as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The role of the message.
Notes: e.g. "user" or "assistant".
(Read and Write property)

122.4 class LlamaContextMBS

122.4.1 class LlamaContextMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for llama.
Blog Entries

- Use Llama.cpp in Xojo

- Using llama.cpp in Xojo
- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.5
- MBS Xojo Plugins, version 25.5pr4

Xojo Developer Magazine

- 24.1, page 9: News

122.4.2 Methods

122.4.3 Ask(Sampler as LlamaSamplerMBS, prompt as String, MaxTokens as Integer = 100) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the LLM with a prompt.
Notes: This is a convenience function to:

- tokenize the prompt.
- run the loop to decode and ask sampler for next token
- collect tokens and convert to text
- return the collected answer

Exists when token limit is reached.

May raise OutOfMemoryException or UnsupportedOperationException if something goes terrible wrong.

122.4.4 ClearMemory

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Clears the memory in the current context.

122.4.5 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 122.4.6 Constructor(Model as LlamaModelMBS, Parameters as LlamaContextParametersMBS = nil) 17183

122.4.6 Constructor(Model as LlamaModelMBS, Parameters as LlamaContextParametersMBS = nil)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new context based on the given model.
Notes: Raises UnsupportedOperationException if the context can't be created.
See also:

- 122.4.5 Constructor 17183

122.4.7 Decode(batch as LlamaBatchMBS) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Process a batch of tokens.
Notes: Requires the context to have a memory.

For encode-decoder contexts, processes the batch using the decoder.
Positive return values does not mean a fatal error, but rather a warning.
Upon fatal-error or abort, the ubatches that managed to be been processed will remain in the memory state of the context

To handle this correctly, query the memory state using llama_memory_seq_pos_min() and llama_memory_seq_pos_max()

Upon other return values, the memory state is restored to the state before this call

0 - success
1 - could not find a KV slot for the batch (try reducing the size of the batch or increase the context)
2 - aborted (processed ubatches will remain in the context's memory)
-1 - invalid input batch
<-1 - fatal error (processed ubatches will remain in the context's memory)

122.4.8 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.4.9 Embeddings as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get all output token embeddings.
Notes: when pooling_type = PoolingTypeNone or when using a generative model, the embeddings for which llama_batch.logits [i] != 0 are stored contiguouslyin the order they have appeared in the batch.

shape: [n_outputs*n_embd]
Otherwise, returns nil.
See also:

- 122.4.10 Embeddings(index as Integer) as Ptr 17184

122.4.10 Embeddings(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the embeddings for the ith token.
Notes: For positive indices, Equivalent to:
Embeddings + ctx->output_ids [i] *n_embd

Negative indicies can be used to access embeddings in reverse order, -1 is the last embedding.

shape: [n_embd] (1-dimensional)

returns nil for invalid ids.
See also:

- 122.4.9 Embeddings as Ptr 17184

122.4.11 EmbeddingsSeq(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the embeddings for a sequence index.
Notes: Returns nil if pooling_type is PoolingTypeRank.

When pooling_type = PoolingTypeRank, returns float [n_cls_out] with the rank(s) of the sequence otherwise: float [n_embd] (1-dimensional)

122.4.12 Encode(batch as LlamaBatchMBS) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Process a batch of tokens.
Notes: In contrast to Decode() - this call does not use KV cache.

For encode-decoder contexts, processes the batch using the encoder.
Can store the encoder output internally for later use by the decoder's cross-attention layers.

Returns 0 - success
Returns <0 - error. the memory state is restored to the state before this call.

122.4.13 Logits as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token logits obtained from the last call to Decode.
Notes: The logits for which llama_batch.logits [i] != 0 are stored contiguously in the order they have appeared in the batch.

Rows: number of tokens for which llama_batch.logits [i] != 0
Cols: n_vocab
See also:

- 122.4.14 Logits(index as Integer) as Ptr 17186

122.4.14 Logits(index as Integer) as Ptr

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Logits for the ith token.
Notes: For positive indices, Equivalent to:
logits + ctx->output_ids [i] *n_vocab

Negative indicies can be used to access logits in reverse order, -1 is the last logit.

Returns nil for invalid ids.
See also:

- 122.4.13 Logits as Ptr 17185

122.4.15 MemoryBreakdownPrint

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print a breakdown of per-device memory use.

122.4.16 Performance as LlamaPerformanceContextDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries performance data.

122.4.17 PerformancePrint

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prints performance statistics.

122.4.18 PerformanceReset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets performance data.

122.4.19 SetCausalAttention(causalAttn as boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set whether to use causal attention or not.
Notes: If set to true, the model will only attend to the past tokens.

122.4.20 SetEmbeddings(embeddings as Boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set whether the context outputs embeddings or not.

122.4.21 SetThreads(Threads as Integer, ThreadsBatch as Integer)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set the number of threads used for decoding.
Notes: n_threads is the number of threads used for generation (single token)
n_threads_batch is the number of threads used for prompt and batch processing (multiple tokens)

122.4.22 SetWarmup(warmup as boolean)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set whether the model is in warmup mode or not.
Notes: If true, all model tensors are activated during llama_decode() to load and cache their weights.

122.4.23 Synchronize

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Wait until all computations are finished.
Notes: This is automatically done when using one of the functions below to obtain the computation results and is not necessary to call it explicitly in most cases.

122.4.24 Properties

122.4.25 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

122.4.26 Model as LlamaModelMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The model used for this context.
Notes: (Read only property)

122.4.27 n_batch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the batch size.
Notes: logical maximum batch size that can be submitted to Decode.
(Read only property)

122.4.28 n_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the context size.
Notes: (Read only property)

122.4.29 n_ctx_seq as UInt32

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for a single sequence.
Notes: (Read only property)

122.4.30 n_ctx_used as UInt32

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries context memory used.
Notes: (Read only property)

122.4.31 n_seq_max as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the maximum sequence size.
Notes: max number of sequences (i.e. distinct states for recurrent models)
(Read only property)

122.4.32 n_threads as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for generation
Notes: (Read only property)

122.4.33 n_threads_batch as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for batch processing
Notes: (Read only property)

122.4.34 n_ubatch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: physical maximum batch size
Notes: (Read only property)

122.4.35 pooling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The pooling type.
Notes: (Read only property)

122.5 class LlamaContextParametersMBS

122.5.1 class LlamaContextParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context parameters.
Blog Entries

- Using llama.cpp in Xojo

122.5.2 Methods

122.5.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

122.5.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.5.5 FlashAttnTypeName(FlashAttnType as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the text for the flash attention type value.
Example:

```
Var nn As String = LlamaContextParametersMBS.FlashAttnTypeName(LlamaContextParametersMBS.FlashAttnTypeEnabled)
Break // nn is "enabled"
```

122.5.6 Properties

122.5.7 attention_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: attention type to use for embeddings
Notes: (Read and Write property)

122.5.8 defrag_thold as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: defragment the KV cache if holes/size >thold, <= 0 disabled (default)
Notes: Deprecated in llama.
(Read and Write property)

122.5.9 embeddings as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: if true, extract embeddings (together with logits)
Notes: (Read and Write property)

122.5.10 flash_attn_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: when to enable Flash Attention
Notes: (Read and Write property)

122.5.11 kv_unified as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Use a unified buffer across the input sequences when computing the attention.
Notes: (Read and Write property)

122.5.12 no_perf as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Measure performance timings.
Notes: (Read and Write property)

122.5.13 n_batch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: logical maximum batch size that can be submitted to llama_decode
Notes: (Read and Write property)

122.5.14 n_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Context size.
Notes: text context, 0 = from model
(Read and Write property)

122.5.15 n_seq_max as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: max number of sequences (i.e. distinct states for recurrent models)
Notes: (Read and Write property)

122.5.16 n_threads as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for generation
Notes: (Read and Write property)

122.5.17 n_threads_batch as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of threads to use for batch processing
Notes: (Read and Write property)

122.5.18 n_ubatch as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: physical maximum batch size
Notes: (Read and Write property)

122.5.19 offload_kqv as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: offload the KQV ops (including the KV cache) to GPU
Notes: (Read and Write property)

122.5.20 op_offload as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: offload host tensor operations to device
Notes: (Read and Write property)

122.5.21 pooling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: whether to pool (sum) embedding results by sequence id
Notes: (Read and Write property)

122.5.22 rope_freq_base as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE base frequency
Notes: 0 = from model
(Read and Write property)

122.5.23 rope_freq_scale as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE frequency scaling factor
Notes: 0 = from model
(Read and Write property)

122.5.24 rope_scaling_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: RoPE scaling type, from ‘enum llama_rope_scaling_type‘
Notes: (Read and Write property)

122.5.25 swa_full as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: use full-size SWA cache.
Notes: (Read and Write property)

122.5.26 type_k as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Data type for K cache.
Notes: See GgmlType constants in LlamaModelQuantizeParametersMBS class.
(Read and Write property)

122.5.27 type_v as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: data type for V cache.
Notes: See GgmlType constants in LlamaModelQuantizeParametersMBS class.
(Read and Write property)

122.5.28 yarn_attn_factor as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN magnitude scaling factor
Notes: (Read and Write property)

122.5.29 yarn_beta_fast as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN low correction dim
Notes: (Read and Write property)

122.5.30 yarn_beta_slow as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN high correction dim
Notes: (Read and Write property)

122.5.31 yarn_ext_factor as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN extrapolation mix factor, negative = from model
Notes: (Read and Write property)

122.5.32 yarn_orig_ctx as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: YaRN original context size
Notes: (Read and Write property)

122.5.33 Constants

Attention Types

Constant	Value	Description
AttentionTypeCausal	0	Standard autoregressive (left-to-right) attention, where each position attends only to itself and previous positions
AttentionTypeNonCausal	1	Allow full (bidirectional) attention across tokens
AttentionTypeUnspecified	-1	No selection made; use default (probably causal)

Flash Attention Types

Constant	Value	Description
FlashAttnTypeAuto	-1	Let the implementation pick whether to use FlashAttention or fallback, depending on hardware, sequence length, etc.
FlashAttnTypeDisabled	0	Do not use FlashAttention; always use standard attention
FlashAttnTypeEnabled	1	Force use of FlashAttention when supported

Pooling Types

Constant	Value	Description
PoolingTypeCls	2	Use a special ,Äú [CLS] ,Äù token embedding (or a reserved first token) as the representation
PoolingTypeLast	3	Use the embedding of the last token in the sequence as representation
PoolingTypeMean	1	Take the average (mean) over token embeddings to form a pooled vector
PoolingTypeNone	0	No pooling: e.g. raw token-level output, no reduction over sequence
PoolingTypeRank	4	For reranking or classification tasks: attach classification head directly on top of the graph (rather than pooling)
PoolingTypeUnspecified	-1	No explicit pooling type chosen

Rope Scaling Types

Constant	Value	Description
RopeScalingTypeLinear	1	Scale positional embeddings (RoPE) linearly to handle longer context
RopeScalingTypeLongrope	3	A scaling method designed for very long contexts, possibly combining multiple scaling techniques (e.g. adjusting frequency)
RopeScalingTypeMaxValue	3	Utility sentinel to bound loops, check ranges etc.
RopeScalingTypeNone	0	Use standard (original) RoPE without any scaling or extension
RopeScalingTypeUnspecified	-1	Means ,Äúnot set,Äù or ,Äúuse default behavior,Äù
RopeScalingTypeYarn	2	Another scaling strategy (less common / experimental)

122.6 class LlamaDeviceMBS

122.6.1 class LlamaDeviceMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a backend device.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 26.1
- MBS Xojo Plugins, version 26.1pr3

122.6.2 Methods

122.6.3 Constructor

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

122.6.4 Properties

122.6.5 Description as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The description for the device.
Notes: (Read only property)

122.6.6 DeviceID as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The id for the device.
Notes: For PCI devices, this should be the PCI bus id formatted as "domain:bus:device.function" (e.g. "0000:01:00.0") if the id is unknown, this should be "".
(Read only property)

122.6.7 MemoryFree as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The free memory.
Notes: Value is zero if unknown.
(Read only property)

122.6.8 MemoryTotal as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The total memory available.
Notes: Value is zero if unknown.
(Read only property)

122.6.9 Name as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name for the device.
Notes: (Read only property)

122.6.10 Type as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the type of the device.
Notes: See Type constants.
May be a CPU, GPU, integrated GPU or Accelerator.
(Read only property)

122.6.11 TypeString as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The type as string for debugging.
Notes: (Read only property)

122.6.12 Constants

Types

Constant	Value	Description
TypeACCEL	3	Accelerator devices intended to be used together with the CPU backend (e.g. BLAS or AMX).
TypeCPU	0	CPU device using system memory
TypeGPU	1	GPU device using dedicated memory
TypeIGPU	2	Integrated GPU device using host memory

122.7 class LlamaExceptionMBS

122.7.1 class LlamaExceptionMBS

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for an exception.
Notes: Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo Plugins, version 26.1pr3

122.8 module LlamaMBS

122.8.1 module LlamaMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The module for globals functions for llama.
Notes: This is a thin layer around llama.cpp package.
We load the llama library (and ggml library) and call the functions.
Blog Entries

- MBS Xojo Plugins, version 26.1pr3
- Using llama.cpp in Xojo
- MBS Xojo Plugins, version 25.5pr3

122.8.2 Methods

122.8.3 ApplyChatTemplate(Template as String, ChatMessages() as LlamaChatMessageMBS, AddAssistentTokens as boolean) as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Apply chat template.
Notes: Template: The Jinja template to use for this chat.
ChatMessages: a list of multiple llama_chat_message
AddAssistentTokens: Whether to end the prompt with the token(s) that indicate the start of an assistant message.

Returns the answer. May raise LlamaExceptionMBS class if the apply process fails.

122.8.4 BackendInit

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initialize the llama + ggml backend.
Notes: If numa is true, use NUMA optimizations
Call once at the start of the program

122.8.5 BackendLoad(Path as String) as Boolean

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a specific backend library.
Notes: Please pass DLL, dylib or so path.

122.8.6 BackendLoadAll

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads all backends.
Example:

```
// load dynamic backends

LlamaMBS.BackendLoadAll
```

Notes: Needs ggml library loaded.

122.8.7 Backends as LlamaBackendMBS()

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the backends available.
Example:

```
// load dynamic backends
LlamaMBS.BackendLoadAll

// now inspect them
var backends() as LlamaBackendMBS = LlamaMBS.Backends
for each backend as LlamaBackendMBS in backends
var devices() as LlamaDeviceMBS = backend.Devices
var name as string = backend.Name
var features as Dictionary = backend.Features

Break
next
```

Notes: Each backend has a list of devices with properties.

122.8.8 ChatBuiltInTemplates as String()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get list of built-in chat templates.

122.8.9 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the llama library is loaded.

122.8.10 LoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message from the last LoadLibrary call.

122.8.11 LoadLibrary(File as FolderItem) as boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the llama library.
Notes: For Windows you need llama.dll, for macOS you need llama.dylib and for Linux you need llama.so.

On Windows you need to load ggml.dll, ggml-base.dll and llama.dll to have all functions.

Returns true on success and false on failure.
See also:

- 122.8.12 LoadLibrary(Path as String) as boolean 17204

122.8.12 LoadLibrary(Path as String) as boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the llama library.
Example:

```
If Not LlamaMBS.LoadLibrary("/opt/homebrew/Cellar/llama.cpp/6710/lib/libllama.dylib") Then
System.DebugLog LlamaMBS.LoadErrorMessage
End If
```

Notes: For Windows you need llama.dll, for macOS you need llama.dylib and for Linux you need llama.so.

On Windows you need to load ggml.dll, ggml-base.dll and llama.dll to have all functions.

Returns true on success and false on failure.
See also:

- 122.8.11 LoadLibrary(File as FolderItem) as boolean 17204

122.8.13 PrintSystemInfo

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print system information

122.8.14 SetDebugLogger

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the debug logger, which prints all log messages to stderr.
Notes: Helps to debug console applications.

122.8.15 SetLogger(Logger as LlamaLogMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the delegate for logging.
Notes: If no logger is set, log messages go to stderr.

122.8.16 Properties

122.8.17 MaxDevices as UInt64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the maximum number of hardware devices (e.g. GPUs or accelerators) that the runtime can utilize.
Notes: May return 1 for CPU-only configurations or higher if multi-GPU support is available.
(Read only property)

122.8.18 MaxParallelSequences as UInt64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the maximum number of sequences that can be processed in parallel during inference.
Notes: Useful for determining batching or parallel decoding strategies in server or multi-user environments.
(Read only property)

122.8.19 MaxTensorBufTOverrides as UInt64

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Maximum tensor buft overrides.
Notes: Should be 4096.
(Read only property)

122.8.20 SupportsGPUOffload as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns whether the current build supports GPU acceleration/offloading.
Notes: Returns true if GPU offloading is available, false otherwise.

Enabled if compiled with CUDA, Metal, or similar GPU backends.
(Read only property)

122.8.21 SupportsMLock as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks if the runtime supports mlock, which allows locking memory pages to avoid swapping them to disk.
Notes: Returns true if mlock is supported and enabled, false otherwise.

Locking model weights in RAM can improve performance consistency and prevent paging.
(Read only property)

122.8.22 SupportsMMap as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks if the current build/runtime supports memory-mapped model loading.
Notes: Returns: true if mmap is supported, false otherwise.

mmap allows efficient loading of large models without reading them entirely into memory.
(Read only property)

122.8.23 SupportsRPC as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Indicates whether the runtime supports RPC (Remote Procedure Call) functionality.
Notes: Returns true if RPC support is compiled in, false otherwise.

Useful for distributed inference setups where parts of the model or computation may be hosted remotely.
(Read only property)

122.8.24 TimeUS as Int64

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the current time in microseconds since an unspecified starting point (usually process start or epoch, depending on implementation).
Notes: Useful for benchmarking or profiling model performance.
(Read only property)

122.8.25 Constants

Log Levels

Constant	Value	Description
LogLevelCont	5	Continue previous log
LogLevelDebug	1	Debug Message
LogLevelError	4	Error
LogLevelInfo	2	Information
LogLevelNone	0	No level set.
LogLevelWarn	3	Warning

122.8.26 Delegates

122.8.27 LlamaLogMBS(Level as Integer, Message as String)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate for log messages.
Example:

```
Sub Init
LlamaMBS.SetLogger AddressOf Log
End Sub

Public Sub Log(level as integer, message as string)
System.DebugLog message
End Sub
```

122.9 class LlamaModelMBS

122.9.1 class LlamaModelMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a llama model.
Blog Entries

- MBS Xojo Plugins, version 26.1pr3
- Using llama.cpp in Xojo
- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.5

Xojo Developer Magazine

- 24.1, page 9: News

122.9.2 Methods

122.9.3 ChatTemplate(Name as String) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the default chat template. Returns nullptr if not available.
Notes: If name is "", returns the default chat template.

122.9.4 ClassifierOutputLabel(index as integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns label of classifier output by index (<n_cls_out).
Notes: Returns "" if no label provided.

122.9.5 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 122.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil) 17210
- 122.9.7 Constructor(Path as String, Parameters as LlamaModelParametersMBS = nil) 17210

122.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model.
Notes: Raises UnsupportedOperationException if the model can't be loaded.

e.g. load e.g. gemma-3-1b-it.Q8_0.gguf or gpt-oss-20b-Q4_K_M.gguf
See also:

- 122.9.5 Constructor 17209
- 122.9.7 Constructor(Path as String, Parameters as LlamaModelParametersMBS = nil) 17210

122.9.7 Constructor(Path as String, Parameters as LlamaModelParametersMBS = nil)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads a model.
Notes: Raises UnsupportedOperationException if the model can't be loaded.
See also:

- 122.9.5 Constructor 17209
- 122.9.6 Constructor(File as FolderItem, Parameters as LlamaModelParametersMBS = nil) 17210

122.9.8 DecoderStartToken as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: For encoder-decoder models, this function returns id of the token that must be provided to the decoder to start generating output sequence. For other models, it returns -1.

122.9.9 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.9.10 MetaKey(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata key with the given index.
Example:

```
var model as LlamaModelMBS // your model
Var firstKey As String = model.MetaKey(0)
Var firstValue As String = model.MetaValue(0)
```

Notes: Index is zero based.

122.9.11 MetaKeyName(Key as Integer) as String

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get sampling metadata key name.
Notes: Returns "" if the key is invalid.
Pass one of MetaKeySampling* constants.

122.9.12 MetaValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata value with the given index.
Example:

```
var model as LlamaModelMBS // your model
Var firstKey As String = model.MetaKey(0)
Var firstValue As String = model.MetaValue(0)
```

Notes: Index is zero based.
See also:

- 122.9.13 MetaValue(Key as String) as String 17211

122.9.13 MetaValue(Key as String) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata value with the given key.
See also:

- 122.9.12 MetaValue(Index as Integer) as String 17211

122.9.14 SaveToFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Saves the model to a new file.
See also:

- 122.9.15 SaveToFile(Path as String) 17212

122.9.15 SaveToFile(Path as String)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Saves the model to a new file.
See also:

- 122.9.14 SaveToFile(File as FolderItem) 17212

122.9.16 Properties

122.9.17 ClassifierOutputs as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of classifier outputs (only valid for classifier models)
Notes: Undefined behavior for non-classifier models
(Read only property)

122.9.18 ctx_train as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the context length (i.e., the maximum number of tokens) the model was trained with.
Notes: This may differ from the context size used during inference, especially if the model is fine-tuned or configured with a different context window.
(Read only property)

122.9.19 Description as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get a string describing the model type.
Notes: (Read only property)

122.9.20 embd as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the size of the embedding vector for each token (also known as the hidden size or dimensionality of the model).
Notes: For LLaMA-7B, this is typically 4096.
(Read only property)

122.9.21 embd_inp as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the input embedding size.
Notes: (Read only property)

122.9.22 embd_out as Integer

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the output embedding size.
Notes: (Read only property)

122.9.23 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

122.9.24 HasDecoder as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model contains a decoder that requires Decode call.
Notes: (Read only property)

122.9.25 HasEncoder as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model contains an encoder that requires Encode call.
Notes: (Read only property)

122.9.26 head as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of attention heads used in each transformer layer.
Notes: LLaMA-7B typically uses 32 attention heads.
(Read only property)

122.9.27 head_kv as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of key-value (KV) attention heads.
Notes: In models with multi-query attention (e.g., grouped-query attention), this may be less than the total number of attention heads. In standard attention, this equals head function.
(Read only property)

122.9.28 IsDiffusion as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is diffusion-based (like LLaDA, Dream, etc.)
Notes: (Read only property)

122.9.29 IsHybrid as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is hybrid (like Jamba, Granite, etc.)
Notes: (Read only property)

122.9.30 IsRecurrent as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the model is recurrent (like Mamba, RWKV, etc.)
Notes: (Read only property)

122.9.31 layer as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of transformer layers (also known as "blocks") in the model.
Notes: LLaMA-7B has 32 layers.
(Read only property)

122.9.32 Meta as Dictionary

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the metadata for the model.
Notes: This provides all keys and values in the metadata at once.
(Read only property)

122.9.33 MetaCount as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries meta data count.
Notes: (Read only property)

122.9.34 ParameterCount as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the total number of parameters in the model.
Notes: (Read only property)

122.9.35 RopeType as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the Rotary Positional Embedding (RoPE) type used by the given llama model.
Notes: See RopeType* constants.
(Read only property)

122.9.36 Size as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the total size of all the tensors in the model in bytes
Notes: (Read only property)

122.9.37 swa as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of sliding window attention (SWA) blocks, if used.
Notes: This field may be 0 if the model does not use sliding window attention. This is a feature used in some efficient transformer variants.
(Read only property)

122.9.38 Vocab as LlamaVocabMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the vocabulary.
Notes: (Read only property)

122.9.39 Constants

Metadata Key Names

Constant	Value	Description
MetaKeySamplingMinP	3	Sets a minimum probability threshold relative to the most likely token. Tokens with probability lower than min_p * max_probability are excluded filtering out extremely unlikely choices.
MetaKeySamplingMirostat	9	Enables Mirostat adaptive sampling, which dynamically adjusts randomness to maintain a target entropy level. Useful for keeping generation coherent while avoiding collapse or runaway randomness.
MetaKeySamplingMirostatEta	11	Controls the learning rate (Œ) for Mirostat,Äôs entropy adjustment. Higher values react faster to entropy changes but may cause instability.
MetaKeySamplingMirostatTau	10	Sets the target entropy (œÑ) for Mirostat sampling. Lower values aim for more focused text; higher values allow more creative variation.
MetaKeySamplingPenaltyLastN	7	Specifies the number of recent tokens to consider when applying repetition penalties. Only tokens within this sliding window are penalized.
MetaKeySamplingPenaltyRepeat	8	Defines the strength of the repetition penalty applied to previously generated tokens. Higher values more aggressively discourage repeated words or phrases.
MetaKeySamplingSequence	0	Defines the order in which sampling strategies are applied when generating tokens (e.g., top-k ,Üí top-p ,Üí temperature). This allows fine-grained control over how multiple sampling filters are composed.
MetaKeySamplingTemp	6	Applies temperature scaling to logits before sampling. Values <1.0 make outputs more deterministic; values >1.0 increase randomness.
MetaKeySamplingTopK	1	Limits token selection to the K most probable tokens at each step. Lower values reduce randomness and increase determinism; higher values allow more diverse outputs.
MetaKeySamplingTopP	2	Enables nucleus sampling, where tokens are selected from the smallest set whose cumulative probability is ,â• P. This dynamically adapts the candidate set size based on confidence.
MetaKeySamplingXtcProbability	4	Controls the probability of applying XTC (eXtended Token Control) sampling during generation. Used to intermittently introduce stronger randomness or exploration behavior
MetaKeySamplingXtcThreshold	5	Defines the entropy or confidence threshold at which XTC sampling activates XTC is only applied when the token distribution meets this threshold condition

Rope Type

Constant	Value	Description
RopeTypeMrope	8	Modified RoPE used for supporting longer context lengths (like in LLaMA 2 64k or LLaMA 3).
RopeTypeNeox	2	GPT-NeoX style RoPE, which can differ in frequency base or application.
RopeTypeNone	-1	Indicates that no RoPE is applied or is unsupported. Often used as a default or error state.
RopeTypeNorm	0	The standard Rotary Positional Embedding (used in original LLaMA models).
RopeTypeVision	24	RoPE adapted for vision models (e.g., LLaVA or CLIP-like models).

122.10 class LlamaModelParametersMBS

122.10.1 class LlamaModelParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The model parameters.
Blog Entries

- Use Llama.cpp in Xojo
- MBS Xojo Plugins, version 26.1pr3
- Using llama.cpp in Xojo

122.10.2 Methods

122.10.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

122.10.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.10.5 Properties

122.10.6 check_tensors as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: validate model tensor data.
Notes: (Read and Write property)

122.10.7 main_gpu as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: the GPU that is used for the entire model when split_mode is SplitModeNone.
Notes: (Read and Write property)

122.10.8 no_alloc as Boolean

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Only load metadata and simulate memory allocations.
Notes: (Read and Write property)

122.10.9 no_host as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: bypass host buffer allowing extra buffers to be used.
Notes: (Read and Write property)

122.10.10 n_gpu_layers as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of layers to store in VRAM.
Notes: (Read and Write property)

122.10.11 split_mode as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How to split the model across multiple GPUs.
Notes: (Read and Write property)

122.10.12 use_direct_io as Boolean

MBS Tools Plugin, Plugin Version: 26.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Use DirectIO if available.
Notes: Whether to read from disk without buffering.
Takes precedence over use_mmap when supported.
(Read and Write property)

122.10.13 use_extra_bufts as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: use extra buffer types (used for weight repacking)
Notes: (Read and Write property)

122.10.14 use_mlock as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: force system to keep model in RAM
Notes: (Read and Write property)

122.10.15 use_mmap as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: use mmap if possible
Notes: (Read and Write property)

122.10.16 vocab_only as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: only load the vocabulary, no weights
Notes: (Read and Write property)

122.10.17 Yield as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to yield time to other threads while loading a model.
Notes: Set to true to give away CPU time to other cooperative threads while loading a model.
(Read and Write property)

122.10.18 Events

122.10.19 Progress(progress as Single) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The progress callback for loading a model.
Notes: Progress parameter gives you the percentage from 0.0 to 1.0.
If implemented, return true to continue loading.

122.10.20 Constants

Split Modes

Constant	Value	Description
SplitModeLayer	1	split layers and KV across GPUs
SplitModeNone	0	single GPU
SplitModeRow	2	split layers and KV across GPUs, use tensor parallelism if supported

122.11 class LlamaModelQuantizeParametersMBS

122.11.1 class LlamaModelQuantizeParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Model quantization parameters.

122.11.2 Methods

122.11.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

122.11.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.11.5 Properties

122.11.6 allow_requantize as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: allow quantizing non-f32/f16 tensors.
Notes: (Read and Write property)

122.11.7 ftype as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The file type / quantization format used to store a LLaMA model,Äôs weights.
Notes: This is primarily relevant when loading models from GGUF or GGML format files in projects like llama.cpp.

These formats balance model size, speed, and accuracy by using various quantization methods—reducing precision to save memory and increase inference speed.

See FType constants.
(Read and Write property)

122.11.8 keep_split as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize to the same number of shards.
Notes: (Read and Write property)

122.11.9 nthread as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of threads to use for quantizing.
Notes: if <=0 will use default for platform.
(Read and Write property)

122.11.10 only_copy as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: only copy tensors - ftype, allow_requantize and quantize_output_tensor are ignored.
Notes: (Read and Write property)

122.11.11 output_tensor_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Output tensor type.
Notes: (Read and Write property)

122.11.12 pure as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize all tensors to the default type.
Notes: (Read and Write property)

122.11.13 quantize_output_tensor as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: quantize output.weight.
Notes: (Read and Write property)

122.11.14 token_embedding_type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token embeddings tensor type.
Notes: (Read and Write property)

122.11.15 Constants

FTypes

Constant	Value	Description
FTypeAllF32	0	All weights are stored as 32-bit floats (most accurate, largest).
FTypeGuessed	1024	The format wasn't specified in the file and was inferred by the loader.
FTypeMostlyBf16	32	Brain float16 —used in hardware like Google TPUs, similar to FP16.
FTypeMostlyF16	1	Mostly float16 weights; 1D tensors remain float32.
FTypeMostlyIq1M	31	IQ1_M: 1-bit int quant (medium).
FTypeMostlyIq1S	24	IQ1_S: 1-bit quantized weights (very small, experimental).
FTypeMostlyIq2M	29	IQ2_M: 2-bit int quant (medium).
FTypeMostlyIq2S	28	IQ2_S: 2-bit int quant (small).
FTypeMostlyIq2Xs	20	IQ2 XS: slightly larger, better accuracy.
FTypeMostlyIq2Xxs	19	IntQuant 2-bit extra-extra-small; ultra-compressed.
FTypeMostlyIq3M	27	IQ3_M: 3-bit int quant (medium).
FTypeMostlyIq3S	26	IQ3_S: 3-bit int quant (standard/small).
FTypeMostlyIq3Xs	22	IQ3 XS: 3-bit int quantization (small).
FTypeMostlyIq3Xxs	23	IQ3 XXS: highly compact 3-bit quantization.
FTypeMostlyIq4Nl	25	IQ4_NL: 4-bit int quant with nonlinear quantization.
FTypeMostlyIq4Xs	30	IQ4_XS: 4-bit int quant (extra small).
FTypeMostlyMxfp4Moe	38	Mixed FP4 quantization for Mixture of Experts models.
FTypeMostlyQ2K	10	Q2_K: grouped 2-bit quantization.
FTypeMostlyQ2KS	21	Q2_K_S: 2-bit grouped quant (small variant).
FTypeMostlyQ3KL	13	Q3_K_L: "large" 3-bit grouped quantization.
FTypeMostlyQ3KM	12	Q3_K_M: "medium" 3-bit grouped quantization.
FTypeMostlyQ3KS	11	Q3_K_S: "small" variant of grouped 3-bit quant.
FTypeMostlyQ40	2	Quantized to 4-bit Q4_0 (original quantization).
FTypeMostlyQ41	3	Q4_1 format; improved accuracy over Q4_0.
FTypeMostlyQ4KM	15	Q4_K_M: 4-bit grouped quant (medium variant). Popular in GGUF models.
FTypeMostlyQ4KS	14	Q4_K_S: 4-bit grouped quant (small variant).
FTypeMostlyQ50	8	5-bit quantization (Q5_0); good balance.
FTypeMostlyQ51	9	5-bit quantization (Q5_1); slightly improved.
FTypeMostlyQ5KM	17	Q5_K_M: 5-bit grouped quant (medium).
FTypeMostlyQ5KS	16	Q5_K_S: 5-bit grouped quant (small variant).
FTypeMostlyQ6K	18	Q6_K: 6-bit grouped quantization.
FTypeMostlyQ80	7	Quantized to 8-bit Q8_0; high accuracy.
FTypeMostlyTq10	36	TQ1_0: true quantized 1-bit (experimental).
FTypeMostlyTq20	37	TQ2_0: 2-bit true quantized (experimental).

Tensor element storage formats

Constant	Value	Description
GgmlTypeBf16	30	Brain Float 16. Compatible with hardware like TPUs.
GgmlTypeCount	40	Total number of defined types. Sentinel constant, not a real type.
GgmlTypeF16	1	16-bit float (IEEE FP16). Half precision.
GgmlTypeF32	0	32-bit float (standard float). Full precision.
GgmlTypeF64	28	64-bit float (double precision).
GgmlTypeI16	25	16-bit signed integer.
GgmlTypeI32	26	32-bit signed integer.
GgmlTypeI64	27	64-bit signed integer.
GgmlTypeI8	24	8-bit signed integer. Raw, unquantized int tensor.
GgmlTypeIq1M	29	IntQuant 1-bit, medium variant.
GgmlTypeIq1S	19	IntQuant 1-bit, small. Very high compression.
GgmlTypeIq2S	22	IntQuant 2-bit, small.
GgmlTypeIq2Xs	17	IntQuant 2-bit, extra-small variant.
GgmlTypeIq2Xxs	16	IntQuant 2-bit, extra-extra-small variant. Extremely compressed.
GgmlTypeIq3S	21	IntQuant 3-bit, small.
GgmlTypeIq3Xxs	18	IntQuant 3-bit, extra-extra-small.
GgmlTypeIq4Nl	20	IntQuant 4-bit with nonlinear quantization.
GgmlTypeIq4Xs	23	IntQuant 4-bit, extra-small.
GgmlTypeMxfp4	39	Mixed-precision FP4 format. Used in Mixture-of-Experts and memory-constrained models.
GgmlTypeQ2K	10	2-bit grouped quantization (K-quant). High compression.
GgmlTypeQ3K	11	3-bit grouped quantization (K-quant).
GgmlTypeQ40	2	4-bit quantization (Q4_0). First 4-bit format in GGML.
GgmlTypeQ41	3	4-bit quantization (Q4_1). Better accuracy vs Q4_0.
GgmlTypeQ4K	12	4-bit grouped quantization (K-quant). Most widely used today.
GgmlTypeQ50	6	5-bit quantization (Q5_0). Balanced compression.
GgmlTypeQ51	7	5-bit quantization (Q5_1). Slight variant.
GgmlTypeQ5K	13	5-bit grouped quantization (K-quant).
GgmlTypeQ6K	14	6-bit grouped quantization (K-quant).
GgmlTypeQ80	8	8-bit quantization (Q8_0). High accuracy, low compression.
GgmlTypeQ81	9	Improved variant of Q8_0, more accurate scaling.
GgmlTypeQ8K	15	8-bit grouped quantization.
GgmlTypeTq10	34	TrueQuant 1-bit format (experimental).
GgmlTypeTq20	35	TrueQuant 2-bit format (experimental).

122.12 class LlamaPerformanceContextDataMBS

122.12.1 class LlamaPerformanceContextDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for performance metrics for a context.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

122.12.2 Methods

122.12.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

122.12.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.12.5 Properties

122.12.6 n_eval as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of generated tokens.
Notes: (Read only property)

122.12.7 n_p_eval as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of prompt tokens.
Notes: (Read only property)

122.12.8 n_reused as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: number of times a ggml compute graph had been reused.
Notes: (Read only property)

122.12.9 t_eval_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for generating tokens.
Notes: In milliseconds.
(Read only property)

122.12.10 t_load_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for loading the model.
Notes: In milliseconds.
(Read only property)

122.12.11 t_p_eval_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for processing the prompt.
Notes: In milliseconds.
(Read only property)

122.12.12 t_start_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: absolute start time.
Notes: In milliseconds.
(Read only property)

122.13 class LlamaPerformanceSamplerDataMBS

122.13.1 class LlamaPerformanceSamplerDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for performance metrics for a sampler.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

122.13.2 Methods

122.13.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

122.13.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.13.5 Properties

122.13.6 n_sample as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of sampled tokens.
Notes: (Read only property)

122.13.7 t_sample_ms as Double

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: time needed for sampling in ms.
Notes: (Read only property)

122.14 class LlamaSamplerChainParametersMBS

122.14.1 class LlamaSamplerChainParametersMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parameters for building a sampler chain.
Blog Entries

- Use Llama.cpp in Xojo
- Using llama.cpp in Xojo

122.14.2 Methods

122.14.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

122.14.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.14.5 Properties

122.14.6 no_perf as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to measure performance timings.
Notes: (Read and Write property)

122.15 class LlamaSamplerMBS

122.15.1 class LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The sampler class.
Notes: This class is key to controlling how tokens are selected during model inference (sampling strategies like greedy, top-k, nucleus, etc.).
Blog Entries

- Use Llama.cpp in Xojo
- Using llama.cpp in Xojo

122.15.2 Methods

122.15.3 Accept(token as Int32)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Notifies the sampler that a token has been selected.
Notes: This allows stateful samplers to update their internal state.

122.15.4 AddToChain(sampler as LlamaSamplerMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a sampler to the chain.

122.15.5 Chain(Index as Integer) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the i-th sampler from the chain.

122.15.6 Clone as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a deep copy of the sampler, including its current internal state.
Notes: Returns a new sampler with the same configuration and state.

122.15.7 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 122.15.8 Constructor(parameters as LlamaSamplerChainParametersMBS) 17233

122.15.8 Constructor(parameters as LlamaSamplerChainParametersMBS)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes an empty sampler chain with the given configuration.
Notes: Raises UnsupportedOperationException if the sampler can't be created.

- 122.15.7 Constructor 17233

122.15.9 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.15.10 InitDist(seed as UInt32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes a random distribution sampler, selecting tokens proportionally to their probabilities.
Notes: seed: RNG seed for reproducibility.

122.15.11 InitGreedy as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes a greedy sampler that always picks the highest-probability token.

122.15.12 InitInfill(vocab as LlamaVocabMBS) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates an in-fill sampler.
Notes: this sampler is meant to be used for fill-in-the-middle infilling
it's supposed to be used after top_k + top_p sampling

1. if the sum of the EOG probs times the number of candidates is higher than the sum of the other probs ->pick EOG
2. combine probs of tokens that have the same prefix

example:

- before:
"hel": 0.5
"hell": 0.2
"hello": 0.1
"dummy": 0.1

- after:
"hel": 0.8
"dummy": 0.1

3. discard non-EOG tokens with low prob
4. if no tokens are left ->pick EOT

122.15.13 InitMinP(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Minimum P sampling keeps all tokens with individual probability ,â• p.

122.15.14 InitTemp(p as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Applies temperature scaling to logits.
Notes: Each logit l_i is divided by t.

If t <= 0, the max logit is preserved; others set to -inf (argmax).

122.15.15 InitTempExt(t as Single, delta as Single, exponent as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Dynamic temperature implementation (a.k.a. entropy)

122.15.16 InitTopK(k as Int32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Top-K sampling limits selection to the top k most probable tokens.
Notes: Setting k <= 0 disables this sampler (noop).

122.15.17 InitTopNSigma(n as Single) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Top n sigma sampling.

122.15.18 InitTopP(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Nucleus (Top-P) sampling limits selection to the smallest set of tokens with cumulative probability ,â • p.
Notes: p: Probability threshold (0.0–1.0).
min_keep: Minimum number of tokens to retain regardless of p.

122.15.19 InitTypical(p as Single, minKeep as UInt64) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Locally Typical Sampling selects tokens whose conditional probability is close to the entropy of the distribution.

122.15.20 InitXTC(p as Single, t as Single, minKeep as UInt64, seed as UInt32) as LlamaSamplerMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: XTC sampler.

122.15.21 Performance as LlamaPerformanceSamplerDataMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries sampler performance data.

122.15.22 PerformancePrint

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prints performance statistics.

122.15.23 PerformanceReset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets performance data.

122.15.24 RemoveFromChain(Index as Integer)

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Removes the i-th sampler from the chain.

122.15.25 Reset

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Resets the internal state of the sampler (if applicable).

122.15.26 Sample(context as LlamaContextMBS, Index as Integer) as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sample and accept a token from the idx-th output of the last evaluation.
Notes: Returns the sampled token.

122.15.27 Properties

122.15.28 ChainLength as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the number of samplers currently in the chain.
Notes: (Read only property)

122.15.29 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

122.15.30 Name as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the name of the sampler (e.g., ”top_k”, ”greedy”).
Notes: (Read only property)

122.15.31 Seed as UInt32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the seed.
Notes: (Read only property)

122.15.32 Constants

Constants

Constant	Value	Description
DefaultSeed	&hFFFFFFFF	The default seed value.

122.16 class LlamaVocabMBS

122.16.1 class LlamaVocabMBS

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a vocabulary.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.1pr3

122.16.2 Methods

122.16.3 Constructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

122.16.4 Destructor

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The destructor.

122.16.5 Detokenize(tokens() as Int32, removeSpecial as boolean, unparseSpecial as Boolean) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convert the provided tokens into text (inverse of Tokenize()).
Notes: Returns the text.

remove_special: Allow to remove BOS and EOS tokens if model is configured to do so.
unparse_special: If true, special tokens are rendered in the output.

122.16.6 isControl(Token as Int32) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Identify if Token Id is a control token or a render-able token.

122.16.7 isEOG(Token as Int32) as Boolean

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check if the token is supposed to end generation (end-of-generation, eg. EOS, EOT, etc.)

122.16.8 Text(Token as Int32) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the text for a token.
Example:

```
// let's list text for 100 tokens

Var vocab As LlamaVocabMBS = model.Vocab

var words() as string
For i As Integer = 30000 To 30100
words.Add vocab.Text(i)
Next
Var List As String = Join(words, ", ")
break
```

122.16.9 TokenAttributes(Token as Int32) as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries attribute flags for the given token.

122.16.10 Tokenize(text as String, AddSpecial as Boolean = true, ParseSpecial as Boolean = true) as Int32()

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convert the provided text into tokens.
Notes: add_special: Allow to add BOS and EOS tokens if model is configured to do so.
parse_special: Allow tokenizing special and/or control tokens which otherwise are not exposed and treated as plaintext. Does not insert a leading space.

122.16.11 TokenScore(Token as Int32) as Single

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the score for a token.

122.16.12 TokenToPiece(Token as Int32, special as boolean = true) as String

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Token Id ->Piece.
Notes: Uses the vocabulary in the provided context.

User can skip up to 'lstrip' leading spaces before copying (useful when encoding/decoding multiple tokens with 'add_space_prefix')

special: If true, special tokens are rendered in the output.

122.16.13 Properties

122.16.14 bos as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for beginning-of-sentence
Notes: (Read only property)

122.16.15 eot as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for end-of-turn.
Notes: (Read only property)

122.16.16 Handle as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

122.16.17 nl as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for next-line.
Notes: (Read only property)

122.16.18 n_tokens as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of tokens.
Notes: (Read only property)

122.16.19 pad as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for padding.
Notes: (Read only property)

122.16.20 sep as Int32

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The token for sentence separator.
Notes: (Read only property)

122.16.21 type as Integer

MBS Tools Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the type of vocab.
Notes: See Type* constants.
(Read only property)

122.16.22 Constants

Constants

Constant	Value	Description
TokenNull	-1	The value used for a null token.

Token Attributes

Constant	Value	Description
TokenAttrByte	32	Byte fallback token (e.g. used for bytes not covered by BPE merges)
TokenAttrControl	8	Control token (e.g. special tokens, separators, directives) —tokens that don,Äôt map directly to output text.
TokenAttrLstrip	128	Token is to be left,Äëstripped (i.e. leading whitespace removal)
TokenAttrNormal	4	A ,Äúnormal,Äù token (non,Äëspecial, non,Äëcontrol) —a basic lexical token.
TokenAttrNormalized	64	Token has been normalized (e.g. transformed / canonicalized)
TokenAttrRstrip	256	Token is to be right,Äëstripped (i.e. trailing whitespace removal)
TokenAttrSingleWord	512	Token represents a single word (i.e. atomic word, not subword)
TokenAttrUndefined	0	No attribute set / default / ,Äúno classification,Äù
TokenAttrUnknown	1	Token whose status is unknown (e.g. not in vocabulary or fallback)
TokenAttrUnused	2	Token that is present but not used / deprecated / reserved.
TokenAttrUserDefined	16	A user,Äëdefined token (e.g. custom token inserted by user / application)

Vocab Types

Constant	Value	Description
TypeBPE	2	GPT-2 tokenizer based on byte-level BPE
TypeNone	0	For models without vocab
TypePLAMO2	6	PLaMo-2 tokenizer based on Aho-Corasick with dynamic programming
TypeRWKV	5	RWKV tokenizer based on greedy tokenization
TypeSPM	1	LLaMA tokenizer based on byte-level BPE with byte fallback
TypeUGM	4	T5 tokenizer based on Unigram
TypeWPM	3	BERT tokenizer based on WordPiece

Chapter 123

LMFit

123.1 class LMFitControlMBS

123.1.1 class LMFitControlMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of input parameters for fit control.
Blog Entries

- MBS Xojo Plugins, version 19.6pr1

123.1.2 Methods

123.1.3 MsgFileStderr

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stderr.

123.1.4 MsgFileStdout

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stdout.

123.1.5 Properties

123.1.6 epsilon as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Step used to calculate the Jacobian, should be slightly larger than the relative error in the user-supplied functions.
Notes: (Read and Write property)

123.1.7 ftol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error desired in the sum of squares.
Notes: Termination occurs when both the actual and predicted relative reductions in the sum of squares are at most ftol.
(Read and Write property)

123.1.8 gtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Orthogonality desired between fvec and its derivs.
Notes: Termination occurs when the cosine of the angle between fvec and any column of the Jacobian is at most gtol in absolute value.
(Read and Write property)

123.1.9 msgfile as FolderItem

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Progress messages will be written to this file.
Notes: (Read and Write property)

123.1.10 m_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of residuals to print.
Notes: (Read and Write property)

123.1.11 n_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of parameters to print.
Notes: (Read and Write property)

123.1.12 patience as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to set the maximum number of function evaluations to patience*(number_of_parameters+1).
Notes: (Read and Write property)

123.1.13 scale_diag as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If 1, the variables will be rescaled internally.
Notes: Recommended value is 1.
(Read and Write property)

123.1.14 stepbound as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used in determining the initial step bound.
Notes: This bound is set to the product of stepbound and the Euclidean norm of diag*x if nonzero, or else to stepbound itself. In most cases stepbound should lie in the interval (0.1,100.0). Generally, the value 100.0 is recommended.
(Read and Write property)

123.1.15 verbosity as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The verbosity flags.
Notes: OR'ed: 1: print some messages; 2: print Jacobian.

(Read and Write property)

123.1.16 xtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error between last two approximations.
Notes: Termination occurs when the relative error between two consecutive iterates is at most xtol.
(Read and Write property)

123.2 class LMFitMBS

123.2.1 class LMFitMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to run Levenberg-Marquardt least squares fitting algorithm.
Notes: Based on lmfit library from Joachim Wuttke, Forschungszentrum Juelich GmbH (2004-2013).

123.2.2 Methods

123.2.3 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes: NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 123.2.4 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17250

123.2.4 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes: NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 123.2.3 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17249

123.2.5 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes: This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution. This should be memoryblock with double values.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 123.2.6 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17251

123.2.6 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes: This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 123.2.5 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 17250

123.2.7 Properties

123.2.8 provideArrays as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to fill parameter array for evaluateMin event.
Notes: If provideArrays property is true, we provide values via parameters array, which may be slower than

using par pointer.
(Read and Write property)

123.2.9 Events

123.2.10 evaluateCurve(t as double, par as Ptr, nPar as Integer, parameters() as double, tag as variant) as double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluate is a event that calculates the m functions.
Notes: The parameter par, nPar, parameters and mDat are passed through from the call to LMCurve.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

123.2.11 evaluateMin(par as Ptr, nPar as Integer, parameters() as double, mDat as Integer, fvec as Ptr, tag as variant) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluate is a event that calculates the m functions.
Notes: The parameter par, nPar, parameters and mDat are passed through from the call to LMMin.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

123.3 class LMFitStatusMBS

123.3.1 class LMFitStatusMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of output parameters for status info.
Blog Entries

- MBS Xojo Plugins, version 19.6pr1

123.3.2 Properties

123.3.3 fnorm as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Norm of the residue vector fvec.
Notes: (Read and Write property)

123.3.4 nfev as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Actual number of iterations.
Notes: (Read and Write property)

123.3.5 outcome as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Status indicator.
Notes: Nonnegative values are used as index for the message text.
(Read and Write property)

123.3.6 outcomeInfoMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The info message text.
Notes: The plugin looks up text based on outcome value.

(Read only property)

123.3.7 outcomeShortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The short message text.
Notes: The plugin looks up text based on outcome value.
(Read only property)

123.3.8 userbreak as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set when function evaluation requests termination.
Notes: (Read and Write property)

Chapter 124

Login Items

124.1 class LoginItemsMBS

124.1.1 class LoginItemsMBS

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use LSSharedFileListMBS instead. **Function:** A class to handle login items on Mac OS X.
Notes: After creating a new object, the constructor may fail sometimes while updateing the list. lasterror is -609 in that case. His happens most likely just after login when the system events process is not yet ready. In that case, let your app wait a few seconds and try again.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.
Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- Adding Login Items on Mac OS X

124.1.2 Methods

124.1.3 AddFile(file as FolderItem, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the login items.
Notes: Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

124.1.4 AddURL(url as string, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds an url to the item list.
Notes: Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

124.1.5 DisplayName(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The display name of the item with the given index.
Example:

```
Var l as LoginItemsMBS

l=new LoginItemsMBS
MsgBox l.displayName(0) // shows name of first item
```

Notes: The display name may be localized.

124.1.6 File(index as Integer) as FolderItem

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The file reference of the item with the given index.
Notes: Index is from 0 to count-1.

124.1.7 IsHidden(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the item with the given index should be hidden after launch.
Notes: Index is from 0 to count-1.

This value does not work in Mac OS X 10.4, but works in 10.5.

124.1.8 Name(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The name of the item with the given index.
Example:

```
Var l as LoginItemsMBS

l=new LoginItemsMBS
MsgBox l.Name(0) // shows name of first item
```

Notes: This is the file name. To get the name for display, use displayname.

124.1.9 OldAddLoginItem(file as folderitem,hide as boolean,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the loginitems list.
Example:

```
Var f as folderItem
Var r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldAddLoginItem(f,false,false) then
msgBox f.displayName+" has been added to the login items!"
else
msgBox "Something went wrong."
end if
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

hide matches the checkbox in the loginitems list.
allusers decides whether to set it for all user or the current one.

This function will add a LoginItem to the list of LoginItems when called. The properties given to the new LoginItem are passed when calling the function. Note that *no* check is made when adding the LoginItem

to ensure that the path points to a valid application. Note that the LoginItem Is always added to the *end* of the list of LoginItems.

First Parameter (appfile):
The absolute path of the application to be launched expressed as a Xojo folderitem.

Second Parameter (hide):
A value representing if you want your application to be hidden at login time. True if you want the application to be hidden after it is launched. If you want the application to show up normally use be hidden use false.

Third Parameter (allusers):
A constant which represents which users preferences we want to change. In this case there are two alternatives: False which changes the preferences of the current user. The second alternative is True.
The kAllUsers LoginItems are launched for all users on the system. You must be root or admin to use the kAllUsers option.

Function Returns:
This function returns a boolean value representing if the function was successful.
The function returns true if the LoginItem was successfully added. False if otherwise. No additional error codes are returned.

Other Notes:
This code doesn't work properly if more than one application is attempting to write to the LoginItems preference at once.
Also no check is made to ensure that what you are adding to the LoginItem list isn't a duplicate. If there is a duplicate however only one instance of the application is launched.

124.1.10 OldCountOfLoginItems(allusers as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: This function will return the number of LoginItems for the user requested.
Example:

```
// Add this code for syncronization:

Var cf as CFPreferencesMBS
Var b as Boolean

cf=new CFPreferencesMBS
b=cf.AppSynchronize(cf.kCFPreferencesCurrentApplication)

// Count items
```

```
Var r as new LoginItemsMBS
msgbox str(r.OldCountOfLoginItems(false))
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

This function returns the number of LoginItems for the user requested as a signed integer.

124.1.11 OldLoginItemPropertyAtIndex(what as Integer, index as Integer, allusers as boolean) as string

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Returns a property from the loginitems list.
Example:

```
Var i as Integer
Var c as Integer
Var l as Integer
Var path,name,hide as string
Var r as new LoginItemsMBS

c=r.OldCountOfLoginItems(false)

MsgBox str(c)+" Login items found for this user."

c=c-1
for i=0 to c
name=r.OldLoginItemPropertyAtIndex(2,i,false)
hide=r.OldLoginItemPropertyAtIndex(3,i,false)
path=r.OldLoginItemPropertyAtIndex(1,i,false)

list.addrow name
l=list.lastIndex
list.cell(l,1)=hide
list.cell(l,2)=path
list.cell(l,3)=str(i)
next
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.
What can be 1 for the absolute path of the LoginItem, 2 for the LoginItem name or 3 for a string with "false" or "true" for the hiding option.

Returns "" on any error.

124.1.12 OldRemoveLoginItem(file as folderitem,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes a file to the loginitems list.
Example:

```
Var f as folderItem
Var r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldRemoveLoginItem(f,false) then
msgBox f.displayName+" has been added to the login items!"
else
msgBox "Something went wrong."
end if
```

Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

The items are compared by path.
Returns true if item was found and the new list is written correctly to disk.
allusers decides whether to set it for all user or the current one.

124.1.13 OldRemoveLoginItemAtIndex(index as Integer, allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes an entry from the loginitem list.
Notes: This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.

124.1.14 Remove(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item from the login items list.
Notes: Index is from 0 to count-1.
The count property is updated.

124.1.15 RemoveFile(file as FolderItem) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the items matching this file reference from the list.
Notes: Returns true on success.
Count is updated.

124.1.16 RemoveURL(url as string) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item matching the given URL.
Notes: Returns true on success.

124.1.17 Update

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Reloads the list of items.
Notes: Update is done after each modification method and in the constructor.
You should never need to call this method.

124.1.18 URL(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The URL of the item with the given index.
Notes: Index is from 0 to count-1.

124.1.19 Properties

124.1.20 Count as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Number of items in the list currently.
Notes: (Read and Write property)

124.1.21 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle to the NSArray Reference used internally for the item list.
Notes: (Read and Write property)

124.1.22 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes: Value can be 0 for success or -1 for a parameter error in the plugins or some other Mac OS X error code.
(Read and Write property)

124.2 class LSSharedFileListItemMBS

124.2.1 class LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a list item.
Notes: Requires Mac OS X 10.5.

124.2.2 Methods

124.2.3 DisplayName as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's display name.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

124.2.4 Icon as Variant

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's icon.
Notes: Value is a IconMBS. We use variant to reduce dependency to other plugins.

124.2.5 ID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain unique item id.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.ID)
next

MsgBox Join(lines, EndOfLine)
end if
```

124.2.6 Resolve(flags as UInt32) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its folderitem.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.Resolve(0).NativePath
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUserInteraction.

124.2.7 ResolveURL(flags as UInt32) as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its URL.
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.ResolveURL(x.kNoUserInteraction)
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUser-Interaction.

124.2.8 Properties

124.2.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the item.
Notes: (Read and Write property)

124.2.10 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

124.2.11 ItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is item hidden in UI?
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.ItemHidden)
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: (Read and Write computed property)

124.2.12 LoginItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Should UI hide login item's window?
Example:

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
Var a(-1) as LSSharedFileListItemMBS = l.Snapshot
Var lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.LoginItemHidden)
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: Requires Mac OS X 10.6.
(Read and Write computed property)

124.2.13 Constants

Constants

Constant	Value	Description
kDoNotMountVolumes	2	One of the flags for resolve. do not mount volumes during resolution
kNoUserInteraction	1	One of the flags for resolve. no user interaction during resolution

124.3 class LSSharedFileListMBS

124.3.1 class LSSharedFileListMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The shared list class.
Notes: The shared file list API is for sharing and storing list of references to file system objects. The shared file list is a persistent list of objects, where each item has assigned display name, icon, and url as well as other optional properties.
Each list can also have various properties attached.

Requires Mac OS X 10.5.
Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Real Studio Plugins, version 12.4pr8
- Adding Login Items on Mac OS X

124.3.2 Methods

124.3.3 Constructor(type as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates shared file list reference to be used for changing list and reading its various properties.
Notes: type: A constant indicating list type to create. See the constants in this class.

124.3.4 GetSeedValue as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns seed value of the shared list.

124.3.5 InsertFile(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, file as folderitem) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Example:

```
// Add iPhoto to launch items

// pick app
Var app as FolderItem = SpecialFolder.Applications.Child("iPhoto.app")

// get list object
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// insert file
Var item as LSSharedFileListItemMBS = l.InsertFile(l.kLSSharedFileListItemBeforeFirst, "Launch iPhoto",
nil, app)

// check error
if l.Lasterror = 0 then
MsgBox "OK"
else
MsgBox "Failed: "+str(l.Lasterror)
end if
```

Notes: Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be NULL.
Icon: IconMBS of the new item. Can be nil.
File: FolderItem of the new item.

124.3.6 InsertURL(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, URL as string) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Notes: Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be "".
Icon: IconMBS object for the icon. Can be nil.

URL: URL of the new item.

124.3.7 kLSSharedFileListItemBeforeFirst as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at beginning of the list.
Example:

```
Var n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemBeforeFirst
MsgBox str(n.Handle) // a special handle value for this virtual item: 1
```

124.3.8 kLSSharedFileListItemLast as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at end of the list.
Example:

```
Var n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemLast
MsgBox str(n.Handle) // a special handle value for this virtual item: 2
```

124.3.9 Move(item as LSSharedFileListItemMBS, MoveAfterItem as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves item at specified location.
Notes: item: Item to move.
MoveAfterItem: New icon of the new item. Use kLSSharedFileListItemBeforeFirst and kLSSharedFileListItemLast to move at the beginning or the end of the shared list.

124.3.10 Remove(item as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove item from shared list.
Example:

```
// Remove iPhoto from launch items

// get list object
```

```
Var l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// get items
Var items(-1) as LSSharedFileListItemMBS = l.Snapshot

// check all items
for each item as LSSharedFileListItemMBS in items
Var file as FolderItem = item.Resolve(LSSharedFileListItemMBS.kNoUserInteraction)

if file<>nil then
if file.Name = "iPhoto.app" then
l.Remove item

if l.Lasterror = 0 then
MsgBox "OK"
else
MsgBox "Error: "+str(l.Lasterror)
end if
Return
end if
end if

next
```

124.3.11 RemoveAllItems

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove all items from shared list.

124.3.12 SetAuthorization(handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Set authorization reference for the shared list.
Notes: Before attempting to perform a privileged operation on the shared list caller must authorize appropriate rights. For example, modifying kGlobalLoginItems list requires "system.global-login-items." right authorized.

124.3.13 Snapshot as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
See also:

- 124.3.14 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS() 17272

124.3.14 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
Notes: seed: Returned seed value at which snapshot was taken.
See also:

- 124.3.13 Snapshot as LSSharedFileListItemMBS() 17271

124.3.15 Properties

124.3.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the list.
Notes: (Read and Write property)

124.3.17 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

124.3.18 RecentItemsMaxAmount as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Maximum amount of items in the list.
Notes: (Read and Write computed property)

124.3.19 VolumesComputerVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Computer item visible in favorite volumes list?
Notes: (Read and Write computed property)

124.3.20 VolumesIDiskVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is iDisk item visible in favorite volumes list.
Notes: (Read and Write computed property)

124.3.21 VolumesNetworkVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Network item visible in favorite volumes list?
Notes: (Read and Write computed property)

124.3.22 Events

124.3.23 Changed

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called whenever the list is changed by an application.

124.3.24 Constants

Constants

Constant	Value	Description
kFavoriteItems	2	One of the list type constants.
kFavoriteVolumes	1	One of the list type constants.
kGlobalLoginItems	7	One of the list type constants.
kRecentApplicationItems	3	One of the list type constants.
kRecentDocumentItems	4	One of the list type constants.
kRecentServerItems	5	One of the list type constants.
kSessionLoginItems	6	One of the list type constants.

124.4 module ServiceManagementModuleMBS

124.4.1 module ServiceManagementModuleMBS

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The module with function to add helper to login items.
Notes: This API seems to be sandbox safe and working with Mac App Store.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr6
- MBS Real Studio Plugins, version 12.3pr9
- Adding Login Items on Mac OS X

124.4.2 Methods

124.4.3 AllJobDictionaries(domain as string) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionaries for all jobs in the given domain.
Notes: domain: The desired domain (e.g. kSMDomainSystemLaunchd).

Returns a new array containing all job dictionaries, or empty array if an error occurred. Must be released by the caller.
Available in OS X v10.6 and later.

124.4.4 CreateAuthorization as AuthorizationMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Creates an authorization for Job operations.
Notes: Creates an authorization with kSMRightBlessPrivilegedHelper and flags InteractionAllowed, PreAuthorize and ExtendRights.

124.4.5 JobBless(domain as string, executableLabel as string, auth as AuthorizationMBS, byref error as Variant) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the executable for the given label as a launchd job.
Notes: domain: The job's domain. Only kSMDomainSystemLaunchd is supported.
executableLabel: The label of the privileged executable to install. This label must be one of the keys found in the SMPrivilegedExecutables dictionary in the application's Info.plist.
auth: An authorization reference containing the kSMRightBlessPrivilegedHelper right.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the executable tool, or nil if successful. It is the responsibility of the application to release the error reference.

Returns true if the job was successfully submitted, otherwise false.

JobBless submits the executable for the given label as a launchd job. This function obviates the need for a setuid helper invoked via AuthorizationExecuteWithPrivileges in order to install a launchd plist.

If the job is already installed, success is returned.

In order to use this function the following requirements must be met:

- The calling application and target executable tool must both be signed.
- The calling application's Info.plist must include a "SMPrivilegedExecutables" dictionary of strings. Each string is a textual representation of a code signing requirement used to determine whether the application owns the privileged tool once installed (i.e. in order for subsequent versions to update the installed version).

Each key of SMPrivilegedExecutables is a reverse-DNS label for the helper tool (must be globally unique).

- The helper tool must have an embedded Info.plist containing an "SMAuthorizedClients" array of strings. Each string is a textual representation of a code signing requirement describing a client which is allowed to add and remove the tool.
- The helper tool must have an embedded launchd plist. The only required key in this plist is the Label key. When the launchd plist is extracted and written to disk, the key for ProgramArguments will be set to an array of 1 element pointing to a standard location. You cannot specify your own program arguments, so do not rely on custom command line arguments being passed to your tool. Pass any parameters via IPC.
- The helper tool must reside in the Contents/Library/LaunchServices directory inside the application bundle, and its name must be its launchd job label. So if your launchd job label is "com.apple.Mail.helper", this must be the name of the tool in your application bundle.

Available in OS X v10.6 and later.

124.4.6 JobDictionary(domain as string, jobLabel as string) as Dictionary

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionary for the given job label.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label identifier for the job to copy.

Return a new dictionary describing the job, or nil if the job could not be found.
Available in OS X v10.6 and later.

124.4.7 JobRemove(domain as string, jobLabel as string, auth as AuthorizationMBS, wait as boolean, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Removes the job with the given label from the specified domain.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label for the job to remove.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
wait: Pass true to block until the process for the given job has exited.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or nil if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was removed successfully, otherwise false.

JobSubmit removes the job specified by label from the domain. If the job is currently running, it will conditionally block until the running process has exited.
Available in OS X v10.6 and later.

124.4.8 JobSubmit(domain as string, job as Dictionary, auth as AuthorizationMBS, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the given job to the specified domain.
Notes: domain: The job's domain (e.g. kSMDomainSystemLaunchd).
job: A dictionary describing a job.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the

job dictionary, or NULL if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was submitted successfully, otherwise false.

JobSubmit submits the given job to the specified domain.
Available in OS X v10.6 and later.

124.4.9 kSMDomainSystemLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: System-level launchd domain.

124.4.10 kSMDomainUserLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: User-level launchd domain.

124.4.11 kSMInfoKeyAuthorizedClients as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Authorized clients property list key.

124.4.12 kSMInfoKeyPrivilegedExecutables as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Privileged executables property list key.

124.4.13 LoginItemRunning(identifier as string) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Checks whether a login item is running.
Notes: Actually checks if there is a record for your helper, so if it crashed, this returns still true.

124.4.14 LoginItemSetEnabled(identifier as string, enabled as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Enable a helper application located in the main application bundle's Contents/Library/LoginItems directory.
Notes: identifier: The bundle identifier of the helper application bundle.
enabled: The Boolean enabled state of the helper application. This value is effective only for the currently logged in user. If true, the helper application will be started immediately (and upon subsequent logins) and kept running. If false, the helper application will no longer be kept running.

Returns true if the requested change has taken effect.

124.4.15 RegisterHelperApp(name as string, Update as boolean = false) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Registers a helper application in the Launch Services database.
Notes: The app must exist with given name inside the bundle in Library/LoginItems folder.

Update: A Boolean value specifying whether Launch Services should update existing information registered for the application, if any. If this parameter is false, the application will not be registered if it has already been registered previously and its current modification date has not changed from when it was last registered; if the parameter is true, the application's registered information will be updated even if its modification date has not changed.

Returns true on success and false on failure.

124.5 class SMAppServiceMBS

124.5.1 class SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: An object the framework uses to control helper executables that live inside an app,Äôs main bundle.
Notes: In macOS 13 and later, use SMAppService to register and control LoginItems, LaunchAgents, and LaunchDaemons as helper executables for your app. When converting code from earlier versions of macOS, use an SMAppService object and select one of the following methods depending on the type of service your helper executable provides:

- For SMAppServices initialized as LoginItems, the register and unregister APIs provide a replacement for SMLoginItemSetEnabled.
- For SMAppServices initialized as LaunchAgents, the register and unregister methods provide a replacement for installing property lists in
textasciitilde /Library/LaunchAgents or /Library/LaunchAgents.
- For SMAppServices initialized as LaunchDaemons, the register and unregister methods provide a replacement for installing property lists in /Library/LaunchDaemons.

Requires macOS 13.0.

- News from the MBS Xojo Plugins in Version 23.0

124.5.2 Methods

124.5.3 agentService(plistName as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object with a launch agent with the property list name you provide.
Notes: plistName: The name of the property list corresponding to the SMAppService.

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LaunchAgents directory.

124.5.4 Constructor

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: An app service object that corresponds to the main application as a login item.
Use this SMAppServiceMBS to configure the main app to launch at login.

124.5.5 daemonService(plistName as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object with a launch daemon with the property list name you provide.
Notes: plistName: The name of the property list corresponding to the SMAppService.

Returns an SMService object

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LaunchDaemons directory

124.5.6 loginItemService(identifier as String) as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Initializes an app service object for a login item corresponding to the bundle with the identifier you provide.
Notes: identifier: The bundle identifier of the helper application.

Returns an SMService object.

The property list name must correspond to a property list in the calling app,Äôs Contents/Library/LoginItems directory.

124.5.7 mainAppService as SMAppServiceMBS

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: An app service object that corresponds to the main application as a login item.
Notes: Use this SMAppServiceMBS to configure the main app to launch at login.

124.5.8 openSystemSettingsLoginItems

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Opens System Settings to the Login Items control panel.

124.5.9 register(byref error as NSErrorMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Registers the service so it can begin launching subject to user approval.
Notes: The registration process applies to the following rules, depending upon the type of service:

- If the service corresponds to a LoginItem bundle, the helper starts immediately and on subsequent logins. If the helper crashes or exits with a non-zero status, the system relaunches it.
- If the service corresponds to the main application, the application launches on subsequent logins.
- If the service corresponds to a LaunchAgent, the LaunchAgent is immediately bootstrapped and may begin running. In addition LaunchAgents registered with this method bootstrap on each subsequent login.
- If an app needs to register a LaunchAgent for multiple users, you must call the API once per user while that user is running the app.
- If the service corresponds to a LaunchDaemon, the system won,Äôt bootstrap the LaunchDaemon until an admin approves the LaunchDaemon in System Preferences. The system bootstraps LaunchDaemons registered with this method and approved by an admin on each subsequent boot.

If the service is already registered, this method returns kSMErrorAlreadyRegistered.
If the service isn,Äôt approved by the user, this method returns kSMErrorLaunchDeniedByUser.

124.5.10 statusForLegacyFile(File as FolderItem) as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Check the authorization status of an earlier OS version login item.
Notes: File: The folderitem of the helper executable,Äôs property list.

Returns one of the SMAppServiceStatus constants that indicate the current authorization status.

124.5.11 statusForLegacyURL(URL as String) as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Check the authorization status of an earlier OS version login item.
Notes: url: The URL of the helper executable,Äôs property list.

Returns one of the SMAppServiceStatus constants that indicate the current authorization status.

124.5.12 unregister(byref error as NSErrorMBS) as Boolean

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Unregisters the service so the system no longer launches it.
Notes: error: Upon an unsuccessful return, a new NSError object describing the error. Upon successful return, this argument is nil. This argument may be NULL.

Returns true if the service was successfully unregistered; otherwise, false.

This is the opposite operation of register().
If the service corresponds to a LoginItem, LaunchAgent, or LaunchDaemon and the service is currently running it, the system terminates it. If the service corresponds to the main application, it continues running, but becomes unregistered to prevent future launches at login.
If the service is already unregistered, this method returns kSMErrorJobNotFound.
See also:

- 124.5.13 unregister(CompleteHandler as SMAppServiceUnregisterCompletedMBS, tag as variant = nil) 17282

124.5.13 unregister(CompleteHandler as SMAppServiceUnregisterCompletedMBS, tag as variant = nil)

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Unregisters the service so the system no longer launches it and calls a completion handler you provide with the resulting error value.
Notes: CompleteHandler: A completion handler to call with the result of the unregistration operation. Upon an unsuccessful return, the handler contains a new NSErrorMBS object describing the error. Upon successful return, this argument is nil.
See also:

- 124.5.12 unregister(byref error as NSErrorMBS) as Boolean 17282

124.5.14 Properties

124.5.15 Handle as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

124.5.16 Status as Integer

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: A property that describes registration or authorization state of the service.
Notes: (Read only property)

124.5.17 Constants

Service Status

Constant	Value	Description
SMAppServiceStatusEnabled	1	The service has been successfully registered and is eligible to run.
SMAppServiceStatusNotFound	3	An error occurred and the framework couldn,Äôt find this service.
SMAppServiceStatusNotRegistered	0	The service hasn,Äôt registered with the Service Management framewo the service attempted to reregister after it was already registered.
SMAppServiceStatusRequiresApproval	2	The service has been successfully registered, but the user needs to take in System Preferences. The Service Management framework successfully registered this servic the user needs to take action in System Settings before the service is e to run. The framework also returns this status if the user revokes conse the service to run in System Settings.

124.5.18 Delegates

124.5.19 SMAppServiceUnregisterCompletedMBS(Error as NSErrorMBS, Tag as Variant)

MBS MacCF Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The delegate used with unregister method.
Notes: A handler to call with the result of the unregistration operation. Upon an unsuccessful return, the handler contains a new NSErrorMBS object describing the error. Upon successful return, this argument is nil.

Chapter 125

Mac

125.1 Globals

125.1.1 CurrentAppearanceThemeMBS as string

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns which theme is used on your computer.
Example:

msgbox "You are using this theme: "+CurrentAppearanceThemeMBS

Notes: Possible values:
com.apple.theme.appearance.platinum
com.apple.theme.appearance.aqua
com.apple.theme.appearance.aqua.blue
com.apple.theme.appearance.aqua.graphite
Returns "" on any error.
Available in CarbonLib 1.4 and later. Available in Mac OS X 10.1 and later.

On Windows or Linux an empty string is returned.

125.1.2 SetDesktopPictureMBS(file as folderitem) as Integer

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Asks the Finder/Explorer to change the desktop picture.
Notes: File must be a valid folderitem for an existing file to define a new desktop picture.
Returns a Mac OS or Windows error code or -1 if the function is not available.

You can use file=nil to remove the desktop wallpaper on Windows.

- MBS Plugins updated for Xojo 2019r2

125.2 class SummaryMBS

125.2.1 class SummaryMBS

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A class using SearchKit on Mac OS X 10.4 and newer to summarize texts.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")

MsgBox s.SentenceSummaryString(1)
```

Blog Entries

- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

125.2.2 Methods

125.2.3 Constructor(text as string)

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Creates a summary object based on a text string.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")

MsgBox s.SentenceSummaryString(1)
```

Notes: text: The text string that you want to summarize.
On success the handle property is not zero.

The constructor creates a summarization object that pre-analyzes a text string to support fast summarization.

Available in Mac OS X v10.4 and later.

125.2.4 ParagraphAtIndex(index as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified paragraph from the text in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.ParagraphAtIndex(0)
```

Notes: index: The ordinal number of the paragraph in the original text, with the first paragraph designated by zero (this function uses zero-based indexing).

Return a string containing the specified paragraph, or "" on failure.

Available in Mac OS X v10.4 and later.

125.2.5 ParagraphIndexOfParagraphs as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns the array containing the ordinal number for each paragraph in the original text.

125.2.6 ParagraphIndexOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of indexes to map a sentence index to it's paragraph index.

125.2.7 ParagraphSummaryString(numParagraphs as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of paragraphs.
Notes: numParagraphs: The maximum number of paragraphs you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

125.2.8 RankOrderOfParagraphs as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each paragraph in the original text.

125.2.9 RankOrderOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each sentence in the original text.

125.2.10 SentenceAtIndex(index as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified sentence from the text in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.SentenceAtIndex(0)
```

Notes: index: The ordinal number of the sentence in the original text, with the first sentence designated by zero (this function uses zero-based indexing).
Returns a string containing the specified sentence, or NULL on failure.
Available in Mac OS X v10.4 and later.

125.2.11 SentenceIndexOfSentences as Integer()

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of the ordinal number for each sentence in the original text.

125.2.12 SentenceSummaryString(numSentences as Integer) as string

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of sentences.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
```

```
MsgBox s.SentenceSummaryString(1)
```

Notes: numSentences: The maximum number of sentences you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

125.2.13 Properties

125.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The internal reference to the SKSummary object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.handle)
```

Notes: (Read and Write property)

125.2.15 ParagraphCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of paragraphs in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.ParagraphCount)
```

Notes: (Read only property)

125.2.16 SentenceCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of sentences in a summarization object.
Example:

```
Var s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.SentenceCount)
```

Notes: (Read only property)

125.3 class TextInputSourceMBS

125.3.1 class TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The class for text input source on Mac OS X.
Notes: Text input sources fall into three general categories:

- Keyboard input sources, including keyboard layouts, keyboard input methods and input modes
- Palette input sources, including the character palette, keyboard viewer, and private dictionary panels
- Ink input sources

Palette input sources and ink input source are categorized as non-keyboard input sources. However, palette input sources might still involve some keyboard interaction. Keyboard input methods can be mode-enabled (for instance, Kotoeri). Hence, they are potentially the parent of several input modes directly selectable in the user interface (for instance, hiragana, katakana, and romaji). With mode-enabled input methods, the parent input method is not directly selectable. Non-mode-enabled input methods are directly selectable.

Some input sources are provided and installed with OS X. Other input sources can be installed as third party products themselves or as part of the installation of certain applications. International Preferences displays a list of all visible installed input sources. You can use International Preferences to enable or disable most input sources that are intended to be visible in the user interface. Setup Assistant also enables some input sources. A separate user interface provides a way to enable ink input sources.

You can use some of the functions in Text Input Source Services to enable or disable input sources programmatically in your application. One keyboard input source must be enabled. Only one ink input source may be enabled. Multiple instances of other input source types may be enabled.

Some enabled input sources are invisible but programmatically selectable, such as ink. Some are visible but not programmatically selectable, such as mode-savvy parent input methods (these must be visible so that International Preferences can display the parent input method for a group of input modes).

Input modes can only be changed from disabled to enabled if their parent input method is enabled. Input modes can only be selected if they and their parent input method are enabled.

Exactly one keyboard input source is selected at any time: the current keyboard input source. Selecting a new keyboard input source deselects the previous keyboard input source. Multiple palette input sources may be selected. For instance, there may be one or more character palettes and one or more keyboard viewers selected in addition to the selected keyboard input source. Selecting or deselecting a palette (or ink) input source does not affect any other input source. Input methods that provide associated input palettes may

programmatically deselect the palette when the input method is deselected, for example.

Text Input Source Source Services specifies modern, non-Script-Manager-based programming interfaces for operating on text input sources and performs the following functions:

- Finds information about text input sources
- Selects, enables, and disables text input sources
- Receives notifications about relevant changes in text input sources.

Available in OS X v10.5 and later.

Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

125.3.2 Methods

125.3.3 BundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The reverse DNS BundleID associated with the input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.BundleID

125.3.4 Category as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The category of this input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Category

Notes: Can be kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

125.3.5 CreateASCIICapableInputSourceList as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of ASCII-capable keyboard input sources.
Notes: This list represents a snapshot of ASCII-capable keyboard input sources enabled when the call was made. Successive calls to CreateASCIICapableInputSourceList may return different results because, for example, in between the calls the user may enable or disable an input source in the International Preferences pane. When a keyboard input source is enabled or disabled, by the user or programmatically, the distributed CF notification kTISNotifyEnabledKeyboardInputSourcesChanged is posted.

125.3.6 CreateInputSourceList(properties as dictionary, includeAllInstalled as boolean) as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of input sources that match specified properties.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes: properties: A dictionary of property keys and corresponding values to filter the input source list. May be nil, in which case no filtering is performed.
includeAllInstalled: Typically, set to false so that only enabled input sources are included; set to true to include all installed input sources that match the filter .

Returns an array for a list of text input source references that match the specified properties.

This list represents a snapshot of input sources that matched the properties specified when you made the call. If you want to include input sources that are installed but not currently enabled, set the includeAllInstalled parameter to true. Typically, you do this to obtain a text input source reference for a newly installed input source. In this case, the properties parameter would include very specific criteria limiting the matching input sources.

Important: Calling this function with the includeAllInstalled parameter set to true can have significant memory impact on the calling application if the properties parameter is nil (match all) or if it specifies criteria that might match many installed input sources. This setting might force caching of data for all matching

input sources and result in an allocation of up to 120K.
If you are calling CreateInputSourceList to find a specific input source or sources from among the sources included in the list, first call CreateInputSourceList with includeAllInstalled set to false and check whether the returned array includes the desired input source(s). If this is not the case, call CreateInputSourceList again with the includeAllInstalled parameter set to true.

125.3.7 CurrentASCIICapableKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardInputSource

MsgBox t.LocalizedName
```

Notes: Returns text input source reference for the most recently used ASCII-capable keyboard input source.

If no ASCII-capable keyboard input source has been used yet, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

125.3.8 CurrentASCIICapableKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard layout.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardLayoutInputSource

MsgBox t.LocalizedName
```

Notes: Returns A text input source reference for the most recently used ASCII-capable keyboard layout.

If no ASCII-capable keyboard input source has been used, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

This function is used by input methods to get the keyboard layout used for key translation if no specific

keyboard layout override exists. The CurrentASCIICapableKeyboardInputSource can return input sources that are not keyboard layouts.

125.3.9 CurrentKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected keyboard input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.LocalizedName
```

125.3.10 CurrentKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the keyboard layout currently in use.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardLayoutInputSource
MsgBox t.LocalizedName
```

Notes: If the currently selected keyboard input source is a keyboard layout, the text input source reference refers to that layout. If the currently selected keyboard input source is an input method or mode, the text input source reference refers to the keyboard layout used by that input method or mode.

125.3.11 Deselect

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Deselects the specified input source.
Notes: inputSource: The input source you want to deselect.

Lasterror is set.

Deselect is for use with palette or ink input sources only. It has no effect on other input sources. When palette input sources are disabled, the palette disappears. Ink input sources are usually deselected and disabled at the same time.

125.3.12 Disable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Disables the specified input source.
Notes: Sets lasterror. Lasterror is paramErr (-50) if the input source cannot be disabled. Otherwise, lasterror is noErr (0).

Disable is primarily intended for input methods, or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source unavailable for selection and removes it from the user interface.

125.3.13 Enable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Enables the specified input source.
Notes: Lasterror is set. Lasterror is paramErr (-50) if the input source cannot be enabled. Otherwise, it is noErr (0).

Enable is primarily for input methods or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source available in the user interface for selection.

For Enable to succeed, the input source must be capable of being enabled (that is, kTISPropertyInputSourceIsEnableCapable is set to true). Furthermore, if the input source is an input mode, its parent must already be enabled for the mode to become enabled.

125.3.14 Icon as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Queries IconMBS object for this input source.
Notes: Value is a IconMBS. We use variant to reduce dependency to other plugins.

Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.

125.3.15 IconImageFile as folderitem

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

125.3.16 IconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The URL to the file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

125.3.17 InputMethodKeyboardLayoutOverride as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected input method's keyboard layout override.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.InputMethodKeyboardLayoutOverride
if t = nil then
MsgBox "Nil"
else
MsgBox t.LocalizedName
end if
```

Notes: If the current keyboard input source is an input method or mode that has a keyboard layout override, a text input source reference for that keyboard layout is returned. Otherwise, the function returns nil.

125.3.18 InputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: A reverse DNS string that identifies a particular usage class for input modes.
Example:

```
MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.InputModeID
```

Notes: For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

125.3.19 InputSourceForLanguage(language as string) as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the input source that should be used to input the specified language.
Notes: language: A BCP 47 language code (in the same form returned by the Core Foundation function CFLocaleCreateCanonicalLanguageIdentifierFromString function) that represents the language an input source should be returned for.

Returns an enabled input source that can input the specified language. If more than one such input source exists and at least one has been used, the most recently used input source is chosen. If none has been used, one is chosen based on the intended languages of the input sources. If no enabled input source exists that can input the specified language, the function returns nil.

If a text field is expected to have input in a particular language, an application can call InputSourceForLanguage and then SelectIt to select an input source appropriate for that language. This function is a replacement for the deprecated KeyScript programming interface's capability to select the default input source associated with a particular script code.

125.3.20 IsASCIICapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is intended to be capable of ASCII input.

125.3.21 IsEnableCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically enabled using Enable.
Notes: You can enable most input sources programmatically at any time. IsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private key-

board layouts used by the input method via the function SetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. IsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. IsEnableCapable is true for these.

125.3.22 IsEnabled as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently enabled.
Example:

MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsEnabled)

125.3.23 IsSelectCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically selected using Select.
Notes: This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, IsSelectCapable is set to true.
For input sources that can never be programmatically selected even if they are enabled, IsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, IsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.
For input sources that can never be enabled or selected, IsSelectCapable is set to false.

125.3.24 IsSelected as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently selected.
Example:

MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsSelected)

125.3.25 kTISCategoryInkInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: You can install or select 0 or 1 ink input source.

125.3.26 kTISCategoryKeyboardInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes keyboard layouts, keyboard input methods (both with modes and without), and keyboard input modes. At least one input source in this category is installed. Of all input sources in this category, exactly one is selected; selecting a new one deselects the previous one.

125.3.27 kTISCategoryPaletteInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes character palettes and keyboard viewers. You can select 0 or more categories.

125.3.28 kTISNotifyEnabledKeyboardInputSourcesChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the set of enabled keyboard input sources.
Notes: Available in OS X v10.5 and later.

125.3.29 kTISNotifySelectedKeyboardInputSourceChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the selected keyboard input source.
Notes: Available in OS X v10.5 and later.

125.3.30 kTISPropertyBundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string for the reverse DNS BundleID associated with the input source.

125.3.31 kTISPropertyIconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFURLRef indicating the file containing the image (typically TIFF) to be used as the input source icon.
If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

125.3.32 kTISPropertyIconRef as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is an IconRef value for the input source icon. Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

125.3.33 kTISPropertyInputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFStringRef for a reverse DNS string that identifies a particular usage class for input modes.
For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with

that TSM document.

125.3.34 kTISPropertyInputSourceCategory as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string indicating the category of an input source.
Possible values are specified by the following property value constants: kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

125.3.35 kTISPropertyInputSourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes: This property key designates a property value, which is a CFStringRef for the unique reverse DNS name associated with the input source.

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.
- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

125.3.36 kTISPropertyInputSourceIsASCIICapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is intended to be capable of ASCII input.

125.3.37 kTISPropertyInputSourceIsEnableCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value which is a boolean indicating whether the input source can ever be programmatically enabled using TISEnableInputSource.
You can enable most input sources programmatically at any time. kTISPropertyInputSourceIsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the functionTISSetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. kTISPropertyInputSourceIsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. kTISPropertyInputSourceIsEnableCapable is true for these.

125.3.38 kTISPropertyInputSourceIsEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is currently enabled.

125.3.39 kTISPropertyInputSourceIsSelectCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source can ever be programmatically selected using TISSelectInputSource.
This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to true.

For input sources that can never be programmatically selected even if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, kTISPropertyInputSourceIsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.
For input sources that can never be enabled or selected, kTISPropertyInputSourceIsSelectCapable is set to false.

125.3.40 kTISPropertyInputSourceIsSelected as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a Boolean indicating whether the input source is currently selected.

125.3.41 kTISPropertyInputSourceLanguages as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a CFArrayRef for an array of CFStringRefs, where each string is the language code for a language that can be input using the input source. You can use this constant with the PropertyValue function, but you may not use it in the filter dictionary passed to the CreateInputSourceList function.
Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

125.3.42 kTISPropertyInputSourceType as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string indicating the specific type of an input source.
Possible values are specified by the following property value constants: kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

125.3.43 kTISPropertyLocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes: This property key designates a property value, which is a string for the input source's localized name as intended for user interface use.
Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

125.3.44 kTISPropertyUnicodeKeyLayoutData as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a Memoryblock that refers to the 'uchr' keyboard layout data for a keyboard layout input source.
The 'uchr' data is in native-endian order. If the input source is not a keyboard layout, or is a keyboard layout for which only 'KCHR data' is available, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

125.3.45 kTISTypeCharacterPalette as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

125.3.46 kTISTypeInk as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryInkInputSource. Even though it is the only type in that category, a type is provided so that clients who don't need category information can just check input

source type.

125.3.47 kTISTypeKeyboardInputMethodModeEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

125.3.48 kTISTypeKeyboardInputMethodWithoutModes as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

125.3.49 kTISTypeKeyboardInputMode as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

125.3.50 kTISTypeKeyboardLayout as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

125.3.51 kTISTypeKeyboardViewer as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

125.3.52 LocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The input source's localized name as intended for user interface use.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.LocalizedName

Notes: Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

125.3.53 PropertyValue(key as string) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Gets the value of a specified property for a specified input source.
Example:

```
Var t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes: Key: The property key constant specifying the desired property value.

Returns a variant associated with the property key. The value type is specified for each key. Can be a string a boolean, a number, an array or an IconMBS. The function might return nil if the specified property is missing or invalid for the specified input source.

125.3.54 RegisterInputSource(file as folderitem) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes: location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList

with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or
textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 125.3.55 RegisterInputSource(URL as string) as Integer 17308

125.3.55 RegisterInputSource(URL as string) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes: location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or
textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respec-

tively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 125.3.54 RegisterInputSource(file as folderitem) as Integer 17307

125.3.56 SelectIt

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Selects the specified input source.
Example:

```
// show keyboard viewer
Var d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Var sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes: Lasterror is set. Lasterror is paramErr (-50) if the input source is not selectable. Otherwise, it is noErr (0).

When the input source is a selectable keyboard, the specified input source becomes the new current keyboard input source, and the previous input source is deselected. When the input source is a palette, that palette is displayed and made available for input. Ink input sources are typically enabled and selected at the same time. When you call SelectInputSource for a palette or ink input source, there is no effect on other input sources. When you call SelectInputSource for an already selected input source, there is, similarly, no effect.

For SelectInputSource to succeed, the input source must be selectable (that is, kTISPropertyInputSourceIsSelectCapable is set to true) and the input source must be enabled (that is, kTISPropertyInputSourceIsEnabled is set to true). Furthermore, if the input source is an input mode, its parent must be enabled for it to be selected.

We named the function SelectIt as Select is a reserved word in Xojo.

125.3.57 SetInputMethodKeyboardLayoutOverride

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Sets the keyboard layout override for an input method or mode.
Notes: self: The input source for the keyboard layout that should be used until the current input method is deactivated (if it should be something other than the most recently used ASCII-capable keyboard layout).

Lasterror is set. Value is paramErr (-50) if the current keyboard input source is not an input method or mode or if keyboardLayout does not designate a keyboard layout. Otherwise, it is noErr (0).

When an input method or mode is the selected input source, the most recently used ASCII-capable keyboard layout to translate key events is used. This keyboard layout is also the one that appears in Keyboard Viewer. An input source for this keyboard layout is returned by the function CurrentASCIICapableKeyboardLayoutInputSource. If a different keyboard layout should be used for a particular input method or mode, the activated input method or mode should call SetInputMethodKeyboardLayoutOverride to specify the desired keyboard layout.

For example, when a Kotoeri user selects kana layout for kana input, Kotoeri should call SetInputMethodKeyboardLayoutOverride to set the kana keyboard as the override for the appropriate input modes.

The keyboard layout set in this way is used for the final stage of key translation in the Window Server, the connection, or application-specific key translation.

The override setting is lost when the input method that set it is deactivated.

The keyboard layout used for overriding need not be enabled or explicitly selectable. It can be a non-selectable layout included in an input method bundle and automatically registered.

The default behavior is new with OS X v10.5, and eliminates the necessity that input methods have a user interface for setting the ASCII- capable keyboard for phonetic input based on Latin characters.

125.3.58 SourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The unique reverse DNS name associated with the input source.
Notes:

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that

uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.

- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

125.3.59 SourceLanguages as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The array of string, where each string is the language code for a language that can be input using the input source.
Notes: Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

125.3.60 Type as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns the type of an input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Type

Notes: Value can be kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

125.3.61 Properties

125.3.62 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

125.3.63 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

125.4 module ValidationMBS

125.4.1 module ValidationMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: This module has helper functions for App Store Validation.
Notes: Please use AppReceiptMBS and AppReceiptVerificatorMBS classes instead.
Blog Entries

- MBS Xojo Plugins, version 25.3pr1
- MBS Xojo Plugins, version 19.6pr1

125.4.2 Methods

125.4.3 AppStoreReceipt(file as folderitem) as dictionary

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the app store receipt.
Example:

```
// read a receipt file
Var file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
Var dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MsgBox dic.Value(ValidationMBS.kReceiptBundleIdentifer)
```

Notes: You can use this to get details from your receipt.
Returns nil on any error.
Please pass folderitem to receipt file.

125.4.4 ExitApp(code as Integer = 173)

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

```
ValidationMBS.ExitApp 173
```

Notes: This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

125.4.5 GUID as string

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the GUID of the Mac.
Example:

```
Var g as String = ValidationMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

125.4.6 locateAppStoreReceipt as folderitem

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Locates the App Store Receipt in the application bundle.
Example:

```
Var f as FolderItem = ValidationMBS.locateAppStoreReceipt
MsgBox f.NativePath
```

Notes: Please check result if folderitem is not nil and exists before processing.

125.4.7 Validate(file as folderitem) as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Validates the receipt.
Example:

```
Var file as FolderItem = ValidationMBS.locateAppStoreReceipt

if ValidationMBS.Validate(file) = false then
ValidationMBS.ExitApp 173
else
// ok
end if
```

Notes: Returns true if valid and false if not.

125.4.8 Constants

Dictionary Keys

Constant	Value	Description
kReceiptBundleIdentifer	"BundleIdentifier"	The bundle identifier.
kReceiptBundleIdentiferData	"BundleIdentifierData"	The bundle identifier data.
kReceiptHash	"Hash"	The hash for the receipt.
kReceiptOpaqueValue	"OpaqueValue"	The opaque value used for hashing.
kReceiptVersion	"Version"	The version string.

Chapter 126

MapKit

126.1 control DesktopMapKitViewControlMBS

126.1.1 control DesktopMapKitViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo (it may or may not work in REAL Studio if the Cocoa target is chosen)

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

126.1.2 Properties

126.1.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

126.1.4 Events

126.1.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

126.1.6 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a touch gesture.
Notes: e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.1.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

126.1.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

126.1.9 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

126.1.10 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

126.1.11 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

126.1.12 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

126.1.13 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

126.1.14 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event to inform you about added overlay views.

126.1.15 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

126.1.16 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

126.1.17 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

126.1.18 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

126.1.19 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

126.1.20 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

126.1.21 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.

view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

126.1.22 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

126.1.23 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

126.1.24 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has ended a touch gesture.
Notes: e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.1.25 FocusLost

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

126.1.26 FocusReceived

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

126.1.27 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

126.1.28 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a pinch gesture.
Notes: e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.1.29 MenuBarSelected

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

126.1.30 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

126.1.31 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

126.1.32 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

126.1.33 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

126.1.34 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes: This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

126.1.35 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.1.36 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method

may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.1.37 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

126.1.38 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a rotation gesture.
Notes: e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.1.39 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

126.1.40 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a swipe gesture.
Notes: e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.1.41 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event to query an annotation view for the given annotation.

126.1.42 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

126.1.43 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

126.1.44 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

126.1.45 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

126.2 control MapKitIOSControlMBS

126.2.1 control MapKitIOSControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo 2020r2 or newer.

126.2.2 Properties

126.2.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

126.2.4 Events

126.2.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as integer, oldState as integer)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

126.2.6 Close

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to close.

126.2.7 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

126.2.8 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

126.2.9 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

126.2.10 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The event to inform you about added overlay views.

126.2.11 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

126.2.12 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

126.2.13 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

126.2.14 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

126.2.15 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

126.2.16 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

126.2.17 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

126.2.18 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.

userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

126.2.19 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

126.2.20 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

126.2.21 Open

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to was created and you can initialize it.

126.2.22 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method

may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.2.23 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.2.24 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

126.2.25 touchesBegan(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells this object that one or more new touches occurred in a view or window.
Notes: e: The event to which the touches belong.

UIKit calls this method when a new touch is detected in a view or window. Many UIKit classes override this method and use it to handle the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

126.2.26 touchesCancelled(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when a system event (such as a system alert) cancels a touch sequence.
Notes: e: The event to which the touches belong.

UIKit calls this method when it receives a system interruption requiring cancellation of the touch sequence. An interruption is anything that causes the application to become inactive or causes the view handling the touch events to be removed from its window. Your implementation of this method should clean up any state associated with handling the touch sequence.

Return true if you handled it as otherwise we pass it on.

126.2.27 touchesEnded(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when one or more fingers are raised from a view or window.
Notes: e: The event to which the touches belong.

UIKit calls this method when a finger or Apple Pencil is no longer touching the screen. Many UIKit classes override this method and use it to clean up state involved in the handling of the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

126.2.28 touchesMoved(e as NSEventMBS, touches() as NSTouchMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.5, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the responder when one or more touches associated with an event changed.
Notes: e: The event to which the touches belong.

UIKit calls this method when the location or force of a touch changes. Many UIKit classes override this method and use it to handle the corresponding touch events. The default implementation of this method forwards the message up the responder chain.

Return true if you handled it as otherwise we pass it on.

126.2.29 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: The event to query an annotation view for the given annotation.

126.2.30 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

126.2.31 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

126.2.32 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: Desktop & iOS.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

126.3 control MapKitViewControlMBS

126.3.1 control MapKitViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo (it may or may not work in REAL Studio if the Cocoa target is chosen)

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

Xojo Developer Magazine

- 18.6, page 69: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

126.3.2 Properties

126.3.3 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The map view used for this control.
Notes: The plugin creates it automatically when the constructor runs.
(Read only property)

126.3.4 Events

126.3.5 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the drag state of one of its annotation views changed.
Notes: mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

126.3.6 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a touch gesture.
Notes: e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.3.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

126.3.8 Close

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

126.3.9 Closing

Plugin Version: 14.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

126.3.10 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes: mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

126.3.11 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

126.3.12 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

126.3.13 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one or more annotation views were added to the map.
Notes: mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

126.3.14 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that one or more renderer objects were added to the map.
Notes: mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

126.3.15 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The event to inform you about added overlay views.

126.3.16 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

126.3.17 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was deselected.
Notes: mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

126.3.18 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified view was unable to load the map data.
Notes: mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

126.3.19 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that an attempt to locate the user's position failed.
Notes: mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

126.3.20 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes: mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

126.3.21 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view has finished rendering all visible tiles.
Notes: fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

126.3.22 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that one of its annotation views was selected.
Notes: mapView: The map view containing the annotation view.

view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

126.3.23 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view stopped tracking the user's location.
Notes: mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

126.3.24 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the location of the user was updated.
Notes: mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

126.3.25 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

126.3.26 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has ended a touch gesture.
Notes: e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.3.27 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

126.3.28 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

126.3.29 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

126.3.30 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

126.3.31 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

126.3.32 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a pinch gesture.
Notes: e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.3.33 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

126.3.34 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

126.3.35 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

126.3.36 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

126.3.37 Open

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

126.3.38 Opening

Plugin Version: 14.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

126.3.39 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes: This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

126.3.40 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view just changed.
Notes: mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.3.41 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the region displayed by the map view is about to change.
Notes: mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

126.3.42 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes: mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

126.3.43 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a rotation gesture.
Notes: e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.3.44 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

126.3.45 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a swipe gesture.
Notes: e: An event object representing the swipe gesture.

The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

126.3.46 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The event to query an annotation view for the given annotation.

126.3.47 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

126.3.48 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes: mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

126.3.49 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: Tells the control that the map view will start tracking the user's position.
Notes: mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

126.3.50 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

126.4 class MKAnnotationViewMBS

126.4.1 class MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation of one of your annotation objects.
Notes: See
https://developer.apple.com/documentation/mapkit/mkannotationview
Subclass of the NSViewMBS class.

- 18.5, pages 80 to 81: Maps (Part 6), A deep dive into Annotations by Markus Winter

126.4.2 Methods

126.4.3 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new annotation view.
Notes: annotation: The annotation object to associate with the new view.
reuseIdentifier: If you plan to reuse the annotation view for similar types of annotations, pass a string to

identify it. Although you can pass nil if you do not intend to reuse the view, reusing annotation views is generally recommended.

Returns the initialized annotation view or nil if there was a problem initializing the object.

The reuse identifier provides a way for you to improve performance by recycling annotation views as they are scrolled on and off of the map. As views are no longer needed, they are moved to a reuse queue by the map view. When a new annotation becomes visible, your application can request a view for that annotation by passing the appropriate reuse identifier string to the dequeueReusableAnnotationViewWithIdentifier: method of MKMapView.

Added EnableEvents parameter to enable new prepareForDisplay and prepareForReuse events. But please keep reference in some global array to those objects to keep the events working.
See also:

- 126.4.4 Constructor(Handle as Integer) 17355

126.4.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKAnnotationView reference from a declare.
The object is retained.
See also:

- 126.4.3 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false) 17354

126.4.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.4.6 MKAnnotationCalloutInfoDidChangeNotification as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The notification name for the case callout info changed.

126.4.7 setDragState(State as Integer, animated as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the current drag state for the annotation view.
Notes: newDragState: The new drag state for the annotation view.
animated: If true, the change to the new drag state should be animated; otherwise, it should be made without animations.

Applications targeting iOS 4.2 and later can override this method and use it to implement drag support for custom annotation views. As the system detects user actions that would indicate a drag, it calls this method to update the drag state. In response to these changes, your custom implementation of this method should do the following:
When the drag state changes to MKAnnotationViewDragStateStarting, set the state to MKAnnotationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, and the animated parameter is true, perform that animation before changing the state.

When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragStateEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, and the animated parameter is true, you should perform that animation before changing the state.

The default implementation of this method sets the value of the dragState property to the value in the newDragState parameter only. Therefore, direct subclasses can simply call the inherited version of this method to change the drag state; otherwise, just change the value in the draggable property directly.

Changing the state to MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone is the way to signal to the map view that you are done with any animations you wanted to perform. For example, when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should call the inherited version of this method to update the dragState property.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.

126.4.8 setSelected(selected as boolean, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the selection state of the annotation view.
Notes: selected: Contains the value true if the view should display itself as selected.
animated: Set to true if the change in selection state is animated.

You should not call this method directly. An MKMapView object calls this method in response to user interactions with the annotation.

126.4.9 Properties

126.4.10 annotation as MKAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object currently associated with the view.
Notes: You should not change the value of this property directly. This property contains a non-nil value only while the annotation view is visible on the map. If the view is queued and waiting to be reused, the value is nil
(Read and Write property)

126.4.11 CalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to place the callout bubble.
Notes: This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view,Äôs frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.
The calloutOffset property is not used in macOS apps. Instead, macOS apps use leftCalloutOffset and rightCalloutOffset.
(Read and Write property)

126.4.12 canShowCallout as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is able to display extra information in a callout bubble.
Notes: If the value of this property is YES, a standard callout bubble is shown when the user taps a selected annotation view. The callout uses the title and subtitle text from the associated annotation object. If there is no title text, though, the annotation view is treated as if its enabled property is set to NO. The callout also displays any custom callout views stored in the leftCalloutAccessoryView and rightCalloutAccessoryView properties.
If the value of this property is NO, the value of the title and subtitle strings are ignored and the annotation view remains enabled by default. You can still disable the view explicitly using the enabled property.

(Read and Write property)

126.4.13 CenterOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to display the view.
Notes: By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in points. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.
(Read and Write property)

126.4.14 clusterAnnotationView as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The clustering annotation view currently standing in for this annotation view.
Notes: When the annotation view is being displayed on the map, the value of this property is nil.
(Read only property)

126.4.15 clusteringIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An identifier that determines whether the annotation view participates in clustering.
Notes: The default value of this property is empty, which prevents the annotation view from being clustered with other annotation views. Setting the property to a non empty value it to participate in clustering.
Clustering occurs when there is a collision between multiple annotation views with the same identifier on the map surface. The annotation views involved in the collision are removed from the map view and replaced by a clustering annotation view, which displays the title from one of the annotations and provides access to the other annotations.
(Read and Write property)

126.4.16 collisionMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The collision mode to use when interpreting the collision frame rectangle.
Notes: (Read and Write property)

126.4.17 detailCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detail accessory view to be used in the standard callout.
Notes: (Read and Write property)

126.4.18 displayPriority as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The display priority of this annotation view.
Notes: An annotation view whose priority is set to DisplayPriorityRequired is always visible on the map, whereas other priorities may result in the annotation view being hidden.
The default value of this property is DisplayPriorityRequired.
(Read and Write property)

126.4.19 draggable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the annotation view is draggable.
Notes: Setting this property to true makes an annotation draggable by the user. If true, the associated annotation object must also implement the setCoordinate: method. The default value of this property is false.
Setting this property to true, lets the map view know that the annotation is always draggable. In other words, you cannot conditionalize drag operations by attempting to stop an operation that has already been initiated; doing so can lead to undefined behavior. Once begun, the drag operation should always continue to completion.
(Read and Write property)

126.4.20 dragState as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current drag state of the annotation view.
Notes: To support drag operations, you must override the implementation of this property and update the drag state at the following times:
When the drag state changes to MKAnnotationViewDragStateStarting, you should set the state to MKAnnotationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, you should perform that animation before changing the state. Changing the state to the new value lets the map know that your animations are done.
When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragSta-

teEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, you should perform that animation before changing the state.

Changing the state to the MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone value is the way to signal to the map view that you are done with any animations you wanted to perform. For example, when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should still change the value of this property to reflect the correct state.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.
(Read and Write property)

126.4.21 enabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation is enabled.
Notes: The default value of this property is YES. If the value of this property is NO, the annotation view ignores touch events and cannot be selected. Subclasses may also display the annotation contents differently depending on the value of this property.
(Read and Write property)

126.4.22 highlighted as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is highlighted.
Notes: You should not set the value of this property directly. The map view sets it in response to touch events entering or exiting the annotation view,Äôs bounds.
(Read and Write property)

126.4.23 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image to be displayed by the annotation view.
Notes: Looks like MKPinAnnotationViewMBS likes to ignore it, so you may prefer to use MKAnnotationViewMBS directly.

(Read and Write property)

126.4.24 leftCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the left side of the standard callout bubble.
Notes: The default value of this property is nil. The left callout view is typically used to display information about the annotation or to link to custom information provided by your application.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view,Äôs delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view,Äôs view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

126.4.25 leftCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-left of the annotation view.
Notes: This property specifies where the anchor of the callout should be shown when it,Äôs oriented off the left side of the annotation view.
(Read and Write property)

126.4.26 reuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies that this annotation view is reusable.
Notes: You specify the reuse identifier when you create the view. You use this type later to retrieve an annotation view that was created previously but which is currently unused because its annotation is not on screen.
If you define distinctly different types of annotations (with distinctly different annotation views to go with them), you can differentiate between the annotation types by specifying different reuse identifiers for each one.
(Read only property)

126.4.27 rightCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the right side of the standard callout bubble.
Notes: This property is set to nil by default. The right callout view is typically used to link to more detailed information about the annotation. In an iOS app, a common view to specify for this property is a button object whose type is set to UIButtonTypeDetailDisclosure.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view,Äôs delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view,Äôs view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

126.4.28 rightCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-right of the annotation view.
Notes: This property specifies where the anchor of the callout should be shown when it,Äôs oriented off the right side of the annotation view.
(Read and Write property)

126.4.29 selected as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is currently selected.
Notes: You should not set the value of this property directly. If the property contains true, the annotation view is displaying a callout bubble.
(Read and Write property)

126.4.30 Events

126.4.31 prepareForDisplay

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Notifies the annotation view that it is about to be displayed on the map.
Notes: Use this event to prepare the content of your annotation view.

126.4.32 prepareForReuse

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the view is removed from the reuse queue.
Notes: You can implement this event in your custom annotation views and use it to put the view in a known state before it is returned to your map view delegate.

126.4.33 Constants

Collision Modes

Constant	Value	Description
CollisionModeCircle	1	
CollisionModeRectangle	0	

Display Priorities

Constant	Value	Description
DisplayPriorityDefaultHigh	750	A constant indicating that the item's display priority is high.
DisplayPriorityDefaultLow	250	A constant indicating that the item's display priority is low.
DisplayPriorityRequired	1000	A constant indicating that the item is required.

Drag States

Constant	Value	Description
DragStateCanceling	3	Drag was cancelled.
DragStateDragging	2	Drag is happening.
DragStateEnding	4	Drag is ending.
DragStateNone	0	No dragging.
DragStateStarting	1	Drag is starting.

126.5 class MKCircleMBS

126.5.1 class MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKCircle class is a concrete overlay object representing a circular area on a map.
Notes: This class manages the data that defines the area and is typically used in conjunction with an MKCircleView object, which handles the drawing of the circular area on a map.
Subclass of the MKShapeMBS class.

Interfaces: MKOverlayMBS

126.5.2 Methods

126.5.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.
See also:

- 126.5.15 boundingMapRect as MKMapRectMBS 17367

126.5.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

126.5.5 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
Var radius as Integer = 300 // 300 meter

Var circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes: coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 126.5.6 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS 17365

126.5.6 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 126.5.5 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS 17365

126.5.7 circleWithMapRect(mapRect as MKMapRectMBS) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.

126.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 126.5.9 Constructor(Handle as Integer) 17366
- 126.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17366
- 126.5.11 Constructor(mapRect as MKMapRectMBS) 17367

126.5.9 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCircle reference from a declare.
The object is retained.
See also:

- 126.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17366
- 126.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17366
- 126.5.11 Constructor(mapRect as MKMapRectMBS) 17367

126.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes: Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 126.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17366
- 126.5.9 Constructor(Handle as Integer) 17366
- 126.5.11 Constructor(mapRect as MKMapRectMBS) 17367

126.5.11 Constructor(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.
See also:

- 126.5.8 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 17366
- 126.5.9 Constructor(Handle as Integer) 17366
- 126.5.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 17366

126.5.12 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.5.16 coordinate as CLLocationCoordinate2DMBS 17368

126.5.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.5.14 Properties

126.5.15 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you

must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.
(Read only property)
See also:

- 126.5.3 boundingMapRect as MKMapRectMBS 17364

126.5.16 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.
Notes: (Read only property)
See also:

- 126.5.12 coordinate as CLLocationCoordinate2DMBS 17367

126.5.17 radius as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the circular area, measured in meters.
Notes: (Read only property)

126.6 class MKCircleRendererMBS

126.6.1 class MKCircleRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a circular overlay.
Notes: This renderer fills and strokes the circular region represented by the overlay object. You can change the color and other drawing attributes of the circle by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.

You create an instance of this class in your map view rendererForOverlay event.
Subclass of the MKOverlayPathRendererMBS class.

- MapKit Framework for Xojo

126.6.2 Methods

126.6.3 Constructor(Circle as MKCircleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified circle overlay object.
Notes: circle: The circle overlay containing the information about the circular area to be drawn. The renderer maintains a strong reference to the object you provide. This parameter must not be nil.
See also:

- 126.6.4 Constructor(Handle as Integer) 17369

126.6.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCircleRenderer reference from a declare.
The object is retained.
See also:

- 126.6.3 Constructor(Circle as MKCircleMBS) 17369

126.6.5 Properties

126.6.6 circle as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The circle overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

126.7 class MKClusterAnnotationMBS

126.7.1 class MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation that groups two or more distinct annotations into a single entity.
Notes: A cluster annotation object stands in for the group of annotations. Cluster views promote legibility of the underlying annotations by displaying a single annotation whose title is taken from one annotation and whose subtitle indicates how many additional annotations belong to the group.

MapKit automatically creates cluster annotations when two or more annotation views become grouped too closely together on the map surface. To customize the cluster annotations displayed on your map, implement the clusterAnnotationForMemberAnnotations event in your map's control.

126.7.5 Constructor(memberAnnotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes the cluster annotations with the specified individual annotations.
Notes: memberAnnotations: The annotations to group together as a single entity.

Returns an initialized MKClusterAnnotationMBS object or nil if the object could not be created.
See also:

- 126.7.3 Constructor 17371
- 126.7.4 Constructor(Handle as Integer) 17372

126.7.6 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.7.7 memberAnnotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The annotations that are grouped together by the cluster.

126.7.8 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.7.9 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 126.7.13 SubTitle as String 17373

126.7.10 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.7.14 Title as String 17374

126.7.11 Properties

126.7.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

126.7.13 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
(Read and Write property)
See also:

- 126.7.9 SubTitle as String 17373

126.7.14 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 126.7.10 Title as String 17373

126.8 class MKCoordinateRegionMBS

126.8.1 class MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A structure that defines which portion of the map to display.

126.8.2 Methods

126.8.3 Constructor(center as CLLocationCoordinate2DMBS, span as MKCoordinateSpanMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor to initialize an object of this class.

126.8.4 MakeWithDistance(center as CLLocationCoordinate2DMBS, latitudinalMeters as double, longitudinalMeters as double) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a region with given center and size.

126.8.5 Properties

126.8.6 center as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the region.
Notes: (Read and Write property)

126.8.7 span as MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The horizontal and vertical span representing the amount of map to display.
Notes: The span also defines the current zoom level used by the map view object.
(Read and Write property)

126.9 class MKCoordinateSpanMBS

126.9.1 class MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A structure that defines the area spanned by a map region.
Notes: You use the delta values in this structure to indicate the desired zoom level of the map, with smaller delta values corresponding to a higher zoom level.

126.9.2 Methods

126.9.3 Constructor(latitudeDelta as Double, longitudeDelta as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor to initialize this class.

126.9.4 Properties

126.9.5 latitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of north-to-south distance (measured in degrees) to display on the map.
Notes: Unlike longitudinal distances, which vary based on the latitude, one degree of latitude is always approximately 111 kilometers (69 miles).
(Read and Write property)

126.9.6 longitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of east-to-west distance (measured in degrees) to display for the map region.
Notes: The number of kilometers spanned by a longitude range varies based on the current latitude. For

example, one degree of longitude spans a distance of approximately 111 kilometers (69 miles) at the equator but shrinks to 0 kilometers at the poles.
(Read and Write property)

126.10 class MKCustomAnnotationMBS

126.10.1 class MKCustomAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a custom MKAnnotationMBS.
Notes: As MKAnnotationMBS is an interface, you need a Cocoa class to implement coordinate, title and subtitle properties.
So you can subclass this class if you like.

126.10.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomAnnotation reference from a declare.
The object is retained.
See also:

- 126.10.3 Constructor 17379

126.10.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.10.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.10.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.

Interfaces: MKOverlayMBS, MKAnnotationMBS

126.11.2 Methods

126.11.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

126.11.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need

for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

126.11.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.11.6 Constructor(Handle as Integer) 17383

126.11.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomOverlay reference from a declare.
The object is retained.
See also:

- 126.11.5 Constructor 17383

126.11.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

126.11.8 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.11.9 setBoundingMapRect(m as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets boundingMapRect property.

126.11.10 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.11.11 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 126.11.16 subtitle as String 17385

126.11.12 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.11.17 title as String 17385

126.11.13 Properties

126.11.14 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.
(Read and Write property)

126.12.2 Methods

126.12.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKCustomOverlayRenderer reference from a declare.
The object is retained.
See also:

- 126.12.4 Constructor(overlay as MKOverlayMBS) 17386

126.12.4 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: The overlay can be any overlay, not just a MKCustomOverlayMBS one.
See also:

- 126.12.3 Constructor(Handle as Integer) 17386

126.12.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.12.6 Events

126.12.7 canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Event to return a Boolean value indicating whether the overlay view is ready to draw its content.
Example:

```
Function canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) Handles canDrawMapRect
as Boolean
Return True
End Function
```

Notes: mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Return yes if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return false if it does not draw content in the specified rectangle.

If you return false from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.

The default implementation of this method returns YES.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

126.12.8 DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The event to draw the overlay,Äôs contents at the specified location on the map.
Example:

```
Sub DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS) Handles DrawMapRect
// change coordinate system to show just our area
Var rect As CGRectMBS = Self.RectForMapRect(overlay.boundingMapRect)
context.ScaleCTM(1.0, -1.0)
context.TranslateCTM(0.0, -rect.size.height)

// and fill it all in red
context.SetRGBFillColor 1,0,0,0.3
context.FillRect rect

context.Flush
End Sub
```

Notes: mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map,Äôs contents.
context: The graphics context to use for drawing the overlay,Äôs contents.

The default implementation of this method does nothing. Subclasses are expected to implement this event and use it to draw the overlay,Äôs contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

126.13 class MKDirectionsMBS

126.13.1 class MKDirectionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that computes directions and travel-time information based on the route information you provide.
Notes: You use an MKDirections object to ask the Apple servers to provide walking or driving directions for a route, which you specify using an MKDirectionsRequestMBS object. After making a request, MapKit delivers the results asynchronously to the completion handler that you provide. You can also get the estimated travel time for the route.

Each MKDirectionsMBS object handles a single request for directions, although you can cancel and restart that request as needed. You can create multiple instances of this class and process different route requests at the same time, but you should make requests only when you plan to present the corresponding route information to the user. Apps may receive a MKErrorLoadingThrottled error if too many requests have been made from the current device in too short a time period.

126.13.2 Methods

126.13.3 calculateDirections(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested route information asynchronously.
Notes: Calls calculateDirectionsCompleted event later.

This method initiates the request for directions and calls your calculateDirectionsCompleted event with the results. The implementation of your event handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

126.13.4 calculateETA(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested travel-time information asynchronously.
Notes: This method initiates a request for a travel-time estimate and calls your calculateETAWithCompleted event handler block with the results. Travel-time estimates take much less time to generate than directions, so use this method in situations where you want a time estimate only. The implementation of your handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event handler with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

126.13.5 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a pending request.
Notes: After canceling a request, you can call the calculateDirections method again (if you want) to restart the request process.

126.13.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirections reference from a declare.
The object is retained.
See also:

- 126.13.7 Constructor(request as MKDirectionsRequestMBS) 17390

126.13.7 Constructor(request as MKDirectionsRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions object using the specified request.
Notes: request: The request object containing the start and end points of the route. This parameter must not be nil.

After initializing your directions object, you must call the calculateDirections or calculateETA method to perform the request.

See also:

- 126.13.6 Constructor(Handle as Integer) 17390

126.13.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.13.9 Properties

126.13.10 Calculating as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a request is currently in process.
Notes: (Read only property)

126.13.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.13.12 Request as MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The request used to create this object.
Notes: (Read only property)

126.13.13 Events

126.13.14 calculateDirectionsCompleted(response as MKDirectionsResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event called when calculateDirections method finished.
Notes: This event takes three parameters:

- The response parameter contains the route information for the request. If an error occurred or no route could be determined, this parameter is nil.
- The error parameter contains information about any errors that occurred. If no errors occurred, this parameter is nil.
- The tag passed to the method.

The implementation of your block should check for a value in the error parameter and, if that parameter is nil, incorporate the route information provided in the response parameter.

126.13.15 calculateETAWithCompleted(response as MKETAResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Event called by calculateETA when method is done.

126.14 class MKDirectionsRequestMBS

126.14.1 class MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start and end points of a route, along with the planned mode of transportation.
Notes: You use an MKDirectionsRequestMBS object when requesting or providing directions. If your app provides directions, use this class to decode the URL sent to you by Maps. If you need to request directions from Apple, pass an instance of this class to an MKDirections object. For example, an app that provides subway directions might request walking directions to and from relevant subway stations.

For apps that provide directions, you receive direction-related URLs in your app delegate,Äôs application:openURL:sourceApplication:annotation: method. Upon receiving a URL, call the isDirectionsRequestURL method of this class to determine if the URL is related to routing directions. If it is, create an instance of this class using the provided URL and extract the map items associated with the start and end points.

To provide routing directions, your app must include special keys in its Info.plist file and be able to handle URLs sent to it by the Maps app. These keys indicate a special URL type that your app must be prepared to handle. For information about how to implement this support, see Location and Maps Programming Guide.

126.14.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirectionsRequest reference from a declare.
The object is retained.
See also:

- 126.14.3 Constructor 17393
- 126.14.5 Constructor(URL as string) 17394

126.14.5 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions request object using the specified URL.
Notes: You should use the isDirectionsRequestURL method to verify that the specified URL is of the correct format before calling this method to initialize the object.
See also:

- 126.14.3 Constructor 17393
- 126.14.4 Constructor(Handle as Integer) 17393

126.14.6 isDirectionsRequestURL(URL as string) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the specified URL contains a directions request.
Notes: True if the URL contains a directions request that your app should display to the user or false if it does not.

126.14.7 Properties

126.14.8 arrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The arrival date for the trip.
Notes: Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

126.14.9 arrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The arrival date for the trip.
Notes: Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

126.14.10 departureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The departure date for the trip.
Notes: Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

126.14.11 departureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The departure date for the trip.
Notes: Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

126.14.12 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point for routing directions.
Notes: (Read and Write property)

126.14.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.14.14 requestsAlternateRoutes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether your app wants multiple routes when they are available.
Notes: When this property is set to false, the server returns a single route between the start and end points. When this property is YES, the server may return additional routes for the user to follow. The server returns additional routes only if they are available and represent a reasonable path that the user might take.
The default value of this property is false.
(Read and Write property)

126.14.15 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The starting point for routing directions.
Notes: (Read and Write property)

126.14.16 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance to which the directions should apply.
Notes: You can use this property to specify whether you want directions suited to a particular type of transportation. For example, you can use this to specify that you want walking directions or driving directions.
The default value of this property is TransportTypeAny.
(Read and Write property)

126.14.17 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

126.15 class MKDirectionsResponseMBS

126.15.1 class MKDirectionsResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route information returned by Apple servers in response to one of your requests for directions.
Notes: You do not create instances of this class directly. Instead, you initiate a request for directions by calling the calculateDirection method of an MKDirectionsMBS object. The calculateDirectionCompleted event handler receives an MKDirectionsResponseMBS object with the results.

126.15.2 Methods

126.15.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.15.4 Constructor(Handle as Integer) 17398

126.15.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDirectionsResponse reference from a declare.
The object is retained.
See also:

- 126.15.3 Constructor 17398

126.15.5 routes as MKRouteMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of route objects representing the directions between the start and end points.
Notes: The array contains one or more MKRouteMBS objects, each of which represents a possible set of directions for the user to follow. If you did not request alternate routes in the original directions request, this array contains at most one object.
Each route object contains geometry information that you can use to display that route on your app,Äôs

map view. Routes may also contain additional information that is relevant to that particular route, such as the expected travel time and any trip advisory notices.

126.15.6 Properties

126.15.7 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes: The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

126.15.8 firstRoute as MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The first route.
Notes: Mainly for debugging, so you can see the routes in debugger.
(Read only property)

126.15.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.15.10 routeCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Number of routes.
Notes: (Read only property)

126.15.11 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes: The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

126.15.12 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

126.16 class MKDistanceFormatterMBS

126.16.1 class MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that converts between a geographic distance and a string-based expression of that distance.
Example:

```
Var f as new MKDistanceFormatterMBS

f.Units = f.UnitsMetric
f.UnitStyle = f.UnitStyleFull

MsgBox f.stringFromDistance(1234.56)
```

Notes: You use a distance formatter when you need to display distances to the user or when you want to parse user-specified text to obtain a numerical value for a distance. When formatting strings containing distances, a distance formatter object takes into account the user,Äôs locale and language settings. You can also specify a custom locale or custom units for any distances that you format.

126.16.2 Methods

126.16.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.16.4 Constructor(Handle as Integer) 17401

126.16.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKDistanceFormatter reference from a declare.
The object is retained.
See also:

- 126.16.3 Constructor 17401

126.16.5 distanceFromString(distance as String) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance value parsed from the specified string.
Notes: distance: A formatted string that specifies a distance.

Returns the distance value represented by the string or -1.0 if the string does not contain a recognized distance value.

This method searches the provided string for a number that could represent a distance. Distances must be specified as purely numerical values. Do not specify distances as fractions such as "1/4 mile".

126.16.6 formatter as MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The singelton instance for easy use.
Example:

```
// shows e.g. 1,2km
// depending on the locale
MsgBox MKDistanceFormatterMBS.formatter.stringFromDistance(1234)
```

Notes: The plugin keeps an object, so you get the same one everytime and you can reuse it often.

126.16.7 stringFromDistance(distance as Double) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a string representation of the specified distance.
Notes: distance: The distance value that you want to convert to a string.

Returns a user-readable string that describes the distance based on the formatter settings.

126.16.8 Properties

126.16.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.16.10 Locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The locale to use when formatting strings.
Notes: If you do not specify an explicit locale, the formatter uses the user,Äôs current locale information.
(Read and Write property)

126.16.11 Units as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The measuring system (imperial or metric) to use for units.
Notes: You can use this property to explicitly set the measuring system for units. The default value of this property is UnitsDefault, which bases the measuring system on the user,Äôs locale.
(Read and Write property)

126.16.12 UnitStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The preferred style for units.
Notes: Units can be abbreviated or fully spelled out. The default value of this property is UnitStyleDefault, which bases the style on the user,Äôs locale and language settings.
(Read and Write property)

126.16.13 Constants

Units

Constant	Value	Description
UnitsDefault	0	The format uses the locale information to determine which units to use. Some locales mix metric and imperial units so do not assume this means one or the other.
UnitsImperial	2	The format uses imperial units.
UnitsImperialWithYards	3	The format uses imperial units that include measurements in yards.
UnitsMetric	1	The format uses metric units.

Util Styles

Constant	Value	Description
UnitStyleAbbreviated	1	Use abbreviated units. For example, use the abbreviation km instead of kilometer.
UnitStyleDefault	0	The decision to abbreviate is based on the current locale and user language settings.
UnitStyleFull	2	Spell out units in full. For example, use kilometer instead of the abbreviation km.

126.17 class MKETAResponseMBS

126.17.1 class MKETAResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The travel-time information returned by Apple servers.
Notes: You do not create instances of this class directly. Instead, you initiate a request for the travel time by calling the calculateETA method of an MKDirectionsMBS object. The completion event handler receives an MKETAResponseMBS object with the results.
Blog Entries

- MapKit Framework for Xojo

126.17.2 Methods

126.17.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.17.4 Constructor(Handle as Integer) 17405

126.17.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKETAResponse reference from a declare.
The object is retained.
See also:

- 126.17.3 Constructor 17405

126.17.5 Properties

126.17.6 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes: The item in this property may contain additional details that were not included in the original item

used to create the MKDirectionsRequestMBS object.
(Read only property)

126.17.7 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel distance, in meters.
Notes: This property contains the overall distance traversed by the route.
(Read only property)

126.17.8 expectedArrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected arrival time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

126.17.9 expectedArrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected arrival time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

126.17.10 expectedDepartureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected departure time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in

your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this property is set to the current time.
(Read only property)

126.17.11 expectedDepartureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected departure time.
Notes: The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this property is set to the current time.
(Read only property)

126.17.12 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes: The expected travel time reflects the time it takes to traverse the route, taking expected traffic into account. The actual amount of time may vary based on changes in traffic and other travel conditions.
(Read only property)

126.17.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.17.14 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes: This item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.

(Read only property)

126.17.15 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance used to determine the travel time.
Notes: You specify the desired transportation type in your MKDirectionsRequestMBS object. If you specified TransportTypeAny, this property contains the transportation type used to generate the estimated information.
(Read only property)

126.17.16 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

126.18 class MKGeodesicPolylineMBS

126.18.1 class MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A line-based shape that follows the contours of the Earth to create the shortest path between the specified points.
Notes: A geodesic polyline contains a set of points that are connected end-to-end in the order that you provide them. The first and last points are not automatically connected to each other. When displayed on a two-dimensional map view, the line segment between any two points may appear curved.
Subclass of the MKPolylineMBS class.

126.18.2 Methods

126.18.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17409
- 126.18.5 Constructor(Handle as Integer) 17410
- 126.18.6 Constructor(points() as MKMapPointMBS) 17410

126.18.4 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes: coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.
See also:

- 126.18.3 Constructor 17409
- 126.18.5 Constructor(Handle as Integer) 17410
- 126.18.6 Constructor(points() as MKMapPointMBS) 17410

126.18.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKGeodesicPolyline reference from a declare.
The object is retained.
See also:

- 126.18.3 Constructor 17409
- 126.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17409
- 126.18.6 Constructor(points() as MKMapPointMBS) 17410

126.18.6 Constructor(points() as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes: points: The array of map points that define the path.

Returns a new geodesic polyline object.
See also:

- 126.18.3 Constructor 17409
- 126.18.4 Constructor(coords() as CLLocationCoordinate2DMBS) 17409
- 126.18.5 Constructor(Handle as Integer) 17410

126.18.7 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes: coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.

126.18.8 polylineWithPoints(points() as MKMapPointMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes: points: The array of map points that define the path.

Returns a new geodesic polyline object.

126.19 class MKLocalSearchCompleterMBS

126.19.1 class MKLocalSearchCompleterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for generating a list of completion strings based on a partial search string that you provide.
Notes: You use an MKLocalSearchCompleter object to retrieve auto-complete suggestions for your own map-based search controls. As the user types text, you feed the current text string into the search completer object, which delivers possible string completions that match locations or points of interest.

You create and configure MKLocalSearchCompleterMBS objects yourself. You should subclass this class to fill the event handler. You should also specify a search region to restrict results to a designated area.

Update the value of the completer,Äôs queryFragment property to begin a search query. You can update this property in real time as the user types new characters into a text field because the completer object waits a short amount of time for the query string to stabilize. When modifications to the query strong stop, the completer initiates a new search and returns the results to your delegate as an array of MKLocalSearch-CompletionMBS objects.

Xojo Developer Magazine

- 17.6, page 36: Maps Part 2, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

126.19.2 Methods

126.19.3 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If a search operation is currently in progress, this method attempts to cancels it. If cancellation is successful, the search completer does not notify its delegate. If no search operation is in progress, this method does nothing.

126.19.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

126.19.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.19.6 results as MKLocalSearchCompletionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The most recently received search completions.
Notes: This property is nil initially. After a successful query, the property is set to the array of MKLocalSearchCompletionMBS objects returned by that query. Each new successful query replaces the previous value of this property.

126.19.7 Properties

126.19.8 filterType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The filter options for the search results.
Notes: Use this property to determine whether you want completions that represent points-of-interest or whether completions might yield additional relevant query strings.
(Read and Write property)

126.19.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.19.10 QueryFragment as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The search string for which you want completions.
Notes: Assigning a string to this property initiates a search based on that string. The completer object waits a short amount of time before initiating new searches. This delay gives you enough time to update the search string based on typed input from the user. For example, if you are using a text field to manage the input from the user, you could use the TextChange event to update the value of this property.
(Read and Write property)

126.19.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region that defines the geographic scope of the search.
Notes: Use this property to limit search results to the specified geographic area. The default value of this property is a region that spans the entire world.
(Read and Write property)

126.19.12 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a search operation is in progress.
Notes: (Read only property)

126.19.13 Events

126.19.14 DidFailWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the specified search completer is unable to generate a list of search results.
Notes: completer: The search completer object reporting the error.
error: The error object containing the reason for the failure.

Use this object to process any errors that occurred while generating search results. Even when an error occurs, the search completer starts a new search if it already has a new search string. Depending on the error, you might do nothing or let the user know that you were unable to obtain a list of search completions.

126.19.15 DidUpdateResults

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called when the specified search completer updates its array of search completions.
Notes: After receiving results from a query, the search completer updates its results property with the new MKLocalSearchCompletionMBS objects and calls this method. Use this method to update your app,Äôs interface based on the new search results. For example, you might update a table that you use to display search results to the user.

126.19.16 Constants

Filter Types

Constant	Value	Description
FilterTypeLocationsAndQueries	0	Points of interest and query suggestions. Specify this value when you want both map-based points of interest and common query terms used to find locations. For example, the search string ,Äúcof,Äù yields a completion for ,Äúcoffee,Äù.
FilterTypeLocationsOnly	1	Points of interest only. Specify this value when you want the search string to yield completions that correspond to a specific point-of-interest on the map.

126.20 class MKLocalSearchCompletionMBS

126.20.1 class MKLocalSearchCompletionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A fully formed string that completes a partial string.
Notes: You do not create instances of this class directly. Instead, you use an MKLocalSearchCompleterMBS to initiate a search based on a set of partial search strings. That object stores any matches in its results property. Retrieve any MKLocalSearchCompletionMBS objects from that property and display the search terms in your interface or use one to initiate a search for content based on that search term.

When displaying text completions for a partial search term in your user interface, you might want to use a bold version of a font or add some other highlighting to the portion of the completion string that caused it to match the partial search term. To help you add this styling, the completion object includes highlight ranges for the title and subtitle strings.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.20.2 Methods

126.20.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructors.

126.20.4 subtitleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the subtitle string.
Notes: This property contains an array of NSRangeMBS objects, each defining a range of characters in the subtitle string. Use this property to identify the ranges of characters in the subtitle string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Zerobased ranges.

126.20.5 titleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the title string.
Notes: This property contains an array of NSRangeNBS objects, each defining a range of characters in the title string. Use this property to identify the ranges of characters in the title string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Range is zero based.

126.20.6 Properties

126.20.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.20.8 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle (if any) associated with the point-of-interest.
Notes: The string in this property may be empty.
(Read only property)

126.20.9 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title string associated with the point-of-interest.
Notes: This string is guaranteed not to be empty.
(Read only property)

126.21 class MKLocalSearchMBS

126.21.1 class MKLocalSearchMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for initiating map-based searches and processing the results.
Notes: Use an MKLocalSearchMBS object to execute a single search request. You might use this class to search for addresses or points of interest on the map. Upon completion of the request, the object delivers the results to the SearchFinished event handler that you provide.

126.21.2 Methods

126.21.3 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If no search operation is in progress, this method does nothing.

126.21.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearch reference from a declare.
The object is retained.
See also:

- 126.21.5 Constructor(request as MKLocalSearchRequestMBS) 17419

126.21.5 Constructor(request as MKLocalSearchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search object configured with the specified parameters.
Notes: request: The search request information. This parameter must not be nil.

This method stores a copy of the object in the request parameter. So any changes you make to your request object after calling this method are ignored.
See also:

- 126.21.4 Constructor(Handle as Integer) 17419

126.21.6 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the search and delivers the results to the specified completion handler.
Notes: Triggers SearchFinished event later.

You use this method to initiate a map-based search operation. The search runs until the results are delivered, at which point the specified completion handler is called.
You should call this method only once to start the search operation. Calling this method while the search is running does not stop the original search operation from finishing. However, for each subsequent call, the search object executes your completion handler and passes an error object to it.
The provided completion handler is always executed on your app,Äôs main thread. The local search object keeps a reference to the completion handler block until the results (or an error) are delivered, at which point it relinquishes that reference.

126.21.7 Properties

126.21.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.21.9 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the search is currently in progress.
Notes: The value of this property is set to true when a search is initiated and remains in that state until the search results (or an appropriate error) are delivered, at which time the property is set to false.
(Read only property)

126.21.10 Events

126.21.11 SearchFinished(response as MKLocalSearchResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event handler that processes the results. This parameter must not be nil.
Notes: Called by Start asynchronously.

126.22 class MKLocalSearchRequestMBS

126.22.1 class MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The parameters to use when searching for points of interest on the map.
Notes: You create an MKLocalSearchRequest object when you want to search for map locations based on a natural language string. For example, if your interface allows the user to type in addresses, you would place the typed text in this object and pass it to an MKLocalSearch object to begin the search process. When specifying your search strings, include a map region to narrow the search results to the specified geographical area.

126.22.2 Methods

126.22.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.22.4 Constructor(completion as MKLocalSearchCompletionMBS) 17422
- 126.22.5 Constructor(Handle as Integer) 17423

126.22.4 Constructor(completion as MKLocalSearchCompletionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search request based on the specified search completion data.
Notes: completion: A search completion object obtained from an MKLocalSearchCompleterMBS object. The search request uses the provided object to set the value of the naturalLanguageQuery property.

Use this method when initializing your object from MKLocalSearchCompleterMBS objects. You do not need to use this method if you intend to provide the search string and region information yourself.
See also:

- 126.22.3 Constructor 17422
- 126.22.5 Constructor(Handle as Integer) 17423

126.22.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearchRequest reference from a declare.
The object is retained.
See also:

- 126.22.3 Constructor 17422
- 126.22.4 Constructor(completion as MKLocalSearchCompletionMBS) 17422

126.22.6 Copy as MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

126.22.7 Properties

126.22.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.22.9 naturalLanguageQuery as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing the desired search item.
Notes: You specify this parameter as a string describing the map-based item you want to look for. The text is equivalent to what the user would type in a search field in the Maps app. For example, the text might contain all or part of an address or it might contain the name of a point of interest.
(Read and Write property)

126.22.10 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A map region that provides a hint as to where to search.
Notes: You can use this parameter to narrow the list of search results to those inside or close to the specified region. Specifying a region does not guarantee that the results will all be inside the region. It is merely a hint to the search engine.
(Read and Write property)

126.23 class MKLocalSearchResponseMBS

126.23.1 class MKLocalSearchResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The results from a map-based search.
Notes: You do not create instances of this class directly. After initiating a map search using an MKLocalSearchMBS object, MapKit passes an instance of this class to your event handler.

126.23.2 Methods

126.23.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.23.4 Constructor(Handle as Integer) 17425

126.23.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKLocalSearchResponse reference from a declare.
The object is retained.
See also:

- 126.23.3 Constructor 17425

126.23.5 mapItems as MKMapItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of map items representing the search results.
Notes: This property contains an array of MKMapItemMBS objects, each of which represents a returned search result. You can use these objects to retrieve information about the search result, such as the name of the point of interest, the address, the geographic location, and so on.

126.23.6 Properties

126.23.7 boundingRegion as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map region that encloses the returned search results.
Notes: The returned region is the smallest bounding box that encloses all of the map items. If there is only one search result, the size of the region may be (0, 0).
(Read only property)

126.23.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.24 class MKMapCameraMBS

126.24.1 class MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A virtual camera for defining the appearance of the map.
Notes: A camera object defines a virtual viewpoint above the map surface and affects how the map is presented to the user. You use a camera object to specify the location of the camera on the map, the compass heading indicating the camera,Äôs viewing direction, the pitch of the camera relative to the map perpendicular, and the camera,Äôs altitude above the map. These factors create a map view with a three dimensional perspective.
After creating an instance of this class, configure it with the desired attributes and assign it to your map view. When you assign a camera to your map view, the map centers the map using the value in your camera object,Äôs centerCoordinate property, updating the map,Äôs own region information in the process. The map also takes the camera,Äôs the pitch and altitude into account when calculating the visible region, ensuring that the region always encompasses the visible content on the map.

126.24.2 Methods

126.24.3 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.

126.24.4 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing

due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 126.24.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS 17428

126.24.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.
See also:

- 126.24.4 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS 17427

126.24.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.
See also:

- 126.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17429
- 126.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17429

- 126.24.9 Constructor(Handle as Integer) 17430

126.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 126.24.6 Constructor 17428
- 126.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17429
- 126.24.9 Constructor(Handle as Integer) 17430

126.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes: centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.
See also:

- 126.24.6 Constructor 17428
- 126.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17429
- 126.24.9 Constructor(Handle as Integer) 17430

126.24.9 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapCamera reference from a declare.
The object is retained.
See also:

- 126.24.6 Constructor 17428
- 126.24.7 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 17429
- 126.24.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 17429

126.24.10 copy as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the camera object.

126.24.11 Properties

126.24.12 altitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The altitude above the ground, measured in meters.
Notes: The value you specify for this property must not be less than 0.
Changing this property may also change the maximum pitch that is allowed for the map. If the current pitch value exceeds the new maximum, the pitch property is clamped to the new maximum.
(Read and Write property)

126.24.13 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Notes: This point represents the coordinate on which the map should be centered. When the camera pitch is 0, this property also corresponds to the geographic position of the camera. Changing the pitch to a nonzero value moves the camera but does not affect this property.
(Read and Write property)

126.24.14 heading as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The heading of the camera (measured in degrees) relative to true north.
Notes: The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.
(Read and Write property)

126.24.15 pitch as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The viewing angle of the camera, measured in degrees.
Notes: A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees. If the map type is MapTypeSatellite or MapTypeHybrid, the pitch value is clamped to 0.
The value in this property may be clamped to a maximum value to maintain map readability. There is no fixed maximum value, though, because the actual maximum value is dependent on the current altitude of the camera.
(Read and Write property)

126.25 class MKMapItemMBS

126.25.1 class MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A point of interest on the map.
Notes: A map item includes a geographic location and any interesting data that might apply to that location, such as the address at that location and the name of a business at that address. You can also create a special MKMapItem object representing the user's current location.

Use this class to do the following:

- Share map-related data with the Maps app.
- Handle requests for directions that originate from the Maps app.

To display information in Maps, create an MKMapItem object with the information you want to display and call the openMapsWithItems method. Maps displays that location on the map and shows the information you provide.
If you implement a routing app, Maps provides you with two MKMapItem objects representing the start and end points. Use the information in those two objects to plot the route and generate directions.

126.25.2 Methods

126.25.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapItem reference from a declare.
The object is retained.
See also:

- 126.25.4 Constructor(PlaceMark as MKPlacemarkMBS) 17433

126.25.4 Constructor(PlaceMark as MKPlacemarkMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a map item object using the specified placemark object.
Notes: placemark: The placemark object corresponding to the desired map location. This parameter must not be nil.

Use this method to create a map item for an existing placemark. Do not use it to create a map item representing the user,Äôs current location. To do that, use the mapItemForCurrentLocation method instead.
See also:

- 126.25.3 Constructor(Handle as Integer) 17432

126.25.5 mapItemForCurrentLocation as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a singleton map item object representing the device,Äôs current location.
Notes: For privacy reasons, and because the user,Äôs location can change, the map item returned by this method does not contain any coordinate data. When you need the actual location of the user, you must use the Core Location framework to retrieve it.

126.25.6 MKLaunchOptionsCameraKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The virtual camera to use for viewing the map.
Notes: The value of this key is an MKMapCameraMBS object that describes a virtual camera that can specify a 3D perspective for the map. If you do not specify this key, Maps uses its current settings to define the appearance of the map.

126.25.7 MKLaunchOptionsDirectionsModeDefault as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Directions that match the user,Äôs preferred transportation type.

126.25.8 MKLaunchOptionsDirectionsModeDriving as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Driving directions between the specified start and end points.

126.25.9 MKLaunchOptionsDirectionsModeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The mode of transportation.
Notes: The value of this key is an NSString corresponding to one of the values described in Directions Mode Values. You specify this key to tell the Maps app which mode of transport to use when generating directions.

126.25.10 MKLaunchOptionsDirectionsModeTransit as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Public transit directions between the specified start and end points.

126.25.11 MKLaunchOptionsDirectionsModeWalking as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Walking directions between the specified start and end points.

126.25.12 MKLaunchOptionsMapCenterKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate value on which to center the map.
Notes: The value of this key is an NSValue object that contains an encoded CLLocationCoordinate2D structure.

126.25.13 MKLaunchOptionsMapSpanKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of the map to display.
Notes: The value of this key is an NSValue object that contains an encoded MKCoordinateSpan structure.

126.25.14 MKLaunchOptionsMapTypeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of map (standard, satellite, or hybrid) to display.
Notes: The value of this key is an NSNumber object whose value is an integer corresponding to an MKMapType value.

126.25.15 MKLaunchOptionsShowsTrafficKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether to display traffic information.
Notes: The value of this key is a Boolean value. If you do not specify this key, Maps uses its current settings to determine whether or not to display traffic.

126.25.16 openInMaps(LaunchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display this map item.
Notes: launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

This parameter may be nil.

Returns true if this map item was successfully opened by the Maps app, or false if there was an error.

You use this method to pass the current map item to the Maps app. If your map item contains descriptive information about the location (such as a name or URL), the Maps app displays that information at the specified coordinate.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the Maps app interprets that as an attempt to map from the user,Äôs current location to the location specified by this

map item.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region around the current item. It uses that region to set the visible portion of the map.

126.25.17 openMapsWithItems(items() as MKMapItemMBS, launchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display the specified map items.
Notes: mapItems: An array containing one or more MKMapItemMBS objects representing the items you want to display on the map.
launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region, a 3D perspective, and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

You may specify nil for this parameter.

Returns true if the map items were successfully opened by the Maps app, or false if there was an error.

You use this method to pass one or more map items to the Maps app. For example, you might use this method to ask the Maps app to display location-based search results generated by your app. Maps displays pins at each location you specify and uses the contents of each map item object to display additional information.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the mapItems array must have no more than two items in it. If the array contains one item, the Maps app generates directions from the user,Äôs current location to the location specified by the map item. If the array contains two items, the Maps app generates directions from the location of the first item to the location of the second item in the array.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region that encompasses the provided items. It uses this region to set the visible portion of the map.

126.25.18 Properties

126.25.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.25.20 isCurrentLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map item represents the user,Äôs current location.
Notes: If the value of this property is true, the map item represents the user,Äôs current location. If true, the value in the placemark property is set to nil.
(Read only property)

126.25.21 Name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The descriptive name associated with the map item.
Notes: Use this property to specify the name associated with the location. For example, if there is a business at the specified location, you would use this property to specify the name of the business.
If this map item represents the user,Äôs current location, the value in property is set to a localized version of ,ÄúCurrent Location,Äù.
(Read and Write property)

126.25.22 phoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The phone number associated with a business at the specified location.
Notes: If there is a relevant phone number associated with the location, such as a phone number for a business at the location, use this property to specify that value.
(Read and Write property)

126.25.23 placemark as MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The placemark object containing the location information.
Notes: If you created the map item using the mapItemForCurrentLocation method, the value of this property is nil and the isCurrentLocation property is set to true.
(Read only property)

126.25.24 timeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The time zone of the specified location.
Notes: When you search for map items, MapKit populates this field with the time zone information as a convenience. You may also set the time zone for any map items you create.
(Read and Write property)

126.25.25 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL associated with the specified location.
Notes: If there is a relevant URL associated with the location, such as a URL for a business at the location, use this property to specify that value.
(Read and Write property)

126.26 class MKMapPointMBS

126.26.1 class MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a point on the map.
Example:

```
// take some coordinates
Var c1 as new CLLocationCoordinate2DMBS(52.518611, 13.408333) // Berlin
Var c2 as new CLLocationCoordinate2DMBS(48.137222, 11.575556) // Munich

// convert to points on map
Var p1 as MKMapPointMBS = MKMapPointMBS.Point(c1)
Var p2 as MKMapPointMBS = MKMapPointMBS.Point(c2)

// show
MsgBox p1.StringValue+EndOfLine+p2.StringValue

// create locations
Var l1 as new CLLocationMBS(c1.latitude, c1.longitude)
Var l2 as new CLLocationMBS(c2.latitude, c2.longitude)

// show
MsgBox l1.Description+EndOfLine+l2.Description

// now get distance on two ways
Var d1 as Double = MKMapPointMBS.MetersBetweenMapPoints(p1,p2)
Var d2 as Double = l1.distanceFromLocation(l2)

// and format to show
Var s1 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d1)
Var s2 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d2)

MsgBox "Distance: "+s1+" vs. "+s2
// not the same due to rounding!
```

Function: The map constructor.
See also:

- 126.26.3 Constructor(other as MKMapPointMBS) 17440

126.26.5 Coordinate(point as MKMapPointMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts point in map to coordinate.

126.26.6 Equal(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two point objects.
Notes: Returns true if both are equal.

126.26.7 MapPointsPerMeterAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of map points that represent one meter at the given latitude.
Notes: The number of map points per meter increases as the latitude approaches the poles.

126.26.8 MetersBetweenMapPoints(point1 as MKMapPointMBS, point2 as MKMapPointMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of meters between two map points.
Notes: This distance reflects the actual distance between the two points on the surface of the globe, taking into account the curvature of the Earth.

126.26.9 MetersPerMapPointAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance spanned by one map point at the specified latitude.
Example:

```
MsgBox str(MKMapPointMBS.MetersPerMapPointAtLatitude(50.0))
```

Notes: latitude: The latitude for which to return the value.

Returns the distance (in meters) spanned by a single map point.

The distance between map points decreases as the latitude approaches the poles. This relationship parallels the relationship between longitudinal coordinates at different latitudes.

126.26.10 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts coordinate in point in map.
See also:

- 126.26.11 Point(x as double = 0, y as double = 0) as MKMapPointMBS 17441

126.26.11 Point(x as double = 0, y as double = 0) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new point with given values.
See also:

- 126.26.10 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS 17441

126.26.12 Properties

126.26.13 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats point as text for display in debugger.
Example:

```
Var p as new MKMapPointMBS(12, 34)

MsgBox p.StringValue
```

Notes: (Read only property)

126.26.14 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X coordinate.
Notes: (Read and Write property)

126.26.15 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y coordinate.
Notes: (Read and Write property)

126.27 class MKMapRectMBS

126.27.1 class MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a map rectangle.
Blog Entries

- MapKit Framework for Xojo

126.27.2 Methods

126.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: Copies values from point and size to build new rectangle.
See also:

- 126.27.4 Constructor(other as MKMapRectMBS) 17443
- 126.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 17443

126.27.4 Constructor(other as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 126.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 17443
- 126.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 17443

126.27.5 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.27.3 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 17443
- 126.27.4 Constructor(other as MKMapRectMBS) 17443

126.27.6 Contains(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if point is included in rectangle area.
See also:

- 126.27.7 Contains(other as MKMapRectMBS) as Boolean 17444

126.27.7 Contains(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if given rectangle is included in rectangle area.
See also:

- 126.27.6 Contains(other as MKMapPointMBS) as Boolean 17444

126.27.8 Divide(byref slice as MKMapRectMBS, byref remainder as MKMapRectMBS, amount as double, edge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Divides rectangle in slice and remainder.

126.27.9 Equal(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two rectangle objects.
Notes: Returns true if both are equal.

126.27.10 Inset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Insets rectangle by given delta and returns new rectangle.

126.27.11 Intersection(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns intersection of two map rectangles.

126.27.12 Intersects(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether the given rectangle intersects with the current one.

126.27.13 Null as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries a null rectangle.

126.27.14 Offset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Offsets map rectangle by given offset.

126.27.15 Rect(x as double = 0, y as double = 0, width as double = 0, heigth as double = 0) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new rectangle with given values.

126.27.16 Region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creation region covering the map rectangle.

126.27.17 Remainder as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: For map rects that span the 180th meridian, this returns the portion of the rect that lies outside of the world rect wrapped around to the other side of the world.
Notes: The portion of the rect that lies inside the world rect can be determined with rect.Intersection(MKMapRectMBS.World).

126.27.18 Union(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns union of both rectangles.

126.27.19 World as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The world rectangle.
Notes: The rect that contains every map point in the world.

126.27.20 Properties

126.27.21 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the rectangle.
Notes: (Read and Write property)

126.27.22 isEmpty as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is empty.
Notes: (Read only property)

126.27.23 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is null rectangle.
Notes: (Read only property)

126.27.24 MaxX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Maximum X value of rectangle.
Notes: (Read only property)

126.27.25 MaxY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum X value of the rectangle.
Notes: (Read only property)

126.27.26 MidX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The middle x value of this rectangle.
Notes: (Read only property)

126.27.27 MidY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Middle Y value of rectangle.
Notes: (Read only property)

126.27.28 MinX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum X value of rectangle.
Notes: (Read only property)

126.27.29 MinY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum Y value of rectangle.
Notes: (Read only property)

126.27.30 Origin as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The origin point of the rectangle.
Notes: Returns new point object with given values.
(Read and Write property)

126.27.31 Size as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the rectangle.
Notes: Returns new size object with given values.
(Read and Write property)

126.27.32 Spans180thMeridian as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this map rectangle spans the 180th meridian.
Notes: (Read only property)

126.27.33 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats rect as text for display in debugger.
Example:

```
Var r as new MKMapRectMBS(1,2,3,4)

MsgBox r.StringValue
```

Notes: (Read only property)

126.27.34 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the rectangle.
Notes: (Read and Write property)

126.27.35 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X origin coordinate.
Notes: (Read and Write property)

126.27.36 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y origin coordinate.
Notes: (Read and Write property)

126.28 class MKMapSizeMBS

126.28.1 class MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a size in maps.

- MapKit Framework for Xojo

126.28.2 Methods

126.28.3 Constructor(other as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 126.28.4 Constructor(width as double = 0, height as double = 0) 17450

126.28.4 Constructor(width as double = 0, height as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.28.3 Constructor(other as MKMapSizeMBS) 17450

126.28.5 Equal(other as MKMapSizeMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two size objects.
Notes: Returns true if both are equal.

126.28.6 Size(Width as double = 0, Height as double = 0) as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new size object with given values.

126.28.7 World as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size that contains every map point in the world.

126.28.8 Properties

126.28.9 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the size.
Notes: (Read and Write property)

126.28.10 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats size as text for display in debugger.
Notes: (Read only property)

126.28.11 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the size.
Notes: (Read and Write property)

126.29 class MKMapSnapshotMBS

126.29.1 class MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take map snapshots.
Blog Entries

126.29.2 Methods

126.29.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.29.4 Constructor(Handle as Integer) 17452

126.29.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshot reference from a declare.
The object is retained.
See also:

- 126.29.3 Constructor 17452

126.29.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.29.6 pointForCoordinate(coordinate as CLLocationCoordinate2DMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Translates a point in the coordinate to the point in the image.

126.29.7 Properties

126.29.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.29.9 Image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image created.
Notes: Please use methods in NSImageMBS class to get PNG or JPEG data.
Or use methods to copy a xojo picture.
(Read only property)

126.29.10 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

126.29.11 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The tag passed to creating the snapshot.
Notes: e.g. a ID for a database record.
(Read and Write property)

126.30 class MKMapSnapshotOptionsMBS

126.30.1 class MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for snapshot options.

126.30.2 Methods

126.30.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.30.4 Constructor(Handle as Integer) 17454

126.30.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshotOptions reference from a declare.
The object is retained.
See also:

- 126.30.3 Constructor 17454

126.30.5 Copy as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options.

126.30.6 Properties

126.30.7 appearance as NSAppearanceMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The appearance to use for rendering.
Notes: For MacOS 10.14 or newer.
(Read and Write property)

126.30.8 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera to use.
Notes: (Read and Write property)

126.30.9 mapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The rectangle in the map to query.
Notes: (Read and Write property)

126.30.10 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map type to use.
Notes: (Read and Write property)

126.30.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region to use.
Notes: (Read and Write property)

126.30.12 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show buildings.
Notes: Affects MKMapTypeStandard.
(Read and Write property)

126.30.13 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show points of interest.
Notes: Affects MKMapTypeStandard and MKMapTypeHybrid.
(Read and Write property)

126.30.14 size as NSSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the image to create.
Notes: Defaults to 256x256 if nil.
(Read and Write property)

126.31 class MKMapSnapshotterMBS

126.31.1 class MKMapSnapshotterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take snapshots for maps.
Blog Entries

- MBS Xojo Plugins, version 19.1pr6

Videos

- Apple MapView In Xojo

126.31.2 Methods

126.31.3 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels the snapshot.

126.31.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMapSnapshotter reference from a declare.
The object is retained.
See also:

- 126.31.5 Constructor(options as MKMapSnapshotOptionsMBS) 17457

126.31.5 Constructor(options as MKMapSnapshotOptionsMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: We keep reference to options in options property.
See also:

- 126.31.4 Constructor(Handle as Integer) 17457

126.31.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.31.7 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the asynchronous snapshot process.
Notes: The tag value is passed to the snapshot for later reference.
Triggers SnapshotCompleted event later.
Sets Error and Snapshot properties on this object.

126.31.8 Properties

126.31.9 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last error.
Notes: (Read and Write property)

126.31.10 Loading as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this is still loading.
Notes: (Read only property)

126.31.11 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

126.31.12 Snapshot as MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last snapshot.
Notes: (Read and Write property)

126.31.13 Events

126.31.14 SnapshotCompleted(snapshot as MKMapSnapshotMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The event to be called when snapshot is done.

126.32 class MKMapViewMBS

126.32.1 class MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: An MKMapView object provides an embeddable map interface, similar to the one provided by the Maps application.
Notes: You use this class as-is to display map information and to manipulate the map contents from your application. You can center the map on a given coordinate, specify the size of the area you want to display, and annotate the map with custom information.

In the IDE we show a generic map image as preview as the control itself doesn't perform well inside the Xojo IDE.
Subclass of the NSViewMBS class.

126.32.2 Methods

126.32.3 addAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the specified annotation to the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

126.32.4 addAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of annotation objects to the map view.

126.32.5 addOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a single overlay object to the map.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
Var radius as Integer = 300 // 300 meter

Var circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes: overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.

The specified object is added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay event.

To remove an overlay from a map, use the removeOverlay method.
See also:

- 126.32.6 addOverlay(overlay as MKOverlayMBS, level as integer) 17462

126.32.6 addOverlay(overlay as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the overlay object to the map at the specified level.
Notes: overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level constants.

Positioning an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.
This method adds the specified overlay to the end of the list of overlay objects at the given level. Adding an overlay also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing the overlay.
To remove an overlay from a map, use the removeOverlay: method.
See also:

- 126.32.5 addOverlay(overlay as MKOverlayMBS) 17462

126.32.7 addOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map.
Notes: overlays: An array of objects, each of which must conform to the MKOverlayMBS interface.

The specified objects are added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view tries to draw the overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay method of the map view's delegate object.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 126.32.8 addOverlays(overlays() as MKOverlayMBS, level as integer) 17463

126.32.8 addOverlays(overlays() as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map at the specified level.
Notes: overlays: The array of overlay objects to add. Each object in the array must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlays. For a list of possible values for this parameter, see MKOverlayLevel.

Positioning an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.

This method adds the specified overlays to the end of the list of overlay objects at the given level. Adding the overlays also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing that overlay.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 126.32.7 addOverlays(overlays() as MKOverlayMBS) 17463

126.32.9 annotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The complete list of annotations associated with the receiver.
Notes: If no annotations are associated with the map view, the value of this property is empty.

126.32.10 annotationsInMapRect(mapRect as MKMapRectMBS) as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation objects located in the specified map rectangle.
Notes: mapRect: The portion of the map that you want to search for annotations.

Returns the array of annotation objects located in mapRect.

This method offers a fast way to retrieve the annotation objects in a particular portion of the map. This method is much faster than doing a linear search of the objects in the annotations property yourself.

126.32.11 annotationViews as MKAnnotationViewMBS()

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Queries internal list of MapView to get list of all annotation views.

126.32.12 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true for Mac 64-bit targets.

126.32.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new MKMapViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 126.32.14 Constructor(Handle as Integer) 17465
- 126.32.15 Constructor(left as Double, top as Double, width as Double, height as Double) 17465

126.32.14 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new MKMapViewMBS(0, 0, 100, 100)
Var v as new MKMapViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a MKMapView and the plugin retains this handle.
See also:

- 126.32.13 Constructor 17464
- 126.32.15 Constructor(left as Double, top as Double, width as Double, height as Double) 17465

126.32.15 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new MKMapViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 126.32.13 Constructor 17464
- 126.32.14 Constructor(Handle as Integer) 17465

126.32.16 convertCoordinateToPointToView(coordinate as CLLocationCoordinate2DMBS, view as NSViewMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map coordinate to a point in the specified view.
Notes: coordinate: The map coordinate for which you want to find the corresponding point.
view: The view in whose coordinate system you want to locate the specified map coordinate. If this parameter is nil, the returned point is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the point (in the appropriate view or window coordinate system) corresponding to the specified latitude and longitude value.

126.32.17 convertPointToCoordinateFromView(point as NSPointMBS, view as NSViewMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a point in the specified view's coordinate system to a map coordinate.
Notes: point: The point you want to convert.
view: The view that serves as the reference coordinate system for the point parameter.

Returns the map coordinate at the specified point.

126.32.18 convertRectToRegionFromView(rect as NSRectMBS, view as NSViewMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a rectangle in the specified view's coordinate system to a map region.
Example:

```
// convert mouse position in x/y to select annotation on the given mouse point
Var xView As MKMapViewMBS = MapViewControl.View
Var rect As New NSRectMBS(x,y,1,1)
Var region As MKCoordinateRegionMBS = xView.convertRectToRegionFromView(rect,xView)
Var center As CLLocationCoordinate2DMBS = region.center
Var circle As New MKCircleMBS(center,32)
Var mapRect As MKMapRectMBS = circle.boundingMapRect()
Var xAnnos() As MKAnnotationMBS = xView.annotationsInMapRect(mapRect)

If xAnnos.LastRowIndex <>-1 Then
Var xThisAnno As MKAnnotationMBS = xAnnos(0)
```

```
If xThisAnno IsA MKPointAnnotationMBS Then
me.View.selectAnnotation(xThisAnno,False)
Return True
End If
End If
```

Notes: rect: The rectangle you want to convert.
view: The view that serves as the reference coordinate system for the rect parameter.

Returns the map region corresponding to the specified view rectangle.

126.32.19 convertRegionToRectToView(region as MKCoordinateRegionMBS, view as NSViewMBS) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map region to a rectangle in the specified view.
Notes: region: The map region for which you want to find the corresponding view rectangle.
view: The view in whose coordinate system you want to locate the specified map region. If this parameter is nil, the returned rectangle is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the rectangle corresponding to the specified map region.

126.32.20 dequeueReusableAnnotationViewWithIdentifier(identifier as string) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a reusable annotation view located by its identifier.
Notes: identifier: A string identifying the annotation view to be reused. This string is the same one you specify when initializing the annotation view using the Constructor method.

Returns an annotation view with the specified identifier, or nil if no such object exists in the reuse queue.

For performance reasons, you should generally reuse MKAnnotationView objects in your map views. As annotation views move offscreen, the map view moves them to an internally managed reuse queue. As new annotations move onscreen, and your code is prompted to provide a corresponding annotation view, you should always attempt to dequeue an existing view before creating a new one. Dequeueing saves time and memory during performance-critical operations such as scrolling.

126.32.21 deselectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Deselects the specified annotation and hides its callout view.
Notes: annotation: The annotation object to deselect.
animated: If true, the callout view is animated offscreen.

126.32.22 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

126.32.23 exchangeOverlay(index1 as Integer, index2 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes: index1: The index of an overlay in the MKOverlayLevelAboveLabels map level.
index2: The index of another overlay in the MKOverlayLevelAboveLabels map level.

If you need to exchange overlays in other map levels, use the exchangeOverlay method.
See also:

- 126.32.24 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS) 17468

126.32.24 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes: If the overlays are in the same map level, they exchange positions within that level,Äôs array of overlay objects. If they are in different map levels, the two objects also swap levels. Swapping the position of the overlays affects their visibility in the map view.
See also:

- 126.32.23 exchangeOverlay(index1 as Integer, index2 as Integer) 17468

126.32.25 insertOverlayAboveOverlay(overlay as MKOverlayMBS, aboveOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object on top of another.
Notes: overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed above that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

126.32.26 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the list associated with the map.
Notes: overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.

This method inserts the overlay into the MKOverlayLevelAboveLabels level.
See also:

- 126.32.27 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer) 17469

126.32.27 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the level at the specified index.
Notes: overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level constants.

Inserting an overlay at a specific level places that overlay,Äôs visual representation in front of or behind other map content such as map labels and point-of-interest icons.
See also:

- 126.32.26 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer) 17469

126.32.28 insertOverlayBelowOverlay(overlay as MKOverlayMBS, belowOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object below another.
Notes: overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed beneath that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

126.32.29 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle to ensure that it fits in the map view,Äôs frame.
Notes: mapRect: The initial map rectangle whose width and height you want to adjust.

Returns a map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view,Äôs frame.

You can use this method to normalize map rectangle values before displaying the corresponding area. This method returns a new map rectangle that both contains the specified rectangle and fits neatly inside the map view,Äôs frame.
See also:

- 126.32.30 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS 17470

126.32.30 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle, incorporating the specified inset values.
Notes: A map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view,Äôs frame minus the inset values.
See also:

- 126.32.29 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS 17470

126.32.31 MKErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Map Kit.

126.32.32 MKMapViewDefaultAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for your map's annotation views.
Notes: Use this constant to register a default annotation view. This default annotation view is used when your map view's delegate does not implement the viewForAnnotation event or when that method returns nil.

126.32.33 MKMapViewDefaultClusterAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for the annotation view representing a cluster of annotations.
Notes: Use this constant to register a default annotation view to use for clusters of annotations. This cluster annotation view is used when your map view's delegate does not implement the viewForAnnotation event or when that method returns nil.

126.32.34 overlays as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects currently associated with the map view.
Notes: This property contains the union of all overlays at the different levels of the map. The objects in this array must adopt the MKOverlayMBS interface. If no overlays are associated with the map view, the value of this property is an empty array.

The order of the objects in this array does not necessary reflect their visual order on the map.

126.32.35 overlaysInLevel(level as Integer) as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects in the specified level of the map.
Notes: level: The map level whose overlays you want. For a list of possible values for this parameter.

Returns an array of objects conforming to the MKOverlayMBS interfaces that display in the specified map level. If there are no overlays at the specified level, this method returns an empty array.

You can use this method to get all of the overlays assigned to a specific map level, which might be a subset of the complete set of overlay objects. For overlapping overlay objects, the order of objects in the array represents their visual order when displayed on the map, with objects in the beginning of the array located behind those at later indexes.

126.32.36 regionThatFits(region as MKCoordinateRegionMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified region to ensure that it fits in the map view,Äôs frame.
Notes: region: The initial region whose span you want to adjust.

Returns a region that is still centered on the same point of the map but whose span values are adjusted to fit in the map view,Äôs frame.

You can use this method to normalize the region values before displaying them in the map. This method returns a new region that both contains the specified region and fits neatly inside the map view,Äôs frame.

126.32.37 removeAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified annotation object from the map view.
Notes: annotation: The annotation object to remove. This object must conform to the MKAnnotationMBS interface.

If the annotation is currently associated with an annotation view, and that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing an annotation object disassociates it from the map view entirely, preventing it from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete a given annotation.

126.32.38 removeAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes an array of annotation objects from the map view.
Notes: annotations: The array of annotations to remove. Objects in the array must conform to the MKAnnotationMBS interface.

If any annotation object in the array has an associated annotation view, and if that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing annotation objects disassociates them from the map view entirely, preventing them from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete the specified annotations.

126.32.39 removeOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a single overlay object from the map.
Notes: overlay: The overlay object to remove.

This method removes the overlay regardless of the level that it is in. Removing an overlay also removes its corresponding renderer, if one is in use. If the specified overlay is not currently associated with the map view, this method does nothing.

126.32.40 removeOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes one or more overlay objects from the map.
Notes: overlays: An array of objects, each of which conforms to the MKOverlayMBS interface.

This method removes the specified overlays regardless of which level each one is in. Removing an overlay also removes its corresponding renderer, if one is in use. If a given overlay object is not associated with the

map view, it is ignored.

126.32.41 rendererForOverlay(overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the renderer object used to draw the contents of the specified overlay object.
Notes: overlay: The overlay object whose renderer you want.

Returns the renderer object in use for the specified overlay or nil if the overlay is not onscreen.

This method returns the renderer object that your control provided in its xrendererForOverlay event.

126.32.42 selectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Selects the specified annotation and displays a callout view for it.
Notes: annotation: The annotation object to select.
animated: If true, the callout view is animated into position.

If the specified annotation is not onscreen, and therefore does not have an associated annotation view, this method has no effect.

126.32.43 selectedAnnotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotations that are currently selected.
Notes: Assigning a new array to this property selects only the first annotation in the array.

126.32.44 setCamera(camera as MKMapCameraMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the camera used for determining the map,Äôs viewing parameters and optionally animates the change.

Notes: camera: The camera object containing the viewing angle information. This parameter must not be nil.
animated: Specify true if you want the change in viewing angle to be animated or false if you want the map to reflect the changes without animations.

126.32.45 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: hanges the center coordinate of the map with zoom and optionally animates the change.
Notes: Zoomlevel is in range 1 to 20.

Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 126.32.46 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true) 17475

126.32.46 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the center coordinate of the map and optionally animates the change.
Notes: Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 126.32.45 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean) 17475

126.32.47 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Notes: Same as SetRegion with MKCoordinateRegionMBS but reuses current coordinate span.
See also:

- 126.32.48 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false) 17476

126.32.48 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Example:

```
Var mapview as MKMapViewMBS // your mapview

// get current region
Var r as MKCoordinateRegionMBS = mapview.region

// make new span with double deltas
Var s as new MKCoordinateSpanMBS(r.span.latitudeDelta*2, r.span.longitudeDelta*2)

// make new region
Var n as new MKCoordinateRegionMBS(r.center, s)

// and zoom there
mapview.setRegion n, true
```

Notes: region: The new region to display in the map view.
animated: Specify true if you want the map view to animate the transition to the new region or false if you want the map to center on the specified region immediately.

Changing just the center coordinate of the region can still cause the span values to change implicitly. The span values might change because that the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the setCenterCoordinate instead.

When setting a new region, the map may adjust the value in the region parameter so that it fits the visible area of the map precisely. This adjustment is normal and is done to ensure that the value in the region property always reflects the visible portion of the map. However, it does mean that if you get the value of that property right after calling this method, the returned value may not match the value you set. (You can

use the regionThatFits method to determine the region that will actually be set by the map.)
See also:

- 126.32.47 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false) 17476

126.32.49 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map and optionally animates the change.
Notes: mapRect: The map rectangle to make visible in the map view.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 126.32.50 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean) 17477

126.32.50 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map, allowing you to specify additional space around the edges.
Notes: MapRect: The map rectangle to make visible in the map view.
edgePaddingLeft, edgePaddingTop, edgePaddingRight and edgePaddingBottom: The amount of additional space (measured in screen points) to make visible around the specified rectangle.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 126.32.49 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true) 17477

126.32.51 setZoomLevel(zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sets zoom level.
Notes: Zoomlevel is in range 1 to 20.

126.32.52 showAddress(address as string)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience method to run an address geocoding and shows position on map.
Example:

```
Var mapview as MKMapViewMBS // your map view
mapView.showAddress "Markt 15, Andernach, Deutschland"
```

Notes: Uses CLGeocoderMBS geocodeAddressString method to asynchronously find the place and show it on the map.

126.32.53 ShowAllAnnotations(withOverlays as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop & iOS.

Function: Zooms map to show all annotations.
Notes: The plugin loops over the annotations to calculate a bounding rectangle for all annotations and zoom the map to make them all visible with some border space around.

Added withOverlays parameter in v22.4 to include overlays in the calculation of the rectangle.

126.32.54 showAnnotations(annotations() as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the visible region so that the map displays the specified annotations.
Notes: annotations: The annotations that you want to be visible in the map.
animated: true if you want the map region change to be animated, or NO if you want the map to display the new region immediately without animations.

Calling this method updates the value in the region property and potentially other properties to reflect the new map region.

126.32.55 viewForAnnotation(annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation view associated with the specified annotation object, if any.
Example:

```
Function viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) Handles
viewForAnnotation as MKAnnotationViewMBS
// return nil for default annotation view

// new annotation view
Var v As New MKAnnotationViewMBS(annotation)

// get a picture and use it as decoration
Var pic As Picture = LogoMBS(100)
Var img As New NSImageMBS(pic)
img.setSize(pic.Width/2, pic.Height/2) // half size gives 2x resolution, if the picture isn't retina aware

// set image and return
v.image = img

Return v
End Function
```

Notes: annotation: The annotation object whose view you want.

Returns the annotation view or nil if the view has not yet been created. This method may also return nil if the annotation is not in the visible map region and therefore does not have an associated annotation view.

126.32.56 Properties

126.32.57 annotationVisibleRect as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visible rectangle where annotation views are currently being displayed.
Notes: (Read only property)

126.32.58 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera used for determining the appearance of the map.
Notes: A camera object defines a point above the map,Äôs surface from which to view the map. Applying a camera to a map can have the effect of giving the map a 3D-like appearance. You can use a camera to rotate the map so that it is oriented to match the user,Äôs heading or to apply a pitch angle to tilt the plane of

the map. (You can check the map,Äôs pitchEnabled property to determine whether the map can be pitched.)

Assigning a new camera to this property updates the map immediately and without animating the change. If you want to animate changes in camera position, use the setCamera method instead.

You must not set this property to nil. To restore the map to a flat appearance, apply a camera with a pitch angle of 0, which yields a camera looking straight down onto the map surface.
(Read and Write property)

126.32.59 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view
Var centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate

// show center
MsgBox str(centerCoordinate.latitude)+" "+str(centerCoordinate.longitude)
```

Notes: Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.
(Read and Write property)

126.32.60 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The type of data displayed by the map view.
Example:

```
Var mapview as MKMapViewMBS // your map view
mapView.mapType = mapView.MKMapTypeHybrid
```

Notes: Changing the value in this property may cause the receiver to begin loading new map content. For example, changing from MKMapTypeStandard to MKMapTypeSatellite might cause it to begin loading

the satellite imagery needed for the map. If new data is needed, however, it is loaded asynchronously and appropriate messages are sent to the receiver's delegate indicating the status of the operation.
(Read and Write property)

126.32.61 PitchEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera,Äôs pitch information is used.
Notes: When this property is set to true and a valid camera is associated with the map, the camera,Äôs pitch angle is used to tilt the plane of the map. When this property is set to NO, the camera,Äôs pitch angle is ignored and the map is always displayed as if the user is looking straight down onto it.
In an app, always check the value of this property to determine whether a map can support 3D.
(Read and Write property)

126.32.62 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes: The region encompasses both the latitude and longitude point on which the map is centered and the span of coordinates to display. The span values provide an implicit zoom value for the map. The larger the displayed area, the lower the amount of zoom. Similarly, the smaller the displayed area, the greater the amount of zoom.

Changing only the center coordinate of the region can still cause the span to change implicitly. The span might change because the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the centerCoordinate instead.

Changing the value of this property updates the map view immediately. When setting this property, the map may adjust the new region value so that it fits the visible area of the map precisely. This is normal and is done to ensure that the value in this property always reflects the visible portion of the map. However, it does mean that if you get the value of this property right after setting it, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)

If you want to animate the change in region, use the setRegion method instead.
(Read and Write property)

126.32.63 RotateEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera,Äôs heading information is used.
Notes: When this property is set to true and a valid camera is associated with the map, the camera,Äôs heading angle is used to rotate the plane of the map around its center point. When this property is set to false, the camera,Äôs heading angle is ignored and the map is always oriented so that true north is situated at the top of the map view.
(Read and Write property)

126.32.64 scrollEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may scroll around the map.
Notes: This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the map location programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

126.32.65 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays extruded building information.
Notes: When this property is set to YES and the camera has a pitch angle greater than zero, the map extrudes buildings so that they extend above the map plane, creating a 3D effect. The mapType property must be set to MapTypeStandard for extruded buildings to be displayed. The default value of this property is true.
(Read and Write property)

126.32.66 ShowsCompass as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays a compass control.
Notes: Use this property to show or hide a control that lets users change the heading orientation of the map.
(Read and Write property)

126.32.67 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays point-of-interest information.
Notes: When this property is set to true, the map displays icons and labels for restaurants, schools, and other relevant points of interest. The mapType property must be set to MapTypeStandard or MapTypeHybrid for points of interest to be displayed. The default value of this property is true.
(Read and Write property)

126.32.68 showsScale as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map shows scale information.
Notes: The default value of this property is false.
(Read and Write property)

126.32.69 showsTraffic as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map displays traffic information.
Notes: The mapType property must be set to MapTypeStandard or MapTypeHybrid for traffic information to be shown. The default value of this property is false.
(Read and Write property)

126.32.70 showsUserLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map should try to display the user's location.
Notes: This property does not indicate whether the user's position is actually visible on the map, only whether the map view should try to display it. Setting this property to true causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is true, the map view continues to track the user's location and update it periodically. The default value of this property is false.

Showing the user's location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user's current location is currently displayed on the map, use the userLocationVisible property.
(Read and Write property)

126.32.71 showsZoomControls as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean indicating whether the map displays zoom controls.
Notes: In macOS, use this property to show or hide the controls that let users change the zoom level of the map.
(Read and Write property)

126.32.72 userLocation as MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object representing the user's current location.
Notes: (Read only property)

126.32.73 userLocationVisible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the device's current location is visible in the map view.
Notes: This property tells you whether the icon used to represent the user's current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal accuracy of the location data. Specifically, if the rectangle represented by the user's current location plus or minus minus the horizontal accuracy of that location intersects the map's visible rectangle, this property contains the value true. If that location rectangle does not intersect the map's visible rectangle, this property contains the value false.

If the user's location cannot be determined, this property contains the value false.
(Read only property)

126.32.74 visibleMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes: This property represents the same basic information as the region property but specified as a map rectangle instead of a region.
Changing the value of this property updates the map view immediately. If you want to animate the change, use the setVisibleMapRect method instead.
(Read and Write property)

126.32.75 zoomEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.
Notes: This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the zoom level programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

126.32.76 zoomLevel as Double

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current zoom level.
Example:

```
Var m as MKMapViewMBS // your map view

// zoom in one level
m.zoomLevel = m.zoomLevel + 1
```

Notes: A value between 1 and 20.
(Read and Write property)

126.32.77 Constants

Errors

Constant	Value	Description
ErrorDirectionsNotFound	4	The specified directions could not be found.
ErrorLoadingThrottled	2	The data was not loaded because data throttling is in effect. This error can occur if an app makes frequent requests for data over a short period of time.
ErrorPlacemarkNotFound	3	The specified placemark could not be found.
ErrorServerFailure	1	The map server was unable to return the desired information.
ErrorUnknown	0	An unknown error occurred.

Feature visibility

Constant	Value	Description
FeatureVisibilityAdaptive	0	For features in the normal state, title text is displayed and subtitle text is hidden. When a feature is selected, the title and subtitle text are hidden when the feature requires a callout.
FeatureVisibilityHidden	1	Always hidden.
FeatureVisibilityVisible	2	Always visible.

Map Types

Constant	Value	Description
MapTypeHybrid	2	Displays a satellite image of the area with road and road name information layered on top.
MapTypeHybridFlyover	4	A hybrid satellite image with flyover data where available.
MapTypeMutedStandard	5	A street map where your data is emphasized over the underlying map details.
MapTypeSatellite	1	Displays satellite imagery of the area.
MapTypeSatelliteFlyover	3	A satellite image of the area with flyover data where available.
MapTypeStandard	0	Displays a street map that shows the position of all roads and some road names.

Overlay Levels

Constant	Value	Description
OverlayLevelAboveLabels	1	Above labels
OverlayLevelAboveRoads	0	Above roads

126.33 class MKMarkerAnnotationViewMBS

126.33.1 class MKMarkerAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation view that displays a balloon-shaped marker at the designated location.
Notes: Return an instance of this class from the viewForAnnotation event of your map view delegate when you want to display the same types of markers used in the Maps app.
The default displayPriority for an instance of this class is FeatureDisplayPriorityDefaultLow.

Available on macOS 11.0
Subclass of the MKAnnotationViewMBS class.

126.33.2 Methods

126.33.3 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true on macOS 11.0 and newer.

126.33.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.33.5 Constructor(Handle as Integer) 17488

126.33.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMarkerAnnotationView reference from a declare.
The object is retained.
See also:

- 126.33.4 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = ””, EnableEvents as Boolean = false) 17487

126.33.6 Properties

126.33.7 animatesWhenAdded as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean that indicates whether the marker animates into position onscreen.
Notes: The default value of this property is false.
(Read and Write property)

126.33.8 glyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display in the marker balloon.
Notes: Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.
MapKit displays the glyph image when the marker is in the normal state. Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Normally, you set the size of this image to 20 by 20 points on iOS and 40 by 40 points on tvOS. However, if you don,Äôt provide a separate selected image in the selectedGlyphImage property, make the size of this image 40 by 40 points on iOS and 60 by 40 points on tvOS instead. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

126.33.9 glyphText as String

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The text to display in the marker balloon.
Notes: Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.
MapKit limits the amount of space available for displaying your glyph text. Specify no more than two or

three characters for any strings you assign to this property.
(Read and Write property)

126.33.10 glyphTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The color to apply to the glyph text or image.
Notes: The default value of this property is nil, which applies the standard tint color for the current map style.
(Read and Write property)

126.33.11 markerTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color of the marker balloon.
Notes: The default value of this property is nil, which applies the standard color that,Äôs appropriate for the current map style.
(Read and Write property)

126.33.12 selectedGlyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display when the user selects the marker.
Notes: MapKit displays the glyph image when the marker is in the selected state. If you specify an image for this property, you should also specify an image in the glyphImage property.
Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Set the size of this image to 40 by 40 points on iOS and 60 by 40 points on tvOS. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

126.33.13 subtitleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the subtitle text rendered beneath the marker balloon.
Notes: MapKit shows the text when the user selects a marker.
(Read and Write property)

126.33.14 titleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the title text rendered beneath the marker balloon.
Notes: (Read and Write property)

126.33.15 Constants

Feature Visibility

Constant	Value	Description
FeatureVisibilityAdaptive	0	A constant indicating that the feature adapts to the current map state.
FeatureVisibilityHidden	1	A constant indicating that the feature is always hidden.
FeatureVisibilityVisible	2	A constant indicating that the feature is always visible.

126.34 class MKMultiPointMBS

126.34.1 class MKMultiPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKMultiPoint class is an abstract superclass used to define shapes composed of multiple points.
Notes: You should not create instances of this class directly. Instead, you should create instances of the MKPolyline or MKPolygon classes. However, you can use the method and properties of this class to access information about the specific points associated with the line or polygon.
Subclass of the MKShapeMBS class.

The object is retained.
See also:

- 126.34.3 Constructor 17491

126.34.5 Coordinates as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries list of coordinates for all the points.

126.34.6 points as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries array with points.

126.34.7 Properties

126.34.8 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries number of points for this multi point object.
Notes: (Read only property)

126.35 class MKMultiPolygonMBS

126.35.1 class MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A collection of multiple closed polygon shapes.
Notes: Use a MKMultiPolygon when you have multiple distinct polygon shapes that you intend to render using the same style.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKShapeMBS class.

Interfaces: MKOverlayMBS

126.35.2 Methods

126.35.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

126.35.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces

the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

126.35.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.35.6 Constructor(Handle as Integer) 17494
- 126.35.7 Constructor(polygons() as MKPolygonMBS) 17494

126.35.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolygon reference from a declare.
The object is retained.
See also:

- 126.35.5 Constructor 17494
- 126.35.7 Constructor(polygons() as MKPolygonMBS) 17494

126.35.7 Constructor(polygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolygon object using the provided polygons.
See also:

- 126.35.5 Constructor 17494
- 126.35.6 Constructor(Handle as Integer) 17494

126.35.8 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

126.35.9 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.35.10 multiPolygon(polygons() as MKPolygonMBS) as MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolygon object using the provided polygons.

126.35.11 polygons as MKPolygonMBS()

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An array containing the polygons that make up the multipolygon object.

126.36 class MKMultiPolygonRendererMBS

126.36.1 class MKMultiPolygonRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The visual representation for a multipolygon overlay.
Notes: Use this renderer to provide the style for multiple polygons created using MKMultiPolygonMBS.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKOverlayPathRendererMBS class.

126.36.2 Methods

126.36.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolygonRenderer reference from a declare.
The object is retained.
See also:

- 126.36.4 Constructor(multiPolygon as MKMultiPolygonMBS) 17496

126.36.4 Constructor(multiPolygon as MKMultiPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Initializes and returns a renderer that handles drawing for the specified multipolygon overlay object.
See also:

- 126.36.3 Constructor(Handle as Integer) 17496

126.36.5 Properties

126.36.6 multiPolygon as MKMultiPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The multipolygon object that the renderer uses to draw the overlay,Äôs contents.
Notes: (Read only property)

126.37 class MKMultiPolylineMBS

126.37.1 class MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A collection of multipolyline shapes, each consisting of one or more connected line segments.
Notes: Use a MKMultiPolyline object when you have multiple distinct polyline shapes that you intend to render using the same style.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKShapeMBS class.

- 126.37.7 Constructor(polylines() as MKPolylineMBS) 17499

126.37.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolyline reference from a declare.
The object is retained.
See also:

- 126.37.5 Constructor 17499
- 126.37.7 Constructor(polylines() as MKPolylineMBS) 17499

126.37.7 Constructor(polylines() as MKPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolyline object using the provided polylines.
See also:

- 126.37.5 Constructor 17499
- 126.37.6 Constructor(Handle as Integer) 17499

126.37.8 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

126.37.9 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.37.10 multiPolyline(polylines() as MKPolylineMBS) as MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Create a multipolyline object using the provided polylines.

126.37.11 polylines as MKPolylineMBS()

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: An array containing the polyline objects that make up the multipolyline object.

126.38 class MKMultiPolylineRendererMBS

126.38.1 class MKMultiPolylineRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The visual representation for a multipolygon overlay.
Notes: Use this renderer to provide the style for multiple polygons created using MKMultiPolygonMBS.
Available on macOS 10.15 and iOS 13 or newer.
Subclass of the MKOverlayPathRendererMBS class.

126.38.2 Methods

126.38.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKMultiPolylineRenderer reference from a declare.
The object is retained.
See also:

- 126.38.4 Constructor(multiPolyline as MKMultiPolylineMBS) 17501

126.38.4 Constructor(multiPolyline as MKMultiPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Initializes and returns a renderer that handles drawing for the specified multipolygon overlay object.
See also:

- 126.38.3 Constructor(Handle as Integer) 17501

126.38.5 Properties

126.38.6 multiPolyline as MKMultiPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The multipolygon object that the renderer uses to draw the overlay,Äôs contents.
Notes: (Read only property)

126.39 class MKOverlayPathRendererMBS

126.39.1 class MKOverlayPathRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a path-based overlay.
Notes: Use this renderer when your overlay's shape is defined by a CGPath object. By default, this renderer fills and strokes the path using its current attributes.
You can use this class as-is or subclass to define additional drawing behaviors. If you subclass, you should override the createPath method and use that method to build the appropriate path object. To change the path, invalidate it and recreate the path using whatever new data your subclass has obtained.
Subclass of the MKOverlayRendererMBS class.

126.39.2 Methods

126.39.3 applyFillProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver,Äôs current fill-related drawing properties to the specified graphics context.
Notes: context: The graphics context used to draw the view,Äôs contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when filling a path. This method applies the current fill color to the specified graphics context.

126.39.4 applyStrokeProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver,Äôs current stroke-related drawing properties to the specified graphics context.
Notes: context: The graphics context used to draw the view,Äôs contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when stroking a path. This method applies the stroke color, line width, line join, line cap, miter limit, line dash phase, and line dash attributes to the specified graphics context. This method applies the scale factor in the zoomScale parameter

to the line width and line dash pattern automatically so that lines scale appropriately.
This method does not save the current graphics state before applying the new attributes. If you want to preserve the existing state, you must save it yourself and restore it later when you finish drawing.

126.39.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.39.6 Constructor(Handle as Integer) 17504

126.39.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKOverlayPathRenderer reference from a declare.
The object is retained.
See also:

- 126.39.5 Constructor 17504

126.39.7 createPath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates the path for the overlay.
Notes: The default implementation of this method does nothing. Subclasses should override it and use it to create the CGPathRef data type to be used for drawing. After creating the path, your implementation should assign it to the path property.

126.39.8 fillPath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Fills the area enclosed by the specified path.
Notes: path: The path to fill.
context: The graphics context in which to draw the path.

You must set the current fill color before calling this method. Typically you do this by calling the applyFillProperties method prior to drawing. If the fillColor property is currently nil, this method does nothing.

126.39.9 GetLineDashPattern as Integer()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of numbers specifying the dash pattern to use for the path.
Notes: The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

126.39.10 invalidatePath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Updates the path associated with the overlay renderer.
Notes: Call this method when a change in the path information would require you to recreate the overlay,Äôs path. This method sets the path property to nil and tells the overlay renderer to redisplay its contents.

126.39.11 SetLineDashPattern(values() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets an array of numbers specifying the dash pattern to use for the path.
Notes: The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

126.39.12 strokePath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws a line along the specified path.
Notes: path: The path to draw.
context: The graphics context in which to draw the path.

You must set the current stroke color before calling this method. Typically you do this by calling the applyStrokePropertiesToContext method prior to drawing. If the strokeColor property is currently nil, this

method does nothing.

126.39.13 Properties

126.39.14 fillColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The fill color to use for the path.
Notes: (Read and Write property)

126.39.15 lineCap as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line cap style to apply to the open ends of the path.
Notes: The line cap style is applied to the start and end points of any open subpaths. This property does not affect closed subpaths. The default line cap style is kCGLineCapRound.
(Read and Write property)

126.39.16 lineDashPhase as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to start drawing the dash pattern.
Notes: Use this property to start drawing a dashed line partway through a segment or gap. For example, a phase value of 6 for the patter 5-2-3-2 would cause drawing to begin in the middle of the first gap.
The default value of this property is 0.
(Read and Write property)

126.39.17 lineJoin as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line join style to apply to corners of the path.
Notes: The default line join style is kCGLineJoinRound.
(Read and Write property)

126.39.18 lineWidth as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke width to use for the path.
Notes: The default value of this property is 0.
(Read and Write property)

126.39.19 miterLimit as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The limiting value that helps avoid spikes at junctions between connected line segments.
Notes: The miter limit helps you avoid spikes in paths that use the kCGLineJoinMiter join style. If the ratio of the miter length—that is, the diagonal length of the miter join—to the line thickness exceeds the miter limit, the joint is converted to a bevel join. The default miter limit is 10, which results in the conversion of miters whose angle at the joint is less than 11 degrees.
(Read and Write property)

126.39.20 Path as CGPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The path representing the overlay,Äôs shape.
Notes: Getting the value of this property causes the path to be created (using the createPath method) if it does not already exist. You can assign a path object to this property explicitly. When assigning a new path object to this property, the overlay renderer stores a strong reference to the path you provide.
(Read and Write property)

126.39.21 strokeColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke color to use for the path.
Notes: (Read and Write property)

126.40 class MKOverlayRendererMBS

126.40.1 class MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The shared infrastructure used to draw overlays on the map surface.
Notes: An overlay renderer draws the visual representation of an overlay object—that is, an object that conforms to the MKOverlayMBS interface. This class defines the drawing infrastructure used by the map view. Subclasses are expected to override the drawMapRect method to draw the contents of the overlay.
The Map Kit framework provides several concrete instances of overlay renderers. Specifically, it provides renderers for each of the concrete overlay objects. You can use one of these existing renderers or define your own subclasses if you want to draw the overlay contents differently.

- MapKit Framework for Xojo

126.40.2 Methods

126.40.3 canDrawMapRect(Rect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the overlay view is ready to draw its content.
Notes: mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Returns true if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return NO if it does not draw content in the specified rectangle.

If you return NO from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.
The default implementation of this method returns true.

126.40.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKOverlayRenderer reference from a declare.
The object is retained.
See also:

- 126.40.5 Constructor(overlay as MKOverlayMBS) 17509

126.40.5 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns the overlay renderer and associates it with the specified overlay object.
Notes: overlay: The overlay object to use when drawing the overlay content on the map. This object provides the data needed to draw the overlay,Äôs shape. The overlay renderer stores a strong reference to this object.
Return Value

Initially, the overlay renderer assumes that the overlay is fully opaque and that it has a content scale factor of 1.0. You can change these values as needed using the alpha and contentScaleFactor properties.
See also:

- 126.40.4 Constructor(Handle as Integer) 17508

126.40.6 drawMapRect(Rect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws the overlay,Äôs contents at the specified location on the map.
Notes: mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map,Äôs contents.
context: The graphics context to use for drawing the overlay,Äôs contents.

The default implementation of this method does nothing. Subclasses are expected to override this method and use it to draw the overlay,Äôs contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread. Your implementation of this method must therefore be capable of safely running from multiple threads simultaneously. In addition, you should avoid drawing the entire contents of the overlay each time this method is called. Instead, always take the mapRect parameter into consideration and avoid drawing content outside that rectangle.

126.40.7 mapPointForPoint(point as CGPointMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point on the map that corresponds to the specified point in the overlay renderer,Äôs drawing area.
Notes: point: The point in the overlay,Äôs drawing area that you want to convert.
Returns the point on the two-dimensional map projection corresponding to the specified point.

126.40.8 mapRectForRect(Rect as CGRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle on the map that corresponds to the specified rectangle in the overlay renderer,Äôs drawing area.
Notes: rect: The rectangle in the overlay,Äôs drawing area that you want to convert.

Returns the rectangle on the two-dimensional map projection corresponding to the specified rectangle.

126.40.9 pointForMapPoint(mapRect as MKMapPointMBS) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point in the overlay renderer,Äôs drawing area corresponding to the specified point on the map.
Notes: mapPoint: A point on the two-dimensional map projection. If you have a coordinate value (latitude and longitude), you can use the MKMapPointForCoordinate function to convert that coordinate to a map point.

Returns the point in the overlay,Äôs drawing area that corresponds to the map point.

126.40.10 RectForMapRect(mapRect as MKMapRectMBS) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle in the overlay renderer,Äôs drawing area corresponding to the specified rectangle on the map.
Notes: mapRect: A rectangle on the two-dimensional map projection.

Returns the rectangle in the overlay,Äôs drawing area that corresponds to the map rectangle.

126.40.11 RoadWidthAtZoomScale(zoomScale as double) as double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the width (in screen points) of roads on a map at the specified zoom level.
Notes: zoomScale: The scale factor currently applied to the map view.

Returns the width of roads, measured in screen points. You can use the returned value to set the width of lines in drawing code that traces the path of a road.

126.40.12 setNeedsDisplay

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the entire contents of the overlay for all zoom scales.
Notes: This method causes the entire contents of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.

126.40.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay at all zoom scales.
Notes: mapRect: The portion of the overlay to update. Specify this value using a map coordinates.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.
See also:

- 126.40.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double) 17512

126.40.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay but only at the specified zoom scale.
Notes: mapRect: The portion of the overlay to update. Specify this value using a map coordinates.
zoomScale: The zoom scale for which you want to invalidate the overlay.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle.
This method invalidates the overlay only at the specified zoom scale.
See also:

- 126.40.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS) 17511

126.40.15 Properties

126.40.16 alpha as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of transparency to apply to the overlay.
Notes: The value in this property can be in the range 0.0 to 1.0, where 0.0 represents total transparency and 1.0 represents total opacity. The default value of this property is 1.0.
(Read and Write property)

126.40.17 contentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor used to draw the overlay,Äôs content.
Notes: The scale factor determines how content is mapped from the logical coordinate space (measured in points) to the device coordinate space (measured in pixels). This value is typically either 1.0 or 2.0. Higher scale factors indicate that each point is represented by more than one pixel on the screen. For example, if the scale factor is 2.0 and the drawing rectangle size is 50 x 50 points, the size of the underlying area is 100 x 100 pixels.
When drawing the content for your overlays, you can use this value to determine how best to render your content.
(Read only property)

126.40.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.40.19 overlay as MKOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay object containing the data for drawing.
Notes: The overlay object contains the coordinate at which to draw the overlay and other information that your app provides.
(Read only property)

126.41 class MKPinAnnotationViewMBS

126.41.1 class MKPinAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPinAnnotationView class provides a concrete annotation view that displays a pin icon like the ones found in the Maps application.
Notes: Using this class, you can configure the type of pin to drop and whether you want the pin to be animated into place.
Subclass of the MKAnnotationViewMBS class.

126.41.6 greenPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for green pins.
Notes: The system uses green pins to indicate starting points on the map.

126.41.7 purplePinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for purple pins.
Notes: The system uses purple pins to indicate user-specified points on the map.

126.41.8 redPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for red pins.
Notes: The system uses red pins to indicate destination points on the map.

126.41.9 Properties

126.41.10 animatesDrop as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to animate the dropping of the pin.
Notes: (Read and Write property)

126.41.11 pinColor as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes: The Maps application uses different pin colors for different types of map annotations. Your own map annotation should use the available pin colors in the same way.
Deprecated in favor of pinTintColor.
(Read and Write property)

126.41.12 pinTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes: Use this property to specify custom a custom color for your pin. You can also specify one of the standard pin colors.
(Read and Write property)

126.41.13 Constants

Color constants

Constant	Value	Description
ColorBlue	2	The head of the pin is blue. Purple pins indicate user-specified points on the map.
ColorGreen	1	The head of the pin is green. Green pins indicate starting points on the map.
ColorRed	0	The head of the pin is red. Red pins indicate destination points on the map.

126.42 class MKPlacemarkMBS

126.42.1 class MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A MKPlacemark object stores placemark data for a given latitude and longitude.
Notes: Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. Placemark objects are typically generated by a MKReverseGeocoderMBS object, although you can also create them explicitly yourself.

A placemark is also an annotation and conforms to the MKAnnotationMBS interface, whose properties and methods include the placemark coordinate and other information. Because they are annotations, you can add them directly to the map view.
Subclass of the CLPlacemarkMBS class.

126.42.2 Methods

126.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate only.
See also:

- 126.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17518

- 126.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17518
- 126.42.6 Constructor(Handle as Integer) 17518

126.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and Address Book dictionary.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.

- 126.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17518
- 126.42.6 Constructor(Handle as Integer) 17518

126.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and CNPostalAddressMBS object.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.
See also:

- 126.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS) 17517
- 126.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17518
- 126.42.6 Constructor(Handle as Integer) 17518

126.42.6 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPlacemark reference from a declare.

The object is retained.
See also:

- 126.42.3 Constructor(coordinate as CLLocationCoordinate2DMBS) 17517
- 126.42.4 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 17518
- 126.42.5 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 17518

126.42.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.42.8 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.42.9 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

126.42.10 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.42.11 Properties

126.42.12 countryCode as String

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The abbreviated country name.
Notes: This string is the standard abbreviation used to refer to the country. For example, if the placemark location was Apple's headquarters, the value for this property would be the string "US".
(Read only property)

126.43 class MKPointAnnotationMBS

126.43.1 class MKPointAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPointAnnotation class defines a concrete annotation object located at a specified point.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

Notes: You can use this class, rather than define your own, in situations where all you want to do is associate a point on the map with a title.
Subclass of the MKShapeMBS class.

126.43.2 Methods

126.43.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Example:

```
Var mapview as MKMapViewMBS // your map view

// new pin
Var pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

126.43.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPointAnnotation reference from a declare.
The object is retained.
See also:

- 126.43.3 Constructor 17521

126.43.5 Properties

126.43.6 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)

126.44 class MKPolygonMBS

126.44.1 class MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPolygon class represents a shape consisting of one or more points that define a closed polygon.
Notes: The points are connected end-to-end in the order they are provided. The first and last points are connected to each other to create the closed shape.

When creating a polygon, you can mask out portions of the polygon by specifying one or more interior polygons. For the polygons you specify, this class uses the even-odd fill rule to determine the final occupied area. When applied to overlapping polygons, this rule can cause specific regions to be masked out (and thereby removed) from the total occupied area. For more information about how fill rules are applied to paths, see "Paths" in Quartz 2D Programming Guide.
Subclass of the MKMultiPointMBS class.

Xojo Developer Magazine

- 19.2, page 49: Maps Part 9,ÄîPutting GPS Data on the Map, Helping out a fellow coder with the MapKitMBS plugin by Markus Winter

Interfaces: MKOverlayMBS

126.44.2 Methods

126.44.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

126.44.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

126.44.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.44.6 Constructor(coords() as CLLocationCoordinate2DMBS) 17524
- 126.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 17525

- 126.44.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 17526

126.44.6 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 126.44.5 Constructor 17524

- 126.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 17525

126.44.7 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver,Äôs polygon.

- 126.44.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 17526

126.44.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver,Äôs polygon.

- 126.44.8 Constructor(Handle as Integer) 17525
- 126.44.9 Constructor(points() as MKMapPointMBS) 17526

126.44.11 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.44.12 interiorPolygons as MKPolygonMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The array of polygons nested inside the receiver.
Notes: When a polygon is rendered on screen, the area occupied by any interior polygons is masked out and not considered part of the polygon.

126.44.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.44.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 126.44.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 17527

126.44.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates and interior polygons.
Notes: coords: The array of coordinates defining the shape.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.

Returns a new polygon object.
See also:

- 126.44.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS

17527

126.44.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
See also:

- 126.44.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 17528

126.44.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver,Äôs polygon.
See also:

- 126.44.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS 17528

126.45 class MKPolygonRendererMBS

126.45.1 class MKPolygonRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a polygon overlay.
Notes: This renderer fills and strokes the polygon represented by first filling the shape and then stroking its outline. You can change the color and other drawing attributes of the polygon by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

126.46.9 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.46.10 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.46.11 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of coordinates.
Notes: coords: The array of coordinates defining the shape. The data in this array is copied to the new object.
Returns a new polyline object.

126.46.12 polylineWithPoints(points() as MKMapPointMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.

126.47 class MKPolylineRendererMBS

126.47.1 class MKPolylineRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for any polyline overlay object.
Notes: This renderer strokes the line only; it does not fill it. You can change the color and other drawing attributes of the polyline by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

- MapKit Framework for Xojo

126.47.2 Methods

126.47.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKPolylineRenderer reference from a declare.
The object is retained.
See also:

- 126.47.4 Constructor(polyline as MKPolylineMBS) 17535

126.47.4 Constructor(polyline as MKPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified polyline overlay object
Notes: polyline: The polyline overlay containing information about the area to be drawn. This object must have at least two points defining the line segment to draw. This parameter must not be nil.
See also:

- 126.47.3 Constructor(Handle as Integer) 17535

126.47.5 Properties

126.47.6 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The polyline overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

126.48 class MKRouteMBS

126.48.1 class MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A single route between a requested start and end point.
Notes: An MKRouteMBS object defines the geometry for the route—that is, it contains line segments associated with specific map coordinates. A route object may also include other information, such as the name of the route, its distance, and the expected travel time.

You do not create instances of this class directly. When you use an MKDirectionsMBS object to request directions from Apple, the returned MKDirectionsResponseMBS object contains the possible routes.

126.48.2 Methods

126.48.3 advisoryNotices as String()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of advisory notice strings for the route.
Notes: This property contains an array of strings. Each string is localized according to the user,Äôs language preferences. The strings contain additional information that is important for the user to know about the route. For example, a string might note that a portion of the route is closed during the winter or after big storms.

126.48.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 126.48.5 Constructor(Handle as Integer) 17538

126.48.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKRoute reference from a declare.
The object is retained.
See also:

- 126.48.4 Constructor 17537

126.48.6 steps as MKRouteStepMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The array of steps that comprise the overall route.
Notes: The array contains one or more MKRouteStep objects representing distinct portions of the route. Each step corresponds to a single direction that must be followed along the route.

126.48.7 Properties

126.48.8 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route distance in meters.
Notes: This property reflects the distance that the user covers while traversing the path of the route. It is not a direct distance between the start and end points of the route.
(Read only property)

126.48.9 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes: This expected travel time reflects the time it takes to traverse the route under ideal conditions. The actual amount of time may vary based on conditions.
(Read only property)

126.48.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.48.11 name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The name assigned to the route.
Notes: The string in this property is localized according to the user,Äôs language preferences. You can display this string to the user from your app,Äôs user interface so that the user can distinguish one route from another.
The string itself describes the route using one of the route,Äôs significant features. For example, a route that uses a major highway for a significant portion of the route might use that highway for its name.
(Read only property)

126.48.12 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed route geometry.
Notes: The polyline object in this property reflects the complete path of the route, including all of its steps. You can use the polyline object as an overlay in a map view.
(Read only property)

126.48.13 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overall route transport type.
Notes: This property reflects the primary transport type used for the route. Individual steps of the route might use different transport types.
(Read only property)

126.48.14 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

126.49 class MKRouteStepMBS

126.49.1 class MKRouteStepMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: One portion of an overall route.
Notes: Each MKRouteStepMBS object corresponds to a single instruction that would need to be followed by the user when navigating between two points. For example, a step might involve following a single road until a turn is required.

You do not create instances of this class directly. An MKRouteMBS object contains the MKRouteStepMBS objects associated with a route. For more information about requesting directions, see MKDirectionsMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.49.2 Methods

126.49.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

126.49.4 Properties

126.49.5 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The step distance in meters.
Notes: This property reflects the distance that the user covers while traversing the path of the step. It is not a direct distance between the start and end points of the step.
(Read only property)

126.49.6 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.

Notes: (Read and Write property)

126.49.7 instructions as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The written instructions for following the path represented by this step.
Notes: The string in this property is localized according to the user,Äôs language preferences. You can present this string to the user from your app,Äôs interface.
(Read only property)

126.49.8 notice as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Additional notices that apply to the step.
Notes: Notices may include legal information or warning notices that apply to the step. For example, if the step crosses railroad tracks, it might contain a notice that warns the user not to cross the tracks when the lights are flashing.
(Read only property)

126.49.9 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed step geometry.
Notes: The polyline object in this property contains the geometry for this step. You can use the polyline object as an overlay in a map view.
(Read only property)

126.49.10 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The transport type of the step.
Notes: This property reflects the transport type employed by the step and may differ from the transport type of the overall route.
(Read only property)

126.49.11 Constants

Transport Types

Constant	Value	Description
TransportTypeAny	&h0FFFFFFF	Directions suitable for any transportation option.
TransportTypeAutomobile	1	Directions suitable for use while driving.
TransportTypeTransit	3	Directions suitable for public transportation.
TransportTypeWalking	2	Directions suitable for a pedestrian.

126.50 class MKShapeMBS

126.50.1 class MKShapeMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKShape class is an abstract class that defines the basic properties for all shape-based annotation objects.
Notes: This class must be subclassed and cannot be used as is. Subclasses are responsible for defining the geometry of the shape and providing an appropriate value for the coordinate property inherited from the MKAnnotationMBS interface.

126.50.4 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKShape reference from a declare.
The object is retained.
See also:

- 126.50.3 Constructor 17544

126.50.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.50.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.50.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.50.11 subtitle as String 17545

126.50.8 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.50.12 title as String 17546

126.50.9 Properties

126.50.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

126.50.11 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.

(Read and Write property)
See also:

- 126.50.7 SubTitle as String 17545

126.50.12 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 126.50.8 Title as String 17545

126.51 class MKTileOverlayMBS

126.51.1 class MKTileOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: MKTileOverlay represents a data source for raster image tiles in the spherical mercator projection (EPSG:3857).
Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS, MKAnnotationMBS

126.51.2 Methods

126.51.3 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes: This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

126.51.4 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes: true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.
See also:

- 126.51.15 canReplaceMapContent as Boolean 17550

126.51.5 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKTileOverlay reference from a declare.
The object is retained.
See also:

- 126.51.6 Constructor(URL as string) 17548

126.51.6 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile overlay object using the specified tile-access template.
Notes: URLTemplate: A string that can be used to build a URL to access your tile images. The string you specify can point to a local file or to an image on a remote server. To facilitate retrieving multiple tiles using the string, use the placeholder values { x } , { y } , { z } , and { scale } as stand-ins for the x and y tile indexes, the zoom level, and the resolution of the tile image. If this parameter is nil, you must provide custom implementations for the tile-loading methods of this class.

Returns an initialized tile overlay object.

The default tile overlay object uses the template string you specify to request tiles. This template string should incorporate the { x } , { y } , { z } , and { scale } placeholder strings to facilitate the creation of a URL for requesting the appropriate tile. For example, if you have a server that vends tiles when you provide a URL of the form http://myserver/tile?x=0&y=0&z=0&scale=1.0, you would specify a template string of http://myserver/tile?x= { x } &y= { y } &z= { z } &scale= { scale } . The tile overlay object substitutes actual index values in for your template,Äôs placeholders before requesting the actual tile.
See also:

- 126.51.5 Constructor(Handle as Integer) 17548

126.51.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.51.16 coordinate as CLLocationCoordinate2DMBS 17551

126.51.8 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

126.51.9 loadTileAtPath(Path as MKTileOverlayPathMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Loads the specified tile asynchronously.
Notes: Path: The path structure that identifies the specific tile you want. This structure incorporates the tile,Äôs X-Y coordinate at a given zoom level and scale factor.

The default implementation of this method uses the URLForTilePath method to retrieve the URL for the specified tile and then loads that tile into memory asynchronously using an NSURLConnectionMBS object. The specified tile may be located either on the local file system or on a remote server. Subclasses may override this method and implement their own custom tile-loading behavior.

When a tile overlay renderer (that is, an instance of MKTileOverlayRendererMBS) needs to display tiles, it uses this method to request the data for each tile.

126.51.10 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

126.51.11 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 126.51.22 subtitle as String 17552

126.51.12 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 126.51.24 title as String 17553

126.51.13 URLForTilePath(Path as MKTileOverlayPathMBS) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the URL to use to access the specified tile.
Notes: path: The path structure that identifies the specific tile you want. This structure incorporates the tile,Äôs X-Y coordinate at a given zoom level and scale factor.

Returns the URL to use to retrieve the tile.

The default implementation of this method uses the template string you provided at initialization time to build a URL to the specified tile image. Subclasses can override this method and use a different scheme to provide URLs for tiles. Tiles can be located either on a local file system or on a remote server.

126.51.14 Properties

126.51.15 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the tile content is fully opaque.
Notes: If the tile content you provide can cover the entire drawing area with opaque content, set this property to true. Doing so serves as a hint to the map view that it does not need to draw any additional content underneath your tiles. Set this property to false if your tiles contain any transparency.
The default value for this property is false.
(Read and Write property)
See also:

• 126.51.4 canReplaceMapContent as Boolean 17547

126.51.16 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read only property)
See also:

• 126.51.7 Coordinate as CLLocationCoordinate2DMBS 17548

126.51.17 geometryFlipped as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates the orientation of tile indexes along the y axis.
Notes: When set to NO, tile indexes start in the upper-left corner of the map and proceed down and to the right. Thus, the tile at (0, 0) is in the upper-left corner of the map, the tile at (1, 0) is to its immediate right and the tile at (0, 1) is immediately below it. Setting this property to true causes the map to start indexes at the lower-left corner of the map and proceed up and to the right.
The default value of this property is false.
(Read and Write property)

126.51.18 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The latitude of the coordinates.
Notes: (Read only property)

126.51.19 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The longitude of the coordinates.
Notes: (Read only property)

126.51.20 maximumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum zoom level supported by the tiles of this overlay object.
Notes: If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the maximum zoom level supported by this overlay,Äôs tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level greater than the value specified by this property.
The default value of this property is 21. Setting the value of this property to a number greater than the default does not guarantee the use of those extra zoom levels.
(Read and Write property)

126.51.21 minimumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum zoom level supported by the tiles of this overlay object.
Notes: If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the minimum zoom level supported by this overlay,Äôs tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level less than the value specified by this property.

The default value of this property is 0.
(Read and Write property)

126.51.22 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
(Read only property)
See also:

- 126.51.11 SubTitle as String 17549

126.51.23 TileSize as CGSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size (in pixels) of your tile images.
Notes: On Retina displays, the images are rendered pixel for pixel and are not scaled. This means that if

the tile size is 256 x 256 pixels and the scale factor is 2.0, the image would be rendered as if it were 128 x 128 points in size. This behavior causes the tile to appear smaller but preserves the original image data. The default tile size is set to 256 x 256 pixels.
(Read and Write property)

126.51.24 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
(Read only property)
See also:

- 126.51.12 Title as String 17550

126.51.25 URLTemplate as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The template for generating tile image URLs.
Notes: You specify this string at initialization time.
(Read only property)

126.51.26 Events

126.51.27 TileLoaded(path as MKTileOverlayPathMBS, tileData as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Called by loadTileAtPath when loading finished.
Notes: The tileData parameter contains the raw data loaded from the corresponding image file. You can use this data to initialize an image object. If an error occurred, this parameter is nil.

The error parameter contains an error object if there was a problem loading the tile image. If no errors occurred, this parameter is nil.

126.52 class MKTileOverlayPathMBS

126.52.1 class MKTileOverlayPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Use this class to specify the index values for a single tile.

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 126.52.4 Constructor(x as Integer, y as Integer, z as Integer, ContentScaleFactor as double) 17554

126.52.4 Constructor(x as Integer, y as Integer, z as Integer, ContentScaleFactor as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 126.52.3 Constructor(other as MKTileOverlayPathMBS) 17554

126.52.5 Properties

126.52.6 ContentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The screen scale factor for which the tile is intended.
Notes: (Read and Write property)

126.52.7 X as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the x axis of the map.
Notes: (Read and Write property)

126.52.8 Y as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the y axis of the map.
Notes: (Read and Write property)

126.52.9 Z as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The zoom level number for the tile.
Notes: (Read and Write property)

126.53 class MKTileOverlayRendererMBS

126.53.1 class MKTileOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The renderer for a tile overlay that handles the drawing of bitmap images on the map surface.
Notes: You create instances of this class when tile overlays become visible on the map view. A renderer works closely with its associated tile overlay object to coordinate the loading and drawing of tiles at appropriate times.
For information about how to specify the tiles to display on the map, see MKTileOverlayMBS.
Subclass of the MKOverlayRendererMBS class.

126.53.2 Methods

126.53.3 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop & iOS.

Function: Constructor for creating an instanced based on an existing handle.
Notes: Useful if you get a MKTileOverlayRenderer reference from a declare.
The object is retained.
See also:

- 126.53.4 Constructor(TileOverlay as MKTileOverlayMBS) 17556

126.53.4 Constructor(TileOverlay as MKTileOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile renderer with the specified overlay object.
Notes: overlay: The tile overlay object whose contents you want to draw.
See also:

- 126.53.3 Constructor(Handle as Integer) 17556

126.53.5 reloadData

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Forces tiles to be reloaded and displayed.
Notes: Use this method to remove the overlay,Äôs existing tile images and reload them from the original

source. This method automatically causes the renderer to redraw the new tiles as soon as they are loaded into memory.

126.54 class MKUserLocationMBS

126.54.1 class MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKUserLocation class defines a specific type of annotation that identifies the user's current location.
Notes: You do not create instances of this class directly. Instead, you retrieve an existing MKUserLocation object from the userLocation property of the map view displayed in your application.

• 127.1.4 Constructor(data as string, flags as Integer = 35799040) 17561

127.1.6 CSS as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates CSS for the html code.

127.1.7 Document as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates HTML document.
Notes: Creates HTML if needed.

127.1.8 Footnotes as MarkdownFootnoteMBS()

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of foot notes.

127.1.9 GenerateCSS(File as folderitem) as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a css file.
Notes: Returns number of bytes written. Or -1 on any error.

127.1.10 GenerateHTML(File as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a html file.
Notes: Returns true on success and false on failure.

127.1.11 Properties

127.1.12 Author as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The author line.
Notes: Can be nil if not used.
(Read only property)

127.1.13 Code as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Intermediate code generated by compile.
Notes: (Read only property)

127.1.14 Compiled as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether document is compiled already.
Notes: (Read only property)

127.1.15 Date as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date line.
Notes: Can be nil if not used.
(Read only property)

127.1.16 ExtraFootnotePrefix as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extra footnote prefix.
Notes: (Read and Write property)

127.1.17 Handle as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read only property)

127.1.18 HasHTML as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether html is available.
Notes: Set to true when html is generated.
(Read only property)

127.1.19 Title as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title line.
Notes: Can be nil if not used.
(Read only property)

127.1.20 URLBase as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL base.
Notes: (Read and Write property)

127.1.21 Constants

Flags

Constant	Value	Description
kAutoLink	&h4000	make http://foo.com link even without <>s
kCDATA	&h80	generate code for xml ! [CDATA [...]]
kExtraFootnote	&h200000	Enable markdown extra-style footnotes.
kInputMask	&h00030000	
kIsLabel	&h08000000	
kNoAlphaList	&h80000	Forbid alphabetic lists.
kNoDivQuote	&h40000	Forbid >%class% blocks.
kNoDList	&h100000	Forbid definition lists.
kNoExt	&h40	Don't allow pseudo-protocols.
kNoHeader	&h10000	Don't process header blocks.
kNoHTML	8	Don't allow raw html through AT ALL
kNoImage	2	Don't do image processing, block <img>.
kNoLinks	1	Don't do link processing, block <a>tags.
kNoPants	4	don't run smartypants.
kNoRelaxed	&h200	emphasis happens /everywhere/
kNoStrikethrough	&h800	Forbid strikethrough.
kNoSuperscript	&h100	no A^B
kNoTables	&h400	Disallow tables.
kSafeLink	&h8000	Paranoid check for link protocol.
kStrict	&h10	Disable SUPERSCRIPT, RELAXED_EMPHASIS.
kTabStop	&h20000	Expand tabs to 4 spaces.
kTagText	&h20	process text inside an html tag; no * , no <bold>, no html or [ ] expansion
kTOC	&h1000	Do table-of-contents processing.
kUserFlags	&h0FFFFFFF	

127.2 class MarkdownFootnoteMBS

127.2.1 class MarkdownFootnoteMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a foot note.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

127.2.2 Methods

127.2.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

127.2.4 Properties

127.2.5 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

127.2.6 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Can be zero or a combination of kFlagExtraBookmark and kFlagReferenced.
(Read only property)

127.2.7 Height as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

127.2.8 Link as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What this footnote points to.
Notes: (Read only property)

127.2.9 RefNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference number.
Notes: (Read only property)

127.2.10 Tag as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag for the reference link.
Notes: (Read only property)

127.2.11 Title as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of the footnode.
Notes: (Read only property)

127.2.12 Width as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

127.2.13 Constants

Footnote Flags

Constant	Value	Description
kFlagExtraBookmark	1	
kFlagReferenced	2	Set if this footnote is referenced.

127.3 class MarkdownLineMBS

127.3.1 class MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a line in the markdown text.
Notes: Each input line is read into a Line, which contains the line, the offset of the first non-space character [this assumes that all tabs will be expanded to spaces!] , and a pointer to the next line.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

127.3.2 Methods

127.3.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

127.3.4 Properties

127.3.5 Count as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The kind of this line.
Notes: See kKind* constants.
(Read only property)

127.3.6 DLE as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading indent on the line.
Notes: (Read only property)

127.3.7 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

127.3.8 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Special attributes for this line.
Notes: Can be combination of kFlag* constants.
(Read only property)

127.3.9 Kind as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line type.
Notes: See kKind* constants.
(Read only property)

127.3.10 NextLine as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next line.
Notes: (Read only property)

127.3.11 Text as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of the line.
Notes: (Read only property)

127.3.12 Constants

Flag Values

Constant	Value	Description
kFlagChecked	2	The line was already processed.
kFlagPipeChar	1	line contains a |

Kind Values

Constant	Value	Description
kKindCode	1	Code
kKindDash	3	Dash line
kKindEqual	5	Equal line
kKindHR	2	HR line
kKindText	0	Text line
kKindTilde	4	Tilde line

127.4 class MarkdownParagraphMBS

127.4.1 class MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class ofr a paragraph.
Notes: A paragraph is a collection of Lines, with links to the next paragraph and (if it's a QUOTE, UL, or OL) to the reparsed contents of this paragraph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

127.4.2 Methods

127.4.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

127.4.4 Properties

127.4.5 Align as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The paragraph alignment.
Notes: Can be kAlignPara, kAlignImplicit or kAlignCenter.
(Read only property)

127.4.6 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

127.4.7 Down as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Recompiled contents of this paragraph.
Notes: (Read only property)

127.4.8 hNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header level for HDR.
Notes: (Read only property)

127.4.9 Ident as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ID tag for quote.
Notes: (Read only property)

127.4.10 Lang as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: lang attribute for CODE
Notes: (Read only property)

127.4.11 NextParagraph as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next paragraph.
Notes: (Read only property)

127.4.12 Text as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: All the text in this paragraph.
Notes: (Read only property)

127.4.13 Typ as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of paragraph.
Notes: See kType* constants.
(Read only property)

127.4.14 Constants

Alignment Values

Constant	Value	Description
kAlignCenter	2	Center
kAlignImplicit	0	Implicit alignment
kAlignPara	1	Paragraph

Typ Codes

Constant	Value	Description
kTypeAL	9	AL
kTypeCode	1	Code
kTypeDL	6	DL
kTypeHDR	11	HDR
kTypeHR	12	HR
kTypeHTML	4	HTML
kTypeListItem	10	ListItem
kTypeMarkup	3	Markup
kTypeOL	8	OL
kTypeQuote	2	Quote
kTypeSource	14	Source
kTypeStyle	5	Style
kTypeTable	13	Table
kTypeUL	7	UL
kTypeWhitespace	0	Whitespace

Chapter 128

Math

128.1 class BiggerNumberMBS

128.1.1 class BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a big number.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Var DaysPerYear As New BiggerNumberMBS(365.25)

Var LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BiggerNumberMBS(13810000000)

Var MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

Notes: This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.

Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

128.1.2 Methods

128.1.3 Abs as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries absolute value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(-123)
Var z as BiggerNumberMBS = o.Abs

MsgBox z.StringValue
```

Notes: Removes sign.
See also:

- 128.1.4 Abs(value as BiggerNumberMBS) as BiggerNumberMBS 17577

128.1.4 Abs(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Absolute value of x.
Example:

```
Var c As New BiggerNumberMBS(-3)
Var d As BiggerNumberMBS = BiggerNumberMBS.Abs(c)
Var e As BiggerNumberMBS = c.Abs

MsgBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 128.1.3 Abs as BiggerNumberMBS 17577

128.1.5 ACos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cosine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ACos(c)

Var x As Double = ACos(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula: acos(x) = pi/2 - asin(x)

128.1.6 ACosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic cosine.
Example:

```
Var c As New BiggerNumberMBS(2.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
Var x As Double = ACosHMBS(2.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: acosh(x) = ln(x + sqrt(x^2 - 1)) x in <1, infinity)

128.1.7 ACot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cotangent.
Notes: we're using the formula: actan(x) = pi/2 - atan(x)

128.1.8 ACoth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic cotangent.
Notes: acoth(x) = 0.5 * ln((x+1) / (x-1)) x in (-infinity, -1) or (1, infinity)

128.1.9 Add(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var d as new BiggerNumberMBS(3)
Var p as BiggerNumberMBS = x.Add(d)

MsgBox p.StringValue // shows 5
```

128.1.10 ASin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Sine.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.ASin(c)

Var x As Double = ASin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: Range is from -1 to 1.

128.1.11 ASinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic sine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Var x As Double = ASinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: asinh(x) = ln(x + sqrt(x^2 + 1))

128.1.12 ATan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ATan(c)

Var x As Double = ATan(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

128.1.13 ATanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Var x As Double = ATanhMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: atanh(x) = 0.5 * ln((1+x) / (1-x)) x in (-1, 1)

128.1.14 BitAnd(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise AND operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitAnd(y)
```

```
MsgBox r.StringValue
```

128.1.15 BitOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise or operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitOr(y)

MsgBox r.StringValue
```

128.1.16 BitXOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise xor operation.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(16)
Var r as BiggerNumberMBS = x.BitXOr(y)

MsgBox r.StringValue
```

128.1.17 Ceil as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a value representing the smallest integer that is greater than or equal to x.
Example:

```
Var c As New BiggerNumberMBS(-3.7)
Var d As BiggerNumberMBS = c.Ceil

MsgBox d // shows -3
```

Notes: e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3

Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

128.1.18 Constructor

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with zero value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS
MsgBox o.StringValue
```

See also:

- 128.1.19 Constructor(other as BiggerNumberMBS) 17582
- 128.1.20 Constructor(value as Currency) 17583
- 128.1.21 Constructor(value as Double) 17584
- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.25 Constructor(value as String) 17586
- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.19 Constructor(other as BiggerNumberMBS)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with other value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
Var c as BiggerNumberMBS = new BiggerNumberMBS(o)

MsgBox c.StringValue
```

See also:

- 128.1.18 Constructor 17582
- 128.1.20 Constructor(value as Currency) 17583
- 128.1.21 Constructor(value as Double) 17584
- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.25 Constructor(value as String) 17586
- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.20 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number object with a currency object.
Example:

```
Var v as Currency = 123.456
Var b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.1.21 Constructor(value as Double) 17584
- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.25 Constructor(value as String) 17586
- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.21 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with double value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.22 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

- 128.1.27 Constructor(value as UInt64) 17587

128.1.23 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

- 128.1.27 Constructor(value as UInt64) 17587

128.1.24 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as new BiggerNumberMBS(v)
```

MsgBox b.StringValue

See also:

- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.25 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with string value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS("123.456")
MsgBox o.StringValue
```

- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.26 Constructor(value as UInt32) 17587
- 128.1.27 Constructor(value as UInt64) 17587

128.1.26 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.1.21 Constructor(value as Double) 17584
- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.25 Constructor(value as String) 17586
- 128.1.27 Constructor(value as UInt64) 17587

128.1.27 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.1.18 Constructor 17582

- 128.1.20 Constructor(value as Currency) 17583
- 128.1.21 Constructor(value as Double) 17584

- 128.1.22 Constructor(value as Int32) 17584
- 128.1.23 Constructor(value as Int64) 17585
- 128.1.24 Constructor(value as Single) 17585
- 128.1.25 Constructor(value as String) 17586
- 128.1.26 Constructor(value as UInt32) 17587

128.1.28 Cos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the cosine value.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Cos(c)

Var x As Double = Cos(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cos(x) = sin(x + PI/2).

128.1.29 Cosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cosine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Var x As Double = CosHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cosh(x)= (e^x + e^(-x)) / 2.

128.1.30 Cot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Cotangent.
Notes: We're using the formula tan(x) = cos(x) / sin(x).

128.1.31 Coth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cotangent.
Notes: We're using the formula coth(x)= (e^x + e^(-x)) / (e^x - e^(-x))

128.1.32 DegToDeg(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format into one value.
Notes: long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

128.1.33 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to gradians.
See also:

• 128.1.34 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS 17590

128.1.34 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 200 / 180
See also:

• 128.1.33 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 17589

128.1.35 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to radians.
See also:

• 128.1.36 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS 17590

128.1.36 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to radians.
Notes: It returns: x * pi / 180
See also:

• 128.1.35 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 17590

128.1.37 Divide(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides the number.
Example:

```
Var x as new BiggerNumberMBS(8)
Var d as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Divide(d)
```

```
MsgBox p.StringValue // shows 4
```

128.1.38 E as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.e
MsgBox b.StringValue
```

128.1.39 Equals(other as BiggerNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two numbers are the same.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(123)
Var z as BiggerNumberMBS = new BiggerNumberMBS(123)

if o.Equals(z) then
MsgBox "equal"
else
Break // error
end if
```

Notes: Returns true if equal.

128.1.40 Exp(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates e^value.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = BiggerNumberMBS.Exp(x)

MsgBox p.StringValue // shows e^2 = 7.38
```

128.1.41 Floor as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any fraction part.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
Var s as BiggerNumberMBS = o.Floor

MsgBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
Var b as BiggerNumberMBS = a.Floor

MsgBox b.StringValue
```

128.1.42 Frac as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the fraction part.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
Var s as BiggerNumberMBS = o.Frac

MsgBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.5)
Var b as BiggerNumberMBS = a.Frac

MsgBox b.StringValue
```

128.1.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o as new BiggerNumberMBS(1234)

// show as hex
```

```
MsgBox o.GetStringValue(16)

// show as number with comma and 3 digits
Var z as new BiggerNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

Notes: Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.
See also:

- 128.1.44 GetStringValue(Conversion as BigNumberConversionMBS) as String 17593

128.1.44 GetStringValue(Conversion as BigNumberConversionMBS) as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o As New BiggerNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6
```

Break

See also:

- 128.1.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String 17592

128.1.45 GradToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 180 / 200

128.1.46 GradToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts gradians to radians.
Notes: It returns: x * pi / 200.

128.1.47 HalfPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi/2.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.HalfPi
MsgBox b.StringValue
```

128.1.48 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries what implementation is used for this platform.
Notes: Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

128.1.49 Ln(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates natural logarithm.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = BiggerNumberMBS.Ln(x)

MsgBox p.StringValue // shows ln(2) = 0.69
```

128.1.50 Ln10 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(10).
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Ln10
MsgBox b.StringValue
```

128.1.51 Ln2 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(2).
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Ln2
MsgBox b.StringValue
```

128.1.52 Log(value as BiggerNumberMBS, base as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates logarithm in a given base.
Example:

```
Var x as new BiggerNumberMBS(100)
Var d as new BiggerNumberMBS(10)
Var p as BiggerNumberMBS = BiggerNumberMBS.Log(x, d)
```

```
MsgBox p.StringValue // shows ln(100)/ln(10) = 2
```

128.1.53 Max as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with maximum value.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Min
MsgBox b.StringValue
```

128.1.54 Min as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with minimum value.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Min
MsgBox b.StringValue
```

128.1.55 Modulate(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates a number.
Example:

```
Var x as new BiggerNumberMBS(17)
Var y as new BiggerNumberMBS(3)
Var r as BiggerNumberMBS = x.Modulate(y)

MsgBox r.StringValue
```

Notes: Similar to mod keyword in Xojo.

128.1.56 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates by 2.
Example:

```
Var x as new BiggerNumberMBS(8)
Var y as new BiggerNumberMBS(9)

MsgBox str(x.Modulate2)+" "+str(y.Modulate2)
```

Notes: Returns 0 or 1.

128.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two numbers.
Example:

```
Var x as new BiggerNumberMBS(8)
Var d as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16
```

See also:

- 128.1.58 Multiply(value as Integer) as BiggerNumberMBS 17597
- 128.1.59 Multiply(value as UInt32) as BiggerNumberMBS 17598

128.1.58 Multiply(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an integer.
Example:

```
Var x as new BiggerNumberMBS(2)
Var p as BiggerNumberMBS = x.Multiply(3)

MsgBox p.StringValue // shows 6
```

See also:

- 128.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 17597

• 128.1.59 Multiply(value as UInt32) as BiggerNumberMBS 17598

128.1.59 Multiply(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an unsigned integer.
Example:

```
Var x as new BiggerNumberMBS(17)
Var r as BiggerNumberMBS = x.Multiply(3)

MsgBox r.StringValue
```

See also:

• 128.1.57 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 17597

• 128.1.58 Multiply(value as Integer) as BiggerNumberMBS 17597

128.1.60 Nan as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value NaN.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Nan
MsgBox b.StringValue
```

128.1.61 Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the number.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(123)
Var z as BiggerNumberMBS = o.Negate

MsgBox z.StringValue
```

128.1.62 NumberWithCurrency(value as Currency) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a currency value.
Example:

```
Var v as Currency = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithCurrency(v)

MsgBox b.StringValue
```

128.1.63 NumberWithDouble(value as Double) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a 64-bit floating number.
Example:

```
Var v as Double = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithDouble(v)

MsgBox b.StringValue
```

128.1.64 NumberWithInt32(value as Int32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt32(v)

MsgBox b.StringValue
```

128.1.65 NumberWithInt64(value as Int64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt64(v)
```

MsgBox b.StringValue

128.1.66 NumberWithInteger(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an integer.
Example:

```
Var v as Integer = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInteger(v)

MsgBox b.StringValue
```

128.1.67 NumberWithSingle(value as single) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithSingle(v)

MsgBox b.StringValue
```

128.1.68 NumberWithString(value as String) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with value from string.
Example:

```
Var v as String = "123"
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithString(v)

MsgBox b.StringValue
```

128.1.69 NumberWithUInt32(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt32(v)

MsgBox b.StringValue
```

128.1.70 NumberWithUInt64(value as UInt64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 64-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt64(v)

MsgBox b.StringValue
```

128.1.71 NumberWithUInteger(value as UInteger) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned integer.
Example:

```
Var v as UInteger = 123
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInteger(v)

MsgBox b.StringValue
```

128.1.72 NumberWithVariant(value as Variant) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number based on a variant.
Example:

```
Var v as Variant = 123.456
Var b as BiggerNumberMBS = BiggerNumberMBS.NumberWithVariant(v)

MsgBox b.StringValue
```

Notes: Internally redirects to other NumberWith functions based on the value type.

128.1.73 One as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value one.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.One
MsgBox b.StringValue
```

128.1.74 Operator_Add(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// add
Var c as BiggerNumberMBS = a + b

MsgBox c.StringValue
```

128.1.75 Operator_AddRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// add
Var c as BiggerNumberMBS = a + b

MsgBox c.StringValue
```

128.1.76 Operator_Compare(other as BiggerNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two numbers.
Example:

```
Var a as new BiggerNumberMBS(1.2)
Var b as new BiggerNumberMBS(1.2)
Var c as new BiggerNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

128.1.77 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts big number to string automatically.
Example:

```
Var b as new BiggerNumberMBS
Var n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MsgBox b
```

See also:

• 128.1.78 Operator_Convert(value as String) 17604

128.1.78 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a string to a big number.
Example:

```
Var b as new BiggerNumberMBS
Var n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
Var d as Double = b
MsgBox str(d)
```

See also:

• 128.1.77 Operator_Convert as String 17603

128.1.79 Operator_Divide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a / b

MsgBox r.StringValue
```

128.1.80 Operator_DivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.

128.1.81 Operator_IntegerDivide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a \b

MsgBox r.StringValue
```

Notes: Same as normal divide, but removes fraction part.

128.1.82 Operator_IntegerDivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

128.1.83 Operator_Modulo(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.
Example:

```
Var a as new BiggerNumberMBS(9.3)
Var b as new BiggerNumberMBS(3.0)

Var r as BiggerNumberMBS = a mod b

MsgBox r.StringValue
```

128.1.84 Operator_ModuloRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.

128.1.85 Operator_Multiply(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Var DaysPerYear As New BiggerNumberMBS(365.25)

Var LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BiggerNumberMBS(13810000000)

Var MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

128.1.86 Operator_MultiplyRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.

128.1.87 Operator_Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates a number.
Example:

```
Var a as new BiggerNumberMBS(3)
```

```
// negate
Var c as BiggerNumberMBS = -a

MsgBox c.StringValue
```

128.1.88 Operator_Power(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// pow
Var c as BiggerNumberMBS = a ^b

MsgBox c.StringValue
```

128.1.89 Operator_PowerRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.

128.1.90 Operator_Subtract(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.
Example:

```
Var a as new BiggerNumberMBS(3)
Var b as new BiggerNumberMBS(4)

// subtract
Var c as BiggerNumberMBS = a - b

MsgBox c.StringValue
```

128.1.91 Operator_SubtractRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.

128.1.92 Pi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Pi
MsgBox b.StringValue
```

128.1.93 Pow(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var o as new BiggerNumberMBS(5)
Var p as BiggerNumberMBS = x.Pow(o)

MsgBox p.StringValue // shows 32
```

128.1.94 RadToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to degrees.
Notes: It returns: x * 180 / pi.

128.1.95 RadToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to gradians.

Notes: it returns: x * 200 / pi

128.1.96 Rand as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates random number.
Notes: Mantissa and exponent are filled with random bytes to generate a random names.

128.1.97 Root(value as BiggerNumberMBS, index as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indexth Root of x
Example:

```
Var c As New BiggerNumberMBS(5*5*5*5)
Var e As New BiggerNumberMBS(4)
Var d As BiggerNumberMBS = BiggerNumberMBS.Root(c, e)

MsgBox d.StringValue
```

Notes: index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

128.1.98 Round as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rounds the number.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
Var s as BiggerNumberMBS = o.Round

MsgBox s.StringValue

Var a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
Var b as BiggerNumberMBS = a.Round

MsgBox b.StringValue
```

128.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
// set to 1.2 and show
Var o as new BiggerNumberMBS

Var after as string
Var ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MsgBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

Notes: Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.
See also:

- 128.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 17610
- 128.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 17611

128.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BiggerNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

o.SetStringValue("1'234'567,89", conv)

MessageBox o.StringValue
```

See also:

- 128.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 17610
- 128.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 17611

128.1.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BiggerNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var after As String
Var read As Boolean

o.SetStringValue("1'234'567,89abc", conv, after, read)
// read will be true and after contains "abc".

Var value As String = o.StringValue

Var after2 As String
```

```
Var read2 As Boolean

o.SetStringValue("abc", conv, after2, read2)
// read2 will be false and after2 contains "abc".

Break
```

Notes: Returns the text after the given text following the number in AfterText parameter.
Sets ValueRead if a value was read.
See also:

- 128.1.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 17610
- 128.1.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 17610

128.1.102 Sgn(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries sign of number.
Example:

```
Var negative As New BiggerNumberMBS(-5.6)
Var sign1 As BiggerNumberMBS = BiggerNumberMBS.Sgn(negative)

Var positive As New BiggerNumberMBS(5.6)
Var sign2 As BiggerNumberMBS = BiggerNumberMBS.Sgn(positive)

Break
```

128.1.103 Sin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sinus value.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Sin(c)

Var x As Double = Sin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

128.1.104 Sinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Sine.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Var x As Double = SinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula sinh(x) = (e^x - e^(-x)) / 2

128.1.105 SkipFraction as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function skips the fraction.
Example:

```
Var c As New BiggerNumberMBS(-3.7)
Var d As BiggerNumberMBS = c.SkipFraction

MsgBox d // shows -3
```

Notes: Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2
-2.7 =>2

128.1.106 Sqrt as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square root.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(256)
Var s as BiggerNumberMBS = o.Sqrt

MsgBox s.StringValue
```

128.1.107 Subtract(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts a number.
Example:

```
Var x as new BiggerNumberMBS(2)
Var d as new BiggerNumberMBS(3)
Var p as BiggerNumberMBS = x.Subtract(d)

MsgBox p.StringValue // shows -1
```

128.1.108 Tan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Tangent.
Example:

```
Var c As New BiggerNumberMBS(1.0)
Var d As BiggerNumberMBS = BiggerNumberMBS.Tan(c)

Var x As Double = Tan(1.0)
```

```
MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tan(x) = sin(x) / cos(x).

128.1.109 Tanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Tangent.
Example:

```
Var c As New BiggerNumberMBS(0.5)
Var d As BiggerNumberMBS = BiggerNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Var x As Double = TanHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tanh(x)= (e^x - e^(-x)) / (e^x + e^(-x))

128.1.110 TwoPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value 2 * PI.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.TwoPi
MsgBox b.StringValue
```

128.1.111 Zero as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BiggerNumberMBS = BiggerNumberMBS.Zero
MsgBox b.StringValue
```

128.1.112 Properties

128.1.113 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets/Queries currency value.
Example:

```
Var u as Currency = 1234.5678
Var b as new BiggerNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

Notes: (Read and Write property)

128.1.114 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exponent for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

128.1.115 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

128.1.116 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mantissa for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

128.1.117 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the double value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

128.1.118 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as Int64.
Example:

```
Var u as Int64 = &h7FFFFFFFFFFFFFFF // maximum Int64
Var b as new BiggerNumberMBS(u)
MsgBox str(b.Int64Value)

Var one as new BiggerNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

Notes: (Read and Write property)

128.1.119 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the integer value.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

128.1.120 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this number is an integer.
Example:

```
Var o as BiggerNumberMBS = new BiggerNumberMBS(1)
Var z as BiggerNumberMBS = new BiggerNumberMBS(1.5)

if o.IsInteger then
MsgBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MsgBox z.StringValue+" is not integer"
end if
```

Notes: If true, there are no digits after the dot.
(Read only property)

128.1.121 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an invalid number.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.zero
Var z as BiggerNumberMBS = BiggerNumberMBS.Nan

if z.IsNan then
MsgBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
```

```
MsgBox o.StringValue+" is not NaN"
end if
```

Notes: (Read only property)

128.1.122 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value is negative.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.one
Var z as BiggerNumberMBS = BiggerNumberMBS.one.Negate

if z.IsNegative then
MsgBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o.StringValue+" is not negative"
end if
```

Notes: (Read only property)

128.1.123 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if value is zero.
Example:

```
Var o as BiggerNumberMBS = BiggerNumberMBS.one
Var z as BiggerNumberMBS = BiggerNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue+" is zero"
else
break // error
end if
```

```
if o.IsZero then
break // error
else
MsgBox o.StringValue+" is not zero"
end if
```

Notes: (Read only property)

128.1.124 StringValue as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value of text.
Example:

```
// set to 1.2 and show
Var o as new BiggerNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue
```

Notes: (Read and Write property)
See also:

- 128.1.127 StringValue(Base as Integer) as String 17621

128.1.125 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as UInt64.
Example:

```
Var u as UInt64 = 12345678901234567890
Var b as new BiggerNumberMBS(u)
MsgBox str(b.UInt64Value)
```

Notes: (Read and Write property)

128.1.126 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries/Sets value with variant.
Notes: Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

128.1.127 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set string value with a given base.
Example:

```
Var o as new BiggerNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:

- 128.1.124 StringValue as String 17620

128.2 class BigNumberConversionMBS

128.2.1 class BigNumberConversionMBS

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class holds information to convert numbers to/from text.
Example:

```
Var o As New BigNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6

Break
```

128.2.2 Methods

128.2.3 Constructor

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

128.2.4 Properties

128.2.5 Base as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: base (radix) on which the value will be shown (or read)
Notes: default: 10
(Read and Write property)

128.2.6 BaseRound as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to round last digit.
Notes: if 'base_round' is true and 'base' is different from 2, 4, 8, or 16 and the result value is not an integer then we make an additional rounding (after converting the last digit from the result is skipped)
default: true
(Read and Write property)

128.2.7 Comma as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The main comma operator (used when reading and writing)
Notes: default is a dot "."
(Read and Write property)

128.2.8 Comma2 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Additional comma operator (used only when reading)
Example:

```
Var o1 As New BigNumberMBS
Var o2 As New BigNumberMBS
Var o3 As New BigNumberMBS

Var conv As New BigNumberConversionMBS
Var after1, after2, after3 As String
Var read1, read2, read3 As Boolean

conv.Comma = "."
conv.Comma2 = ","

// by default comma accepts dot and comma
o1.SetStringValue("1,2", conv, after1, read1)
o2.SetStringValue("1.2", conv, after2, read2)

// now set us conversion
conv.Comma = "."
conv.Comma2 = ""
conv.Group = ","

o3.SetStringValue("1,234.5", conv, after3, read3)

Var value1 As String = o1.StringValue
Var value2 As String = o2.StringValue
Var value3 As String = o3.StringValue

Break
```

Notes: If you don't want it just set it to zero.
default is a comma ','

This allowes you to convert from a value:
123.45 as well as from 123,45
(Read and Write property)

128.2.9 Group1 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: It sets the character which is used for grouping after comma.
Notes: If group1 and group2 are both a space then: 1234,56789 will be printed as: 1 234,567 89
If you don't want grouping just set it to "" (which is default)
(Read and Write property)

128.2.10 Group2 as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: It sets the character which is used for grouping before comma.
Notes: If group1 and group2 are both a space then: 1234,56789 will be printed as: 1 234,567 89
If you don't want grouping just set it to "" (which is default)
(Read and Write property)

128.2.11 GroupDigits as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: How many digits should be grouped (it is used if 'group' is non "")
Notes: default: 3
(Read and Write property)

128.2.12 Round as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tells how many digits after comma are possible.
Notes: default: -1 which means all digits are printed

set it to zero if you want integer value only.

for example when the value is: 12.345678 and 'round' is 4 then the result will be 12.3457 (the last digit was rounded)
(Read and Write property)

128.2.13 Scientific as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to use scientific mode.

Notes: If true the value will be always shown in the scientific mode, e.g: 123e+30

default: false
(Read and Write property)

128.2.14 ScientificFrom as Integer

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Scientific from this exponent value.
Notes: If scient is false then the value will be printed in the scientific mode only if the exponent is greater than ScientificFrom.

default: 15
(Read and Write property)

128.2.15 TrimZeroes as Boolean

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to trim zeros.
Notes: If true that not mattered digits in the mantissa will be cut off
(zero characters at the end – after the comma operator)
e.g. 1234,78000 will be: 1234,78
default: true
(Read and Write property)

128.3 class BigNumberErrorExceptionMBS

128.3.1 class BigNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class for big number math.
Example:

```
Var b as new BigNumberMBS(5)
Var c as BigNumberMBS = BigNumberMBS.Zero

// raises exception due to division by zero
Var x as BigNumberMBS = b/c
```

Notes: Raised when operations fail due to division by zero, invalid numbers or overflow/underflow.
Subclass of the RuntimeException class.

- Big numbers for Xojo

Xojo Developer Magazine

- 17.6, page 65: Big Numbers and Large Numbers, How you can use the BigNumberMBS and LargeNumberMBS class in Xojo by Stefanie Juchmes

128.4 class BigNumberMBS

128.4.1 class BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a big number.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BigNumberMBS(24 * 3600)

Var DaysPerYear As New BigNumberMBS(365.25)

Var LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BigNumberMBS(13810000000)

Var MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

Notes: This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.
Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

128.4.2 Methods

128.4.3 Abs as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries absolute value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(-123)
Var z as BigNumberMBS = o.Abs

MsgBox z.StringValue
```

Notes: Removes sign.
See also:

- 128.4.4 Abs(value as BigNumberMBS) as BigNumberMBS 17630

128.4.4 Abs(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Absolute value of x.
Example:

```
Var c As New BigNumberMBS(-3)
Var d As BigNumberMBS = BigNumberMBS.Abs(c)
Var e As BigNumberMBS = c.Abs

MsgBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 128.4.3 Abs as BigNumberMBS 17630

128.4.5 ACos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cosine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ACos(c)

Var x As Double = ACos(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula: acos(x) = pi/2 - asin(x)

128.4.6 ACosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic cosine.
Example:

```
Var c As New BigNumberMBS(2.0)
Var d As BigNumberMBS = BigNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
Var x As Double = ACosHMBS(2.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: acosh(x) = ln(x + sqrt(x^2 - 1)) x in <1, infinity)

128.4.7 ACot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Cotangent.
Notes: we're using the formula: actan(x) = pi/2 - atan(x)

128.4.8 ACoth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic cotangent.
Notes: acoth(x) = 0.5 * ln((x+1) / (x-1)) x in (-infinity, -1) or (1, infinity)

128.4.9 Add(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var x as new BigNumberMBS(2)
Var d as new BigNumberMBS(3)
Var p as BigNumberMBS = x.Add(d)

MsgBox p.StringValue // shows 5
```

128.4.10 ASin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Sine.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.ASin(c)

Var x As Double = ASin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: Range is from -1 to 1.

128.4.11 ASinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverse hyperbolic sine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Var x As Double = ASinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: asinh(x) = ln(x + sqrt(x^2 + 1))

128.4.12 ATan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Arc Tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ATan(c)

Var x As Double = ATan(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

128.4.13 ATanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates inverse hyperbolic tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Var x As Double = ATanhMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: atanh(x) = 0.5 * ln((1+x) / (1-x)) x in (-1, 1)

128.4.14 BitAnd(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise AND operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitAnd(y)
```

```
MsgBox r.StringValue
```

128.4.15 BitOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise or operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitOr(y)

MsgBox r.StringValue
```

128.4.16 BitXOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise xor operation.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(16)
Var r as BigNumberMBS = x.BitXOr(y)

MsgBox r.StringValue
```

128.4.17 Ceil as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns a value representing the smallest integer that is greater than or equal to x.
Example:

```
Var c As New BigNumberMBS(-3.7)
Var d As BigNumberMBS = c.Ceil

MsgBox d // shows -3
```

Notes: e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3

Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

128.4.18 Constructor

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with zero value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS
MsgBox o.StringValue
```

See also:

- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.19 Constructor(other as BigNumberMBS)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with other value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
Var c as BigNumberMBS = new BigNumberMBS(o)

MsgBox c.StringValue
```

- 128.4.21 Constructor(value as Double) 17637
- 128.4.22 Constructor(value as Int32) 17637
- 128.4.23 Constructor(value as Int64) 17638
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.20 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number object with a currency object.
Example:

```
Var v as Currency = 123.456
Var b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.4.18 Constructor 17635

- 128.4.22 Constructor(value as Int32) 17637
- 128.4.23 Constructor(value as Int64) 17638
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.21 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with double value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

See also:

- 128.4.18 Constructor 17635

- 128.4.20 Constructor(value as Currency) 17636
- 128.4.22 Constructor(value as Int32) 17637
- 128.4.23 Constructor(value as Int64) 17638
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.22 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.4.18 Constructor 17635

- 128.4.21 Constructor(value as Double) 17637

- 128.4.23 Constructor(value as Int64) 17638
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.23 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.4.18 Constructor 17635

- 128.4.21 Constructor(value as Double) 17637
- 128.4.22 Constructor(value as Int32) 17637
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.24 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as new BigNumberMBS(v)
```

MsgBox b.StringValue

See also:

- 128.4.18 Constructor 17635

- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.25 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with string value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS("123.456")
MsgBox o.StringValue
```

See also:

- 128.4.18 Constructor 17635

- 128.4.26 Constructor(value as UInt32) 17640
- 128.4.27 Constructor(value as UInt64) 17640

128.4.26 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.4.18 Constructor 17635

- 128.4.25 Constructor(value as String) 17639
- 128.4.27 Constructor(value as UInt64) 17640

128.4.27 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 128.4.18 Constructor 17635
- 128.4.19 Constructor(other as BigNumberMBS) 17635
- 128.4.20 Constructor(value as Currency) 17636
- 128.4.21 Constructor(value as Double) 17637

- 128.4.22 Constructor(value as Int32) 17637
- 128.4.23 Constructor(value as Int64) 17638
- 128.4.24 Constructor(value as Single) 17638
- 128.4.25 Constructor(value as String) 17639
- 128.4.26 Constructor(value as UInt32) 17640

128.4.28 Cos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the cosine value.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Cos(c)

Var x As Double = Cos(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cos(x) = sin(x + PI/2).

128.4.29 Cosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cosine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Var x As Double = CosHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula cosh(x)= (e^x + e^(-x)) / 2.

128.4.30 Cot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Cotangent.
Notes: We're using the formula tan(x) = cos(x) / sin(x).

128.4.31 Coth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Cotangent.
Notes: We're using the formula coth(x)= (e^x + e^(-x)) / (e^x - e^(-x))

128.4.32 DegToDeg(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format into one value.
Notes: long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

128.4.33 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to gradians.
See also:

- 128.4.34 DegToGrad(value as BigNumberMBS) as BigNumberMBS 17643

128.4.34 DegToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 200 / 180
See also:

- 128.4.33 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 17642

128.4.35 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees in the long format to radians.
See also:

- 128.4.36 DegToRad(value as BigNumberMBS) as BigNumberMBS 17643

128.4.36 DegToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to radians.
Notes: It returns: x * pi / 180
See also:

- 128.4.35 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 17643

128.4.37 Divide(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides the number.
Example:

```
Var x as new BigNumberMBS(8)
Var d as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Divide(d)
```

```
MsgBox p.StringValue // shows 4
```

128.4.38 E as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.e
MsgBox b.StringValue
```

128.4.39 Equals(other as BigNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two numbers are the same.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(123)
Var z as BigNumberMBS = new BigNumberMBS(123)

if o.Equals(z) then
MsgBox "equal"
else
Break // error
end if
```

Notes: Returns true if equal.

128.4.40 Exp(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates e^value.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = BigNumberMBS.Exp(x)

MsgBox p.StringValue // shows e^2 = 7.38
```

128.4.41 Floor as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any fraction part.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.3)
Var s as BigNumberMBS = o.Floor

MsgBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.3)
Var b as BigNumberMBS = a.Floor

MsgBox b.StringValue
```

128.4.42 Frac as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the fraction part.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)
Var s as BigNumberMBS = o.Frac

MsgBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.5)
Var b as BigNumberMBS = a.Frac

MsgBox b.StringValue
```

128.4.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o as new BigNumberMBS(1234)

// show as hex
```

```
MsgBox o.GetStringValue(16)

// show as number with comma and 3 digits
Var z as new BigNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

Notes: Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.
See also:

- 128.4.44 GetStringValue(Conversion as BigNumberConversionMBS) as String 17646

128.4.44 GetStringValue(Conversion as BigNumberConversionMBS) as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
Var o As New BigNumberMBS(1234567.890)

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var s1 As String = o.GetStringValue(conv)
// 1'234'567,89

conv.Comma = "."
conv.Group = ","

Var s2 As String = o.GetStringValue(conv)
// 1,234,567,89

conv.Comma = ","
conv.Group = "'"
conv.Scientific = True

Var s3 As String = o.GetStringValue(conv)
// 1,235e+6
```

Break

See also:

- 128.4.43 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String 17645

128.4.45 GradToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts degrees to gradians.
Notes: it returns: x * 180 / 200

128.4.46 GradToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts gradians to radians.
Notes: It returns: x * pi / 200.

128.4.47 HalfPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi/2.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.HalfPi
MsgBox b.StringValue
```

128.4.48 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries what implementation is used for this platform.
Notes: Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

128.4.49 Ln(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates natural logarithm.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = BigNumberMBS.Ln(x)

MsgBox p.StringValue // shows ln(2) = 0.69
```

128.4.50 Ln10 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(10).
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Ln10
MsgBox b.StringValue
```

128.4.51 Ln2 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(2).
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Ln2
MsgBox b.StringValue
```

128.4.52 Log(value as BigNumberMBS, base as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates logarithm in a given base.
Example:

```
Var x as new BigNumberMBS(100)
Var d as new BigNumberMBS(10)
Var p as BigNumberMBS = BigNumberMBS.Log(x, d)
```

```
MsgBox p.StringValue // shows ln(100)/ln(10) = 2
```

128.4.53 Max as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with maximum value.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

128.4.54 Min as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with minimum value.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

128.4.55 Modulate(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates a number.
Example:

```
Var x as new BigNumberMBS(17)
Var y as new BigNumberMBS(3)
Var r as BigNumberMBS = x.Modulate(y)

MsgBox r.StringValue
```

Notes: Similar to mod keyword in Xojo.

128.4.56 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates by 2.
Example:

```
Var x as new BigNumberMBS(8)
Var y as new BigNumberMBS(9)

MsgBox str(x.Modulate2)+" "+str(y.Modulate2)
```

Notes: Returns 0 or 1.

128.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two numbers.
Example:

```
Var x as new BigNumberMBS(8)
Var d as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16
```

See also:

- 128.4.58 Multiply(value as Integer) as BigNumberMBS 17650
- 128.4.59 Multiply(value as UInt32) as BigNumberMBS 17651

128.4.58 Multiply(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an integer.
Example:

```
Var x as new BigNumberMBS(2)
Var p as BigNumberMBS = x.Multiply(3)

MsgBox p.StringValue // shows 6
```

See also:

- 128.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 17650

• 128.4.59 Multiply(value as UInt32) as BigNumberMBS 17651

128.4.59 Multiply(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an unsigned integer.
Example:

```
Var x as new BigNumberMBS(17)
Var r as BigNumberMBS = x.Multiply(3)

MsgBox r.StringValue
```

See also:

• 128.4.57 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 17650

• 128.4.58 Multiply(value as Integer) as BigNumberMBS 17650

128.4.60 Nan as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value NaN.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Nan
MsgBox b.StringValue
```

128.4.61 Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the number.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(123)
Var z as BigNumberMBS = o.Negate

MsgBox z.StringValue
```

128.4.62 NumberWithCurrency(value as Currency) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a currency value.
Example:

```
Var v as Currency = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithCurrency(v)

MsgBox b.StringValue
```

128.4.63 NumberWithDouble(value as Double) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a 64-bit floating number.
Example:

```
Var v as Double = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithDouble(v)

MsgBox b.StringValue
```

128.4.64 NumberWithInt32(value as Int32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 32-bit integer.
Example:

```
Var v as Int32 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInt32(v)

MsgBox b.StringValue
```

128.4.65 NumberWithInt64(value as Int64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 64-bit integer.
Example:

```
Var v as Int64 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInt64(v)
```

MsgBox b.StringValue

128.4.66 NumberWithInteger(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an integer.
Example:

```
Var v as Integer = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithInteger(v)

MsgBox b.StringValue
```

128.4.67 NumberWithSingle(value as single) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an 32-bit floating point number.
Example:

```
Var v as Single = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithSingle(v)

MsgBox b.StringValue
```

128.4.68 NumberWithString(value as String) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with value from string.
Example:

```
Var v as String = "123"
Var b as BigNumberMBS = BigNumberMBS.NumberWithString(v)

MsgBox b.StringValue
```

128.4.69 NumberWithUInt32(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 32-bit integer.
Example:

```
Var v as UInt32 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInt32(v)

MsgBox b.StringValue
```

128.4.70 NumberWithUInt64(value as UInt64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 64-bit integer.
Example:

```
Var v as UInt64 = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInt64(v)

MsgBox b.StringValue
```

128.4.71 NumberWithUInteger(value as UInteger) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned integer.
Example:

```
Var v as UInteger = 123
Var b as BigNumberMBS = BigNumberMBS.NumberWithUInteger(v)

MsgBox b.StringValue
```

128.4.72 NumberWithVariant(value as Variant) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number based on a variant.
Example:

```
Var v as Variant = 123.456
Var b as BigNumberMBS = BigNumberMBS.NumberWithVariant(v)

MsgBox b.StringValue
```

Notes: Internally redirects to other NumberWith functions based on the value type.

128.4.73 One as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value one.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.One
MsgBox b.StringValue
```

128.4.74 Operator_Add(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// add
Var c as BigNumberMBS = a + b

MsgBox c.StringValue
```

128.4.75 Operator_AddRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// add
Var c as BigNumberMBS = a + b

MsgBox c.StringValue
```

128.4.76 Operator_Compare(other as BigNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two numbers.
Example:

```
Var a as new BigNumberMBS(1.2)
Var b as new BigNumberMBS(1.2)
Var c as new BigNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

128.4.77 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts big number to string automatically.
Example:

```
Var b as new BigNumberMBS
Var n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MsgBox b
```

See also:

• 128.4.78 Operator_Convert(value as String) 17657

128.4.78 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a string to a big number.
Example:

```
Var b as new BigNumberMBS
Var n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
Var d as Double = b
MsgBox str(d)
```

See also:

• 128.4.77 Operator_Convert as String 17656

128.4.79 Operator_Divide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a / b

MsgBox r.StringValue
```

128.4.80 Operator_DivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.

128.4.81 Operator_IntegerDivide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a \b

MsgBox r.StringValue
```

Notes: Same as normal divide, but removes fraction part.

128.4.82 Operator_IntegerDivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

128.4.83 Operator_Modulo(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.
Example:

```
Var a as new BigNumberMBS(9.3)
Var b as new BigNumberMBS(3.0)

Var r as BigNumberMBS = a mod b

MsgBox r.StringValue
```

128.4.84 Operator_ModuloRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.

128.4.85 Operator_Multiply(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.
Example:

```
// speed of light in m/s
Var SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Var SecondsPerDay As New BigNumberMBS(24 * 3600)

Var DaysPerYear As New BigNumberMBS(365.25)

Var LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Var AgeOfUniversum As New BigNumberMBS(13810000000)

Var MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

128.4.86 Operator_MultiplyRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.

128.4.87 Operator_Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates a number.
Example:

```
Var a as new BigNumberMBS(3)

// negate
```

```
Var c as BigNumberMBS = -a

MsgBox c.StringValue
```

128.4.88 Operator_Power(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// pow
Var c as BigNumberMBS = a ^b

MsgBox c.StringValue
```

128.4.89 Operator_PowerRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.

128.4.90 Operator_Subtract(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.
Example:

```
Var a as new BigNumberMBS(3)
Var b as new BigNumberMBS(4)

// subtract
Var c as BigNumberMBS = a - b

MsgBox c.StringValue
```

128.4.91 Operator_SubtractRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.

128.4.92 Pi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Pi
MsgBox b.StringValue
```

128.4.93 Pow(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the number.
Example:

```
Var x as new BigNumberMBS(2)
Var o as new BigNumberMBS(5)
Var p as BigNumberMBS = x.Pow(o)

MsgBox p.StringValue // shows 32
```

128.4.94 RadToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to degrees.
Notes: It returns: x * 180 / pi.

128.4.95 RadToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts radians to gradians.
Notes: it returns: x * 200 / pi

128.4.96 Rand as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates random number.
Notes: Mantissa and exponent are filled with random bytes to generate a random names.

128.4.97 Root(value as BigNumberMBS, index as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Indexth Root of x
Example:

```
Var c As New BigNumberMBS(5*5*5*5)
Var e As New BigNumberMBS(4)
Var d As BigNumberMBS = BigNumberMBS.Root(c, e)

MsgBox d.StringValue
```

Notes: index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

128.4.98 Round as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rounds the number.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.3)
Var s as BigNumberMBS = o.Round

MsgBox s.StringValue

Var a as BigNumberMBS = new BigNumberMBS(-2.3)
Var b as BigNumberMBS = a.Round

MsgBox b.StringValue
```

128.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
// set to 1.2 and show
Var o as new BigNumberMBS

Var after as string
Var ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MsgBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

Notes: Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.
See also:

- 128.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 17663
- 128.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 17664

128.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BigNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

o.SetStringValue("1'234'567,89", conv)

MessageBox o.StringValue
```

See also:

- 128.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 17663
- 128.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean) 17664

128.4.101 SetStringValue(Text As String, Conversion as BigNumberConversionMBS, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
Var o As New BigNumberMBS

Var conv As New BigNumberConversionMBS
conv.Comma = ","
conv.Group = "'"
conv.Scientific = False
conv.Round = 3

Var after As String
Var read As Boolean

o.SetStringValue("1'234'567,89abc", conv, after, read)
// read will be true and after contains "abc".

Var value As String = o.StringValue

Var after2 As String
```

```
Var read2 As Boolean

o.SetStringValue("abc", conv, after2, read2)
// read2 will be false and after2 contains "abc".

Break
```

Notes: Returns the text after the given text following the number in AfterText parameter.
Sets ValueRead if a value was read.
See also:

- 128.4.99 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean) 17663
- 128.4.100 SetStringValue(Text As String, Conversion as BigNumberConversionMBS) 17663

128.4.102 Sgn(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries sign of number.
Example:

```
Var negative As New BigNumberMBS(-5.6)
Var sign1 As BigNumberMBS = BigNumberMBS.Sgn(negative)

Var positive As New BigNumberMBS(5.6)
Var sign2 As BigNumberMBS = BigNumberMBS.Sgn(positive)

Break
```

128.4.103 Sin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sinus value.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Sin(c)

Var x As Double = Sin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

128.4.104 Sinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Sine.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Var x As Double = SinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: we're using the formula sinh(x) = (e^x - e^(-x)) / 2

128.4.105 SkipFraction as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function skips the fraction.
Example:

```
Var c As New BigNumberMBS(-3.7)
Var d As BigNumberMBS = c.SkipFraction

MsgBox d // shows -3
```

Notes: Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2
-2.7 =>2

128.4.106 Sqrt as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square root.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(256)
Var s as BigNumberMBS = o.Sqrt

MsgBox s.StringValue
```

128.4.107 Subtract(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts a number.
Example:

```
Var x as new BigNumberMBS(2)
Var d as new BigNumberMBS(3)
Var p as BigNumberMBS = x.Subtract(d)

MsgBox p.StringValue // shows -1
```

128.4.108 Tan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Tangent.
Example:

```
Var c As New BigNumberMBS(1.0)
Var d As BigNumberMBS = BigNumberMBS.Tan(c)

Var x As Double = Tan(1.0)
```

```
MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tan(x) = sin(x) / cos(x).

128.4.109 Tanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Hyperbolic Tangent.
Example:

```
Var c As New BigNumberMBS(0.5)
Var d As BigNumberMBS = BigNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Var x As Double = TanHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

Notes: We're using the formula tanh(x)= (e^x - e^(-x)) / (e^x + e^(-x))

128.4.110 TwoPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value 2 * PI.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.TwoPi
MsgBox b.StringValue
```

128.4.111 Zero as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
Var b as BigNumberMBS = BigNumberMBS.Zero
MsgBox b.StringValue
```

128.4.112 Properties

128.4.113 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets/Queries currency value.
Example:

```
Var u as Currency = 1234.5678
Var b as new BigNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

Notes: (Read and Write property)

128.4.114 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exponent for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

128.4.115 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

128.4.116 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mantissa for this number.
Notes: Setting this may need to update flags, too.
(Read and Write property)

128.4.117 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the double value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

128.4.118 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as Int64.
Example:

```
Var u as Int64 = &h7FFFFFFFFFFFFFFF // maximum Int64
Var b as new BigNumberMBS(u)
MsgBox str(b.Int64Value)

Var one as new BigNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

Notes: (Read and Write property)

128.4.119 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or Set the integer value.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

128.4.120 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this number is an integer.
Example:

```
Var o as BigNumberMBS = new BigNumberMBS(1)
Var z as BigNumberMBS = new BigNumberMBS(1.5)

if o.IsInteger then
MsgBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MsgBox z.StringValue+" is not integer"
end if
```

Notes: If true, there are no digits after the dot.
(Read only property)

128.4.121 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an invalid number.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.zero
Var z as BigNumberMBS = BigNumberMBS.Nan

if z.IsNan then
MsgBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
```

```
MsgBox o.StringValue+" is not NaN"
end if
```

Notes: (Read only property)

128.4.122 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value is negative.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.one
Var z as BigNumberMBS = BigNumberMBS.one.Negate

if z.IsNegative then
MsgBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o.StringValue+" is not negative"
end if
```

Notes: (Read only property)

128.4.123 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if value is zero.
Example:

```
Var o as BigNumberMBS = BigNumberMBS.one
Var z as BigNumberMBS = BigNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue+" is zero"
else
break // error
end if
```

```
if o.IsZero then
break // error
else
MsgBox o.StringValue+" is not zero"
end if
```

Notes: (Read only property)

128.4.124 StringValue as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set string value of text.
Example:

```
// set to 1.2 and show
Var o as new BigNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue
```

Notes: (Read and Write property)
See also:

- 128.4.127 StringValue(Base as Integer) as String 17674

128.4.125 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set value as UInt64.
Example:

```
Var u as UInt64 = 12345678901234567890
Var b as new BigNumberMBS(u)
MsgBox str(b.UInt64Value)
```

Notes: (Read and Write property)

128.4.126 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries/Sets value with variant.
Notes: Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

128.4.127 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set string value with a given base.
Example:

```
Var o as new BigNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:

- 128.4.124 StringValue as String 17673

128.5 Globals

128.5.1 IsValidCreditCardNumberMBS(Number as String) as boolean

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a credit card number.
Example:

```
MsgBox "test 49927398716 gives "+str(IsValidCreditCardNumberMBS("49927398716"))+EndOfLine+_
"test 49927398717 gives "+str(IsValidCreditCardNumberMBS("49927398717"))
```

Notes: This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.
Returns true on success or false on failure.

If this function returns false, you can be sure the number is not valid. But if the function returns true, you may want to check the number online with some database.

- MBS Real Studio Plugins, version 11.3pr5

128.5.2 CompareNumbersMBS(v1 as Variant, v2 as Variant) as Integer

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares numbers.
Example:

```
Var u As UInt64 = 12345678901234567890
Var i As Int64 = -1

If u >i Then
Break // 12345678901234567890 >-1
Else
Break // xojo says it's smaller!
End If

If CompareNumbersMBS(u,i) >0 Then
Break // Plugin does it right
Else
Break
End If
```

Notes: The goal: compare numbers better than Xojo.

Especially UInt64/Int64 edge cases.

We treat nil as 0 value and ptr as UInt64.
If first argument is string, we just compare both as string. If first argument is numeric and second argument is string, we convert second one to number.

- MBS Xojo Plugins, version 20.5pr3

128.5.3 ACosHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic cosine of the real argument x.
Example:

MsgBox str(ACosHMBS(5))

Notes: acosh(1) returns +0.
acosh(x) returns a NAN for x <1.
acosh(+infinity) returns +infinity.

128.5.4 ACosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc cosine of x in the range [0, pi] .
Example:

MsgBox str(ACosMBS(5))

Notes: acos(1) returns +0.
acos(x) returns a NAN for | x | >1.

- MBS SQLite Extension, version 1.1pr1

128.5.5 ArithmeticShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an arithmetic Shift of value and cares for the sign (+ or -).
Example:

msgbox str(ArithmeticShiftMBS(5,3))

// displays 40 which is 5*(2^3) = 5 * 8

Notes: Always using 32bit.

128.5.6 ASinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ASinHMBS(5))

Notes: asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

128.5.7 ASinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ASinMBS(5))

Notes: asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

- MBS SQLite Extension, version 1.1pr1

128.5.8 ATan2MBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc tangent of y/x, using the signs of both arguments to determine the quadrant of the return value.
Example:

MsgBox str(ATan2MBS(3,4))

Notes: atan2(+-0, -0) returns +-pi.
atan2(+-0, +0) returns +-0.
atan2(+-0, x) returns +-pi for x <0.
atan2(+-0, x) returns +-0 for x >0.
atan2(y, +-0) returns -pi/2 for y >0.
atan2(+-y, -infinity) returns +-pi for finite y >0.
atan2(+-y, +infinity) returns +-0 for finite y >0.
atan2(+-infinity, +x) returns +-pi/2 for finite x.
atan2(+-infinity, -infinity) returns +-3*pi/4.
atan2(+-infinity, +infinity) returns +-pi/4.

128.5.9 ATanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic tangent of the real argument x.
Example:

MsgBox str(ATanHMBS(5))

Notes: atanh(+-0) returns +-0.
atanh(+-1) returns +-infinity.
atanh(x) returns a NaN for | x | >1.

128.5.10 ATanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The atan() function computes the principal value of the arc tangent of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ATanMBS(5))

Notes: atan(+-0) returns +-0.
atan(+-infinity) returns +-pi/2.

128.5.11 BitClearMBS(value as UInt64, mask as UInt64) as UInt64

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the bits in the mask from the value.
Example:

MsgBox bin(BitClearMBS(&b1111,&b0110)) // 1001

Notes: Does not work for 64 bit integers.

128.5.12 BitCountMBS(value as UInt64) as Integer

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the number of bits set.
Example:

MsgBox str(BitCountMBS(&b101)) // 2
MsgBox str(BitCountMBS(&b10101)) // 5
MsgBox str(BitCountMBS(&b11111111111100001111)) // 16
MsgBox str(BitCountMBS(&hFFFFFFFF)) // 32

Notes: Does not work for 64 bit integers.

128.5.13 BitExclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseAnd using the value and bitwisenot of 2^bitNumber.
Or: Switches off the bit bitNumber inside value.
Example:

```
msgBox str(BitExclMBS(80,4))
' displays 64 which is 80 without 16 = 2^4+2^5 without 2^4
```

Notes:

Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

128.5.14 BitInclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseOr using the value and 2^bitNumber
Or: Switches on the bit bitNumber inside value.
Example:

```
msgBox str(BitInclMBS(64,4))
' displays 80 which is 64 + 16 = 64 + 2^4
```

Notes:

Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

128.5.15 BitIsSetMBS(value as UInt64, bitNumber as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a certain bit is set inside the value
Example:

```
Var bool as boolean

bool=BitIsSetMBS(80,4)
' true, because 2^4=16 is included in 80=2^4+2^6
```

Notes: Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

128.5.16 BitValMBS(bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns 2^bitNumber
Example:

```
msgBox str(BitValMBS(5))
' displays 32
```

Notes: Always using 64-bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

128.5.17 BitwiseDiffMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all bits of val1 which are not in val2.
Example:

```
msgBox str(BitwiseDiffMBS(65,80))
' displays 1, because 65=2^0+2^5 includes 1=2^0, which is not part of 80=2^4+2^5.
```

Notes: Always using 32bit.

128.5.18 BitwiseNAndMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseAnd on them.
Example:

```
msgBox str(bitwiseNandMBS(65,80))
' displays -82
```

Notes: Always using 32bit.

128.5.19 BitwiseNOrMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseor on them.
Example:

```
msgBox str(bitwisenorMBS(65,80))
' displays -65
```

Notes: Always using 32bit.

128.5.20 BitwiseNotMBS(value as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise negation of value.
Example:

```
msgBox str(BitwiseNotMBS(5))
' displays -6
```

Notes: Always using 32bit.

128.5.21 BitwiseRotateMBS(value as UInt64, count as Integer, offset as Integer, width as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise rotation of value.
Example:

```
msgBox str(BitwiseRotateMBS(5,2,0,32))
' displays 20
```

Notes: Always using 32bit.

128.5.22 ConvertFromFloat16MBS(Number as UInt16) as Single

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 16bit floating point number to a 32bit floating point number.
Example:

```
Var h1 as UInt16 = ConvertToFloat16MBS(1.0)
Var f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0
```

```
Var h2 as UInt16 = ConvertToFloat16MBS(-1.0)
Var f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

Var h3 as UInt16 = ConvertToFloat16MBS(1000.0)
Var f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

Var h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
Var f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

Var inf as single = 65504.0
Var h5 as UInt16 = ConvertToFloat16MBS(inf)
Var f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

Var nan as single = sqrt(-1)
Var h6 as UInt16 = ConvertToFloat16MBS(nan)
Var f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

128.5.23 ConvertToFloat16MBS(Number as Single) as UInt16

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 32bit floating point number to a 16bit floating point number.
Example:

```
Var h1 as UInt16 = ConvertToFloat16MBS(1.0)
Var f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0

Var h2 as UInt16 = ConvertToFloat16MBS(-1.0)
Var f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

Var h3 as UInt16 = ConvertToFloat16MBS(1000.0)
Var f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0
```

```
Var h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
Var f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

Var inf as single = 65504.0
Var h5 as UInt16 = ConvertToFloat16MBS(inf)
Var f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

Var nan as single = sqrt(-1)
Var h6 as UInt16 = ConvertToFloat16MBS(nan)
Var f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

Notes: This looses precision as 16bit fit less bits than 32 bit.

128.5.24 CosHMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic cosine of x.
Example:

```
MsgBox str(CosHMBS(5))
```

Notes: cosh(+-0) returns 1.
cosh(+-infinity) returns +infinity.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

128.5.25 CosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the cosine of x (measured in radians).
Example:

MsgBox str(CosMBS(5))

Notes: cos(+-0) returns 1.
cos(+-infinity) returns a NaN.

- MBS SQLite Extension, version 1.1pr1

128.5.26 CurrencyAddMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds two currency values.
Notes: This function uses 64bit integer math to avoid rounding issues.

128.5.27 CurrencyDivMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides currency value by integer.
Notes: Rest is ignored.
This function uses 64bit integer math to avoid rounding issues.

128.5.28 CurrencyMulMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies currency value with integer.
Example:

```
Var c1 as Currency = 1234567890.1234

// in xojo
Var c3 as Currency = c1 * 12345

// with plugin
Var c4 as Currency = CurrencyMulMBS(c1, 12345)

// verify by 64bit math
Var c5 as Int64 = 12345678901234
Var c6 as int64 = c5 * 12345
```

```
// and plugin is correct
MsgBox str(c3)+" "+str(c4)+" "+str(c6)
```

Notes: This function uses 64bit integer math to avoid rounding issues.

128.5.29 CurrencySubMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts value2 from value1.
Notes: This function uses 64bit integer math to avoid rounding issues.

128.5.30 CurrencyValueMBS(value as string) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses string into currency value.
Notes: Replacement for val() which works better with large numbers and raises exceptions on errors.
Blog Entries

- Currency Data Type
- MBS Xojo / Real Studio Plugins, version 14.3pr9
- Currency Data Type

128.5.31 DoubleToExtendedStrMBS(x as Double) as string

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the double as an 80bit Float stored inside a ten byte string.
Example:

```
Var s as string
Var d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

Notes: Returns "" if there is not enough memory to create the string.

128.5.32 Exp2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes 2^x, the base-2 exponential of x.
Example:

```
MsgBox str(Exp2MBS(5))
```

Notes: exp2(+-0) return 1.
exp2(-infinity) return +0.
exp2(+infinity) return +infinity.

128.5.33 ExpMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes e^x, the base-e exponential of x.
Example:

```
MsgBox str(ExpMBS(5))
```

Notes: exp(+-0) return 1.
exp(-infinity) return +0.
exp(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

128.5.34 ExtendedStrToDoubleMBS(v as string) as Double

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the 80bit Float as a double.
Example:

```
Var s as string
Var d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
```

```
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

Notes: Returns NAN (255) if the string is not valid. e.g. "".
Returns always NAN on Windows.

128.5.35 FacMBS(x as Integer) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates (value!).
Example:

```
Sub Open()
// Fill a listbox with Fac values:
Var x as Integer
Var y as Double

for x=1 to 100
listBox1.addrow format(x,"0")
y=FacMBS(x)
if y=0 then
exit
else
listBox1.cell(listBox1.lastIndex,1)=format(y,"0")
end if
next
End Sub
```

Notes: msgBox str(facMBS(5))
' displays 120 which is 1*2*3*4*5

128.5.36 FloorMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the largest integral value less than or equal to x.
Example:

```
MsgBox str(FloorMBS(5.45))
```

Notes: floor(+-0) returns +-0.
floor(+-infinity) returns +-infinity.
Blog Entries

- REAL Server Plugin 0.4

128.5.37 FRExpMBS(inputx as Double, byref expValue as Integer) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Breaks floating-point number into normalized fraction and power of 2.
Example:

```
Var x as Double = 123.456

Var y as Integer
Var r as Double = FRExpMBS(x, y)

MsgBox str(X)+": "+str(y)+" "+str(r)
```

Notes: This functions break the floating-point number value into a normalized fraction and an integral power of 2. They store the integer in the int object pointed to by exp.

The functions return a number x such that x has a magnitude in the interval [1/2, 1) or 0, and value = x*(2^exp).

frexp(+-0, exp) returns +-0, and stores 0 in the object pointed to by exp.

frexp(+-infinity, exp) returns +-infinity, and stores an unspecified value in the object pointed to by exp.

frexp(Nan, exp) returns a Nan, and stores an unspecified value in the object pointed to by exp.

128.5.38 HiWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the high word part of the integer.
Example:

```
MsgBox hex(HiWordMBS(&H12345678)) // shows 1234
```

Notes: equal to bitwiseshiftright(i,16)

128.5.39 HypotMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sqrt(x*x+y*y) without undue overflow or underflow.
Example:

```
MsgBox str(HypotMBS(3,4)) // shows 5
```

Notes: hypot(x, y) , hypot(y, x) , and hypot(x, -y) are equivalent.
hypot(x, +-0) is equivalent to fabs(x).
hypot(+-infinity, y) returns +infinity even if y is a NaN.

128.5.40 IsFiniteMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is finite.
Example:

```
Var x as Double

x=1/0
if not isfiniteMBS(x) then
msgbox "the result is Infinite."
end if
```

128.5.41 IsInfMBS(x as Double) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the double passed in is an infinity value.
Example:

```
Var e as Double = 0.0000000000000000000000000000000000000000000000001
Var d as Double = 1.0/e/e/e/e/e/e/e

MsgBox str(d)+" is inf: "+str(IsInfMBS(d))
```

128.5.42 IsNANMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is not a number.
Example:

```
Var x as Double
x=sqrt(-1)
if isnanMBS(x) then
msgbox "the square root of -1 is not correct."
end if
```

128.5.43 Log10MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 10.
Example:

```
MsgBox str(Log10MBS(5))
```

Notes: log10(1) return +0.
log10(x) return a NaN for x <0.
log10(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

128.5.44 Log2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 2.
Example:

```
MsgBox str(Log2MBS(5))
```

Notes: log2(1) return +0.
log2(x) return a NaN for x <0.
log2(+infinity) return +infinity.

128.5.45 LogicalShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an logical Shift of value and doesn't take care for the sign (+ or -).
Example:

msgbox str(LogicalShiftMBS(5,3))

Notes: Always using 32bit.

128.5.46 LogMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base e.
Example:

MsgBox str(LogMBS(5))

Notes: log(1) return +0.
log(x) return a NaN for x <0.
log(+infinity) return +infinity.
Blog Entries

- REAL Server Plugin 0.4

128.5.47 LoWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the low word part of the integer.
Example:

MsgBox hex(LoWordMBS(&H12345678)) // shows 5678

Notes: equal to bitwiseand(i,&HFFFF)

128.5.48 NormInvMBS(p as Double, mu as double = 0.0, sigma as double = 1.0) as double

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates NormInv function like in Excel.
Example:

MsgBox Str(NormInvMBS(0.56, 5, 2)) // should show 5.3019

Blog Entries

128.5.49 PowMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes x raised to the power y.
Example:

MsgBox str(PowMBS(5,5))

Notes: pow(+-0, y) returns +-infinity for y an odd integer <0.
pow(+-0, y) returns +infinity for y <0 and not an odd integer.
pow(+-0, y) returns +-0 for y an odd integer >0.
pow(+-0, y) returns +0 for y >0 and not an odd integer.
pow(-1, +-infinity) returns 1.
pow(1, y) returns 1 for any y, even a NaN.
pow(x, +-0) returns 1 for any x, even a NaN.
pow(x, y) returns a NaN for finite x <0 and finite non-integer y.
pow(x, -infinity) returns +infinity for | x | <1.
pow(x, -infinity) returns +0 for | x | >1.
pow(x, +infinity) returns +0 for | x | <1.
pow(x, +infinity) returns +infinity for | x | >1.
pow(-infinity, y) returns -0 for y an odd integer <0.
pow(-infinity, y) returns +0 for y <0 and not an odd integer.
pow(-infinity, y) returns -infinity for y an odd integer >0.
pow(-infinity, y) returns +infinity for y >0 and not an odd integer.
pow(+infinity, y) returns +0 for y <0.
pow(+infinity, y) returns +infinity for y >0.

Range errors may occur.
Blog Entries

- REAL Server Plugin 0.4

128.5.50 RandomExponentialDistributionMBS(lambda as Double) as double

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Generates a random number using exponential distribution.
Notes: Produces random non-negative floating-point values, distributed according to probability density function.
Blog Entries

128.5.52 RandomPoissonDistributionMBS(Mean as Integer) as Integer

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Generates a random number using poisson distribution.
Notes: Produces random non-negative integer values i, distributed according to discrete probability function.

128.5.53 RoundMBS(x as Double, decimals as Integer = 0) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the integral value nearest to x rounding half-way cases away from zero, regardless of the current rounding direction.
Example:

```
MsgBox str(RoundMBS(5.5))

Var lines(-1) as string

for i as Integer = -5 to 5
lines.Append str(i)+": "+Format(RoundMBS(123456789.123456789, i), "0.0000000")
next

MsgBox join(lines,EndOfLine)
```

Notes: round(+-0) returns +-0.
round(+-infinity) returns +-infinity.

128.5.54 SinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic sine of x.
Example:

```
MsgBox str(SinHMBS(5.5))
```

Notes: sinh(+-0) returns +-0.
sinh(+-infinity) returns +-infinity.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

128.5.55 SinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sine of x (measured in radians).
Example:

```
MsgBox str(SinMBS(5.5))
```

Notes: sin(+-0) returns +-0.
sin(+-infinity) returns a NaN.
Blog Entries

- MBS SQLite Extension, version 1.1pr1

128.5.56 SqrtMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function compute the yth root of x.
Example:

```
Var r,x,y as Double

r=SqrtMBS(x,y)
// r^y=x
```

Notes: sqrt(-0) returns -0.
sqrt(x,y) returns a NaN if the root can't be calculated.
Blog Entries

- REAL Server Plugin 0.4

128.5.57 TanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic tangent of x.
Example:

```
MsgBox str(TanHMBS(5.5))
```

Notes: tanh(+-0) returns +-0.
tanh(+-infinity) returns +-1.
Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

128.5.58 TanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the tangent of x (measured in radians).
Example:

```
MsgBox str(TanMBS(5.5))
```

Notes: tan(+-0) returns +-0.
tan(+-infinity) returns a NaN.
Blog Entries

128.5.59 DoubleToInt64MBS(value as Double) as Int64

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to Int64.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

128.5.60 DoubleToUInt64MBS(value as Double) as UInt64

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to UInt64 correctly.
Example:

```
// set d to a very high UInt64 value
Var d as Double = pow(256.0,8.0) - 10000

// RB will convert to Int64 here! so number is cut to 9... instead of 18...
Var u1 as UInt64 = d

// plugin does it right
Var u2 as UInt64 = DoubleToUInt64MBS(d)

MsgBox str(u1)+" "+str(u2)
```

Notes: Xojo converts UInt64 to Double with an intermediate Int64 which breaks big numbers. This function does it correctly.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11

128.5.61 Int64ToDoubleMBS(value as Int64) as Double

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an Int64 to Double.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

128.5.62 UInt64ToDoubleMBS(value as UInt64) as Double

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an UInt64 to Double.
Example:

```
Var d as Double = 18446744073709541376
MsgBox str(d) // fails

Var e as Double = UInt64ToDoubleMBS(18446744073709541376)
MsgBox str(e) // works
```

Notes: Xojo likes to use Int64 internally when doing math with UInt64, so we added this method to fix it.

128.6 class Int128MBS

128.6.1 class Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class to wrap a 128-bit number for Xojo.
Example:

```
Var n As New Int128MBS(123)
MessageBox n
```

Notes: Not supported for 32-bit Linux targets.
We cache small numbers.

See also

128.6.2 Methods

128.6.3 BitwiseAnd(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")
var x as Int128MBS = 211

n = n.BitwiseAnd(x)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 128.6.4 BitwiseAnd(Value as Int64) as Int128MBS

128.6.4 BitwiseAnd(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

n = n.BitwiseAnd(211)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 128.6.3 BitwiseAnd(Value as Int128MBS) as Int128MBS 17699

128.6.5 BitwiseOr(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

// or one bit
n = n.BitwiseOr(Int128MBS.one)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 128.6.6 BitwiseOr(Value as Int64) as Int128MBS 17700

128.6.6 BitwiseOr(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

// or one bit
```

```
n = n.BitwiseOr(1)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 128.6.5 BitwiseOr(Value as Int128MBS) as Int128MBS 17700

128.6.7 BitwiseXOr(Value as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")
var o as Int128MBS = 211

n = n.BitwiseXor(o)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 128.6.8 BitwiseXOr(Value as Int64) as Int128MBS 17701

128.6.8 BitwiseXOr(Value as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New Int128MBS("1234")

n = n.BitwiseXor(211)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 128.6.7 BitwiseXOr(Value as Int128MBS) as Int128MBS 17701

128.6.9 Constructor

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor to create a null value.
Example:

```
Var n As New Int128MBS
n.stringValue = "1234"
Break
```

See also:

- 128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17702
- 128.6.11 Constructor(value as Int128MBS) 17702
- 128.6.12 Constructor(value as Int64) 17703
- 128.6.13 Constructor(value as String) 17703
- 128.6.14 Constructor(value as UInt128MBS) 17704

128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new number based on data in memory.
Notes: Size should be 1, 2, 4, 8 or 16 bytes.
See also:

- 128.6.9 Constructor 17702
- 128.6.11 Constructor(value as Int128MBS) 17702
- 128.6.12 Constructor(value as Int64) 17703
- 128.6.13 Constructor(value as String) 17703
- 128.6.14 Constructor(value as UInt128MBS) 17704

128.6.11 Constructor(value as Int128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing 128-bit integer.
Example:

```
Var n As New Int128MBS("1234")
var c as new Int128MBS(n)
Var s As String = c
Break
```

Notes: The copy constructor.
See also:

- 128.6.9 Constructor 17702
- 128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17702
- 128.6.12 Constructor(value as Int64) 17703
- 128.6.13 Constructor(value as String) 17703
- 128.6.14 Constructor(value as UInt128MBS) 17704

128.6.12 Constructor(value as Int64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an Int64.
Example:

```
Var n As New Int128MBS(1234)
Var s As String = n
Break
```

See also:

- 128.6.9 Constructor 17702
- 128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17702
- 128.6.11 Constructor(value as Int128MBS) 17702
- 128.6.13 Constructor(value as String) 17703
- 128.6.14 Constructor(value as UInt128MBS) 17704

128.6.13 Constructor(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from a string.
Example:

```
Var n As New Int128MBS("1234")
Var s As String = n
Break
```

Notes: Ignores any non digit numbers.
See also:

- 128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17702
- 128.6.11 Constructor(value as Int128MBS) 17702
- 128.6.12 Constructor(value as Int64) 17703
- 128.6.14 Constructor(value as UInt128MBS) 17704

128.6.14 Constructor(value as UInt128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing unsigned 128-bit integer.
Example:

```
Var n As New UInt128MBS("1234")
var c as new Int128MBS(n)
Var s As String = c
Break
```

Notes: Raises exception if the UInt128MBS is out of range.
See also:

- 128.6.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17702
- 128.6.11 Constructor(value as Int128MBS) 17702
- 128.6.12 Constructor(value as Int64) 17703
- 128.6.13 Constructor(value as String) 17703

128.6.15 Dec

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As Int128MBS = 123

n.Dec

var v as String = n // 122

Break
```

See also:

- 128.6.16 Dec as Int128MBS 17705

128.6.16 Dec as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As Int128MBS = 123
var o as Int128MBS = n.Dec
var v as String = o // 122

Break
```

Notes: Returns the new value.
See also:

- 128.6.15 Dec 17704

128.6.17 Equals(other as Int128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As Int128MBS = 123
Var u As UInt128MBS = 123

If u.Equals(i) Then
Break // <- goes here
Else
Break
End If
```

```
If u.Equals(o) Then
Break
Else
Break // <- goes here
End If
```

See also:

- 128.6.19 Equals(other as UInt128MBS) as Boolean 17706

128.6.18 Equals(other as Int64) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
See also:

- 128.6.17 Equals(other as Int128MBS) as Boolean 17705
- 128.6.19 Equals(other as UInt128MBS) as Boolean 17706

128.6.19 Equals(other as UInt128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As Int128MBS = 123
Var u As UInt128MBS = 123

If i.Equals(u) Then
Break // <- goes here
Else
Break
End If

If o.Equals(u) Then
Break
Else
Break // <- goes here
End If
```

- 128.6.18 Equals(other as Int64) as Boolean 17706

128.6.20 Inc

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
var n As Int128MBS = 123

n.inc

var v as String = n // 124

Break
```

See also:

- 128.6.21 Inc as Int128MBS 17707

128.6.21 Inc as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
var n As Int128MBS = 123
var o as Int128MBS = n.inc
var v as String = o // 124

Break
```

Notes: Returns the new value.
See also:

- 128.6.20 Inc 17707

128.6.22 one as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns one as a constant.
Example:

```
MessageBox Int128MBS.one
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.6.23 Operator_Add(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Add
n = n + Int128MBS.one

Break
```

See also:

- 128.6.24 Operator_Add(other as Int64) as Int128MBS 17708

128.6.24 Operator_Add(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Add
n = n + 1

Break
```

See also:

- 128.6.23 Operator_Add(other as Int128MBS) as Int128MBS 17708

128.6.25 Operator_AddRight(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.

128.6.26 Operator_Compare(other as Int128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var n As New Int128MBS(6)
// calls Operator_Compare

If n >6 Then
Break
Else
Break
end if

If n = 6 Then
Break
Else
Break
End If

If n <6 Then
Break
Else
Break
End If

Break
```

See also:

- 128.6.27 Operator_Compare(other as Int64) as Integer 17709
- 128.6.28 Operator_Compare(other as UInt128MBS) as Integer 17710

128.6.27 Operator_Compare(other as Int64) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var v As Int128MBS = 5
```

```
var u as Int64 = 5

If u = v Then
// okay
Break
Else
// failed?
Break
End If
```

See also:

- 128.6.26 Operator_Compare(other as Int128MBS) as Integer 17709
- 128.6.28 Operator_Compare(other as UInt128MBS) as Integer 17710

128.6.28 Operator_Compare(other as UInt128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var n As New Int128MBS(6)
var u as UInt128MBS = 5
Var x As New Int128MBS(-6)
Var v As Int128MBS = 5

// calls Operator_Compare

If x <u Then
// okay, negative number is always smaller
Break
Else
// failed?
Break
End If

If x <n Then
// okay
Break
Else
// failed?
Break
End If

If v = u Then
```

```
// okay
Break
Else
// failed?
Break
End If
```

See also:

- 128.6.26 Operator_Compare(other as Int128MBS) as Integer 17709
- 128.6.27 Operator_Compare(other as Int64) as Integer 17709

128.6.29 Operator_Convert as Int64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an 128-bit number to an Int64.
Example:

```
Var n As New Int128MBS("1234")

// auto convert
var s as int64 = n

Break
```

Notes: Raises an exception if the number is out of range for an Int64.
See also:

- 128.6.30 Operator_Convert as String 17711
- 128.6.31 Operator_Convert(value as Int64) 17712
- 128.6.32 Operator_Convert(value as String) 17712

128.6.30 Operator_Convert as String

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts the 128-bit integer to a string.
Example:

```
var n As Int128MBS = "123"

// convert to int64
Var v As Int64 = n
```

```
// convert to string
Var s As String = n
// convert to double via Int64
var d as Double = n

Break
```

See also:

- 128.6.29 Operator_Convert as Int64 17711
- 128.6.31 Operator_Convert(value as Int64) 17712
- 128.6.32 Operator_Convert(value as String) 17712

128.6.31 Operator_Convert(value as Int64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an Int64 to an 128-bit integer.
Example:

```
var n As Int128MBS = 123
```

See also:

- 128.6.29 Operator_Convert as Int64 17711
- 128.6.30 Operator_Convert as String 17711
- 128.6.32 Operator_Convert(value as String) 17712

128.6.32 Operator_Convert(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a string to an 128-bit integer.
Example:

```
var n As Int128MBS = "123"
```

See also:

- 128.6.29 Operator_Convert as Int64 17711
- 128.6.30 Operator_Convert as String 17711
- 128.6.31 Operator_Convert(value as Int64) 17712

128.6.33 Operator_Divide(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Divide
var x as Int128MBS = 2
n = n / x
Var s As String = n // 617

Break
```

See also:

- 128.6.34 Operator_Divide(other as Int64) as Int128MBS 17713

128.6.34 Operator_Divide(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides the number by the other one.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Divide
n = n / 2
Var s As String = n // 617

Break
```

See also:

- 128.6.33 Operator_Divide(other as Int128MBS) as Int128MBS 17713

128.6.35 Operator_DivideRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_DivideRight
n = 2468 / n
```

```
Var s As String = n // 2

Break
```

128.6.36 Operator_Modulo(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(33)
var x as new Int128MBS(5)
// calls Operator_Modulo
n = n mod x
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 128.6.37 Operator_Modulo(other as Int64) as Int128MBS 17714

128.6.37 Operator_Modulo(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(33)
// calls Operator_Modulo
n = n mod 5
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 128.6.36 Operator_Modulo(other as Int128MBS) as Int128MBS 17714

128.6.38 Operator_ModuloRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New Int128MBS(5)
// calls Operator_ModuloRight
n = 33 mod n
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.

128.6.39 Operator_Multiply(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS(6)
var x as new Int128MBS(5)
// calls Operator_Multiply
n = n * x
Var s As String = n // 30

Break
```

See also:

- 128.6.40 Operator_Multiply(other as Int64) as Int128MBS 17715

128.6.40 Operator_Multiply(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS(6)
// calls Operator_Multiply
n = n * 5
Var s As String = n // 30
```

Break

See also:

- 128.6.39 Operator_Multiply(other as Int128MBS) as Int128MBS 17715

128.6.41 Operator_MultiplyRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New Int128MBS("6")
// calls Operator_MultiplyRight
n = 5 * n
Var s As String = n // 30
```

Break

128.6.42 Operator_Negate as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Negates the number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Negate
n = -n
Var s As String = n // -1234
```

Break

128.6.43 Operator_Subtract(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the other number from this number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Subtract
```

```
n = n - Int128MBS.one
Var s As String = n // 1233

Break
```

See also:

- 128.6.44 Operator_Subtract(other as Int64) as Int128MBS 17717

128.6.44 Operator_Subtract(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the other number from this number.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_Subtract
n = n - 1
Var s As String = n // 1233

Break
```

See also:

- 128.6.43 Operator_Subtract(other as Int128MBS) as Int128MBS 17716

128.6.45 Operator_SubtractRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the number as right side.
Example:

```
Var n As New Int128MBS("1234")
// calls Operator_SubtractRight
n = 1 - n
Var s As String = n // -1233

Break
```

128.6.46 Pow(exp as UInt64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates the power of the value with given exponent.
Example:

```
Var Exp As Int64 = 5
Var num As Int128MBS = 2

var p as Int128MBS = num.Pow(exp)
var s as string = p // 25

Var Exp2 As Int128MBS = 90
Var p2 As Int128MBS = num.Pow(Exp2)
Var s2 As String = p2 // 1237940039285380274899124224

Break
```

128.6.47 ShiftLeft(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the left.
See also:

- 128.6.48 ShiftLeft(other as Int64) as Int128MBS 17718

128.6.48 ShiftLeft(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the left.
Example:

```
Var n As Int128MBS = 12
var u as Int64 = 1
Var m As Int128MBS = n.ShiftLeft(u)
var s as string = m

Break
```

See also:

- 128.6.47 ShiftLeft(other as Int128MBS) as Int128MBS 17718

128.6.49 ShiftRight(other as Int128MBS) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the right.
Example:

```
Var n As Int128MBS = 12
Var u As Int64 = 1
Var m As Int128MBS = n.ShiftRight(u)
Var s As String = m

Break
```

See also:

- 128.6.50 ShiftRight(other as Int64) as Int128MBS 17719

128.6.50 ShiftRight(other as Int64) as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the right.
See also:

- 128.6.49 ShiftRight(other as Int128MBS) as Int128MBS 17718

128.6.51 Sqrt as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates the square root.
Example:

```
Var n As UInt128MBS = 85
Var m As UInt128MBS = n.Sqrt
Var s As String = m

Break // 9
```

Notes: Returns the rounded down square root without using floating point math.

128.6.52 supported as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether Int128 is supported.
Example:

```
If Int128MBS.supported Then
MessageBox "Int128 available"
Else
MessageBox "Int128 not supported"
End If
```

Notes: Not supported for 32-bit Linux.

128.6.53 two as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns two as a constant.
Example:

```
MessageBox Int128MBS.two
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.6.54 zero as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns zero as a constant.
Example:

```
MessageBox Int128MBS.zero
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.6.55 Properties

128.6.56 Abs as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates the absolute value.
Example:

```
Var n As Int128MBS = -123
Var m As Int128MBS = n.Abs
Var s As String = m
```

Break

Notes: (Read only property)

128.6.57 BitWidth as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the bit width of the value.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)

Var BitWidth2 As Integer = n2.BitWidth
Var BitWidth36 As Integer = n36.BitWidth
Var BitWidth100 As Integer = n100.BitWidth

Break
```

Notes: (Read only property)

128.6.58 CountLeftZeros as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are zero from the left side.
Example:

```
Var n2 As Int128MBS = 2
Var n36 As Int128MBS = 36
Var n100 as Int128MBS = Int128MBS.two.Pow(100)

Var CountLeftZeros2 As Integer = n2.CountLeftZeros
Var CountLeftZeros36 As Integer = n36.CountLeftZeros
Var CountLeftZeros100 As Integer = n100.CountLeftZeros

Var CountRightZeros2 As Integer = n2.CountRightZeros
Var CountRightZeros36 As Integer = n36.CountRightZeros
Var CountRightZeros100 As Integer = n100.CountRightZeros

Break
```

Notes: (Read only property)

128.6.59 CountRightZeros as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are zero from the right side.
Example:

```
Var n2 As Int128MBS = 2
Var n36 As Int128MBS = 36
Var n100 as Int128MBS = Int128MBS.two.Pow(100)

Var CountLeftZeros2 As Integer = n2.CountLeftZeros
Var CountLeftZeros36 As Integer = n36.CountLeftZeros
Var CountLeftZeros100 As Integer = n100.CountLeftZeros

Var CountRightZeros2 As Integer = n2.CountRightZeros
Var CountRightZeros36 As Integer = n36.CountRightZeros
Var CountRightZeros100 As Integer = n100.CountRightZeros

Break
```

Notes: (Read only property)

128.6.60 Data as Ptr

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the data pointer of a number.
Notes: The size of the memory is 16 bytes.
(Read only property)

128.6.61 doubleValue as Double

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the value as double.
Example:

```
Var n2 As Int128MBS = 2
Var n100 As Int128MBS = Int128MBS.two.Pow(100)
```

```
n100 = n100 + 5

Var value2 As Double = n2.doubleValue
Var value100 As Double = n100.doubleValue
Var string100 As String = n100.stringValue

Break // string and value don't match!
```

Notes: Since double has only 53 bits of precision, you loose precision when doing this.
(Read only property)

128.6.62 HighValue as Int64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The higher 64 bit half of the 128 bits.
Example:

```
Var n As New Int128MBS("10000000000000000000000000000000")

Var l As Int64 = n.LowValue
Var h As Int64 = n.HighValue
var s as string = n

Break
```

Notes: (Read and Write property)

128.6.63 LowValue as UInt64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The lower 64 bit half of the 128 bits.
Example:

```
Var n As New Int128MBS("10000000000000000000000000000000")

Var l As UInt64 = n.LowValue
Var h As Int64 = n.HighValue
var s as string = n

Break
```

Notes: (Read and Write property)

128.6.64 PopCount as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are set.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)

Var PopCount2 As Integer = n2.PopCount
Var PopCount36 As Integer = n36.PopCount
Var PopCount100 As Integer = n100.PopCount

Break
```

Notes: (Read only property)

128.6.65 Sign as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the sign of the value.
Example:

```
Var n As Int128MBS = -123
Var s1 As Integer = n.Sign
Var m As Int128MBS = 123
Var s2 As Integer = m.Sign

Break
```

Notes: (Read only property)

128.6.66 stringValue as String

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries or assigns the string value to the Int128MBS class.
Example:

```
Var n As New Int128MBS("1234")
Var s1 As String = n.stringValue
n.stringValue = "2345"
Var s2 As String = n.stringValue
Break
```

Notes: (Read and Write property)

128.7 class LargeNumberErrorExceptionMBS

128.7.1 class LargeNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class used to report with problems in LargeNumberMBS class.
Notes: Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo Plugins, version 19.1pr5

128.8 class LargeNumberMBS

128.8.1 class LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An 4128 bit integer number.
Example:

```
Var n1 As Int64 = 10000000000
Var n2 As Int64 = 10000000000
Var n3 As Int64 = n1 * n2 // overflow, so wrong result

Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n1)
Var l2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n2)
Var l3 As LargeNumberMBS = l1 * l2

Var s4 As String = l3.StringValue // this is correct

Break
```

Notes: Can be useful to calculate with more than Int64.
This class works with up to 1224 digits.

See BigNumberMBS for a 320 bit floating point number.

128.8.2 Methods

128.8.3 Add(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number.
See also:

- 128.8.4 Add(other as LargeNumberMBS) as LargeNumberMBS 17728

128.8.4 Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.
See also:

- 128.8.3 Add(other as LargeNumberMBS) 17728

128.8.5 AddMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Addition with modulo.
Example:

```
Var v As New LargeNumberMBS(100)
Var o As New LargeNumberMBS(200)
Var n As New LargeNumberMBS(&hFF)

Var r As LargeNumberMBS = v.AddMod(o, n)

MsgBox r.StringValue // shows 45 = (100+200) mod 255
```

128.8.6 CheckBit(bit as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a bit is set.
Notes: Returns true if bit is set.

128.8.7 Clone as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the number.

128.8.8 Constructor

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with value zero.
Example:

```
Var l1 As New LargeNumberMBS
MsgBox l1.StringValue
```

See also:

- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.10 Constructor(value as Int32) 17730

- 128.8.11 Constructor(value as Int64) 17731
- 128.8.12 Constructor(value as String) 17731
- 128.8.13 Constructor(value as UInt32) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.9 Constructor(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the number.
Example:

```
Var l1 As New LargeNumberMBS(123456789)
Var l2 As New LargeNumberMBS(l1)

MsgBox l2.StringValue
```

See also:

- 128.8.8 Constructor 17729
- 128.8.10 Constructor(value as Int32) 17730
- 128.8.11 Constructor(value as Int64) 17731
- 128.8.12 Constructor(value as String) 17731
- 128.8.13 Constructor(value as UInt32) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.10 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an 32-bit integer.
See also:

- 128.8.8 Constructor 17729
- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.11 Constructor(value as Int64) 17731
- 128.8.12 Constructor(value as String) 17731
- 128.8.13 Constructor(value as UInt32) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.11 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an 64-bit integer.
See also:

- 128.8.8 Constructor 17729
- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.10 Constructor(value as Int32) 17730
- 128.8.12 Constructor(value as String) 17731
- 128.8.13 Constructor(value as UInt32) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.12 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number based on a string.
Notes: Raises OutOfBoundsExceptionMBS if your string is too long.
See also:

- 128.8.8 Constructor 17729
- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.10 Constructor(value as Int32) 17730
- 128.8.11 Constructor(value as Int64) 17731
- 128.8.13 Constructor(value as UInt32) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.13 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an unsigned 32-bit integer.
See also:

- 128.8.8 Constructor 17729
- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.10 Constructor(value as Int32) 17730

- 128.8.11 Constructor(value as Int64) 17731
- 128.8.12 Constructor(value as String) 17731
- 128.8.14 Constructor(value as UInt64) 17732

128.8.14 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an unsigned 64-bit integer.
See also:

- 128.8.8 Constructor 17729
- 128.8.9 Constructor(other as LargeNumberMBS) 17730
- 128.8.10 Constructor(value as Int32) 17730
- 128.8.11 Constructor(value as Int64) 17731
- 128.8.12 Constructor(value as String) 17731
- 128.8.13 Constructor(value as UInt32) 17731

128.8.15 Decrement(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrement number with an integer.
Example:

```
Var o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

Notes: This is faster than building a new LargeNumberMBS, just to subtract some small number.

128.8.16 Divide(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value with by value.
See also:

- 128.8.17 Divide(other as LargeNumberMBS) as LargeNumberMBS 17733
- 128.8.18 Divide(value as UInt32) as LargeNumberMBS 17733

128.8.17 Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value with by value.
See also:

- 128.8.16 Divide(other as LargeNumberMBS) 17732
- 128.8.18 Divide(value as UInt32) as LargeNumberMBS 17733

128.8.18 Divide(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divide by given integer and return result.
Example:

```
Var o As New LargeNumberMBS(63)
Var r1 As LargeNumberMBS = o.Divide(8)
Var r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 128.8.16 Divide(other as LargeNumberMBS) 17732
- 128.8.17 Divide(other as LargeNumberMBS) as LargeNumberMBS 17733

128.8.19 DivMod(other as LargeNumberMBS, byref DivResult as LargeNumberMBS, byref ModResult as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs divide and modulo together.
Example:

```
Var d As New LargeNumberMBS(100)
Var n As New LargeNumberMBS(13)

Var x As LargeNumberMBS
```

```
Var y As LargeNumberMBS

d.DivMod n, x, y

MsgBox d.StringValue + " = " + x.StringValue + " * " + n.StringValue + " + " + y.StringValue
```

Notes: Puts result into both byref parameters.

128.8.20 Equals(other as LargeNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares if two numbers are equal.
Notes: Returns true if equal.

128.8.21 ExpMod(e as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an exponent.
Example:

```
Var o As New LargeNumberMBS(2)
Var e As New LargeNumberMBS(11)
Var m As New LargeNumberMBS(255)
Var r As LargeNumberMBS = o.ExpMod(e,m)

MsgBox r.StringValue // shows 8 = 2^11 mod 255
```

Notes: Returns x^e mod n where x is the current number, e a parameter and n the modulo parameter.

128.8.22 FindGCD(v as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds greatest common divisor for two positive numbers.

128.8.23 GetStringValue(Base as Integer = 10, ThousandsDelimiter as String = "") as String

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number with a given base and delimiter.
Example:

```
Var l As New LargeNumberMBS(1234567890)

Var s0 As String = l.StringValue
Var s1 As String = l.GetStringValue
// 1234567890
Var s2 As String = l.GetStringValue(10, ",")
// 1,234,567,890
Var s4 As String = l.GetStringValue(8, "")
// 499602d2
Var s3 As String = l.GetStringValue(16, "")
// 11145401322

Break // check in debugger
```

Notes: With all default parameter, this is same as StringValue property.

128.8.24 Increment(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increment number with an integer.
Example:

```
Var o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

Notes: This is faster than building a new LargeNumberMBS, just to add some small number.

128.8.25 IsPrime(iter as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if number is a prime number.
Example:

```
Var lines() As String

For i As Integer = 61 To 69 Step 2
Var a As New LargeNumberMBS(i)
lines.Append a.StringValue+": "+Str(a.IsPrime(5))
Next

MsgBox Join(lines, EndOfLine)
```

Notes: Returns 1 if prime and 0 if not.
Returns -1 in case of error.

Iter is the factor between 1 and 680 about how deep to iterate. The bigger the this factor, the more exact the check is.

Miller-Rabin Algorithm (ret=1 .. n is composit)

128.8.26 LeftShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts value to left by given number of bits.
Notes: Bits must be <= 32.

128.8.27 MaxInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as Int32.

128.8.28 MaxInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as Int64.

128.8.29 MaxUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as UInt32.

128.8.30 MaxUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as UInt64.

128.8.31 MinInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as Int32.

128.8.32 MinInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as Int64.

128.8.33 MinUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as UInt32.

128.8.34 MinUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as UInt64.

128.8.35 ModInverse(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function calculates modular multiplicative inverse of an given integer a modulo m.
Example:

```
Var l As New LargeNumberMBS(3)
Var n As New LargeNumberMBS(26)

Var r As LargeNumberMBS = l.ModInverse(n)

MsgBox r.StringValue
```

128.8.36 Modulo(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.
See also:

- 128.8.37 Modulo(other as LargeNumberMBS) as LargeNumberMBS 17738
- 128.8.38 Modulo(value as UInt32) as UInt32 17738

128.8.37 Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.
See also:

- 128.8.36 Modulo(other as LargeNumberMBS) 17738
- 128.8.38 Modulo(value as UInt32) as UInt32 17738

128.8.38 Modulo(value as UInt32) as UInt32

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divide by given integer and return remainder.
Example:

```
Var o As New LargeNumberMBS(63)
Var r1 As LargeNumberMBS = o.Divide(8)
```

```
Var r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 128.8.36 Modulo(other as LargeNumberMBS) 17738
- 128.8.37 Modulo(other as LargeNumberMBS) as LargeNumberMBS 17738

128.8.39 MulMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply with modulo.
Example:

```
Var o As New LargeNumberMBS(50)
Var f As New LargeNumberMBS(80)
Var m As New LargeNumberMBS(255)
Var r As LargeNumberMBS = o.MulMod(f, m)

MsgBox r.StringValue // shows 175 = (50 * 80) mod 255
```

128.8.40 Multiply(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
See also:

- 128.8.41 Multiply(value as UInt32) as LargeNumberMBS 17739

128.8.41 Multiply(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by given integer and return result.
Example:

```
Var o As New LargeNumberMBS(5)
Var r As LargeNumberMBS = o.Multiply(8)
```

```
MsgBox r.StringValue // shows 40
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 128.8.40 Multiply(other as LargeNumberMBS) 17739

128.8.42 Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the value.
Notes: Returns new value with different sign.

128.8.43 NumberWithInt32(value as Int32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given Int32 value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(123456789)
MsgBox l1.StringValue
```

128.8.44 NumberWithInt64(value as Int64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given Int64 value.
Example:

```
Var d1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(0)
Var d2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123)
Var d3 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123456789012345)

MsgBox d1.StringValue+EndOfLine+d1.HexString+EndOfLine+_
d2.StringValue+EndOfLine+d2.HexString+EndOfLine+_
d3.StringValue+EndOfLine+d3.HexString
```

128.8.45 NumberWithInteger(value as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given integer value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(123456789)
MsgBox l1.StringValue
```

128.8.46 NumberWithString(value as String) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given string.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithString("123456789")
MsgBox l1.StringValue
```

128.8.47 NumberWithUInt32(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given UInt32 value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt32(123456789)
MsgBox l1.StringValue
```

128.8.48 NumberWithUInt64(value as UInt64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given UInt64 value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt64(123456789)
MsgBox l1.StringValue
```

128.8.49 NumberWithUInteger(value as UInteger) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given unsigned integer value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInteger(123456789)
MsgBox l1.StringValue
```

128.8.50 NumberWithVariant(value as variant) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given variant value.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithVariant(123456789)
MsgBox l1.StringValue
```

Notes: Variant can be integer or string.

128.8.51 Operator_Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

Var r As LargeNumberMBS = l+o
Var s As LargeNumberMBS = o+l

MsgBox r.StringValue+" "+s.StringValue
```

128.8.52 Operator_AddRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.

128.8.53 Operator_And(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs bitwise AND operator on the values.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Var ra As LargeNumberMBS = l And o
Var ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

Notes: Returns new value.

128.8.54 Operator_Compare(other as LargeNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two values.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

If l >o Then
MsgBox "l is bigger"
Else
MsgBox "o is bigger"
end if
```

Notes: Returns -1, 1 or 0.

128.8.55 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the number to string.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
MsgBox l
```

See also:

- 128.8.56 Operator_Convert(value as String) 17744

128.8.56 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts string to large number.
Example:

```
Var l As LargeNumberMBS = "123"
MsgBox l
```

See also:

- 128.8.55 Operator_Convert as String 17743

128.8.57 Operator_Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value by other value.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(21)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Var r As LargeNumberMBS = l / o

MsgBox r.stringValue
```

128.8.58 Operator_DivideRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value by other value.
Example:

```
Var o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_DivideRight is called
Var r As LargeNumberMBS = "10" / o

MsgBox r.StringValue
```

128.8.59 Operator_Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Var r As LargeNumberMBS = l Mod o

MsgBox r.stringValue
```

Notes: Divides value and returns the rest.

128.8.60 Operator_ModuloRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.

128.8.61 Operator_Multiply(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(5)
Var r As LargeNumberMBS = o*l

MsgBox r.stringValue
```

128.8.62 Operator_MultiplyRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
Example:

```
Var o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_MultiplyRight is called
```

```
Var r As LargeNumberMBS = "10" * o

MsgBox r.StringValue
```

128.8.63 Operator_Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the value.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Var r As LargeNumberMBS = -l

MsgBox r.StringValue
```

128.8.64 Operator_Or(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs bitwise OR operator on the values.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Var ra As LargeNumberMBS = l And o
Var ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

Notes: Returns new value.

128.8.65 Operator_Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
Example:

```
Var l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Var o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

Var r As LargeNumberMBS = l-o
```

```
Var s As LargeNumberMBS = o-l

MsgBox r.StringValue+" "+s.StringValue
```

128.8.66 Operator_SubtractRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
Example:

```
Var o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_SubtractRight is called
Var r As LargeNumberMBS = "10" - o

MsgBox r.StringValue
```

128.8.67 Prime(byte as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new big prime number.
Example:

```
Var lines() As String
For i As Integer = 1 To 10

Var r As LargeNumberMBS = LargeNumberMBS.Prime(i)
lines.Append r.StringValue

Next
MsgBox Join(lines,EndOfLine)
```

Notes: Byte defines how big the prime number becomes. Range 1 to 680.

128.8.68 RightShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts value to right by given number of bits.
Notes: Bits must be <= 32.

128.8.69 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets number from text.
Notes: Returns the text after the given text following the number in AfterText parameter.
Sets ValueRead if a value was read.

128.8.70 SetZero

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets number to zero.
Example:

```
Var l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(12345)
MsgBox l1.StringValue

// set to zero
l1.SetZero
MsgBox l1.StringValue
```

128.8.71 SqrMod(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply with itself and modulo.
Example:

```
Var o As New LargeNumberMBS(90)
Var m As New LargeNumberMBS(255)
Var r As LargeNumberMBS = o.SqrMod(m)

MsgBox r.StringValue // shows 195 = (90 * 90) mod 255
```

128.8.72 sqrt as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates square root of value.
Example:

```
Var l As New LargeNumberMBS(1234567890123456)

// let's multiple first and then
Var q As LargeNumberMBS = l * l
Var root As LargeNumberMBS = q.Sqrt

If l = root Then
Break // okay
Else
Break // failed
End If
```

Notes: Get nearly square root of a. The answer will be a >= ret^2.

128.8.73 Square as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates square of current value.
Notes: Return x^2.

128.8.74 SubMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtraction with modulo.
Example:

```
Var v As New LargeNumberMBS(100)
Var o As New LargeNumberMBS(200)
Var n As New LargeNumberMBS(&hFF)

Var r As LargeNumberMBS = v.SubMod(o, n)

MsgBox r.StringValue // shows 155 = (100-200) mod 255

// -100 is too small, so 255 is added to bring to range.
```

128.8.75 Subtract(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number.
See also:

- 128.8.76 Subtract(other as LargeNumberMBS) as LargeNumberMBS 17750

128.8.76 Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
See also:

- 128.8.75 Subtract(other as LargeNumberMBS) 17750

128.8.77 Properties

128.8.78 BitSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries bit size of the number.
Notes: Up to 4128 bits.
(Read only property)

128.8.79 Bytes as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides raw bytes of number in memory.
Example:

```
Var o As New LargeNumberMBS(&h12345678)
Var m As MemoryBlock = o.Bytes

Break
```

Notes: Without sign as number is always positive.
(Read only property)

128.8.80 ByteSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte size of the number.
Notes: Up to 516 bytes.
(Read only property)

128.8.81 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as double.
Notes: Result is not correct if value is not in range of a double.
(Read only property)

128.8.82 HexString as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as hex string.
Notes: (Read only property)

128.8.83 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as Int64.
Notes: Result is not correct if value is not in range of a double.
(Read and Write property)

128.8.84 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as integer.
Example:

```
Var l As New LargeNumberMBS(123)

Var u As UInteger = l.UIntegerValue
Var i As Integer = l.IntegerValue
```

Break

Notes: Result is not correct if value is not in range of a double.
(Read and Write property)

128.8.85 IsDouble as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value fits in double range.
Notes: (Read only property)

128.8.86 IsInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value fits in Int32 range.
Notes: (Read only property)

128.8.87 IsInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value fits in Int64 range.
Notes: (Read only property)

128.8.88 IsNegate as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether value is negative.
Notes: (Read and Write property)

128.8.89 IsUInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value fits in UInt32 range.
Notes: (Read only property)

128.8.90 IsUInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this value fits in UInt64 range.
Notes: (Read only property)

128.8.91 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether value is zero.
Notes: (Read only property)

128.8.92 StringValue as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as string.
Notes: Result is not correct if value is not in range of a double.
(Read and Write property)

128.8.93 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as UInt64.
Notes: Result is not correct if value is not in range of a double.
(Read and Write property)

128.8.94 UIntegerValue as UInteger

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as unsigned integer.
Example:

```
Var l As New LargeNumberMBS(123)

Var u As UInteger = l.UIntegerValue
Var i As Integer = l.IntegerValue

Break
```

Notes: Result is not correct if value is not in range of a double.
(Read and Write property)

128.8.95 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value as variant.
Notes: Result is can be string, integer or double.
(Read and Write property)

128.9 class SplineMBS

128.9.1 class SplineMBS

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class calculates a 2D cubic spline.
Notes: The curve goes smooth through all points.

- MBS Xojo / Real Studio Plugins, version 15.4pr4
- MBS Xojo / Real Studio Plugins, version 15.3pr3

128.9.2 Methods

128.9.3 a(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constant part of the coefficient.

128.9.4 b(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 1st order coefficient.

128.9.5 c(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 2nd order coefficient.

128.9.6 calc(x as Double) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Y value on the spline for a given X value.

128.9.7 Constructor(X() as Double, Y() as Double)

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Raises an exception for invalid arrays passed, e.g. different size.
Calculates the spline curve coefficients and sets count property.

128.9.8 d(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 3rd order coefficient.

128.9.9 x(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value for this coefficent.

128.9.10 y(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value for this coefficent.

128.9.11 Properties

128.9.12 count as Integer

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of coefficients.
Notes: (Read and Write property)

128.10 module SunTimesMBS

128.10.1 module SunTimesMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A helper module to calculate sunset/sunrise times.
Example:

```
// may be an hour off due to daylight saving time

Var d as new date

Var jd as Double = SunTimesMBS.CalcJulianDate(d.day, d.Month, d.Year)

// Koblenz, Germany
const latitude = 50.356667
const longitude = 7.593889

// Miami, FL
'const latitude = 25.787778
'const longitude = -80.224167

Var sr as Double = SunTimesMBS.CalcSunriseUTC(jd, latitude, longitude)
Var ss as Double = SunTimesMBS.CalcSunsetUTC (jd, latitude, longitude)

d.gmtoffset = 0
d.hour = 0
d.minute = 0
d.second = 0

Var base as Double = d.totalseconds
d.totalseconds = sr*60 + base

MsgBox "Sunrise: "+d.longdate+" "+d.longtime

d.totalseconds = ss*60 + base

MsgBox "Sunset: "+d.longdate+" "+d.longtime
```

Notes: The example code above works well, but seems not to take into account the daylight saving time.
Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

128.10.2 Methods

128.10.3 CalcJulianDate(day as Integer, month as Integer, year as Integer) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a julian date from given date values.

128.10.4 CalcSunriseUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates sunrise time.
Notes: Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

128.10.5 CalcSunsetUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates sunset time.
Notes: Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

128.11 class UInt128MBS

128.11.1 class UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class to wrap an unsigned 128-bit number for Xojo.
Example:

```
Var n As New UInt128MBS(123)
MessageBox n
```

Notes: Not supported for 32-bit Linux targets.
We cache small numbers.

128.11.2 Methods

128.11.3 BitwiseAnd(Value as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")
var u as UInt64 = 211

n = n.BitwiseAnd(u)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 128.11.4 BitwiseAnd(Value as UInt64) as UInt128MBS 17760

128.11.4 BitwiseAnd(Value as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise AND operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")
Var x As UInt128MBS = 211

n = n.BitwiseAnd(x)

Var s As String = n.stringValue
Break // shows 210
```

See also:

- 128.11.3 BitwiseAnd(Value as UInt128MBS) as UInt128MBS 17759

128.11.5 BitwiseOr(Value as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")

// or one bit
n = n.BitwiseOr(UInt128MBS.one)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 128.11.6 BitwiseOr(Value as UInt64) as UInt128MBS 17761

128.11.6 BitwiseOr(Value as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise OR operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")
var u as UInt64 = 1

// or one bit
n = n.BitwiseOr(u)

Var s As String = n.stringValue
Break // shows 1235
```

See also:

- 128.11.5 BitwiseOr(Value as UInt128MBS) as UInt128MBS 17760

128.11.7 BitwiseXOr(Value as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")

var u as UInt64 = 211
n = n.BitwiseXor(u)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 128.11.8 BitwiseXOr(Value as UInt64) as UInt128MBS 17762

128.11.8 BitwiseXOr(Value as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise XOR operation on two numbers.
Example:

```
Var n As New UInt128MBS("1234")
var o as UInt128MBS = 211

n = n.BitwiseXor(o)

Var s As String = n.stringValue
Break // shows 1025
```

See also:

- 128.11.7 BitwiseXOr(Value as UInt128MBS) as UInt128MBS 17761

128.11.9 Constructor

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor to create a null value.
Example:

```
Var n As New UInt128MBS
n.stringValue = "1234"
Break
```

See also:

- 128.11.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17762
- 128.11.11 Constructor(value as Int128MBS) 17763
- 128.11.12 Constructor(value as Int64) 17763
- 128.11.13 Constructor(value as String) 17764
- 128.11.14 Constructor(value as UInt128MBS) 17765
- 128.11.15 Constructor(value as UInt64) 17765

128.11.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new number based on data in memory.
Notes: Size should be 1, 2, 4, 8 or 16 bytes.
See also:

- 128.11.9 Constructor 17762
- 128.11.11 Constructor(value as Int128MBS) 17763
- 128.11.12 Constructor(value as Int64) 17763
- 128.11.13 Constructor(value as String) 17764
- 128.11.14 Constructor(value as UInt128MBS) 17765
- 128.11.15 Constructor(value as UInt64) 17765

128.11.11 Constructor(value as Int128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing unsigned 128-bit integer.
Example:

```
Var n As New Int128MBS("1234")
var c as new UInt128MBS(n)
Var s As String = c
Break
```

Notes: Raises exception if the Int128MBS is out of range.

- 128.11.14 Constructor(value as UInt128MBS) 17765
- 128.11.15 Constructor(value as UInt64) 17765

128.11.12 Constructor(value as Int64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an Int64.
Example:

```
var u as Int64 = 1234
Var n As New UInt128MBS(u)
Var s As String = n
Break
```

See also:

- 128.11.9 Constructor 17762
- 128.11.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17762
- 128.11.11 Constructor(value as Int128MBS) 17763
- 128.11.13 Constructor(value as String) 17764
- 128.11.14 Constructor(value as UInt128MBS) 17765
- 128.11.15 Constructor(value as UInt64) 17765

128.11.13 Constructor(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from a string.
Example:

```
Var n As New UInt128MBS("1234")
Var s As String = n
Break
```

Notes: Ignores any non digit numbers.

- 128.11.10 Constructor(Data as Ptr, Size as Integer, isUnsigned as boolean = false) 17762
- 128.11.11 Constructor(value as Int128MBS) 17763
- 128.11.12 Constructor(value as Int64) 17763
- 128.11.14 Constructor(value as UInt128MBS) 17765
- 128.11.15 Constructor(value as UInt64) 17765

128.11.14 Constructor(value as UInt128MBS)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an existing 128-bit integer.
Example:

```
Var n As New UInt128MBS("1234")
var c as new UInt128MBS(n)
Var s As String = c
Break
```

Notes: The copy constructor.

- 128.11.12 Constructor(value as Int64) 17763
- 128.11.13 Constructor(value as String) 17764
- 128.11.15 Constructor(value as UInt64) 17765

128.11.15 Constructor(value as UInt64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new 128-bit integer from an UInt64.
Example:

```
var u as UInt64 = 1234
Var n As New UInt128MBS(u)
Var s As String = n
Break
```

- 128.11.13 Constructor(value as String) 17764
- 128.11.14 Constructor(value as UInt128MBS) 17765

128.11.16 Dec

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As UInt128MBS = 123

n.Dec

var v as String = n // 122

Break
```

See also:

- 128.11.17 Dec as UInt128MBS 17766

128.11.17 Dec as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Decreases the number by one.
Example:

```
var n As UInt128MBS = 123
var o as UInt128MBS = n.Dec
var v as String = o // 122

Break
```

Notes: Returns the new value.
See also:

- 128.11.16 Dec 17766

128.11.18 Equals(other as Int128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As UInt128MBS = 123
Var u As UInt128MBS = 123
```

```
If i.Equals(u) Then
Break // <- goes here
Else
Break
End If

If o.Equals(u) Then
Break
Else
Break // <- goes here
End If
```

See also:

- 128.11.19 Equals(other as UInt128MBS) as Boolean 17767
- 128.11.20 Equals(other as UInt64) as Boolean 17768

128.11.19 Equals(other as UInt128MBS) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
Example:

```
Var o As Int128MBS = -1
Var i As UInt128MBS = 123
Var u As UInt128MBS = 123

If i.Equals(u) Then
Break // <- goes here
Else
Break
End If

If o.Equals(u) Then
Break
Else
Break // <- goes here
End If
```

See also:

- 128.11.18 Equals(other as Int128MBS) as Boolean 17766
- 128.11.20 Equals(other as UInt64) as Boolean 17768

128.11.20 Equals(other as UInt64) as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if two numbers are equal.
See also:

- 128.11.18 Equals(other as Int128MBS) as Boolean 17766
- 128.11.19 Equals(other as UInt128MBS) as Boolean 17767

128.11.21 Inc

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
Var n As UInt128MBS = 123

n.inc

Var v As String = n // 124

Break
```

See also:

- 128.11.22 Inc as UInt128MBS 17768

128.11.22 Inc as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Increases the number by one.
Example:

```
var n As UInt128MBS = 123
var o as UInt128MBS = n.inc
var v as String = o // 124

Break
```

Notes: Returns the new value.
See also:

- 128.11.21 Inc 17768

128.11.23 one as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns one as a constant.
Example:

```
MessageBox UInt128MBS.one
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.11.24 Operator_Add(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Add
n = n + UInt128MBS.one

Break
```

See also:

- 128.11.25 Operator_Add(other as UInt64) as UInt128MBS 17769

128.11.25 Operator_Add(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Add

var u as UInt64 = 1
n = n + u

Break
```

See also:

• 128.11.24 Operator_Add(other as UInt128MBS) as UInt128MBS 17769

128.11.26 Operator_AddRight(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adds a number.

128.11.27 Operator_Compare(other as Int128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
var u as UInt128MBS = 5
Var x As New Int128MBS(-6)
Var v As Int128MBS = 5

// calls Operator_Compare

If u >x Then
// okay, negative number is always smaller
Break
Else
// failed?
Break
End If

If u = v Then
// okay
Break
Else
// failed?
Break
End If
```

See also:

• 128.11.28 Operator_Compare(other as UInt128MBS) as Integer 17771

• 128.11.29 Operator_Compare(other as UInt64) as Integer 17771

128.11.28 Operator_Compare(other as UInt128MBS) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
var u as UInt128MBS = 5
Var x As UInt128MBS = 12345
Var v As UInt128MBS = 5

// calls Operator_Compare

If u <x Then
// okay
Break
Else
// failed?
Break
End If

If u = v Then
// okay
Break
Else
// failed?
Break
End If
```

See also:

- 128.11.27 Operator_Compare(other as Int128MBS) as Integer 17770
- 128.11.29 Operator_Compare(other as UInt64) as Integer 17771

128.11.29 Operator_Compare(other as UInt64) as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Compares two numbers.
Example:

```
Var v As UInt128MBS = 5
var u as UInt64 = 5

If u = v Then
// okay
Break
```

```
Else
// failed?
Break
End If
```

See also:

- 128.11.27 Operator_Compare(other as Int128MBS) as Integer 17770
- 128.11.28 Operator_Compare(other as UInt128MBS) as Integer 17771

128.11.30 Operator_Convert as String

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts the 128-bit integer to a string.
Example:

```
var n As UInt128MBS = "123"

// convert to UInt64
Var v As UInt64 = n
// convert to string
Var s As String = n
// convert to double via UInt64
var d as Double = n

Break
```

See also:

- 128.11.31 Operator_Convert as UInt64 17772
- 128.11.32 Operator_Convert(value as String) 17773
- 128.11.33 Operator_Convert(value as UInt64) 17773

128.11.31 Operator_Convert as UInt64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an 128-bit number to an UInt64.
Example:

```
Var n As New Int128MBS("1234")

// auto convert
```

```
var s as UInt64 = n

Break
```

Notes: Raises an exception if the number is out of range for an UInt64.
See also:

- 128.11.30 Operator_Convert as String 17772
- 128.11.32 Operator_Convert(value as String) 17773
- 128.11.33 Operator_Convert(value as UInt64) 17773

128.11.32 Operator_Convert(value as String)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a string to an 128-bit integer.
Example:

```
var n As UInt128MBS = "123"
```

See also:

- 128.11.30 Operator_Convert as String 17772
- 128.11.31 Operator_Convert as UInt64 17772
- 128.11.33 Operator_Convert(value as UInt64) 17773

128.11.33 Operator_Convert(value as UInt64)

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts an UInt64 to an 128-bit integer.
Example:

```
var n As UInt128MBS = 123
```

See also:

- 128.11.30 Operator_Convert as String 17772
- 128.11.31 Operator_Convert as UInt64 17772
- 128.11.32 Operator_Convert(value as String) 17773

128.11.34 Operator_Divide(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Divide
var x as UInt128MBS = 2
n = n / x
Var s As String = n // 617

Break
```

See also:

- 128.11.35 Operator_Divide(other as UInt64) as UInt128MBS 17774

128.11.35 Operator_Divide(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides the number by the other one.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Divide
var u as UInt64 = 2
n = n / u
Var s As String = n // 617

Break
```

See also:

- 128.11.34 Operator_Divide(other as UInt128MBS) as UInt128MBS 17774

128.11.36 Operator_DivideRight(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Divides a number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_DivideRight
```

```
n = 2468 / n
Var s As String = n // 2

Break
```

128.11.37 Operator_Modulo(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var u5 As UInt64 = 5
Var u33 As UInt64 = 33
Var n As New UInt128MBS(u33)
Var x As New UInt128MBS(u5)
// calls Operator_Modulo
n = n Mod x
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 128.11.38 Operator_Modulo(other as UInt64) as UInt128MBS 17775

128.11.38 Operator_Modulo(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
Var n As New UInt128MBS(33)
// calls Operator_Modulo
var u as UInt64 = 5
n = n Mod u
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.
See also:

- 128.11.37 Operator_Modulo(other as UInt128MBS) as UInt128MBS 17775

128.11.39 Operator_ModuloRight(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates modulo operation.
Example:

```
var u5 as UInt64 = 5
Var n As New UInt128MBS(u5)
// calls Operator_ModuloRight
n = 33 Mod n
Var s As String = n // 3

Break
```

Notes: Performs division and returns the left over.

128.11.40 Operator_Multiply(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New UInt128MBS(6)
Var x As New UInt128MBS(5)
// calls Operator_Multiply
n = n * x
Var s As String = n // 30

Break
```

See also:

- 128.11.41 Operator_Multiply(other as UInt64) as UInt128MBS 17776

128.11.41 Operator_Multiply(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var u5 As UInt64 = 5
var u6 as UInt64 = 6
Var n As New UInt128MBS(u6)
// calls Operator_Multiply
n = n * u5
Var s As String = n // 30

Break
```

See also:

- 128.11.40 Operator_Multiply(other as UInt128MBS) as UInt128MBS 17776

128.11.42 Operator_MultiplyRight(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Multiplies the number with the other one.
Example:

```
Var n As New UInt128MBS("6")
// calls Operator_MultiplyRight
n = 5 * n
Var s As String = n // 30

Break
```

128.11.43 Operator_Negate as Int128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Negates the number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Negate
var x as Int128MBS = -n
Var s As String = x // -1234

Break
```

128.11.44 Operator_Subtract(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the other number from this number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Subtract
n = n - UInt128MBS.one
Var s As String = n // 1233

Break
```

See also:

- 128.11.45 Operator_Subtract(other as UInt64) as UInt128MBS 17778

128.11.45 Operator_Subtract(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the other number from this number.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_Subtract
var u as UInt64 = 1
n = n - u
Var s As String = n // 1233

Break
```

See also:

- 128.11.44 Operator_Subtract(other as UInt128MBS) as UInt128MBS 17777

128.11.46 Operator_SubtractRight(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Subtracts the number as right side.
Example:

```
Var n As New UInt128MBS("1234")
// calls Operator_SubtractRight
n = 2000 - n
Var s As String = n // 766

Break
```

128.11.47 Pow(exp as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates the power of the value with given exponent.
Example:

```
Var Exp As Int64 = 5
Var num As UInt128MBS = 2

var p as UInt128MBS = num.Pow(exp)
var s as string = p // 25

Var Exp2 As UInt128MBS = 90
Var p2 As UInt128MBS = num.Pow(Exp2)
Var s2 As String = p2 // 1237940039285380274899124224

Break
```

128.11.48 ShiftLeft(other as Int64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the left.
Example:

```
Var n As UInt128MBS = 12
Var m As UInt128MBS = n.ShiftLeft(1)
Var s As String = m

Break
```

See also:

- 128.11.49 ShiftLeft(other as UInt128MBS) as UInt128MBS 17779
- 128.11.50 ShiftLeft(other as UInt64) as UInt128MBS 17780

128.11.49 ShiftLeft(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the left.
See also:

- 128.11.48 ShiftLeft(other as Int64) as UInt128MBS 17779

• 128.11.50 ShiftLeft(other as UInt64) as UInt128MBS 17780

128.11.50 ShiftLeft(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the left.
Example:

```
Var n As UInt128MBS = 12
var u as UInt64 = 1
Var m As UInt128MBS = n.ShiftLeft(u)
var s as string = m

Break
```

See also:

• 128.11.48 ShiftLeft(other as Int64) as UInt128MBS 17779
• 128.11.49 ShiftLeft(other as UInt128MBS) as UInt128MBS 17779

128.11.51 ShiftRight(other as Int64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the right.
Example:

```
Var n As UInt128MBS = 12
Var m As UInt128MBS = n.ShiftRight(1)
Var s As String = m

Break
```

See also:

• 128.11.52 ShiftRight(other as UInt128MBS) as UInt128MBS 17780
• 128.11.53 ShiftRight(other as UInt64) as UInt128MBS 17781

128.11.52 ShiftRight(other as UInt128MBS) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the right.
See also:

- 128.11.51 ShiftRight(other as Int64) as UInt128MBS 17780
- 128.11.53 ShiftRight(other as UInt64) as UInt128MBS 17781

128.11.53 ShiftRight(other as UInt64) as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a bitwise shift to the right.
Example:

```
Var n As UInt128MBS = 12
Var u As UInt64 = 1
Var m As UInt128MBS = n.ShiftRight(u)
Var s As String = m

Break
```

See also:

- 128.11.51 ShiftRight(other as Int64) as UInt128MBS 17780
- 128.11.52 ShiftRight(other as UInt128MBS) as UInt128MBS 17780

128.11.54 Sqrt as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calculates the square root.
Example:

```
Var n As UInt128MBS = 85
Var m As UInt128MBS = n.Sqrt
Var s As String = m

Break // 9
```

Notes: Returns the rounded down square root without using floating point math.

128.11.55 supported as Boolean

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether UInt128 is supported.
Example:

```
If UInt128MBS.supported Then
MessageBox "UInt128 available"
Else
MessageBox "UInt128 not supported"
End If
```

Notes: Not supported for 32-bit Linux.

128.11.56 two as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns two as a constant.
Example:

```
MessageBox UInt128MBS.two
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.11.57 zero as UInt128MBS

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns zero as a constant.
Example:

```
MessageBox UInt128MBS.zero
```

Notes: We cache the object, so calling this multiple times will return the same object.

128.11.58 Properties

128.11.59 BitWidth as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the bit width of the value.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)
```

```
Var BitWidth2 As Integer = n2.BitWidth
Var BitWidth36 As Integer = n36.BitWidth
Var BitWidth100 As Integer = n100.BitWidth

Break
```

Notes: (Read only property)

128.11.60 CountLeftZeros as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are zero from the left side.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)

Var CountLeftZeros2 As Integer = n2.CountLeftZeros
Var CountLeftZeros36 As Integer = n36.CountLeftZeros
Var CountLeftZeros100 As Integer = n100.CountLeftZeros

Var CountRightZeros2 As Integer = n2.CountRightZeros
Var CountRightZeros36 As Integer = n36.CountRightZeros
Var CountRightZeros100 As Integer = n100.CountRightZeros

Break
```

Notes: (Read only property)

128.11.61 CountRightZeros as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are zero from the right side.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)

Var CountLeftZeros2 As Integer = n2.CountLeftZeros
```

```
Var CountLeftZeros36 As Integer = n36.CountLeftZeros
Var CountLeftZeros100 As Integer = n100.CountLeftZeros

Var CountRightZeros2 As Integer = n2.CountRightZeros
Var CountRightZeros36 As Integer = n36.CountRightZeros
Var CountRightZeros100 As Integer = n100.CountRightZeros

Break
```

Notes: (Read only property)

128.11.62 Data as Ptr

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the data pointer of a number.
Notes: The size of the memory is 16 bytes.
(Read only property)

128.11.63 doubleValue as Double

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the value as double.
Example:

```
Var n2 As UInt128MBS = 2
Var n100 As UInt128MBS = UInt128MBS.two.Pow(100)
n100 = n100 + UInt64(5)

Var value2 As Double = n2.doubleValue
Var value100 As Double = n100.doubleValue
Var string100 As String = n100.stringValue

Break // string and value don't match!
```

Notes: Since double has only 53 bits of precision, you loose precision when doing this.
(Read only property)

128.11.64 HighValue as UInt64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The higher 64 bit half of the 128 bits.
Example:

```
Var n As New UInt128MBS("10000000000000000000000000000000")

Var l As UInt64 = n.LowValue
Var h As UInt64 = n.HighValue
var s as string = n

Break
```

Notes: (Read and Write property)

128.11.65 LowValue as UInt64

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The lower 64 bit half of the 128 bits.
Example:

```
Var n As New UInt128MBS("10000000000000000000000000000000")

Var l As UInt64 = n.LowValue
Var h As UInt64 = n.HighValue
var s as string = n

Break
```

Notes: (Read and Write property)

128.11.66 PopCount as Integer

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Counts how many bits are set.
Example:

```
Var n2 As UInt128MBS = 2
Var n36 As UInt128MBS = 36
Var n100 as UInt128MBS = UInt128MBS.two.Pow(100)

Var PopCount2 As Integer = n2.PopCount
Var PopCount36 As Integer = n36.PopCount
Var PopCount100 As Integer = n100.PopCount
```

```
Break
```

Notes: (Read only property)

128.11.67 stringValue as String

MBS Util Plugin, Plugin Version: 25.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries or assigns the string value to the UInt128MBS class.
Example:

```
Var n As New UInt128MBS("1234")
Var s1 As String = n.stringValue
n.stringValue = "2345"
Var s2 As String = n.stringValue
Break
```

Notes: (Read and Write property)

Chapter 129

Media Keys

129.1 class MediaKeysMBS

129.1.1 class MediaKeysMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Catch some special keys with this class.
Example:

```
Var m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

// set which keys to watch for
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

// and start
m.startWatchingMediaKeys
```

Notes: First written to catch play, fast and rewind keys from Apple keyboards.
Later extended to also catch other keys.
Still not all keys are available on all keyboards.

Please have only instance of this class running your application.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr12
- MBS Real Studio Plugins, version 11.2pr11

- MBS Real Studio Plugins, version 11.2pr9

- MBS Real Studio Plugins, version 11.2pr9

129.1.2 Methods

129.1.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Initializes the key watcher.

129.1.4 startWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Starts watching for keys.
Example:

```
Var m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
m.startWatchingMediaKeys
```

129.1.5 stopWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Stops watching for keys.
Example:

```
Var m as MediaKeysMBS // global property

// when closing media window
m.stopWatchingMediaKeys
```

Notes: The destructor calls this for cleanup.

129.1.6 Properties

129.1.7 Keys(keyCode as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Which keys should be intercepted and handled by your application.
Example:

```
Var m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
```

Notes: (Read and Write computed property)

129.1.8 Events

129.1.9 receivedMediaKeyEvent(e as NSEventMBS, keyCode as Integer, keyFlags as Integer, keyState as Integer, keyRepeat as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The event called when the user uses one of the special keys we listen for.
Notes: If you don't get the event, did you make sure all conditions are right?

- Requires Mac OS X 10.5
- Keys(x) set to kModeEventAndBlock or kModeEventAndPass for the keys you need?
- startWatchingMediaKeys called?
- your object is still alive in your application?

129.1.10 Constants

Key Constants

Constant	Value	Description
kMediaKeyBrightnessDown	3	
kMediaKeyBrightnessUp	2	
kMediaKeyCapsLock	4	Caps Lock
kMediaKeyContrastDown	12	
kMediaKeyContrastUp	11	
kMediaKeyDownArrow	9	
kMediaKeyEject	14	Eject key
kMediaKeyFast	19	Fast key. On by default.
kMediaKeyHelp	5	
kMediaKeyIlluminationDown	22	
kMediaKeyIlluminationToggle	23	
kMediaKeyIlluminationUp	21	
kMediaKeyLaunchPanel	13	
kMediaKeyMute	7	Sound Mute
kMediaKeyNext	17	
kMediaKeyNumLock	10	Num Lock key
kMediaKeyPlay	16	Play key. On by default.
kMediaKeyPower	6	Power Key
kMediaKeyPrevious	18	Previous key
kMediaKeyRewind	20	Rewind Key. On by default.
kMediaKeySoundDown	1	Sound down
kMediaKeySoundUp	0	Sound up
kMediaKeyUpArrow	8	
kMediaKeyVideoMirror	15	

Mode Constants

Constant	Value	Description
kModeBlock	1	Block the event.
kModeEventAndBlock	2	Call the receivedMediaKeyEvent event and block the event.
kModeEventAndPass	3	Call the receivedMediaKeyEvent event and pass the event to other applications.
kModePass	0	Pass event to other applications.

Chapter 130

MediaLibrary

130.1 class MLMediaGroupMBS

130.1.1 class MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The MLMediaGroup class provides groupings for media objects from a single source of media, such as iTunes or Aperture.
Notes: The media objects—individual files containing a piece of media such as a photo, song, or movie—are referenced by one or more groups within each media source. These groupings serve as filters, providing hierarchical structure to the collection of objects in each source.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.

A media group has an array of attributes which can change at any point. For example, a media group may have certain attributes that describe its objects, but these attributes appear only after the objects for that group have been loaded. When any media group attribute changes, observers are notified via KVO notification. For information about handling attributes that change, see Cocoa Bindings Programming Topics.

Every media group has a unique identifier as well as a type identifier. In certain cases, multiple groups within a source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.
All MLMediaGroup properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Blog Entries

- MBS Xojo Plugins, version 18.2pr1

130.1.2 Methods

130.1.3 childGroups as MLMediaGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A list of child groups contained in the media group.

130.1.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

130.1.5 mediaObjects as MLMediaObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A list of media objects in the media group.
Notes: This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. A KVO notification will be sent via the main thread when data arrives.

130.1.6 MLApertureAllPhotosTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents all photos in Aperture.

130.1.7 MLApertureAllProjectsTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents all projects in Aperture.

130.1.8 MLApertureFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Facebook album that is visible in Aperture.

130.1.9 MLApertureFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Facebook user account in Aperture. A Facebook user account contains one or more Facebook albums.

130.1.10 MLApertureFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Faces album in Aperture. Individual Faces albums are nested in the main Faces album.

130.1.11 MLApertureFlaggedTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the album of flagged media in Aperture.

130.1.12 MLApertureFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Flickr album that is visible in Aperture.

130.1.13 MLApertureFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Flickr user account in Aperture. A Flickr user account contains one or more Flickr albums.

130.1.14 MLApertureFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a folder in Aperture.

130.1.15 MLApertureLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the last import album in Aperture.

130.1.16 MLApertureLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the recent content album in Aperture, known as the Last N Months album. The value for N is usually 12 (settable in Aperture >Preferences >General).

130.1.17 MLApertureLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the last viewed event in Aperture.

130.1.18 MLApertureLightTableTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a light table in Aperture.

130.1.19 MLAperturePhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a photo stream in Aperture.

130.1.20 MLAperturePlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the Places album in Aperture.

130.1.21 MLAperturePlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a city in Aperture. A city album is nested in a province or state album.

130.1.22 MLAperturePlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a country in Aperture. A country album is nested in the main Places album.

130.1.23 MLAperturePlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a point-of-interest in Aperture. A point of interest album is nested in a city album.

130.1.24 MLApertureProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a province or state in Aperture. A province or state album is nested in a country album.

130.1.25 MLApertureProjectAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a project in Aperture.

130.1.26 MLApertureProjectFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a folder within a project in Aperture.

130.1.27 MLApertureRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The root media group for Aperture.

130.1.28 MLApertureSlideShowTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents a slideshow in Aperture.

130.1.29 MLApertureSmugMugAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a SmugMug album that is visible in Aperture.

130.1.30 MLApertureSmugMugGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a SmugMug user account in Aperture. A SmugMug user account contains one or more SmugMug albums.

130.1.31 MLApertureUserAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a user-created album in Aperture.

130.1.32 MLApertureUserSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a user-created smart album in Aperture.

130.1.33 MLFinalCutEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a collection of events from a specific time period in Final Cut Pro.

130.1.34 MLFinalCutEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents an event in Final Cut Pro.

130.1.35 MLFinalCutEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: The media group that represents the event library in Final Cut Pro. The event library contains all event calendar groups.

130.1.36 MLFinalCutFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a folder in Final Cut Pro.

130.1.37 MLFinalCutProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a project in Final Cut Pro.

130.1.38 MLFinalCutRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: The root media group for Final Cut Pro.

130.1.39 MLFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in folder-based media sources.
Notes: A media group that represents a folder in folder-based media.

130.1.40 MLFolderRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in folder-based media sources.
Notes: The root media group for folder-based media.

130.1.41 MLGarageBandFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the GarageBand media source.
Notes: A media group that represents a folder in GarageBand.

130.1.42 MLGarageBandRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the GarageBand media source.
Notes: The root media group for GarageBand.

130.1.43 MLiMovieEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a collection of events from a specific time period in iMovie.

130.1.44 MLiMovieEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents an event in iMovie.

130.1.45 MLiMovieEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: The media group that represents the event library in iMovie. The event library contains all event calendar groups.

130.1.46 MLiMovieFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a folder in iMovie.

130.1.47 MLiMovieProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a project in iMovie.

130.1.48 MLiMovieRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: The root media group for iMovie.

130.1.49 MLiPhotoAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents an album in iPhoto.

130.1.50 MLiPhotoEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents an event in iPhoto.

130.1.51 MLiPhotoEventsFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Events album in iPhoto.

130.1.52 MLiPhotoFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Facebook album that is visible in iPhoto.

130.1.53 MLiPhotoFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Facebook user account in iPhoto. A Facebook user account contains one or more Facebook albums.

130.1.54 MLiPhotoFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Faces album in iPhoto. Individual Faces albums are nested in the main Faces album.

130.1.55 MLiPhotoFlaggedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the album of flagged media in iPhoto.

130.1.56 MLiPhotoFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Flickr album that is visible in iPhoto.

130.1.57 MLiPhotoFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Flickr user account in iPhoto. A Flickr user account contains one or more Flickr albums.

130.1.58 MLiPhotoFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a folder in iPhoto.

130.1.59 MLiPhotoLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Last Import album in iPhoto.

130.1.60 MLiPhotoLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the recent content album in iPhoto, known as the Last N Months album. The value for N is usually 12 (settable in iPhoto >Preferences >General).

130.1.61 MLiPhotoLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the last viewed event in iPhoto.

130.1.62 MLiPhotoLibraryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Photos album in iPhoto.

130.1.63 MLiPhotoPhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a photo stream in iPhoto.

130.1.64 MLiPhotoPlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Places album in iPhoto.

130.1.65 MLiPhotoPlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a city in iPhoto. A city album is nested in a province or state album.

130.1.66 MLiPhotoPlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a country in iPhoto. A country album is nested in the main Places album.

130.1.67 MLiPhotoPlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a point-of-interest in iPhoto. A point of interest

album is nested in a city album.

130.1.68 MLiPhotoPlacesProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a province or state in iPhoto. A province or state album is nested in a country album.

130.1.69 MLiPhotoRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The root media group for iPhoto.

130.1.70 MLiPhotoSlideShowAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a slideshow album in iPhoto.

130.1.71 MLiPhotoSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a smart album in iPhoto.

130.1.72 MLiPhotoSubscribedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a subscribed album in iPhoto.

130.1.73 MLiTunesAudioBooksPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Audio Books playlist in iTunes.

130.1.74 MLiTunesFolderPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a folder in iTunes.

130.1.75 MLiTunesGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a genius playlist in iTunes.

130.1.76 MLiTunesiTunesUPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the iTunes U playlist in iTunes.

130.1.77 MLiTunesMoviesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Movies playlist in iTunes.

130.1.78 MLiTunesMusicPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Music playlist in iTunes.

130.1.79 MLiTunesMusicVideosPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: Musicvideos playlist

130.1.80 MLiTunesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a user-created playlist in iTunes.

130.1.81 MLiTunesPodcastPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Podcast playlist in iTunes.

130.1.82 MLiTunesPurchasedPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Purchased playlist in iTunes.

130.1.83 MLiTunesRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The root media group for iTunes.

130.1.84 MLiTunesSavedGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a saved genius playlist in iTunes.

130.1.85 MLiTunesSmartPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a smart playlist in iTunes.

130.1.86 MLiTunesTVShowsPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the TV Shows playlist in iTunes.

130.1.87 MLiTunesVideoPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: Video Playlist

130.1.88 MLLogicBouncesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The media group that represents all bounces in Logic.

130.1.89 MLLogicProjectsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The media group that represents all projects in Logic.

130.1.90 MLLogicProjectTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: A media group that represents a project in Logic. Projects may be nested.

130.1.91 MLLogicRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The root media group for Logic.

130.1.92 MLPhotosAlbumsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.93 MLPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.
Notes: A media group that represents an album in Photos.

130.1.94 MLPhotosAllCollectionsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.95 MLPhotosAllMomentsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.96 MLPhotosAllPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.97 MLPhotosAllYearsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.98 MLPhotosAnimatedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.99 MLPhotosBurstGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.100 MLPhotosCollectionGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.101 MLPhotosDepthEffectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.102 MLPhotosFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.103 MLPhotosFavoritesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.104 MLPhotosFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.105 MLPhotosFrontCameraGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.106 MLPhotosLastImportGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.107 MLPhotosLivePhotosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.108 MLPhotosLongExposureGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.109 MLPhotosMomentGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.110 MLPhotosMyPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.111 MLPhotosPanoramasGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.112 MLPhotosPublishedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.113 MLPhotosRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.
Notes: The root media group for Photos.

130.1.114 MLPhotosScreenshotGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.115 MLPhotosSharedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.116 MLPhotosSharedPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.117 MLPhotosSloMoGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.118 MLPhotosSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.
Notes: A media group that represents a smart album in Photos.

130.1.119 MLPhotosTimelapseGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.120 MLPhotosVideosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.121 MLPhotosYearGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for media group types in the Photos media source.

130.1.122 Properties

130.1.123 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internet object reference.
Notes: (Read and Write property)

130.1.124 IconImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The media group,Äôs icon.
Notes: (Read only property)

130.1.125 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An identifier for the media group.
Notes: Each group,Äôs identifier is unique within a media source.
(Read only property)

130.1.126 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A pointer to the media library instance that loaded the media group,Äôs source.
Notes: (Read only property)

130.1.127 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An identifier for the source that loaded the media group.
Notes: (Read only property)

130.1.128 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media group was last altered.
Notes: (Read only property)

130.1.129 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media group was last altered.
Notes: (Read only property)

130.1.130 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the media group.
Notes: This string is human-readable. It is either user created (such as the name of an iTunes playlist) or already localized.
(Read only property)

130.1.131 Parent as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The media group,Äôs parent group.
Notes: (Read only property)

130.1.132 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A dictionary of attributes describing the media group.
Notes: These attributes are usually defined by the source app, such as iTunes. For example, an iTunes playlist is represented as a group. iTunes attaches attributes such as "Playlist Persistent ID" to the group in its attributes. The attribute names vary based on the media source. Attributes common to all sources are called out as separate properties.
(Read only property)

130.1.133 TypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An identifier for the media group,Äôs type.
Notes: Multiple groups within a media source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.
(Read only property)

130.1.134 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the media group.
Notes: Some groups do not have a URL, in which case this returns nil. For example, a group that represents a filesystem folder on disk has a URL, but a group that represents a named face in iPhoto does not.
(Read only property)

130.2 class MLMediaLibraryMBS

130.2.1 class MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The MLMediaLibrary class provides an interface for accessing a collection of media objects from various sources.
Notes: It serves as the initial access point of the Media Library framework.

The media library structure is defined by MLMediaSource, MLMediaGroup, and MLMediaObject classes. At the highest level, all content within a media library instance is categorized by media source. Conceptually, a media source represents a single app, such as iTunes or Aperture. Each source contains a hierarchy of media groups that originates from a root group. These groups consist of media objects—individual files containing a piece of media such as a photo, song, or movie. Only one copy of each object exists within a media library instance, but an object can be referenced by multiple groups from a single source. The structure of the group hierarchy is specific to each media source.

A media library is initialized using the Constructor. The options argument to this method serves as a filter. By specifying which folders or sources to include or exclude during load, you can view a particular subset of groups and objects from your collection. All objects provided are thread-safe. For descriptions of possible load options, see Load Options Keys.
The typical and most efficient use case is to create and use one instance of MLMediaLibrary for the lifetime of an app. When the underlying media files and metadata on the user,Äôs system change, the corresponding data model objects (media groups and media objects) are automatically updated and KVO notifications are sent to notify the calling code of any changes. Multiple instances of MLMediaLibrary can be created and used, but their sources, groups, and objects will be independent of those provided by other instances of MLMediaLibrary.

130.2.2 Methods

130.2.3 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this class available.
Notes: Returns true on Mac OS 10.7 or newer in 64-bit app.

130.2.4 Constructor(options as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the media library based on the specified load options.
Notes: options: A dictionary of load options.

Returns a new media library.

For descriptions of possible load options, see Load Options Keys.

130.2.5 MLMediaLoadAppFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: Specifies one or more relative paths inside the caller,Äôs app bundle in which to search for media files. The value for this key is an array of strings (relative paths inside the caller,Äôs app bundle).

130.2.6 MLMediaLoadAppleLoops as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for well-known media folders used to specify the value for MLMediaLoadFoldersKey.
Notes: Identifies the folder containing audio loops from Apple.

130.2.7 MLMediaLoadExcludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: Defines which media sources to exclude when loading. This option is processed after MLMediaLoadIncludeSourcesKey. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

130.2.8 MLMediaLoadFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: Specifies the well-known folders that should be searched for media files. If this key is not present, none of the well-known folders will be provided. The value for this key is an array of strings (identifiers that correspond to well-known folder locations). For a list of well-known folder identifiers, see MLMediaLoadMoviesFolder and MLMediaLoadAppleLoops.

130.2.9 MLMediaLoadIncludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: Defines which media sources to include when loading. If not present, load all available media sources. This option is processed after MLMediaLoadSourceTypesKey. If MLMediaLoadIncludeSourcesKey is present but MLMediaLoadSourceTypesKey is not, then only those sources specified here will be loaded. This is useful for loading a single media source. When both keys are present, this is useful for adding one or more media sources that normally would not appear for the requested library type. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

130.2.10 MLMediaLoadMoviesFolder as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the identifiers for well-known media folders used to specify the value for MLMediaLoadFoldersKey.
Notes: Identifies the user,Äôs Movies folder.

130.2.11 MLMediaLoadSourceTypesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the option keys.
Notes: Defines which sources to load based on library type. If not present, this will load all sources. The value for this key is a media source type.

130.2.12 Properties

130.2.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internet object reference.
Notes: (Read and Write property)

130.2.14 mediaSources as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary of media sources by identifier.
Notes: Returns nil the first time, beginning an asynchronous load of the media sources. A KVO notification is sent when all media sources have been loaded. If there are no objects in a media source, the source does not appear in this dictionary.
(Read only property)

130.3 class MLMediaObjectMBS

130.3.1 class MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The MLMediaObject class describes a single media file, such as a photo, song, or movie.
Notes: Each media object contains basic metadata including a name, media type, URL, and so on. Additional information about each object is stored in its list of attributes. For a list of possible object attribute keys, see Media Object Attribute Keys.

A media object belongs to a single media source but can be referenced by several groups within that source. In other words, an object can appear in multiple places in the group hierarchy under a single media source. In iTunes, a movie that was purchased through the iTunes Store is referenced by both the Purchased playlist and the Movies playlist. If a user adds the movie to his own playlist, the group respresenting that playlist will also reference the movie. All three groups reference the same media object.

All MLMediaObject properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.3.2 Methods

130.3.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

130.3.4 MLMediaObjectAlbumKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs album. The value for this key is a string.

130.3.5 MLMediaObjectArtistKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs artist. The value for this key is a string.

130.3.6 MLMediaObjectBitRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs bit rate, in kilobits per second. The value for this key is a number.

130.3.7 MLMediaObjectChannelCountKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs channel count. The value for this key is a number.

130.3.8 MLMediaObjectCommentsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the contents of the comments field associated with the media object. The value for this key is a string.

130.3.9 MLMediaObjectDurationKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs duration, in seconds. The value for this key is a number.

130.3.10 MLMediaObjectGenreKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs genre. The value for this key is a string.

130.3.11 MLMediaObjectKeywordsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the keywords associated with the media object. The value for this key is an array of strings.

130.3.12 MLMediaObjectKindKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Used by iTunes only. Specifies the media object,Äôs file format (shown in the ,ÄúKind,Äù column in iTunes). The value for this key is a string.

130.3.13 MLMediaObjectProtectedKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies whether the media object is protected by DRM (Digital Rights Management). The value for this key is a boolean value.

130.3.14 MLMediaObjectResolutionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs resolution. The value for this key is a string with size.

130.3.15 MLMediaObjectSampleRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs sample rate, in samples per second (Hz). The value for this key is a number.

130.3.16 MLMediaObjectTrackNumberKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the property keys for a media object.
Notes: Specifies the media object,Äôs track number. The value for this key is a number.

130.3.17 Properties

130.3.18 ArtworkImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Album artwork associated with the media object.
Notes: Applies to iTunes media only. Returns nil if not applicable or not available.
(Read only property)

130.3.19 ContentType as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The UTI associated with the media object.
Notes: (Read only property)

130.3.20 File as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the media object.
Notes: For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

130.3.21 FileSize as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The size, in bytes, of the media object.
Notes: (Read only property)

130.3.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internet object reference.
Notes: (Read and Write property)

130.3.23 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An identifier for the media object.
Notes: Each object,Äôs identifier is unique within a media source.
(Read only property)

130.3.24 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A pointer to the media library instance that loaded the media object,Äôs source.
Notes: (Read only property)

130.3.25 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An identifier for the source that loaded the media object.
Notes: For a list of possible media source identifiers, see MLMediaLibraryMBS.
(Read only property)

130.3.26 MediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The media object,Äôs type of media (image, audio, or movie).
Notes: For a list of possible media types, see kType* constants.
(Read only property)

130.3.27 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media object was last altered.
Notes: (Read only property)

130.3.28 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media object was last altered.
Notes: (Read only property)

130.3.29 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the media object.
Notes: (Read only property)

130.3.30 OriginalFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the original media object, if URL is not the original (master).
Notes: For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

130.3.31 OriginalURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the original media object, if URL is not the original (master).
Notes: This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

130.3.32 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A dictionary of attributes describing the media object.
Notes: For a list of possible object attribute keys, see Media Object Attribute Keys.
(Read only property)

130.3.33 ThumbnailFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the media object,Äôs thumbnail image.
Notes: For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

130.3.34 ThumbnailURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the media object,Äôs thumbnail image.
Notes: This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

130.3.35 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The location of the media object.
Notes: This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

130.3.36 Constants

Types

Constant	Value	Description
kTypeAudio	1	Audio
kTypeImage	2	Image
kTypeMovie	4	Movie

130.4 class MLMediaSourceMBS

130.4.1 class MLMediaSourceMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The MLMediaSource class identifies a specific provider of media.
Notes: Conceptually, a media source respresents a single app, such as iTunes or Aperture. Each media source contains multiple groups of media objects—individual files containing a piece of media such as a photo, song, or movie.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.
Every media source has a unique media source identifier within a single media library instance. For a list of possible media source identifiers, see Media Source Identifiers.
All MLMediaSourceMBS properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 18.2pr1

130.4.2 Methods

130.4.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

130.4.4 mediaGroupForIdentifier(mediaGroupIdentifier as string) as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the media group with the specified identifier.
Notes: mediaGroupIdentifier: The media group identifier to search for in the source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

130.4.5 mediaGroupsForIdentifiers(mediaGroupIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the media groups with the specified identifiers.
Notes: mediaGroupIdentifiers: An array of media group identifiers to search for in the source.

Returns a dictionary of media groups matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

130.4.6 mediaObjectForIdentifier(mediaObjectIdentifier as string) as MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the media object with the specified identifier.
Notes: mediaObjectIdentifier: The media object identifier to search for in the media source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

130.4.7 mediaObjectsForIdentifiers(mediaObjectIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the media objects with the specified identifiers.
Notes: mediaObjectIdentifiers: An array of media object identifiers to search for in the source.

Returns a dictionary of media objects matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

130.4.8 MLMediaSourceApertureIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from Aperture.

130.4.9 MLMediaSourceAppDefinedFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from app defined folder.

130.4.10 MLMediaSourceCustomFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from a custom folder.

130.4.11 MLMediaSourceFinalCutIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from Final Cut Pro.

130.4.12 MLMediaSourceGarageBandIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from GarageBand.

130.4.13 MLMediaSourceiMovieIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from iMovie.

130.4.14 MLMediaSourceiPhotoIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from iPhoto.

130.4.15 MLMediaSourceiTunesIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from iTunes.

130.4.16 MLMediaSourceLogicIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from Logic.

130.4.17 MLMediaSourceMoviesFolderIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from movies folder.

130.4.18 MLMediaSourcePhotoBoothIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from Photo Booth.

130.4.19 MLMediaSourcePhotosIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The identifier for the media source providing content from photos folder.

130.4.20 Properties

130.4.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internet object reference.
Notes: (Read and Write property)

130.4.22 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A pointer to the media library instance that loaded this media source.
Notes: (Read only property)

130.4.23 mediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A unique identifier for the media source.
Notes: For a list of possible media source identifiers, see shared methods.
(Read only property)

130.4.24 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A list of attributes describing the media source.
Notes: (Read only property)

130.4.25 rootMediaGroup as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The base media group in the media source that contains all other groups within the source as descendant elements.
Notes: This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. When data arrives, a KVO notification is sent via the main thread.
(Read only property)

130.4.26 Constants

Source Types

Constant	Value	Description
kSourceTypeAudio	1	Audio
kSourceTypeImage	2	Images
kSourceTypeMovie	4	Movies

130.5 class NSMediaLibraryBrowserControllerMBS

130.5.1 class NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: An instance of an NSMediaLibraryBrowserController configures and displays a Media Library Browser Panel.
Notes: A User can drag and drop media files from the Media Library Browser into views in their application. Requires Mac OS X 10.9.

130.5.2 Methods

130.5.3 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.9 and false on other platforms.

130.5.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new object for the shared library browser.

130.5.5 orderFront

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Orders window to front.

130.5.6 orderOut

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Orders window out.
Notes: Hides window.

130.5.7 sharedMediaLibraryBrowserController as NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns a new object for the shared library browser.

130.5.8 togglePanel

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Toggles the panel to hide/show.

130.5.9 Properties

130.5.10 Frame as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The bounds of the panel.
Notes: (Read and Write property)

130.5.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

130.5.12 mediaLibraries as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Which media library to show: audio, video or image.
Notes: (Read and Write property)

130.5.13 Visible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The visible state of the browser panel.
Notes: (Read and Write property)

130.5.14 Constants

Library Types

Constant	Value	Description
NSMediaLibraryAudio	1	Audio
NSMediaLibraryImage	2	Image
NSMediaLibraryMovie	4	Movie

Chapter 131

MediaPlayer

131.1 class MPMediaItemArtworkMBS

131.1.1 class MPMediaItemArtworkMBS

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: A graphical image, such as music album cover art, associated with a media item.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.0
- MBS Xojo Plugins, version 24.6pr3

131.1.2 Methods

131.1.3 Constructor(Pic as Picture)

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: Creates a new image from existing artwork with the specified bounds.

131.1.4 Properties

131.1.5 Handle as Integer

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

131.1.6 Height as Integer

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The maximum size, in points, of the image associated with the media item artwork.
Notes: (Read only property)

131.1.7 Width as Integer

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The maximum size, in points, of the image associated with the media item artwork.
Notes: (Read only property)

131.2 class MPNowPlayingInfoCenterMBS

131.2.1 class MPNowPlayingInfoCenterMBS

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: An object for setting the Now Playing information for media that your app plays.
Notes: If your app also provides Now Playing information containing information about the current track, use this object to update that information at appropriate times. This object contains a nowPlayingInfo dictionary describing the playing item.

Your application may need com.apple.mediaremote.set-playback-state entitlement to use the nowPlayingInfo property.
Blog Entries

- MBS Xojo Plugins, version 24.6pr3

131.2.2 Methods

131.2.3 Constructor

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The constructor.
Notes: Sets the singleton Now Playing info center.

131.2.4 defaultCenter as MPNowPlayingInfoCenterMBS

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: Returns the singleton Now Playing info center.
Notes: The default now playing info center holds Now Playing information for the app that,Äôs designated to receive remote control events.

131.2.5 MediaItemPropertyAlbumTitle as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The title of an album.

This value property contains the album title, such as ‚ÄúLive On Mars‚Äù, as opposed to the title of an individual song on the album, such as ‚ÄúCrater Dance (radio edit)‚Äù (which you specify using the MPMediaItemPropertyTitle property). Value is a string.

131.2.6 MediaItemPropertyAlbumTrackCount as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The number of tracks for the album that contains the media item.
This value is an UInteger. For an audio streaming app, the system provides a default value of 1 for this property.

131.2.7 MediaItemPropertyAlbumTrackNumber as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The track number of the media item, for a media item that is part of an album.
This value is an UInteger.

131.2.8 MediaItemPropertyArtist as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The performing artists for a media item —which may vary from the primary artist for the album that a media item belongs to.

For example, if the album artist is ‚ÄúJoseph Fable,,‚Äù the artist for one of the songs in the album may be ‚ÄúJoseph Fable featuring Thomas Smithson‚Äù. Value is a string.

131.2.9 MediaItemPropertyArtwork as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The artwork image for the media item.
This value is a media item image, described in MPMediaItemArtworkMBS.

131.2.10 MediaItemPropertyComposer as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The musical composer for the media item.
This value is a string.

131.2.11 MediaItemPropertyDiscCount as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The number of discs for the album that contains the media item.
This value is an UInteger.

131.2.12 MediaItemPropertyDiscNumber as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The disc number of the media item, for a media item that is part of a multidisc album.
This value is an UInteger.

131.2.13 MediaItemPropertyGenre as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The music or film genre of the media item.
This value is a string.

131.2.14 MediaItemPropertyMediaType as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The media type of the media item.
This value is an Integer. The integer value represents a bit field flag, or set of flags, from MPMediaType.

131.2.15 MediaItemPropertyPersistentID as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The key for the persistent identifier for the media item.

The corresponding value is a number that contains a MPMediaEntityPersistentID. The value of the MP-MediaItemPropertyPersistentID identifier persists across application launches and across syncs that do not change the sync status of the media item. The value is not guaranteed to persist across a sync/unsync/sync cycle.

131.2.16 MediaItemPropertyPlaybackDuration as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The duration. Value is a double.

131.2.17 MediaItemPropertyTitle as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the media property keys.
Notes: The title or name of the media item.
This property is unrelated to the MPMediaItemPropertyAlbumTitle property. Value is a string.

131.2.18 NowPlayingInfoCollectionIdentifier as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: An identifier that represents the collection to which the now playing item belongs. This can refer to an artist, album, playlist, etc. This can be used to ask the now playing app to resume playback of the collection.

131.2.19 NowPlayingInfoPropertyAdTimeRanges as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A list of ad breaks in the now playing item.

131.2.20 NowPlayingInfoPropertyAssetURL as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A URL pointing to the now playing item's underlying audio/video asset. This property is used by system UI when video thumbnails or audio waveform visualizations are applicable.

131.2.21 NowPlayingInfoPropertyAvailableLanguageOptions as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A list of available language option groups in the now playing item Only one language option in a given group can be played at once.

131.2.22 NowPlayingInfoPropertyChapterCount as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The total number of chapters in the now playing item.

131.2.23 NowPlayingInfoPropertyChapterNumber as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The chapter currently being played. Note that this is zero-based.

131.2.24 NowPlayingInfoPropertyCreditsStartTime as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: Represents the credits start time (without ads) in seconds for the now playing item.

A replacement for MPNowPlayingInfoPropertyPlaybackProgress.

131.2.25 NowPlayingInfoPropertyCurrentLanguageOptions as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A list of currently active language options in the now playing item.

131.2.26 NowPlayingInfoPropertyCurrentPlaybackDate as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: Represents the real-time date associated with the current elapsed playback time.

The value of an AVPlayerItem,Äôs currentDate property can be used to populate this property (see AVFoundation framework.) Note the current playback date will be automatically extrapolated from the previously provided current playback date, so updating this property frequently is not required (nor recommended.) For example, a sports broadcast can map an elapsed playback time (i.e 12 minutes and 30 seconds) to a real-time date (i.e "10:30:00 9/14/2017")

131.2.27 NowPlayingInfoPropertyDefaultPlaybackRate as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The "default" playback rate of the now playing item. You should set this property if your app is playing a media item at a rate other than 1.0 in a default playback state. e.g., if you are playing back content at a rate of 2.0 and your playback state is not fast-forwarding, then the default playback rate should also be 2.0. Conversely, if you are playing back content at a normal rate (1.0) but the user is fast-forwarding your content at a rate greater than 1.0, then the default playback rate should be set to 1.0.

131.2.28 NowPlayingInfoPropertyElapsedPlaybackTime as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The elapsed time of the now playing item, in seconds.
Note the elapsed time will be automatically extrapolated from the previously provided elapsed time and

playback rate, so updating this property frequently is not required (or recommended.)

131.2.29 NowPlayingInfoPropertyExcludeFromSuggestions as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A boolean denoting whether the now playing item should be excluded from content suggestions.

131.2.30 NowPlayingInfoPropertyExternalContentIdentifier as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: An opaque identifier that uniquely represents the now playing item, even across app relaunches. This can be in any format and is only used to reference this item back to the now playing app.

131.2.31 NowPlayingInfoPropertyExternalUserProfileIdentifier as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: An optional opaque identifier that uniquely represents the profile that the now playing item is being played from, even across app relauches. This can be in any format and is only used to reference this profile back to the now playing app.

131.2.32 NowPlayingInfoPropertyInternationalStandardRecordingCode as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: Represents the International Standard Recording Code (ISRC) for a song, if available. This will be used by system services that leverage now playing data, such as Music Haptics.

131.2.33 NowPlayingInfoPropertyIsLiveStream as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A boolean denoting whether the now playing item is a live stream.

131.2.34 NowPlayingInfoPropertyMediaType as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: Indicates the media type of the now playing item This can be used to determine what kind of user interface the system displays.

131.2.35 NowPlayingInfoPropertyPlaybackProgress as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: Represents the current playback progress of the now playing item. 0.0 = not watched/listened/viewed, 1.0 = fully watched/listened/viewed This value is different that ElapsedPlaybackTime and does not need to be exact as it is used as a high level indicator as to how far along the user is. For example, a movie may wish to set the now playing item as fully watched when the credits begin to roll.

131.2.36 NowPlayingInfoPropertyPlaybackQueueCount as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The total number of items in the application's playback queue.

131.2.37 NowPlayingInfoPropertyPlaybackQueueIndex as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The index of the now playing item in the application's playback queue. Note that the queue uses zero-based indexing, so the index of the first item would be 0 if the item should be displayed as "item 1 of 10".

131.2.38 NowPlayingInfoPropertyPlaybackRate as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: The playback rate of the now playing item, with 1.0 representing normal playback. For example,

2.0 would represent playback at twice the normal rate.
If not specified, assumed to be 1.0.

131.2.39 NowPlayingInfoPropertyServiceIdentifier as String

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: One of the dictionary keys for now playing.
Notes: A unique string that identifies a service provider. If the now playing item belongs to a channel or subscription service, this key can be used to coordinate various types of now playing content from a particular service provider.

131.2.40 Properties

131.2.41 Handle as Integer

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

131.2.42 nowPlayingInfo as Dictionary

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The current Now Playing information for the default Now Playing info center.
Notes: To clear the now playing info center dictionary, set it to nil.
(Read and Write property)

131.2.43 playbackState as Integer

MBS iOS Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The current playback state of the app.
Notes: This property only applies to macOS. You must set this property every time the app begins or halts playback, otherwise remote control functionality may not work as expected.
(Read and Write property)

131.2.44 Constants

Media Types

Constant	Value	Description
MediaTypeAudio	1	The now playing media item is an audio item.
MediaTypeNone	0	There is no now playing media item.
MediaTypeVideo	2	The now playing media item is a video item.

Playback states

Constant	Value	Description
PlaybackStateInterrupted	4	The app has been interrupted during playback.
PlaybackStatePaused	2	The app is currently paused.
PlaybackStatePlaying	1	The app is currently playing a media item.
PlaybackStateStopped	3	The app has stopped playing.
PlaybackStateUnknown	0	The current state of the app is unknown.

Chapter 132

MemoryBlock

132.1 Globals

132.1.1 NewMemoryBlockWithBytesMBS(Data as Ptr, size as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new memoryblock with a copy of the given data.

132.1.2 NewMemoryBlockFromPtrMBS(ptr as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock for a given address in memory.
Notes: The memory for the ptr is not freed as you have to do this yourself (or via the library that allocated it).

132.1.3 Memoryblock2ptrMBS(mem as memoryblock) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the memory adress of the memoryblock

132.1.4 ptr2MemoryblockMBS(Value as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock with the bytes at position mem in memory.

132.2 class Memoryblock

132.2.1 class Memoryblock

Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends Xojo's Memoryblock class.

132.2.2 Methods

132.2.3 AddressMBS(offset as Int64 = 0) as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the adress of the byte at offset inside the memoryblock.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

Xojo Developer Magazine

- 11.3, page 8: News

132.2.4 AddressPtrMBS(offset as Int64 = 0) as Ptr

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the adress of the byte at offset inside the memoryblock.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

132.2.5 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a And on the bits in the memoryblock.
Example:

```
Var m1 as MemoryBlock = NewMemoryBlock(20)
Var m2 as MemoryBlock = NewMemoryBlock(20)
Var m3 as MemoryBlock = NewMemoryBlock(20)

m1.Int32Value(0)=&b10000001
m2.Int32Value(0)=&b10000000

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))

call m1.AndBitsMBS(m2,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

Notes: Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 132.2.6 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock 17853

132.2.6 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a And on the bits in the memoryblock.
Example:

```
Var m1 as MemoryBlock = NewMemoryBlock(20)
Var m2 as MemoryBlock = NewMemoryBlock(20)
Var m3 as MemoryBlock = NewMemoryBlock(20)

m1.Int32Value(0)=&b11110001
m2.Int32Value(0)=&b11110000

const mask = &b11001111

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

```
call m1.AndBitsMBS(m2,mask,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

Notes: The mask is always 8 bit. Use the &b notation to specify it.
Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them. Only bits set int he given mask are used.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 132.2.5 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock 17852

132.2.7 AppendMBS(other as memoryblock) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new memoryblock with the bytes of the two given memoryblocks.
Example:

```
Var m1 As MemoryBlock = "Hello "
Var m2 As MemoryBlock = "World!"

Var m3 As MemoryBlock = m1.AppendMBS(m2)
Var s As String = m3

MessageBox s
```

Notes: This function will not work if the memoryblock has an unknown size.
If one memoryblock is nil than you get a copy of the other memoryblock.
Blog Entries

- MBS Xojo Plugins, version 25.0pr9

132.2.8 BitwiseAndMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitwise AND for a Memoryblock.
Example:

```
Var m1 As New MemoryBlock(555)
Var m2 As New MemoryBlock(555)
Var r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Var mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Var mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Var mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)

// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If

Next

Break
```

Notes: We walk over all values in current and second MemoryBlock and apply a bitwise AND to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

132.2.9 BitwiseOrMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitwise OR for a Memoryblock.
Example:

```
Var m1 As New MemoryBlock(555)
Var m2 As New MemoryBlock(555)
Var r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Var mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Var mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Var mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)

// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If

Next

Break
```

Notes: We walk over all values in current and second MemoryBlock and apply a bitwise OR to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

132.2.10 BitwiseXOrMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitwise XOR for a Memoryblock.
Example:

```
Var m1 As New MemoryBlock(555)
Var m2 As New MemoryBlock(555)
Var r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Var mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Var mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Var mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)

// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
```

```
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If

Next

Break
```

Notes: We walk over all values in current and second MemoryBlock and apply a bitwise XOR to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

132.2.11 BytesEqualMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if equal byte data.
Example:

```
Var m1 as MemoryBlock = NewMemoryBlock(100)
Var m2 as MemoryBlock = NewMemoryBlock(100)

// try with 2 different strings
m1.CString(0)="Hello"
m2.CString(0)="Hallo"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if

// try with 2 equal strings
```

```
m1.CString(0)="Hello"
m2.CString(0)="Hello"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes: Fixed in 10.1 to return true on equal bytes and false on non equal bytes. Older plugin versions returned the wrong value.

Does not check the bounds of the memoryblock, so it can crash with wrong parameters.
Returns false if one of the memoryblocks is nil.

132.2.12 BytesZeroMBS(srcOfs as Integer, numBytes as Integer) as Boolean

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if all bytes in the memoryblock in the given range are zero.
Example:

```
Var m as MemoryBlock = NewMemoryBlock(100)

if m.BytesZeroMBS(0,100) then
MsgBox "all zero"
else
MsgBox "error"
end if

m.Byte(50)=1

if m.BytesZeroMBS(0,100) then
MsgBox "error"
else
MsgBox "okay"
end if
```

Notes: Returns false on any error.
Bounds are not checked with the memoryblock, so be careful.

- MBS Xojo Plugins, version 22.4pr2

132.2.13 ClearBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123)
Var v1 As Boolean = m.IsBitSetMBS(123)
m.ClearBitMBS(123)
Var v2 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes: Sets value of the bit to zero.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

132.2.14 ConvertRGB12BitTo8BitMBS(Width as Integer)

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a memoryblock with 12 bit RGB data into 8 bit RGB data.
Notes: Width is number of pixels.

Please make sure the memoryblock is 9 bytes bigger than input to avoid errors.
Plugin converts each 9 bytes (72 bits) with 2 RGB triple. So first 12 bits are red, next 12 bits green and last 12 bits blue.
Plugin removes last 4 bits.

- MBS Xojo / Real Studio Plugins, version 14.3pr7

132.2.15 CopyBytesFromMacHandleMBS(srcHandle as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Copies bytes from Mac Handle into your memoryblock.
Notes: Same as CopyBytesFromMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

132.2.16 CopyBytesFromMacPtrMBS(srcPtr as Ptr, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given amount of bytes from the given address in the Mac's memory address space into the memoryBlock.
Notes: Make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).

132.2.17 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the specified amount of bytes into a second memoryBlock.
Example:

```
Var m as MemoryBlock
Var n as MemoryBlock

m=NewMemoryBlock(100)
n=NewMemoryBlock(100)

m.Long(0)=12345

m.CopyBytesMBS(0,4,n,0)

MsgBox str(n.long(0))
```

Notes: You must make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).
See also:

- 132.2.18 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer) 17862

132.2.18 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the specified amount of bytes inside the memoryBlock.
Notes: You must make sure that the copied bytes fit inside the block (if they don't, your application or even the whole system can crash).
See also:

- 132.2.17 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) 17861

132.2.19 CopyBytesToMacHandleMBS(srcOfs as Integer, numBytes as Integer, destHandle as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Copies byte data from the memoryblock into the memory the handle is pointing to.
Notes: Same as CopyBytesToMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

132.2.20 CopyBytesToMacPtrMBS(srcOfs as Integer, numBytes as Integer, destPtr as Ptr)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given amount of bytes from the memoryBlock to the given address in the Mac's memory address space.
Notes: Be careful where you copy the data to - you can easily crash your computer if you write to the wrong address space.

132.2.21 CopyByteToUShortMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies bytes in a memoryblock to another memoryblock converting the 8bit values to 16bit values.
Notes: Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

132.2.22 CopyNthBitsMBS(source as memoryblock, SourceOffsetBits as Integer, DestinationOffsetBits as Integer, BitCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies every nth bits in the source memoryblock to the current memoryblock.
Notes: BitCount = the number of bits to copy from each step.
StepCount = the number of bits to not copy.
NumberOfSteps = the number of rounds to do.
There is no bound checking. The function will crash with invalid parameters!

132.2.23 CopyNthBytesMBS(source as memoryblock, SourceOffsetBytes as Integer, DestinationOffsetBytes as Integer, ByteCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies every nth bytes in the source memoryblock to the current memoryblock.
Example:

```
Var s,d as memoryBlock

s=NewmemoryBlock(100)
d=NewmemoryBlock(100)

s.CString(0)="Hello World!"

call d.CopyNthBytesMBS(s,0,0,2,4,3)

MsgBox d.CString(0) // "Heo rl"
```

Notes: ByteCount = the number of bytes to copy from each step.
StepCount = the number of bytes to move for each step forward in source.
NumberOfSteps = the number of steps to do.
There is no bound checking. The function will crash with invalid parameters!

132.2.24 CopyUShortToByteMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies shorts in a memoryblock to another memoryblock converting the 16bit values to 8bit

values.
Notes: Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

132.2.25 CRC_32ContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

132.2.26 CRC_32MBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

132.2.27 CRC_CCITTContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.

132.2.28 CRC_CCITTMBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided block of data.
Notes: See the text "About-CRC" for details about this Checksum things.
This function is also available for strings.

See the CRC_32 for more details on Checksums.

132.2.29 CRC_DillonMBS(bitWidth as Integer, offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided block of data.
Notes: This function is also available for strings.

See the CRC_32 for more details on Checksums.

132.2.30 EndianS16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_BtoLMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.31 EndianS16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_BtoNMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.32 EndianS16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_LtoBMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.33 EndianS16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_LtoNMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.34 EndianS16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_NtoBMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.35 EndianS16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS16_NtoLMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.36 EndianS32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_BtoLMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.37 EndianS32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_BtoNMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.38 EndianS32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_LtoBMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.39 EndianS32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_LtoNMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.40 EndianS32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_NtoBMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.41 EndianS32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianS32_NtoLMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.42 EndianSwap16MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Swaps several 16 bit integers inside a memoryblock.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianSwap16MBS(0,mem.size/2)
```

132.2.43 EndianSwap32MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Swaps several 32 bit integers inside a memoryblock.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianSwap32MBS(0,mem.size/4)
```

132.2.44 EndianU16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_BtoLMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.45 EndianU16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_BtoNMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.46 EndianU16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_LtoBMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.47 EndianU16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_LtoNMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.48 EndianU16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_NtoBMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.49 EndianU16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU16_NtoLMBS(0,mem.size/2)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.50 EndianU32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_BtoLMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.51 EndianU32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_BtoNMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.52 EndianU32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_LtoBMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.53 EndianU32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_LtoNMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.54 EndianU32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_NtoBMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.

B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.55 EndianU32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
Var mem as memoryblock // your memoryblock
mem.EndianU32_NtoLMBS(0,mem.size/4)
```

Notes: e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

132.2.56 ExpandBitsMBS(dest as memoryblock, SourceByteCount as Integer, LowValue as Integer = 0, HighValue as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Expands bits into bytes.
Example:

```
Var m1 as new MemoryBlock(200)
Var m2 as new MemoryBlock(1600)

for i as Integer = 0 to 127
m1.Int8Value(i) = i
next

Var n as Integer = 128
Var b as Boolean = m1.ExpandBitsMBS(m2, n)
```

```
break // see result in debugger
```

Notes: Takes a bit from the source memoryblock and writes a byte for it to destination. Uses LowValue (default 0) if the bit is not set and HighValue (Default 255) if the bit is set.
Works only on x86 CPUs (no PPC).
Reads source memoryblock in 32 bit blocks and writes the destination in 32 byte blocks.
Blog Entries

- MBS REALbasic Plugins, version 10.6pr9

132.2.57 ExtractBitsMBS(Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies bits from a memoryblock to another.
Example:

```
Var mask as Integer = &b01010101
Var m as MemoryBlock = "Hello World"

Var r as MemoryBlock = m.ExtractBitsMBS(mask)

MsgBox r.StringValue(0,r.size) // shows "@EDDE UEPDD"
```

Notes: The mask is always 8 bit. Use the &b notation to specify it.
If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

132.2.58 FillBytesMBS(offset as Integer, count as Integer, value as Integer)

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills memory with a specific byte value.
Notes: Caution: No bounds checking.

132.2.59 FindByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the position of the first byte which has the given value.
Example:

```
Var m as MemoryBlock = NewMemoryBlock(100)
Var n as Integer

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 0 as the byte at offset 0 is zero

m.Byte(0)=1

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 1 as the byte at offset 1 is zero

m.FillBytesMBS(0,100,5)

n = m.FindByteMBS(0, 100, 6)

MsgBox str(n) // shows -1 as there is no byte with value 6
```

Notes: Returns -1 if the byte is not found.
See also:

- 132.2.60 FindByteMBS(values() as UInt8, StartByteOffset as Integer = 0) as Integer 17879

132.2.60 FindByteMBS(values() as UInt8, StartByteOffset as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Var m As MemoryBlock = "Hello World"

Var u() As UInt8
u.Append Asc("e")
u.Append Asc("o")

Var pos1 As Integer = m.FindByteMBS(u)
Var pos2 As Integer = m.FindByteMBS(u, pos1+1)

// shows 1 and 4
MsgBox "Found position: "+Str(pos1)+" and "+Str(pos2)
```

Notes: Values is an array of possible values to find.
For best performance avoid duplicates in that array.

Returns zero based byte offset.
Result is -1 if not found.

- 132.2.59 FindByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer 17878

132.2.61 FindBytesMBS(srcOfs as Integer, maxBytes as Integer, target as memoryBlock, targOfs as Integer, targLen as Integer) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds some bytes from the target memoryblock inside the current memoryblock.

132.2.62 FindNotByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the position of the first byte which has no the given value.
Example:

```
Var m as MemoryBlock = NewMemoryBlock(100)
Var n as Integer

n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // -1 as no value is not zero

m.Byte(30)=1
```

```
n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // shows 30 as the byte at offset 30 is not zero

m.Byte(0)=255

n = m.FindNotByteMBS(0, 100, 255)

MsgBox str(n) // shows 1 as the byte at offset 1 is not 255
```

Notes: Returns -1 if the no byte was found which has not the given value.

132.2.63 FindStringMBS(srcOfs as Integer, maxBytes as Integer, target as String) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a string inside a memoryblock.

132.2.64 GetBitMBS(Bit as UInt64) as Integer

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value of the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123)
Var v1 As Integer = m.GetBitMBS(123)
Break // see debugger
```

Notes: Returns 1 if bit is set or 0 if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

132.2.65 GetStringMBS(offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string from the memoryblock.
Notes: With newer RB versions you may better use StringValue.

132.2.66 InvertBytesMBS(offset as Integer, count as Integer)

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the given number of bytes in a memoryblock.
Example:

```
Var m as memoryblock
m=newmemoryblock(100)
' do something
m.InvertBytesMBS(0,100) // invert all bytes
```

Notes: Does work faster if count is a multiply of 4.

132.2.67 IsBitSetMBS(Bit as UInt64) as Boolean

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value of the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123)

Var v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes: Returns true if bit is set or false if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

- MBS Xojo Plugins, version 20.6pr5

132.2.68 LeftMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the first given number of bytes.
Notes: If length is greater than the size of the memoryblock then then length is set to size.
Returns nil if length<=0 or on low memory.
This function will not work if the memoryblock has an unknown size.

132.2.69 MaxMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates max values of values in memory.
Example:

```
Var m1 as new MemoryBlock(12)
Var m2 as new MemoryBlock(12)
Var mr1 as new MemoryBlock(12)
Var mr2 as new MemoryBlock(12)

for i as Integer = 0 to 11
m1.UInt8Value(i) = i
m2.UInt8Value(11-i) = i
next

if mr1.minMBS(m1, m2) then
if mr2.maxMBS(m1, m2) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

Notes: firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises exceptions for invalid parameters.

132.2.70 MidMBS(offset as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the bytes of the given memoryblock from the given offset on.
Notes: Offset is 0 based.
Returns nil if offset<0 or on low memory.
This function will not work if the memoryblock has an unknown size.
See also:

- 132.2.71 MidMBS(offset as Integer, length as Integer) as memoryblock 17884

132.2.71 MidMBS(offset as Integer, length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the given bytes from the middle of the memoryblock.
Notes: Offset is 0 based.
Returns nil if offset<0 or on low memory.
If length is too long then length is set to a lower value.
This function will not work if the memoryblock has an unknown size.
See also:

- 132.2.70 MidMBS(offset as Integer) as memoryblock 17884

132.2.72 MinMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates min values of values in memory.
Example:

```
Var m1 as new MemoryBlock(24)
Var m2 as new MemoryBlock(24)
Var mr1 as new MemoryBlock(24)
Var mr2 as new MemoryBlock(24)

for i as Integer = 0 to 11
m1.UInt16Value(2*i) = i
```

```
m2.UInt16Value(2*(11-i)) = i
next

if mr1.minMBS(m1, m2, 16, false, 0, 24) then
if mr2.maxMBS(m1, m2, 16, false, 0, 24) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

Notes: firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises exceptions for invalid parameters.

132.2.73 MirrorBitsInBytesMBS(offsetByte as Integer, lengthByte as Integer)

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors bits in each byte.
Example:

```
Var m as new MemoryBlock(12)

m.CString(0)="HelloHello"

m.MirrorBitsInBytesMBS(0,5)

MsgBox EncodingToHexMBS(m.StringValue(5,5))+" ->"+EncodingToHexMBS(m.StringValue(0,5))
```

Notes: offsetByte: where to start in the memoryblock
lengthByte: number of bytes to swap

Mirror means in this case, that if you a byte with bits 11001100, after the mirror, you have 00110011. So bit 0 and 7 exchange values. Same for 1 and 6, 2 and 5, 3 and 4.

132.2.74 MirrorBitsMBS(offsetBit as Integer, lengthBit as Integer)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the bits in a memoryblock.
Notes: e.g. "111100001" in the memoryblock would give "100001111"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 ,â§ offsetBit <mem.size*8 and 0 ,â§ lengthBit ,â§ mem.size*8 - offsetBit

132.2.75 MirrorBytesMBS(offsetByte as Integer = 0, lengthByte as Integer = -1)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the bytes in the given range.
Notes: e.g. "abcdefgh" in the memoryblock would give "hgfedcba"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 ,â§ offsetByte <mem.size and 0 ,â§ lengthByte ,â§ mem.size - offsetByte

If lengthByte is -1, we query memoryblock for size. If size is unknown or negative, the function does nothing.

132.2.76 MultiplyUInt16MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplied UInt16 values in the memoryblock.
Example:

```
Var myMemOut3 as new MemoryBlock(500)
myMemOut3.MultiplyUInt16MBS(0.9)
```

Notes: Values bigger than 65535 are set to 65535.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.

Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative) can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.
Blog Entries

- MBS Xojo Plugins, version 18.4pr7

132.2.77 MultiplyUInt8MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies UInt8 values in the memoryblock.
Example:

```
Var myMemOut3 as new MemoryBlock(500)
myMemOut3.MultiplyUInt8MBS(0.9)
```

Notes: Values bigger than 255 are set to 255.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.
Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative) can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.

- MBS Xojo Plugins, version 18.4pr7

132.2.78 RightMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the given number of bytes from the right side of the memoryblock.
Example:

```
Var mem,m as MemoryBlock
mem=m.RightMBS(5)
```

Notes: If length is more than the memoryblock's size, than length is set to size.
Returns nil if length<=0 or on low memory.

This function will not work if the memoryblock has an unknown size.

132.2.79 SetBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123)

Var v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes: Sets bit to 1.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 132.2.80 SetBitMBS(Bit as UInt64, Value as Boolean) 17888
- 132.2.81 SetBitMBS(Bit as UInt64, Value as Integer) 17889

132.2.80 SetBitMBS(Bit as UInt64, Value as Boolean)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123, true)

Var v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes: Pass true to set bit or false to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 132.2.79 SetBitMBS(Bit as UInt64) 17888
- 132.2.81 SetBitMBS(Bit as UInt64, Value as Integer) 17889

132.2.81 SetBitMBS(Bit as UInt64, Value as Integer)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Var m As New MemoryBlock(100)

m.SetBitMBS(123, 1)

Var v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes: Pass 1 to set bit or 0 to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
Blog Entries

132.2.82 SetStringMBS(str as String, offset as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a string inside the memoryblock.
Notes: With newer RB versions you may better use StringValue.

132.2.83 SwapBytes16MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps words inside the given bounds inside the memoryblock.
Example:

```
Var numbytes as Integer // number of bytes in MemoryBlock
Var m as MemoryBlock // your memoryblock
Var i as Integer

for i=0 to numbytes step 2
m.UShort(i)=EndianSwap16MBS(m.UShort(i))
next
```

132.2.84 SwapBytes32MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps longs inside the given bounds inside the memoryblock.
Example:

```
// Test SwapBytes32MBS and SwapBytes16MBS:

const h11223344=&h11223344
const h22114411=&h22114433 // 16bit swap
const h44332211=&h44332211 // 32bit swap

Var m as memoryBlock
Var ok as Integer

m=NewmemoryBlock(20)
m.Long(00)=h11223344
m.Long(04)=h11223344
m.Long(08)=h11223344
m.Long(12)=h11223344
m.Long(16)=h11223344

m.SwapBytes16MBS(4,4)
m.SwapBytes32MBS(12,4)

if m.Long(00)=h11223344 then
ok=ok+1
else
MsgBox "00: "+hex(m.Long(00))
end if

if m.Long(04)=h22114411 then
ok=ok+1
else
MsgBox "04: "+hex(m.Long(04))
```

```
end if

if m.Long(08)=h11223344 then
ok=ok+1
else
MsgBox "08: "+hex(m.Long(08))
end if

if m.Long(12)=h44332211 then
ok=ok+1
else
MsgBox "12: "+hex(m.Long(12))
end if

if m.Long(16)=h11223344 then
ok=ok+1
else
MsgBox "16: "+hex(m.Long(16))
end if

if ok=5 then
MsgBox "OK"
else
MsgBox "Fail"
end if
```

Notes: It should do something like this:

```
Var m as memoryBlock

for i=0 to numbytes step 2
m.long(i)=EndianSwap32MBS(m.long(i))
next
```

132.2.85 SwapBytesMBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps bytes inside the given bounds inside the memoryblock.
Notes: Reverses the order of the bytes at the given offset and length in the memoryBlock. This is helpful to change representation of values from Little Endian (used in Windows) to Big Endian (used in Mac OS) and vice versa. Thanks to Franco Vaccari for the code of this routine.

132.2.86 Properties

132.2.87 OSTypeMBS(offset as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read/Write an OSType.
Notes: Interprets 4 bytes starting at the given offset as a OSType value.
(Read and Write computed property)

132.3 class MemoryBlockMBS

132.3.1 class MemoryBlockMBS

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold a memoryblock.
Example:

```
Var m as new MemoryBlockMBS

if m.Create(2000) then

// copy struing into memory
m.Memory.StringValue(0,5)="Hello"

// and read again
MsgBox m.Memory.StringValue(0,5)

end if
```

Notes: Xojo's memoryblocks have two bad things:
- they are limited to 1 GB on Mac OS X and Mac OS Classic
- they take a lot of time to create them
- they take a lot of real memory

Xojo allocates the memory and fills it with zeros.

The plugin in contrast uses zero filled pages to create the memoryblock which nearly take no time to create them and it does only need virtual memory until the memory is really used which saved swapping space.

132.3.2 Methods

132.3.3 Close

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without

waiting for Xojo to do it for you.

132.3.4 Constructor

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: This constructor does nothing, so you can call Create yourself.
See also:

- 132.3.5 Constructor(Mem as MemoryBlock) 17894
- 132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 17895
- 132.3.7 Constructor(Size as Int64) 17895
- 132.3.8 Constructor(Str as String) 17895
- 132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 17896

132.3.5 Constructor(Mem as MemoryBlock)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with content of memoryblock.
Example:

```
Var s as string = "Hello World"
Var m as MemoryBlock = s

Var x as new MemoryBlockMBS(m)

MsgBox str(x.Size)
```

Notes: Raises exception is size is invalid or no memory is available.
See also:

- 132.3.4 Constructor 17894
- 132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 17895
- 132.3.7 Constructor(Size as Int64) 17895
- 132.3.8 Constructor(Str as String) 17895
- 132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 17896

132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size and copies content of memoryblock.
Example:

```
Var s as string = "Hello World"
Var m as MemoryBlock = s

Var x as new MemoryBlockMBS(m, 9)

MsgBox str(x.Size)
```

Notes: Raises exception is size is invalid or no memory is available.
See also:

- 132.3.4 Constructor 17894
- 132.3.5 Constructor(Mem as MemoryBlock) 17894
- 132.3.7 Constructor(Size as Int64) 17895
- 132.3.8 Constructor(Str as String) 17895
- 132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 17896

132.3.7 Constructor(Size as Int64)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size.
Notes: Raises exception is size is invalid or no memory is available.
See also:

- 132.3.4 Constructor 17894
- 132.3.5 Constructor(Mem as MemoryBlock) 17894
- 132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 17895
- 132.3.8 Constructor(Str as String) 17895
- 132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 17896

132.3.8 Constructor(Str as String)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with content of string.
Example:

```
Var s as string = "Hello World"
Var x as new MemoryBlockMBS(s)

MsgBox str(x.Size)
```

Notes: Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 132.3.4 Constructor 17894
- 132.3.5 Constructor(Mem as MemoryBlock) 17894
- 132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 17895
- 132.3.7 Constructor(Size as Int64) 17895
- 132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 17896

132.3.9 Constructor(Str as String, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size and copies content of string.
Example:

```
Var s as string = "Hello World"
Var x as new MemoryBlockMBS(s, 9)

MsgBox str(x.Size)
```

Notes: Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 132.3.4 Constructor 17894
- 132.3.5 Constructor(Mem as MemoryBlock) 17894
- 132.3.6 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 17895
- 132.3.7 Constructor(Size as Int64) 17895
- 132.3.8 Constructor(Str as String) 17895

132.3.10 Create(size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new memoryblock.
Example:

```
Var m as MemoryBlockMBS
Var n as MemoryBlock
Var t as Integer

const size=2200000000

// RB: up to 1 GigaByte
// Plugin: up to 2 GigaByte - 1 Byte

m=New MemoryBlockMBS

t=ticks
if m.Create(size) then
n=m.Memory

MsgBox str(ticks-t)

end if

t=ticks
n=NewMemoryBlock(size)
if n<>nil then
MsgBox str(ticks-t)
end if
```

Notes: Returns true on success and false on failure.
Size can be any positive value up to &h7FFFFFFF (=2^31-1).

Size became 64bit to avoid integer overflows.

132.3.11 Resize(Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to resize the memorybock to the new size.
Example:

```
Var m as new MemoryBlockMBS
```

```
if m.Create(1000) then
MsgBox str(m.Size)

if m.Resize(2000) then
MsgBox str(m.Size)
end if
end if
```

Notes: Returns true on success.
If false is returned, the memoryblockMBS is not touched.

If the new size is smaller, data is lost as the memoryblock is cut.
If the new size is bigger, the memoryblock is resized. Or if that does not work, a new memoryblock is created and data is copied. New bytes will be zero.

132.3.12 Properties

132.3.13 Address as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address of the memory.
Notes: This value became 64bit to avoid integer overflows.
(Read only property)

132.3.14 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock to access this memory.
Notes: Keep a reference to the MemoryBlockMBS object as long as you use this memoryblock object.
(Read only property)

132.3.15 Size as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of this memoryblock.
Notes: This value became 64bit to avoid integer overflows.
(Read only property)

132.4 class MemoryStorageMBS

132.4.1 class MemoryStorageMBS

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to store stuff in memory outside of the app memory.
Notes: The memory is stored using mapped memory in the system address space outside of the 32bit app memory of your app.

Normally a 32-bit app can only use 2 to 4 GB of memory. Using blocks of memory outside this address space, you can easily keep 10 GB of data in memory.

Be aware that a some point creating more storages may fail due to out of memory.
The system may decide to swap memory to disk if you run out of physical memory.

Please have your app check free space on boot disk regularly and avoid running out of disk space for swap!

132.4.2 Methods

132.4.3 Constructor(Size as Int64 = 0)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: If size >0, we allocate the memory for this size right away.

132.4.4 Destructor

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

132.4.5 MemoryValue(Offset as Int64, Assigns s as MemoryBlock)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets part of memory storage as string.
Notes: Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.

- 132.4.10 MemoryValue as MemoryBlock 17901
- 132.4.6 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 17900

132.4.6 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part of memory storage as memory block.
Notes: Offset and Size are checked for range and an OutOfBoundsException can be raised.
See also:

- 132.4.10 MemoryValue as MemoryBlock 17901
- 132.4.5 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 17900

132.4.7 StringValue(Offset as Int64, Assigns s as String)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part of memory storage as string.
Notes: Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.

132.4.9 Properties

132.4.10 MemoryValue as MemoryBlock

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this memory storage as a memoryblock.
Notes: (Read and Write property)
See also:

- 132.4.5 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 17900
- 132.4.6 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 17900

132.4.11 Size as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data in bytes.
Notes: (Read and Write property)

132.4.12 SizeAllocated as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of memory allocated.
Notes: (Read and Write property)

132.4.13 StringValue as String

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this memory storage as a string.
Notes: (Read and Write property)
See also:

- 132.4.7 StringValue(Offset as Int64, Assigns s as String) 17900
- 132.4.8 StringValue(Offset as Int64, Size as Int64) as String 17900

Chapter 133

Messages

133.1 class MFMailComposeViewControllerMBS

133.1.1 class MFMailComposeViewControllerMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A standard view controller, whose interface lets the user manage, edit, and send email messages.
Notes: Use this view controller to display a standard email interface inside your app. Before presenting the interface, populate the fields with initial values for the subject, email recipients, body text, and attachments of the email. After presenting the interface, the person can edit your initial values before sending the email.

The composition interface doesn,Äôt guarantee the delivery of your email message; it only lets you construct the initial message and present it for user approval. The person may opt to cancel the composition interface which discards the message and its contents. If the person opts to send the message, the message queues in the user,Äôs Mail app outbox. The Mail app is ultimately responsible for sending the message.

An alternate way to compose emails is to create and open a URL that uses the mailto scheme. URLs of that type go directly to the built-in Mail app, which uses your URL to configure a message. For information about the structure of mailto URLs, see Apple URL Scheme Reference.

133.1.2 Methods

133.1.3 addAttachmentData(attachment as MemoryBlock, mimeType as String, fileName as String)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Adds the specified data as an attachment to the message.
Notes: attachment: The data to attach. Typically, this is the contents of a file that you want to include. This parameter must not be nil.
mimeType: The MIME type of the specified data. (For example, the MIME type for a JPEG image is image/jpeg.) For a list of valid MIME types, see http://www.iana.org/assignments/media-types/. This parameter is set to "application/octet-stream" if passed empty.
filename: The preferred filename to associate with the data. This is the default name applied to the file when it is transferred to its destination. Any path separator (/) characters in the filename are converted to underscore (_) characters prior to transmission.

This method attaches the specified data after the message body, but before the user,Äôs signature. You may attach multiple files (using different file names), but must do so prior to displaying the mail composition interface. Don,Äôt call this method after presenting the interface to the user.

133.1.4 canSendMail as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean that indicates whether the current device is able to send email.
Notes: True if the device is configured for sending email or false if it is not.

You should call this method before attempting to display the mail composition interface. If it returns false, you must not display the mail composition interface.

133.1.5 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The constructor.

133.1.6 Destructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The destructor.

133.1.7 Dismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

133.1.8 MFMailComposeErrorDomain as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The domain used for error objects that are associated with the mail composition interface.

133.1.9 Present

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

133.1.10 setBccRecipients(bccRecipients() as String)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Sets the initial recipients to include in the email,Äôs Bcc field.
Notes: bccRecipients: An array of strings, each containing the email address of a single recipient.

This method replaces the previous blind carbon-copy (Bcc) recipients with the new ones listed in the bccRecipients parameter. This method doesn,Äôt filter out duplicate email addresses, so if duplicates are present, the recipient may receive multiple copies of the email message.
Only call this method before you display the mail composition interface. Don,Äôt call it after presenting the interface to the user.

133.1.11 setCcRecipients(ccRecipients() as String)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Sets the initial recipients to include in the email,Äôs Cc field.
Notes: ccRecipients: An array of strings, each containing the email address of a single recipient.

This method replaces the previous carbon-copy (Cc) recipients with the new ones listed in the ccRecipients parameter. This method doesn,Äôt filter out duplicate email addresses, so if duplicates are present, multiple copies of the email message may be sent to the same address.
Only call this method before you display the mail composition interface. Don,Äôt call it after presenting the interface to the user.

133.1.12 setMessageBody(body as String, isHTML as Boolean)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Sets the initial body text to include in the email.
Notes: body: The initial body text of the message. The text is interpreted as either plain text or HTML, depending on the value of the isHTML parameter.
isHTML: Specify true if the body parameter contains HTML content or specify false if it contains plain text.

This method replaces the previous body content with the new content. If the user has a signature file, the body content is inserted immediately before the signature. If you want to include images with your content, you must attach the images separately using the addAttachmentData method.
Only call this method before you display the mail composition interface. Don,Äôt call it after presenting the interface to the user.

133.1.13 setToRecipients(toRecipients() as String)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Sets the initial recipients to include in the email,Äôs To field.
Notes: toRecipients: An array of strings, each containing the email address of a single recipient.

This method replaces the previous recipients with the new ones listed in the toRecipients parameter. This method doesn,Äôt filter out duplicate email addresses, so if duplicates are present, multiple copies of the email message may be sent to the same address.
Only call this method before you display the mail composition interface. Don,Äôt call it after presenting the interface to the user.

133.1.14 Properties

133.1.15 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

133.1.16 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether the controller is presented.
Notes: Returns true if the dialog is visible.
(Read only property)

133.1.17 isHTML as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether message body is html.
Notes: (Read only property)

133.1.18 messageBody as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The message body.
Notes: (Read only property)

133.1.19 preferredSendingEmailAddress as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The preferred email address to use in the From field, if such an address is available.
Notes: emailAddress: The preferred email address used to send this message.

If the user doesn,Äôt have an account with a preferred address set up, the default account is used instead. Only set this method before you display the mail composition interface. Don,Äôt call it after presenting the interface to the user.
(Read and Write property)

133.1.20 subject as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The initial text for the subject line of the email.
Notes: This method replaces the previous subject text with the new text. Only set this property before you display the mail composition interface. Don,Äôt set it after presenting the interface to the user.
(Read and Write property)

133.1.21 Events

133.1.22 didFinishWithResult(result as Integer, error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Tells you that the user wants to dismiss the mail composition view.
Notes: result: The result of the user,Äôs action. See constants
error: If an error occurred, this parameter contains an error object with information about the type of failure.

Your implementation of this method should dismiss the mail composition view. Implementation of this method is optional, but expected.

If the user has opted to send the email created by this interface, that email should be queued in the user,Äôs Mail program by the time this method is called. If an error occurred while queueing the email message, the error parameter contains an error object that indicates the type of failure that occurred.

133.1.23 dismissed

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The dialog got dismissed.

133.1.24 Constants

Error Codes

Constant	Value	Description
MailComposeErrorCodeSaveFailed	0	An error occurred while trying to save the email message to the Drafts fold
MailComposeErrorCodeSendFailed	1	An error occurred while trying to queue or send the email message.

Result Codes

Constant	Value	Description
MailComposeResultCancelled	0	The user canceled the operation.
MailComposeResultFailed	3	The email message was not saved or queued, possibly due to an error.
MailComposeResultSaved	1	The email message was saved in the user,Äôs drafts folder.
MailComposeResultSent	2	The email message was queued in the user,Äôs outbox.

133.2 class MFMessageComposeViewControllerMBS

133.2.1 class MFMessageComposeViewControllerMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A standard view controller whose interface lets the user compose and send SMS or MMS messages.
Notes: Use an MFMessageComposeViewController object to display the standard message composition interface inside your app. Before presenting the interface, populate the fields with the set of initial recipients and the message you want to send. After presenting the interface, a person can edit your initial values before sending the message.

The composition interface doesn,Äôt guarantee the delivery of your message; it only lets you construct the initial message and present it for a person,Äôs approval. The person may opt to cancel the composition interface which discards the message and its contents. If the person opts to send the message, the Messages app takes on the responsibility of sending the message.

An alternate way to compose SMS messages is to create and open a URL that uses the sms scheme. URLs of that type go directly to the Messages app, which uses your URL to configure the message. For information about the structure of sms URLs, see Apple URL Scheme Reference.

133.2.2 Methods

133.2.3 addAttachmentData(attachment as MemoryBlock, typeIdentifier as String, fileName as String) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Attaches arbitrary content to the message.
Notes: attachment: Content in the form of an NSData object to attach to the message. Must not be nil.

typeIdentifier: A valid Uniform Type Identifier (UTI) appropriate for the attachment data. See Uniform Type Identifiers Reference.
filename: The name to present to the user, in the message UI, for the data attachment.

Returns true if the attachment data was successfully added to the message, or false otherwise.

This method is especially useful when the attachment you want to add to a message does not have a file system representation. This can be the case, for example, for programmatically composed audiovisual content.

133.2.4 addAttachmentFile(attachmentFile as FolderItem, alternateFilename as String) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Attaches a specified file to the message.
Notes: attachmentFile: The file URL for the attachment. Must not be nil.
alternateFilename: If you supply a string here, the message UI uses it for the attachment. Use an alternate filename to better describe the attachment or to make the name more readable. OK to use a "" value, in which case the attachment,Äôs actual filename is displayed in the message UI.

Returns true if the attachment at the specified URL was successfully added to the message, or false otherwise.

You can add zero or more attachments to a message before you display the message to the user. To access information about a message,Äôs attachments, access the attachments property.

133.2.5 canSendAttachments as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Indicates whether or not messages can include attachments.
Notes: True if the device can send attachments in MMS or iMessage messages, or false otherwise.

133.2.6 canSendSubject as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Indicates whether or not messages can include subject lines, according to the user,Äôs configuration in Settings.
Notes: True if the device can include subject lines in messages, or false otherwise.

133.2.7 canSendText as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether the current device is capable of sending text messages.
Notes: True if the device can send text messages or false if it cannot.

Always call this method before attempting to present the message compose view controller. A device may be unable to send messages if it does not support messaging or if it is not currently configured to send messages. This method applies only to the ability to send text messages via iMessage, SMS, and MMS.
To be notified of changes in the availability of sending text messages, register as an observer of the MFMessageComposeViewControllerTextMessageAvailabilityDidChangeNotification notification.

133.2.8 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The constructor.

133.2.9 Destructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The destructor.

133.2.10 disableUserAttachments

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Disables the camera/attachment button in the message composition view.
Notes: In iOS 7.0 and later, call this method to disable the camera/attachment button in the message composition view. In an app linked against an older version of iOS, the camera/attachment button is not available in any case.

133.2.11 Dismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Dismisses the controller.

133.2.12 isSupportedAttachmentUTI(uti as String) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Indicates whether or not the message can accept a file, with the specified UTI, as an attachment.
Notes: uti: The UTI (Uniform Type Identifier) in question. See Uniform Type Identifiers Reference

Returns treu if a file with the specified UTI can be attached to the message, or false otherwise.

133.2.13 MFMessageComposeViewControllerAttachmentAlternateFilename as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The key for the alternate filename for the file-based item attached to the message.
Notes: Use this constant with the attachments property to retrieve the optional, more descriptive name for a message attachment.

133.2.14 MFMessageComposeViewControllerAttachmentURL as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The URL for the item that is attached to the message.

133.2.15 MFMessageComposeViewControllerTextMessageAvailabilityDidChangeNotification as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Posted when the value returned by the canSendText class method has changed.
Notes: Upon receiving this notification, query its userInfo dictionary with the MFMessageComposeViewControllerTextMessageAvailabilityKey key. If the availability of text message sending has changed, your app should invalidate caches and update its user interface as appropriate.

You can receive this notification with NSNotificationObserverMBS class.

133.2.16 MFMessageComposeViewControllerTextMessageAvailabilityKey as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The value of this key is a number object that contains a Boolean value.
Notes: This value matches the result of the canSendText class method.The userInfo dictionary for the MFMessageComposeViewControllerTextMessageAvailabilityDidChangeNotification notification includes this key. The value of this key is a Boolean value. This value matches the result of the canSendText class method.

133.2.17 Present

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Presents the controller.

133.2.18 Recipients as String()

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: An array of strings that contains the initial recipients of the message.

133.2.19 setRecipients(Recipients() as String)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Sets an array of strings that contains the initial recipients of the message.
Notes: If you want to provide an initial array of one or more recipients for a message, do so before you display it. After the message is displayed you cannot change the value of this property.
Each string in the array should contain the phone number of the intended recipient.

133.2.20 Properties

133.2.21 attachments as Variant

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns an array of dictionaries that describe the properties of an attachment.
Notes: Each attachment is described by an dictionary object in the attachments array. To retrieve the alternate file name for an attachment from its dictionary, use the MFMessageComposeViewControllerAttachmentAlternateFilename key.
(Read only property)

133.2.22 body as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The initial content of the message.
Notes: If you want to provide initial content in the body of a message, do so before you display it. After the message is displayed you cannot change the value of this property.
(Read and Write property)

133.2.23 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

133.2.24 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether the controller is presented.
Notes: Returns true if the dialog is visible.
(Read only property)

133.2.25 subject as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The initial subject of the message.
Notes: If you want to provide an initial subject for a message, do so before you display it. After the message is displayed you cannot change the value of this property.
(Read and Write property)

133.2.26 Events

133.2.27 didFinishWithResult(result as Integer)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Tells you that the user finished composing the message.
Notes: result: A result code that indicates how the user chose to complete the composition.

This method is called when the user taps one of the buttons to dismiss the message composition interface. Your implementation of this method should dismiss the view controller and perform any additional actions needed to process the sending of the message. The result parameter lets you know whether the user chose to cancel or send the message, or whether sending the message failed.
Implementation of this method is required.

133.2.28 dismissed

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The dialog got dismissed.

133.2.29 Constants

Result Codes

Constant	Value	Description
MessageComposeResultCancelled	0	The user canceled the composition.
MessageComposeResultFailed	2	The user,Äôs attempt to save or send the message was unsuccessful.
MessageComposeResultSent	1	The user successfully queued or sent the message.

Chapter 134

Midi

134.1 class AVMIDIPlayerMBS

134.1.1 class AVMIDIPlayerMBS

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The AVMIDIPlayer class is a player for music file formats such as MIDI and iMelody.
Notes: Requires Mac OS X 10.10.

See also MidiPlaybackMBS class for playing notes.
Blog Entries

- MBS Xojo / Real Studio plug-ins version 16.2
- MBS Xojo / Real Studio Plugins, version 16.2pr1

134.1.2 Methods

134.1.3 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
Notes: Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 134.1.4 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17918
- 134.1.5 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17918

134.1.4 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
Notes: Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 134.1.3 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17917
- 134.1.5 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17918

134.1.5 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the file, using the specified sound bank.
Notes: File: The file to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 134.1.3 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17917
- 134.1.4 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 17918

134.1.6 Destructor

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The destructor.

134.1.7 play

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Plays the sequence.
Notes: If prepareToPlay has not been invoked, play may be delayed while the events are prerolled.

134.1.8 prepareToPlay

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Prepares to play the sequence by prerolling all events.
Notes: This happens automatically on play if it has not already been called, but may produce a delay in startup.

134.1.9 stop

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Stops playing the sequence.

134.1.10 Properties

134.1.11 CurrentPosition as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The current playback position, in seconds.
Notes: You can set the currentPosition of the player while the player is playing, in which case playback will

resume at the new time.

Note: No range checking on the currentPosition value is done when you set it to a new value. It is your responsibility to ensure the position is valid relative to the duration.
(Read and Write property)

134.1.12 Duration as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The length of the currently loaded file, in seconds.
Notes: (Read only property)

134.1.13 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

134.1.14 Playing as Boolean

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Whether the sequence is playing.
Notes: The player may have reached the end of all the events in any of its tracks, but it will return true until it is stopped.
(Read only property)

134.1.15 Rate as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The playback rate of the player.
Notes: The default value is 1.0, normal playback rate.
(Read and Write property)

134.1.16 Events

134.1.17 Completed

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Called when a MIDI playback request is completed.

134.2 class MidiClientMBS

134.2.1 class MidiClientMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for the global MIDI stuff on Mac OS X.
Notes: Only make one instance of this class in your application.

From Apple's documentation:

History:

Apple's MIDI Manager (ca. 1990) had a simple model of the world. There were application and driver clients, which had MIDI in/out ports, which could be interconnected in arbitrary ways. This model failed to provide a way for applications to make reasonable assumptions about how to make bi-directional connections to a MIDI device. MIDI Manager also had limitations on the number of ports per client, and became very unwieldy with the advent of large studios and multi-port MIDI interfaces such as the MIDI Time Piece and Studio 5.

Opcode's OMS (1991) addressed some of the shortcomings of MIDI Manager. There was the concept of a studio setup document, where drivers detected their devices, and the user could define the characteristics of additional devices connected to the MIDI ports. Applications could view the studio both as a collection of MIDI source and destination "nodes", but also as a collection of devices. OMS collected information about, and made available to its clients, useful characteristics of the devices in the studio, such as their system-exclusive IDs, MIDI channels on which they were listening, which were controllers (as opposed to simple tone generators), etc.

API Overview:
This design expands slightly on OMS's device/node hierarchy, inspired by the USB MIDI spec.

Drivers own and control devices, e.g. USB interfaces, PCI cards, etc. A device is defined as a physical object that would be represented by a single icon if there were a graphical view of the studio.

Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port. These are called Entities.

Entities have any number of Endpoints, sources and destinations of 16-channel MIDI streams. By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is necessary in MIDI librarian applications.

Third-party services like FreeMIDI or OMS can collect and report interesting properties of a device by attaching those properties to the devices' entities – CoreMIDI provides a central database, but no user interfaces.. It's worth noting that some device characteristics are dynamic (e.g. MIDI receive channel and system-exclusive ID's), or a matter of user preference (choice of icon, whether the device should appear in lists of possible controllers), while other properties are static and could be looked up in a database, using the device's manufacturer and model names as a key.

Persistent configurations / Device Information:
There are a number of reasons why CoreMIDI has a persistent state.

Endpoints must have persistent ID's. When a user assigns events in a sequencing application to an endpoint, the application needs a way to retain a permanent reference to the selected endpoint. A brute-force method of generating a persistent ID would be to combine the driver name, device name, entity name, and endpoint type and index into a string, but this is not very friendly to clients even if the system provides services to generate and decode these strings.

Consider a USB MIDI interface driver, in the case where there are two instances of one model of interface present. The driver needs a way to permanently distinguish, to the system and its clients, between the two interfaces. Which is #1 and which is #2? If #1 gets unplugged, #2 should not automatically become #1; the user's documents may be referring to devices which were attached to #2.

The system needs a persistent concept of which driver's device is attached to a serial port.

Some drivers will need to store configuration information about the devices they control. For example, the driver for a standard MIDI interface on a serial port needs to remember which external clocking speed to use (this is a simple, slightly obscure, but hardly unique example). The Alesis QS7 is capable of communicating at a variety of speeds, so its driver needs to remember the correct speed.

These needs for persistent configuration information provide a rationale for having something akin to OMS's studio setup document, a saved configuration for the system. Mobile users who work in multiple environments could select between multiple saved configurations in a Location Manager-compatible manner.

Given services with which to store driver configuration information, we then have built the groundwork for a client studio setup editor application.
Such an application can define external MIDI devices (not to be confused with the driver-owned cards/interfaces/etc whose presence in the configuration is determined by the driver).

Moreover, since a driver knows exactly what device it is communicating with, it is capable of supplying information to the system about the characteristics of the device, such as its system-exclusive ID, whether it is General MIDI or DLS-compatible, etc.

But unlike OMS, the system is able to begin functioning immediately, using only the MIDI devices/end-

points detected by the drivers, without forcing the user to go through a somewhat lengthy and confusing intial configuration process. Definition of external MIDI devices can be a completely optional step, only made possible when a client application requests that they be added to the configuration.

Implementation overview:
The client API is implemented as the CoreMIDI framework, which uses IPC to communicate with a server process, MIDIServer.

The server process loads, and manages all communication with, MIDI drivers. Most of its implementation is in the CoreMIDIServer framework, which drivers may import in order to access the API.

"Drivers" are not I/O Kit drivers. They are dynamic libraries, using CFPlugin.

Many MIDI drivers can simply be user-side I/O Kit clients (probably for serial, USB, Firewire).

PCI card drivers will need their MIDI drivers to communicate with a separate kernel extension.

If you have an old file named EmagicUSBMIDIDriver.plugin in your /Library/Audio/MIDI Drivers folder, please remove it. It makes trouble with our Midi classes.

See also macOS specific classes AVMIDIPlayerMBS and MidiPlaybackMBS for playback. For Windows see also WindowsMidiMBS class.
See also PortMidiMBS class for cross platform Midi handling.
Subclass of the MidiObjectMBS class.

- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.4
- MBS Xojo Plugins, version 23.4pr2
- MBS Real Studio Plugins, version 11.3fc

Xojo Developer Magazine

- 21.6, page 8: News

134.2.2 Methods

134.2.3 Available as boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: True if the MIDI stuff was successfull loaded.

134.2.4 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.2.5 CreateDestination(name as CFStringMBS, TargetEndpointObject as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Create a virtual destination in a client.
Notes: Clients may use this to create virtual destinations.
Lasterror is set.
You must pass a valid new MidiEndpointMBS for TargetEndpointObject. Best is if you make a subclass from MidiEndpointMBS and fill the event. You can add there additional methods and properties. CreateDestination will than fill the handle property on success.

134.2.6 CreateInputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Create an input port through which the client may receive incoming MIDI messages from any MIDI source.
Example:

```
Var mc as MidiClientMBS
Var mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateInputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

Notes: After creating a port, use MIDIPortConnectSource to establish an input connection from any number of sources to your port.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so it can be filled.

134.2.7 CreateOutputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Create an output port through which the client may send outgoing MIDI messages to any MIDI destination.
Example:

```
Var mc as MidiClientMBS
Var mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateOutputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

Notes: Output ports provide a mechanism for MIDI merging. The system assumes that each output port will be responsible for sending only a single MIDI stream to each destination, although a single port may address all of the destinations in the system.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so it can be filled.

134.2.8 CreateSource(name as CFStringMBS) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new virtual Midi source.
Example:

```
Var m as MidiClientMBS
Var e as MidiEndpointMBS

m=new MidiClientMBS

// Initialize
m.Init NewCFStringMBS("Hallo")

// Create device:
e=m.CreateSource(NewCFStringMBS("Hallo"))

// if error is 0 and handle is not 0, it's okay
MsgBox "error: "+str(m.Lasterror)+", handle: "+str(e.Handle)
```

Notes: Lasterror is set.
Returns nil on any error.

Clients may use this to create virtual sources.

After creating a virtual source, use Received to transmit MIDI messages from your virtual source to any clients connected to the virtual source.

134.2.9 FindObjectByUniqueID(id as Integer) as MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Locate a device, typedefal device, entity, or endpoint by its uniqueID.
Notes: New for CoreMIDI 1.3.
You may cast the returned object to MidiEndpointMBS, MidiEntityMBS or MidiDeviceMBS. RB's "isa" command may help you.
Returns nil on any error. Lasterror is set.

134.2.10 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the destinations in the system.
Notes: The index goes from 0 to NumberOfDestinations-1.
Lasterror is set.
Returns nil on any error.

134.2.11 GetDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the devices in the system.
Notes: To enumerate the entities in the system, you can walk through the devices, then walk through the devices' entities.

Note: If a client iterates through the devices and entities in the system, it will not ever visit any virtual sources and destinations created by other clients. Also, a device iteration will return devices which are "offline" (were present in the past but are not currently present), while iterations through the system's sources and destinations will not include the endpoints of offline devices.

Thus clients should usually prefer NumberOfSources, GetSource, NumberOfDestinations and GetDestination to iterating through devices and entities to locate endpoints.

Lasterror is set.
Returns nil on any error.

134.2.12 GetExternalDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the external devices in the system.
Notes: The index goes from 0 to NumberOfDevices-1.
Lasterror is set.
Returns nil on any error.

134.2.13 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the sources in the system.
Notes: The index goes from 0 to NumberOfSources-1.
Lasterror is set.

Returns nil on any error.

134.2.14 Init(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Creates a new Client object with the given client name.
Notes: Lasterror is set.

134.2.15 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of destinations in the system.
Example:

```
Var m as new MidiClientMBS
Var n as Integer = m.NumberOfDestinations

MsgBox "NumberOfDestinations: "+str(n)
```

Notes: Returns 0 on any error.
Lasterror is set.

134.2.16 NumberOfDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of devices in the system.
Example:

```
Var m as new MidiClientMBS
Var n as Integer = m.NumberOfDevices

MsgBox "NumberOfDevices: "+str(n)
```

Notes: Returns 0 on any error.
Lasterror is set.

134.2.17 NumberOfExternalDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of typedefal MIDI devices in the system.
Example:

```
Var m as new MidiClientMBS
Var n as Integer = m.NumberOfExternalDevices

MsgBox "NumberOfExternalDevices: "+str(n)
```

Notes: External MIDI devices are MIDI devices connected to endpoints via a standard MIDI cable. Their presence is completely optional, only when a UI somewhere adds them.

New for CoreMIDI 1.1.

Returns 0 on any error.
Lasterror is set.

134.2.18 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of sources in the system.
Example:

```
Var m as new MidiClientMBS
Var n as Integer = m.NumberOfSources

MsgBox "NumberOfSources: "+str(n)
```

Notes: Returns 0 on any error.
Lasterror is set.

134.2.19 Restart as Integer

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Stops and restarts MIDI I/O.
Notes: This is useful for forcing CoreMIDI to ask its drivers to rescan for hardware.
Returns the Mac OS X error code.

134.2.20 Send(port as MidiPortMBS, endpoint as MidiEndpointMBS, packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sends midi data using the port to the given endpoint.
Example:

```
// Not 100% if this example works:
Var client as MIDIClientMBS
Var outport as MIDIPortMBS
Var dest as MIDIEndpointMBS
Var pack as MIDIPacketMBS
Var list as MIDIPacketListMBS
Var packs(-1) as MIDIPacketMBS

client = new MidiClientMBS

if client <>nil then
client.Init newcfstringmbs("CoreMIDI")
outport = new MIDIPortMBS
client.CreateOutputPort(NewCFStringMBS("outport"), outport)
dest = client.getDestination(0)
outport.connectSource dest

pack = new MIDIPacketMBS
list = new MIDIPacketListMBS
pack.timeStamp = nil
pack.datastring = chrb(&h90)+chrb(&h5A)+chrb(&h7C)
packs.append pack
if not list.FillList(packs) then
msgBox "bad"
end

client.Send(outport, dest, list)
end
```

Notes: Events with future timestamps are scheduled for future delivery. The system performs any needed MIDI merging.

Lasterror is set.

134.2.21 Events

134.2.22 ObjectAdded(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Called when an object is added to a MidiObject.

134.2.23 ObjectRemoved(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Called when an object is removed from a MidiObject.

134.2.24 PropertyChanged(target as MidiObjectMBS, theProperty as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Called when a property was changed.

134.2.25 SerialPortOwnerChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A persistent MIDI Thru connection was created or destroyed.
Notes: New for CoreMIDI 1.3.

134.2.26 SetupChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Some aspect of the current MIDISetup has changed.
Notes: You should ignore this message if you handle the other messages.

134.2.27 ThruConnectionsChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A persistent MIDI Thru connection was created or destroyed.
Notes: New for CoreMIDI 1.3.

134.2.28 Constants

Constants

Constant	Value	Description
kMIDIIDNotUnique	-10843	One of the type constants for a MIDI error. Attempt to set a non-unique kMIDIPropertyUniqueID on an object.
kMIDIInvalidClient	-10830	One of the type constants for a MIDI error. An invalid MIDIClientRef was passed.
kMIDIInvalidPort	-10831	One of the type constants for a MIDI error. An invalid MIDIPortRef was passed.
kMIDIInvalidUniqueID	0	A constant for an invalid unique ID.
kMIDIMessageSendErr	-10838	One of the type constants for a MIDI error. Communication with MIDIServer failed.
kMIDIMsgIOError	7	One of the type constants for a MIDI Notification. A driver I/O error occurred.
kMIDIMsgObjectAdded	2	One of the type constants for a MIDI Notification. A device, entity or endpoint was added.
kMIDIMsgObjectRemoved	3	One of the type constants for a MIDI Notification. A device, entity or endpoint was removed.
kMIDIMsgPropertyChanged	4	One of the type constants for a MIDI Notification. An object's property was changed.
kMIDIMsgSerialPortOwnerChanged	6	One of the type constants for a MIDI Notification. A persistent MIDI Thru connection was created or destroyed. No data. for CoreMIDI 1.3.
kMIDIMsgSetupChanged	1	One of the type constants for a MIDI Notification. Some aspect of the current MIDISetup has changed. No data. Should ig this message if messages 2-6 are handled.
kMIDIMsgThruConnectionsChanged	5	One of the type constants for a MIDI Notification. A persistent MIDI Thru connection was created or destroyed. No data. for CoreMIDI 1.3.
kMIDINoConnection	-10833	One of the type constants for a MIDI error. Attempt to close a non-existant connection.
kMIDINoCurrentSetup	-10837	One of the type constants for a MIDI error. Internal error; there is no current MIDI setup object.
kMIDIObjectNotFound	-10842	One of the type constants for a MIDI error. The requested object does not exist.
kMIDIServerStartErr	-10839	One of the type constants for a MIDI error. Unable to start MIDIServer.
kMIDISetupFormatErr	-10840	One of the type constants for a MIDI error. Unable to read the saved state.
kMIDIUnknownEndpoint	-10834	One of the type constants for a MIDI error. An invalid MIDIEndpointRef was passed.
kMIDIUnknownProperty	-10835	One of the type constants for a MIDI error. Attempt to query a property not set on the object.
kMIDIWrongEndpointType	-10832	One of the type constants for a MIDI error. A source endpoint was passed to a function expecting a destination, or versa.
kMIDIWrongPropertyType	-10836	One of the type constants for a MIDI error. Attempt to set a property with a value not of the correct type.
kMIDIWrongThread	-10841	One of the type constants for a MIDI error. A driver is calling a non-I/O function in the server from a thread other the server's main thread.

134.3 class MidiDeviceMBS

134.3.1 class MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a MIDI device.
Notes: A MIDI device, which either attaches directly to the computer and is controlled by a MIDI driver, or which is "external," meaning that it is connected to a driver-controlled device via a standard MIDI cable.
Subclass of the MidiObjectMBS class.

134.3.2 Methods

134.3.3 GetEntity(index as Integer) as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given device's entities.
Notes: The index goes from 0 to NumberOfEntities-1.
Lasterror is set.
Returns nil on any error.

134.3.4 NumberOfEntities as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of entilities for this device.
Notes: Returns nil on any error.
Lasterror is set.

134.4 class MidiEndpointMBS

134.4.1 class MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the CoreMidi classes.
Notes: Entities have any number of MIDIEndpointRef's, sources and destinations of 16-channel MIDI streams.
Subclass of the MidiObjectMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

134.4.2 Methods

134.4.3 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: Frees the endpoint handle.
There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.4.4 Entity as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns an endpoint's entity.
Notes: Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

134.4.5 FlushOutput

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Unschedule previously-sent packets.
Notes: Clients may use MIDIFlushOutput to cancel the sending of
packets that were previously scheduled for future delivery.
New for CoreMIDI 1.1.

Lasterror is set.

134.4.6 Received(packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Distribute MIDI from a source to the client input ports which are connected to that source.
Notes: Drivers should call this function when receiving MIDI from a source.
Clients which have created virtual sources, using MIDICreateSource, should call this function when the source is generating MIDI.
Lasterror is set.

134.4.7 Events

134.4.8 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Called when data arrives at an endpoint.
Notes: If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

134.5 class MidiEntityMBS

134.5.1 class MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the CoreMidi classes.
Notes: Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port.

By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is desirable in MIDI librarian applications.

These sub-components are MIDIEntityRef's.
Subclass of the MidiObjectMBS class.

134.5.2 Methods

134.5.3 Device as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns an entity's device.
Notes: Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

134.5.4 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given entity's destinations.
Notes: Lasterror is set.
Returns nil on any error.

134.5.5 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given entity's sources.

Notes: Lasterror is set.
Returns nil on any error.

134.5.6 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return the number of destinations in a given entity.
Notes: Lasterror is set.
Returns 0 on any error.

134.5.7 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return the number of sources in a given entity.
Notes: Lasterror is set.
Returns 0 on any error.

134.6 class MidiObjectMBS

134.6.1 class MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a Mac OS X CoreMidi object.
Blog Entries

- MBS Xojo Plugins, version 24.1pr1
- MBS Xojo Plugins, version 17.4pr2
- MBS Real Studio Plugins, version 12.5pr2

134.6.2 Methods

134.6.3 kMIDIPropertyAdvanceScheduleTimeMuSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
If it is >0, then it is a recommendation of how many microseconds in advance clients should schedule output. Clients should treat this value as a minimum. For devices with a >0 advance schedule time, drivers will receive outgoing messages to the device at the time they are sent by the client, via MIDISend, and the driver is responsible for scheduling events to be played at the right times according to their timestamps.
As of CoreMIDI 1.3, this property may also be set on virtual destinations (but only the creator of the destination should do so).
When a client sends to a virtual destination with an advance schedule time of 0, the virtual destination receives its messages at their scheduled delivery time. If a virtual destination has a non-zero advance schedule time, it receives timestamped messages as soon as they are sent, and must do its own scheduling of the events.

134.6.4 kMIDIPropertyCanRoute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.5 kMIDIPropertyConnectionUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, integer or CFDataRef

UniqueID of an external device/entity/endpoint attached to this one (strongly recommended that it be an endpoint). This is for the use of a setup editor UI; not currently used internally. A driver-owned entity or endpoint has this property to refer to an external MIDI device that is connected to it.

The property is non-existant or 0 if there is no connection.

New for CoreMIDI 1.1.

Beginning with CoreMIDI 1.3, this property may be a CFDataRef containing an array of big-endian SInt32's, to allow specifying that a driver object connects to multiple external objects (via MIDI thru-ing or splitting).

This property may also exist for external devices/entities/endpoints, in which case it signifies a MIDI Thru connection to another external device/entity/endpoint (again, strongly recommended that it be an edpoint).

134.6.6 kMIDIPropertyDeviceID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.
device/entity property, integer
The entity's system-exclusive ID, in user-visible form
Drivers may set this property on their devices or entities.
Setup editors may allow the user to set this property on external devices.

134.6.7 kMIDIPropertyDisplayName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: device/entity/endpoint property, string.

Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.

For objects other than endpoints, the display name is the same as the name.

New for CoreMIDI 1.5.

134.6.8 kMIDIPropertyDriverDeviceEditorApp as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: device property, string, contains the full path to an application which knows how to configure this driver-owned devices. Drivers may set this property on their owned devices. Applications must not write to it.

New for CoreMIDI 1.4.

134.6.9 kMIDIPropertyDriverOwner as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, string

Name of the driver that owns a device.
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

134.6.10 kMIDIPropertyDriverVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, integer, returns the driver version API of the owning driver (only for driver-owned devices). Drivers need not set this property; applications should not write to it.

New for CoreMIDI 1.3.

134.6.11 kMIDIPropertyFactoryPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current factory patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

134.6.12 kMIDIPropertyImage as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device property, CFStringRef which is a full POSIX path to a device or external device's icon, stored in any standard graphic file format such as JPEG, GIF, PNG and TIFF are all acceptable. (See CFURL for functions to convert between POSIX paths and other ways of specifying files.) The image's maximum size should be 128x128.

Drivers should set the icon on the devices they add.
A studio setup editor should allow the user to choose icons for external devices.

New for CoreMIDI 1.3.

134.6.13 kMIDIPropertyIsBroadcast as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.
entity/endpoint property, integer
1 if the endpoint broadcasts messages to all of the other endpoints in the device, 0 if not. Set by the owning driver; should not be touched by other clients.
New for CoreMIDI 1.3.

134.6.14 kMIDIPropertyIsDrumMachine as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.15 kMIDIPropertyIsEffectUnit as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.16 kMIDIPropertyIsEmbeddedEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

entity/endpoint property, integer
0 if there are external MIDI connectors, 1 if not.
New for CoreMIDI 1.1.

134.6.17 kMIDIPropertyIsMixer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.18 kMIDIPropertyIsSampler as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.19 kMIDIPropertyManufacturer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
Var m as MidiClientMBS
Var i, n as Integer
Var e as MIDIEndpointMBS
Var d as MIDIDeviceMBS
Var s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

Notes: Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.

Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

134.6.20 kMIDIPropertyMaxReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

134.6.21 kMIDIPropertyMaxSysExSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.
device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
maximum bytes/second of sysex messages sent to it
(default is 3125, as with MIDI 1.0)

134.6.22 kMIDIPropertyMaxTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

134.6.23 kMIDIPropertyModel as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.
Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

134.6.24 kMIDIPropertyName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
// init midi
Var m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
Var name as CFStringMBS = NewCFStringMBS("TestSource")
Var source as MidiEndpointMBS = m.CreateSource(name)

// query name property
Var s as CFStringMBS = source.StringProperty(source.kMIDIPropertyName)
MsgBox "Name: "+s.str
```

Notes: Only available after you called the Init Method.

device/entity/endpoint property, string
Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.
A setup editor may allow the user to set the names of both driver-owned and external devices.

134.6.25 kMIDIPropertyNameConfiguration as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, CFDictionary

This specifies the device's current patch, note and control name values using the MIDINameDocument XML format. This specification requires the use of higher-level, OS-specific constructs outside of the specification,

to fully define the current names for a device.

The MIDINameConfiguration property is implementated as a CFDictionary:

key "master" maps to a CFDataRef containing an AliasHandle referring to the device's master name document.

key "banks" maps to a CFDictionaryRef. This dictionary's keys are CFStringRef names of patchBank elements in the master document, and its values are each a CFDictionaryRef: key "file" maps to a CFDataRef containing an AliasHandle to a document containing patches that override those in the master document, and key "patchNameList" maps to a CFStringRef which is the name of the patchNameList element in the overriding document.

key "currentModes" maps to a 16-element CFArrayRef, each element of which is a CFStringRef of the name of the current mode for each of the 16 MIDI channels.

Clients setting this property must take particular care to preserve dictionary values other than the ones they are interested in changing, and to properly structure the dictionary.

New for CoreMIDI 1.3.

134.6.26 kMIDIPropertyOffline as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = device is offline (is temporarily absent), 0 = present
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

134.6.27 kMIDIPropertyPanDisruptsStereo as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.28 kMIDIPropertyPrivate as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = endpoint is private, hidden from other clients.
May be set on a device or entity, but they will still appear in the API; only affects whether the owned endpoints are hidden.

New for CoreMIDI 1.3.

134.6.29 kMIDIPropertyReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object receives, (1«0)=ch 1...(1«15)=ch 16.
Drivers may set this property on their entities or endpoints.
Setup editors may allow the user to set this property on external endpoints.
Virtual destination may set this property on their endpoints.

134.6.30 kMIDIPropertyReceivesBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.31 kMIDIPropertyReceivesBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.32 kMIDIPropertyReceivesClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.33 kMIDIPropertyReceivesMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.34 kMIDIPropertyReceivesNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.35 kMIDIPropertyReceivesProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.36 kMIDIPropertySingleRealtimeEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device property, integer

Some MIDI interfaces cannot route MIDI realtime messages to individual outputs; they are broadcast. On such devices the inverse is usually also true – incoming realtime messages cannot be identified as originating from any particular source.

When this property is set on a driver device, it signifies the 0-based index of the entity on which incoming realtime messages from the device will appear to have originated from.

New for CoreMIDI 1.3.

134.6.37 kMIDIPropertySupportsGeneralMIDI as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.38 kMIDIPropertySupportsMMC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.39 kMIDIPropertySupportsShowControl as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: device/entity property, integer (0/1). Indicates whether the device implements the MIDI.
New for CoreMIDI 1.5.

134.6.40 kMIDIPropertyTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object transmits, (1«0)=ch 1...(1«15)=ch 16
New for CoreMIDI 1.3.

134.6.41 kMIDIPropertyTransmitsBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.42 kMIDIPropertyTransmitsBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.43 kMIDIPropertyTransmitsClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.44 kMIDIPropertyTransmitsMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.45 kMIDIPropertyTransmitsNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.46 kMIDIPropertyTransmitsProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

134.6.47 kMIDIPropertyUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
// init midi
Var m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
Var name as CFStringMBS = NewCFStringMBS("TestSource")
Var source as MidiEndpointMBS = m.CreateSource(name)

// query name property
Var s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)
```

Notes: Only available after you called the Init Method.
devices, entities, endpoints all have unique ID's, integer
The system assigns unique ID's to all objects. Creators of virtual endpoints may set this property on their endpoints, though doing so may fail if the chosen ID is not unique.

134.6.48 kMIDIPropertyUserPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes: Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current user patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

134.6.49 Properties(deep as boolean) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get all of an object's properties.

Notes: Deep parameter: true if the object's child objects are to be included (e.g. a device's entities, or an entity's endpoints).
Properties which an object inherits from its owning object (if any) are not included.

New for CoreMIDI 1.1.

Returns nil on any error.
Lasterror is set.

134.6.50 RemoveProperty(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Remove an object's property.
Notes: Lasterror is set.

134.6.51 Properties

134.6.52 DisplayName as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.
Notes: For objects other than endpoints, the display name is the same as the name.
(Read only property)

134.6.53 Handle as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The handle of this object.
Notes: (Read and Write property)

134.6.54 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The last error code reported.
Notes: 0 if the function was successfull.

-1 if the function is not available or the RB parameters were bad. (e.g. nil)
else a Mac OS error code.

Some Midi specific error codes:

kMIDIInvalidClient	-10830	
kMIDIInvalidPort	-10831	
kMIDIWrongEndpointType	-10832	want source, got destination, or vice versa
kMIDINoConnection	-10833	attempt to close a non-existant connection
kMIDIUnknownEndpoint	-10834	
kMIDIUnknownProperty	-10835	
kMIDIWrongPropertyType	-10836	
kMIDINoCurrentSetup	-10837	there is no current setup, or it contains no devices
kMIDIMessageSendErr	-10838	communication with server failed
kMIDIServerStartErr	-10839	couldn't start the server
kMIDISetupFormatErr	-10840	unparseable saved state
kMIDIWrongThread	-10841	driver is calling non I/O function in server from a thread other than server's main one:
kMIDIObjectNotFound	-10842	
kMIDIIDNotUnique	-10843	

(Read and Write property)

134.6.55 Manufacturer as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Drivers should set this property on their devices.
Notes: Setup editors may allow the user to set this property on external devices.
(Read only property)

134.6.56 Model as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The model name.
Notes: (Read only property)

134.6.57 Name as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The item's name.
Notes: Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.

A setup editor may allow the user to set the names of both driver-owned and external devices.
(Read only property)

134.6.58 BinaryProperty(name as CFStringMBS) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Set or Get an object's data-type property.
Notes: Lasterror is set.
Returns nil on any error.
(Read and Write computed property)

134.6.59 IntegerProperty(name as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Set or Get an object's integer-type property.
Example:

```
// init midi
Var m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
Var name as CFStringMBS = NewCFStringMBS("TestSource")
Var source as MidiEndpointMBS = m.CreateSource(name)

// query name property
Var s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)

// set it
source.IntegerProperty(source.kMIDIPropertyUniqueID) = 1234

// query again
Var t as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(t)
```

Notes: Returns 0 on any error.

Lasterror is set.
(Read and Write computed property)

134.6.60 ObjectProperty(name as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get or Set an object's dictionary-type property.
Notes: Lasterror is set.
New for CoreMIDI 1.3.
Renamed from Property to ObjectProperty in v4.3 for Xojo 6 compatibility.
(Read and Write computed property)

134.6.61 StringProperty(name as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get or Set an object's string-type property.
Example:

```
Var m as MidiClientMBS
Var i, n as Integer
Var e as MIDIEndpointMBS
Var d as MIDIDeviceMBS
Var s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

Notes: Lasterror is set.
(Read and Write computed property)

134.7 class MidiPacketListMBS

134.7.1 class MidiPacketListMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class to hold a list of MidiPackets.

134.7.2 Methods

134.7.3 FillList(packets() as MidiPacketMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Fills the list with the given Xojo array of MidiPackets.
Example:

```
Var packs(-1) As MIDIPacketMBS

Var pack As New MIDIPacketMBS
Var list As New MIDIPacketListMBS
Var data As New MemoryBlock(9)

data.Byte(0) = &hF0
data.Byte(1) = &h00
data.Byte(2) = &h20
data.Byte(3) = &h1C
data.Byte(4) = &h7F
data.Byte(5) = &h04
data.Byte(6) = &h02
data.Byte(7) = &h01
data.Byte(8) = &hF7

pack.datamemory = data
pack.timeStamp = Nil 'now

packs.append pack
If Not list.FillList(packs) Then
Break // problem
Else
// send to current port and destination
client.Send(outport, currentDest, list)
End If
```

134.7.4 Item(index as Integer) as MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the item with the given index.

134.7.5 Properties

134.7.6 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of items in the list.
Notes: (Read and Write property)

134.8 class MidiPacketMBS

134.8.1 class MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a midi packet.
Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- MBS Plugins 10.3 Release Notes

134.8.2 Methods

134.8.3 AbsoluteToNanoseconds(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts an absolute time value to a nanoseconds time value.
Example:

```
Var x as UInt64 = MidiPacketMBS.CurrentTime

Var y as UInt64 = x + MidiPacketMBS.NanosecondsToAbsolute(5)

MsgBox str(x)+" + 5 ns = "+str(Y)
```

134.8.4 CurrentTime as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns the current time of the computer as an absolute time value.
Example:

```
Var u as uint64 = MidiPacketMBS.CurrentTime
Var n as uint64 = MidiPacketMBS.AbsoluteToNanoseconds(u)
Var x as Double = n / 1000000000.0

MsgBox str(u)+" "+str(n)+" "+str(x)

Var d as new date
d.Minute = 0
d.Hour = 0
d.Second = 0
d.TotalSeconds = d.TotalSeconds + x
```

```
MsgBox d.ShortTime // how long the mac is running.
```

Notes: While some Macs do have host clock time being in nanoseconds, this is not guaranteed. So use the function AbsoluteToNanoseconds to convert to nanoseconds.

134.8.5 NanosecondsToAbsolute(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Converts a nanoseconds value to an absolute time.
Example:

```
Var x as UInt64 = MidiPacketMBS.CurrentTime

Var y as UInt64 = MidiPacketMBS.NanosecondsToAbsolute(x)

Var seconds as uint64 = y / 1000000000
Var hours as uint64 = seconds / 3600
seconds = seconds - hours*3600
Var minutes as uint64 = seconds / 60
seconds = seconds - minutes*60

// shows how long the Mac is running:
MsgBox str(hours)+" hours, "+str(minutes)+" minutes, "+str(seconds)+" seconds"
```

134.8.6 Properties

134.8.7 DataMemory as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data of the packet as a memoryblock.
Notes: Setting this value will automatically fill the DataString property, so both are in sync.
(Read and Write property)

134.8.8 DataString as String

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data of the packet as a string.
Notes: Setting this value will automatically fill the DataMemory property, so both are in sync.

This will not work:
DataString="90 5A 7C"

But this is better:
DataString=chrb(&h90)+chrb(&h5A)+chrb(&h7C)

or with the DataMemory property:
m=newmemoryblock(3)
m.byte(0)=&h90
m.byte(1)=&h5A
m.byte(2)=&h7C
DataMemory=m
(Read and Write property)

134.8.9 TimeStamp as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use TimeStampValue instead.
Function: The timestamp of the packet.
Example:

```
Var pack as MIDIPacketMBS
Var m as memoryblock

m=newmemoryblock(8)
m.Long(0) = 2345678 // some time value
m.Long(4) = 3456789
pack = new MIDIPacketMBS
pack.TimeStamp = m
```

Notes: A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
And using nil for the memoryblock represents a value of zero (=now).
(Read and Write property)

134.8.10 TimeStampValue as UInt64

MBS MacCF Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

Function: The timestamp of the packet.

Notes: A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
(Read and Write property)

134.9 class MidiPlaybackMBS

134.9.1 class MidiPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: A class to do Midi playback on Mac OS X.
Notes: With sandbox, you need the com.apple.security.temporary-exception.audio-unit-host entitlement as of September 2013.
see
https://developer.apple.com/library/mac/qa/qa1483/_index.html

See also AVMIDIPlayerMBS class for playing midi files.

134.9.2 Methods

134.9.3 Callback as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Needed for the MidiPortMBS class to know which function to call
Example:

```
Var p as MidiPlaybackMBS
Var m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

Notes: Return the address of the callback method used to process Midi data.
The method is to be used together with the SetCallback method in the MidiPortMBS class.

134.9.4 Constructor(UsesInternalReverb as boolean=false, AutoStart as boolean=true)

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Initializes the midi playback.
Notes: After calling the constructor the Inited flag is true on success.
If AutoStart is false the midi playback is not started.

134.9.5 CPULoad as single

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The CPU load of the graph.
Notes:

Returns a short-term running average of the current CPU load of the graph.

134.9.6 InstrumentCount as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The number of instruments.

134.9.7 InstrumentID(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The ID of the instrument with the given index.

134.9.8 InstrumentName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The name of the instrument with the given index.
Example:

```
// show list of all names
Var m as new MidiPlaybackMBS

Var u as Integer = m.InstrumentCount-1
for i as Integer = 0 to u
Listbox1.AddRow m.InstrumentName(i)
```

```
next
```

Notes: Index from 0 to InstrumentCount-1.

134.9.9 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Whether the midi playback is running.
Notes: Lasterror is set.

134.9.10 LoadSoundBankFile(file as folderitem)

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Loads a sound bank file.
Example:

```
Sub LoadSoundFont (SoundFontName as string)

Var j as Integer
Var f as folderitem
Var e as string

//GET SOUNDFONT
f = Volume(0).Child("Library").Child("Audio").Child("Sounds").Child("Banks").Child(SoundFontName)

if f <>Nil then
//INSTALL SOUNDFONT
me.LoadSoundBankFile(f)
Window1.PopupMenu1.DeleteAllRows
for j = 0 to 127
if me.InstrumentName(j) <>"" then
Window1.PopupMenu1.addrow me.InstrumentName(j)
end if
next
Window1.PopupMenu1.ListIndex = 0
else
e = "Could not locate the SoundFont: "+ SoundFontName
e = e + " Please make sure the file is a valid soundfont file"
e = e + " and is located in the folder YourHardDrive/Library/Audio/Sounds/Banks"
e = e + " and has the extension .sf2"
MsgBox e
end if
```

End Sub

Notes: This function can load files with .sf2 extension placed in the location: Library/Audio/Sounds/Banks.

Lasterror is set.

To avoid crashes on Mac OS X 10.5, the midi playback is stopped before loading is done and restarted if necessary after loading completed.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

134.9.11 MaxCPULoad as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The Maximum CPU load of the graph
Notes: Returns the max CPU load of the graph since this call was last made or the graph was last started.

134.9.12 SendMidiEvent(Status as Integer, Data1 as Integer, Data2 as Integer, OffsetSampleFrame as Integer)

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Sends midi data for playback.

134.9.13 Start

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Starts the midi playback.
Notes: Lasterror is set.

134.9.14 Stop

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Stops the midi playback.
Notes: Lasterror is set.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

134.9.15 Properties

134.9.16 FilterNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the filter graph node.
Notes: (Read only property)

134.9.17 GraphHandle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The handle for the AUGraph.
Notes: (Read only property)

134.9.18 Inited as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Whether the constructor was successful.
Notes: This property is false if the constructor failed to initialize.
(Read only property)

134.9.19 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read only property)

134.9.20 OutputNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the output graph node.
Notes: (Read only property)

134.9.21 SynthNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the synth graph node.
Notes: (Read only property)

134.9.22 SynthUnitHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the synth audio unit.
Notes: (Read only property)

134.9.23 InstrumentIDOnChannel(Channel as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Which instrument is playing on which channel.
Notes: (Read and Write computed property)

134.9.24 ReverbVolume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The reverb volume.
Notes: The value range is -120 to 40 dB.
(Read and Write computed property)

134.9.25 StreamFromDisk as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Whether we are streaming from disk.
Notes: Currently setting this value can crash the application.
(Read and Write computed property)

134.9.26 Tuning as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The tuning setting.
Notes: Value is in cents from -1200 to 1200.
(Read and Write computed property)

134.9.27 UsesInternalReverb as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: One of the audio unit properties.
Example:

```
Var m as new MidiPlaybackMBS

MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
m.UsesInternalReverb=true
MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
```

Notes: Lasterror is set.
(Read and Write computed property)

134.9.28 Volume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The volume.
Notes: The value is in dB from -120 to 40.
(Read and Write computed property)

134.10 class MidiPortMBS

134.10.1 class MidiPortMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a MIDI port.
Notes: A MIDIPortMBS, which may be an input port or output port, is an object through which a client may communicate with any number of MIDI sources or destinations.
Subclass of the MidiObjectMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

134.10.2 Methods

134.10.3 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.10.4 ConnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Establish a connection from a source to a client's input port.
Notes: Lasterror is set.

134.10.5 DisconnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Close a previously-established source-to-input port connection.
Notes: Lasterror is set.

134.10.6 SetCallback(callback as Integer, reference as object)

MBS MacCF Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Connects the MidiPort to send data to given MidiPlayback reference.
Example:

```
Var p as MidiPlaybackMBS
Var m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

Notes: The method is to be used together with the Callback function in the MidiPlaybackMBS class.
Read event is still being called if needed.

You can call again with 0 as callback to clear it.

134.10.7 Events

134.10.8 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Called when data arrives at this port.
Notes: If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

134.11 class MIDISysexSendRequestMBS

134.11.1 class MIDISysexSendRequestMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: An asynchronous request to send a single system-exclusive MIDI event to a MIDI destination.
Example:

```
// build a data package
Var data As New MemoryBlock(9)

data.Byte(0) = &hF0
data.Byte(1) = &h00
data.Byte(2) = &h20
data.Byte(3) = &h1C
data.Byte(4) = &h7F
data.Byte(5) = &h04
data.Byte(6) = &h02
data.Byte(7) = &h01
data.Byte(8) = &hF7

// make new secon request
Var sendRequest As New MIDISysexSendRequestMBS
sendRequest.Data = data
sendRequest.Destination = currentDest
sendRequest.Send

// store reference for later as send is asynchron
Window1.sendRequest = sendRequest
```

134.11.2 Methods

134.11.3 close

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.11.4 Send

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Send a single system-exclusive event, asynchronously.
Notes: Keep a reference to this object until the call Completes.

134.11.5 Properties

134.11.6 BytesToSend as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Initially set when sending starts to the number of bytes to be sent.
Notes: MIDISendSysex will decrement this counter as bytes are sent.
(Read and Write property)

134.11.7 Data as Memoryblock

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The memoryblock with the data you want to send.
Notes: (Read and Write property)

134.11.8 Destination as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The endpoint to which the event is to be sent.
Notes: (Read and Write property)

134.11.9 IsComplete as boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The client may set this to true at any time to abort transmission.
Notes: The implementation sets this to true when all bytes have been sent.
Renamed from Complete to IsComplete in v4.3 for Xojo 6 compatibility.
(Read and Write property)

134.11.10 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The last error code.
Notes: 0 for success.
(Read and Write property)

134.11.11 Length as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The length of the memoryblock.
Notes: If 0, the memoryblock.size property is taken, but not all memoryblocks know their size.
(Read and Write property)

134.11.12 Events

134.11.13 Complete

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: An event to notify the client of the completion of a call to MIDISendSysex.

134.12 class MidiThruConnectionControlTransformMBS

134.12.1 class MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a control transformation midi connection.
Notes: Note: must order control transforms appropriately – first, filter out and remap. Further transforms can follow, and will apply to the remapped control number (if any).
N.B. All transformations are done using 14-bit control values, so, when doing an add/min/max transform on a 7-bit value, the parameter must be a 14-bit value, e.g. to add n, param must be n «7.

134.12.2 Properties

134.12.3 ControlNumber as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The control number.
Notes: (Read and Write property)

134.12.4 ControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The control type.
Notes: implementation note: some code tests bits of these values

constants:

kMIDIControlType_7Bit	0	control numbers may be 0-127
kMIDIControlType_14Bit	1	control numbers may be 0-31
kMIDIControlType_7BitRPN	2	control numbers may be 0-16383
kMIDIControlType_14BitRPN	3	
kMIDIControlType_7BitNRPN	4	
kMIDIControlType_14BitNRPN	5	

(Read and Write property)

134.12.5 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameter for the transformation.
Notes: (Read and Write property)

134.12.6 RemappedControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The Remapped Control Type.
Notes: Only used when transform is kMIDITransform_MapControl
(Read and Write property)

134.12.7 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The transformation code to apply.
Notes: Some constants:

kMIDITransform_None	0	no param
kMIDITransform_FilterOut	1	filter out event type, no param
kMIDITransform_MapControl	2	param is remapped control number
kMIDITransform_Add	8	param is value to add
kMIDITransform_Scale	9	param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb
kMIDITransform_MinValue	10	
kMIDITransform_MaxValue	11	
kMIDITransform_MapValue	12	param is index of map in connection's map array

(Read and Write property)

134.13 class MidiThruConnectionEndpointMBS

134.13.1 class MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for an endpoint specifications.
Notes: When filling one of these out, clients can leave uniqueID 0 if the endpoint exists.
When when one is provided back to the client, the endpoint may be null if it doesn't exist, but the uniqueID will always be non-zero.

134.13.2 Methods

134.13.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.13.4 Properties

134.13.5 Endpoint as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The endpoint to use for a connection.
Notes: (Read and Write property)

134.13.6 UniqueID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An unique ID for an endpoint.
Notes: (Read and Write property)

134.14 class MidiThruConnectionMBS

134.14.1 class MidiThruConnectionMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a midi connection.
Notes: This class defines functions to create MIDI play-through connections between the MIDI sources and destinations. These connections may be persistent or transitory, owned by a client.

By using connections instead of doing MIDI Thru operations themselves, the overhead of moving MIDI messages between the server and the client for thru-ing is reduced.

The aim of these functions is to permit as flexible a set of transformations as possible while keeping the API and data structures relatively simple.
Subclass of the MidiObjectMBS class.

134.14.2 Methods

134.14.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.14.4 Create(PersistentOwnerID as CFStringMBS, params as MidiThruConnectionParamsMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new connection.
Notes: If inPersistentOwnerID is nil, then the connection is marked as owned by the client and will be automatically disposed with the client.

If it is non-nil, then it should be a unique identifier, e.g. "com.mycompany.MyCoolProgram".

134.14.5 Find(PersistentOwnerID as String) as MidiThruConnectionMBS()

MBS MacCF Plugin, Plugin Version: 24.1, Platform: macOS, Targets: All.

Function: Returns all of the persistent thru connections created by a client.
Notes: PersistentOwnerID: The ID of the owner whose connections are to be returned.

134.14.6 Properties

134.14.7 Parameter as MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameters for the connection.
Notes: Lasterror is set.
(Read and Write computed property)

134.15 class MidiThruConnectionParamsMBS

134.15.1 class MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The class for the parameters of a midi connection.
Blog Entries

- News from the MBS Xojo Plugins Version 20.1

134.15.2 Methods

134.15.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.15.4 Properties

134.15.5 ChannelPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.6 ControlTransformsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of control transformations used.
Notes: If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the ControlTransform array.
(Read and Write property)

134.15.7 DestinationsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of destinations.
Notes: If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the destination array.
(Read and Write property)

134.15.8 FilterOutAllControls as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

134.15.9 FilterOutBeatClock as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

134.15.10 FilterOutMTC as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

134.15.11 FilterOutSysEx as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

134.15.12 FilterOutTuneRequest as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

134.15.13 HighNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The high note value.
Notes: Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

134.15.14 HighVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

Function: Higher velocity limit.
Notes: Note events with a velocity greater than this, if it is not 0, are filtered out.
(Read and Write property)

134.15.15 KeyPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.16 LowNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The low note value.
Notes: Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

134.15.17 LowVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

Function: Lower velocity limit.
Notes: Note events with a velocity less than this value are filtered out.
(Read and Write property)

134.15.18 MapsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of mappings used.
Notes: If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the Map array.
(Read and Write property)

134.15.19 NoteNumber as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.20 PitchBend as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.21 ProgramChange as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.22 SourcesCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of sources used.
Notes: If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries

in the Source array.
(Read and Write property)

134.15.23 Velocity as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

134.15.24 ChannelMap(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array with the value mappings.
Notes: Map each of the source 16 MIDI channels to channel 0-15 (1-16) or 0xFF to filter out.
(Read and Write computed property)

134.15.25 ControlTransform(index as Integer) as MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of control transformations.
Notes: (Read and Write computed property)

134.15.26 Destination(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of destination endpoints.
Notes: (Read and Write computed property)

134.15.27 Map(index as Integer) as MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The list of mappings for this midi connection.
Notes: Index is from 0 to 15.

(if you need more, send me an email and I upper the limit.)
(Read and Write computed property)

134.15.28 Source(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of source endpoints.
Notes: (Read and Write computed property)

134.16 class MidiThruConnectionTransformMBS

134.16.1 class MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The class for a Midi connection transformation.

134.16.2 Properties

134.16.3 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameter of the transformation.
Notes: (Read and Write property)

134.16.4 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The transformation code.
Notes: Some constants:

kMIDITransform_None	0	no param
kMIDITransform_FilterOut	1	filter out event type, no param
kMIDITransform_MapControl	2	param is remapped control number
kMIDITransform_Add	8	param is value to add
kMIDITransform_Scale	9	param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb
kMIDITransform_MinValue	10	
kMIDITransform_MaxValue	11	
kMIDITransform_MapValue	12	param is index of map in connection's map array

(Read and Write property)

134.17 class MidiThruConnectionValueMapMBS

134.17.1 class MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A value map for a Midi connection.
Notes: This is an array to map Midi values from 0 to 127 to new values from 0 to 127.

134.17.2 Properties

134.17.3 Value(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The value Map.
Notes: Index is from 0 to 127.
Use only values from 0 to 127.
(Read and Write computed property)

134.18 class PortMidiDeviceInfoMBS

134.18.1 class PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for device information.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr5

134.18.2 Properties

134.18.3 HasInput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if input is available.
Notes: (Read only property)

134.18.4 HasOutput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if output is available.
Notes: (Read only property)

134.18.5 InterfaceName as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Underlying MIDI API.
Notes: e.g. MMSystem, DirectX or CoreMidi.
(Read only property)

134.18.6 Name as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device name.
Notes: e.g. USB MidiSport 1x1

(Read only property)

134.19 class PortMidiEventMBS

134.19.1 class PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a piece of midi data.
Notes: See this website for a list of Midi status codes:
https://www.midi.org/specifications-old/item/table-2-expanded-messages-list-status-bytes
Blog Entries

- MBS Xojo Plugins, version 17.1pr3
- MBS REALbasic Plugins, version 11.0pr14

134.19.2 Methods

134.19.3 Set(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value to the given data.

134.19.4 SetRaw(data0 as Integer, data1 as Integer, data2 as Integer, data3 as Integer)

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the raw data by setting all 4 bytes together.

134.19.5 Properties

134.19.6 CurrentEvent as PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current event played.
Notes: You can use this to show current note playing.
(Read only property)

134.19.7 Data1 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first data value in the midi event.
Notes: (Read and Write property)

134.19.8 Data2 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second data value in the midi event.
Notes: (Read and Write property)

134.19.9 RawData0 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first byte of the raw data in this event.
Notes: Same as Status property.
(Read and Write property)

134.19.10 RawData1 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second byte of the raw data in this event.
Notes: Same as Data1 property.
(Read and Write property)

134.19.11 RawData2 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The third byte of the raw data in this event.
Notes: Same as Data2 property.
(Read and Write property)

134.19.12 RawData3 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The forth byte of the raw data in this event.
Notes: (Read and Write property)

134.19.13 RawMessage as Integer

MBS Audio Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw content of the event as a integer.
Notes: Take care about platform differences like the byte order.
(Read and Write property)

134.19.14 Status as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The status value.
Notes: (Read and Write property)

134.19.15 When as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time value of this midi data.
Notes: Should be milliseconds.
(Read and Write property)

134.20 class PortMidiMBS

134.20.1 class PortMidiMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PortMidi library wrapped for use in Xojo.
Notes: Error codes:

```
const pmNoError              = 0
const pmHostError            = -10000
const pmInvalidDeviceId      = -9999
const pmInsufficientMemory   = -9998
const pmBufferTooSmall       = -9997
const pmBufferOverflow       = -9996
const pmBadPtr               = -9995
const pmBadData              = -9994
const pmInternalError        = -9993
const pmBufferMaxSize        = -9992
```

Requires libasound.so.2 on Linux to be installed.
Blog Entries

- MBS Xojo Plugins, version 21.2pr5
- MBS Xojo / Real Studio Plugins, version 16.3pr4

134.20.2 Methods

134.20.3 CountDevices as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the devices.
Example:

```
Var pa as new PortMidiMBS

Var u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
Var d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

Notes: Returns 0 on any error.

134.20.4 DefaultInputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the default device ID or pmNoDevice (-1) if there are no devices.
Notes: On the PC, the user can specify a default device by setting an environment variable. For example, to use device #1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".
To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

134.20.5 DefaultOutputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the default device ID or pmNoDevice (-1) if there are no devices.
Notes: On the PC, the user can specify a default device by setting an environment variable. For example, to use device #1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".
To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

134.20.6 DeviceInfo(DeviceID as Integer) as PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns information about a certain device.
Example:

```
Var pa as new PortMidiMBS

Var u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
Var d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

Notes: Returns nil on any error.

134.20.7 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error text for the given error code.
Notes: Returns "" on any error.

134.20.8 Initialize as Integer

MBS Audio Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the PortMidi functions.
Notes: You call this manually to trigger initialization now.
Or you just let the plugin do it automatically when you call one of the portmidi functions.
Returns the error code. (0 = okay)

134.20.9 ReInitialize as Integer

MBS Audio Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shuts down PortMidi and initializes it again.
Notes: As PortMidi does not recognize the attachment of new MIdi devices, you can only reinitialize.

Returns a PortMidi error code.

134.20.10 Constants

Constants

Constant	Value	Description
pmBadData	-9994	One of the PortMidi errors. illegal midi data, e.g. missing EOX
pmBadPtr	-9995	One of the PortMidi errors.
pmBufferMaxSize	-9992	One of the PortMidi errors. buffer is already as large as it can be.
pmBufferOverflow	-9996	One of the PortMidi errors.
pmBufferTooSmall	-9997	One of the PortMidi errors.
pmHostError	-10000	One of the PortMidi errors.
pmInsufficientMemory	-9998	One of the PortMidi errors.
pmInternalError	-9993	One of the PortMidi errors.
pmInvalidDeviceId	-9999	One of the PortMidi errors. out of range or output device when input is requested or input device when output is requested or device is already opened.
pmNoDevice	-1	One of the PortMidi errors.
pmNoError	0	One of the PortMidi errors.

134.21 class PortMidiStreamMBS

134.21.1 class PortMidiStreamMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo class to represent a PortMidi stream.
Notes: A single PortMidiStream is a descriptor for an open MIDI device.

See also macOS specific classes AVMIDIPlayerMBS, MidiPlaybackMBS and MidiClientMBS.

Xojo Developer Magazine

- 15.2, page 10: News

134.21.2 Methods

134.21.3 Abort as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminates outgoing messages immediately.
Notes: The caller should immediately close the output port; this call may result in transmission of a partial midi message. There is no abort for Midi input because the user can simply ignore messages in the buffer and close an input device at any time.
Returns an error code.

134.21.4 Close

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

134.21.5 currentTimeStamp as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current time stamp.

134.21.6 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message for this error number.

134.21.7 HostError as string

MBS Audio Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries host error string.
Example:

```
Var s as new PortMidiStreamMBS
// do something that causes an error
MsgBox "HostError: "+s.HostError
```

Notes: Clears error.

134.21.8 OpenInput(DeviceID as Integer, Buffersize as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a device for reading.
Notes: DeviceID is the id of the device used for input.

For input, the buffersize specifies the number of input events to be buffered waiting to be read using Pm_Read().
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

return value:
Upon success OpenInput returns PmNoError.
If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

134.21.9 OpenOutput(DeviceID as Integer, Buffersize as Integer, Latency as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a device for writing.
Notes: DeviceID is the id of the device used for input.

For output, buffersize specifies the number of output events to be buffered waiting for output.
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

Latency is the delay in milliseconds applied to timestamps to determine when the output should actually occur. (If latency is <0, 0 is assumed.)
If latency is zero, timestamps are ignored and all output is delivered immediately. If latency is greater than zero, output is delayed until the message timestamp plus the latency. (NOTE: time is measured relative to the time source indicated by time_proc. Timestamps are absolute, not relative delays or offsets.) In some cases, PortMidi can obtain better timing than your application by passing timestamps along to the device driver or hardware. Latency may also help you to synchronize midi data to audio data by matching midi latency to the audio buffer latency.
Due to the may timers work on Windows, the latency is limited there.

return value:
Upon success OpenInput returns PmNoError.
If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

134.21.10 Poll as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether input is available,
Notes: Returns 1 on success and 0 on failure.

134.21.11 Read(byref data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads midi data.
Notes: Returns the number of read items.
(0 for error and 1 for success)

Read retrieves midi data into a buffer, and returns the number of events read. Result is a non-negative number unless an error occurs, in which case a PmError value will be returned.

Buffer Overflow

The problem: if an input overflow occurs, data will be lost, ultimately because there is no flow control all the way back to the data source. When data is lost, the receiver should be notified and some sort of graceful recovery should take place, e.g. you shouldn't resume receiving in the middle of a long sysex message.

With a lock-free fifo, which is pretty much what we're stuck with to enable portability to the Mac, it's tricky for the producer and consumer to synchronously reset the buffer and resume normal operation.

Solution: the buffer managed by PortMidi will be flushed when an overflow occurs. The consumer (Read()) gets an error message (pmBufferOverflow) and ordinary processing resumes as soon as a new message arrives. The remainder of a partial sysex message is not considered to be a "new message" and will be flushed as well.

134.21.12 SetChannelMask(mask as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filters incoming messages based on channel.
Example:

```
Var s as PortMidiStreamMBS // your midi stream

call s.SetChannelMask(1+4) // Channel 1 and 3.
```

Notes: The mask is a 16-bit bitfield corresponding to appropriate channels
All channels are allowed by default.
Returns an error code.

134.21.13 SetFilter(filters as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: SetFilter() sets filters on an open input stream to drop selected input types.
Notes: By default, only active sensing messages are filtered.
To prohibit, say, active sensing and sysex messages, call SetFilter(FilterActive + FilterSysEx);

Filtering is useful when midi routing or midi thru functionality is being provided by the user application.
For example, you may want to exclude timing messages (clock, MTC, start/stop/continue), while allowing

note-related messages to pass.
Or you may be using a sequencer or drum-machine for MIDI clock information but want to exclude any notes it may play.

Returns an error code.

134.21.14 Write(data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes midi data from a buffer.
Notes: This may contain:
- short messages or
- sysex messages that are converted into a sequence of PortMidiStreamMBS objects, e.g. sending data from a file or forwarding them from midi input.

Use WriteSysEx() to write a sysex message stored as a contiguous array of bytes.

Sysex data may contain embedded real-time messages.
Returns an error code.

134.21.15 WriteShort(When as Integer, message as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped non-system-exclusive midi message.
Notes: Messages are delivered in order as received, and timestamps must be non-decreasing. (But timestamps are ignored if the stream was opened with latency = 0.)

134.21.16 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped system-exclusive midi message.
Notes: The data is taken from the memoryblock at the given offset.
The message must be 0 terminated.

This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 134.21.17 WriteSysEx(When as Integer, message as string) as Integer 18005

134.21.17 WriteSysEx(When as Integer, message as string) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped system-exclusive midi message.
Notes: This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 134.21.16 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer 18004

134.21.18 Properties

134.21.19 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The channel mask used.
Notes: Use SetChannelMask to change it.
(Read only property)

134.21.20 DeviceID as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The device ID.
Notes: The ID of the device the stream is connected to.
(Read only property)

134.21.21 DeviceName as String

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The device name.
Notes: The name of the device the stream is connected to.
(Read only property)

134.21.22 Filters as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The filters setting.
Notes: Use SetFilters to change it.
(Read only property)

134.21.23 Constants

Constants

Constant	Value	Description
FilterActive	&h4000	One of the PortMidi filter constants. filter active sensing messages (&hFE)
FilterAftertouch	&h6000000	One of the PortMidi filter constants. filter both channel and poly aftertouch
FilterChannelAftertouch	&h20000000	One of the PortMidi filter constants. filter channel aftertouch (most midi controllers use this) (&hD0-&hDF)
FilterClock	&h1D00	One of the PortMidi filter constants. filter clock messages (CLOCK &hF8, START &hFA, STOP &hFC, and CONTINUE &hFB)
FilterControl	&h8000000	One of the PortMidi filter constants. Control Changes (CC's) (&hB0-&hBF)
FilterFD	&h2000	One of the PortMidi filter constants. filter undefined FD messages
FilterMTC	2	One of the PortMidi filter constants. MIDI Time Code (&hF1)
FilterNote	&h3000000	One of the PortMidi filter constants. filter note-on and note-off (&h90-&h9F and &h80-&h8F
FilterPitchBend	&h40000000	One of the PortMidi filter constants. Pitch Bender (&hE0-&hEF)
FilterPlay	&h400	One of the PortMidi filter constants. filter play messages (start &hFA, stop &hFC, continue &hFB)
FilterPolyAftertouch	&h4000000	One of the PortMidi filter constants. per-note aftertouch (&hA0-&hAF)
FilterProgram	&h10000000	One of the PortMidi filter constants. Program changes (&hC0-&hCF)
FilterRealTime	&hFF01	One of the PortMidi filter constants. filter all real-time messages
FilterReset	&h8000	One of the PortMidi filter constants. filter reset messages (&hFF)
FilterSongPosition	4	One of the PortMidi filter constants. Song Position (&hF2)
FilterSongSelect	8	One of the PortMidi filter constants. Song Select (&hF3)
FilterSysEx	1	One of the PortMidi filter constants. filter system exclusive messages (&hF0)
FilterSystemCommon	&h4E	One of the PortMidi filter constants. All System Common messages (mtc, song position, song select, tune request)
FilterTick	&h200	One of the PortMidi filter constants. filter tick messages (&hF9)
FilterTune	&h40	One of the PortMidi filter constants. Tuning request (&hF6)
FilterUndefined	&h2000	One of the PortMidi filter constants. filter undefined real-time messages

134.22 class WindowsMidiInputInfoMBS

134.22.1 class WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for information about a certain Midi Device.

134.22.2 Properties

134.22.3 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Version number of the device driver for the MIDI input device.
Notes: The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

134.22.4 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Some flags.
Notes: Currently unused in Windows XP.
(Read only property)

134.22.5 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Manufacturer identifier of the device driver for the MIDI input device.
Notes: (Read only property)

134.22.6 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product name.
Notes: Currently an ANSI string.

(Read only property)

134.22.7 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product identifier of the MIDI input device.
Notes: (Read only property)

134.23 class WindowsMidiInputMBS

134.23.1 class WindowsMidiInputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class to represent an open Midi Input device in Xojo.
Notes: Subclass of the WindowsMidiMBS class.
Blog Entries

- MBS Xojo Plugins, version 25.6pr7
- MBS Xojo Plugins, version 18.5pr2
- MBS Real Studio Plugins, version 13.1pr9

134.23.2 Methods

134.23.3 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the device.
Notes: First stops recording, second resets midi output device and third Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

134.23.4 Idle

MBS Audio Plugin, Plugin Version: 9.7, Platform: Windows, Targets: All.

Function: Processes events.
Notes: Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

same as WindowsMidiMBS.Idle

134.23.5 InputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Translates an error number into a human readable text.
Notes: Returns "" on unknown errros.

String returned has Windows ANSI text encoding.

134.23.6 Open(DeviceID as Integer, BufferSize as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens a Midi device.
Notes: DeviceID is from 0 to NumberOfMidiInputDevices-1.
Buffersize is the maximum size to allocate for each SysEx receive buffer.
Minimum is 256 bytes. Windows does not handle SysEx messages bigger than 64K.
Lasterror is set.
On success the handle property is non zero.

134.23.7 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Resets the device.
Notes: Lasterror is set.

134.23.8 Start

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Starts listening for events.
Notes: Lasterror is set.
Please do not call from Open event as that's too early.

134.23.9 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Stops recording.
Notes: Lasterror is set.
You should not need this and just call close or let the object die.

134.23.10 Events

134.23.11 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: An event called whenever the output device is closed.
Notes: Called when you call close.

134.23.12 DeviceData(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A simple Midi message has been received.
Notes: Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

134.23.13 DeviceError(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A bad Midi message has been received.
Notes: Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

134.23.14 DeviceLongData(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: SysEx data was received.
Notes: If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

134.23.15 DeviceLongError(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Bad SysEx data was received.
Notes: If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

134.23.16 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: An event called whenever the output device is opened.
Notes: Called when you call open.
Please do not call Start from Open event as that's too early.

134.24 class WindowsMidiMBS

134.24.1 class WindowsMidiMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Windows Midi base class.
Example:

```
Var midi as WindowsMidiMBS // your midi object

Sub Open()
Var i as WindowsMidiInputInfoMBS
Var o as WindowsMidiOutputInfoMBS
Var c,n as Integer

midi=new WindowsMidiMBS

c=midi.NumberOfMidiInputDevices-1

for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)

next

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next

End Sub
```

Notes: See also PortMidiMBS class for cross platform Midi handling.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

134.24.2 Methods

134.24.3 Connect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Connect function connects a MIDI input device to a MIDI thru or output device, or connects a MIDI thru device to a MIDI output device.
Notes: self must be a MIDI input device or a MIDI thru device.
output must be the MIDI output or thru device.

After calling this function, the MIDI input device receives event data in an DeviceData event whenever a message with the same event data is sent to the output device driver.

A thru driver is a special form of MIDI output driver. The system will allow only one MIDI output device to be connected to a MIDI input device, but multiple MIDI output devices can be connected to a MIDI thru device. Whenever the given MIDI input device receives event data in an DeviceData event, a message with the same event data is sent to the given output device driver (or through the thru driver to the output drivers).

Lasterror is set.

134.24.4 DataLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of data blocks lost.
Notes: The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

134.24.5 Disconnect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Disconnect function disconnects a MIDI input device from a MIDI thru or output device, or disconnects a MIDI thru device from a MIDI output device.
Notes: self must be a MIDI input device or a MIDI thru device.
output must be the MIDI output device to be disconnected.

MIDI input, output, and thru devices can be connected by using the Connect function. Thereafter, whenever the MIDI input device receives event data in an DeviceData event, a message with the same event data is

sent to the output device driver (or through the thru driver to the output drivers).

Lasterror is set.

134.24.6 EventsLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of events lost.
Notes: The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

134.24.7 Idle

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Processes events.
Notes: Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

134.24.8 InputDevice(index as Integer) as WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The InputDevice function queries a specified MIDI input device to determine its capabilities.
Example:

```
Var midi as WindowsMidiMBS // your midi object
Var n,c as Integer
Var i as WindowsMidiInputInfoMBS

c=midi.NumberOfMidiInputDevices-1

for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)
```

next

Notes: Index is from 0 to NumberOfMidiInputDevices-1.

134.24.9 NumberOfMidiInputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Returns the number of MIDI input devices present in the system.
Example:

```
Var midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiInputDevices)
```

Notes: A return value of zero means that there are no devices.

134.24.10 NumberOfMidiOutputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Returns the number of MIDI output devices present in the system.
Example:

```
Var midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiOutputDevices)
```

Notes: A return value of zero means that there are no devices.

134.24.11 OutputDevice(index as Integer) as WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The OutputDevice function queries a specified MIDI output device to determine its capabilities.
Example:

```
Var midi as WindowsMidiMBS // your midi object
Var c,n as Integer
Var o as WindowsMidiOutputInfoMBS

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
```

```
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next
```

Notes: Index is from 0 to NumberOfMidiOutputDevices-1.

134.24.12 Properties

134.24.13 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The handle for this Midi input or output port.
Notes: Depending on which Xojo class this is, value is a HMIDI, HMIDIIN or HMIDIOUT handle.
(Read only property)

134.24.14 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The last error code reported.
Notes: 0 is no error and -1 is parameter error from the plugin.
(Read only property)

134.25 class WindowsMidiOutputInfoMBS

134.25.1 class WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for information about a certain Midi Device.

134.25.2 Properties

134.25.3 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Channels that an internal synthesizer device responds to, where the least significant bit refers to channel 0 and the most significant bit to channel 15.
Notes: Port devices that transmit on all channels set this member to &hFFFF.
(Read only property)

134.25.4 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Version number of the device driver for the MIDI input device.
Notes: The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

134.25.5 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Optional functionality supported by the device.
Notes: It can be one or more of the following:

MIDICAPS_CACHE	= 4	Supports patch caching.
MIDICAPS_LRVOLUME	= 2	Supports separate left and right volume control.
MIDICAPS_STREAM	= 8	Provides direct support for the midiStreamOut function.
MIDICAPS_VOLUME	= 1	Supports volume control.

If a device supports volume changes, the MIDICAPS_VOLUME flag will be set for the dwSupport member.

If a device supports separate volume changes on the left and right channels, both the MIDICAPS_VOLUME and the MIDICAPS_LRVOLUME flags will be set for this member.
(Read only property)

134.25.6 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Manufacturer identifier of the device driver for the MIDI input device.
Notes: (Read only property)

134.25.7 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product name.
Notes: Currently an ANSI string.
(Read only property)

134.25.8 Notes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Maximum number of simultaneous notes that can be played by an internal synthesizer device.
Notes: If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

134.25.9 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product identifier of the MIDI input device.
Notes: (Read only property)

134.25.10 Technology as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Type of the MIDI output device.
Notes: This value can be one of the following:

```
MOD_MIDIPORT    = 1  // output port
MOD_SYNTH       = 2  // generic internal synth
MOD_SQSYNTH     = 3  // square wave internal synth
MOD_FMSYNTH     = 4  // FM internal synth
MOD_MAPPER      = 5  // MIDI mapper
MOD_WAVETABLE   = 6  // hardware wavetable synth
MOD_SWSYNTH     = 7  // software synth
```

(Read only property)

134.25.11 Voices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of voices supported by an internal synthesizer device.
Notes: If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

134.25.12 Volume as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Whether volume control is available.
Notes: True if yes and False if no.
(Read only property)

134.25.13 VolumeStereo as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Whether the device can control volume on two independend channels.
Notes: True if stereo, False if mono.
(Read only property)

134.26 class WindowsMidiOutputMBS

134.26.1 class WindowsMidiOutputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class to represent a Midi Output device.
Notes: Subclass of the WindowsMidiMBS class.
Blog Entries

- MBS Xojo Plugins, version 25.6pr7
- MBS Xojo Plugins, version 18.5pr2

134.26.2 Methods

134.26.3 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the output device.
Notes: Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

134.26.4 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens the midi device with the given index.
Notes: DeviceID is from 0 to NumberOfMidiOutputDevices-1.
Lasterror is set.

134.26.5 OpenDefault

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens the Midi mapper which opens the device the user selected as the default midi device.
Notes: If only one midi output device is available this one is opened.
On success the handle property is not zero.
Lasterror is set.

134.26.6 OutputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Translates an error number into a human readable text.
Notes: Returns "" on unknown errros.
String returned has Windows ANSI text encoding.

134.26.7 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Resets the output device.
Notes: Lasterror is set.

134.26.8 SendData(data as memoryblock)

MBS Audio Plugin, Plugin Version: 12.5, Platform: Windows, Targets: All.

Function: Sends sysex data.
Notes: Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
See also:

- 134.26.9 SendData(data as memoryblock, size as Integer) 18023
- 134.26.10 SendData(data as string) 18024

134.26.9 SendData(data as memoryblock, size as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends sysex data.
Example:

```
Var m as MemoryBlock
Var o as WindowsMidiOutputMBS // your midi output

m=NewMemoryBlock(8)

m.Byte(0)=&hF0
m.Byte(1)=&h7F
```

```
m.Byte(2)=&h7F
m.Byte(3)=&h04
m.Byte(4)=&h01
m.Byte(5)=&h7F
m.Byte(6)=&h7F
m.Byte(7)=&hF7

o.SendData m
```

Notes: Lasterror is set.
size is the size of the memoryblock to use. A wrong value will crash the application.

See also:

- 134.26.8 SendData(data as memoryblock) 18023
- 134.26.10 SendData(data as string) 18024

134.26.10 SendData(data as string)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends sysex data.
Notes: Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
The plugin prepares MIDIHDR structure and uses your data there.
See also:

- 134.26.8 SendData(data as memoryblock) 18023
- 134.26.9 SendData(data as memoryblock, size as Integer) 18023

134.26.11 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
Var o as WindowsMidiOutputMBS // your windows midi output
// &h90 = Note down
// &h43 = the note number
```

```
// &h40 = the velocity
o.SendMessage &h404390
```

Notes: The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798481(v=vs.85).aspx
See also:

- 134.26.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 18025

134.26.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
Var o as WindowsMidiOutputMBS // your windows midi output
// &h90 = Note down
// &h3C = the note number
// &h40 = the velocity
o.SendMessage &h90, &h3C, &h40
```

Notes: Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798481(v=vs.85).aspx
See also:

- 134.26.11 SendMessage(message as Integer) 18024

134.26.13 Properties

134.26.14 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The volume to be used for this device.
Example:

```
Var m as WindowsMidiOutputMBS // your midi output

m.Volume=0 // all silent
m.Volume=&hFFFF0000 // right only
m.Volume=&h0000FFFF // left only or max volume for mono device
m.Volume=&h7FFF7FFF // half volume for both channels
```

Notes: Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of &hFFFF represents full volume, and a value of &h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
(Read and Write computed property)

134.26.15 Events

134.26.16 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: An event called when the device is closed.
Notes: Should be called when you call close or the object dies.

134.26.17 DeviceDataSent

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: An event called whenever SysEx data was sent.

134.26.18 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: An event called whenever the device was opened successfully.

134.26.19 DevicePositionCallback

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Called when a MEVT_F_CALLBACK Midi event is about to be executed.
Notes: A way to track progress in playback.

134.27 class WindowsMidiStreamMBS

134.27.1 class WindowsMidiStreamMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for a Windows Midi Stream.

134.27.2 Methods

134.27.3 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the Midi stream.

134.27.4 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens a MIDI stream for output.
Notes: By default, the device is opened in paused mode.
Lasterror is set.
DeviceID: The device is opened on behalf of the stream and closed again when the stream is closed.

134.27.5 Pause

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Pauses playback of a specified MIDI stream.
Notes: Lasterror is set.

134.27.6 PositionBytes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in bytes.
Notes: Lasterror is set.

134.27.7 PositionMS as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in milliseconds.
Notes: Lasterror is set.

134.27.8 PositionSamples as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in samples.
Notes: Lasterror is set.

134.27.9 PositionTicks as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in ticks.
Notes: Lasterror is set.

134.27.10 Restart

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Restart function restarts a paused MIDI stream.
Notes: Lasterror is set.

134.27.11 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
Var o as WindowsMidiStreamMBS // your midi stream

// &h90 = Note down
// &h43 = the note number
// &h40 = the velocity
o.SendMessage &h404390
```

Notes: The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.
See also:

- 134.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 18030

134.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
Var o as WindowsMidiStreamMBS // your midi stream

// &h90 = Note down
// &h3C = the note number
// &h40 = the velocity
o.SendMessage &h90, &h3C, &h40
```

Notes: Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.
See also:

- 134.27.11 SendMessage(message as Integer) 18029

134.27.13 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Stop function turns off all notes on all MIDI channels for the specified MIDI output device.
Notes: Lasterror is set.

134.27.14 Properties

134.27.15 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The handle for the midi stream.
Notes: Type is HMIDISTRM.

(Read only property)

134.27.16 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The last error code reported by one of the class functions.
Notes: (Read only property)

134.27.17 Tempo as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Tempo of the stream, in microseconds per quarter note.
Notes: The tempo is honored only if the time division for the stream is specified in quarter note format.
Lasterror is set.
(Read and Write computed property)

134.27.18 TimeDiv as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Time division for this stream, in the format specified in the Standard MIDI Files 1.0 specification.
Notes: The low 16 bits of this integer value contain the time division.
Lasterror is set.
(Read and Write computed property)

134.27.19 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The volume to be used for this stream.
Example:

```
Var m as WindowsMidiStreamMBS // your midi stream

m.Volume=0 // all silent
m.Volume=&hFFFF0000 // right only
m.Volume=&h0000FFFF // left only or max volume for mono device
m.Volume=&h7FFF7FFF // half volume for both channels
```

Notes: Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of &hFFFF represents full volume, and a value of &h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
Lasterror is set.
(Read and Write computed property)

Chapter 135

Mobile Ads

135.1 class GADAdNetworkResponseInfoMBS

135.1.1 class GADAdNetworkResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Response metadata for an individual ad network in an ad response.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 22.5pr3

135.1.2 Methods

135.1.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.1.4 Properties

135.1.5 adNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A class name that identifies the ad network.
Notes: (Read only property)

135.1.6 adSourceID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad source ID associated with this ad network response.
Notes: Empty if the ad server does not populate this field.
(Read only property)

135.1.7 adSourceInstanceID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad source instance ID associated with this ad network response. not populate this field.
Notes: Empty if the ad server does
(Read only property)

135.1.8 adSourceInstanceName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad source instance name associated with this ad network response.
Notes: Empty if the ad server does not populate this field.
(Read only property)

135.1.9 adSourceName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad source name associated with this ad network response.
Notes: Empty if the ad server does not populate this field.
(Read only property)

135.1.10 adUnitMapping as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Network configuration set on the AdMob UI.
Notes: (Read only property)

135.1.11 dictionaryRepresentation as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: JSON-safe dictionary representation of the ad network response info.
Notes: (Read only property)

135.1.12 error as NSErrorMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Error associated with the request to the network.
Notes: Nil if the network successfully loaded an ad or if the network was not attempted.
(Read only property)

135.1.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.1.14 latency as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Amount of time the ad network spent loading an ad. 0 if the network was not attempted.
Notes: (Read only property)

135.2 class GADAdRewardMBS

135.2.1 class GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Ad reward information.
Blog Entries

- MBS Xojo Plugins, version 22.5pr3

135.2.2 Methods

135.2.3 Constructor(rewardType as string, rewardAmount as String)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns an initialized GADAdReward with the provided reward type and reward amount.

135.2.4 Properties

135.2.5 amount as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Amount rewarded to the user as string.
Notes: (Read only property)

135.2.6 amountValue as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Amount rewarded to the user as double.
Notes: (Read only property)

135.2.7 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.2.8 type as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Type of the reward.
Notes: (Read only property)

135.3 class GADAdSizeMBS

135.3.1 class GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The class for an ad size.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 22.5

Xojo Developer Magazine

- 21.1, page 33: News from MBS Xojo Plugins, What's up with MonkeyBread Software by Stefanie Juchmes

135.3.2 Methods

135.3.3 Banner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: iPhone and iPod Touch ad size.
Notes: Typically 320x50.

135.3.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.3.5 Fluid as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: An ad size that spans the full width of its container, with a height dynamically determined by the ad.

135.3.6 FullBanner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Full Banner size for the iPad (especially in a PopOver or in sheet).
Notes: Typically 468x60.

135.3.7 Invalid as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Invalid ad size marker.

135.3.8 LargeBanner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Taller version of GADAdSizeBanner.
Notes: Typically 320x100.

135.3.9 Leaderboard as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Leaderboard size for the iPad.
Notes: Typically 728x90.

135.3.10 MediumRectangle as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Medium Rectangle size for the iPad (especially in a UISplitView's left pane).
Notes: Typically 300x250.

135.3.11 Skyscraper as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Skyscraper size for the iPad.
Notes: Mediation only. AdMob/Google does not offer this size. Typically 120x600.

135.3.12 Properties

135.3.13 Flags as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The flags field.
Notes: (Read only property)

135.3.14 Height as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The height value.
Notes: (Read only property)

135.3.15 IsFluid as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns true if this is a fluid ad size.
Notes: (Read only property)

135.3.16 IsValid as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns true if this is a valid size.
Notes: (Read only property)

135.3.17 StringValue as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns a string describing the provided AdSize.
Notes: (Read only property)

135.3.18 Width as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The width.
Notes: (Read only property)

135.4 class GADAdValueMBS

135.4.1 class GADAdValueMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The monetary value earned from an ad.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 22.5pr3

135.4.2 Methods

135.4.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.4.4 Properties

135.4.5 amount as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad's value as string.
Notes: (Read only property)

135.4.6 amountValue as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad's value as double.
Notes: (Read only property)

135.4.7 currencyCode as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The value's currency code.
Notes: (Read only property)

135.4.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.4.9 precision as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The precision of the reported ad value.
Notes: (Read only property)

135.4.10 Constants

Precisions

Constant	Value	Description
PrecisionEstimated	1	An ad value estimated from aggregated data.
PrecisionPrecise	3	The precise value paid for this ad.
PrecisionPublisherProvided	2	A publisher-provided ad value, such as manual CPMs in a mediation group.
PrecisionUnknown	0	An ad value with unknown precision.

135.5 class GADAppOpenAdMBS

135.5.1 class GADAppOpenAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: An app open ad.
Notes: Used to monetize app load screens.

See https://developers.google.com/admob/ios/app-open to get started.
Blog Entries

- MBS Xojo Plugins, version 23.6pr5
- Google Admob for Xojo

135.5.2 Methods

135.5.3 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns whether the interstitial ad can be presented from the provided root view controller.
Notes: Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

135.5.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.
Notes: Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

135.5.5 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.5.6 loadWithAdUnitID(adUnitID as String, orientation as Integer, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Loads an interstitial ad.
Notes: Deprecated in favor of the other variant without orientation.

adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.
See also:

- 135.5.7 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil) 18045

135.5.7 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Loads an interstitial ad.
Notes: adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.
See also:

- 135.5.6 loadWithAdUnitID(adUnitID as String, orientation as Integer, request as GADRequestMBS = nil) 18045

135.5.8 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Presents the interstitial ad.
Notes: Must be called on the main thread.

135.5.9 Properties

135.5.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.5.11 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about the ad response that returned the current ad or an error.
Notes: Nil until the first ad request succeeds or fails.
(Read only property)

135.5.12 Events

135.5.13 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad dismissed full screen content.

135.5.14 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad failed to present full screen content.

135.5.15 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a click has been recorded for the ad.

135.5.16 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when that an impression has been recorded for the ad.

135.5.17 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when Load finished.
Notes: Next you can call Present when needed.

135.5.18 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Handles ad events that are estimated to have earned money.

135.5.19 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will dismiss full screen content.

135.5.20 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will present full screen content.

135.5.21 Constants

Device Orientation Constants

Constant	Value	Description
DeviceOrientationFaceDown	6	The device is held parallel to the ground with the screen facing downwa
DeviceOrientationFaceUp	5	The device is held parallel to the ground with the screen facing upwards
DeviceOrientationLandscapeLeft	3	The device is in landscape mode, with the device held upright and the button on the right side.
DeviceOrientationLandscapeRight	4	The device is in landscape mode, with the device held upright and the button on the left side.
DeviceOrientationPortrait	1	The device is in portrait mode, with the device held upright and the button at the bottom.
DeviceOrientationPortraitUpsideDown	2	The device is in portrait mode but upside down, with the device held u and the home button at the top.
DeviceOrientationUnknown	0	The orientation is currently not known.

135.6 class GADBannerViewMBS

135.6.1 class GADBannerViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A view that displays banner ads.
Notes: See https://developers.google.com/admob/ios/banner to get started.
Blog Entries

- News from the MBS Xojo Plugins Version 22.5
- Google Admob for Xojo

Xojo Developer Magazine

- 21.1, page 33: News from MBS Xojo Plugins, What's up with MonkeyBread Software by Stefanie Juchmes

135.6.2 Methods

135.6.3 AddToControl(Control as MobileControl)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Adds the control to the existing mobile control as children.

135.6.4 Constructor(AdSize as GADAdSizeMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Initializes and returns a banner view with the specified ad size placed at its superview's origin.

135.6.5 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.6.6 loadRequest(request as GADRequestMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Requests an ad. The request object supplies targeting information.

135.6.7 setValidAdSizes(sizes() as GADAdSizeMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Sets array of GADAdSizeMBS objects, specifying all valid sizes that are appropriate for this slot.

135.6.8 validAdSizes as GADAdSizeMBS()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Optional array of GADAdSizeMBS objects, specifying all valid sizes that are appropriate for this slot.

135.6.9 Properties

135.6.10 adSize as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Required to set this banner view to a proper size.
Notes: If not using mediation, then changing the adSize after an ad has been shown will cause a new request (for an ad of the new size) to be sent. If using mediation, then a new request may not be sent.
(Read and Write property)

135.6.11 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad unit ID.
Notes: Required value created on the Ad Manager website. Create a new ad unit for every unique placement of an ad in your application. Set this to the ID assigned for this placement. Ad units are important for targeting and statistics.

Example Ad Manager ad unit ID: "/6499/example/banner"
(Read and Write property)

135.6.12 autoloadEnabled as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether autoloading of ads in the receiver is enabled.
Notes: If enabled, you do not need to call the loadRequest method to load ads.
(Read and Write property)

135.6.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.6.14 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about the ad response that returned the current ad or an error.
Notes: Nil until the first ad request succeeds or fails.
(Read only property)

135.6.15 Events

135.6.16 DidDismissScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the full screen view has been dismissed.
Notes: You should restart anything paused while handling WillPresentScreen.

135.6.17 DidFailToReceiveAdWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called whenan ad request failed.
Notes: The failure is normally due to network connectivity or ad availability (for example, no fill).

135.6.18 DidReceiveAd

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when an ad request successfully received an ad.
Notes: You may want to add the banner view to the view hierarchy if it hasn't been added yet.

135.6.19 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a click has been recorded for the ad.

135.6.20 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when an impression has been recorded for an ad.

135.6.21 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Handles ad events that are estimated to have earned money.

135.6.22 WillDismissScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the full screen view will be dismissed.

135.6.23 WillPresentScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a full screen view will be presented in response to the user clicking on an ad.
Notes: You may want to pause animations and time sensitive interactions.

135.7 class GADInterstitialAdMBS

135.7.1 class GADInterstitialAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: An interstitial ad.
Notes: This is a full-screen advertisement shown at natural transition points in your application such as between game levels or news stories.

See https://developers.google.com/admob/ios/interstitial to get started.
Blog Entries

- Add Google Ads to your Xojo app
- Google Admob for Xojo

135.7.2 Methods

135.7.3 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns whether the interstitial ad can be presented from the provided root view controller.
Notes: Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

135.7.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.
Notes: Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

135.7.5 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.7.6 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Loads an interstitial ad.
Notes: adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

135.7.7 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Presents the interstitial ad.
Notes: Must be called on the main thread.

135.7.8 Properties

135.7.9 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad unit ID.
Notes: (Read only property)

135.7.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.7.11 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about the ad response that returned the current ad or an error.
Notes: Nil until the first ad request succeeds or fails.

(Read only property)

135.7.12 Events

135.7.13 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad dismissed full screen content.

135.7.14 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad failed to present full screen content.

135.7.15 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a click has been recorded for the ad.

135.7.16 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when that an impression has been recorded for the ad.

135.7.17 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when Load finished.
Notes: Next you can call Present when needed.

135.7.18 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Handles ad events that are estimated to have earned money.

135.7.19 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will dismiss full screen content.

135.7.20 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will present full screen content.

135.8 class GADMobileAdsMBS

135.8.1 class GADMobileAdsMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Google Mobile Ads SDK settings.
Notes: You need to load framework first, before using this class.
Blog Entries

- Add Google Ads to your Xojo app
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5

135.8.2 Methods

135.8.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.

135.8.4 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.8.5 disableMediationInitialization

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Disables mediation adapter initialization during initialization of the GMA SDK.
Notes: Calling this method may negatively impact your ad performance and should only be called if you will not use GMA SDK controlled mediation during this app session. This method must be called before initializing the GMA SDK or loading ads and has no effect once the SDK has been initialized.

135.8.6 disableSDKCrashReporting

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Disables automated SDK crash reporting.
Notes: If not called, the SDK records the original exception handler if available and registers a new exception handler. The new exception handler only reports SDK related exceptions and calls the recorded original exception handler.

135.8.7 registerWebView(WKWebViewPtr as Ptr)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Registers a web view with the Google Mobile Ads SDK to improve in-app ad monetization of ads within this web view.
Notes: Please pass handle of HTMLViewer controls or WKWebViewMBS.
If needed, cast from Integer to Ptr.

135.8.8 requestTrackingAuthorization

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The request for user authorization to access app-related data.
Notes: The requestTrackingAuthorization: is a one-time request to authorize or deny access to app-related data that can be used for tracking the user or the device. The system remembers the user,Äôs choice and doesn,Äôt prompt again unless a user uninstalls and then reinstalls the app on the device.

Calls to the API only prompt when the application state is UIApplicationStateActive. The authorization prompt doesn,Äôt display if another permission request is pending user confirmation. Concurrent requests aren,Äôt preserved by iOS, and calls to the API through an app extension don,Äôt prompt. Check the trackingAuthorizationStatus for a status of TrackingManagerAuthorizationStatusNotDetermined to determine if you need to make an additional call.

135.8.9 sharedInstance as GADMobileAdsMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns the shared GADMobileAds instance.

135.8.10 start

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Starts the Google Mobile Ads SDK.
Notes: Call this method as early as possible to reduce latency on the session's first ad request. Calls start-

Completed event when the GMA SDK and all mediation networks are fully set up or if set-up times out. The Google Mobile Ads SDK starts on the first ad request if this method is not called.

135.8.11 Properties

135.8.12 applicationMuted as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Indicates whether the application's audio is muted.
Notes: Affects initial mute state for all ads. Use this method only if your application has its own volume controls (e.g., custom music or sound effect muting). Defaults to false.
(Read and Write property)

135.8.13 applicationVolume as Single

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The application's audio volume.
Notes: Affects audio volumes of all ads relative to other audio output.
Valid ad volume values range from 0.0 (silent) to 1.0 (current device volume). Use this method only if your application has its own volume controls (e.g., custom music or sound effect volumes). Defaults to 1.0.
(Read and Write property)

135.8.14 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.8.15 requestConfiguration as GADRequestConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Request configuration that is common to all requests.
Notes: (Read only property)

135.8.16 sdkVersion as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns the version of the SDK.
Notes: (Read only property)

135.8.17 trackingAuthorizationStatus as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The authorization status that is current for the calling application.
Notes: Use the trackingAuthorizationStatus property to check authorization status.
(Read only property)

135.8.18 Events

135.8.19 requestTrackingAuthorizationCompleted(status as integer)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when requestTrackingAuthorization is done.

135.8.20 startCompleted

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called, when start method finishes.

135.8.21 Constants

Tracking Authorization Status

Constant	Value	Description
TrackingManagerAuthorizationStatusAuthorized	3	The value that returns if the user authorizes access to a tracking the user or the device.
TrackingManagerAuthorizationStatusDenied	2	The value that returns if the user denies authorization t data for tracking the user or the device.
TrackingManagerAuthorizationStatusNotDetermined	0	The value that returns when the app can,Äôt determine rization status for access to app-related data for tracking th
TrackingManagerAuthorizationStatusRestricted	1	The value that returns if authorization to access app-relat the user or the device has a restricted status.

135.9 class GADRequestConfigurationMBS

135.9.1 class GADRequestConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Request configuration.
Notes: The settings in this class will apply to all ad requests.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 24.0
- MBS Xojo Plugins, version 23.6pr5

135.9.2 Methods

135.9.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.9.4 GADMaxAdContentRatingGeneral as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Rating for content suitable for general audiences, including families.

135.9.5 GADMaxAdContentRatingMatureAudience as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Rating for content suitable only for mature audiences.

135.9.6 GADMaxAdContentRatingParentalGuidance as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Rating for content suitable for most audiences with parental guidance.

135.9.7 GADMaxAdContentRatingTeen as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Rating for content suitable for teen and older audiences.

135.9.8 GADSimulatorID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Add this constant to the testDevices property's array to receive test ads on the simulator.

135.9.9 setSameAppKeyEnabled(enabled as boolean)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Controls whether the Google Mobile Ads SDK Same App Key is enabled.
Notes: The value set persists across app sessions. The key is enabled by default.

135.9.10 setTestDeviceIdentifiers(testDeviceIdentifiers() as string)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Sets the identifiers corresponding to test devices which will always request test ads.
Notes: The test device identifier for the current device is logged to the console when the first ad request is made.

135.9.11 testDeviceIdentifiers as string()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Identifiers corresponding to test devices which will always request test ads.
Notes: The test device identifier for the current device is logged to the console when the first ad request is made.

135.9.12 Properties

135.9.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.9.14 maxAdContentRating as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The maximum ad content rating. All Google ads will have this content rating or lower.
Notes: (Read and Write property)

135.9.15 publisherPrivacyPersonalizationState as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function:

This property lets you specify the personalization treatment that applies to subsequent ad requests.
Notes:

(Read and Write property)

135.9.16 tagForChildDirectedTreatment as Variant

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The child directed treatment tag.
Notes: This property indicates whether you would like your app to be treated as child-directed for purposes of the Children,Äôs Online Privacy Protection Act (COPPA),
https://www.ftc.gov/business-guidance/privacy-security/childrens-privacy.

If you set this property with true, you are indicating that your app should be treated as child-directed for purposes of the Children,Äôs Online Privacy Protection Act (COPPA).

If you set this property with false, you are indicating that your app should not be treated as child-directed for purposes of the Children,Äôs Online Privacy Protection Act (COPPA).

If you leave or reset this property as nil, ad requests will include no indication of how you would like your app treated with respect to COPPA.

By setting this property, you certify that this notification is accurate and you are authorized to act on behalf of the owner of the app. You understand that abuse of this setting may result in termination of your Google account.
(Read and Write property)

135.9.17 tagForUnderAgeOfConsent as Variant

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The tag for under age consent
Notes: This property indicates whether the user is under the age of consent.
https://developers.google.com/admob/ios/targeting#users_under_the_age_of_consent.

If you set this property with true, a TFUA parameter will be included in all ad requests, and you are indicating that you want ad requests to be handled in a manner suitable for users under the age of consent. This parameter disables personalized advertising, including remarketing, for all ad requests. It also disables requests to third-party ad vendors, such as ad measurement pixels and third-party ad servers.

If you set this property with false, you are indicating that you don't want ad requests to be handled in a manner suitable for users under the age of consent.

If you leave or reset this property as nil, ad requests will include no indication of how you would like your ad requests to be handled in a manner suitable for users under the age of consent.
(Read and Write property)

135.9.18 Constants

Privacy treatment personalization states

Constant	Value	Description
PublisherPrivacyPersonalizationStateDefault	0	Indicates that ad requests should receive the default publisher p ment.
PublisherPrivacyPersonalizationStateDisabled	2	Indicates that ad requests should receive non-personalized publ treatment.
PublisherPrivacyPersonalizationStateEnabled	1	Indicates that ad requests should receive personalized publisher p ment.

135.10 class GADRequestMBS

135.10.1 class GADRequestMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Specifies optional parameters for ad requests.
Blog Entries

- Add Google Ads to your Xojo app

135.10.2 Methods

135.10.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.

135.10.4 request as GADRequestMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns a default request.

135.10.5 Properties

135.10.6 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.10.7 publisherProvidedID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Publisher provided user ID.
Notes: (Read and Write property)

135.10.8 requestAgent as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: String that identifies the ad request's origin.
Notes: Third party libraries that reference the Mobile Ads SDK should set this property to denote the platform from which the ad request originated.
For example, a third party ad network called "CoolAds network" that is mediating requests to the Mobile Ads SDK should set this property as "CoolAds".
(Read and Write property)

135.11 class GADResponseInfoMBS

135.11.1 class GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about a response to an ad request.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 22.5pr3

135.11.2 Methods

135.11.3 adNetworkInfoArray as GADAdNetworkResponseInfoMBS()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Array of metadata for each ad network included in the response.

135.11.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.11.5 GADCustomEventAdNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Ad network class name for custom event ads.

135.11.6 GADErrorUserInfoKeyResponseInfo as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Key into NSError.userInfo mapping to a GADResponseInfo object.
Notes: When ads fail to load, errors returned contain an instance of GADResponseInfoMBS.

135.11.7 GADGoogleAdNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Ad network class name for ads returned from Google's ad network.

135.11.8 Properties

135.11.9 adNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A class name that identifies the ad network that returned the ad. Nil if no ad was returned.
Notes: (Read only property)

135.11.10 dictionaryRepresentation as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: JSON-safe dictionary representation of the response info.
Notes: (Read only property)

135.11.11 extrasDictionary as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Dictionary of extra parameters that may be returned in an ad response.
Notes: (Read only property)

135.11.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.11.13 loadedAdNetworkResponseInfo as GADAdNetworkResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The GADAdNetworkResponseInfo corresponding to the adapter that was used to load the ad.
Notes: Nil if the ad failed to load.
(Read only property)

135.11.14 responseIdentifier as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Unique identifier of the ad response.
Notes: (Read only property)

135.12 class GADRewardedAdMBS

135.12.1 class GADRewardedAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A rewarded ad.
Notes: Rewarded ads are ads that users have the option of interacting with in exchange for in-app rewards.

- MBS Xojo Plugins, version 22.5pr3

135.12.2 Methods

135.12.3 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns whether the ad can be presented from the provided root view controller.
Notes: Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

135.12.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.
Notes: Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

135.12.5 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.12.6 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Loads a reward ad.
Notes: adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

135.12.7 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Presents the interstitial ad.
Notes: Must be called on the main thread.

135.12.8 Properties

135.12.9 adReward as GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The reward earned by the user for interacting with the ad.
Notes: (Read only property)

135.12.10 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad unit ID.
Notes: (Read only property)

135.12.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.12.12 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about the ad response that returned the current ad or an error.
Notes: Nil until the first ad request succeeds or fails.
(Read only property)

135.12.13 Events

135.12.14 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad dismissed full screen content.

135.12.15 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad failed to present full screen content.

135.12.16 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a click has been recorded for the ad.

135.12.17 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when that an impression has been recorded for the ad.

135.12.18 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when Load finished.
Notes: Next you can call Present when needed.

135.12.19 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Handles ad events that are estimated to have earned money.

135.12.20 userDidEarnReward

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event to be executed when the user earns a reward.

135.12.21 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will dismiss full screen content.

135.12.22 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will present full screen content.

135.13 class GADRewardedInterstitialAdMBS

135.13.1 class GADRewardedInterstitialAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: A rewarded interstitial ad.
Notes: Rewarded Interstitial ads are full screen ads that can be presented without user-opt in and allow you to reward the user with in-app items.

135.13.2 Methods

135.13.3 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Returns whether the interstitial ad can be presented from the provided root view controller.
Notes: Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

135.13.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The constructor.
Notes: Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

135.13.5 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.13.6 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Loads a rewarded interstitial ad.
Notes: adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

135.13.7 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Presents the interstitial ad.
Notes: Must be called on the main thread.

135.13.8 Properties

135.13.9 adReward as GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The reward earned by the user for interacting with the ad.
Notes: (Read only property)

135.13.10 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The ad unit ID.
Notes: (Read only property)

135.13.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.13.12 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Information about the ad response that returned the current ad or an error.
Notes: Nil until the first ad request succeeds or fails.
(Read only property)

135.13.13 Events

135.13.14 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad dismissed full screen content.

135.13.15 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad failed to present full screen content.

135.13.16 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when a click has been recorded for the ad.

135.13.17 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when that an impression has been recorded for the ad.

135.13.18 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when Load finished.
Notes: Next you can call Present when needed.

135.13.19 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: Handles ad events that are estimated to have earned money.

135.13.20 userDidEarnReward

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event to be executed when the user earns a reward.

135.13.21 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will dismiss full screen content.

135.13.22 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

Function: The event called when the ad will present full screen content.

135.14 class UIViewControllerMBS

135.14.1 class UIViewControllerMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: An object that manages a view hierarchy for your UIKit app.
Notes: The UIViewController class defines the shared behavior that,Äôs common to all view controllers. You rarely create instances of the UIViewController class directly. Instead, you subclass UIViewController and add the methods and properties needed to manage the view controller,Äôs view hierarchy.

A view controller,Äôs main responsibilities include the following:

- Updating the contents of the views, usually in response to changes to the underlying data
- Responding to user interactions with views
- Resizing views and managing the layout of the overall interface
- Coordinating with other objects —including other view controllers —in your app

A view controller is tightly bound to the views it manages and takes part in handling events in its view hierarchy. Specifically, view controllers are UIResponder objects and are inserted into the responder chain between the view controller,Äôs root view and that view,Äôs superview, which typically belongs to a different view controller. If none of the view controller,Äôs views handle an event, the view controller has the option of handling the event or passing it along to the superview.

View controllers are rarely used in isolation. Instead, you often use multiple view controllers, each of which owns a portion of your app,Äôs user interface. For example, one view controller might display a table of items while a different view controller displays the selected item from that table. Usually, only the views from one view controller are visible at a time. A view controller may present a different view controller to display a new set of views, or it may act as a container for other view controllers,Äô content and animate views however it wants.
Subclass of the NSResponderMBS class.

Xojo Developer Magazine

- 23.6, page 10: News

135.14.2 Methods

135.14.3 beginAppearanceTransition(isAppearing as boolean, animated as boolean)

MBS iOS Plugin, Plugin Version: 25.4, Platform: iOS, Targets: iOS only.

Function: Tells a child controller its appearance is about to change.
Notes: isAppearing: true if the child view controller,Äôs view is about to be added to the view hierarchy, false if it is being removed.
animated: If true, the transition is being animated.

If you are implementing a custom container controller, use this method to tell the child that its views are about to appear or disappear. Do not invoke viewWillAppear, viewWillDisappear, viewDidAppear, or viewDidDisappear directly.

135.14.4 Constructor

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The constructor to create a new empty UIViewController.

135.14.5 dismissViewController(animated as boolean)

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: Dismisses the view controller that was presented modally by the view controller.
Notes: animated: Pass true to animate the transition.

The presenting view controller is responsible for dismissing the view controller it presented. If you call this method on the presented view controller itself, UIKit asks the presenting view controller to handle the dismissal.

If you present several view controllers in succession, thus building a stack of presented view controllers, calling this method on a view controller lower in the stack dismisses its immediate child view controller and all view controllers above that child on the stack. When this happens, only the top-most view is dismissed in an animated fashion; any intermediate view controllers are simply removed from the stack. The top-most view is dismissed using its modal transition style, which may differ from the styles used by other view controllers

lower in the stack.

If you want to retain a reference to the view controller's presented view controller, get the value in the presentedViewController property before calling this method.

Xojo may not be happy, if you mess up their controllers!

135.14.6 endAppearanceTransition

MBS iOS Plugin, Plugin Version: 25.4, Platform: iOS, Targets: iOS only.

Function: Tells a child controller its appearance has changed.
Notes: If you are implementing a custom container controller, use this method to tell the child that the view transition is complete.

135.14.7 loadView

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: Creates the view that the controller manages.
Notes: You should never call this method directly. The view controller calls this method when its view property is requested but is currently nil. This method loads or creates a view and assigns it to the view property.

135.14.8 presentViewController(ViewController as UIViewControllerMBS, animated as Boolean)

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: Presents a view controller modally.
Notes: ViewController: The view controller to display over the current view controller,Äôs content.
animated: Pass true to animate the presentation; otherwise, pass false.

In a horizontally regular environment, the view controller is presented in the style specified by the modalPresentationStyle property. In a horizontally compact environment, the view controller is presented full screen by default. If you associate an adaptive delegate with the presentation controller associated with the object in viewControllerToPresent, you can modify the presentation style dynamically.
The object on which you call this method may not always be the one that handles the presentation. Each presentation style has different rules governing its behavior. For example, a full-screen presentation must be made by a view controller that itself covers the entire screen. If the current view controller is unable to fulfill a request, it forwards the request up the view controller hierarchy to its nearest parent, which can then handle or forward the request.

Before displaying the view controller, this method resizes the presented view controller's view based on the presentation style. For most presentation styles, the resulting view is then animated onscreen using the transition style in the modalTransitionStyle property of the presented view controller. For custom presentations, the view is animated onscreen using the presented view controller,Äôs transitioning delegate. For current context presentations, the view may be animated onscreen using the current view controller,Äôs transition style.

Xojo may not be happy, if you mess up their controllers!

135.14.9 Properties

135.14.10 className as String

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The name of this NSViewController class.
Notes: e.g. XOJViewController
(Read only property)

135.14.11 classPath as String

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The path of this NSViewController class.
Notes: Useful for debugging to know what super classes the view controller has.

e.g. XOJViewController:UIViewController:UIResponder:NSObject
(Read only property)

135.14.12 currentViewController as UIViewControllerMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: Queries the current view controller on the screen.
Example:

```
Var c As UIViewControllerMBS = UIViewControllerMBS.currentViewController

Break
```

Notes: (Read only property)

135.14.13 isBeingDismissed as Boolean

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view controller is dismissing.
Notes: (Read only property)

135.14.14 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view controller is presenting.
Notes: (Read only property)

135.14.15 isViewLoaded as Boolean

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view is currently loaded into memory.
Notes: (Read only property)

135.14.16 parentViewController as UIViewControllerMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The parent view controller of the recipient.
Notes: If the recipient is a child of a container view controller, this property holds the view controller it is contained in. If the recipient has no parent, the value in this property is nil.
(Read only property)

135.14.17 prefersStatusBarHidden as Boolean

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: Specifies whether the view controller prefers the status bar to be hidden or shown.
Notes: True if the status bar should be hidden or false if it should be shown.
(Read only property)

135.14.18 presentedViewController as UIViewControllerMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The view controller that is presented by this view controller, or one of its ancestors in the view controller hierarchy.
Notes: When you present a view controller modally (either explicitly or implicitly) using the presentViewController method, the view controller that called the method has this property set to the view controller that it presented. If the current view controller did not present another view controller modally, the value in this property is nil.
(Read only property)

135.14.19 presentingViewController as UIViewControllerMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The view controller that presented this view controller.
Notes: When you present a view controller modally (either explicitly or implicitly) using the presentViewController() method, the view controller that was presented has this property set to the view controller that presented it. If the view controller was not presented modally, but one of its ancestors was, this property contains the view controller that presented the ancestor. If neither the current view controller or any of its ancestors were presented modally, the value in this property is nil.
(Read only property)

135.14.20 Title as String

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: A localized string that represents the view this controller manages.
Notes: Set the title to a human-readable string that describes the view. If the view controller has a valid navigation item or tab-bar item, assigning a value to this property updates the title text of those objects.
(Read and Write property)

135.14.21 View as NSViewMBS

MBS iOS Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The view that the controller manages.
Notes: This property represents the root view of the view controller's view hierarchy. The default value of this property is nil.

If you access this property when its value is nil, the view controller automatically calls the loadView method and returns the resulting view.

Each view controller is the sole owner of its view object. Don,Äôt associate the same view object with multiple view controllers. The only exception is that a container view controller implementation may add another view controller,Äôs view object to its own view hierarchy. Before adding the subview, the container must first call its addChildViewController method to create a parent-child relationship between the two view controller objects.

Because accessing this property can cause the view to be loaded automatically, you can use viewLoaded to determine if the view is currently in memory. Unlike this property, viewLoaded doesn,Äôt force the loading of the view if it,Äôs not currently in memory.
(Read and Write property)

135.15 class UMPConsentFormMBS

135.15.1 class UMPConsentFormMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: A single use consent form object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 24.0
- Google Admob Update
- MBS Xojo Plugins, version 23.6pr5

135.15.2 Methods

135.15.3 Constructor

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The private constructor.

135.15.4 load(handler as ConsentFormLoadCompletedMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Loads a consent form and calls completionHandler on completion.
Notes: Must be called on the main queue.

135.15.5 loadAndPresentIfRequiredFromViewController(viewController as UIViewControllerMBS, handler as ConsentFormPresentCompletedMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Loads a consent form and immediately presents it.
Notes: Loads a consent form and immediately presents it from the provided viewController if ConsentInformation.sharedInstance.consentStatus is UMPConsentStatusRequired. Calls handler after the user selects an option and the form is dismissed, or on the next run loop if no form is presented.
Must be called on the main queue.

135.15.6 presentFromViewController(viewController as UIViewControllerMBS, handler as ConsentFormPresentCompletedMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Presents the full screen consent form over viewController.
Notes: The form is dismissed and handler is called after the user selects an option.
ConsentInformation.sharedInstance.consentStatus is updated prior to handler being called.

135.15.7 presentPrivacyOptionsFormFromViewController(viewController as UIViewControllerMBS, handler as ConsentFormPresentCompletedMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Presents a privacy options form.
Notes: Presents a privacy options form from the provided viewController if ConsentInformation.sharedInstance.privacyOptionsRequirementStatus is
PrivacyOptionsRequirementStatusRequired.

Calls handler with nil error after the user selects an option and the form is dismissed, or on the next run loop with a non-nil error if no form is presented. Must be called on the main queue.

This method should only be called in response to a user input to request a privacy options form to be shown. The privacy options form is preloaded by the SDK automatically when a form becomes available. If no form is preloaded, the SDK will invoke the handler on the next run loop, but will asynchronously retry to load one.

135.15.8 UMPErrorDomain as String

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Error domain for all SDK errors.

135.15.9 Properties

135.15.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.15.11 VersionString as String

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The SDK version string.
Notes: In the form "major.minor.patch".
(Read only property)

135.15.12 Constants

Error codes

Constant	Value	Description
FormErrorCodeAlreadyUsed	6	Form was already used.
FormErrorCodeInternal	5	Internal error.
FormErrorCodeInvalidViewController	9	Form cannot be presented from the provided view controller.
FormErrorCodeTimeout	8	Loading a form timed out.
FormErrorCodeUnavailable	7	Form is unavailable.
RequestErrorCodeInternal	1	Internal error.
RequestErrorCodeInvalidAppID	2	The application's app ID is invalid.
RequestErrorCodeMisconfiguration	4	A misconfiguration exists in the Funding Choices UI.
RequestErrorCodeNetwork	3	Network error communicating with Funding Choices.

135.15.13 Delegates

135.15.14 ConsentFormLoadCompletedMBS(consentForm as UMPConsentFormMBS, Error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Provides a nonnull consentForm and a nil error if the load succeeded.
Notes: Provides a nil consentForm and a nonnull error if the load failed.

135.15.15 ConsentFormPresentCompletedMBS(Error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Called after presentation of a ConsentForm finishes.

135.16 class UMPConsentInformationMBS

135.16.1 class UMPConsentInformationMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Consent information.
Notes: All methods must be called on the main thread.
Blog Entries

- Google Admob Update
- MBS Xojo Plugins, version 23.6pr5

135.16.2 Methods

135.16.3 Constructor

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The constructor.
Notes: Gets you the shared instance.

135.16.4 Destructor

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The destructor.

135.16.5 requestConsentInfoUpdateWithParameters(parameters as UMPRequestParametersMBS = nil)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Requests consent information update.
Notes: Must be called in every app session before checking the user's consentStatus or loading a consent form. After calling this method, consentStatus will be updated synchronously to hold the consent state from the previous app session, if one exists.
consentStatus may be updated again immediately before the handler is called.

135.16.6 Reset

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Clears all consent state from persistent storage.

135.16.7 Properties

135.16.8 canRequestAds as Boolean

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Indicates whether the app has completed the necessary steps for gathering updated user consent.
Notes: Returns false until requestConsentInfoUpdateWithParameters is called. Returns true once requestConsentInfoUpdateWithParameters is called and when consentStatus is ConsentStatusNotRequired or ConsentStatusObtained.
(Read only property)

135.16.9 consentStatus as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The user's consent status.
Notes: This value defaults to ConsentStatusUnknown until requestConsentInfoUpdateWithParameters is called, and defaults to the previous session's value until your handler from requestConsentInfoUpdateWithParameters is called.
(Read only property)

135.16.10 formStatus as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Consent form status.
Notes: This value defaults to FormStatusUnknown and requires a call to requestConsentInfoUpdateWithParameters to update.
(Read only property)

135.16.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.16.12 privacyOptionsRequirementStatus as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Privacy options requirement status.
Notes: This value defaults to PrivacyOptionsRequirementStatusUnknown until requestConsentInfoUpdateWithParameters is called, and defaults to the previous session's value until your handler from requestConsentInfoUpdateWithParameters is called.
(Read only property)

135.16.13 sharedInstance as UMPConsentInformationMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The shared consent information instance.
Notes: (Read only property)

135.16.14 Events

135.16.15 ConsentInformationUpdateCompleted(Error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Called when the consent info request completes.
Notes: Error is nil on success, and non-nil if the update failed.

135.16.16 Constants

Consent Status

Constant	Value	Description
ConsentStatusNotRequired	2	Consent not required.
ConsentStatusObtained	3	User consent obtained, personalized vs non-personalized undefined.
ConsentStatusRequired	1	User consent required but not yet obtained.
ConsentStatusUnknown	0	Unknown consent status.

Form Status

Constant	Value	Description
FormStatusAvailable	1	Consent forms are available and can be loaded using loadWithCompletionHandler.
FormStatusUnavailable	2	Consent forms are unavailable. Showing a consent form is not required.
FormStatusUnknown	0	Whether a consent form is available is unknown. An update should be requested using requestConsentInfoUpdateWithParameters().

Privacy options requirement status

Constant	Value	Description
PrivacyOptionsRequirementStatusNotRequired	2	User does not need to modify their privacy options. Either required, or the consent type does not require modification.
PrivacyOptionsRequirementStatusRequired	1	A way must be provided for the user to modify their privacy op
PrivacyOptionsRequirementStatusUnknown	0	Requirement unknown.

135.17 class UMPDebugSettingsMBS

135.17.1 class UMPDebugSettingsMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Overrides settings for debugging or testing.
Example:

```
// test for Europe Economic Area
Var debug As New UMPDebugSettingsMBS
debug.geography = debug.DebugGeographyEEA

Var param As New UMPRequestParametersMBS
param.debugSettings = debug
param.tagForUnderAgeOfConsent = True

UMPConsentInformationMBS.sharedInstance.requestConsentInfoUpdateWithParameters param
```

Blog Entries

- Google Admob Update
- MBS Xojo Plugins, version 23.6pr5

135.17.2 Methods

135.17.3 Constructor

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The constructor.
Example:

```
// test for Europe Economic Area
Var debug As New UMPDebugSettingsMBS
debug.geography = debug.DebugGeographyEEA

Var param As New UMPRequestParametersMBS
param.debugSettings = debug
param.tagForUnderAgeOfConsent = True

UMPConsentInformationMBS.sharedInstance.requestConsentInfoUpdateWithParameters param
```

135.17.4 copy as UMPDebugSettingsMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Creates a copy o this class.

135.17.5 setTestDeviceIdentifiers(testDeviceIdentifiers() as String)

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Sets the array of device identifier strings.
Notes: Debug features are enabled for devices with these identifiers. Debug features are always enabled for simulators.

135.17.6 testDeviceIdentifiers as String()

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Array of device identifier strings.
Notes: Debug features are enabled for devices with these identifiers. Debug features are always enabled for simulators.

135.17.7 Properties

135.17.8 geography as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Debug geography.
Notes: (Read and Write property)

135.17.9 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.17.10 Constants

Debug Geography

Constant	Value	Description
DebugGeographyDisabled	0	Disable geography debugging.
DebugGeographyEEA	1	Geography appears as in EEA for debug devices.
DebugGeographyNotEEA	2	Geography appears as not in EEA for debug devices.

135.18 class UMPRequestParametersMBS

135.18.1 class UMPRequestParametersMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Parameters sent on updates to user consent info.
Blog Entries

- Google Admob Update
- MBS Xojo Plugins, version 23.6pr5

135.18.2 Methods

135.18.3 Constructor

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The constructor.

135.18.4 copy as UMPRequestParametersMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Creates a copy of the object.

135.18.5 Properties

135.18.6 debugSettings as UMPDebugSettingsMBS

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Debug settings for the request.
Notes: (Read and Write property)

135.18.7 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

135.18.8 tagForUnderAgeOfConsent as Boolean

MBS iOS Plugin, Plugin Version: 24.0, Platform: iOS, Targets: iOS only.

Function: Indicates whether the user is tagged for under age of consent.
Notes: (Read and Write property)

Chapter 136

MongoDB

136.1 class MongoChangeStreamMBS

136.1.1 class MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A MongoDB change stream.
Example:

```
Var pipeline As String = " { } "
Var stream As MongoChangeStreamMBS = Collection.Watch(pipeline)

// now do inserts

// and now query changes
Var changeJSON As String

While stream.NextChange(changeJSON)

MessageBox changeJSON

Wend
```

Notes: Use this class to audit a collection, database or client for changes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 22.1, page 9: News

136.1.2 Methods

136.1.3 Constructor

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.1.4 ErrorDocument(byref ReplyJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks if an error has occurred when creating or iterating over a change stream.
Notes: Similar to ErrorDocument in MongoCursorMBS if the error has occurred client-side then the reply will be set to an empty BSON document. If the error occurred server-side, reply is set to the server,Äôs reply document.

Provides the reply from server about the error.

Returns a boolean indicating if there was an error.

136.1.5 NextChange(byref RecordJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Iterates the underlying change stream, setting RecordJSON to the next document.
Example:

```
Var pipeline As String = " { } "
Var stream As MongoChangeStreamMBS = Collection.Watch(pipeline)
```

```
// now do inserts

// and now query changes
Var changeJSON As String

While stream.NextChange(changeJSON)

MessageBox changeJSON

Wend
```

Notes: This will block for a maximum of maxAwaitTimeMS milliseconds as specified in the options when created, or the default timeout if omitted. Data may be returned before the timeout. If no data is returned this function returns false.

RecordJSON: The location for the resulting document.

This function returns true if a valid bson document was read from the stream. Otherwise, false if there was an error or no document was available.

Raises exception in case of error.

136.1.6 StreamResumeToken as String

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the cached resume token, which may be passed as either the resumeAfter or startAfter option of a watch function to start a new change stream from the same point.
Notes: Returns "" if no resume token is available. This is possible if the change stream has not been iterated and neither resumeAfter nor startAfter options were specified in the watch function.

136.1.7 Properties

136.1.8 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.1.9 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parent object.
Notes: (Read only property)

136.2 class MongoClientMBS

136.2.1 class MongoClientMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: A MongoDB connection.
Notes: This is a class that provides access to a MongoDB server, replica set, or sharded cluster. It maintains management of underlying sockets and routing to individual nodes

The connection is NOT thread-safe and should only be used from one thread at a time.

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.

136.2.2 Methods

136.2.3 Collection(DatabaseName as String, CollectionName as String) as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get a newly allocated MongoCollectionMBS for the collection named collection in the named database.
Notes: Collections are automatically created on the MongoDB server upon insertion of the first document. There is no need to create a collection manually.

136.2.4 Command(dbName as String, commandJSON as String) as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a simplified interface to CommandQuery.
Notes: It returns the first document from the result cursor into reply. The client,Äôs read preference, read concern, and write concern are not applied to the command.

This function is not considered a retryable read operation.
See also:

- 136.2.5 Command(dbName as String, commandJSON as String, OptionsJSON as String) as String 18102

136.2.5 Command(dbName as String, commandJSON as String, OptionsJSON as String) as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, interpreting options according to the MongoDB server version.
Notes: To send a raw command to the server without any of this logic, use Command().

Read preferences, read and write concern, and collation can be overridden by various sources.
See also:

- 136.2.4 Command(dbName as String, commandJSON as String) as String 18102

136.2.6 CommandQuery(dbName as String, queryJSON as String) as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a query cursor.
Notes: This function creates a cursor which will execute the command when Next on the cursor is called on it. The client,Äôs read preference, read concern, and write concern are not applied to the command, and Next on the cursor will not check the server response for a write concern error or write concern timeout.

136.2.7 CommandWithServerId(dbName as String, commandJSON as String, serverId as UInt32) as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This function executes a command on a specific server, using the database and command specification provided.
Notes: This function is not considered a retryable read operation.

dbName: The name of the database to run the command on.
serverId: An opaque id specifying which server to use.

136.2.8 Constructor(URI as MongoURIMBS)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new client using the URI provided.
Notes: In case of an error, raises MongoExceptionMBS.

Connection is made when you run the first command, so you may want to soon query something or run a ping command.

136.2.9 Database(Name as String) as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Opens the given database.
Notes: Databases are automatically created on the MongoDB server upon insertion of the first document into a collection. There is no need to create a database manually.

136.2.10 DatabasesNames(OptionsJSON as String = "") as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the MongoDB server for a list of known databases.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var databases() as string = client.DatabasesNames

Break // shows e.g. admin, config and local.
```

Notes: Returns a list of database names.
In case of an error, raises MongoExceptionMBS.

136.2.11 DataToBinary(Data as MemoryBlock) as String

MBS MongoDB Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts the data to a binary object.
Notes: Converts a string or MemoryBlock to JSON for MongoDB.
Reads the bytes, converts to base64 and embeds it in a $ binary JSON for use in MongoDB.
See also:

- 136.2.12 DataToBinary(Data as String) as String 18104

136.2.12 DataToBinary(Data as String) as String

MBS MongoDB Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts the data to a binary object.
Example:

```
Var json As String = MongoClientMBS.DataToBinary("Hello World")

MessageBox json

// shows: { "$ binary" : { "base64" : "SGVsbG8gV29ybGQ=", "subType" : "00" }
```

Notes: Converts a string or MemoryBlock to JSON for MongoDB.
Reads the bytes, converts to base64 and embeds it in a $ binary JSON for use in MongoDB.
See also:

• 136.2.11 DataToBinary(Data as MemoryBlock) as String 18104

136.2.13 DefaultDatabase as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Opens default database.
Notes: Get the database named in the MongoDB connection URI, or "" if the URI specifies none.
Useful when you want to choose which database to use based only on the URI in a configuration file.

136.2.14 FindDatabases(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches list of database records.
Notes: Fetches a cursor containing documents, each corresponding to a database on this MongoDB server.

Sets current cursor.

136.2.15 GridFS(DB as String, Prefix as String = "") as MongoGridFSMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates the GridFS object for the given database.
Notes: The db parameter is the name of the database which the gridfs instance should exist in. The prefix parameter corresponds to the gridfs collection namespacing; its default is ,Äúfs,Äù, thus the default GridFS collection names are ,Äúfs.files,Äù and ,Äúfs.chunks,Äù.

136.2.16 LogMessage(Message as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sends message through MongoDB logging system.
See also:

• 136.2.39 LogMessage(Level as Integer, Domain as String, Message as String) 18112

136.2.17 NewCursorFromCommandReply(commandReplyJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a cursor object from the reply of a command.
Notes: Some MongoDB commands return a ,Äúcursor,Äù document.

commandReplyJSON: The reply to a command, such as ,Äúaggregate,Äù, ,Äúfind,Äù, or ,ÄúlistCollections,Äù, that returns a cursor document.

136.2.18 NowUTC as String

MBS MongoDB Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Create a new JSON value with current date and time.
Notes: Value is in GMT/UTC.
e.g. { "$ date" : "2023-03-09T11:39:34Z" }

136.2.19 Ping

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sends ping command.
Notes: Great to check if connection is there and/or trigger reconnection.

136.2.20 ReadCommand(dbName as String, commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic that is specific to commands that read, and taking the MongoDB server version into account.
Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that read such as ,Äúcount,Äù or ,Äúdistinct,Äù.

Read preferences, read concern, and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts and the read preference must be primary or nil. The highest-priority sources for these options are listed first in the following table. No write concern is applied.

136.2.21 ReadWriteCommand(dbName as String, commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic for commands that both read and write, and taking the MongoDB server version into account.
Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that both read and write, such as ‚ÄúmapReduce‚Äù with an output collection.

Read and write concern and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts. The highest-priority sources for these options are listed first in the following table. Read preferences are not applied. The write concern is omitted for MongoDB before 3.4.

136.2.22 ServerDescription(ServerID as UInt32) as MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get information about the server specified by ServerID.
Example:

```
Const URL = "mongodb://localhost/"

Var uri As New MongoURIMBS(URL)
Var client As New MongoClientMBS(uri)

// do something to trigger connection
Var names() As String = client.DatabasesNames

// now check first server
Var des As MongoServerDescriptionMBS = client.ServerDescription(1)
Break // check in debugger
```

136.2.23 ServerDescriptions as MongoServerDescriptionMBS()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches an server descroptions for all known servers in the topology.
Example:

```
Const URL = "mongodb://localhost/"
```

```
Var uri As New MongoURIMBS(URL)
Var client As New MongoClientMBS(uri)

// do something to trigger connection
Var names() As String = client.DatabasesNames

// now check first server
Var ServerDescriptions() As MongoServerDescriptionMBS = client.ServerDescriptions
Break // check in debugger
```

Notes: Returns no servers until the client connects. Returns a single server if the client is directly connected, or all members of a replica set if the client,Äôs MongoDB URI includes a ,ÄúreplicaSet,Äù option, or all known mongos servers if the MongoDB URI includes a list of them.

136.2.24 Time(SecondsSince1970 as Double) as String

MBS MongoDB Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Create a new JSON value with given timestamp.
Notes: Please pass time as seconds since 1970 and in UTC time zone.

e.g. { "$ date" : "2023-03-09T11:39:34Z" }

136.2.25 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a change stream for a client.
Notes: It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the client. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the client which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ,Äúinvalidate,Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ,Äúdefault,Äù, ,ÄúupdateLookup,Äù, ,ÄúwhenAvailable,Äù, or ,Äúrequired,Äù, If unset, The string ,Äúdefault,Äù is assumed. Set this option to ,ÄúupdateLookup,Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ,ÄúwhenAvailable,Äù, ,Äúrequired,Äù, or ,Äúoff,Äù. When unset, the default value is ,Äúoff,Äù. Similar to ,ÄúfullDocument,Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

136.2.26 WriteCommand(dbName as String, commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic that is specific to commands that write, and taking the MongoDB server version into account.
Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that write such as ,Äúdrop,Äù or ,ÄúcreateRole,Äù (but not for ,Äúinsert,Äù, ,Äúupdate,Äù, or ,Äúdelete,Äù, see Basic Write Operations). Write concern and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts. The highest-priority sources for these options are listed first in the following table. The write concern is omitted for MongoDB before 3.4.

136.2.27 Properties

136.2.28 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.2.29 LibraryVersion as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries library version.
Notes: This is the version of the mongo client library we use to build the plugin.
(Read only property)

136.2.30 MaxBSONSize as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns the maximum bson document size allowed by the cluster.
Notes: Until a connection has been made, this will be the default of 16Mb.
(Read only property)

136.2.31 MaxMessageSize as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns the maximum message size allowed by the cluster.
Notes: Until a connection has been made, this will be the default of 40Mb.
(Read only property)

136.2.32 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parent object reference.
Notes: (Read only property)

136.2.33 Session as MongoSessionMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The current session.
Notes: Weak reference, which is cleared when the session object is destroyed.
(Read only property)

136.2.34 SSLLibrary as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries SSL library used.
Notes: Returns SecureTransport, SecureChannel or OpenSSL.
SecureChannel is used on Windows while SecureTransport is Apple's framework on iOS and macOS. And OpenSSL is available for all platforms.
(Read only property)

136.2.35 SSLOptions as MongoSSLOptionsMBS

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the TLS (SSL) options to use when connecting to TLS enabled MongoDB servers.
Example:

```
const URL = "mongodb://localhost/"
Var uri As New MongoURIMBS(URL)

Var client As New MongoClientMBS(URI)

// we assign the options to point to the cacert.pem file
Var SSLOptions As New MongoSSLOptionsMBS
SSLOptions.CertificateAuthorityFile = "/Users/cs/cacert.pem"

client.SSLOptions = SSLOptions

Break
```

Notes: Setting SSLOptions overrides all TLS options set through the connection string with which the client was constructed.
(Read and Write property)

136.2.36 Trace as Boolean

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Enables trace messages to be written.
Notes: Default error logging will print errors to stderr/stdout already.
(Read and Write property)

136.2.37 URI as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the URI object used to construct this.
Notes: (Read only property)

136.2.38 Events

136.2.39 LogMessage(Level as Integer, Domain as String, Message as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called for log messages in MongoDB client.
Notes: Trace level is not used by our plugin.
See also:

• 136.2.16 LogMessage(Message as String) 18105

136.2.40 Constants

Log Levels

Constant	Value	Description
LogLevelCritical	1	Critical
LogLevelDebug	5	Debug
LogLevelError	0	Error
LogLevelInfo	4	Info
LogLevelMessage	3	Message
LogLevelTrace	6	Trace
LogLevelWarning	2	Warning

136.3 class MongoCollectionMBS

136.3.1 class MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class provides access to a MongoDB collection.
Notes: This handle is useful for actions for most CRUD operations, I.e. insert, update, delete, find, etc.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.3.2 Methods

136.3.3 Aggregate(flags as Integer, pipelineJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates an aggregate collection.
Example:

```
Var collection as MongoCollectionMBS // your collection
Var json As String = " [ "+_
" { ""$ match"" : { ""index"" : 123 } } ,"+_
" { ""$ sort"" : { ""index"" : -1 } } ,"+_
" { ""$ limit"" : 2 } "+_
" ] "
```

```
cursor = Collection.Aggregate(Collection.kFlagNone, json)
// loop over cursor
```

Notes: This function creates a cursor which sends the aggregate command on the underlying collection upon the first call to CursorNext. For more information on building aggregation pipelines, see the MongoDB Manual entry on the aggregate command.
Returns a new cursor on success.

Please review the documentation for MongoDB on how to build the JSON for pipeline or options.

Flag	Value	Description
None	0	Specify no query flags.
TailableCursor	2	Cursor will not be closed when the last data is retrieved. You can resume this cursor later.
SecondaryOk	4	Allow query of replica set secondaries.
NoCursorTimeout	16	The server normally times out an idle cursor after an inactivity period (10 minutes). This prevents that.
AwaitData	32	Use with TailableCursor. Block rather than returning no data. After a period, time out.
Exhaust	64	Stream the data down full blast in multiple ,Äúreply,Äù packets. Faster when you are pulling down a lot of data and you know you want to retrieve it all. Only applies to cursors created from a find operation (i.e. find)
Partial	128	Get partial results from mongos if some shards are down (instead of throwing an error).

In case of an error, raises MongoExceptionMBS.

136.3.4 Command(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server.
Example:

```
Var collection as MongoCollectionMBS // your collection

Var Reply as String = collection.Command(" { ""hello"": 1 } ")
```

Notes: Consult the MongoDB Manual entry on Database Commands for each command,Äôs arguments.

In case of an error, raises MongoExceptionMBS.

136.3.5 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.3.6 Copy as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a deep copy of the collection struct and its configuration.
Notes: This function does not copy the contents of the collection on the MongoDB server.

136.3.7 DeleteMany(selectorJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes many records.
Notes: This function removes all documents in the given collection that match selector.

To delete at most one matching document, use DeleteOne().
Returns string with JSON about errors on server.

136.3.8 DeleteOne(selectorJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes one record.
Example:

```
// delete record by object ID

Var oid As New JSONItem
oid.Value("$ oid") = "632752c4031bafedd50fbf21"

Var Record As New JSONItem
Record.Value("_id") = oid
```

```
Var Result As String = Collection.DeleteOne(Record.toString)
// e.g. { "deletedCount" : 1 }
```

Notes: This function removes at most one document in the given collection that matches selector.

To delete all matching documents, use DeleteMany().

Returns string with JSON about errors on server.

136.3.9 EstimatedDocumentCount(OptionsJSON as String = "") as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes a count query on collection.
Notes: The count returned is not guaranteed to be accurate.

see also
http://mongoc.org/libmongoc/current/mongoc_collection_estimated_document_count.html
See also:

- 136.3.10 EstimatedDocumentCount(OptionsJSON as String, byref ReplyJSON as String) as Int64 18117

136.3.10 EstimatedDocumentCount(OptionsJSON as String, byref ReplyJSON as String) as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Executes a count query on collection.
Notes: The count returned is not guaranteed to be accurate.

see also
http://mongoc.org/libmongoc/current/mongoc_collection_estimated_document_count.html
See also:

- 136.3.9 EstimatedDocumentCount(OptionsJSON as String = "") as Int64 18117

136.3.11 Find(FilterJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Query on collection, passing arbitrary query options to the server in opts.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.Collection("test")

Var Filter as new JSONItem
'filter.Value("Hello") = "World"

Var sortOrder as new JSONItem
sortOrder.Value("hello") = -1 // descending

Var options as new JSONItem
options.Value("limit") = 10
options.Value("sort") = sortOrder

Var cursor as MongoCursorMBS = Collection.Find(filter.toString, options.toString)
Var Record as string

while cursor.NextRecord(record)

MessageBox record

wend
```

Notes: See also find command documented here:
https://www.mongodb.com/docs/manual/reference/command/find/

136.3.12 FindIndexes(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches a cursor containing documents, each corresponding to an index on this collection.

136.3.13 InsertMany(documentArrayJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Insert documents into collection.
Notes: Please pass a JSON array as string for all documents. Each entry in the array should be a JSON object with the document data.

For any document that does not have an "_id" field, a bson_oid_t will be generated locally and added to the document. If you must know the inserted document's _id, generate it in your code and include it in the document. The _id you generate can be a bson_oid_t or any other non-array BSON type.

The reply is filled out with an "insertedCount" field. If there is a server error then reply may contain a "writeErrors" array and/or a "writeConcernErrors" array.
See also:

- 136.3.14 InsertMany(documentJSON() as String, OptionsJSON as String = "") as String 18119

136.3.14 InsertMany(documentJSON() as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Insert documents into collection.
Notes: Please pass an array with a JSON object in each entry as string.

For any document that does not have an "_id" field, a bson_oid_t will be generated locally and added to the document. If you must know the inserted document's _id, generate it in your code and include it in the document. The _id you generate can be a bson_oid_t or any other non-array BSON type.

The reply is filled out with an "insertedCount" field. If there is a server error then reply may contain a "writeErrors" array and/or a "writeConcernErrors" array.
See also:

- 136.3.13 InsertMany(documentArrayJSON as String, OptionsJSON as String = "") as String 18118

136.3.15 InsertOne(documentJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Inserts a document into collection.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)
```

```
Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.Collection("test")

Var j as new JSONItem
j.Value("Hello") = "World"

Var reply as string = Collection.InsertOne(j.ToString)

// reply is { "insertedCount" : 1 }

Break
```

Notes: To insert an array of documents, see MongoDB.InsertMany.

If no _id element is found in document, then an oid will be generated locally and added to the document. If you must know the inserted document,Äôs _id, generate it in your code and include it in the document. The _id you generate can be an old or any other non-array BSON type.

The reply is filled out with an ,ÄúinsertedCount,Äù field. If there is a server error then reply contains either a ,ÄúwriteErrors,Äù array with one subdocument or a ,ÄúwriteConcernErrors,Äù array.

In case of an error, raises MongoExceptionMBS.

OptionsJSON may be empty or a JSON document with additional command options:

writeConcern: the write concern.
sessionId: The session ID.
validate: The validation flags.
bypassDocumentValidation: Set to true to skip server-side schema validation of the provided BSON documents.

136.3.16 Keys as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries current collection to find all the key names.
Notes: You may store different JSON documents in the collection with different keys.
This function scans all documents to get the root keys and returns the list.

136.3.17 Rename(NewDatabaseName as String, NewCollectionName as String, DropTargetBeforeRename as Boolean = false, OptionsJSON as String = "") as boolean

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This function is a helper to rename an existing collection on a MongoDB server.
Notes: The name of the collection will also be updated internally so it is safe to continue using this collection after the rename. Additional operations will occur on renamed collection.

NewDatabaseName: The name of the new database.
NewCollectionName: The new name for the collection.
DropTargetBeforeRename: If an existing collection matches the new name, drop it before the rename.

Returns true if successful. Returns false and raises exception in case of an error.

136.3.18 ReplaceOne(selectorJSON as String, replacementJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This replaces documents in collection that match selector with replacement.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
Var j as new JSONItem
j.Value("Hello") = "World"

// the new values
Var u as new JSONItem
u.Value("OtherField") = 456
u.Value("Hello") = "World"

Var reply as string = Collection.ReplaceOne(j.ToString, u.ToString)

Break
```

Notes: selectorJSON: A JSON containing the query to match the document for updating.
updateJSON: A JSON containing the replacement document.

The reply JSON is populated with the fields matchedCount, modifiedCount, upsertedCount, and optionally upsertedId if applicable. If there is a server error then reply contains either a writeErrors array with one subdocument or a writeConcernErrors array.

In case of an error, raises MongoExceptionMBS.

136.3.19 UpdateMany(selectorJSON as String, updateJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Updates all documents in collection that match selector.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
Var j as new JSONItem
j.Value("Hello") = "World"

// the new values
Var u as new JSONItem
u.Value("OtherField") = 123

// and the update, where we define to set those values
Var s as new JSONItem
s.Value("$ set") = u

Var reply as string = Collection.UpdateMany(j.ToString, s.ToString)

// reply: { "modifiedCount" : 1, "matchedCount" : 1, "upsertedCount" : 0 }
Break
```

Notes: In case of an error, raises MongoExceptionMBS.

To update at most one document see UpdateOne().

The result JSON is filled out with fields matchedCount, modifiedCount, and optionally upsertedId if applicable. If there is a server error then reply contains either a ,ÄúwriteErrors,Äù array with one subdocument or a ,ÄúwriteConcernErrors,Äù array.

136.3.20 UpdateOne(selectorJSON as String, updateJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Updates at most one document in collection that matches selector.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
Var j as new JSONItem
j.Value("Hello") = "World"

// the new values
Var u as new JSONItem
u.Value("OtherField") = 123

// and the update, where we define to set those values
Var s as new JSONItem
s.Value("$ set") = u

Var reply as string = Collection.UpdateOne(j.ToString, s.ToString)

// reply: { "modifiedCount" : 1, "matchedCount" : 1, "upsertedCount" : 0 }
break
```

Notes: In case of an error, raises MongoExceptionMBS.

To update multiple documents see UpdateMany().

Return is a JSON filled out with fields matchedCount, modifiedCount, and optionally upsertedId if applica-

ble. If there is a server error then reply contains either a ,ÄúwriteErrors,Äù array with one subdocument or a ,ÄúwriteConcernErrors,Äù array.

for Options you may e.g. pass { "upsert":true } to create a new record if the old one doesn't exist.

136.3.21 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a change stream for a collection.
Notes: It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the collection. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the collection which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ,Äúinvalidate,Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ,Äúdefault,Äù, ,ÄúupdateLookup,Äù, ,ÄúwhenAvailable,Äù, or ,Äúrequired,Äù, If unset, The string ,Äúdefault,Äù is assumed. Set this option to ,ÄúupdateLookup,Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ,ÄúwhenAvailable,Äù, ,Äúrequired,Äù, or ,Äúoff,Äù. When unset, the default value is ,Äúoff,Äù. Similar to ,ÄúfullDocument,Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

136.3.22 Properties

136.3.23 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.3.24 Name as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries name of the collection.
Notes: (Read only property)

136.3.25 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parent object reference.

Notes: Points to the related database or client and avoids you free those before this object gets destructed. (Read only property)

136.3.26 Constants

Flags

Constant	Value	Description
kFlagAwaitData	32	Use with kFlagTailableCursor. Block rather than returning no data. After a period, time out.
kFlagExhaust	64	Stream the data down full blast in multiple ,Äúreply,Äù packets. Faster when you are pulling down a lot of data and you know you want to retrieve it all. Only applies to cursors created from a find operation (i.e. find).
kFlagNoCursorTimeout	16	The server normally times out an idle cursor after an inactivity period (10 minutes). This prevents that.
kFlagNone	0	Specify no query flags.
kFlagPartial	128	Get partial results from mongos if some shards are down (instead of throwing an error).
kFlagSecondaryOk	4	Allow query of replica set secondaries.
kFlagTailableCursor	2	Cursor will not be closed when the last data is retrieved. You can resume this cursor later.

136.4 class MongoCursorMBS

136.4.1 class MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class provides access to a MongoDB query cursor.
Notes: It wraps up the wire protocol negotiation required to initiate a query and retrieve an unknown number of documents.

Cursors are lazy, meaning that no connection is established and no network traffic occurs until the first call to NextRecord().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 21.1, page 95: A Database That Connects, A Mongo DB photo database used with FileMaker and Xojo by Stefanie Juchmes

136.4.2 Methods

136.4.3 Clone as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a copy of a cursor.
Notes: The cloned cursor will be reset to the beginning of the query, and therefore the query will be re-executed on the MongoDB server when Next is called.

136.4.4 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.4.5 ErrorDocument(byref ReplyJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks to see if an error has occurred while iterating the cursor.
Notes: If an error occurred server-side, the ReplyJSON is set to the server,Äôs reply document with information about the error.

136.4.6 NextRecord(byref RecordJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the next record as JSON.
Notes: This function shall iterate the underlying cursor, setting bson to the next document.
Returns false if there is no other record.

In case of an error, raises MongoExceptionMBS.
Raises OutOfMemoryException if size of JSON exceeds 2 GB.

136.4.7 Operator_Convert as String

MBS MongoDB Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries all the next records as JSON.
Notes: Queries all following records and return them as a big JSON.
In case of an error, raises MongoExceptionMBS.

In case of an error, raises MongoExceptionMBS.
Raises OutOfMemoryException if size of JSON exceeds 2 GB.

136.4.8 Records as String

MBS MongoDB Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries all the next records as JSON.
Notes: Queries all following records and return them as a big JSON.
In case of an error, raises MongoExceptionMBS.

136.4.9 Properties

136.4.10 BatchSize as UInt32

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The cursor,Äôs batch size.
Notes: (Read and Write property)

136.4.11 Current as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries current record as JSON.
Notes: Fetches the cursors current document or "" if there has been an error.
(Read only property)

136.4.12 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.4.13 Host as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the MongoDB host that the cursor is communicating with in the host out parameter.
Notes: (Read only property)

136.4.14 ID as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the cursor id used by the server to track the cursor.
Notes: This number is zero until the driver actually uses a server when executing the query, and after it has fetched all results from the server.
(Read only property)

136.4.15 Limit as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Limits the number of documents in the result set.
Notes: This function is useful for setting the limit on a cursor after the cursor is created, but before any calls to NextRecord().

Calling this function after NextRecord() has no effect.
(Read and Write property)

136.4.16 MaxAwaitTimeMS as UInt32

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The maximum amount of time for the server to wait on new documents to satisfy a tailable cursor query.
Notes: Only applies if the cursor is created from Find() with ‚Äútailable‚Äù and ‚ÄúawaitData‚Äù options, and the server is MongoDB 3.2 or later.

The max await time ms cannot be changed after the first call to NextRecord().

This is not applicable to all cursors. Setting batch size on a cursor returned by FindDatabases(), FindCollections(), or FindIndexes() will not change the results.
(Read and Write property)

136.4.17 More as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether there may be more data.
Notes: This function shall indicate if there is potentially more data to be read from the cursor.
This is only useful with tailable cursors. Use NextRecord() for regular cursors.

Details: mongoc_cursor_more is unreliable because it does not contact the server to see if there are actually more documents in the result set. It simply returns true if the cursor has not begun, or if it has begun and

there are buffered documents in the client-side cursor, or if it has begun and the server has not yet told the cursor it is completely iterated.

This is unreliable with regular queries because it returns true for a new cursor before iteration, even if the cursor will match no documents. It is also true if the collection has been dropped on the server since the previous fetch, or if the cursor has finished its final batch and the next batch will be empty.

Returns true if the cursor has locally-buffered documents, or if a round-trip to the server might fetch additional documents.
(Read only property)

136.4.18 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The parent object reference.
Notes: Points to the related database or collection and avoids you free those before this object gets destructed.
(Read only property)

136.5 class MongoDatabaseMBS

136.5.1 class MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: MongoDB Database Abstraction.
Notes: This class provides access to a MongoDB database. This handle is useful for actions a particular database object. It is not a container for collection objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.5.2 Methods

136.5.3 Aggregate(pipelineJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates an aggregate database.
Example:

```
Var database as MongoDatabaseMBS // your database

Var Cursor as MongoCursorMBS = database.Aggregate(" [ { ""$ listLocalSessions"": { } } ] ")
// loop over cursor
```

Notes: This function creates a cursor which sends the aggregate command on the underlying database upon the first call to MongoDB.CursorNext. For more information on building aggregation pipelines, see the

MongoDB Manual entry on the aggregate command. Note that the pipeline must start with a compatible stage that does not require an underlying collection (e.g. ,Äú$ currentOp,Äù, ,Äú$ listLocalSessions,Äù). Returns a new cursor on success.

Please review the documentation for MongoDB on how to build the JSON for pipeline or options.

In case of an error, raises MongoExceptionMBS.

136.5.4 Collection(Name as String) as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the collection with given name.

136.5.5 CollectionNames(OptionsJSON as String = "") as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the list of the names of all of the collections in database.
Example:

```
const URL = "mongodb://192.168.2.102/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collections() as string = database.CollectionNames

Break // see in debugger
```

Notes: see MongoDB documentation for list of options:
https://www.mongodb.com/docs/manual/reference/command/listCollections/

In case of an error, raises MongoExceptionMBS.

136.5.6 Command(commandJSON as String) as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a simplified interface to Command() that returns the first result document.

Example:

```
Const URL = "mongodb://localhost/"

Var uri As New MongoURIMBS(URL)
Var client As New MongoClientMBS(uri)
Var database As MongoDatabaseMBS = client.Database("local")

Var ping As New JSONItem
ping.Value("ping") = 1

Var reply As String = database.Command(ping.ToString)

Break // { "ok" : 1.0 }
```

Notes: The database,Äôs read preference, read concern, and write concern are not applied to the command. The parameter reply is initialized even upon failure to simplify memory management.

This function is not considered a retryable read operation.
See also:

- 136.5.7 Command(commandJSON as String, OptionsJSON as String) as String 18134

136.5.7 Command(commandJSON as String, OptionsJSON as String) as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, interpreting opts according to the MongoDB server version.
Example:

```
Const URL = "mongodb://localhost/"

Var uri As New MongoURIMBS(URL)
Var client As New MongoClientMBS(uri)
Var database As MongoDatabaseMBS = client.Database("local")

Var ping As New JSONItem
ping.Value("ping") = 1

Var options As New JSONItem

Var reply As String = database.Command(ping.ToString, options.tostring)

Break // { "ok" : 1.0 }
```

Notes: Returns the reply from the server.

In case of an error, raises MongoExceptionMBS.
See also:

- 136.5.6 Command(commandJSON as String) as String 18133

136.5.8 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.5.9 Copy as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a deep copy of the database struct and its configuration.

136.5.10 CreateCollection(Name as String, OptionsJSON as String = "") as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a collection in the database.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")
Var Collection as MongoCollectionMBS = database.CreateCollection("testing2")

MessageBox Collection.Name

Break
```

Notes: If no write concern is provided in opts, the database,Äôs write concern is used.

For a list of all options, see the MongoDB Manual entry on the create command.
In case of an error, raises MongoExceptionMBS.

136.5.11 FindCollections(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches a cursor containing documents, each corresponding to a collection on this database.
Example:

```
const URL = "mongodb://localhost/"

Var uri as new MongoURIMBS(URL)
Var client as new MongoClientMBS(uri)

Var database as MongoDatabaseMBS = client.Database("local")

Var cursor as MongoCursorMBS = database.FindCollections
Var Record as string

while cursor.NextRecord(record)

MessageBox record

wend

Break
```

Notes: In case of an error, raises MongoExceptionMBS.

136.5.12 HasCollection(Name as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks to see if a collection exists on the MongoDB server within database.
Notes: If the function succeeds, it returns true if the collection exists and false if not.
Raises exception in case of an invalid arguments or a server or network error.

In case of an error, raises MongoExceptionMBS.

136.5.13 ReadCommand(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic that is specific to commands that read, and taking the MongoDB server version into account.

Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that read such as ,Äúcount,Äù or ,Äúdistinct,Äù.

Read preferences, read concern, and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts and the read preference must be primary or nil. The highest-priority sources for these options are listed first in the following table. No write concern is applied.

136.5.14 ReadWriteCommand(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic for commands that both read and write, and taking the MongoDB server version into account.
Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that both read and write, such as ,ÄúmapReduce,Äù with an output collection.

Read and write concern and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts. The highest-priority sources for these options are listed first in the following table. Read preferences are not applied. The write concern is omitted for MongoDB before 3.4.

136.5.15 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a change stream for a database.
Notes: It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the database. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the database which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ,Äúinvalidate,Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ,Äúdefault,Äù, ,ÄúupdateLookup,Äù, ,ÄúwhenAvailable,Äù, or ,Äúrequired,Äù, If unset, The string ,Äúdefault,Äù is assumed. Set this option to ,ÄúupdateLookup,Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ,ÄúwhenAvailable,Äù, ,Äúrequired,Äù, or ,Äúoff,Äù. When unset, the default value is ,Äúoff,Äù. Similar to ,ÄúfullDocument,Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

136.5.16 WriteCommand(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Execute a command on the server, applying logic that is specific to commands that write, and taking the MongoDB server version into account.
Notes: To send a raw command to the server without any of this logic, use Command().

Use this function for commands that write such as ,Äúdrop,Äù or ,ÄúcreateRole,Äù (but not for ,Äúinsert,Äù, ,Äúupdate,Äù, or ,Äúdelete,Äù). Write concern and collation can be overridden by various sources. In a transaction, read concern and write concern are prohibited in opts. The highest-priority sources for these options are listed first in the following table. The write concern is omitted for MongoDB before 3.4.

136.5.17 Properties

136.5.18 Client as MongoClientMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The current client for this database.
Notes: (Read only property)

136.5.19 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.5.20 Name as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries name of the database.
Notes: (Read only property)

136.6 class MongoExceptionMBS

136.6.1 class MongoExceptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class to report errors in MongoDB.
Notes: Subclass of the RuntimeException class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Insert record to MongoDB in Xojo

136.6.2 Methods

136.6.3 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.7 class MongoGridFSFileListMBS

136.7.1 class MongoGridFSFileListMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a list of files in GridFS.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 25.2
- MBS Xojo Plugins, version 25.2pr1

136.7.2 Methods

136.7.3 Constructor

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.7.4 NextFile as MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the next file each iteration.

136.7.5 Properties

136.7.6 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.8 class MongoGridFSFileMBS

136.8.1 class MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class provides a MongoDB GridFS file abstraction.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")

Var options As New MongoGridFSFileOptionsMBS
options.FileName = "test.txt"
options.ContentType = "text/plain"

Var file As MongoGridFSFileMBS = GridFS.CreateFile(options)
Var BytesWritten As Integer = file.Write("Hello World")
file.Save
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- GridFS with MongoDB
- News from the MBS Xojo Plugins Version 25.2
- MBS Xojo Plugins, version 25.2pr1

136.8.2 Methods

136.8.3 Constructor

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.8.4 NewStream as MongoStreamMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: create a new Stream to read from and write to a GridFS file.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")
```

```
// now find the file and read it
Var file As MongoGridFSFileMBS = GridFS.FindOneByFileName( "test.txt")

// open a stream
Var stream As MongoStreamMBS = file.NewStream

// write new content
Var bytes As Integer = stream.Write("Just a test! more bytes")
MessageBox "bytes written: "+bytes.ToString

// this will do file.save internally
stream.Close
```

Notes: GridFS files are created with CreateFile() or CreateFileFromStream().

This function does not transfer ownership of file. Therefore, file must remain valid for the lifetime of this stream.

Note, the returned stream uses the ‚ÄúsocketTimeoutMS‚Äù and ‚ÄúconnectTimeoutMS‚Äù values from the MongoDB URI.

136.8.5 Read(ByteCount as Integer, MinBytes as Integer = -1) as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads given number of bytes as String.
Notes: MinBytes: The minimum number of bytes that must be read or an error will be synthesized.

This function performs a scattered read from file, potentially blocking to read from the MongoDB server.

136.8.6 ReadAll as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads all data into a string.
Notes: This function performs a scattered read from file, potentially blocking to read from the MongoDB server.

136.8.7 ReadAllMemory as MemoryBlock

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads all data into Memoryblock.
Notes: This function performs a scattered read from file, potentially blocking to read from the MongoDB server.

136.8.8 ReadMemory(ByteCount as Integer, MinBytes as Integer = -1) as MemoryBlock

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads given number of bytes as MemoryBlock.
Notes: MinBytes: The minimum number of bytes that must be read or an error will be synthesized.

This function performs a scattered read from file, potentially blocking to read from the MongoDB server.

136.8.9 Remove

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Removes file and its data chunks from the MongoDB server.

136.8.10 Save

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Saves modifications to file to the MongoDB server.
Notes: Modifying GridFS files is NOT thread-safe. Only one thread or process can access a GridFS file while it is being modified.

136.8.11 Seek(delta as Int64, whence as Integer = 0)

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Adjust the file position pointer in the given file by delta, starting from the position whence.
Notes: The whence argument is interpreted as in fseek:

On success, the file,Äôs underlying position pointer is set appropriately. On failure, the file position is NOT

SeekSet	Set the position relative to the start of the file.
SeekCurrent	Move delta relative to the current file position.
SeekEnd	Move delta relative to the end of the file.

changed and an exception is raised.

136.8.12 Write(Data as MemoryBlock) as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a gathered write to the underlying gridfs file.
Notes: Modifying GridFS files is NOT thread-safe. Only one thread or process can access a GridFS file while it is being modified.

Returns the number of bytes written.
See also:

- 136.8.13 Write(Data as String) as Integer 18145

136.8.13 Write(Data as String) as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a gathered write to the underlying gridfs file.
Notes: Modifying GridFS files is NOT thread-safe. Only one thread or process can access a GridFS file while it is being modified.

Returns the number of bytes written.
See also:

- 136.8.12 Write(Data as MemoryBlock) as Integer 18145

136.8.14 Properties

136.8.15 Aliases as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches or sets the aliases associated with a gridfs file.
Notes: You need to call Save() to persist this change.
(Read and Write property)

136.8.16 ChunkSize as Int32

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the chunk size used with the underlying gridfs file.
Notes: (Read only property)

136.8.17 ContentType as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the content type specified for the underlying file.
Notes: Sets the content type for the gridfs file. This should be something like "text/plain".
You need to call Save() to persist this change.
(Read and Write property)

136.8.18 FileName as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches or sets the filename for the given gridfs file.
Notes: (Read and Write property)

136.8.19 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.8.20 ID as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches or sets the id of a gridfs file.
Notes: The C Driver always uses an ObjectId for _id, but files created by other drivers may have any type of _id.

Sets the id of file to any BSON type.
(Read and Write property)

136.8.21 Length as Int64

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the length of the gridfs file in bytes.
Notes: (Read only property)

136.8.22 MD5 as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches or sets the pre-computed MD5 for the underlying gridfs file.
Notes: You need to call Save() to persist this change.
(Read and Write property)

136.8.23 Metadata as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches or sets a bson document containing the metadata for the gridfs file.
Notes: Sets the metadata associated with file.
You need to call Save() to persist this change.
(Read and Write property)

136.8.24 Position as Int64

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets or sets the current position indicator within file.
Notes: Setting the position will seek within the file.
(Read and Write property)

136.8.25 UploadDate as Int64

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the specified upload date of the gridfs file in milliseconds since the UNIX epoch.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")
Var file As MongoGridFSFileMBS = GridFS.FindOneByFileName( "test.txt")
```

```
Var d As New date(1970,1,1,0,0,0)
d.TotalSeconds = d.TotalSeconds + file.UploadDate / 1000.0

MessageBox d.SQLDateTime
```

Notes: (Read only property)

136.8.26 Constants

Seek Modes

Constant	Value	Description
SeekCurrent	1	Position from current position.
SeekEnd	2	Position from end of file.
SeekSet	0	Position from start of file.

136.9 class MongoGridFSFileOptionsMBS

136.9.1 class MongoGridFSFileOptionsMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for file options to create a new file.
Example:

```
Var options As New MongoGridFSFileOptionsMBS
options.FileName = "test.txt"
options.ContentType = "text/plain"
```

136.9.2 Properties

136.9.3 Aliases as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The aliases.
Notes: If not empty, a JSON with the aliases to include for the new file.
(Read and Write property)

136.9.4 ChunkSize as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The chunk size in bytes.
Notes: (Read and Write property)

136.9.5 ContentType as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The content type.
Notes: (Read and Write property)

136.9.6 FileName as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The file name to use.
Notes: (Read and Write property)

136.9.7 MD5 as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The MD5 hash.
Notes: (Read and Write property)

136.9.8 MetaData as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The metadata.
Notes: If not empty, a JSON with the metadata to include for the new file.
(Read and Write property)

136.10 class MongoGridFSMBS

136.10.1 class MongoGridFSMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class provides a MongoDB gridfs implementation.
Notes: The system as a whole is made up of gridfs objects, which contain gridfs files and gridfs file lists. Essentially, a basic file system API.

There are extensive caveats about the kind of use cases gridfs is practical for. In particular, any writing after initial file creation is likely to both break any concurrent readers and be quite expensive. That said, this implementation does allow for arbitrary writes to existing gridfs object, just use them with caution.

mongoc_gridfs also integrates tightly with the MongoStreamMBS class abstraction, which provides some convenient wrapping for file creation and reading/writing. It can be used without, but its worth looking to see if your problem can fit that model.

MongoGridFSMBS is NOT thread-safe and should only be used in the same thread as the owning MongoClientMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.10.2 Methods

136.10.3 Chunks as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a collection that contains the chunks for files.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")
Var chunks As MongoCollectionMBS = GridFS.Chunks

// now request content and inspect it
Var item As MongoCursorMBS = chunks.Find(" { } ")
Var items As String = item.Records
```

```
Break
```

Notes: This instance is owned by the GridFS instance and should not be modified or freed.

136.10.4 Constructor

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.10.5 CreateFile(options as MongoGridFSFileOptionsMBS) as MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new file.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")

Var options As New MongoGridFSFileOptionsMBS
options.FileName = "test.txt"
options.ContentType = "text/plain"

Var file As MongoGridFSFileMBS = GridFS.CreateFile(options)
Var BytesWritten As Integer = file.Write("Hello World")
file.Save
```

136.10.6 CreateFileFromStream(stream as MongoStreamMBS, options as MongoGridFSFileOptionsMBS) as MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new file and fill it with the contents of the stream.
Example:

```
// create a file from a file on disk
Var options As New MongoGridFSFileOptionsMBS
options.FileName = "test.pdf"
options.ContentType = "application/pdf"

Var stream As MongoStreamMBS = MongoStreamMBS.NewStreamFromPath("/Users/cs/Desktop/Installation.pdf")
```

```
Var file As MongoGridFSFileMBS = GridFS.CreateFileFromStream(stream, options)
```

Notes: Note that this function will read from stream until End of File, making it best suited for file-backed streams.

136.10.7 Drop

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Requests that an entire GridFS be dropped, including all files associated with it.

136.10.8 Files as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Retrieves the collection containing the file metadata for GridFS.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")
Var Files As MongoCollectionMBS = GridFS.Files

// now request content and inspect it
Var item As MongoCursorMBS = Files.Find(" { } ")
Var items As String = item.Records
Break
```

136.10.9 Find(filterJSON as String, OptionsJSON as String = "") as MongoGridFSFileListMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Finds all gridfs files matching filter.
Notes: You can iterate the matched gridfs files with the resulting file list.

See Find() in MongoCollectionMBS for a description of the filter and opts parameters.

This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI, the retry behavior does not apply.

136.10.10 Find2(filterJSON as String, OptionsJSON as String = "") as MongoGridFSFileMBS()

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Finds all gridfs files matching filter.
Example:

```
// find all files
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")
Var files() As MongoGridFSFileMBS = GridFS.Find2(" { } ")
```

Notes: Same as Find() but returns a Xojo array with all files.

136.10.11 FindOne(filterJSON as String, OptionsJSON as String = "") as MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Find the first GridFS file matching filter.
Notes: If there is an error, nil is returned and an exception is reported; if there is no error but no matching file is found, nil is returned.

See Find() for a description of the filter and opts parameters.

This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI, the retry behavior does not apply.

136.10.12 FindOneByFileName(FileName as String) as MongoGridFSFileMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Finds the first file matching the filename specified.
Example:

```
Var GridFS As MongoGridFSMBS = Client.GridFS("test", "fs")

// now find the file and read it
Var file As MongoGridFSFileMBS = GridFS.FindOneByFileName( "test.txt")
Var data As String = file.ReadAll
```

Notes: If there is an error, nil is returned and an exception is raised; if there is no error but no matching

file is found, nil is returned.

This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

136.10.13 RemoveByFileName(Name as String)

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Removes all files matching filename and their data chunks from the MongoDB server.
Notes: Returns true if successful, including when no files match. Returns false and raises exception if there are invalid arguments or a server or network error.

136.10.14 Properties

136.10.15 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.11 class MongoHostListMBS

136.11.1 class MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The host entry for a MongoDB server.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.11.2 Methods

136.11.3 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.11.4 Properties

136.11.5 Family as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The protocol family.
Notes: (Read only property)

136.11.6 Host as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The host.
Notes: (Read only property)

136.11.7 HostAndPort as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The host and port together.
Notes: (Read only property)

136.11.8 NextHost as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The next entry in the list.
Notes: (Read only property)

136.11.9 Port as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The port number.
Notes: (Read only property)

136.12 class MongoServerDescriptionMBS

136.12.1 class MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The server description class.
Example:

```
Const URL = "mongodb://localhost/"

Var uri As New MongoURIMBS(URL)
Var client As New MongoClientMBS(uri)

// do something to trigger connection
Var names() As String = client.DatabasesNames

// now check first server
Var ServerDescriptions() As MongoServerDescriptionMBS = client.ServerDescriptions
Break // check in debugger
```

Notes: Holds information about a mongod or mongos the driver is connected to.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.12.2 Methods

136.12.3 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.12.4 Properties

136.12.5 CompressorID as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the compressor ID used here.
Notes: (Read only property)

136.12.6 helloResponse as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The hello response from the server.
Notes: (Read only property)

136.12.7 HostList as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The server's host and port.
Notes: (Read only property)

136.12.8 ID as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the server's id, an opaque identifier generated by the client or client pool.
Notes: (Read only property)

136.12.9 LastUpdateTime as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last timestamp when the server description was updated.
Notes: (Read only property)

136.12.10 NextDescription as MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The next server in the list.
Notes: (Read only property)

136.12.11 RTT as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the server's round trip time in milliseconds.
Notes: This is the client's measurement of the duration of an "ismaster" command.
(Read only property)

136.12.12 Type as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a string, one of the server types defined in the Server Discovery And Monitoring Spec
Notes: Possible types:

- Standalone
- Mongos
- PossiblePrimary
- RSPrimary
- RSSecondary
- RSArbiter
- RSOther
- RSGhost
- Unknown

(Read only property)

136.13 class MongoSessionMBS

136.13.1 class MongoSessionMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for organizing a transaction session.
Blog Entries

- News from the MBS Xojo Plugins Version 22.5
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5
- MBS Xojo Plugins, version 22.5pr1

136.13.2 Methods

136.13.3 AbortTransaction

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Abort a multi-document transaction.
Example:

```
Var Client as MongoClientMBS // your connection
Var Collection as MongoClientMBS // your collection

// count before
Var count1 As Integer = Collection.EstimatedDocumentCount

Var session As New MongoSessionMBS(Client)
session.StartTransaction

Var NewRecord As New JSONItem

NewRecord.Value("firstName") = "Bob"
NewRecord.Value("lastName") = "Jones"
NewRecord.Value("phone") = "555-1234-567"

Var Result As String = Collection.InsertOne(NewRecord.toString)

// should be count1 + 1
Var count2 As Integer = Collection.EstimatedDocumentCount

details.Text = result

session.AbortTransaction
Var count3 As Integer = Collection.EstimatedDocumentCount
```

```
// should be back to count1

Break // see in debugger
```

Notes: Raises exception if there are invalid arguments, such as a session with no transaction in progress. Network or server errors are ignored.

136.13.4 CommitTransaction as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Commit a multi-document transaction.
Example:

```
Var Client as MongoClientMBS // your connection
Var Collection as MongoClientMBS // your collection

Var session As New MongoSessionMBS(Client)

session.StartTransaction

Var NewRecord As New JSONItem

NewRecord.Value("firstName") = "Bob"
NewRecord.Value("lastName") = "Jones"
NewRecord.Value("phone") = "555-1234-567"

Var Result As String = Collection.InsertOne(NewRecord.toString)
Break // see in debugger
```

Notes: Returns JSON if the transaction was committed. Raises exception if there are invalid arguments, such as a session with no transaction in progress, or if there is a server or network error.

136.13.5 Constructor(client as MongoClientMBS)

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Create a session for a sequence of operations.

136.13.6 StartTransaction

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Start a multi-document transaction for all following operations in this session.
Notes: The transaction must be completed with CommitTransaction or AbortTransaction. An in-progress transaction is automatically aborted by destructor.

Raises exception if there are invalid arguments, such as a session with a transaction already in progress.

If you run MongoDB server locally, you may need to configure a replication. Otherwise you get an error like this: "Error 17:20: Transaction numbers are only allowed on a replica set member or mongos".

136.13.7 Properties

136.13.8 Client as Variant

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The reference to the client object.
Notes: (Read only property)

136.13.9 ClusterTime as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the session's clusterTime, as a JSON document.
Notes: If the session has not been used for any operation and you have not called AdvanceClusterTime, then the returned value is NULL.
(Read only property)

136.13.10 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.13.11 InTransaction as Boolean

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check whether a multi-document transaction is in progress for this session.
Notes: Returns true if a transaction was started and has not been committed or aborted, otherwise false.

(Read only property)

136.13.12 ServerID as UInt32

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the "server ID" of the mongos this session is pinned to.
Notes: A server ID or 0 if this session is not pinned.
(Read only property)

136.13.13 SessionID as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get the server-side "logical session ID" associated with this session as a JSON document.
Notes: (Read only property)

136.13.14 TransactionState as Integer

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the current transaction state for this session.
Notes: See transaction* constants.
(Read only property)

136.13.15 Constants

Transaction States

Constant	Value	Description
TransactionAborted	4	Aborted
TransactionCommitted	3	Committed
TransactionInProgress	2	In Progress
TransactionNone	0	Not yet initialized.
TransactionStarting	1	Starting transaction

136.14 class MongoSSLOptionsMBS

136.14.1 class MongoSSLOptionsMBS

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for MongoDB SSL Options.
Example:

```
const URL = "mongodb://localhost/"
Var uri As New MongoURIMBS(URL)

Var client As New MongoClientMBS(URI)

// we assign the options to point to the cacert.pem file
Var SSLOptions As New MongoSSLOptionsMBS
SSLOptions.CertificateAuthorityFile = "/Users/cs/cacert.pem"

client.SSLOptions = SSLOptions

Break
```

Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.4
- MBS Xojo Plugins, version 23.4pr1

136.14.2 Methods

136.14.3 Constructor

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes the object with default values.
Notes: Default is false for all boolean.

136.14.4 Properties

136.14.5 AllowInvalidCertificates as Boolean

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to do weaker certificate validation.
Notes: Default is false to disallow.
(Read and Write property)

136.14.6 AllowInvalidHostnames as Boolean

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether to allow invalid host names.
Notes: This allows you to disable hostname validation to allow to continue if the hostname doesn't match the certificate.

Default is false to disallow.
(Read and Write property)

136.14.7 CertificateAuthorityDirectory as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The native file path to the CA directory.
Notes: (Read and Write property)

136.14.8 CertificateAuthorityFile as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The native file path for a CA file.
Example:

```
const URL = "mongodb://localhost/"
Var uri As New MongoURIMBS(URL)

Var client As New MongoClientMBS(URI)

// we assign the options to point to the cacert.pem file
Var SSLOptions As New MongoSSLOptionsMBS
SSLOptions.CertificateAuthorityFile = "/Users/cs/cacert.pem"

client.SSLOptions = SSLOptions

Break
```

Notes: e.g. get such a file from CURL website:
https://curl.se/docs/caextract.html
(Read and Write property)

136.14.9 CertificateRevocationListFile as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The native file path to the Certificate revocation list file.
Notes: (Read and Write property)

136.14.10 ClientCertificateKeyFile as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The native path to the PEM file with the private key to use.
Notes: (Read and Write property)

136.14.11 ClientCertificateKeyPassword as String

MBS MongoDB Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The password for the PEM file with private key.
Notes: (Read and Write property)

136.15 class MongoStreamMBS

136.15.1 class MongoStreamMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This class provides a generic streaming IO abstraction based on a struct of pointers interface.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- News from the MBS Xojo Plugins Version 25.2
- MBS Xojo Plugins, version 25.2pr1

136.15.2 Methods

136.15.3 Close

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Closes the underlying file-descriptors.

136.15.4 Constructor

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

136.15.5 Flush

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flushes any buffered bytes in the underlying stream to the physical transport.
Notes: It mimics the API and semantics of fflush(), forcing a write of user space buffered data.

136.15.6 NewStreamFromFile(File as FolderItem) as MongoStreamMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new stream to read the given file path.

136.15.7 NewStreamFromPath(Path as String) as MongoStreamMBS

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new stream to read the given file path.
Example:

```
Var m As MongoStreamMBS = MongoStreamMBS.NewStreamFromPath("/Users/cs/Desktop/Installation.pdf")
Var data As String = m.ReadAll

Break
```

136.15.8 Read(ByteCount as Integer, MinBytes as Integer = -1) as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads data into string.
Notes: MinBytes: The minimum number of bytes to read or failure will be indicated.

136.15.9 ReadAll as String

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads all data from the stream.

136.15.10 ReadAllMemory as MemoryBlock

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads all data from the stream as MemoryBlock.

136.15.11 ReadMemory(ByteCount as Integer, MinBytes as Integer = -1) as MemoryBlock

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Reads data into MemoryBlock.
Notes: MinBytes: The minimum number of bytes to read or failure will be indicated.

136.15.12 Write(Data as MemoryBlock) as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Writes data to a stream.
Notes: Returns the number of bytes written on success,
See also:

- 136.15.13 Write(Data as String) as Integer 18170

136.15.13 Write(Data as String) as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Writes data to a stream.
Notes: Returns the number of bytes written on success,
See also:

- 136.15.12 Write(Data as MemoryBlock) as Integer 18170

136.15.14 Properties

136.15.15 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.15.16 ShouldRetry as Boolean

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether you should retry.
Notes: True if the stream is open and has encountered a retryable network error such as EAGAIN or if a TLS exchange is in progress and needs more data.
(Read only property)

136.15.17 TimeOut as Boolean

MBS MongoDB Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: True if there has been a network timeout error on this stream.
Notes: (Read only property)

136.16 class MongoURIMBS

136.16.1 class MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: MongoURIMBS provides an abstraction on top of the MongoDB connection URI format.
Example:

```
Var URL As String = "mongodb://myuser:mypass@localhost/"
Var URI As New MongoURIMBS(URL)

MessageBox URI.URI
```

Notes: It provides standardized parsing as well as convenience methods for extracting useful information such as replica hosts or authorization information.

136.16.2 Methods

136.16.3 Constructor(URI as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Parses a string containing a MongoDB style URI connection string.
Example:

```
Var URL as string = "mongodb://localhost/"
Var URI as new MongoURIMBS(URI)

MessageBox URI.URI
```

Notes: Raises a MongoExceptionMBS in case of a parsing error.
Examples of some valid MongoDB connection strings can be seen below.

- "mongodb://localhost/"
- "mongodb://localhost/?replicaSet=myreplset"
- "mongodb://myuser:mypass@localhost/"
- "mongodb://kerberosuser%40EXAMPLE.COM@example.com/?authMechanism=GSSAPI"
- "mongodb:// [::1] :27017/"
- "mongodb://10.0.0.1:27017,10.0.0.1:27018, [::1] :27019/?tls=true"
- "mongodb://%2Ftmp%2Fmongodb-27017.sock"
- "mongodb://user:pass@%2Ftmp%2Fmongodb-27017.sock"
- "mongodb://localhost, [::1] /mydb?authSource=mydb"

136.16.4 Copy as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the entire contents of a URI.

136.16.5 Properties

136.16.6 AppName as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The client application name.
Notes: This value is used by MongoDB when it logs connection information and profile information, such as slow queries.

Default: Empty (no appname)
(Read and Write property)

136.16.7 AuthMechanism as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Authentication mechanism.
Notes: Sets the ,ÄúauthMechanism,Äù URI option, such as ,ÄúSCRAM-SHA-1,Äù or ,ÄúGSSAPI,Äù, after the URI has been parsed from a string.
Updates the option in-place if already set, otherwise appends it to the URI,Äôs of options.
(Read and Write property)

136.16.8 AuthSource as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Authentication source.
Notes: Sets the ,ÄúauthSource,Äù URI option, after the URI has been parsed from a string.
Updates the option in-place if already set, otherwise appends it to the URI,Äôs options.
(Read and Write property)

136.16.9 Compressors as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets or sets compressors to use.
Notes: Sets the URI,Äôs compressors, after the URI has been parsed from a string. Will overwrite any previously set value.

Value is a text consisting of one or more comma (,) separated compressors (e.g. ,Äúsnappy,zlib,Äù) or "".
Passing "" clears any existing compressors set on uri.
(Read and Write property)

136.16.10 Credentials as String

MBS MongoDB Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries credentials as JSON.
Notes: (Read only property)

136.16.11 DatabaseName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the database portion of an URI if provided.
Notes: This is the portion after the / but before the ?.

Sets the URI's database, after the URI has been parsed from a string.

The driver authenticates to this database if the connection string includes authentication credentials. This database is used when you open the default database with DefaultDatabase function.
(Read and Write property)

136.16.12 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

136.16.13 Hosts as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches a linked list of hosts that were defined in the URI (the comma-separated host section).
Notes: (Read only property)

136.16.14 Options as String

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the options from the URL.
Notes: Fetches a JSON document containing all of the options provided after the ? of a URI.
Can be empty if not set.
(Read only property)

136.16.15 Password as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the password portion of an URI.
Example:

```
Var URL As String = "mongodb://myuser:mypass@localhost/"
Var URI As New MongoURIMBS(URL)

MessageBox URI.Password
```

Notes: (Read and Write property)

136.16.16 ServiceHostName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the hostname for the service.
Notes: (Read only property)

136.16.17 ServiceName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the service name.
Notes: (Read only property)

136.16.18 TLS as Boolean

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether this connection is set to be encrypted.
Notes: Fetches a boolean indicating if TLS was specified for use in the URI.

Returns a boolean, true indicating that TLS should be used. This returns true if any TLS option is specified. (Read only property)

136.16.19 URI as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the URI as a string.
Example:

```
Var URL as string = "mongodb://localhost/"
Var URI as new MongoURIMBS(URL)

MessageBox URI.URI
```

Notes: (Read only property)

136.16.20 UserName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Fetches the username portion of a URI.
Example:

```
Var URL as string = "mongodb://myuser:mypass@localhost/"
Var URI as new MongoURIMBS(URL)

MessageBox URI.UserName+EndOfLine+uri.Password
```

Notes: (Read and Write property)

136.16.21 Constants

Constants

Constant	Value	Description
DefaultPort	27017	The default port number.

Chapter 137

Natural Language

137.1 class NLContextualEmbeddingMBS

137.1.1 class NLContextualEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: A model that computes sequences of embedding vectors for natural language utterances.
Notes: NLContextualEmbeddingMBS provides a dense vector representation of natural language utterances using models trained with contextualized language understanding. Unlike static word embeddings provided by NLEmbeddingMBS, contextual embeddings dynamically adjust based on surrounding words, enabling deeper language comprehension.

If you are building text classification or word tagging models, you can use NLContextualEmbeddingMBS with Create ML by selecting MLTextClassifier.FeatureExtractorType.bertEmbedding as the feature extraction component in your model. For more information on how to create your own text classification model refer to Creating a text classifier model.

Note
For semantic similarity tasks, consider using NLEmbeddingMBS. To learn more on how to implement semantic similarity, refer to Finding similarities between pieces of text.

Before configuring your contextual embedding:

- Select a model that,Äôs appropriate for your target language when initializing the embedding.
- Call requestEmbeddingAssetsWithCompletionHandler: before computing the embedding to confirm assets are available.

Some models support multiple languages; for example, you can use the same object to compute embeddings for both English and Spanish. However, this isn,Äôt always the case —languages like English and Chinese may require separate models. For more information about supported languages, refer to languages.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr1

137.1.2 Methods

137.1.3 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Whether the class is available.
Example:

```
If NLContextualEmbeddingMBS.available Then
MessageBox "available"
Else
MessageBox "not available"
end if
```

Notes: Returns true on macOS 14, iOS 17 or newer.

137.1.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

137.1.5 contextualEmbeddingsForValues(values as Dictionary) as NLContextualEmbeddingMBS()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Returns contextual embedding models that match the specified language, script, or revision criteria.
Notes: The dictionaries has values using the NLContextualEmbeddingKeyLanguages, NLContextualEmbeddingKeyScripts and NLContextualEmbeddingKeyRevision constants.

137.1.6 contextualEmbeddingWithLanguage(language as String) as NLContextualEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a contextual embedding from a language.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

MessageBox n.modelIdentifier
```

Notes: language: The language the framework uses to find the most recent embedding suitable for the value you specify.

The language the framework uses to find the most recent embedding suitable for the value you specify.

137.1.7 contextualEmbeddingWithModelIdentifier(modelIdentifier as String) as NLContextualEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a contextual embedding from a model identifier.
Notes: modelIdentifier: A string that uniquely identifies the embedding model.

If you train a custom model with the contextual embedding as the feature layer, keep track of this identifier and use it when loading the custom model in your app.

137.1.8 contextualEmbeddingWithScript(script as String) as NLContextualEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a contextual embedding from a script.
Notes: script: The writing system the framework uses to find the most suitable system embedding for the value you specify; for example, Chinese or Latin.

137.1.9 embeddingResultForString(Text as String, Language as String = ””, byref Error as NSErrorMBS) as NLContextualEmbeddingResultMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Applies an embedding to a string and obtains the resulting embedding vectors.
Notes: Text: The string to apply an embedding to.
language: The language of the string.
error: On output, an error object that describes why the method failed, or nil if no error occurred.

Returns an embedding result. On failure, this method returns nil.

137.1.10 languages as String()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The languages that the contextual embedding supports.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)
Var languages() As String = n.languages

MessageBox String.FromArray(languages)
// shows: cs da de en es fi fr hr hu id it nb nl pl pt ro sk sv tr vi
```

Notes: Starting in iOS 17 and macOS 14, the framework supports 27 languages across three models:

- Latin —including Croatian, Czech, Danish, Dutch, English, Finnish, French, German, Hungarian, Indonesian, Italian, Norwegian, Polish, Portuguese, Romanian, Slovak, Swedish, Spanish, Turkish, and Vietnamese
- Cyrillic —including Bulgarian, Kazakh, Russian, and Ukrainian
- Chinese, Japanese, and Korean

In iOS 18 and macOS 15, the framework expands language support to include three additional models:

- Arabic
- Indic —including Bangla, Gujarati, Hindi, Kannada, Malayalam, Marathi, Punjabi, Tamil, Telugu, and Urdu
- Thai

137.1.11 Load(byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The instance method that loads the embedding model.
Notes: error: On output, a pointer to an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Returns a Boolean value that indicates whether the load succeeds. When you create a contextual embedding, the framework doesn,Äôt load the model until you need it. Use load and unload to control when to load and unload the model. The first time load can be expensive, make sure you load the model before you need to use it.

The method fails if the necessary assets aren,Äôt on device for the model you specify. Use hasAvailableAssets and requestEmbeddingAssets to manage the assets.

137.1.12 NLContextualEmbeddingKeyLanguages as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Dictionary key for the languages.
Notes: For use with contextualEmbeddingsForValues function.

137.1.13 NLContextualEmbeddingKeyRevision as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Dictionary key for the revision.
Notes: For use with contextualEmbeddingsForValues function.

137.1.14 NLContextualEmbeddingKeyScripts as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Dictionary key for the scripts.
Notes: For use with contextualEmbeddingsForValues function.

137.1.15 requestEmbeddingAssets

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Requests embedding model assets and downloads them if available.
Notes: You use a contextual embedding after loading the necessary assets onto the device. Use hasAvailableAssets to determine whether assets are available. This method returns immediately if the framework knows the state of the assets or if an error occurs.

Calls requestEmbeddingAssetsCompleted later when finished.

137.1.16 scripts as String()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The writing systems that the language uses.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)
Var scripts() As String = n.scripts

MessageBox String.FromArray(scripts)
// shows: Latn
```

Notes: The current scripts that are supported by NLContextualEmbedding include:

- Arabic
- Cyrillic
- Chinese, Japanese, and Korean
- Indic
- Latin
- Thai

For the specific languages that each script supports, refer to languages.

137.1.17 unload

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The instance method that unloads the embedding model.

137.1.18 Properties

137.1.19 dimension as UInt64

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The dimensionality of the embedding vectors generated by the model.
Notes: (Read only property)

137.1.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

137.1.21 hasAvailableAssets as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether assets are available on-device.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

If n.hasAvailableAssets Then
MessageBox "all things locally installed"
Else
n.requestEmbeddingAssets
MessageBox "loading..."
end if
```

Notes: (Read only property)

137.1.22 maximumSequenceLength as UInt64

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The maximum number of tokens in sequence for which the embedding generates vectors.
Example:

```
const lang = "en"
```

```
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

MessageBox "maximumSequenceLength: "+n.maximumSequenceLength.ToString
```

Notes: The model operates on subword tokens rather than whole words. Each token may represent a single character, part of a word, or (less commonly) an entire word. Most words are split into multiple tokens, especially rare or complex terms. As a result, the number of tokens in a sequence is often greater than the number of words.

Inputs longer than the token limit will be truncated, and only the first maximumSequenceLength tokens will be processed to generate embeddings.

NLContextualEmbedding works best with text snippets at the sentence or paragraph level. The model truncates text that exceeds this maximum length and only processes the truncated portion of the input.
(Read only property)

137.1.23 modelIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: A string that uniquely identifies the embedding model.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

MessageBox n.modelIdentifier
```

Notes: Use the same model identifier that you developed and tested your app with to maintain consistent results.
(Read only property)

137.1.24 revision as UInt64

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The version number the contextual embedding uses.
Notes: Ensure your app uses the same model revision you used during development and testing to maintain consistent results.
(Read only property)

137.1.25 Events

137.1.26 requestEmbeddingAssetsCompleted(result as Integer, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The event that notifies your app when the asset request completes.

137.1.27 Constants

RequestEmbeddingAssets Results

Constant	Value	Description
NLContextualEmbeddingAssetsResultAvailable	0	A result that indicates that the assets are present on-device
NLContextualEmbeddingAssetsResultError	2	A result that indicates the framework encounters an error.
NLContextualEmbeddingAssetsResultNotAvailable	1	A result that indicates that the assets aren,Äôt present on-d

137.2 class NLContextualEmbeddingResultMBS

137.2.1 class NLContextualEmbeddingResultMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: An object that represents the embedding vector result from applying a contextual embedding to a string.
Notes: This object returns embeddings at the subword level, meaning a single word may generate multiple vectors, especially for rare or complex terms. If you need to work with whole-word embeddings or create single representations for entire text inputs, pool or combine subword vectors.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr1

137.2.2 Methods

137.2.3 averageToken as NLContextualEmbeddingResultVectorMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Calculates an average over the vectors in the result.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

var e as NSErrorMBS
var r1 as NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hello World", lang, e)
Var r2 As NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hallo World", lang, e)

Var average1 As NLContextualEmbeddingResultVectorMBS = r1.averageToken
Var average2 As NLContextualEmbeddingResultVectorMBS = r2.averageToken

Var compare As Double = average1.cosineSimilarity(average2)

MessageBox compare.ToString // 0.93
```

Notes: The "Hello World" has six tokens. We sum them up and later divide by count to get the average.

137.2.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

137.2.5 tokenVectorAtIndex(characterIndex as Integer) as NLContextualEmbeddingResultVectorMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Returns a token vector at the specified character index.
Notes: characterIndex: The index to get the token vector at.

137.2.6 tokenVectors as NLContextualEmbeddingResultVectorMBS()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Provides the embedding vectors corresponding to the result.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

var e as NSErrorMBS
var r as NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hello World", lang, e)

Var tokenVectors() As NLContextualEmbeddingResultVectorMBS = r.tokenVectors
Break // inspect array in debugger
```

Notes: Use this method to access the individual (subword) token embeddings. You can apply pooling or combination techniques to aggregate these subword vectors into a single representation for a word, phrase, or entire input.

Common pooling techniques include:

- Mean pooling to take the average of subword vectors.
- Max pooling for finding the element-wise maximum across tokens.
- Use the embeddings of the first or last subword tokens to represent the entire input.

137.2.7 Properties

137.2.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

137.2.9 Language as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The language that the framework identified or used when processing the input string.
Notes: e.g. "en" for English.
(Read only property)

137.2.10 SequenceLength as UInt64

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The number of embedding vectors the request generates.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

var e as NSErrorMBS
var r as NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hello World", lang, e)

MessageBox r.SequenceLength.ToString+" tokens"
```

Notes: (Read only property)

137.2.11 Text as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: A copy of the input string used to generate the embedding vectors.
Notes: (Read only property)

137.3 class NLContextualEmbeddingResultVectorMBS

137.3.1 class NLContextualEmbeddingResultVectorMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The class for a vector.
Notes: An utility class to store a vector, the range and text for it.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr1

137.3.2 Methods

137.3.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

137.3.4 cosineSimilarity(other as NLContextualEmbeddingResultVectorMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Utility function to calculate the cosine similarity between two vectors.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

// we make vectors for two similar texts
var e as NSErrorMBS
var r1 as NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hello World", lang, e)
Var r2 As NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hallo World", lang, e)

Var average1 As NLContextualEmbeddingResultVectorMBS = r1.averageToken
Var average2 As NLContextualEmbeddingResultVectorMBS = r2.averageToken

Var compare As Double = average1.cosineSimilarity(average2)

MessageBox compare.ToString // 0.93
```

Notes: Returns 1 if equal or 0 if not.

137.3.5 values as Single()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The vector as array.

137.3.6 Properties

137.3.7 Data as Ptr

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The data pointer for the vector data.
Example:

```
const lang = "en"
Var n As NLContextualEmbeddingMBS = NLContextualEmbeddingMBS.contextualEmbeddingWithLanguage(lang)

var e as NSErrorMBS
var r as NLContextualEmbeddingResultMBS = n.embeddingResultForString("Hello World", lang, e)

Var firstVector As NLContextualEmbeddingResultVectorMBS = r.tokenVectorAtIndex(0)
Var data As Ptr = firstVector.Data

// show first 4 values
MessageBox data.Single(0).ToString+EndOfLine+data.Single(4).ToString+EndOfLine+_
data.Single(8).ToString+EndOfLine+data.Single(12).ToString
```

Notes: Currently 512 single precision values.
(Read only property)

137.3.8 Length as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The length of the text range.
Notes: (Read only property)

137.3.9 Position as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The position of the text range.
Notes: (Read only property)

137.3.10 Text as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The text for the range.
Notes: (Read only property)

137.4 class NLEmbeddingMBS

137.4.1 class NLEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: A map of strings to vectors, which locates neighboring, similar strings.
Notes: Use an NLEmbedding to find similar strings based on the proximity of their vectors. The vocabulary is the entire set of strings in an embedding. Each string in the vocabulary has a vector, which is an array of doubles, and each double corresponds to a dimension in the embedding. An NLEmbedding uses these vectors to determine the distance between two strings, or to find the nearest neighbors of a string in the vocabulary. The higher the similarity of any two strings, the smaller the distance is between them.

Natural Language provides built-in word embeddings that you can retrieve by using the wordEmbeddingFor-Language: method. You can also compile your own custom embedding into an efficient, searchable, on-disk representation. Typically, you compile an embedding by using Create ML,Äôs MLWordEmbedding and save it as a file for your Xcode project at development time.

Your custom embedding can use any kind of string that,Äôs useful to your app, such as phrases, brand names, serial numbers, and so on. For example, you could make an embedding of movie titles. Each movie title could have a vector that places similar movies close together in the embedding.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr1

137.4.2 Methods

137.4.3 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Whether the class is available.
Example:

```
If NLEmbeddingMBS.available Then
MessageBox "available"
Else
MessageBox "not available"
end if
```

Notes: Returns on macOS 10.15, iOS 13.0 or newer.

137.4.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

137.4.5 containsString(Text as String) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Requests a Boolean value that indicates whether the term is in the vocabulary.
Notes: Text: The term to search for in the word embedding.

Retruns true if the term is in the word embedding,Äôs vocabulary, otherwise false.

137.4.6 currentRevisionForLanguage(language as String) as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: etrieves the current version of a sentence embedding for the given language.
Notes: language: A language supported by the Natural Language framework.

Returns an integer representing the current version number of a sentence embedding.

137.4.7 currentSentenceEmbeddingRevisionForLanguage(language as String) as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the current version of a sentence embedding for the given language.
Notes: language: A language supported by the Natural Language framework. For possible values, see

Returna an integer representing the current version number of a sentence embedding.

137.4.8 distanceBetweenString(firstString as String, secondString as String, distanceType as Integer = 0) as double

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Calculates the distance between two strings in the vocabulary space.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("en")
var distance as double = e.distanceBetweenString("bicycle", "motorcycle")

Break // shows 0.76
```

Notes: firstString: A string in the embedding vocabulary.
secondString: Another string in the embedding vocabulary.
distanceType: A means of calculating distance that determines which formula the method uses to evaluate the distance between firstString and secondString.

Returns the distance associated with distanceType.

137.4.9 embeddingWithContents(File as FolderItem, byref error as NSErrorMBS) as NLEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a word embedding from a model file.
Notes: File: The location of the .mlmodel file that contains a word embedding.
error: On output, a pointer to an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Use this initializer to create a word embedding from an .mlmodel file saved by Create ML,Äôs MLWordEmbedding.
See also:

- 137.4.10 embeddingWithContents(Path as String, byref error as NSErrorMBS) as NLEmbeddingMBS 18196

137.4.10 embeddingWithContents(Path as String, byref error as NSErrorMBS) as NLEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Creates a word embedding from a model file.
Notes: Path: The location of the .mlmodel file that contains a word embedding.
error: On output, a pointer to an error object that describes why the method failed, or nil if no error occurred. If you are not interested in the error information, pass nil for this parameter.

Use this initializer to create a word embedding from an .mlmodel file saved by Create ML,Äôs MLWordEm-

bedding.
See also:

- 137.4.9 embeddingWithContents(File as FolderItem, byref error as NSErrorMBS) as NLEmbeddingMBS 18196

137.4.11 neighborsForString(text as String, maximumCount as Integer, maximumDistance as double = 0.0, distanceType as Integer = 0) as NLEmbeddingNeighborMBS()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a limited number of strings near a string in the vocabulary.
Notes: text: A string in the embedding vocabulary.
maximumCount: The largest number of neighboring strings that the method can return in an array.
distanceType: A means of calculating distance that determines which formula the method uses to evaluate a neighbor,Äôs distance from string.

Return an array of neighbors.

137.4.12 neighborsForVector(vectorValues() as single, maximumCount as Integer, maximumDistance as double = 0.0, distanceType as Integer = 0) as NLEmbeddingNeighborMBS()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Passes the nearest strings, within a radius of a location in the vocabulary space, to a block.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("en")
Var vector() as single = e.vectorForString("cat")
Var neighbors() As NLEmbeddingNeighborMBS = e.neighborsForVector(vector, 5)

Break // shows: feline, kitten, dog, tabby, pet
```

Notes: vector: A location in the vocabulary space.
maxCount: The largest number of times the method calls block.
distanceType: A means of calculating distance that determines which formula the method uses to evaluate a neighbor,Äôs distance from vector.

137.4.13 neighborStringsForString(text as String, maximumCount as Integer, maximumDistance as double = 0.0, distanceType as Integer = 0) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a limited number of strings near a string in the vocabulary.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("en")

Var neighbors() As String = e.neighborStringsForString("cat", 5)

Break // shows: feline, kitten, dog, tabby, pet
```

Notes: text: A string in the embedding vocabulary.
maximumCount: The largest number of neighboring strings that the method can return in an array.
distanceType: A means of calculating distance that determines which formula the method uses to evaluate a neighbor,Äôs distance from string.

Return an array of strings.

137.4.14 neighborStringsForVector(vectorValues() as single, maximumCount as Integer, maximumDistance as double = 0.0, distanceType as Integer = 0) as String()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a limited number of strings within a radius of a location in the vocabulary space.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("en")
Var vector() as single = e.vectorForString("cat")
Var neighbors() As String = e.neighborStringsForVector(vector, 5)

Break // shows: feline, kitten, dog, tabby, pet
```

Notes: vector: A location in the vocabulary space.
maxCount: The largest number of neighboring strings that the method can return in an array.
maxDistance: The largest distance a neighbor can be from vector.
distanceType: A means of calculating distance that determines which formula the method uses to evaluate a neighbor,Äôs distance from vector.

Return an array of strings.

137.4.15 sentenceEmbeddingForLanguage(language as String, Revision as Integer = -1) as NLEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a sentence embedding for a given language and revision.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.sentenceEmbeddingForLanguage("de")
Var vectorValues() As Single = e.vectorForString("Hello World")

Break
```

Notes: language: The language of the sentence embedding, such as "fr".
revision: Optionally the revision of the sentence embedding.

Returns an NLEmbedding if available, otherwise nil.

137.4.16 supportedRevisionsForLanguage(language as String) as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves all version numbers of a word embedding for the given language.
Notes: language: A language supported by the Natural Language framework.

Returns an index set.

137.4.17 supportedSentenceEmbeddingRevisionsForLanguage(language as String) as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves all version numbers of a sentence embedding for the given language.
Notes: language: A language supported by the Natural Language framework.

Returns an index set representing all of the supported version numbers of the sentence embedding.

137.4.18 vectorForString(text as String) as Single()

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Requests the vector for the given term.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.sentenceEmbeddingForLanguage("de")
Var vectorValues() As Single = e.vectorForString("Hello World")

Break
```

Notes: Text: The term to find in the word embedding.

Returns a vector represented as an array of doubles if present in the word embedding, otherwise nil.

137.4.19 wordEmbeddingForLanguage(language as String, Revision as Integer = -1) as NLEmbeddingMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a word embedding for a given language and revision.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("en")
Var vectorValues() As Single = e.vectorForString("a")

Break
```

Notes: language: The language of the word embedding, such as "fr".
revision: Optionally the revision of the word embedding.

Returns an NLEmbedding if available, otherwise nil.

137.4.20 Properties

137.4.21 dimension as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The number of dimensions in the vocabulary,Äôs vector space.
Notes: (Read only property)

137.4.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

137.4.23 Language as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The language of the text in the word embedding.
Example:

```
Var e As NLEmbeddingMBS = NLEmbeddingMBS.wordEmbeddingForLanguage("de")

MessageBox e.Language
```

Notes: (Read only property)

137.4.24 revision as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The revision of the word embedding.
Notes: (Read only property)

137.4.25 vocabularySize as Integer

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The number of words in the vocabulary.
Notes: (Read only property)

137.4.26 Constants

Constants

Constant	Value	Description
NLDistanceTypeCosine	0	The means of calculating a distance between two locations in a text embedding. The meaning of an distance is directly related to the NLDistanceType you use when you call a method that uses it. For example, if you use the neighborsForString method and use NLDistanceTypeCosine for the distanceType parameter, the method calculates the cosine distance and returns it as an NLDistance.

137.5 class NLEmbeddingNeighborMBS

137.5.1 class NLEmbeddingNeighborMBS

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The class for a neighbor with a distance.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 26.2pr1

137.5.2 Methods

137.5.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

137.5.4 Properties

137.5.5 Distance as Double

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The distance for the neighbor.
Notes: (Read only property)

137.5.6 Text as String

MBS MacFrameworks Plugin, Plugin Version: 26.2, Platforms: macOS, iOS, Targets: All.

Function: The text for the neighbor.
Notes: (Read only property)

Chapter 138

Navigation

138.1 class NSOpenPanelMBS

138.1.1 class NSOpenPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The class for the Cocoa Open Panel.
Notes: Subclass of the NSSavePanelMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

138.1.2 Methods

138.1.3 beginForDirectory(path as folderitem, name as string, filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a modeless Open panel.
Notes: path:

Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in absoluteDirectoryPath that is selected when the Open panel is presented to the user. When nil, no file is initially selected.

fileTypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in path selectable by the user.

This method will later called the savePanelDidEnd event.

138.1.4 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as DesktopWindow)

MBS MacCocoa Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Presents a sheet Open panel on a given window.
Notes: path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in path that is selected when the Open panel is presented to the user. When "", no file is initially selected.

filetypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in absoluteDirectoryPath selectable by the user.

targetWindow:
Window to open the sheet on.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 138.1.5 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow

as window) 18207

138.1.5 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a sheet Open panel on a given window.
Notes: path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in path that is selected when the Open panel is presented to the user. When "", no file is initially selected.

filetypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in absoluteDirectoryPath selectable by the user.

targetWindow:
Window to open the sheet on.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 138.1.4 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as DesktopWindow) 18206

138.1.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The constructor which initializes the panel with default values.

138.1.7 Files as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Queries all folderitems.
See also:

- 138.1.8 Files(index as UInt32) as folderitem 18208

138.1.8 Files(index as UInt32) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The array of files.
Notes: Index is zero based.
See also:

- 138.1.7 Files as FolderItem() 18207

138.1.9 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience version of the runModalForDirectory function which passes one filetype instead of an array of file types.
Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 138.1.10 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer 18208

138.1.10 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Runs the panel as a modal dialog with the given filetypes.
Notes: path is the directory to use as a start point. Pass nil to use the last directory which has been used.

filetypes:
The filetypes you want to allow.

See NSCancelButton and NSOkButton constants for return values.
See also:

- 138.1.9 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer 18208

138.1.11 runModalForTypes(filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience version of the runModalForTypes function which passes one filetype instead of an array of file types.
Example:

```
Var dlg As New NSOpenPanelMBS
Var iResult as Integer = dlg.runModalForTypes("jpg")
```

Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 138.1.12 runModalForTypes(filetypes() as string) as Integer 18209

138.1.12 runModalForTypes(filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Runs the panel as a modal dialog with the given filetypes.
Example:

```
Var dlg As New NSOpenPanelMBS
Var types() as string = array("jpg", "tif")
Var iResult as Integer = dlg.runModalForTypes(types)
```

Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 138.1.11 runModalForTypes(filetypes as string) as Integer 18209

138.1.13 URL(index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The array of file URLs.
Notes: Index is zero based.

138.1.14 URLs as String()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Queries all URLs.

138.1.15 Properties

138.1.16 AccessoryViewDisclosed as Boolean

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the panel's accessory view is visible.
Notes: The value of this property is true when the accessory view is visible, and false when it isn't. Setting the value of this property programmatically changes the visibility of the accessory panel. If no accessory panel is present, setting this property does nothing.
(Read and Write property)

138.1.17 allowsMultipleSelection as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel's browser allows the user to open multiple files (and directories) at a time.
Notes: (Read and Write property)

138.1.18 canChooseDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the user can select directories in the pane's browser.
Notes: When a directory is selected, the OK button is enabled only if flag is true.
(Read and Write property)

138.1.19 canChooseFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel allows the user to choose files to open.
Notes: (Read and Write property)

138.1.20 canDownloadUbiquitousContents as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Controls how the receiver responds to ubiquitous documents that aren't yet fully downloaded locally.
Notes: If true, then the receiver will disallow opening non-local ubiquitous files. Also, if the user attempts

to select a non-local file, the receiver will trigger or reprioritize downloading for that file so that it can be opened as soon as possible. If false, then the receiver will allow the user to select and open non-local files, giving your application responsibility for downloading and reporting progress. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and download the file's contents (with NSFileCoordinator) and show downloading progress (with NSProgress or NSMetadataQuery) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

138.1.21 canResolveUbiquitousConflicts as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Controls how the receiver responds to ubiquitous documents with conflicting versions.
Notes: If true, then when the user attempts to open one or more documents with conflicts, the receiver will first display conflict resolution UI, requiring the user to resolve those conflicts before the documents can be opened. If false, then the receiver does nothing in response to conflicts, allowing your application to handle them. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and do conflict detection and resolution (using NSURLUbiquitousItemHasUnresolvedConflictsKey and NSFileVersion) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

138.1.22 FilesCount as UInt32

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The number of selected files.
Notes: (Read only property)

138.1.23 resolvesAliases as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver resolves aliases.
Notes: If true, the effect is that dropping an alias on the panel or asking for filenames returns the resolved aliases. The default is true.
(Read and Write property)

138.2 class NSSavePanelMBS

138.2.1 class NSSavePanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The class for a Cocoa Save Panel.
Example:

```
Var n as new NSSavePanelMBS

Var e as integer = n.runModal

if e = n.NSCancelButton then
// cancelled
Break
elseif e = n.NSOKButton then
// got file
Var file as FolderItem = n.file
Break
end if
```

Notes: Subclass of the NSPanelMBS class.

138.2.2 Methods

138.2.3 allowedFileTypes as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns an array of the allowed file types.
Notes: If the user specifies a file whose type is in the array of allowed types, the user is not presented with another dialog (see allowsOtherFileTypes for details about this dialog) when trying to save. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this attribute. A nil return value, which is the default, indicates that the user can save to any ASCII file.

Available in Mac OS X v10.3 and later.

138.2.4 beginSheetForDirectory(path as folderitem, name as string, targetWindow as DesktopWindow)

MBS MacCocoa Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Presents a Save panel as a sheet with the directory specified by path and optionally, the file specified by name selected.
Notes: If targetWindow is nil, the panel will be a modal dialog.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 138.2.5 beginSheetForDirectory(path as folderitem, name as string, targetWindow as window) 18214

138.2.5 beginSheetForDirectory(path as folderitem, name as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a Save panel as a sheet with the directory specified by path and optionally, the file specified by name selected.
Notes: If targetWindow is nil, the panel will be a modal dialog.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 138.2.4 beginSheetForDirectory(path as folderitem, name as string, targetWindow as DesktopWindow) 18214

138.2.6 Cancel

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: You can cancel the dialog using this method.

138.2.7 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The constructor which initializes the panel with default values.

138.2.8 File as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The file currently shown in the panel.
Notes: May be nil.

138.2.9 FileTypeForHFSType(hfstype as string) as string

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Returns a string encoding a file type code.
Example:

```
Var n as new NSSavePanelMBS

MsgBox n.FileTypeForHFSType("TEXT") // shows 'TEXT'
```

Notes: When using Mac Type codes, you need to use this function to convert them in a string the file manager understands.

138.2.10 HideNSNavNodePopUpButton

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Hides the nagivation popup menu.
Notes: This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.

138.2.11 Ok

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: You can click ok in the dialog using this method.

138.2.12 runModal as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop with the current working (or last selected) directory as the default starting point.
Example:

```
Var n as new NSSavePanelMBS

Var e as integer = n.runModal

if e = n.NSCancelButton then
// cancelled
Break
elseif e = n.NSOKButton then
// got file
Var file as FolderItem = n.file
Break
end if
```

Notes: Returns NSOKButton or NSCancelButton or -1 on any error.

138.2.13 runModalForDirectory(path as folderitem, name as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Initializes the panel to the directory specified by path and, optionally, the file specified by filename, then displays it and begins its modal event loop; path and filename can be empty strings.

Notes: If path is nil, the previous directory the Save panel was in is used.
See NSCancelButton and NSOkButton constants for return values.

138.2.14 setAllowedFileTypes(filetype as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience method for setAllowedFileTypes with only one file type.
See also:

- 138.2.15 setAllowedFileTypes(filetypes() as string) 18217

138.2.15 setAllowedFileTypes(filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Specifies the allowed file types.
Notes: A file type is an extension to be appended to any selected files that don't already have that extension; "nib" and "rtf" are examples. The items in types should not include the period that begins the extension. File type strings encoding HFS file types are not valid values. Pass an empty array, to allow any file type, which is the default.
See also:

- 138.2.14 setAllowedFileTypes(filetype as string) 18217

138.2.16 setTagNames(tagNames() as string)

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

Function: Sets the tag names that you want to include on a saved file.
Example:

```
Var n as new NSSavePanelMBS
n.showsTagField = true
n.setTagNames array("test")
```

Notes: When the value of showsTagField is true, use this property to provide an array of strings that represent the initial tag names to display in the panel. If you set the property to nil or an empty array, the panel displays no initial tag names.

138.2.17 tagNames as string()

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

Function: The tag names that you want to include on a saved file.
Notes: When the value of showsTagField is true, use this property to provide an array of strings that represent the initial tag names to display in the panel. If you set the property to nil or an empty array, the panel displays no initial tag names.

138.2.18 validateVisibleColumns

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Validates and possibly reloads the browser columns visible in the receiver by invoking the delegate method shouldShowFilename.
Notes: You might use this method if you want the browser to only allow selection of files with certain extensions based on the selection made in an accessory-view pop-up list. When the user changes the selection, you would invoke this method to revalidate the visible columns.

138.2.19 Properties

138.2.20 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The custom accessory view for the current application.
Notes: You can place any Cocoa control on that panel.
(Read and Write property)

138.2.21 allowsOtherFileTypes as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver allows the user to save files with an extension that's not in the list of allowed types.
Notes: If the user tries to save a filename with a recognized extension that's not in the list of allowed types they are presented with a dialog. If this property is true, then the dialog presents the option of using the extension the user specified.

The default setting is false.
(Read and Write property)

138.2.22 canCreateDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver allows the user to create directories.
Notes: (Read and Write property)

138.2.23 canSelectHiddenExtension as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver allows the user to hide or show extensions.
Notes: (Read and Write property)

138.2.24 Directory as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The path of the directory currently shown in the panel.
Notes: May be nil on any error.
(Read and Write property)

138.2.25 directoryURL as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The directory shown in the panel as a URL.
Notes: Available in Mac OS X v10.6 and later.
(Read and Write property)

138.2.26 isExpanded as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel is expanded.
Notes: (Read only property)

138.2.27 isExtensionHidden as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the extension-hiding checkbox is visible and checked.
Notes: True to show the checkbox and false to hide.
(Read and Write property)

138.2.28 Message as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The message displayed in the panel.
Notes: The default message text is an empty string.
(Read and Write property)

138.2.29 NameFieldLabel as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The string displayed in front of the filename text field.
Notes: By default the label is "Save As:".
(Read and Write property)

138.2.30 nameFieldStringValue as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The user-editable filename currently shown in the name field.
Notes: Available in Mac OS X v10.6 and later.
(Read and Write property)

138.2.31 Prompt as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The prompt of the default button.
Notes: This prompt appears on all SavePanel objects (or all OpenPanel objects if the panel of this message is an NSOpenPanel instance) in your application. By default the text in the default button is "Open" for an Open panel and "Save" for a Save panel.

It is intended that short words or phrases, such as "Open", "Save", "Set", or "Choose", be used on the button. The button is not resized to accommodate long prompts.

Since this method previously affected a title field, any colon at the end of prompt is removed.
(Read and Write property)

138.2.32 requiredFileType as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The required file type (if any).
Notes: A file specified in the Save panel is saved with the designated filename and this file type as an extension. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this attribute. An "" return value indicates that the user can save to any ASCII file.

This method is equivalent to calling allowedFileTypes and returning the first element of the list of allowed types, or "" if there are none.
(Read and Write property)

138.2.33 showsHiddenFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether to show or hide the invisible files.
Notes: This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.
(Read and Write property)

138.2.34 showsTagField as Boolean

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the panel displays the Tags field.
Example:

```
Var n as new NSSavePanelMBS
n.showsTagField = true
n.setTagNames array("test")
```

Notes: When the value of this property is true, the panel displays the Tags field; if NO, the panel doesn,Äôt display the Tags field. The default value is true. (Note that the Tags field is appropriate only in a Save panel.)
If you set this property to true, you are responsible for setting tag names on the resulting file after saving is complete. If you don,Äôt set this property, macOS will automatically show the tag field and attempt to

apply the tags to the file. To set tags on files, use the NSURLTagNamesKey.
(Read and Write property)

138.2.35 Title as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The title of the panel.
Notes: (Read and Write property)

138.2.36 treatsFilePackagesAsDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the panel displays file packages to the user as directories.
Notes: (Read and Write property)

138.2.37 Events

138.2.38 compareFilename(name1 as string, name2 as string, caseSensitive as boolean) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Controls the ordering of files presented by the NSSavePanel.
Notes: If this event has no code, the default behavior is used.

The caseSensitive argument, if true, indicates that the ordering is to be case-sensitive.

Don't reorder filenames in the Save panel without good reason, because it may confuse the user to have files in one Save panel or Open panel ordered differently than those in other such panels or in the Finder. The default behavior of Save and Open panels is to order files as they appear in the Finder. Note also that by implementing this method you will reduce the operating performance of the panel.

Constants:
const NSOrderedAscending=-1 // The left operand is smaller than the right operand.
const NSOrderedSame=0 // The two operands are equal.
const NSOrderedDescending=1 // The left operand is greater than the right operand.

138.2.39 directoryDidChange(path as string, folder as folderitem)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Sent when the user has changed the selected directory in the panel.
Notes: If this event has no code, the default behavior is used.

138.2.40 isValidFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Gives the delegate the opportunity to validate selected items.
Notes: If this event has no code, the default behavior is used.

The NSSavePanel object sender sends this event just before the end of a modal session for each filename displayed or selected (including filenames in multiple selections). The event determines whether it wants the file identified by filename; it returns true if the filename is valid, or false if the save panel should stay in its modal loop and wait for the user to type in or select a different filename or names. If the event refuses a filename in a multiple selection, none of the filenames in the selection is accepted.

138.2.41 panelSelectionDidChange

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The event called whenever the selection changed in the dialog.
Notes: If this event has no code, the default behavior is used.

138.2.42 savePanelDidEnd(ReturnCode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The save panel finished in sheet mode.
Notes: Returncode is NSOKButton or NSCancelButton.

138.2.43 shouldShowFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Gives the delegate the opportunity to filter items that it doesn't want the user to choose.
Notes: If this event has no code, the default behavior is used.

The NSSavePanel sends this event for each file or directory (filename) it is about to load in the browser. The delegate returns true if filename should be selectable, and false if the save panel should disable the file or directory.

138.2.44 userEnteredFilename(filename as string, confirmed as boolean) as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Sent when the user confirms a filename choice by hitting OK or Return in the NSSavePanel.
Notes: You can either leave the filename alone, return a new filename, or return "" to cancel the save (and leave the Save panel as is). This method is sent before any required extension is appended to the filename and before the Save panel asks the user whether to replace an existing file.

Note that in the future, this method may be called multiple times in the sessions as the user types. In those cases, okFlag will be false until the user confirms the choice, in which case okFlag will become true. If the delegate does extensive validation or puts up alerts, it should do so only when okFlag is true.

If this event has no code, the default behavior is used.

138.2.45 willExpand(expanding as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Sent when the NSSavePanel is about to expand or collapse because the user clicked the disclosure triangle that displays or hides the file browser.
Notes: If this event has no code, the default behavior is used.

138.2.46 Constants

Constants

Constant	Value	Description
NSCancelButton	0	One of the result codes you may need with this class.
NSOKButton	1	One of the result codes you may need with this class.

138.3 class OpenDialogFileTypeMBS

138.3.1 class OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for a file type for the OpenDialog class.
Notes: For Cocoa, only the type field is used and can be an UTI or file extension.

138.3.2 Methods

138.3.3 Close

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

138.3.4 Properties

138.3.5 Extension as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The extension for this filetype.
Notes: Currently this value is only used on Windows.
Value e.g. "*.TXT" or "*.TXT;*.BMP".

Use a value like "*.TXT" or to match multiple types, list multiple extensions separated by semicolons like this: "*.TXT;*.BMP".

With version 8.2, we use extensions also for MacOS.
(Read and Write property)

138.3.6 Name as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The name of this file type.
Notes: Currently this value is only used on Windows.

(Read and Write property)

138.3.7 Type as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The Mac OS type code for this file type.
Notes: Currently this value is only used on Mac OS.
And check the documenation on the Navigation Manager if you use it as you will need a KIND Resource for this.

For Cocoa, only the type field is used and can be an UTI or file extension.
(Read and Write property)

138.4 class OpenDialogItemMBS

138.4.1 class OpenDialogItemMBS

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The class for an item selected via open dialog.
Notes: Currently only used for Windows.
Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0pr7

138.4.2 Methods

138.4.3 ReadData as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Reads the data.
Notes: We try to get a stream for the data from Windows and then read all available data.

138.4.4 Properties

138.4.5 Handle as Integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The internal object handle.
Notes: Points to an IShellItem object.
(Read and Write property)

138.4.6 Name as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The display name of the file.
Notes: (Read and Write property)

138.4.7 Path as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The file path of the file.
Notes: Not available for virtual files.
(Read and Write property)

138.4.8 URL as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The URL of the file.
Notes: Not available for virtual files.
(Read and Write property)

138.5 class OpenDialogMBS

138.5.1 class OpenDialogMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for a multiple selection open dialog.
Example:

```
Var o as OpenDialogMBS
Var i,c as Integer
Var f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.ShowDialog

c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next

else
// MsgBox "no file was selected."
quit
end if
```

Notes: OpenDialogMBS does not yet use NSOpenPanel yet. So for Cocoa applications you can use NSOpenPanelMBS class directly. For the Mac App Store, you must use NSOpenPanelMBS and avoid OpenDialogMBS.

138.5.2 Methods

138.5.3 AddType(t as OpenDialogFileTypeMBS)

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Adds a file type to the list.

138.5.4 ClearTypes

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Clears the file type list.

138.5.5 CountTypes as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Returns the number of file types in the file type list.

138.5.6 Files as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries an array with all files picked.
See also:

• 138.5.7 Files(index as Integer) as folderitem 18231

138.5.7 Files(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The array with the selected files.
Notes: Index goes from 0 to filecount-1.
See also:

• 138.5.6 Files as FolderItem() 18230

138.5.8 GetCustomImageHeight as Integer

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Returns the heigh of the custom picture in pixels.
Example:

```
Var o as new OpenDialogMBS
msgbox "GetCustomImageHeight: "+str(o.GetCustomImageHeight) // could show 72 as value.
```

Notes: The height depends on the size of the Windows system font, so it's variable and this function calculates the size for you.

Returns 0 on any error.

138.5.9 GetType(index as Integer) as OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Returns the file type with the given index.
Notes: Returns nil on any error.

138.5.10 Items as OpenDialogItemMBS()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries items picked.
Notes: Currently only provided for Windows to get name, path, URL or data for items, which may not always have a file path.

138.5.11 RefreshCustomImage

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Call this method after you set the custompicture property to update the window.
Notes: The control is asked to redraw and will use the CustomPicture property for the picture content. Space around is colored with window background color.

138.5.12 ShowDialog

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Shows the dialog.
Example:

```
Var o as new OpenDialogMBS
o.ShowDialog
```

Notes: Check the FileCount property to see whether something was selected.

138.5.13 Properties

138.5.14 accessoryView as Variant

MBS Util Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Customizes the panel for the application by adding a custom view to the panel.
Notes: Only for Cocoa target. Must be a NSViewMBS or subclass.

The custom object that is added appears just above the OK and Cancel buttons at the bottom of the panel. The open panel automatically resizes itself to accommodate the view. You can invoke this method repeatedly to change the accessory view as needed. If view is nil, the panel removes the current accessory view.
(Read and Write property)

138.5.15 ActionButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The label of the action button.
Example:

```
Var o as new OpenDialogMBS
```

```
o.ActionButtonLabel = "Hello"
o.ShowDialog
```

Notes: Used only on Mac OS.
For RB 4.5 and earlier you need to make sure the encoding is set correctly.
Can be set to "" to use the default value.
(Read and Write property)

138.5.16 AllowFolderSelection as Boolean

MBS Util Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Whether folders can be selected.
Example:

```
Var o as OpenDialogMBS
Var i,c as Integer
Var f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files/folders:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files/folders"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.AllowFolderSelection=true
o.ShowDialog

c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next
end if
```

Notes: Default is false.
Setting this to true on Windows or Linux has no effect there.
(Read and Write property)

138.5.17 CancelButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** The text for the cancel button.
Example:

```
Var o as new OpenDialogMBS

o.CancelButtonLabel = "Hello"
o.ShowDialog
```

Notes: Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

138.5.18 ClientName as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** The name of the client.
Example:

```
Var o as new OpenDialogMBS
o.ClientName = "Hello"
o.ShowDialog
```

Notes: Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

138.5.19 Creator as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The creator code of your application.
Notes: This property is only used Mac OS if you specify one or more file types.
(Read and Write property)

138.5.20 CustomPicture as Picture

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: The custom picture content.
Notes: You need to call RefreshCustomImage to refresh the picture visible to the user.
(Read and Write property)

138.5.21 File as FolderItem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The first file selected.
Example:

```
Var o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog

MsgBox o.File.displaypathmbs
```

Notes: file = files(0)
Just for the cases where you only need the first file.
(Read only property)

138.5.22 FileCount as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The number of files selected.
Example:

```
Var o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog

MsgBox str(o.FileCount)
```

Notes: (Read only property)

138.5.23 InitialDirectory as FolderItem
