MsgBox c.stringRepresentation // shows "1 0.5 0 1"
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object without options, all output will be drawn into the CG context.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS 10984

60.255.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object with options, all output will be drawn into the CG context.
Notes: OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.
UseSoftwareRenderer: Whether you want software renderer only.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS 10983

60.255.6 NewCIImagewithBitmapDataMBS(data as memoryblock, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes: Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.7 NewCIImagewithBitmapMemoryMBS(data as memoryblock, DataLength as Integer, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes: Data points directly to the row data.
Length is the size of the memoryblock in bytes.
BytesPerRow is the size of a row in bytes.
Width and height are the dimensions of the image.
Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.
Colorspace is the CoreGraphics Colorspace object to be used.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.8 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes: cgcolorspace: Use this colorspace when opening the image.
Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.9 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS 10985

60.255.9 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.8 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 10985

60.255.10 NewCIImagewithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Notes: cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.11 NewCIImagewithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS 10986

60.255.11 NewCIImagewithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.10 NewCIImagewithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 10986

60.255.12 NewCIImagewithFileMBS(file as folderitem) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework.
See also:

- 60.255.13 NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 10987

60.255.13 NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes: cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework.
See also:

- 60.255.12 NewCIImagewithFileMBS(file as folderitem) as CIImageMBS 10986

60.255.14 NewCIImagewithURLMBS(url as String) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file where the URL points to.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.15 NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 10987

60.255.15 NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file where the URL points to.
Notes: cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.14 NewCIImagewithURLMBS(url as String) as CIImageMBS 10987

60.255.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS 10988

60.255.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes:

matrix:	An affine transformation [a b c d tx ty] defining the transformation to be applied to the sampler.
wrapmode:	A string defining how pixels outside the sampler's extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).
FilterMode:	A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 60.255.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS 10988

60.255.18 NewCIVectorWithStringMBS(s as string) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on content of the string.
Example:

```
Var v as CIVectorMBS
v=NewCIVectorWithStringMBS(" [ 1 2 3 ] ")
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.19 NewCIVectorWithXMBS(x as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on one value.
Example:

```
Var x as Double = 1
Var v as CIVectorMBS
v=NewCIVectorWithXMBS(x)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

60.255.20 NewCIVectorWithXYMBS(x as Double, y as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on two values.
Example:

```
Var x as Double = 1
Var y as Double = 2
Var v as CIVectorMBS
v=NewCIVectorWithXYMBS(x,y)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.21 NewCIVectorWithXYZMBS(x as Double, y as Double, z as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on three values.
Example:

```
Var x as Double = 1
Var y as Double = 2
Var z as Double = 3
Var v as CIVectorMBS
v=NewCIVectorWithXYZMBS(x,y,z)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

60.255.22 NewCIVectorWithXYZWMBS(x as Double, y as Double, z as Double, w as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on 4 values.
Example:

```
Var x as Double = 1
Var y as Double = 2
Var z as Double = 3
Var w as Double = 4
Var v as CIVectorMBS
v=NewCIVectorWithXYZWMBS(x,y,z,w)
```

Notes: Returns nil on any error.
Requires Mac OS X 10.4 to work.

Chapter 61

CoreLocation

61.1 class CLGeocodeCompletionHandlerMBS

61.1.1 class CLGeocodeCompletionHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The class to receive the Complete event from a geocoder.

61.1.2 Events

61.1.3 Completed(geocoder as CLGeocoderMBS, placemarks() as CLPlacemarkMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The event to be called when a geocoding request is complete.
Notes: Upon completion of a geocoding request, a block of this form is called to give you a chance to process the results. The parameters of this block are as follows:

placemark: Contains an array of CLPlacemark objects. For most geocoding requests, this array should contain only one entry. However, forward-geocoding requests may return multiple placemark objects in situations where the specified address could not be resolved to a single location.
If the request was canceled or there was an error in obtaining the placemark information, this parameter is nil.
error: Contains an error object (if any) indicating why the placemark data was not returned. For a list of possible error codes, see CLLocationManager Class Reference.

Available in OS X v10.8 and later.
Tag parameter added in version 14.2.

61.2 class CLGeocoderMBS

61.2.1 class CLGeocoderMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The CLGeocoder class provides services for converting between a coordinate (specified as a latitude and longitude) and the user-friendly representation of that coordinate.
Notes: A user-friendly representation of the coordinate typically consists of the street, city, state, and country information corresponding to the given location, but it may also contain a relevant point of interest, landmarks, or other identifying information. A geocoder object is a single-shot object that works with a network-based service to look up placemark information for its specified coordinate value.

To use a geocoder object, create it and call one of its forward- or reverse-geocoding methods to begin the request. Reverse-geocoding requests take a latitude and longitude value and find a user-readable address. Forward-geocoding requests take a user-readable address and find the corresponding latitude and longitude value. Forward-geocoding requests may also return additional information about the specified location, such as a point of interest or building at that location. For both types of request, the results are returned using a CLPlacemark object. In the case of forward-geocoding requests, multiple placemark objects may be returned if the provided information yielded multiple possible locations.

To make smart decisions about what types of information to return, the geocoder server uses all the information provided to it when processing the request. For example, if the user is moving quickly along a highway, it might return the name of the overall region, and not the name of a small park that the user is passing through.

Applications should be conscious of how they use geocoding. Here are some rules of thumb for using this class effectively:

Send at most one geocoding request for any one user action.
If the user performs multiple actions that involve geocoding the same location, reuse the results from the initial geocoding request instead of starting individual requests for each action.
When you want to update the user's current location automatically (such as when the user is moving), issue new geocoding requests only when the user has moved a significant distance and after a reasonable amount of time has passed. For example, in a typical situation, you should not send more than one geocoding request per minute.
Do not start a geocoding request at a time when the user will not see the results immediately. For example, do not start a request if your application is inactive or in the background.
The computer or device must have access to the network in order for the geocoder object to return detailed placemark information. Although, the geocoder stores enough information locally to report the localized country name and ISO country code for many locations. If country information is not available for a specific location, the geocoder may still report an error to your completion block.

61.2.2 Methods

61.2.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

61.2.4 cancelGeocode

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Cancels a pending geocoding request.
Notes: You can use this method to cancel a pending request and free up the resources associated with that request. Canceling a pending request causes the completion handler event to be called.

If the request is not pending, because it has already returned or has not yet begun, this method does nothing. Available in OS X v10.8 and later.

61.2.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The constructor.

61.2.6 geocodeAddressDictionary(addressDictionary as Dictionary, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes: addressDictionary: An Address Book dictionary containing information about the address to look up.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.
Available in OS X v10.8 and later.

61.2.7 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string.
Notes: addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.
Available in OS X v10.8 and later.
See also:

- 61.2.8 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 10996
- 61.2.9 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 10996

61.2.8 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string and region information.
Notes: addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
region: A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user's current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user's approximate location. Invoking this method does not trigger a location services authorization request.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.
Available in OS X v10.8 and later.
See also:

- 61.2.7 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 10995
- 61.2.9 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 10996

61.2.9 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string and region information.
Notes: addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
region: A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user's current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user's approximate location. Invoking this method does not trigger a location services authorization request.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.

Available in OS X v10.8 and later.
For macOS 10.13 or newer we can optionally pass preferred locale.
See also:

- 61.2.7 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 10995
- 61.2.8 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 10996

61.2.10 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries coordinates for postal address.
Notes: postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:

- 61.2.11 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 10997

61.2.11 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries coordinates for postal address.
Notes: postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:

- 61.2.10 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 10997

61.2.12 isGeocoding as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the receiver is in the middle of geocoding its value. (read-only)
Notes: This property contains the value true if the process is ongoing or false if the process is done or has not yet been initiated.
Available in OS X v10.8 and later.

61.2.13 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a reverse-geocoding request for the specified location.
Notes: location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
See also:

- 61.2.14 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 10998

61.2.14 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Submits a reverse-geocoding request for the specified location.
Notes: location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
For macOS 10.13 or newer we can optionally pass preferred locale.

See also:

- 61.2.13 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 10998

61.2.15 Properties

61.2.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

61.3 class CLHeadingMBS

61.3.1 class CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A CLHeading object contains heading data generated by a CLLocationManager object.
Notes: The heading data consists of computed values for true and magnetic north. It also includes the raw data for the three-dimensional vector used to compute those values.

Typically, you do not create instances of this class yourself, nor do you subclass it. Instead, you receive instances of this class through the delegate assigned to the CLLocationManager object whose startUpdatingHeading method you called.

Note: If you want heading objects to contain valid data for the trueHeading property, your location manager object should also be configured to deliver location updates. You can start the delivery of these updates by calling the location manager object's startUpdatingLocation method.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.3.2 Methods

61.3.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

61.3.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

61.3.5 copy as CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a clone of this object.

61.3.6 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The time at which this heading was determined. (read-only)
Notes: Available in OS X v10.7 and later.

61.3.7 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the heading data in a formatted text string.
Notes: A string of the form "magneticHeading <magnetic>trueHeading <heading>accuracy <accuracy>x <x>y <y>z <z>@ <date-time>" where <magnetic>, <heading>, <accuracy>, <x>, <y>, and <z>are formatted floating-point numbers and <date-time>is a formatted date string that includes date, time, and time zone information.

Available in OS X v10.7 and later.

61.3.8 headingAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The maximum deviation (measured in degrees) between the reported heading and the true geomagnetic heading. (read-only)
Notes: A positive value in this property represents the potential error between the value reported by the magneticHeading property and the actual direction of magnetic north. Thus, the lower the value of this property, the more accurate the heading. A negative value means that the reported heading is invalid, which can occur when the device is uncalibrated or there is strong interference from local magnetic fields.

Available in OS X v10.7 and later.

61.3.9 kCLHeadingFilterNone as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Special value for heading filter to define that you don't want to filter.

61.3.10 magneticHeading as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The heading (measured in degrees) relative to magnetic north. (read-only)
Notes: The value in this property represents the heading relative to the magnetic North Pole, which is different from the geographic North Pole. The value 0 means the device is pointed toward magnetic north, 90 means it is pointed east, 180 means it is pointed south, and so on. The value in this property should always be valid.

If the headingAccuracy property contains a negative value, the value in this property should be considered unreliable.

Available in OS X v10.7 and later.

61.3.11 timestamp as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time at which this heading was determined. (read-only)
Notes: Available in OS X v10.7 and later.

61.3.12 trueHeading as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The heading (measured in degrees) relative to true north. (read-only)
Notes: The value in this property represents the heading relative to the geographic North Pole. The value 0 means the device is pointed toward true north, 90 means it is pointed due east, 180 means it is pointed due south, and so on. A negative value indicates that the heading could not be determined.

Important This property contains a valid value only if location updates are also enabled for the corresponding location manager object. Because the position of true north is different from the position of magnetic north on the Earth's surface, Core Location needs the current location of the device to compute the value of this property.

Available in OS X v10.7 and later.

61.3.13 x as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the x-axis. (read-only)
Notes: This value represents the x-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

61.3.14 y as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the y-axis. (read-only)
Notes: This value represents the y-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

61.3.15 z as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the z-axis. (read-only)
Notes: This value represents the z-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

61.3.16 Properties

61.3.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

61.4 class CLLocationCoordinate2DMBS

61.4.1 class CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The class for a location coordinate.

61.4.2 Methods

61.4.3 Constructor(latitude as Double = 0.0, longitude as Double = 0.0)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Initializes a coordinate with values.

61.4.4 Properties

61.4.5 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The latitude.
Notes: (Read and Write property)

61.4.6 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The longitude.
Notes: (Read and Write property)

61.5 class CLLocationManagerMBS

61.5.1 class CLLocationManagerMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The CoreLocation base class.
Example:

```
Var c as new CLLocationManagerMBS

c.startUpdatingLocation
```

Notes: The CLLocationManagerMBS class defines the interface for configuring the delivery of location- and heading-related events to your application. You use an instance of this class to establish the parameters that determine when location and heading events should be delivered. You can also a location manager object to retrieve the most recent location data.

To use a CLLocationManagerMBS object to deliver location events, create an instance, configure the desired accuracy and distance filter values, and call the startUpdatingLocation method. The location service returns an initial location as quickly as possible, returning cached information when available. After delivery of the initial event notification, the CLLocationManagerMBS object may deliver additional events if the minimum threshold distance (as specified by the distanceFilter property) is exceeded or a more accurate location value is determined.

Important: The user has the option of denying an application's access to the location service data. During its initial uses by an application, the Core Location framework prompts the user to confirm that using the location service is acceptable. If the user denies the request, the CLLocationManagerMBS object reports an appropriate error to its delegate during future requests.

See also documentation from Apple for the CLLocationManager class:
https://developer.apple.com/library/mac/#documentation/CoreLocation/Reference/CLLocationManager_Class/CLLocationManager/CLLocationManager.html

See WindowsLocationManagerMBS class for Windows.

61.5.2 Methods

61.5.3 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the application's authorization status for using location services.
Notes: The authorization status of a given application is managed by the system and determined by several factors. Applications must be explicitly authorized to use location services by the user and location services must themselves currently be enabled for the system. This authorization takes place automatically when your application first attempts to use location services.

Available on Mac OS X 10.7 or later.

61.5.4 CheckEvents

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Checks for new events.
Notes: This is a helper app to make CoreLocation geocoder work in web projects.
Should not be called in desktop apps.
But for a web app, use a Timer (not WebTimer) to run it on main loop every few milliseconds (e.g. 500 ms).

61.5.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
Var c as new CLLocationManagerMBS

MsgBox str(c.Handle) // not zero on success
```

61.5.6 deferredLocationUpdatesAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Returns true if the device supports deferred location updates, otherwise false.
Notes: Requires Mac OS X 10.9.

61.5.7 Destructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The destructor.

61.5.8 dismissHeadingCalibrationDisplay

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Dismisses the heading calibration view from the screen immediately.
Notes: Core Location uses the heading calibration alert to calibrate the available heading hardware as needed. The display of this view is automatic, assuming your delegate supports displaying the view at all. If the view is displayed, you can use this method to dismiss it after an appropriate amount of time to ensure that your application's user interface is not unduly disrupted.

61.5.9 headingAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the location manager is able to generate heading-related events.
Example:

```
msgbox "headingAvailable available: "+str(CLLocationManagerMBS.headingAvailable)
```

Notes: Returns true if heading data is available or false if it is not.

Heading data may not be available on all iOS-based devices. You should check the value returned by this method before asking the location manager to deliver heading-related events.

Available on Mac OS X 10.7 or later.

61.5.10 kCLErrorDomain as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The domain for Core Location errors. This value is used in the NSError class.

61.5.11 kCLErrorUserInfoAlternateRegionKey as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A key in the user information dictionary of an kCLErrorRegionMonitoringResponseDelayed error whose value is a CLRegionMBS object that the location services can more effectively monitor.

61.5.12 locationServicesAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Whether the CoreLocation framework is available.
Example:

```
if CLLocationManagerMBS.locationServicesAvailable then
if CLLocationManagerMBS.locationServicesEnabled then
MsgBox "available and enabled"
else
MsgBox "available and not enabled"
end if
else
MsgBox "Not available"
end if
```

Notes: Returns true on Mac OS X 10.6 and false on all other systems.

61.5.13 locationServicesEnabled as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether location services are enabled on the device.
Example:

```
if CLLocationManagerMBS.locationServicesAvailable then
if CLLocationManagerMBS.locationServicesEnabled then
MsgBox "available and enabled"
else
```

```
MsgBox "available and not enabled"
end if
else
MsgBox "Not available"
end if
```

61.5.14 monitoredRegions as CLRegionMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The array of shared regions monitored by all location manager objects.
Notes: You cannot add regions to this property directly. Instead, you must register regions by calling the startMonitoringForRegion method. The regions in this property are shared by all instances of the CLLocationManagerMBS class in your application.

The objects in this set may not necessarily be the same objects you specified at registration time. Only the region data itself is maintained by the system. Therefore, the only way to uniquely identify a registered region is using its identifier property.

The location manager persists region data between launches of your application. If your application is terminated and then relaunched, the contents of this property are repopulated with region objects that contain the previously registered data.

Available on Mac OS X 10.7 or later.

61.5.15 regionMonitoringAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether region monitoring is supported on the current device.
Example:

```
msgbox "regionMonitoringAvailable available: "+str(CLLocationManagerMBS.regionMonitoringAvailable)
```

Notes: Available on Mac OS X 10.7 or later.

Returns true if region monitoring is available or false if it is not.

Support for region monitoring may not be available on all devices and models. You should check the value of this property before attempting to set up any regions or initiate region monitoring.

Even if region monitoring support is present on a device, it may still be unavailable because the user disabled it for the current application or for all applications.

61.5.16 regionMonitoringEnabled as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether region monitoring is currently enabled.
Notes: Returns true if region monitoring is available and is currently enabled or false if it is unavailable or not enabled.

The user can enable or disable location services (including region monitoring) altogether from the System Preferences.

You should check the return value of this method before starting region monitoring updates to determine if the user currently allows location services to be used at all. If this method returns false and you start region monitoring updates anyway, the Core Location framework prompts the user with a confirmation panel asking whether location services should be reenabled.

This method does not check to see if region monitoring capabilities are actually supported by the device. Therefore, you should also check the return value of the regionMonitoringAvailable class method before attempting to start region monitoring services.

Available on Mac OS X 10.7 or later.

61.5.17 significantLocationChangeMonitoringAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns true if the device supports significant location change monitoring, otherwise false.
Example:

msgbox "significantLocationChangeMonitoringAvailable available: "+str(CLLocationManagerMBS.significantLocationChangeMonitoringAvailable)

Notes: Available on Mac OS X 10.7 or later.

This method indicates whether the device is able to report updates based on significant location changes only. (This primarily involves detecting changes in the cell tower currently associated with the device.) This capability provides tremendous power savings for applications that want to track a user's approximate location and do not need highly accurate position information.

61.5.18 startMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Starts monitoring the specified region.
Notes: region: The region object that defines the boundary to monitor. This parameter must not be nil.

You must call this method separately for each region you want to monitor. If an existing region with the same identifier is already being monitored by the application, the old region is replaced by the new one. The regions you add using this method are shared by all location manager objects in your application and stored in the monitoredRegions property.

Region events are delivered to the didEnterRegion and didExitRegion events. If there is an error, the location manager calls the monitoringDidFailForRegion event instead.

61.5.19 startMonitoringSignificantLocationChanges

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Starts the generation of updates based on significant location changes.
Example:

```
Var c as new CLLocationManagerMBS

c.startMonitoringSignificantLocationChanges
```

Notes: This method initiates the delivery of location events asynchronously, returning shortly after you call it. Location events are delivered to your delegate's didUpdateToLocation event. The first event to be delivered is usually the most recently cached location event (if any) but may be a newer event in some circumstances. Obtaining a current location fix may take several additional seconds, so be sure to check the timestamps on the location events in your event code.

After returning a current location fix, the receiver generates update events only when a significant change in the user's location is detected. For example, it might generate a new event when the device becomes associated with a different cell tower. It does not rely on the value in the distanceFilter property to generate events. Calling this method several times in succession does not automatically result in new events being generated. Calling stopMonitoringSignificantLocationChanges in between, however, does cause a new initial event to be sent the next time you call this method.

In addition to your subclass implementing the didUpdateToLocation event, it should also implement the didFailWithError event to respond to potential errors.

Available in Mac OS X 10.7 or later.

61.5.20 startUpdatingHeading

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Starts the generation of updates that report the user's current heading.
Notes: This method returns immediately. Calling this method when the receiver is stopped causes it to obtain an initial heading and notify your delegate. After that, the receiver generates update events when the value in the headingFilter property is exceeded.

Before calling this method, you should always check the headingAvailable property to see whether heading information is supported on the current device. If heading information is not supported, calling this method has no effect and does not result in the delivery of events to your delegate.

Calling this method several times in succession does not automatically result in new events being generated. Calling stopUpdatingHeading in between, however, does cause a new initial event to be sent the next time you call this method.

If you start this service and your application is suspended, the system stops the delivery of events until your application starts running again (either in the foreground or background). If your application is terminated, the delivery of new heading events stops altogether and must be restarted by your code when the application is relaunched.

Heading events are delivered to the didUpdateHeading event. If there is an error, the location manager calls the
didFailWithError event instead.

61.5.21 startUpdatingLocation

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Starts the generation of updates that report the user's current location.
Example:

```
Var c as new CLLocationManagerMBS

c.startUpdatingLocation
```

Notes: This method returns immediately. Calling this method when the receiver is stopped causes it to

obtain an initial location fix (which may take several seconds) and notify your delegate. After that, the receiver generates update events primarily when the value in the distanceFilter property is exceeded. Updates may be delivered in other situations though. For example, the receiver may send another notification if the hardware gathers a more accurate location reading.

Calling this method several times in succession does not automatically result in new events being generated. Calling stopUpdatingLocation in between, however, does cause a new initial event to be sent the next time you call this method.

61.5.22 stopMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Stops monitoring the specified region.
Notes: region: The region object currently being monitored. This parameter must not be nil.

If the specified region object is not currently being monitored, this method has no effect.

Available on Mac OS X 10.7 or later.

61.5.23 stopMonitoringSignificantLocationChanges

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Stops the delivery of location events based on significant location changes.
Notes: Use this method to stop the delivery of location events that was started using the startMonitoringSignificantLocationChanges method.
Available on Mac OS X 10.7 or later.

61.5.24 stopUpdatingHeading

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Stops the generation of heading updates.
Notes: Call this method whenever your code no longer needs to receive heading-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of heading updates by calling the startUpdatingHeading method again.

61.5.25 stopUpdatingLocation

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Stops the generation of location updates.
Example:

```
Var c as new CLLocationManagerMBS

c.startUpdatingLocation
// later
c.stopUpdatingLocation
```

Notes: You should call this method whenever your code no longer needs to receive location-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of location updates by calling the startUpdatingLocation method again.

61.5.26 Properties

61.5.27 desiredAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The desired accuracy of the location data.
Example:

```
Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest
```

Notes: The receiver does its best to achieve the requested accuracy; however, the actual accuracy is not guaranteed.

You should assign a value to this property that is appropriate for your usage scenario. In other words, if you need only the current location within a few kilometers, you should not specify kCLLocationAccuracyBest for the accuracy. Determining a location with greater accuracy requires more time and more power.

When requesting high accuracy location data, the initial event delivered by the location service may not have the accuracy you requested. The location service delivers the initial event as quickly as possible. It then continues to determine the location with the accuracy you requested and delivers additional events, as necessary, when that data is available.

The default value of this property is kCLLocationAccuracyBest.

(Read and Write property)

61.5.28 distanceFilter as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The minimum distance (measured in meters) a device must move laterally before an update event is generated.
Example:

```
Var c as new CLLocationManagerMBS
c.distanceFilter=CLLocationMBS.kCLDistanceFilterNone
```

Notes: This distance is measured relative to the previously delivered location. Use the value kCLDistanceFilterNone to be notified of all movements.

The default value of this property is kCLDistanceFilterNone.
(Read and Write property)

61.5.29 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The internal reference to the CLLocationManager object.
Example:

```
Var c as new CLLocationManagerMBS

MsgBox str(c.Handle) // not zero on success
```

Notes: (Read and Write property)

61.5.30 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The most recently retrieved user location.
Example:

```
Var c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox c.description
```

Notes: The value of this property is nil if no location data has ever been retrieved.

It is a good idea to check the timestamp of the location that is returned. If the receiver is currently gathering location data, but the minimum distance filter is large, the returned location might be relatively old. If it is, you can stop the receiver and start it again to force an update.
(Read only property)

61.5.31 maximumRegionMonitoringDistance as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The largest boundary distance that can be assigned to a region.
Notes: This property defines the largest boundary distance allowed from a region's center point. Attempting to monitor a region with a distance larger than this value causes the location manager to send a kCLErrorRegionMonitoringFailure error to the delegate.

If region monitoring is unavailable or not supported, the value in this property is -1.

Available on Mac OS X 10.7 or later.
(Read only property)

61.5.32 purpose as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: An application-provided string that describes the reason for using location services.
Notes: If this property is not "" and the system needs to ask for the user's consent to use location services, it displays the provided string. You can use this string to explain why your application is using location services.

You must set the value of this property prior to starting any location services. Because the string is ultimately displayed to the user, you should always load it from a localized strings file.

Available on Mac OS X 10.7 or later.
(Read and Write property)

61.5.33 Events

61.5.34 didChangeAuthorizationStatus(status as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells the delegate that the authorization status for the application changed.
Notes: status: The new authorization status for the application.

This method is called whenever the application's ability to use location services changes. Changes can occur because the user allowed or denied the use of location services for your application or for the system as a whole.

61.5.35 didEnterRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells the delegate that the user entered the specified region.
Notes: region: An object containing information about the region that was entered.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region's identifier string to determine if your delegate should respond.

61.5.36 didExitRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells the delegate that the user left the specified region.
Notes: manager: The location manager object reporting the event.
region: An object containing information about the region that was exited.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region's identifier string to determine if your delegate should respond.

61.5.37 didFailWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells you that the location manager was unable to retrieve a location value.

Notes: error: The error object containing the reason why the location could not be retrieved.

If the location service is unable to retrieve a location fix right away, it reports a kCLErrorLocationUnknown error and keeps trying. In such a situation, you can simply ignore the error and wait for a new event.

If the user denies your application's use of the location service, this method reports a kCLErrorDenied error. Upon receiving such an error, you should stop the location service.

61.5.38 didFinishDeferredUpdatesWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Invoked when deferred updates will no longer be delivered.
Notes: Stopping location, disallowing deferred updates, and meeting a specified criterion are all possible reasons for finishing deferred updates.

An error will be returned if deferred updates end before the specified criteria are met (see CLError).
Requires Mac OS X 10.9.

61.5.39 didStartMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Tells you that a new region is being monitored.
Notes: region: The region that is being monitored.

61.5.40 didUpdate(newLocation as CLLocationMBS, oldLocation as CLLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells you that a new location value is available.
Notes: newLocation: The new location data.
oldLocation: The location data from the previous update. If this is the first update event delivered by this location manager, this parameter is nil.

By the time this event is called, the new location data is also available directly from the CLLocationManagerMBS object. The newLocation parameter may contain the data that was cached from a previous usage of the location service. You can use the timestamp property of the location object to determine how recent the location data is.

61.5.41 didUpdateHeading(newHeading as CLHeadingMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Tells you that the location manager received updated heading information.
Notes: Implementation of this method is optional but expected if you start heading updates using the startUpdatingHeading method.

The location manager object calls this method after you initially start the heading service. Subsequent events are delivered when the previously reported value changes by more than the value specified in the headingFilter property of the location manager object.

61.5.42 didUpdateLocations(locations() as CLLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Invoked when new locations are available.
Notes: Required for delivery of deferred locations.
If implemented, updates will not be delivered to didUpdate.
Requires Mac OS X 10.9.

61.5.43 monitoringDidFailForRegion(region as CLRegionMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Tells the delegate that a region monitoring error occurred.
Notes: region: The region for which the error occurred.
error: An error object containing the error code that indicates why region monitoring failed.

If an error occurs while trying to monitor a given region, the location manager sends this message to its delegate. Region monitoring might fail because the region itself cannot be monitored or because there was a more general failure in configuring the region monitoring service.

Although implementation of this event is optional, it is recommended that you implement it if you use region monitoring in your application.

61.5.44 Constants

Constants

Constant	Value	Description
kCLErrorDenied	1	One of the error codes reported by the location manager error event. Access to the location service was denied by the user.
kCLErrorLocationUnknown	0	One of the error codes reported by the location manager error event. The location manager was unable to obtain a location value right now.

Authorization Status Constants.

Constant	Value	Description
kCLAuthorizationStatusAuthorized	3	This application is authorized to use location services.
kCLAuthorizationStatusDenied	2	The user explicitly denied the use of location services for this applica location services are currently disabled in Settings.
kCLAuthorizationStatusNotDetermined	0	The user has not yet made a choice regarding whether this application location services.
kCLAuthorizationStatusRestricted	1	This application is not authorized to use location services. The user change this application's status, possibly due to active restrictions s parental controls being in place.

Device Orientation Constants

Constant	Value	Description
kCLDeviceOrientationFaceDown	6	The device is held parallel to the ground with the screen facing dow
kCLDeviceOrientationFaceUp	5	The device is held parallel to the ground with the screen facing upw
kCLDeviceOrientationLandscapeLeft	3	The device is in landscape mode, with the device held upright and button on the right side.
kCLDeviceOrientationLandscapeRight	4	The device is in landscape mode, with the device held upright and button on the left side.
kCLDeviceOrientationPortrait	1	The device is in portrait mode, with the device held upright and button at the bottom.
kCLDeviceOrientationPortraitUpsideDown	2	The device is in portrait mode but upside down, with the device he and the home button at the top.
kCLDeviceOrientationUnknown	0	The orientation is currently not known.

Corelocation Error Codes

Constant	Value	Description
kCLErrorGeocodeCanceled	10	The geocode request was canceled.
kCLErrorGeocodeFoundNoResult	8	The geocode request yielded no result.
kCLErrorGeocodeFoundPartialResult	9	The geocode request yielded a partial result.
kCLErrorHeadingFailure	3	The heading could not be determined.
kCLErrorNetwork	2	The network was unavailable or a network error occurred.
kCLErrorRegionMonitoringDenied	4	Access to the region monitoring service was denied by the user.
kCLErrorRegionMonitoringFailure	5	A registered region cannot be monitored.
kCLErrorRegionMonitoringResponseDelayed	7	Core Location will deliver events but they may be delayed.
kCLErrorRegionMonitoringSetupDelayed	6	Core Location could not initialize the region monitoring feature in

61.6 class CLLocationMBS

61.6.1 class CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A CLLocationMBS object represents the location data generated by a CLLocationManagerMBS object.
Example:

```
Var c as new CLLocationMBS(50,7)

MsgBox c.description

// example output: <+50.00000000, +7.00000000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200
```

Notes: This object incorporates the geographical coordinates and altitude of the device's location along with values indicating the accuracy of the measurements and when those measurements were made. On some devices, this class also reports information about the speed and heading in which the device is moving.

Typically, you use a CLLocationManagerMBS object to create instances of this class based on the last known location of the user's device. You can create instances yourself, however, if you want to cache custom location data or get the distance between two different coordinate points.

This class is designed to be used as is and should not be subclassed.

Requires Mac OS X 10.6

61.6.2 Methods

61.6.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

61.6.4 Constructor(latitude as Double, longitude as Double)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes and returns a location object with the specified latitude and longitude.
Example:

```
Var c as new CLLocationMBS(50,7)

MsgBox c.description

// example output: <+50.00000000, +7.00000000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200
```

Notes: latitude: The latitude of the coordinate point.
longitude: The longitude of the coordinate point.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application. When using this method, the other properties of the object are initialized to appropriate values. In particular, the altitude and horizontalAccuracy properties are set to 0, the verticalAccuracy property is set to -1 to indicate that the altitude value is invalid, and the timestamp property is set to the time at which the instance was initialized.

Requires Mac OS X 10.6
See also:

- 61.6.5 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 11025
- 61.6.6 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime) 11025
- 61.6.7 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 11026

- 61.6.8 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 11027

61.6.5 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a location object with the specified coordinate and course information.
Notes: latitude and longitude: A coordinate structure containing the latitude and longitude values.
altitude: The altitude value for the location.
horizontalAccuracy: The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
course: The direction of travel for the location.
speed: The current speed associated with this location.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.

Available on Mac OS X 10.7 or newer.

- 61.6.8 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 11027

61.6.7 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes and returns a location object with the specified coordinate information.
Example:

```
Var c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox c.description
```

Notes: coordinate: A coordinate structure containing the latitude and longitude values.
altitude: The altitude value for the location.
horizontalAccuracy: The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.

- 61.6.7 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 11026

61.6.9 copy as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Creates a copy of the object.
Example:

```
Var c as new CLLocationMBS(5,6)

Var n as CLLocationMBS = c.copy

MsgBox n.description
```

Notes: Internally a new CLLocation object is created with a copy of the data.

61.6.10 distanceFromLocation(location as CLLocationMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the distance (in meters) between the two locations.
Example:

```
// Nickenich 50¬∞ 24' 48" N, 7¬∞ 19' 47" E
// Andernach 50¬∞ 26' 23" N, 7¬∞ 24' 6" E

Var c1 as new CLLocationMBS(50.439722, 7.40167) // Andernach
Var c2 as new CLLocationMBS(50.413333, 7.32972) // Nickenich
```

MsgBox str(c1.distanceFromLocation(c2))+" meter"

Notes: This method measures the distance between the two locations by tracing a line between them that follows the curvature of the Earth. The resulting arc is a smooth curve and does not take into account specific altitude changes between the two locations.

61.6.11 kCLDistanceFilterNone as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: This constant indicates the minimum distance required before an event is generated.
Notes: All movements are reported.

61.6.12 kCLLocationAccuracyBest as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest

Notes: Use the best possible accuracy.

61.6.13 kCLLocationAccuracyBestForNavigation as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Notes: Available on Mac OS X 10.7 or later.

61.6.14 kCLLocationAccuracyHundredMeters as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyHundredMeters

Notes: Accurate to within one hundred meters.

61.6.15 kCLLocationAccuracyKilometer as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyKilometer

Notes: Accurate to the nearest kilometer.

61.6.16 kCLLocationAccuracyNearestTenMeters as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyNearestTenMeters

Notes: Accurate to within ten meters of the desired target.

61.6.17 kCLLocationAccuracyThreeKilometers as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

Var c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyThreeKilometers

Notes: Accurate to the nearest three kilometers.

61.6.18 Properties

61.6.19 altitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The altitude in meters.
Example:

```
Var c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox str(c.altitude)
```

Notes: Positive values indicate altitudes above sea level. Negative values indicate altitudes below sea level.
(Read only property)

61.6.20 course as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The direction in which the device is travelling.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.course)
end if
```

Notes: Course values are measured in degrees starting at due north and continuing clockwise around the compass. Thus, north is 0 degrees, east is 90 degrees, south is 180 degrees, and so on. Course values may not be available on all devices. A negative value indicates that the direction is invalid.
(Read only property)

61.6.21 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The time at which this location was determined.
Notes: (Read only property)

61.6.22 description as string

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the location data in a formatted text string.
Example:

```
Var c as new CLLocationMBS(50.439722, 7.40167)

MsgBox C.description
// shows for example:
// <+50.43972200, +7.40167000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-29 14:22:39 +0200
```

Notes: A string of the form "«latitude», <longitude»+/- <accuracy>m (speed <speed>kph / heading <heading>) @ <date-time>", where <latitude>, <longitude>, <accuracy>, <speed>, and <heading>are formatted floating point numbers and <date-time>is a formatted date string that includes date, time, and time zone information.

The returned string is intended for display purposes only.
(Read only property)

61.6.23 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The internal reference to the CLLocation object.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.handle)
end if
```

Notes: (Read and Write property)

61.6.24 horizontalAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The radius of uncertainty for the location, measured in meters.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.horizontalAccuracy)
end if
```

Notes: The coordinate's latitude and longitude identify the center of the circle and this value indicates the radius of that circle. A negative value indicates that the coordinate's latitude and longitude are invalid. (Read only property)

61.6.25 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The geographical coordinate information.
Example:

```
Var c as new CLLocationMBS(50.413333, 7.32972)

MsgBox str(C.latitude) // shows 50.413333
```

Notes: (Read only property)

61.6.26 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The geographical coordinate information.
Example:

```
Var c as new CLLocationMBS(50.413333, 7.32972)
```

```
MsgBox str(C.longitude) // shows 7.32972
```

Notes: (Read only property)

61.6.27 speed as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The instantaneous speed of the device in meters per second.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.speed)
end if
```

Notes: This value reflects the instantaneous speed of the device in the direction of its current heading. A negative value indicates an invalid speed. Because the actual speed can change many times between the delivery of subsequent location events, you should use this property for informational purposes only.
(Read only property)

61.6.28 timestamp as date

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time at which this location was determined.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox l.timestamp.SQLDateTime
end if
```

Notes: (Read only property)

61.6.29 verticalAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The accuracy of the altitude value in meters.
Example:

```
Var c as CLLocationManagerMBS // your global instance

Var l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.verticalAccuracy)
end if
```

Notes: The value in the altitude property could be plus or minus the value indicated by this property. A negative value indicates that the altitude value is invalid.
(Read only property)

61.7 class CLPlacemarkMBS

61.7.1 class CLPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A CLPlacemark object stores placemark data for a given latitude and longitude.
Notes: Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. It can also include points of interest and geographically related data. Placemark objects are typically generated by a CLGeocoder object, although you can also create them explicitly yourself.

61.7.2 Methods

61.7.3 areasOfInterest as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The relevant areas of interest associated with the placemark. (read-only)
Notes: Examples of an area of interest are the name of a military base or large national park or an attraction such as Eiffel Tower, Disneyland, or Golden Gate Park.
Available in OS X v10.8 and later.

61.7.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

61.7.5 Constructor(placement as CLPlacemarkMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Initializes and returns a placemark object from another placemark object.
Notes: You can use this method to transfer information from one placemark object to another placemark object.
Available in OS X v10.8 and later.

61.7.6 copy as CLPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a clone of this object.

61.7.7 Properties

61.7.8 addressDictionary as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A dictionary containing the Address Book keys and values for the placemark. (read-only)
Notes: The keys in this dictionary are those defined by the Address Book framework and used to access address information for a person. For a list of the strings that can be in this dictionary, see the Address Property constants in ABPerson Reference.

You can format the contents of this dictionary to get a full address string as opposed to building the address yourself.

Available in OS X v10.8 and later.
(Read only property)

61.7.9 administrativeArea as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The state or province associated with the placemark. (read-only)
Notes: If the placemark location is Apple's headquarters, for example, the value for this property would be the string "CA" or "California".
Available in OS X v10.8 and later.
(Read only property)

61.7.10 country as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the country associated with the placemark. (read-only)
Notes: If the placemark location is Apple's headquarters, for example, the value for this property would be the string "United States".
Available in OS X v10.8 and later.
(Read only property)

61.7.11 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The description for debugging.
Notes: (Read only property)

61.7.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

61.7.13 inlandWater as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the inland water body associated with the placemark. (read-only)
Notes: For coordinates that lie over an inland body of water, this property contains the name of that water body—the name of a lake, stream, river, or other waterway.
Available in OS X v10.8 and later.

(Read only property)

61.7.14 ISOcountryCode as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The abbreviated country name. (read-only)
Notes: This string is the standard abbreviation used to refer to the country. For example, if the placemark location is Apple's headquarters, the value for this property would be the string "US".
Available in OS X v10.8 and later.
(Read only property)

61.7.15 locality as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The city associated with the placemark. (read-only)
Notes: If the placemark location is Apple's headquarters, for example, the value for this property would be the string "Cupertino".
Available in OS X v10.8 and later.
(Read only property)

61.7.16 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The location object containing latitude and longitude information. (read-only)
Notes: This object is used to initialize the placemark object.
Available in OS X v10.8 and later.
(Read only property)

61.7.17 name as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the placemark. (read-only)
Notes: Available in OS X v10.8 and later.
(Read only property)

61.7.18 ocean as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the ocean associated with the placemark. (read-only)
Notes: For coordinates that lie over an ocean, this property contains the name of the ocean.
Available in OS X v10.8 and later.
(Read only property)

61.7.19 postalAddress as variant

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The address as CNPostalAddressMBS object.
Notes: Value is a CNPostalAddressMBS. We use variant to reduce dependency to other plugins.
(Read only property)

61.7.20 postalCode as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The postal code associated with the placemark. (read-only)
Notes: If the placemark location is Apple's headquarters, for example, the value for this property would be the string "95014".
Available in OS X v10.8 and later.
(Read only property)

61.7.21 region as CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geographic region associated with the placemark. (read-only)
Notes: Available in OS X v10.8 and later.
(Read only property)

61.7.22 subAdministrativeArea as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional administrative area information for the placemark. (read-only)
Notes: Subadministrative areas typically correspond to counties or other regions that are then organized into a larger administrative area or state. For example, if the placemark location is Apple's headquarters,

the value for this property would be the string ”Santa Clara”, which is the county in California that contains the city of Cupertino.

Available in OS X v10.8 and later.
(Read only property)

61.7.23 subLocality as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional city-level information for the placemark. (read-only)
Notes: This property contains additional information, such as the name of the neighborhood or landmark associated with the placemark. It might also refer to a common name that is associated with the location.
Available in OS X v10.8 and later.
(Read only property)

61.7.24 subThoroughfare as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional street-level information for the placemark. (read-only)
Notes: Subthroughfares provide information such as the street number for the location. For example, if the placemark location is Apple’s headquarters (1 Infinite Loop), the value for this property would be the string ”1”.

Available in OS X v10.8 and later.
(Read only property)

61.7.25 thoroughfare as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The street address associated with the placemark. (read-only)
Notes: The street address contains the street name. For example, if the placemark location is Apple’s headquarters, the value for this property would be the string ”Infinite Loop”.

Available in OS X v10.8 and later.
(Read only property)

61.8 class CLRegionMBS

61.8.1 class CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The CLRegion class defines a geographical area that can be tracked.
Example:

```
Var c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")

msgbox c.identifier+" "+str(c.latitude)+"/"+str(c.longitude)+", "+str(c.radius)+"m"
```

Notes: When an instance of this class is registered with a CLLocationManagerMBS object, the location manager generates an appropriate event whenever the user crosses the boundaries of the defined area.

To use this class, create an instance of it and use the startMonitoringForRegion method of a CLLocationManager object to begin monitoring it.

Please also check the documentation from Apple for the CLRegion class.
Available on Mac OS X 10.7 or later.
Blog Entries

- Lion arrived

61.8.2 Methods

61.8.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

61.8.4 Constructor(latitude as Double, longitude as Double, radius as Double, identifier as string)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Initializes a region object defining a circular area.
Notes: latitude and longitude: The center point of the region.
radius: The distance (measured in meters) from the center point that marks the boundary of the region.
identifier: A unique identifier to associate with the region object. You use this identifier to differentiate

regions within your application. This value must not be "".

identifier is a description for the region that could be displayed to the user, and ideally should be chosen by the user.

On success the handle property is not zero.

61.8.5 containsCoordinate(latitude as Double, longitude as Double) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the region contains the specified coordinate.
Notes: latitude and longitude: The coordinate to test against the region.

Returns true if the coordinate lies within the region's boundaries or false if it does not.

61.8.6 copy as CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a copy of the region object.

61.8.7 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The identifier for the region object.
Example:

```
Var c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")
msgbox c.identifier
```

61.8.8 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The position of the center of the region.

61.8.9 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The position of the center of the region.

61.8.10 radius as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The radius (measured in meters) that defines the region's outer boundary.

61.8.11 Properties

61.8.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal CLRegion object reference.
Notes: (Read and Write property)

Chapter 62

CoreML

62.1 class MLArrayBatchProviderMBS

62.1.1 class MLArrayBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A convenience wrapper for batches of feature providers.
Notes: This batch provider supports an array of feature providers or a dictionary of arrays of feature values.
Available on MacOS 10.14 or newer.
Subclass of the MLBatchProviderMBS class.
Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

62.1.2 Methods

62.1.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

62.1.4 Constructor(value as Dictionary, byref Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a batch provider based on feature names and their associated arrays of data.
Notes: dictionary: A dictionary which maps feature names to an array of values. The error case occurs when all the arrays do not have the same length or the values in an aray are not expressible as an MLFeatureValueMBS.
See also:

- 62.1.5 Constructor(values() as MLFeatureProviderMBS) 11046

62.1.5 Constructor(values() as MLFeatureProviderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates the batch provider based on the array of feature providers.
Notes: array: The array of feature providers for the batch.
See also:

- 62.1.4 Constructor(value as Dictionary, byref Error as NSErrorMBS) 11045

62.1.6 values as MLFeatureProviderMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The array of feature providers.

62.2 class MLBatchProviderMBS

62.2.1 class MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An interface that represents a collection of feature providers.
Notes: Similar to the MLFeatureProviderMBS, this interface allows you to define your own batch provider. If you collect your data asynchronously or it is memory intensive, implement this protocol on your data structure to optimize performance with batch processing.

Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.2.2 Methods

62.2.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.2.4 featuresAtIndex(index as Integer) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Returns the feature provider at the given index.

62.2.5 Properties

62.2.6 Count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The number of feature providers in this batch.
Notes: (Read only property)

62.2.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.3 class MLDictionaryConstraintMBS

62.3.1 class MLDictionaryConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint describing expected NSDictionary properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.3.2 Methods

62.3.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.13 or newer.

62.3.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.3.5 Properties

62.3.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.3.7 keyType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required key type.
Notes: See MLFeatureValueMBS.Type* constants.

(Read only property)

62.4 class MLDictionaryFeatureProviderMBS

62.4.1 class MLDictionaryFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A concrete convenience class conforming to MLFeatureProvider protocol.
Notes: Subclass of the MLFeatureProviderMBS class.
Blog Entries

- Update Machine Learning Model on Device

62.4.2 Methods

62.4.3 Constructor(content as Dictionary, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create from a generic dictionary by converting all values to MLFeatureValues or from a dictionary with values already stored as MLFeatureValues.
Notes: An error results if the values are not or cannot be represented as MLFeatureValues.

62.4.4 objectForKeyedSubscript(script as string) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Get the value for specified feature.

62.4.5 Properties

62.4.6 Content as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Dictionary holding the feature values.
Notes: When you query this, you get a copy of the dictionary, so any modification doesn't go back to the feature provider.
(Read only property)

62.5 class MLFeatureDescriptionMBS

62.5.1 class MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of a feature.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.5.2 Methods

62.5.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.5.4 copy as MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy.

62.5.5 isAllowedValue(value as MLFeatureValueMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Check if MLFeatureValue is valid based on this description.

62.5.6 Properties

62.5.7 dictionaryConstraint as MLDictionaryConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for dictionary.
Notes: Only set when type is dictionary.
(Read only property)

62.5.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.5.9 imageConstraint as MLImageConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for image.
Notes: Only set when type is image.
(Read only property)

62.5.10 isOptional as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this feature can take an undefined value or not.
Notes: (Read only property)

62.5.11 multiArrayConstraint as MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for multi array.
Notes: Only set when type is array.
(Read only property)

62.5.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Name of feature.
Notes: (Read only property)

62.5.13 sequenceConstraint as MLSequenceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints for a sequence feature.
Notes: (Read only property)

62.5.14 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of data.
Notes: (Read only property)

62.5.15 Constants

Value Types

Constant	Value	Description
TypeDictionary	6	Numerically weighted hashable objects (e.g. word counts)
TypeDouble	2	Continuous values
TypeImage	4	CVPixelBufferRef or converted by plugin to Xojo picture.
TypeInt64	1	Discrete values, sometimes used to hold numeric encoding of a categorical value
TypeInvalid	0	Undefined type.
TypeMultiArray	5	An array of values.
TypeSequence	7	The possible types for feature values, input features, and output features.
TypeString	3	Text or categorical strings

62.6 class MLFeatureProviderMBS

62.6.1 class MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Protocol for accessing a feature value for a feature name.
Notes: In Xojo defined as class, but in objective-c just a protocol.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.6.2 Methods

62.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.6.4 featureNames as String()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries list of all feature names available.

62.6.5 featureValueForName(featureName as String) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries value for feature by name.
Notes: Returns nil if the provided featureName is not in the set of featureNames

62.6.6 Properties

62.6.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.7 class MLFeatureValueMBS

62.7.1 class MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An immutable variant holding a data value of a supported MLFeatureType.
Notes: MLFeatureValue does not support type conversion in its accessor properties.
It can also have a missing or undefined value of a well defined type.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.7.2 Methods

62.7.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.7.4 copy as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy.

62.7.5 featureValueWithCGImage(image as variant, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image,Äôs URL and constraints.
Notes: Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 62.7.6 featureValueWithCGImage(image as variant, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

62.7.6 featureValueWithCGImage(image as variant, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image, its width, and its height, in pixels.
Notes: Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 62.7.5 featureValueWithCGImage(image as variant, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 11056

62.7.7 featureValueWithDictionary(value as Dictionary, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new feature based on a dictionary.
Notes: Copies the dictionary.
For encoding a sparse feature set or for encoding probabilities. Input keys that are not number or string are rejected on construction and return a MLModelErrorFeatureTypeMismatch error. Further validation for consistency occurs on evaluation.

62.7.8 featureValueWithDouble(value as double) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

62.7.9 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image and its constraints.
Notes: Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 62.7.10 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 11058

62.7.10 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image,Äôs URL, and its width and height, in pixels.
Notes: Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 62.7.9 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 11057

62.7.11 featureValueWithInt64(value as Int64) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

62.7.12 featureValueWithMultiArray(value as MLMultiArrayMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

62.7.13 featureValueWithPicture(value as Picture) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

62.7.14 featureValueWithPixelBuffer(Handle as Integer) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps a pixel buffer as a value for a feature.

62.7.15 featureValueWithSequence(sequence as MLSequenceMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps a sequence as a value for a feature.

62.7.16 featureValueWithString(value as string) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

62.7.17 isEqualToFeatureValue(value as MLFeatureValueMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries whether two feature objects are the same.

62.7.18 MLFeatureValueImageOptionCropAndScale as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The option you use to crop and scale an image when creating an image feature value.

62.7.19 MLFeatureValueImageOptionCropRect as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The option you use to crop an image when creating an image feature value.

62.7.20 undefinedFeatureValueWithType(type as Integer) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Represent an undefined value of a specified type.

62.7.21 Properties

62.7.22 CIImageValue as Variant

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries image as CIImageMBS object.
Notes: Value is a CIImageMBS. We use variant to reduce dependency to other plugins.
(Read only property)

62.7.23 dictionaryValue as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeDictionary.
Notes: When you query the dictionary, you get a copy.
(Read only property)

62.7.24 doubleValue as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeDouble.
Notes: (Read only property)

62.7.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.7.26 imageBufferValue as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The image, or pixelBuffer, wrapped in this feature value.
Notes: The handle for a CVPixelBufferMBS object.
(Read only property)

62.7.27 int64Value as Int64

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeInt64.
Notes: (Read only property)

62.7.28 multiArrayValue as MLMultiArrayMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeMultiArray.
Notes: (Read only property)

62.7.29 PictureHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The picture height.
Notes: Populated value if the type is TypeImage.
(Read only property)

62.7.30 PictureValue as Picture

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeImage.
Notes: (Read only property)

62.7.31 PictureWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The picture width.
Notes: Populated value if the type is TypeImage.
(Read only property)

62.7.32 sequenceValue as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The sequence wrapped in this feature value.
Notes: (Read only property)

62.7.33 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeString.
Notes: (Read only property)

62.7.34 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of the value for which the corresponding property below is held.
Notes: (Read only property)

62.7.35 Undefined as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: True if the value represents a missing or undefined value.
Notes: (Read only property)

62.7.36 value as Variant

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries value as variant.
Notes: (Read only property)

62.7.37 Constants

Value Types

Constant	Value	Description
TypeDictionary	6	Numerically weighted hashable objects (e.g. word counts)
TypeDouble	2	Continuous values
TypeImage	4	CVPixelBufferRef or converted by plugin to Xojo picture.
TypeInt64	1	Discrete values, sometimes used to hold numeric encoding of a categorical value
TypeInvalid	0	Undefined type.
TypeMultiArray	5	An array of values.
TypeSequence	7	The possible types for feature values, input features, and output features.
TypeString	3	Text or categorical strings

62.8 class MLImageConstraintMBS

62.8.1 class MLImageConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint on image properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.8.2 Methods

62.8.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.8.4 Properties

62.8.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.8.6 pixelFormatType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The accepted kCVPixelFormatType for the image.
Notes: (Read only property)

62.8.7 pixelsHigh as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The required height of the image.
Notes: (Read only property)

62.8.8 pixelsWide as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The required width of the image.
Notes: (Read only property)

62.8.9 sizeConstraint as MLImageSizeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Additional sizes this image feature supports.
Notes: Available on MacOS 10.14 or newer.
(Read only property)

62.9 class MLImageSizeConstraintMBS

62.9.1 class MLImageSizeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A list or range of sizes that augment an image constraint's default size.
Notes: You use an MLImageSizeConstraint to express what image sizes of an image feature a model will accept as input or produce as output.

Use type to determine which properties describe what image sizes the model's image feature expects as input or produces as output.

If type is:

- TypeRange, the image feature accepts any image that has a width in pixelsWideRange and a height in pixelsHighRange.
- TypeEnumerated, the image feature accepts any image size listed in enumeratedImageSizes.
- TypeUnspecified, the MLImageSizeConstraint instance is not configured and should be ignored. Instead, use the image feature's default image size constraint, defined by pixelsWide and pixelsHigh.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.9.2 Methods

62.9.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

62.9.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.9.5 enumeratedImageSizes as MLImageSizeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An array of image sizes a model's image feature accepts as input or produces as output.

62.9.6 Properties

62.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.9.8 pixelsHighRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of heights a model's image feature accepts as input or produces as output.
Notes: (Read only property)

62.9.9 pixelsWideRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of widths a model's image feature accepts as input or produces as output.
Notes: (Read only property)

62.9.10 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Indicator of which properties to inspect for this image size constraint.
Notes: (Read only property)

62.9.11 Constants

Types

Constant	Value	Description
TypeEnumerated	2	The image feature accepts image sizes listed in an array.
TypeRange	3	The image feature accepts image sizes defined by a range of widths and a range of heights.
TypeUnspecified	0	The image size constraint is not configured and should be ignored.

62.10 class MLImageSizeMBS

62.10.1 class MLImageSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The width and height of an image feature size.
Notes: Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.10.2 Methods

62.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

62.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.10.5 Properties

62.10.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.10.7 pixelsHigh as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The height of an image feature in pixels.
Notes: (Read only property)

62.10.8 pixelsWide as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The width of an image feature in pixels.
Notes: (Read only property)

62.11 class MLKeyMBS

62.11.1 class MLKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An abstract base class for machine learning key types.
Notes: You don,Äôt create use this class directly. Instead, use a class that inherits from this one, such as MLParameterKey or MLMetricKey.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.11.2 Methods

62.11.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.11.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.11.5 copy as MLKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Copies the object.

62.11.6 Properties

62.11.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.11.8 Name as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The name of the machine learning key.
Notes: (Read only property)

62.11.9 Scope as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The scope value.
Notes: (Read only property)

62.12 class MLMetricKeyMBS

62.12.1 class MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A key for the metrics dictionary in an update context.
Notes: Available in MacOS 10.15 or newer.
Subclass of the MLKeyMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.12.2 Methods

62.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.12.4 Properties

62.12.5 epochIndex as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the epoch index (an Int64 value).
Notes: Use this key to fetch the epoch index value in the metrics dictionary.
(Read only property)

62.12.6 lossValue as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the current loss (a float value).
Notes: Use this key to fetch the loss value in the metrics dictionary.
(Read only property)

62.12.7 miniBatchIndex as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the mini-batch index (an Int64 value) within an epoch.
Notes: Use this key to fetch the mini-batch index value in the metrics dictionary.
(Read only property)

62.13 class MLModelConfigurationMBS

62.13.1 class MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The settings for creating or updating a machine learning model.
Notes: Available in MacOS 10.14 or newer.
Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

62.13.2 Methods

62.13.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

62.13.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constructor.

62.13.5 copy as MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a copy of the model configuration.

62.13.6 Properties

62.13.7 allowLowPrecisionAccumulationOnGPU as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A Boolean value that determines whether to allow low-precision accumulation on a GPU.
Notes: (Read and Write property)

62.13.8 computeUnits as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The processing unit or units the model uses to make predictions.
Notes: (Read and Write property)

62.13.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.13.10 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Optional dictionary with any requested changes to model or update parameters.
Notes: (Read and Write property)

62.13.11 preferredMetalDevice as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The metal device you prefer this model use to make predictions (inference) and update the model.
Notes: If preferredMetalDevice is 0, the default value, Core ML chooses a metal device for you.
Until we have a class for MLDevice, you pass the handle here directly.
(Read and Write property)

62.13.12 Constants

Compute Units

Constant	Value	Description
ComputeUnitsAll	2	The option you choose to allow the model to use all compute units available, including the neural engine.
ComputeUnitsCPUAndGPU	1	The option you choose to allow the model to use both the CPU and GPU, but not the neural engine.
ComputeUnitsCPUOnly	0	The option you choose to limit the model to only use the CPU.

62.14 class MLModelDescriptionMBS

62.14.1 class MLModelDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A description of a model containing input and output feature descriptions, optionally outputted features with special meaning and metadata.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.14.2 Methods

62.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.14.4 Properties

62.14.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.14.6 inputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of the inputs to the model.
Notes: (Read only property)

62.14.7 isUpdatable as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether you can update the model with additional training.
Notes: Available on Mac OS 10.15 or newer.
(Read only property)

62.14.8 metadata as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Optional metadata describing the model.
Notes: (Read only property)

62.14.9 outputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of the outputs from the model.
Notes: (Read only property)

62.14.10 parameterDescriptionsByKey as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Allows for access of each parameter as parameter description.
Notes: (Read only property)

62.14.11 predictedFeatureName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Name of the primary target / predicted output feature in the output descriptions.
Notes: (Read only property)

62.14.12 predictedProbabilitiesName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Key for all predicted probabilities stored as a MLFeatureTypeDictionary in the output descriptions.
Notes: (Read only property)

62.14.13 trainingInputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Provides access to each training input as a feature description, given the name of the input.
Notes: Available on MacOS 101.5 or newer.
(Read only property)

62.15 class MLModelMBS

62.15.1 class MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model and evaluate on a specific set of input features.
Notes: Inputs and outputs are accessed via the MLFeatureProvider protocol.
Returns a model or nil if there is an error.

Available on macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- Update Machine Learning Model on Device

62.15.2 Methods

62.15.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether CoreML is available.
Notes: Should return true on macOS 10.13 or newer.

62.15.4 compileModelAtURL(URL as string, byref error as NSErrorMBS) as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Compile a .mlmodel for this device.
Notes: URL: URL file path to .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a URL to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permenant location if you wish to keep it.

62.15.5 compileModelFile(File as folderItem, byref error as NSErrorMBS) as folderItem

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Compile a .mlmodel for this device.
Example:

```
Var SourceFile as FolderItem = SpecialFolder.Desktop.child("resnet50.MLmodel")
Var Error as NSErrorMBS

Var Tempfile as FolderItem = MLModelMBS.compileModelFile(SourceFile, Error)

if Tempfile <>nil then
tempfile.MoveFileTo SpecialFolder.Desktop
MsgBox "OK"
else
MsgBox Error.localizedDescription
end if
```

Notes: File: FolderItem for .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a folderitem to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permenant location if you wish to keep it.

62.15.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.15.7 MLModelAuthorKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: The author of this model.

62.15.8 MLModelCreatorDefinedKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: Any additional pertinent information specified by the model creator.

62.15.9 MLModelDescriptionKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: A short description of what the model does and/or its purpose

62.15.10 MLModelErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error domain string for the CoreML errors.

62.15.11 MLModelLicenseKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: License information for the model.

62.15.12 MLModelVersionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: A version number encoded as a string.

62.15.13 modelWithContentsOfFile(file as FolderItem, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 62.15.14 modelWithContentsOfFile(file as FolderItem, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 11084

62.15.14 modelWithContentsOfFile(file as FolderItem, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes: File: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.

62.15.15 modelWithContentsOfPath(Path as string, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 62.15.16 modelWithContentsOfPath(Path as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 11084

62.15.16 modelWithContentsOfPath(Path as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes: Path: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned

from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.

62.15.17 modelWithContentsOfURL(URL as string, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 62.15.18 modelWithContentsOfURL(URL as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 11085

62.15.18 modelWithContentsOfURL(URL as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes: URL: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.

62.15.19 parameterValueForKey(key as MLParameterKeyMBS, byref error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Provides value for the given parameter.
Notes: Returns nil on error.
Available on MacOS 10.15 or newer.

62.15.20 predictionFromFeatures(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: All models can predict on a specific set of input features.

62.15.21 predictionFromFeaturesMT(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: All models can predict on a specific set of input features.
Notes: The work is performed on an extra thread, so this function can yield time to other Xojo threads. And it calles the Working event regularly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

62.15.22 predictionsFromBatch(inputBatch as MLBatchProviderMBS, byref error as NSErrorMBS) as MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Predicts output feature values from the given a batch of input feature values.
Notes: inputBatch: The batch of feature values the model needs to make its predictions.

Returns a batch provider that represents the model,Äôs predictions for the batch of inputs.
See also:

- 62.15.23 predictionsFromBatch(inputBatch as MLBatchProviderMBS, options as MLPredictionOptionsMBS, byref error as NSErrorMBS) as MLBatchProviderMBS 11087

62.15.23 predictionsFromBatch(inputBatch as MLBatchProviderMBS, options as MLPredictionOptionsMBS, byref error as NSErrorMBS) as MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Predicts output feature values from the given a batch of input feature values and prediction options.
Notes: inputBatch: The batch of feature values the model needs to make its predictions.
options: All the options to be applied to the prediction.

Returns a batch provider that represents the model,Äôs predictions for the batch of inputs.
See also:

- 62.15.22 predictionsFromBatch(inputBatch as MLBatchProviderMBS, byref error as NSErrorMBS) as MLBatchProviderMBS 11086

62.15.24 Properties

62.15.25 configuration as MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The configuration of the model set during initialization.
Notes: (Read only property)

62.15.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.15.27 modelDescription as MLModelDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A model holds a description of its required inputs and expected outputs.
Notes: (Read only property)

62.15.28 Constants

Errors

Constant	Value	Description
ErrorCustomLayer	4	An error related to a custom layer in your model.
ErrorCustomModel	5	An error related to your custom model.
ErrorDescriptionMismatch	2	Mismatch error.
ErrorFeatureType	1	Type error.
ErrorGeneric	0	Generic error.
ErrorIO	3	I/O file error.
ErrorParameters	7	An error related to missing or invalid model parameters.
ErrorUpdate	6	An error related to updating a model.

62.16 class MLMultiArrayConstraintMBS

62.16.1 class MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint describing expected MLMultiArray properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

62.16.2 Methods

62.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

62.16.4 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required shape of array.
Notes: One value for each dimension.

62.16.5 Properties

62.16.6 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required dataType.
Notes: (Read only property)

62.16.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.16.8 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(0) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.16.9 shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(1) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.16.10 shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(2) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.16.11 shapeConstraint as MLMultiArrayShapeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraint on the shape of the multiarray.
Notes: (Read only property)

62.17 class MLMultiArrayMBS

62.17.1 class MLMultiArrayMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a Multidimensional Array.
Blog Entries

62.17.2 Methods

62.17.3 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create by wrapping existing data.
Notes: Please make sure that memory is not deallocated too early, e.g. by subclassing and freeing it in destructor.
See also:

- 62.17.4 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS) 11091

62.17.4 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create by C-style contiguous array by allocating and managing the necessary memory.
See also:

- 62.17.3 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS) 11091

62.17.5 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An array containing the sizes of each dimension in the multiarray.

62.17.6 strides as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An array containing the stride in memory for each dimension.
Notes: The element referred to by a multidimensional index is located at an offset equal to sum_d index [d] *strides [d] . This offset is in the units of the specified dataType.

62.17.7 Properties

62.17.8 count as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Count of total number of elements.
Notes: (Read only property)

62.17.9 dataPointer as Ptr

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Unsafe pointer to underlying buffer holding the data.
Notes: (Read only property)

62.17.10 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of element held.
Notes: See DataType* constants.
(Read only property)

62.17.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.17.12 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(0) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.13 shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(1) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.14 shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(2) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.15 strides0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(0) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.16 strides1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(1) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.17 strides2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(2) value.
Notes: Convenience property to see value in debugger.
(Read only property)

62.17.18 doubleValue(index as Integer) as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes: Pass the index for the value to query.
(Read and Write computed property)
See also:

- 62.17.19 doubleValue(indexes() as Integer) as Double 11094

62.17.19 doubleValue(indexes() as Integer) as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes: Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 62.17.18 doubleValue(index as Integer) as Double 11094

62.17.20 integerValue(index as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes: Pass the index for the value to query.
(Read and Write computed property)
See also:

- 62.17.21 integerValue(indexes() as Integer) as Integer 11094

62.17.21 integerValue(indexes() as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes: Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 62.17.20 integerValue(index as Integer) as Integer 11094

62.17.22 singleValue(index as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes: Pass the index for the value to query.
(Read and Write computed property)
See also:

- 62.17.23 singleValue(indexes() as Integer) as Single 11095

62.17.23 singleValue(indexes() as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes: Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 62.17.22 singleValue(index as Integer) as Single 11095

62.17.24 Constants

Data Types

Constant	Value	Description
DataTypeDouble	&h10040	Data is double values.
DataTypeFloat16	&h10010	Data is Float16 values. Sadly Xojo doesn't have a native Float16 data type.
DataTypeFloat32	&h10020	Data is single values (32-bit).
DataTypeFloat64	&h10040	Data is Float64 values. Use double in Xojo.
DataTypeInt32	&h20020	Data is 32-bit integer values.
DataTypeInt8	&h20008	Data is 8-bit integer values. For macOS 26.0 and newer.

62.18 class MLMultiArrayShapeConstraintMBS

62.18.1 class MLMultiArrayShapeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The lists of shapes or ranges of shapes that constrain a multiarray feature.
Notes: Available in MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 19.6pr3

62.18.2 Methods

62.18.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.18.4 enumeratedShapes as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Array of allowed shapes for a multiarray feature.

62.18.5 sizeRangeForDimension as NSRangeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The allowable range for a dimention of the multiarray.

62.18.6 Properties

62.18.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.18.8 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The type of the shape constraint.
Notes: (Read only property)

62.18.9 Constants

Types

Constant	Value	Description
TypeEnumerated	2	The constraint is an array of allowed shapes.
TypeRange	3	The constraint is a set of ranges allowed for the array shape.
TypeUnspecified	1	The constraint type is undefined.

62.19 class MLNumericConstraintMBS

62.19.1 class MLNumericConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The value limitations of a number.
Notes: Available on MacOS 10.15 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.19.2 Methods

62.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.19.5 enumeratedNumbers as Double()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A set of the numbers allowed in this constraint.

62.19.6 Properties

62.19.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.19.8 maxNumber as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The largest numerical value allowed by this constraint.
Notes: (Read only property)

62.19.9 minNumber as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The smallest numerical value allowed by this constraint.
Notes: (Read only property)

62.20 class MLParameterDescriptionMBS

62.20.1 class MLParameterDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The description of a model parameter that includes a default value and a constraint, if applicable.
Notes: Available for MacOS 10.15 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.20.2 Methods

62.20.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.20.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.20.5 Properties

62.20.6 defaultValue as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The default value for the parameter.
Notes: (Read only property)

62.20.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.20.8 key as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key for this parameter description value.
Notes: (Read only property)

62.20.9 numericConstraint as MLNumericConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints of this paramter description value, if and only if the value is numerical.
Notes: (Read only property)

62.21 class MLParameterKeyMBS

62.21.1 class MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A key for model and update parameter dictionaries.
Notes: Subclass of the MLKeyMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.21.2 Methods

62.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.21.4 scopedTo(scope as String) as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Returns a new MLParameterKey instance after adding additional scoping.

62.21.5 Properties

62.21.6 beta1 as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the beta1 parameter for the Adam optimizer (a Double value).
Notes: Double parameter used to control the beta1 of Adam optimizer. Adjustable at load-time.
(Read only property)

62.21.7 beta2 as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the beta2 parameter for the Adam optimizer (a Double value).
Notes: Double parameter used to control the beta2 of Adam optimizer. Adjustable at load-time.
(Read only property)

62.21.8 biases as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: MLMultiArrayMBS parameter returned when client requests for biases of a particular layer using a scoped parameter.
Notes: (Read only property)

62.21.9 epochs as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the epochs parameter for the optimizer (an Int64 value).
Notes: Int64 parameter used to specify the number of epochs used by optimizer. Adjustable at load-time.
(Read only property)

62.21.10 eps as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the eps parameter for the Adam optimizer (a Double value).
Notes: Double parameter used to control the epsilon of Adam optimizer. Adjustable at load-time.
(Read only property)

62.21.11 learningRate as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the parameter for the optimizer,Äôs learning rate (a Double value).
Notes: Double parameter used to control the learning rate of an optimizer. Adjustable in progress.
(Read only property)

62.21.12 linkedModelFileName as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the name of the linked model.
Notes: (Read only property)

62.21.13 linkedModelSearchPath as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the search path for the linked model.
Notes: (Read only property)

62.21.14 miniBatchSize as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the mini batch-size parameter for the optimizer (an Int64 value).
Notes: Int64 parameter used to specify the size of a miniBatch used by optimizer. Adjustable at load-time.
(Read only property)

62.21.15 momentum as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the parameter for the optimizer,Äôs momentum gradient (a Double value).
Notes: Double parameter used to control the momentum of gradient based optimizers. Adjustable at load-time.
(Read only property)

62.21.16 numberOfNeighbors as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Int64 parameter used to specify the number of neighbors to use for class affinity (applicable to kNN).
Notes: Not adjustable in progress.
(Read only property)

62.21.17 seed as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Int64 parameter used to specify the seed to be used if shuffling data between epochs.
Notes: Adjustable at load-time.
(Read only property)

62.21.18 shuffle as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Bool parameter used to specify whether to shuffle the data between epochs.
Notes: Adjustable at load-time.
(Read only property)

62.21.19 weights as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: MLMultiArrayMBS parameter returned when client requests for weights of a particular layer using a scoped parameter.
Notes: (Read only property)

62.22 class MLPredictionOptionsMBS

62.22.1 class MLPredictionOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An object to hold options / controls / parameters of how model prediction is performed

62.22.2 Methods

62.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.

62.22.4 Properties

62.22.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.22.6 usesCPUOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Set to true to force computation to be on the CPU only
Notes: (Read and Write property)

62.23 class MLSequenceConstraintMBS

62.23.1 class MLSequenceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints for a sequence feature.
Notes: Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.23.2 Methods

62.23.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

62.23.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.23.5 Properties

62.23.6 countRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of values allowed for the sequence's length.
Notes: (Read only property)

62.23.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.23.8 valueDescription as MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The description that all sequence elements must match.
Notes: (Read only property)

62.24 class MLSequenceMBS

62.24.1 class MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A sequence of data used as a feature input or feature output for a model.
Notes: Data from sensors (a time series) or language (a series of words) are often manipulated as sequences by machine learning models. These sequences can have variable lengths depending on their context. MLSequenceMBS explicitly encodes a sequence of strings or integers to support a series of data points as a single input.

If you need to process a sequence of values individually, one at a time, see Making Predictions with a Sequence of Inputs for details.
https://developer.apple.com/documentation/coreml/core_ml_api/making_predictions_with_a_sequence_of_inputs

Available in MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 19.6pr3

62.24.2 Methods

62.24.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.24.4 emptySequenceWithType(type as Integer) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an empty sequence of the given type.
Notes: Type: The MLFeatureType for the sequence. Must be either MLFeatureTypeString or MLFeatureTypeInt64.

62.24.5 int64Values as Int64()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The integer elements of the sequence.

62.24.6 sequenceWithInt64Array(int64Values() as Int64) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a sequence from an array of integers.

62.24.7 sequenceWithStringArray(stringValues() as String) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a sequence from an array of strings.

62.24.8 stringValues as String()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The string elements of the sequence.

62.24.9 Properties

62.24.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.24.11 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The type of value held in the sequence.
Notes: (Read only property)

62.25 class MLTaskMBS

62.25.1 class MLTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An abstract base class for machine learning tasks.
Notes: You don,Äôt create use this class directly. Instead, use a class that inherits from this one, such as MLUpdateTaskMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.6pr3

62.25.2 Methods

62.25.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.25.4 cancel

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Cancels a machine learning task before it completes.

62.25.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

62.25.6 resume

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Begins or resumes a machine learning task.
Notes: Use this method to start a task for the first time or resumes a task that has paused. Tasks pause

when they notify your app,Äôs progress handlers, such as those you provide to an MLUpdateProgressHandlersMBS instance.

62.25.7 Properties

62.25.8 Error as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The underlying error if the task is in a failed state.
Notes: (Read only property)

62.25.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.25.10 State as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The current state of the machine learning task.
Notes: (Read only property)

62.25.11 TaskIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A unique name of the task to distinguish it from all other tasks at runtime.
Notes: (Read only property)

62.25.12 Constants

Task States

Constant	Value	Description
StateCancelling	3	The state of a machine learning task that,Äôs in mid-termination, before it could finish successfully.
StateCompleted	4	The state of a machine learning task that has finished successfully.
StateFailed	5	The state of a machine learning task that has terminated due to an error.
StateRunning	2	The state of a machine learning task that,Äôs executing.
StateSuspended	1	The state of a machine learning task that,Äôs paused.

62.26 class MLUpdateContextMBS

62.26.1 class MLUpdateContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The context an update task provides to your app,Äôs completion and update progress handlers.
Blog Entries

- Update Machine Learning Model on Device

62.26.2 Methods

62.26.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.26.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constructor.

62.26.5 writeToFile(file as FolderItem, byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Exports a machine learning file to the file system.
Notes: file: The location in the file system where the file should be written.
Error: will return any error message.

Returns true on success or false on failure.
Requires MacOS 10.15 or newer.

62.26.6 Properties

62.26.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.26.8 Metrics as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The training metrics of the model for the update task, contained in a dictionary.
Notes: (Read only property)

62.26.9 Model as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The underlying Core ML model stored in memory.
Notes: (Read only property)

62.26.10 Parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The parameters for the update task.
Notes: (Read only property)

62.26.11 ProgressEvent as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The event type that triggered an update task to notify your app,Äôs completion and update progress handlers.
Notes: (Read only property)

62.26.12 Task as MLUpdateTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The update task that generated the update context.
Notes: (Read only property)

62.26.13 Constants

Progress Event Types

Constant	Value	Description
ProgressEventEpochEnd	2	An event that represents the end of training epoch.
ProgressEventMiniBatchEnd	4	An event that represents the end of a mini-batch within a training epoch.
ProgressEventTrainingBegin	1	An event that represents the start of training.

62.27 class MLUpdateProgressHandlersMBS

62.27.1 class MLUpdateProgressHandlersMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A collection of closures an update task uses to notify your app of its progress.
Notes: Available in MacOS 10.15 or newer.
Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

62.27.2 Methods

62.27.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

62.27.4 Constructor(interestedEvents as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates the collection of event handlers for an update task uses to notify your app of its progress.
Notes: interestedEvents: The events for which the update task will call your closures for, contained in an option set.

62.27.5 Properties

62.27.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

62.27.7 Events

62.27.8 completionHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The event that an update tasks uses to notify you when it is complete.

62.27.9 progressHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The event an update task uses to notify your app.
Notes: The update task only uses this event for the events you specified in interestedEvents.

62.27.10 Constants

Progress Event Types

Constant	Value	Description
ProgressEventEpochEnd	2	An event that represents the end of training epoch.
ProgressEventMiniBatchEnd	4	An event that represents the end of a mini-batch within a training epoch.
ProgressEventTrainingBegin	1	An event that represents the start of training.

62.28 class MLUpdateTaskMBS

62.28.1 class MLUpdateTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A task that updates a model with additional training data.
Notes: Use an MLUpdateTaskMBS to update a machine learning model on a user,Äôs device.

Available on MacOS 10.15 or newer.
Subclass of the MLTaskMBS class.

62.28.2 Methods

62.28.3 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an update task for your model, given its file URL, training data, and your completion handler.
Notes: file: The location in the file system of a model file (ModelName.mlmodelc).
trainingData: The update data for the model, contained in a batch provider.
configuration: The model settings for a updated model object.

Calls later completionHandler event.
See also:

- 62.28.4 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, progressHandlers as MLUpdateProgressHandlersMBS, byref error as NSErrorMBS) 11119

62.28.4 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, progressHandlers as MLUpdateProgressHandlersMBS, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an update task for your model, given its file URL, training data, and your progress handlers.
Notes: file: The location in the file system of a model file (ModelName.mlmodelc).
trainingData: The update data for the model, contained in a batch provider.
configuration: The model settings for a updated model object.
progressHandlers: The closures the task calls during the update process.
See also:

- 62.28.3 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) 11119

62.28.5 resumeWithParameters(updateParameters as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Resumes a model update with updated parameter values.
Notes: updateParameters: Model training parameter values to replace those currently set in the update task.

Use this method to resume the model update task with newer parameter values. You use this method within the closures you provide in an MLUpdateProgressHandlersMBS instance to resume the MLUpdateTaskMBS.

62.28.6 Events

62.28.7 completionHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The complete event.
Notes: Called only if you use constructor without passing MLUpdateProgressHandlersMBS object, because if you use MLUpdateProgressHandlersMBS, the event is called there.

Chapter 63

CoreText

63.1 class CoreTextMBS

63.1.1 class CoreTextMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The central CoreText class.
Notes: Some global methods, constants and events for CoreText.
Blog Entries

- News from the MBS Xojo Plugins Version 25.0
- MBS Xojo Plugins, version 24.6pr6
- CoreText Completed

63.1.2 Methods

63.1.3 AvailableFontFamilyNames as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of visible font family names sorted for user interface display.

63.1.4 AvailableFontURLs as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font URLs.

63.1.5 AvailablePostScriptNames as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of unique PostScript font names for the fonts.

63.1.6 CompareFontFamilyNames(name1 as string, name2 as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A comparator function to compare font family names and sort them according to Apple guidelines.
Notes: family1: The first localized font family name to compare, as a string.
family2: The second localized font family name to compare, as a string.

Returns a CFComparisonResult value indicating the sort order for the two family names. kCFComparisonResultGreatherThan (1) if family1 is greater than family2, kCFComparisonResultLessThan (-1) if family1 is less than family2, and kCFComparisonResultEqualTo (0) if they are equal.

This CFComparatorFunction function compares font family names and sorts them in the Apple preferred order, accounting for foundry prefix. Family names with recognized prefixes are sorted after the unprefixed names in prefix order.

63.1.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The constructor.

63.1.8 CoreTextVersion as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the version of the CoreText framework.
Notes: This function returns a number indicating the version of the CoreText framework. Note that framework version is not always an accurate indicator of feature availability. The recommended way to use this function is first to check that the function pointer is non nil (plugin will do and raise exceptions), followed by calling it and comparing its result to a defined constant (or constants).

Returns the version number. This value is for comparison with the constants beginning with kCTVersion-Number.

63.1.9 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a font descriptor representing the font in the supplied data.
Notes: Note: the font descriptor is not available through font descriptor matching.

data: A memoryblock containing font data.

Returns a font descriptor created from the data, or nil on error.
See also:

- 63.1.10 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS 11123

63.1.10 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a font descriptor representing the font in the supplied data.
Notes: Note: the font descriptor is not available through font descriptor matching.

data: A string containing font data.

Returns a font descriptor created from the data, or nil on error.
See also:

- 63.1.9 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS 11123

63.1.11 CreateFontDescriptorsFromFile(file as folderitem) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font descriptors representing each of the fonts in the specified file.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("Didot.ttc")
```

```
Var descriptor() as CTFontDescriptorMBS
Var result() as string

descriptor = CoreTextMBS.CreateFontDescriptorsFromFile(file)

for i as Integer = 0 to descriptor.Ubound
result.append descriptor(i).Displayname
next

MsgBox Join(result, EndOfLine)
```

Notes: file: A folderitem referencing a valid font file.

63.1.12 CreateFontDescriptorsFromURL(URL as string) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font descriptors representing each of the fonts in the specified URL.
Notes: URL: A file system URL referencing a valid font file.

63.1.13 Destructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The destructor.

63.1.14 EnableFontDescriptors(descriptors() as CTFontDescriptorMBS, enable as boolean)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Enables or disables the matching font descriptors for font descriptor matching.
Notes: descriptors: Array of font descriptors.
enable: Boolean value indicating whether the fonts matching descriptors should be enabled for font descriptor matching.

63.1.15 GetScopeForFile(file as folderitem) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the registration scope of the specified folderitem.
Notes: The registration scope of the specified file or kCTFontManagerScopeNone if not currently registered.
Available in OS X v10.6 and later.

63.1.16 GetScopeForURL(URL as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the registration scope of the specified URL.
Notes: The registration scope of the specified URL or kCTFontManagerScopeNone if not currently registered.
Available in OS X v10.6 and later.

63.1.17 IsSupportedFontFile(file as folderitem) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines whether the referenced font data is supported on the current platform.
Notes: Returns true if the folderitem refers to a valid font that can be used on the current platform; false otherwise.

63.1.18 IsSupportedFontURL(URL as string) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines whether the referenced font data (usually by file URL) is supported on the current platform.
Notes: Returns true if the URL refers to a valid font that can be used on the current platform; false otherwise.

63.1.19 kCTBaselineClassAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline class override.
Notes: Value must be one of the kCTBaselineClass constants. Normally, glyphs on the line will be assigned baseline classes according to the 'bsln' or 'BASE' table in the font. This attribute may be used to change this assignment.

see also: kCTBaselineClassRoman, kCTBaselineClassIdeographicCentered, kCTBaselineClassIdeographicLow, kCTBaselineClassIdeographicHigh, kCTBaselineClassHanging, kCTBaselineClassMath.

63.1.20 kCTBaselineInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline info dictionary.
Notes: Value must be a CFDictionaryRef. Normally, baseline offsets will be assigned based on the 'bsln' or 'BASE' table in the font. This attribute may be used to assign different offsets. Each key in the dictionary is one of the kCTBaselineClass constants and the value is a number of the baseline offset in points. You only need to specify the offsets you wish to change.

63.1.21 kCTBaselineReferenceInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline info dictionary for the reference baseline.
Notes: Value must be a Dictionary. All glyphs in a run are assigned a baseline class and then aligned to the offset for that class in the reference baseline baseline info. See the discussion of kCTBaselineInfoAttributeName for information about the contents of the dictionary. You can also use the kCTBaselineReferenceFont key to specify that the baseline offsets of a particular CTFontMBS should be used as the reference offsets.

63.1.22 kCTCharacterShapeAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Controls glyph selection.
Notes: Value must be a number. Default is value is 0 (disabled). A non-zero value is interpreted as an SFNT kCharacterShapeType selector + 1; see SFNTLayoutTypes.h for selectors. For example, an attribute value of 1 corresponds to kTraditionalCharactersSelector.

63.1.23 kCTFontAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key for the font.
Notes: Value must be a CTFontMBS. Default is Helvetica 12.

63.1.24 kCTFontManagerBundleIdentifier as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: CTFontManage bundle identifier.
Notes: The CTFontManager bundle identifier to be used with get or set global auto-activation settings.

63.1.25 kCTFontManagerErrorDomain as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The error domain for CoreText.
Notes: CFError objects with this domain have error codes corresponding to one of the CTFontManagerError errors listed in "Font Registration Errors" and "Font Unregistration Errors."

63.1.26 kCTFontManagerErrorFontURLsKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: User info key to be used with CFError references returned from registration functions.
Notes: The value associated with this key in the user info dictionary of a CFError object is a CFArray of font URLs that failed with the given error.

63.1.27 kCTFontManagerRegisteredFontsChangedNotification as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Notification name for font registry changes.
Notes: This is the string to use as the notification name when subscribing to Core Text Font Manager notifications. This notification is posted when fonts are added to the font registry. The client is responsible for registered with the distributed notification center to receive notifications for changes to the session or user scopes, and with a local notification center for changes to the process scope.

63.1.28 kCTFontSlantTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the slant trait value.
Notes: Use this key to access the normalized slant angle from the font traits dictionary. The value returned is a number representing a float value between -1.0 and 1.0 for normalized slant angle. The value or 0.0 corresponds to 0 degree clockwise rotation from the vertical and 1.0 corresponds to 30 degrees clockwise rotation.

63.1.29 kCTFontSymbolicTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the symbolic traits value.
Notes: Use this key to access the symbolic traits value from the font traits dictionary. The value is returned as a number.

63.1.30 kCTFontWeightTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the weight trait value.
Notes: Use this key to access the normalized weight trait from the font traits dictionary. The value returned is a number representing a float value between -1.0 and 1.0 for normalized weight. The value of 0.0 corresponds to the regular or medium font weight.

63.1.31 kCTFontWidthTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the width (condense/expand) trait value.
Notes: Use this key to access the normalized proportion trait from the font traits dictionary. This value corresponds to the relative inter-glyph spacing for a given font. The value returned is a number representing a float between -1.0 and 1.0. The value of 0.0 corresponds to regular glyph spacing while negative values represent condensed glyph spacing.

63.1.32 kCTForegroundColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key for the foreground color..
Notes: Value must be a CGColorMBS. Default value is black.

63.1.33 kCTForegroundColorFromContextAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Never set a foreground color in the CGContext; use what is set as the context's fill color.

Value must be a boolean. Default is false. The reason why this exists is because an NSAttributedString defaults to a black color if no color attribute is set. This forces CoreText to set the color in the context. This will allow developers to sidestep this, making CoreText set nothing but font information in the CGContext. If set, this attribute also determines the color used by kCTUnderlineStyleAttributeName, in which case it overrides the foreground color.

63.1.34 kCTGlyphInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Allows the use of unencoded glyphs.
Value must be a CTGlyphInfoMBS. The glyph specified by this CTGlyphInfo object is assigned to the entire attribute range, provided that its contents match the specified base string and that the specified glyph is available in the font specified by kCTFontAttributeName.

63.1.35 kCTKernAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: A kerning adjustment.
Value must be a float. Default is standard kerning. The kerning attribute indicate how many points the following character should be shifted from its default offset as defined by the current character's font in points; a positive kern indicates a shift farther along and a negative kern indicates a shift closer to the current character. If this attribute is not present, standard kerning will be used. If this attribute is set to 0.0, no kerning will be done at all.

63.1.36 kCTLanguageAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Specifies text language.

Value must be a String containing a locale identifier. Default is unset. When this attribute is set to a valid identifier, it will be used to select localized glyphs (if supported by the font) and locale-specific line breaking rules.

63.1.37 kCTLigatureAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Controls ligature formation.

Value must be a number. Default is int value 1. The ligature attribute determines what kinds of ligatures should be used when displaying the string. A value of 0 indicates that only ligatures essential for proper rendering of text should be used, 1 indicates that standard ligatures should be used, and 2 indicates that all available ligatures should be used. Which ligatures are standard depends on the script and possibly the font. Arabic text, for example, requires ligatures for many character sequences, but has a rich set of additional ligatures that combine characters. English text has no essential ligatures, and typically has only two standard ligatures, those for "fi" and "fl" – all others being considered more advanced or fancy.

On iOS releases prior to 6.0 essential ligatures are applied if the font contains glyphs for any of U+FB00 through U+FB04 and the font lacks AAT or OpenType shaping tables, but as of 6.0 shaping tables (or the lack thereof) are treated as definitive. This character-based shaping will still be performed if this attribute is explicitly specified with the default value of 1.

63.1.38 kCTParagraphStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: A CTParagraphStyle object which is used to specify things like line alignment, tab rulers, writing direction, etc.
Value must be a CTParagraphStyleMBS. Default is an empty CTParagraphStyle object.

63.1.39 kCTRunDelegateAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Allows customization of certain aspects of a range of text's appearance.

Value must be a CTRunDelegateMBS. The values returned by the embedded object for an attribute range apply to each glyph resulting from the text in that range. Because an embedded object is only a display-time modification, care should be taken to avoid applying this attribute to a range of text with complex behavior, such as a change of writing direction, combining marks, etc. Consequently, it is recommended that this attribute be applied to a range containing the single character U+FFFC.

63.1.40 kCTStrokeColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: The stroke color.
Value must be a CGColorMBS. Default is the foreground color.

63.1.41 kCTStrokeWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: The stroke width.
Value must be a number. Default value is 0.0, or no stroke. This attribute, interpreted as a percentage of font point size, controls the text drawing mode: positive values effect drawing with stroke only; negative values are for stroke and fill. A typical value for outlined text is 3.0.

63.1.42 kCTSuperscriptAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Controls vertical text positioning.
Value must be a number. Default is int value 0. If supported by the specified font, a value of 1 enables superscripting and a value of -1 enables subscripting.

63.1.43 kCTUnderlineColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: The underline color.
Value must be a CGColorMBS. Default is the foreground color.

63.1.44 kCTUnderlineStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Allows the setting of an underline to be applied at render time.

Value must be a number. Default is kCTUnderlineStyleNone. Set a value of something other than kCTUnderlineStyleNone to draw an underline. In addition, the CTUnderlineStyleModifiers can be used to modify the look of the underline. The underline color will be determined by the text's foreground color.

63.1.45 kCTVerticalFormsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Controls glyph orientation.

Value must be a boolean. Default is false. A value of false indicates that horizontal glyph forms are to be used, true indicates that vertical glyph forms are to be used.

63.1.46 kCTWritingDirectionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes: Specifies a bidirectional override or embedding.

Value must be a CFArray of CFNumberRefs, each of which should have a value of either kCTWritingDirectionLeftToRight or kCTWritingDirectionRightToLeft, plus one of kCTWritingDirectionEmbedding or kCTWritingDirectionOverride. This array represents a sequence of nested bidirectional embeddings or overrides, in order from outermost to innermost, with (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionEmbedding) corresponding to a LRE/PDF pair in plain text or in HTML, (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionEmbedding) corresponding to a RLE/PDF pair in plain text or a in HTML, (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionOverride) corresponding to a LRO/PDF pair in plain text or <bdo dir="ltr">in HTML, and (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionOverride) corresponding to a RLO/PDF pair in plain text or <bdo dir="rtl">in HTML.

63.1.47 MatchFontDescriptorsWithProgressHandler(descriptors() as CTFontDescriptorMBS, mandatoryAttributes() as string, tag as Variant = nil) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Matches font descriptors in background.
Notes: This function returns immediately, but can potentially take long time to process. The progress is notified via progress evnet.

descriptors: An array of descriptors to process.
mandatoryAttributes: some mandatory attributes.
Returns false if it couldn't start the work.

63.1.48 RegisterFontsForFile(file as folderitem, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes: fontURL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: a CFErrorMBS object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.

63.1.49 RegisterFontsForFiles(files() as folderitem, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes: files: Array of font files.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFErrorMBS objects which, in case of failed registration, contain error information. Each error contains a CFArrayMBS of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller. Can be nil.

Returns true if registration of all font URLs was successful, otherwise false.

63.1.50 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes: fontURL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: a CFErrorMBS object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.
See also:

- 63.1.51 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean 11134

63.1.51 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes: URLs: Array of font URLs.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: Array of CFErrorMBS objects which, in case of failed registration, contain error information. Each error contains a CFArrayMBS of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller. Can be nil.

Please pass in errors array empty as
Returns true if registration of all font URLs was successful, otherwise false.
See also:

- 63.1.50 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean 11133

63.1.52 RegisterGraphicsFont(font as CGFontMBS, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers the specified graphics font with the font manager.
Notes: font: The graphics font to be registered.
error: Returns by indirection an error object in the case of failed registration.

Returns true if registration of the font was successful, otherwise false.

Registered fonts are discoverable through font descriptor matching. Any attempt to register a font that is either already registered or contains the same Postscript of an already registered font will fail. This behavior is useful for fonts that may be embedded in documents or constructed in memory. A graphics font is obtained by calling CGFontMBS.CreateWithDataProvider. Fonts that are backed by files should be registered using CoreTextMBS.RegisterFontsForURL.

63.1.53 RequestFonts(descriptors() as CTFontDescriptorMBS, tag as variant = nil)

MBS MacCG Plugin, Plugin Version: 25.0, Platform: macOS, Targets: iOS only.

Function: Resolves font descriptors specified on input.
Example:

```
ct = New MyCoreTextMBS // your subclass with the event
Var descriptors() As CTFontDescriptorMBS

descriptors.add CTFontDescriptorMBS.CreateWithNameAndSize("testing", 12)

ct.RequestFonts descriptors
```

Notes: descriptors: An array of font descriptors to make available to the process. The keys for describing the fonts may be a combination of kCTFontNameAttribute, kCTFontFamilyNameAttribute, or kCTFontRegistrationUserInfoAttribute.

On iOS, fonts registered by font provider apps in the CTFontManagerScope.persistent scope aren,Äôt automatically available to other apps. Other apps must call this function to make the fonts available for font descriptor matching.

On iOS, if the font descriptors can't be found, the system presents the user with a dialog that indicates which fonts couldn't be resolved. The system may provide the user with a way to resolve the missing fonts, if the font manager has a way to enable them.

63.1.54 UnregisterFontsForFile(file as folderitem, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.

Notes: URL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

63.1.55 UnregisterFontsForFiles(files() as folderitem, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes: files: Array of font folderitems.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.

63.1.56 UnregisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes: URL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

63.1.57 UnregisterFontsForURLs(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes: URLs: Array of font URLs.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.

63.1.58 UnregisterGraphicsFont(font as CGFontMBS, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters the specified graphics font with the font manager.
Notes: font: The graphics font to be unregistered.
error: Returns by indirection an error object in the case of failed unregistration.

Returns true if unregistration of the font was successful, otherwise false.

Unregistered fonts are no longer discoverable through font descriptor matching. Fonts that are backed by files should be unregistered using CTFontManagerUnregisterFontsForURL.

63.1.59 Properties

63.1.60 AutoActivationSetting(BundleID as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The auto-activation setting for the specified bundle identifier.
Notes: bundleID: The bundle identifier used to specify a particular application bundle. If "", the current application bundle is used. If kCTFontManagerBundleIdentifier is specified, sets global auto-activation.
(Read and Write computed property)

63.1.61 Events

63.1.62 FontCollectionSortDescriptors(first as CTFontDescriptorMBS, second as CTFontDescriptorMBS, tag as Variant) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The event to sort font descriptors..
Notes: This callback can be specified to obtain the matching font descriptors of a collection in sorted order. Return the appropriate comparison result of first descriptor to second descriptor.

Return -1 if smaller, 0 if equal or 1 if bigger.

63.1.63 Progress(state as Integer, progressParameter as Dictionary, tag as Variant) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Progress was made for a call to MatchFontDescriptorsWithProgressHandler.
Notes: Return true to continue, and return false to cancel the process.

63.1.64 RequestFontsCompleted(unresolvedFontDescriptors() as CTFontDescriptorMBS, tag as variant)

MBS MacCG Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: An event called after the request operation completes.
Notes: This event takes a unresolvedFontDescriptors parameter that contains an array of descriptors that couldn't be resolved or found. The array can be empty if all descriptors resolved.

63.1.65 Constants

Font Class Constants

Constant	Value	Description
kCTFontClassClarendonSerifs	&H040000000	Clarendon Serifs
kCTFontClassFreeformSerifs	&H070000000	Freeform Serifs
kCTFontClassMaskShift	28	The font class shift. This is used to shift the font class to the upper most 4 bits of the s traits.
kCTFontClassModernSerifs	&H030000000	Modern Serifs
kCTFontClassOldStyleSerifs	&H010000000	OldStyleSerifs
kCTFontClassOrnamentals	&H090000000	Ornamentals
kCTFontClassSansSerif	&H080000000	Sans Serif
kCTFontClassScripts	&H0A0000000	Scripts
kCTFontClassSlabSerifs	&H050000000	Slab Serifs
kCTFontClassSymbolic	&H0C0000000	Symbolic
kCTFontClassTransitionalSerifs	&H020000000	Transitional Serifs
kCTFontClassUnknown	&H000000000	Unknown

Font Auto-Activation Settings

Constant	Value	Description
kCTFontManagerAutoActivationDefault	0	Default auto-activation setting. When specified, the application us setting.
kCTFontManagerAutoActivationDisabled	1	Disables auto-activation.
kCTFontManagerAutoActivationEnabled	2	Enables auto-activation.
kCTFontManagerAutoActivationPromptUser	3	Requires user input for auto-activation. A dialog is presented to confirm auto-activation of the font.

Font Registration Errors

Constant	Value	Description
kCTFontManagerErrorAlreadyRegistered	105	The file has already been registered in the specified scope.
kCTFontManagerErrorFileNotFound	101	The file does not exist at the specified URL.
kCTFontManagerErrorInsufficientPermissions	102	Cannot access the file due to insufficient permissions.
kCTFontManagerErrorInvalidFontData	104	The file contains invalid font data that could cause system proble
kCTFontManagerErrorUnrecognizedFormat	103	The file is not a recognized or supported font file format.

Font Unregistration Errors

Constant	Value	Description
kCTFontManagerErrorInUse	202	The font file is actively in use and cannot be unregistered.
kCTFontManagerErrorNotRegistered	201	The file is not registered in the specified scope.
kCTFontManagerErrorSystemRequired	202	The file is required by the system and cannot be unregistered.

Font Registration Scope

Constant	Value	Description
kCTFontManagerScopeNone	0	No scope is defined.
kCTFontManagerScopeProcess	1	The font is available to the current process for the duration of the process unless directly unregistered.
kCTFontManagerScopeSession	3	The font is available to the current user session but will not be available in subsequent sessions.
kCTFontManagerScopeUser	2	The font is available to all processes for the current user session and will be available in subsequent sessions unless unregistered.

Font Traits

Constant	Value	Description
kCTFontTraitBold	2	Bold. Additional detail available via kCTFontWeightTrait
kCTFontTraitClassMask	4026531840	Mask for the font class
kCTFontTraitColorGlyphs	8192	Color bitmap glyphs are available.
kCTFontTraitComposite	16384	Composite The font is a CFR (Composite font reference), a cascade list is expected per font.
kCTFontTraitCondensed	64	Condensed Additional detail available via kCTFontWidthTrait
kCTFontTraitExpanded	32	Expanded Expanded and condensed traits are mutually exclusive
kCTFontTraitItalic	1	Italic Additional detail available via kCTFontSlantTrait
kCTFontTraitMonoSpace	1024	MonoSpace Use fixed-pitch glyphs if available. May have multiple glyph advances (most CJK glyphs may contain two spaces)
kCTFontTraitUIOptimized	4096	UI optimized Synthesize appropriate attributes for UI rendering such as control titles if necessary
kCTFontTraitVertical	2048	Vertical Use vertical glyph variants and metrics.

Underline Pattern

Constant	Value	Description
kCTUnderlinePatternDash	&h0200	Dash
kCTUnderlinePatternDashDot	&h0300	Dash Dot
kCTUnderlinePatternDashDotDot	&h0400	Dash Dot Dot
kCTUnderlinePatternDot	&h0100	Dot
kCTUnderlinePatternSolid	&h0000	Solid

Underline style specifiers.

Constant	Value	Description
kCTUnderlineStyleDouble	9	Double underlined.
kCTUnderlineStyleNone	0	Not underlined.
kCTUnderlineStyleSingle	1	Single underlined.
kCTUnderlineStyleThick	2	Thick underlined.

Version Constants

Constant	Value	Description
kCTVersionNumber10_5	&h00020000	Mac OS X 10.5
kCTVersionNumber10_5_2	&h00020001	Mac OS X 10.5.2
kCTVersionNumber10_5_3	&h00020002	Mac OS X 10.5.3
kCTVersionNumber10_5_5	&h00020003	Mac OS X 10.5.5
kCTVersionNumber10_6	&h00030000	Mac OS X 10.6
kCTVersionNumber10_7	&h00040000	Mac OS X 10.7
kCTVersionNumber10_8	&h00050000	Mac OS X 10.8
kCTVersionNumber10_9	&h00060000	Mac OS X 10.9

Writing Directions

Constant	Value	Description
kCTWritingDirectionEmbedding	0	
kCTWritingDirectionOverride	1	

63.2 class CTFontCollectionMBS

63.2.1 class CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The CTFontCollection opaque type represents a font collection, that is, a group of font descriptors taken together as a single object.
Notes: Font collections provide the capabilities of font enumeration, access to global and custom font collections, and access to the font descriptors comprising the collection.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.2.2 Methods

63.2.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.2.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

63.2.5 CopyWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a copy of the original collection augmented with the given new font descriptors.
Notes: queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
Available in OS X v10.5 and later.

63.2.6 CreateCopyWithFontDescriptors(original as CTFontCollectionMBS, queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a copy of the original collection augmented with the given new font descriptors.
Notes: queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
Available in OS X v10.5 and later.

63.2.7 CreateFromAvailableFonts(options as Dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a new font collection containing all available fonts.
Notes: options: The options dictionary.

Returns a new collection containing all fonts available to the current application.

63.2.8 CreateWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a new collection based on the array of font descriptors.
Notes: An array of font descriptors to use for matching.

options: The options dictionary. See constant option keys.
Returns this function creates a new collection based on the provided font descriptors. The contents of this collection is defined by matching the provided descriptors against all available font descriptors.

63.2.9 ExclusionDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of descriptors to exclude from the match.

63.2.10 FontAttribute(attributeName as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptor attribute values.
Notes: attributeName: The attribute to retrieve for each descriptor in the collection.
options: Options to alter the return value.

This function returns a retained reference to an array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.
See also:

- 63.2.11 FontAttribute(attributeNames() as string, options as Integer) as Dictionary() 11144

63.2.11 FontAttribute(attributeNames() as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of dictionaries containing font descriptor attribute values.
Notes: This function returns a retained reference to a array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.
See also:

- 63.2.10 FontAttribute(attributeName as string, options as Integer) as Dictionary() 11144

63.2.12 kCTFontCollectionDisallowAutoActivationOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes: Option key to avoid auto-activating fonts.
Specify this option key in the options dictionary with a non-zero value to disallow searches for missing fonts

(font descriptors returning no results).

63.2.13 kCTFontCollectionIncludeDisabledFontsOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes: Specify this option key in the options dictionary with a non-zero value to enable matching of disabled fonts. You can pass font descriptors specifying disabled fonts to CTFontManagerEnableFontDescriptors, but you cannot use such a font descriptor to query font attributes from the system database or create a CTFontMBS.

63.2.14 kCTFontCollectionRemoveDuplicatesOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes: Option key to specify filtering of duplicates.

63.2.15 MatchingFontDescriptors(options as dictionary = nil) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptors matching the collection.

63.2.16 MatchingFontDescriptorsForFamily(familyName as string, options as dictionary = nil) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptors matching the specified family, one descriptor for each style in the collection.

63.2.17 MatchingFontDescriptorsSorted(tag as Variant) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of matching font descriptors sorted with the callback function.
Notes: This function returns an array of font descriptors matching the criteria of the collection and sorted by the results of the sorting callback function.

Calls FontCollectionSortDescriptors in CoreTextMBS class.

63.2.18 MutableCopy as CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a mutable copy of the original collection.

63.2.19 QueryDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of descriptors to match.

63.2.20 Constants

Bulk attribute access

Constant	Value	Description
kCTFontCollectionCopyDefaultOptions	0	Passing this option indicates that defaults are to be used. Available in OS X v10.7 and later.
kCTFontCollectionCopyStandardSort	2	Passing this option indicates that the return values should be sorted in st UI order, suitable for display to the user. This is the same sorting be used by NSFontPanel and Font Book. Available in OS X v10.7 and later.
kCTFontCollectionCopyUnique	1	Passing this option indicates that duplicate values should be removed fr results. Available in OS X v10.7 and later.

63.3 class CTFontDescriptorMBS

63.3.1 class CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFontDescriptor opaque type represents a font descriptor, that is, a dictionary of attributes (such as name, point size, and variation) that can completely specify a font.
Notes: A font descriptor can be an incomplete specification, in which case the system chooses the most appropriate font to match the given attributes.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.3.2 Methods

63.3.3 AttributeValue(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value associated with an arbitrary attribute.
Notes: key: The requested attribute.

Returns a attribute value, or nil if the requested attribute is not present.

63.3.4 AttributeValues as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes dictionary of the font descriptor.
Notes: The font descriptor attributes dictionary. This dictionary contains the minimum number of attributes to specify fully this particular font descriptor.

63.3.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.3.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.3.7 CopyWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a copy of the original font descriptor with new attributes.
Notes: attributes: A dictionary containing arbitrary attributes.

Returns a new copy of the original font descriptor with attributes augmented by those specified. If there are conflicts between attributes, the new attributes replace existing ones.

63.3.8 CopyWithFamily(family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor in the specified family based on the traits of the original descriptor.
Notes: family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.

63.3.9 CopyWithFeature(featureTypeIdentifier as Integer, featureSelectorIdentifier as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a font descriptor with new feature settings.
Notes: featureTypeIdentifier: The feature type identifier.
featureSelectorIdentifier: The feature selector identifier.

Returns a copy of the original font descriptor modified with the given feature settings.
This is a convenience method to toggle more easily the state of individual features.

63.3.10 CopyWithSymbolicTraits(symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor based on the original descriptor having the specified symbolic traits.
Notes: symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

63.3.11 CopyWithVariation(variationIdentifier as Integer, variationValue as Double) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a copy of the original font descriptor with a new variation instance.
Notes: variationIdentifier: The variation axis identifier. This is the four-character code of the variation axis as a number.
variationValue: The value corresponding with the variation instance.

Returns a copy of the original font descriptor with a new variation instance.
This is a convenience method for easily creating new variation font instances.

63.3.12 CreateCopyWithFamily(orignal as CTFontDescriptorMBS, family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor in the specified family based on the traits of the original descriptor.
Notes: original: The original font descriptor reference.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.

63.3.13 CreateCopyWithSymbolicTraits(orignal as CTFontDescriptorMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor based on the original descriptor having the specified symbolic traits.
Example:

```
// find PostScript names for a font
const nameOfAFont = "Arial"

Var FontName as string
Var FontFamilyName as string
Var FontPostscriptName as string
Var FontPostscriptNameBold as string
Var FontPostscriptNameItalic as string

Var f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)

if f <>nil then
FontName = f.FullName
FontFamilyName = f.FamilyName
FontPostscriptName = f.PostScriptName

Var d as CTFontDescriptorMBS = f.FontDescriptor

Var db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitBold, CoreTextMBS.kCTFontTraitBold)
Var di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitItalic, CoreTextMBS.kCTFontTraitItalic)

Var fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
Var fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

FontPostscriptNameBold = fb.PostScriptName
FontPostscriptNameItalic = fi.PostScriptName

end if

Break // read names in debugger
```

Notes: original: The original font descriptor reference.
symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should

be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

Requires Mac OS X 10.9 or newer.

63.3.14 CreateWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font descriptor reference from a dictionary of attributes.
Notes: The provided attribute dictionary can contain arbitrary attributes that are preserved; however, unrecognized attributes are ignored on font creation and and may not be preserved over the round trip from descriptor to font and back to descriptor.

63.3.15 CreateWithNameAndSize(Name as string, Size as Double = 0.0) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font descriptor with the provided PostScript name and size.
Example:

```
Var c as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateWithNameAndSize("Times", 12)
MsgBox c.AttributeValue(c.kCTFontFamilyNameAttribute)
```

Notes: name: The PostScript name to be used for the font descriptor as a string.
size: The point size. If 0.0, the font size attribute (kCTFontSizeAttribute) is omitted from the returned font descriptor.

Return sa new font descriptor reference with the given PostScript name and point size.

63.3.16 kCTFontBaselineAdjustAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the baseline adjustment for a font reference. This is primarily used when defining font descriptors for a cascade list to keep the baseline of all fonts even. The value associated with

this is a float represented as a number.

63.3.17 kCTFontCascadeListAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the cascade list used for a font reference. The cascade list is a array containing CTFontDescriptorMBS elements. If unspecified, the global cascade list is used.

63.3.18 kCTFontCharacterSetAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the Unicode character coverage set for a font reference. The value for this key is a CharacterSetMBS object. If specified, this attribute can be used to restrict the font to a subset of its actual character set. If unspecified, this attribute is ignored and the actual character set is used.

63.3.19 kCTFontDescriptorMatchingCurrentAssetSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A number. Total downloaded byte size. Valid during Downloading state.

63.3.20 kCTFontDescriptorMatchingDescriptors as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: Array of descriptors to be queried.
Valid while downloading or when state is kCTFontDescriptorMatchingWillBeginQuerying.

63.3.21 kCTFontDescriptorMatchingError as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A CFErrorMBS; Valid when state kCTFontDescriptorMatchingDidFailWithError.

63.3.22 kCTFontDescriptorMatchingPercentage as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A Number; Download progress in 0 - 100. Valid during Downloading state.

63.3.23 kCTFontDescriptorMatchingResult as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: Array of matched font descriptors.
Valid when state is kCTFontDescriptorMatchingDidMatch or CTFontDescriptorMatchingEnd.

63.3.24 kCTFontDescriptorMatchingSourceDescriptor as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A CTFontDescriptorMBS; The current font descriptor.
Valid when state is kCTFontDescriptorMatchingDidMatch.

63.3.25 kCTFontDescriptorMatchingTotalAssetSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A Number; Total byte size to download.
Always valid, but may be Zero when information is not available.

63.3.26 kCTFontDescriptorMatchingTotalDownloadedSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A Number; Total downloaded byte size. Valid during Downloading state.

63.3.27 kCTFontDisplayNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the name used to display the font. Most commonly this is the full name. The value associated with this key is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to the global font cascade list.

63.3.28 kCTFontDownloadableAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: The font downloadable state.
The value associated with this key is a Boolean. If it is true, CoreText attempts to download a font if necessary when matching a descriptor.

63.3.29 kCTFontEnabledAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to obtain the font enabled state. The returned value is an integer represented as a number representing a Boolean value. Unregistered font descriptors return nil, which is equivalent to false.
Available in OS X v10.6 and later.

63.3.30 kCTFontFamilyNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the font family name from the font descriptor. The value associated with this key is a string.

63.3.31 kCTFontFeaturesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the font features for a font reference. The value associated with this key is a array containing font feature dictionaries. This feature list contains the feature information from the 'feat'

table of the font. For more information, see Features.
Available in OS X v10.5 and later.

63.3.32 kCTFontFeatureSettingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the font features settings for a font reference. The value associated with this key is a CFArrayRef object containing font feature-setting dictionaries. A feature-setting dictionary contains a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting should be turned on. In the case of duplicate or conflicting setting, the last setting in the list takes precedence. It is the caller's responsibility to handle exclusive and nonexclusive settings as necessary.
Available in OS X v10.5 and later.

63.3.33 kCTFontFixedAdvanceAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify a fixed advance to be used for a font reference. If present and specified, this attribute is used to specify a constant advance to override any font values. The value associated with this key is a float represented as a number.
Available in OS X v10.5 and later.

63.3.34 kCTFontFormatAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the recognized format of the font. The value associated with this key is an integer represented as a number containing one of the constants in "Font Format Constants."
Available in OS X v10.6 and later.

63.3.35 kCTFontLanguagesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain a list of covered languages for a font reference. The value for this key is

an array containing string elements. If specified, this attribute restricts the search to matching fonts that support the specified languages. The language identifier string should conform to the RFC 3066bis standard. If unspecified, this attribute is ignored.
Available in OS X v10.5 and later.

63.3.36 kCTFontMacintoshEncodingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the Macintosh encodings for a font reference. The value associated with this key is a number containing a bit field of the Macintosh encodings. This attribute is provided for legacy compatibility.
Available in OS X v10.5 and later.

63.3.37 kCTFontMatrixAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify the font transformation matrix when creating a font. If unspecified it defaults to the unit matrix. The value for this key is a Memoryblock object containing a CGAffineTransform.

63.3.38 kCTFontNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the PostScript name from the font descriptor. The value associated with this key is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to the global font cascade list.

63.3.39 kCTFontOrientationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify a particular orientation for the glyphs of the font. The value associated with this key is an integer represented as a number containing one of the constants in "Font Orientation Constants." If you want to receive vertical metrics from a font for vertical rendering, specify kCTFontVerticalOrientation.

If unspecified, the font uses its native orientation.

63.3.40 kCTFontPriorityAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the font priority used by font descriptors when resolving duplicates and sorting match results. The value associated with this key is an integer represented as a CFNumberRef object containing one of the values enumerated in "Font Priority Constants." The higher the value, the higher the priority of the font. Only registered fonts have a priority. Unregistered font descriptors return nil.
Available in OS X v10.6 and later.

63.3.41 kCTFontRegistrationScopeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the font descriptor's registration scope. The value associated with this key is an integer represented as a number containing one of the CTFontManagerScope enumerated values. A value of nil can be returned for font descriptors that are not registered.
Available in OS X v10.6 and later.

63.3.42 kCTFontSizeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to obtain or specify the font point size. Creating a font with this unspecified will default to a point size of 12.0. The value for this key is represented as a number.

63.3.43 kCTFontStyleNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the style name of the font. This name represents the designer's description of the font's style. The value associated with this key is a string.

63.3.44 kCTFontTraitsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the dictionary of font traits for stylistic information. See "Font Traits" for the list of font traits. The value associated with this key is a dictionary.

63.3.45 kCTFontURLAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the font URL from the font descriptor. The value associated with this key is an URL string.
Available in OS X v10.6 and later.

63.3.46 kCTFontVariationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to obtain the font variation dictionary instance as a dictionary object. If specified in a font descriptor, fonts with the specified axes are primary match candidates; if no such fonts exist, this attribute is ignored.

63.3.47 LocalizedAttributeValue(key as string, byref lang as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a localized value for the requested attribute, if available.
Notes: key: The requested font attribute.
lang: On output, contains a reference to the matched language. The language identifier will conform to the RFC 3066bis standard.

Returns a localized attribute value based on the global language list.

This function passes back the matched language in language. If localization is not possible for the attribute, the behavior matches the value returned from AttributeValue. Generally, localization of attributes is applicable to name attributes of only a normalized font descriptor.

63.3.48 MatchingFontDescriptor(mandatoryAttributes() as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the single preferred matching font descriptor based on the original descriptor and system precedence.
Notes: mandatoryAttributes: A set of attribute keys which must be identically matched in any returned font descriptors.

Returns a normalized font descriptor matching the attributes present in descriptor.

The original descriptor may be returned in normalized form. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.

63.3.49 MatchingFontDescriptors(mandatoryAttributes() as String) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of normalized font descriptors matching the provided descriptor.
Notes: mandatoryAttributes: A set of attribute keys that must be identically matched in any returned font descriptors.

Returns an array of normalized font descriptors matching the attributes present in descriptor.

If descriptor itself is normalized, then the array will contain only one item: the original descriptor. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.

63.3.50 Properties

63.3.51 DisplayName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The display name.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
```

```
MsgBox d.DisplayName
```

Notes: (Read only property)

63.3.52 FamilyName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The family name.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.FamilyName
```

Notes: (Read only property)

63.3.53 File as FolderItem

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font file.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.file.NativePath
```

Notes: (Read only property)

63.3.54 FontSize as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font size.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox str(d.FontSize)
```

Notes: Can be zero if unknown.

(Read only property)

63.3.55 Name as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The PostScript name.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.Name
```

Notes: When matching, this is treated more generically: the system first tries to find fonts with this PostScript name. If none is found, the system tries to find fonts with this family name, and, finally, if still nothing, tries to find fonts with this display name.
(Read only property)

63.3.56 StyleName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The style name.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.StyleName
```

Notes: This name represents the designer's description of the font's style.
Can be empty if unknown.
(Read only property)

63.3.57 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font URL.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
Var d as CTFontDescriptorMBS = f.FontDescriptor
```

MsgBox d.URL

Notes: (Read only property)

63.3.58 Constants

Font Matching State

Constant	Value	Description
kCTFontDescriptorMatchingDidBegin	0	called once at the beginning.
kCTFontDescriptorMatchingDidFailWithError	8	called when an error occurred. (may be called multiple tim
kCTFontDescriptorMatchingDidFinish	1	called once at the end.
kCTFontDescriptorMatchingDidFinishDownloading	6	Finished downloading a descriptor.
kCTFontDescriptorMatchingDidMatch	7	called when font descriptor is matched.
kCTFontDescriptorMatchingDownloading	5	Downloading a descriptor.
kCTFontDescriptorMatchingStalled	3	called when stalled. (e.g. while waiting for server response.
kCTFontDescriptorMatchingWillBeginDownloading	4	Starts downloading a descriptor. Downloading part may be skipped if all the assets are alrea
kCTFontDescriptorMatchingWillBeginQuerying	2	called once before talking to the server. Skipped if not nec

Formats

Constant	Value	Description
kCTFontFormatBitmap	5	The font is a bitmap only format.
kCTFontFormatOpenTypePostScript	1	The font is an OpenType format containing PostScript data
kCTFontFormatOpenTypeTrueType	2	The font is an OpenType format containing TrueType data.
kCTFontFormatPostScript	4	The font is a recognized PostScript format.
kCTFontFormatTrueType	3	The font is a recognized TrueType format.
kCTFontFormatUnrecognized	0	The font is not a recognized format

Orientations

Constant	Value	Description
kCTFontOrientationDefault	0	Default
kCTFontOrientationHorizontal	1	Horizontal
kCTFontOrientationVertical	2	Vertical

Priorities

Constant	Value	Description
kCTFontPriorityComputer	30000	Priority of computer local fonts (located in /Library/Fonts).
kCTFontPriorityDynamic	50000	Priority of fonts registered dynamically, not located in a standard location (either kCTFontManagerScopeUser, or kCTFontManagerScopeSession).
kCTFontPriorityNetwork	20000	Priority of network fonts (located in /Network/Library/Fonts).
kCTFontPriorityProcess	60000	Priority of fonts registered for the process (kCTFontManagerScopeProcess).
kCTFontPrioritySystem	10000	Priority of system fonts (located in /System/Library/Fonts).
kCTFontPriorityUser	40000	Priority of local fonts (located in user's Library/Fonts).

63.4 class CTFontMBS

63.4.1 class CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFont opaque type represents a Core Text font object.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("times", 10)
MsgBox c.FullName
```

Notes: Font objects represent fonts to an application, providing access to characteristics of the font, such as point size, transform matrix, and other attributes. Fonts provide assistance in laying out glyphs relative to one another and are used to establish the current font when drawing in a graphics context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.4.2 Methods

63.4.3 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the advances for an array of glyphs and returns the summed advance.
Notes: font: The font reference.
orientation
The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
advances: An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.
See also:

- 63.4.4 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double 11165

63.4.4 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the advances for an array of glyphs and returns the summed advance.
Notes: font: The font reference.
orientation
The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
advances: An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.
See also:

- 63.4.3 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double 11164

63.4.5 AttributeValue(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value associated with an arbitrary attribute of the given font.
Notes: key: The requested attribute.

Returns attribute value or nil if the requested attribute is not present.
Available in OS X v10.5 and later.

63.4.6 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.4.7 AvailableTables(options as Integer) as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font table tags.
Notes: options: The font table options.

Returns an array of Font Table Tag Constants values for the given font and the supplied options.
Available in OS X v10.5 and later.

63.4.8 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.
Notes: font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 63.4.9 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS 11166

63.4.9 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.
Notes: font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 63.4.8 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS 11166

63.4.10 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.4.11 CreateCopyWithAttributes(size as Double, Matrix as CGAffineTransformMBS, fontAttributes as CTFontDescriptorMBS) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font with additional attributes based on the original font.
Example:

```
// find PostScript names for a font
const nameOfAFont = "Arial"

Var FontName as string
Var FontFamilyName as string
Var FontPostscriptName as string
Var FontPostscriptNameBold as string
Var FontPostscriptNameItalic as string

Var f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)

if f <>nil then
FontName = f.FullName
FontFamilyName = f.FamilyName
```

```
FontPostscriptName = f.PostScriptName

Var d as CTFontDescriptorMBS = f.FontDescriptor

Var db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitBold, CoreTextMBS.kCTFontTraitBold)
Var di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitItalic, CoreTextMBS.kCTFontTraitItalic)

Var fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
Var fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

FontPostscriptNameBold = fb.PostScriptName
FontPostscriptNameItalic = fi.PostScriptName

end if

Break // read names in debugger
```

Notes: size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
fontAttributes: A font descriptor containing additional attributes that the new font should contain.

Returns a new font reference converted from the original with the specified attributes.

This function provides a mechanism to change attributes quickly on a given font reference in response to user actions. For instance, the size can be changed in response to a user manipulating a size slider.
Available in OS X v10.5 and later.

63.4.12 CreateForString(text as string, location as Integer, length as Integer) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference that can best map the given string range based on the current font.
Notes: string: A unicode string containing characters that cannot be encoded by the current font.
location and length: The range of the string that needs to be mapped.

Returns the best substitute font from the cascade list of the current font that can encode the specified string range. If the current font is capable of encoding the string range, then it is retained and returned.

63.4.13 CreatePathForGlyph(glyph as Integer, transform as CGAffineTransformMBS) as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a path for the specified glyph.
Notes: glyph: The glyph.
transform: An affine transform applied to the path. Can be nil. If nil, CGAffineTransformIdentity is used.

Returns a CGPath object containing the glyph outlines, nil on error. Must be released by caller.

Creates a path from the outlines of the glyph for the specified font. The path reflects the font point size, matrix, and transform parameter, applied in that order. The transform parameter is most commonly be used to provide a translation to the desired glyph origin.

63.4.14 CreateUIFontForLanguage(Type as Integer, size as Double = 0.0, language as string = "") as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the special user-interface font for the given language and user-interface type.
Notes: Type: A constant specifying the intended user-interface use for the requested font reference. See Enumerations for possible values.
size: The point size for the font reference. If 0.0 is specified, the default size for the requested user-interface type is used.
language: Language specifier string to select a font for a particular localization. If "" is specified, the current system language is used. The format of the language identifier should conform to the RFC 3066bis standard.

Returns the correct font for various user-interface uses.
The only required parameter is the Type selector; the other parameters have default values.

63.4.15 CreateWithFamily(size as Double, Matrix as CGAffineTransformMBS, family as string) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font in the specified family based on the traits of the original font.
Notes: size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none is found in the system. Available in OS X v10.5 and later.

63.4.16 CreateWithFontDescriptor(descriptor as CTFontDescriptorMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference that best matches the given font descriptor.
Notes: descriptor: A font descriptor containing attributes that specify the requested font.
size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontMBS that best matches the attributes provided with the font descriptor.

The size and matrix parameters override any specified in the font descriptor unless they are unspecified (0.0 for size and NULL for matrix). A best match font is always returned, and default values are used for any unspecified parameters.

63.4.17 CreateWithGraphicsFont(graphicsFont as CGFontMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font reference from an existing Core Graphics font reference.
Notes: graphicsFont: A valid Core Graphics font reference.
size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
attributes: Additional attributes that should be matched. Optional.

Returns a new font reference for an existing CGFontRef object with the specified size, matrix, and additional attributes.

63.4.18 CreateWithName(name as string, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference for the given name.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FullName
```

Notes: name: The font name for which you wish to create a new font reference. A valid PostScript name is preferred, although other font name types are matched in a fallback manner.
size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontRef that best matches the name provided with size and matrix attributes.

The name parameter is the only required parameter, and default values are used for unspecified parameters (0.0 for size and nil for matrix). If all parameters cannot be matched identically, a best match is found.

63.4.19 CreateWithPlatformFont(ATSFontHandle as Integer, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new font reference from an ATS font reference.
Notes: ATSFontHandle: A valid ATSFontRef object.
size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
attributes: A CTFontDescriptorMBS containing additional attributes that should be matched. Optional.

Returns a new font reference for an ATSFontRef with the specified size, matrix, and additional attributes.

63.4.20 CreateWithSymbolicTraits(size as Double, Matrix as CGAffineTransformMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font in the same font family as the original with the specified symbolic traits.
Example:

```
Var helveticaBold as CTFontMBS = CTFontMBS.CreateWithName("Helvetica-Bold", 12)
MsgBox helveticaBold.FullName

// now create similar fonts with

Var Trait as Integer = CoreTextMBS.kCTFontTraitItalic
Var TraitMask as Integer = CoreTextMBS.kCTFontTraitItalic+CoreTextMBS.kCTFontTraitBold

Var helveticaItalic as CTFontMBS = helveticaBold.CreateWithSymbolicTraits(12, nil, Trait, TraitMask)
MsgBox helveticaItalic.FullName
```

Notes: size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
symTraitValue: The value of the symbolic traits.
symTraitMask: The mask bits of the symbolic traits.

Returns a new font reference in the same family with the given symbolic traits. or nil if none is found in the system.

Available in OS X v10.5 and later.

63.4.21 DefaultCascadeListForLanguages(languagePrefList() as string) as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Return an ordered list of CTFontDescriptorMBS's for font fallback derived from the system default fallback region according to the given language preferences.
Notes: The style of the given is also matched as well as the weight and width of the font is not one of the system UI font, otherwise the UI font fallback is applied.

languagePrefList: The language preference list - ordered array of CFStringRef's of ISO language codes.

The ordered list of fallback fonts - ordered array of CTFontDescriptors.

63.4.22 Draw(glyphs() as Integer, positions() as CGPointMBS, context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Renders the given glyphs of a font at the specified positions in the supplied graphics context.
Notes: font: The font with glyphs to render. If the font has a size or matrix attribute, context is set with these values.
glyphs: The glyphs to be rendered. The glyphs should be the result of proper Unicode text layout operations (such as with CTLine). Functions such as CTFontMBS.GetGlyphsForCharacters do not perform any Unicode text layout.
positions: The positions (origins) for each glyph in glyphs. The positions are in user space. The number of positions passed in must match the number of glyphs (in glyphs).
context: The graphics context used to render the glyphs.

This function modifies graphics state including font, text size, and text matrix if these attributes are specified in font. These attributes are not restored.

Available in OS X v10.7 and later.

63.4.23 Features as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font features.
Notes: Returns an array of font feature dictionaries for the font reference.

63.4.24 FeatureSettings as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font feature-setting tuples.
Notes: Returns a normalized array of font feature-setting dictionaries. The array contains only the non-default settings that should be applied to the font, or nil if the default settings should be used.

A feature-setting dictionary is a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting is enabled. It is the caller's responsibility to handle exclusive and nonexclusive settings as necessary.

The feature settings are verified against those that the font supports and any that do not apply are removed. Further, feature settings that represent a default setting for the font are also removed.

63.4.25 GlyphsForCharacters(characters() as Integer) as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Provides basic Unicode encoding for the given font, returning by reference an array of CGGlyph values corresponding to a given array of Unicode characters for the given font.
Notes: If a glyph could not be encoded, a value of 0 is passed back at the corresponding index in the glyphs array and the function returns False. It is the responsibility of the caller to handle the Unicode properties of the input characters.

63.4.26 GlyphWithName(name as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the CGGlyph value for the specified glyph name in the given font.
Notes: Name: The glyph name as a CFString object.

Returns the glyph value for the named glyph as a CGGlyph object, or if the glyph name is not recognized, the .notdef glyph index value.
The returned CGGlyph object can be used with any of the subsequent glyph data accessors or directly with Core Graphics.

63.4.27 GraphicsFont(byref fontAttributes as CTFontDescriptorMBS) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a Core Graphics font reference and attributes.
Notes: attributes: On output, points to a font descriptor containing additional attributes from the font.

Returns a CGFontMBS object for the given font reference.

63.4.28 kCTBaselineClassHanging as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Hanging baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Hanging baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.29 kCTBaselineClassIdeographicCentered as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic Centered baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic Centered baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.30 kCTBaselineClassIdeographicHigh as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic High baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic High baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.31 kCTBaselineClassIdeographicLow as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic Low baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic Low baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.32 kCTBaselineClassMath as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Math baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Math baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.33 kCTBaselineClassRoman as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Roman baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Roman baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

63.4.34 kCTBaselineOriginalFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Use the original font for setting the reference baseline.
Notes: This constant can be used as the value for kCTBaselineReferenceFont to specify that the original font should be used for the reference baseline.

63.4.35 kCTBaselineReferenceFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a font for the reference baseline.
Notes: This key can be used to specify a font for the reference baseline. The value is a CTFontMBS or the kCTBaselineOriginalFont constant.

63.4.36 kCTFontCopyrightNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the copyright name.

63.4.37 kCTFontDescriptionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the description name.

63.4.38 kCTFontDesignerNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the designer name.

63.4.39 kCTFontDesignerURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the vendor URL name.

63.4.40 kCTFontFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the family name.

63.4.41 kCTFontFeatureSelectorDefaultKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get the default indicator for the selector. This value is a boolean, which if present and true, indicates that this selector is the default setting for the current feature type.

63.4.42 kCTFontFeatureSelectorIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary corresponding to a feature type to obtain the selector identifier value as a number.

63.4.43 kCTFontFeatureSelectorNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get the localized name string for the selector as a string.

63.4.44 kCTFontFeatureSelectorSettingKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get or specify the current setting for the selector. This

value is a Boolean to indicate whether this selector is on or off. If this key is not present, the default setting is used.

63.4.45 kCTFontFeatureTypeExclusiveKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the font feature exclusive setting of the feature as a Boolean. The value associated with this key indicates whether the feature selectors associated with this type should be mutually exclusive.

63.4.46 kCTFontFeatureTypeIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the font feature type value as a number.

63.4.47 kCTFontFeatureTypeNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the localized font feature type name as a string.

63.4.48 kCTFontFeatureTypeSelectorsKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the the array of font feature selectors as an array. This is an array of selector dictionaries that contain the values for the font feature selector keys listed in this group.

63.4.49 kCTFontFullNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the full name.

63.4.50 kCTFontLicenseNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the license name.

63.4.51 kCTFontLicenseURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the license URL name.

63.4.52 kCTFontManufacturerNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the manufacturer name.

63.4.53 kCTFontPostScriptCIDNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the PostScript character identifier (CID) font name.

63.4.54 kCTFontPostScriptNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the PostScript name.

63.4.55 kCTFontSampleTextNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the sample text name string.

63.4.56 kCTFontStyleNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the style name.

63.4.57 kCTFontSubFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the subfamily name.

63.4.58 kCTFontTrademarkNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the trademark name.

63.4.59 kCTFontUniqueNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the unique name.

63.4.60 kCTFontVariationAxisDefaultValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis default value as a number.

63.4.61 kCTFontVariationAxisIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis identifier value as a number.

63.4.62 kCTFontVariationAxisMaximumValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis maximum value as a number.

63.4.63 kCTFontVariationAxisMinimumValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis minimum value as a number.

63.4.64 kCTFontVariationAxisNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the localized variation axis name string.

63.4.65 kCTFontVendorURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the vendor URL name.

63.4.66 kCTFontVersionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the version name.

63.4.67 LigatureCaretPositions(glyph as Integer) as Double()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns caret positions within a glyph.
Notes: glyph: A reference to the glyph.

This function is used to obtain caret positions for a specific glyph. The return value is the maximum number of positions possible, and the function will populate the caller's positions buffer with available positions if possible. This function might not be able to produce positions if the font does not have the appropriate data, in which case it will return 0.

63.4.68 Name(nameKey as string) as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to the requested name of the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.name(CTFontMBS.kCTFontFullNameKey)
```

Notes: nameKey: The name specifier. See Name Specifier Constants for possible values.

Returns The requested name for the font, or "" if the font does not have an entry for the requested name. The Unicode version of the name is preferred, otherwise the first available version is returned.
See also:

- 63.4.69 Name(nameKey as string, byref language as string) as String 11182

63.4.69 Name(nameKey as string, byref language as string) as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to a localized name for the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
Var lang as string
MsgBox c.name(CTFontMBS.kCTFontFullNameKey, lang)+EndOfLine+lang
```

// shows name and "en" as language.

Notes: nameKey: The name specifier. See Name Specifier Constants for possible values.
language: On output, points to the language string of the returned name string. The format of the language identifier conforms to the RFC 3066bis standard.

Returns a specific localized name from the font reference or "" if the font does not have an entry for the requested name key.

The name is localized based on the user's global language preference precedence. That is, the user,Äôs language preference is a list of languages in order of precedence. So, for example, if the list had Japanese and English, in that order, then a font that did not have Japanese name strings but had English strings would return the English strings.

Available in OS X v10.5 and later.
See also:

- 63.4.68 Name(nameKey as string) as String 11182

63.4.70 OpticalBoundsForGlyphs(glyphs() as Integer, boundingRects() as CGRectMBS, options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.
Notes: Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if present in a font, otherwise it returns typographic bounding rects (composed of the font's ascent and descent and a glyph's advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 63.4.71 OpticalBoundsForGlyphs(glyphs() as Integer, options as Integer = 0) as CGRectMBS 11184

63.4.71 OpticalBoundsForGlyphs(glyphs() as Integer, options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.
Notes: Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if present in a font, otherwise it returns typographic bounding rects (composed of the font's ascent and descent and a glyph's advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 63.4.70 OpticalBoundsForGlyphs(glyphs() as Integer, boundingRects() as CGRectMBS, options as Integer = 0) as CGRectMBS 11183

63.4.72 PlatformFont(byref fontAttributes as CTFontDescriptorMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns an ATS font reference and attributes.

63.4.73 SupportedLanguages as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of languages supported by the font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox Join(c.SupportedLanguages,EndOfLine)
```

63.4.74 Table(table as string, options as Integer) as Memoryblock

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to the font table data.
Notes: table: The font table identifier as a Font Table Tag Constants constant. See Font Table Tag Constants for possible values.
options: The font table options.

Returns a retained reference to the font table data as a Memoryblock.

63.4.75 VariationAxes as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of variation axes.
Notes: An array of variation axes dictionaries. Each variation axis dictionary contains the five variation axis keys listed in Font Variation Axis Dictionary Keys.

63.4.76 VerticalTranslationsForGlyphs(glyphs() as Integer) as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the offset from the default (horizontal) origin to the vertical origin for an array of glyphs.
Notes: glyphs: An array of count number of glyphs.
Returns the computed origin offsets in an array of count number of CGSizeMBS objects.

63.4.77 Properties

63.4.78 Ascent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-ascent metric of the given font.
Notes: The font-ascent metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.79 BoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled bounding box of the given font.
Notes: The design bounding box of the font, which is the rectangle defined by xMin, yMin, xMax, and yMax values for the font. Returns CGRectNull on error.
(Read only property)

63.4.80 CapHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the cap-height metric of the given font.
Notes: The font cap-height metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.81 CharacterSet as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the Unicode character set of the font.
Notes: Value is a CFCharacterSetMBS. We use variant to reduce dependency to other plugins.

The returned character set covers the nominal referenced by the font's Unicode 'cmap,Äô table.
(Read only property)

63.4.82 Descent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-descent metric of the given font.
Notes: The font-descent metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.83 DisplayName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the display name of the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.DisplayName
```

Notes: (Read only property)

63.4.84 FamilyName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the family name of the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FamilyName
```

Notes: (Read only property)

63.4.85 File as FolderItem

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font file.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.file.NativePath
```

Notes: (Read only property)

63.4.86 FontDescriptor as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the normalized font descriptor for the given font reference.
Notes: A normalized font descriptor for a font containing enough information to recreate this font at a later time.
(Read only property)

63.4.87 FullName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the full name of the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FullName
```

Notes: (Read only property)

63.4.88 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyphs of the given font.
Notes: (Read only property)

63.4.89 Leading as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-leading metric of the given font.
Notes: The font-leading metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.90 Matrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the transformation matrix of the given font.
Notes: The transformation matrix for the given font reference. This is the matrix that was provided when the font was created.
(Read only property)

63.4.91 PostScriptName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the PostScript name of the given font.
Example:

```
Var c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.PostScriptName
```

Notes: (Read only property)

63.4.92 Size as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the point size of the given font.
Notes: This is the point size provided when the font was created.
(Read only property)

63.4.93 SlantAngle as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the slant angle of the given font.
Notes: The transformed slant angle of the font. This is equivalent to the italic or caret angle with any skew from the transformation matrix applied.
(Read only property)

63.4.94 StringEncoding as UInt32

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the best string encoding for legacy format support.
Notes: The best string encoding for the font.
(Read only property)

63.4.95 SymbolicTraits as UInt32

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the symbolic traits of the given font.
Notes: The symbolic traits of the font. This is equivalent to the kCTFontSymbolicTrait value of the traits dictionary.

(Read only property)

63.4.96 Traits as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the traits dictionary of the given font.
Notes: A retained reference to the font traits dictionary. Individual traits can be accessed with the trait key constants.
(Read only property)

63.4.97 UnderlinePosition as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled underline position of the given font.
Notes: The font underline-position metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.98 UnderlineThickness as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled underline-thickness metric of the given font.
Notes: The font underline-thickness metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.99 UnitsPerEm as UInt64

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the units-per-em metric of the given font.
Notes: (Read only property)

63.4.100 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font URL.
Example:

```
Var f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.URL
```

Notes: (Read only property)

63.4.101 Variation as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a variation dictionary from the font reference.
Notes: The keys for each variation correspond to the variation identifier obtained via kCTFontVariationAxisIdentifierKey, which represents the four-character axis code as a number.
(Read only property)

63.4.102 XHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the x-height metric of the given font.
Notes: The font x-height metric scaled according to the point size and matrix of the font reference.
(Read only property)

63.4.103 Constants

Font Option Constants

Constant	Value	Description
kCTFontOptionsDefault	0	Default options are used. Available in OS X v10.6 and later.
kCTFontOptionsPreferSystemFont	4	Font matching prefers to match Apple system fonts. Available in OS X v10.6 and later.
kCTFontOptionsPreventAutoActivation	1	Prevents automatic font activation. Available in OS X v10.6 and later.

Font Table Tag Constants

Constant	Value	Description
kCTFontTableAcnt	"acnt"	Font table tag for accent attachment.
kCTFontTableAnkr	"ankr"	Anchor points
kCTFontTableAvar	"avar"	Font table tag for axis variation.
kCTFontTableBASE	"BASE"	Font table tag for the font baseline.
kCTFontTableBdat	"bdat"	Font table tag for bitmap data.
kCTFontTableBhed	"bhed"	Font table tag for bitmap font header.
kCTFontTableBloc	"bloc"	Font table tag for bitmap location.
kCTFontTableBsln	"bsln"	Font table tag for baseline.
kCTFontTableCFF	"CFF "	Font table tag for a PostScript font program.
kCTFontTableCmap	"cmap"	Font table tag for character-to-glyph mapping.
kCTFontTableCvar	"cvar"	Font table tag for control value variation, or CVT variation.
kCTFontTableCvt	"cvt "	Font table tag for control value table.
kCTFontTableDSIG	"DSIG"	Font table tag for a digital signature.
kCTFontTableEBDT	"EBDT"	Font table tag for an embedded bitmap.
kCTFontTableEBLC	"EBLC"	Font table tag for the embedded bitmap location.
kCTFontTableEBSC	"EBSC"	Font table tag for embedded bitmap scaling.
kCTFontTableFdsc	"fdsc"	Font table tag for font descriptor.
kCTFontTableFeat	"feat"	Font table tag for layout feature.
kCTFontTableFmtx	"fmtx"	Font table tag for font metrics.
kCTFontTableFpgm	"fpgm"	Font table tag for font program.
kCTFontTableFvar	"fvar"	Font table tag for font variation.
kCTFontTableGasp	"gasp"	Font table tag for grid-fitting/scan-conversion.
kCTFontTableGDEF	"GDEF"	Font table tag for glyph definition.
kCTFontTableGlyf	"glyf"	Font table tag for glyph data.
kCTFontTableGPOS	"GPOS"	Font table tag for glyph positioning.
kCTFontTableGSUB	"GSUB"	Font table tag for glyph substitution.
kCTFontTableGvar	"gvar"	Font table tag for glyph variation.
kCTFontTableHdmx	"hdmx"	Font table tag for horizontal device metrics.
kCTFontTableHead	"head"	Font table tag for font header.
kCTFontTableHhea	"hhea"	Font table tag for horizontal header.
kCTFontTableHmtx	"hmtx"	Font table tag for horizontal metrics.
kCTFontTableHsty	"hsty"	Font table tag for horizontal style.
kCTFontTableJSTF	"JSTF"	Font table tag for justification.
kCTFontTableJust	"just"	Font table tag for justification.
kCTFontTableKern	"kern"	Font table tag for kerning.
kCTFontTableKerx	"kerx"	Font table tag for extended kerning.
kCTFontTableLcar	"lcar"	Font table tag for ligature caret.
kCTFontTableLoca	"loca"	Font table tag for index to location.
kCTFontTableLtag	"ltag"	Language tags
kCTFontTableLTSH	"LTSH"	Font table tag for linear threshold.
kCTFontTableMaxp	"maxp"	Font table tag for maximum profile.
kCTFontTableMort	"mort"	Font table tag for morph.
kCTFontTableMorx	"morx"	Font table tag for extended morph.
kCTFontTableName	"name"	Font table tag for naming table.
kCTFontTableOpbd	"opbd"	Font table tag for optical bounds.
kCTFontTableOS2	"OS/2"	Font table tag for OS/2 and Windows-specific metrics.
kCTFontTablePCLT	"PCLT"	Font table tag for PCL 5 data.
kCTFontTablePost	"post"	Font table tag for PostScript information.
kCTFontTablePrep	"prep"	Font table tag for control value program, 'prep' table.
kCTFontTableProp	"prop"	Font table tag for properties.
kCTFontTableSbit	"sbit"	Font table tag for bitmap data. Available in OS X v10.7 and later.
kCTFontTableSbix	"sbix"	Font table tag for extended bitmap data. Available in OS X v10.7 and later.
kCTFontTableTrak	"trak"	Font table tag for tracking.
kCTFontTableVDMX	"VDMX"	Font table tag for vertical device metrics.
kCTFontTableVhea	"vhea"	Font table tag for vertical header.
kCTFontTableVmtx	"vmtx"	Font table tag for vertical metrics.

Font Table Option Constants

Constant	Value	Description
kCTFontTableOptionExcludeSynthetic	1	The font table excludes synthetic font data. Available in OS X v10.5 and later. Deprecated in OS X v10.8.
kCTFontTableOptionNoOptions	0	No font table options are specified.

User Interface Type Constants

Constant	Value	Description
kCTFontUIFontAlertHeader	18	The font used for alert headers.
kCTFontUIFontApplication	9	The default font for text documents.
kCTFontUIFontControlContent	26	The font used for contents of user-interface controls.
kCTFontUIFontEmphasizedSystem	3	The system font used for emphasis in alerts.
kCTFontUIFontEmphasizedSystemDetail	20	The system font used for emphasis in details.
kCTFontUIFontLabel	10	The font used for labels and tick marks on full-size sliders.
kCTFontUIFontMenuItem	12	The font used for menu items.
kCTFontUIFontMenuItemCmdKey	14	The font used for menu-item command-key equivalents.
kCTFontUIFontMenuItemMark	13	The font used to draw menu item marks.
kCTFontUIFontMenuTitle	11	The font used for menu titles.
kCTFontUIFontMessage	23	The font used for standard interface items, such as button labels, mer and so on.
kCTFontUIFontMiniEmphasizedSystem	7	The small system font used for emphasis.
kCTFontUIFontMiniSystem	6	The standard small system font used for informative text in alerts, headings in lists, help tags, and small controls.
kCTFontUIFontNone	-1	The user-interface font type is not specified.
kCTFontUIFontPalette	24	The font used in tool palettes.
kCTFontUIFontPushButton	16	The font used for a push button (a rounded rectangular button wit label on it).
kCTFontUIFontSmallEmphasizedSystem	5	The system font used for emphasis in alerts.
kCTFontUIFontSmallSystem	4	The standard small system font used for informative text in alerts, headings in lists, help tags, and small controls.
kCTFontUIFontSmallToolbar	22	The small font used for labels of toolbar items.
kCTFontUIFontSystem	2	The system font used for standard user-interface items such as butto menu items, and so on.
kCTFontUIFontSystemDetail	19	The standard system font used for details.
kCTFontUIFontToolbar	21	The font used for labels of toolbar items.
kCTFontUIFontToolTip	25	The font used for tool tips.
kCTFontUIFontUser	0	The font used by default for documents and other text under the control (that is, text whose font the user can normally change).
kCTFontUIFontUserFixedPitch	1	The font used by default for documents and other text under the control when that font is fixed-pitch. Available in OS X v10.5 and later.
kCTFontUIFontUtilityWindowTitle	17	The font used for utility window titles.
kCTFontUIFontViews	8	The view font used as the default font of text in lists and tables.
kCTFontUIFontWindowTitle	15	The font used for utility window titles.

63.5 class CTFrameMBS

63.5.1 class CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFrame opaque type represents a frame containing multiple lines of text.
Example:

```
Var longText as string = "Lorem ipsum dolor sit amet..."

Var ct as new CFStringMBS(longText)
Var s as new CFAttributedStringMBS(ct, nil)

// layout master
Var framesetter as CTFramesetterMBS = CTFramesetterMBS.CreateWithAttributedString(s)

// a column
Var ColumnPath as new CGMutablePathMBS
Var Rect as new CGRectMBS(0, 0, g.Width, g.Height)
ColumnPath.AddRect nil, Rect

// context
#If XojoVersion >= 2019.02 Then
Var CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
#Else
Var CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Var CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
#EndIf

CGContext.SaveGState
// reset text matrix
Var a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

Var Frame as CTFrameMBS = framesetter.CreateFrame(0, 0, ColumnPath, nil)

// draw
Frame.Draw(CGContext)

// cleanup
CGContext.RestoreGState
CGContext.Flush
```

Notes: The frame object is the output resulting from the text-framing process performed by a framesetter object.

You can draw the entire text frame directly into the current graphic context. The frame object contains an array of line objects that can be retrieved for individual rendering or to get glyph information.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.5.2 Methods

63.5.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.5.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.5.5 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws an entire frame into a context.
Notes: context: The context in which to draw the frame.

If both the frame and the context are valid, the frame is drawn in the context. This call can leave the context in any state and does not flush it after the draw operation.

63.5.6 kCTFrameClippingPathsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes: Specifies array of paths to clip frame.

The value must be a array containing dictionaries. Each dictionary should have a kCTFramePathClipping-PathAttributeName key-value pair, and can have a kCTFramePathFillRuleAttributeName key-value pair and kCTFramePathFillRuleAttributeName key-value pair as optional parameters.
Available in OS X v10.7 and later.

63.5.7 kCTFramePathClippingPathAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes: Specifies clipping path. This attribute is valid only in a dictionary contained in an array specified by kCTFrameClippingPathsAttributeName.

The value must be a CGPathMBS specifying a clipping pat. See kCTFrameClippingPathsAttributeName.
Available in OS X v10.7 and later.

63.5.8 kCTFramePathFillRuleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key used to specify the fill rule for a frame.
Notes: he value must be a CFNumberRef object containing a CTFramePathFillRule constant. See CT-FramePathFillRule Constants for more information. The default value is kCTFramePathFillEvenOdd.
Available in OS X v10.7 and later.

63.5.9 kCTFramePathWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes: The key used to specify the frame width.
The value must be a number containing a value specifying the frame width. The default width value is zero.
Available in OS X v10.7 and later.

63.5.10 kCTFrameProgressionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes: Specifies progression for a frame.
A number containing a CTFrameProgression constant. The default is kCTFrameProgressionTopToBottom.

Available in OS X v10.5 and later.

This value determines the line-stacking behavior for a frame and does not affect the appearance of the glyphs within that frame.

63.5.11 LineOrigins(location as Integer, length as Integer) as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of line origins for a frame.
Notes: location and length: The range of line origins you wish to copy. If the length of the range is 0, then the copy operation continues from the start index of the range to the last line origin.

Returns array with CGPoints. Empty array in case of errors.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function may function unpredictably if the frame is not rectangular.

63.5.12 Lines as CTLineMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of lines stored in the frame.

63.5.13 Properties

63.5.14 FrameAttributes as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the frame attributes used to create the frame.
Notes: Returns a reference to a CFDictionary object containing the frame attributes that were used to create the frame, or, if the frame was created without any frame attributes, nil.

You can create a frame with an attributes dictionary to control various aspects of the framing process. These attributes are different from the ones used to create an attributed string.
(Read only property)

63.5.15 Path as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the path used to create the frame.
Notes: (Read only property)

63.5.16 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

63.5.17 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

63.5.18 VisibleStringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes: This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

63.5.19 VisibleStringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes: This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

63.5.20 Constants

Fill rules

Constant	Value	Description
kCTFramePathFillEvenOdd	0	Text is filled in the area that would be painted if the path were given CGContextMBS.EOFillPath. Available in OS X v10.7 and later.
kCTFramePathFillWindingNumber	1	Text is fill in the area that would be painted if the path were given to CGC textMBS.FillPath. Available in OS X v10.7 and later.

Frame Progression Types

Constant	Value	Description
kCTFrameProgressionLeftToRight	2	Lines are stacked left to right for vertical text. The lines of text within a frame may be stacked for either horizontal or vert text. Values are enumerated for each stacking type supported by CTFra Frames created with a progression type specifying vertical text rotate lines degrees counterclockwise when drawing.
kCTFrameProgressionRightToLeft	1	Lines are stacked right to left for vertical text. The lines of text within a frame may be stacked for either horizontal or vert text. Values are enumerated for each stacking type supported by CTFra Frames created with a progression type specifying vertical text rotate lines degrees counterclockwise when drawing.
kCTFrameProgressionTopToBottom	0	Lines are stacked top to bottom for horizontal text. The lines of text within a frame may be stacked for either horizontal or vert text. Values are enumerated for each stacking type supported by CTFra Frames created with a progression type specifying vertical text rotate lines degrees counterclockwise when drawing.

63.6 class CTFramesetterMBS

63.6.1 class CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFramesetter opaque type is used to generate text frames. That is, CTFramesetter is an object factory for CTFrame objects.
Notes: The framesetter takes an attributed string object and a shape descriptor object and calls into the typesetter to create line objects that fill that shape. The output is a frame object containing an array of lines. The frame can then draw itself directly into the current graphic context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.6.2 Methods

63.6.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.6.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.6.5 CreateFrame(location as Integer, length as Integer, path as CGPathMBS, frameAttributes as dictionary = nil) as CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable frame using a framesetter.
Notes: location and length: The range, of the attributed string that was used to create the framesetter, that is to be typeset in lines fitted into the frame. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
path: A CGPath object that specifies the shape of the frame. The path may be non-rectangular in versions of OS X v10.7 or later and versions of iOS 4.2 or later.

frameAttributes: Additional attributes that control the frame filling process can be specified here, or nil if there are no such attributes.

Returns a reference to a new CTFrame object if the call was successful; otherwise, nil.

This call creates a frame full of glyphs in the shape of the path provided by the path parameter. The framesetter continues to fill the frame until it either runs out of text or it finds that text no longer fits.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function returns NULL if the CGPath specified by the path parameter is not rectangular.

63.6.6 CreateWithAttributedString(s as CFAttributedStringMBS) as CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable framesetter object from an attributed string.
Notes: s: The attributed string with which to construct the framesetter object.

Returns a reference to a CTFramesetter object if the call was successful; otherwise, NULL.
The resultant framesetter object can be used to create and fill text frames with the CreateFrame call.

63.6.7 SuggestFrameSizeWithConstraints(location as Integer, length as Integer, frameAttributes as dictionary, constraints as CGSizeMBS, byref fitRangeLocation as Integer, byref fitRangeLength as Integer) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the frame size needed for a string range.
Notes: location and length: The string range to which the frame size applies. The string range is a range over the string used to create the framesetter. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
frameAttributes: Additional attributes that control the frame filling process, or NULL if there are no such attributes.
constraints: The width and height to which the frame size is constrained. A value of CGFLOAT_MAX for either dimension indicates that it should be treated as unconstrained.
fitRange: On return, contains the range of the string that actually fit in the constrained size.

Returns the actual dimensions for the given string range and constraints.

This function can be used to determine how much space is needed to display a string, optionally by constraining the space along either dimension.
Available in OS X v10.5 and later.

63.6.8 Properties

63.6.9 TypeSetter as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the typesetter object being used by the framesetter.
Notes: Return sa reference to a CTTypesetter object if the call was successful; otherwise, nil. The framesetter maintains a reference to the returned object, which should not be released by the caller.

Each framesetter uses a typesetter internally to perform line breaking and other contextual analysis based on the characters in a string; this function returns the typesetter being used by a particular framesetter in case the caller would like to perform other operations on that typesetter.

Available in OS X v10.5 and later.
(Read only property)

63.7 class CTGlyphInfoMBS

63.7.1 class CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTGlyphInfo opaque type enables you to override a font's specified mapping from Unicode to the glyph ID.
Notes: Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.7.2 Methods

63.7.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.7.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.7.5 CreateWithCharacterIdentifier(cid as Integer, collection as Integer, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a character identifier.
Notes: cid: A character identifier.
collection: A character collection identifier.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object if glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a character identifier and a character collection.
Available in OS X v10.5 and later.

63.7.6 CreateWithGlyph(glyph as Integer, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph index.
Notes: glyph: The index of the glyph.
font: The font to be associated with the returned CTGlyphInfoMBS object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object, If glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a glyph index using a specified font.
Available in OS X v10.5 and later.

63.7.7 CreateWithGlyphName(glyphName as string, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph name.
Notes: glyphName: The name of the glyph.
font: The font to be associated with the returned CTGlyphInfo object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfo object if glyph info creation was successful; otherwise, nil.
This function creates an immutable glyph info object for a glyph name such as copyright using a specified font.
Available in OS X v10.5 and later.

63.7.8 Properties

63.7.9 CharacterCollection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character collection for a glyph info object.
Notes: If the glyph info object was created with a glyph name or a glyph index, its character collection is kCTIdentityMappingCharacterCollection.
(Read only property)

63.7.10 CharacterIdentifier as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character identifier for a glyph info object.
Notes: (Read only property)

63.7.11 GlyphName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph name for a glyph info object if that object exists.
Notes: (Read only property)

63.7.12 Constants

Character Collection

Constant	Value	Description
kCTAdobeCNS1CharacterCollection	1	The Adobe-CNS1 mapping.
kCTAdobeGB1CharacterCollection	2	The Adobe-GB1 mapping.
kCTAdobeJapan1CharacterCollection	3	The Adobe-Japan1 mapping.
kCTAdobeJapan2CharacterCollection	4	The Adobe-Japan2 mapping.
kCTAdobeKorea1CharacterCollection	5	The Adobe-Korea1 mapping.
kCTCharacterCollectionAdobeCNS1	1	The Adobe-CNS1 mapping.
kCTCharacterCollectionAdobeGB1	2	The Adobe-GB1 mapping.
kCTCharacterCollectionAdobeJapan1	3	The Adobe-Japan1 mapping.
kCTCharacterCollectionAdobeJapan2	4	The Adobe-Japan2 mapping.
kCTCharacterCollectionAdobeKorea1	5	The Adobe-Korea1 mapping.
kCTCharacterCollectionIdentityMapping	0	The character identifier is equal to the CGGlyph glyph index.
kCTIdentityMappingCharacterCollection	0	The character identifier is equal to the CGGlyph glyph index.

63.8 class CTLineMBS

63.8.1 class CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTLine opaque type represents a line of text.
Example:

```
Sub Paint(g As Graphics)
// inside paint event of a Canvas

// create a font, quasi systemFontWithSize:24.0
Var sysUIFont as CTFontMBS = CTFontMBS.CreateUIFontForLanguage(CTFontMBS.kCTFontUIFontSystem, 24.0)

// create a naked string
Var text as string = "Some Text."

// blue
Var cgColor as CGColorMBS = CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0)

// single underline
Var underline as Integer = CoreTextMBS.kCTUnderlineStyleSingle

// pack it into attributes dictionary
Var attributesDict as new Dictionary
attributesDict.Value(CoreTextMBS.kCTFontAttributeName) = sysUIFont
attributesDict.Value(CoreTextMBS.kCTForegroundColorAttributeName) = cgColor
attributesDict.Value(CoreTextMBS.kCTUnderlineStyleAttributeName) = underline

// make the attributed string
Var cfDic as new CFDictionaryMBS(attributesDict)
Var cfStr as new CFStringMBS(text)
Var stringToDraw as CFAttributedStringMBS = CFAttributedStringMBS.Create( cfStr, cfDic)

// now for the actual drawing

#If XojoVersion >= 2019.02 Then
Var CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Var CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
#Else
Var CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Var CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
#EndIf

CGContext.SaveGState
```

```
// reset text matrix
Var a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

// draw
Var line as CTLineMBS = CTLineMBS.CreateWithAttributedString(stringToDraw)

Var x as Integer = 10
Var y as Integer = 10

// plus text height
y = y + 24

// swap y
y = g.Height - y

CGContext.TextPosition = new CGPointMBS(x, y)
line.Draw(CGContext)

CGContext.RestoreGState
CGContext.Flush
End Sub
```

Notes: A CTLine object contains an array of glyph runs. Line objects are created by the typesetter during a framesetting operation and can draw themselves directly into a graphics context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.8.2 Methods

63.8.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.8.4 Bounds(options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Queries bounds.

63.8.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.8.6 CreateJustifiedLine(justificationFactor as Double, justificationWidth as Double) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a justified line from an existing line.
Notes: line: The line from which to create a justified line.
justificationFactor: Full or partial justification. When set to 1.0 or greater, full justification is performed. If this parameter is set to less than 1.0, varying degrees of partial justification are performed. If it is set to 0 or less, no justification is performed.
justificationWidth: The width to which the resultant line is justified. If justificationWidth is less than the actual width of the line, then negative justification is performed (that is, glyphs are squeezed together).

Returns a reference to a justified CTLine object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

63.8.7 CreateTruncatedLine(width as Double, truncationType as Integer, truncationToken as CTLineMBS = nil) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a truncated line from an existing line.
Notes: line: The line from which to create a truncated line.
width: The width at which truncation begins. The line is truncated if its width is greater than the width passed in this parameter.
truncationType: The type of truncation to perform if needed. See constants for possible values.
truncationToken: This token is added at the point where truncation took place, to indicate that the line was truncated. Usually, the truncation token is the ellipsis character (U+2026). If this parameter is set to nil, then no truncation token is used and the line is simply cut off.

Returns a reference to a truncated CTLine object if the call was successful; otherwise, NULL.

The line specified in truncationToken should have a width less than the width specified by the width param-

eter. If the width of the line specified in truncationToken is greater than width and truncation is needed, the function returns nil.

Available in OS X v10.5 and later.

63.8.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a single immutable line object directly from an attributed string.
Notes: s: The string from which the line is created.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.

This function allows clients who need very simple line generation to create a line without creating a typesetter object. The typesetting is done under the hood. Without a typesetter object, the line cannot be properly broken. However, for simple things like text labels, line breaking is not an issue.
Available in OS X v10.5 and later.

63.8.9 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete line.
Notes: context: The context into which the line is drawn.

This is a convenience function because the line could be drawn run-by-run by getting the glyph runs, getting the glyphs out of them, and calling a function such as CGContextMBS.ShowGlyphsAtPositions. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

63.8.10 GlyphRuns as CTRunMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the array of glyph runs that make up the line object.
Notes: Returns an array containing the CTRunMBS objects that make up the line.
Available in OS X v10.5 and later.

63.8.11 ImageBounds(context as CGContextMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a line.
Notes: context: The context for which the image bounds are calculated. This is required because the context could have settings in it that would cause changes in the image bounds.

Returns a rectangle that tightly encloses the paths of the line's glyphs, or, if the line or context is invalid, CGRectNull.
Available in OS X v10.5 and later.

63.8.12 OffsetForStringIndex(charIndex as Integer, byref secondaryOffset as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the graphical offset or offsets for a string index.
Notes: charIndex: The string index corresponding to the desired position.
secondaryOffset: On output, the secondary offset along the baseline for charIndex. When a single caret is sufficient for a string index, this value will be the same as the primary offset, which is the return value of this function. May be NULL.

Returns the primary offset along the baseline for charIndex, or 0.0 if the line does not support string access.

This function returns the graphical offset or offsets corresponding to a string index, suitable for movement between adjacent lines or for drawing a custom caret. For moving between adjacent lines, the primary offset can be adjusted for any relative indentation of the two lines; a CGPoint constructed with the adjusted offset for its x value and 0.0 for its y value is suitable for passing to CTLineGetStringIndexForPosition. For drawing a custom caret, the returned primary offset corresponds to the portion of the caret that represents the visual insertion location for a character whose direction matches the line's writing direction.

Available in OS X v10.5 and later.

63.8.13 PenOffsetForFlush(flushFactor as Double, flushWidth as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the pen offset required to draw flush text.
Notes: flushFactor: Determines the type of flushness. A flushFactor of 0 or less indicates left flush. A flushFactor of 1.0 or more indicates right flush. Flush factors between 0 and 1.0 indicate varying degrees of

center flush, with a value of 0.5 being totally center flush.
flushWidth: Specifies the width to which the flushness operation should apply.

Returns the offset from the current pen position for the flush operation.
Available in OS X v10.5 and later.

63.8.14 StringIndexForPosition(position as CGPointMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Performs hit testing.
Notes: position: The location of the mouse click relative to the line's origin.

Returns the string index for the position, or if the line does not support string access, kCFNotFound. Relative to the line's string range, this value can be no less than the first string index and no greater than the last string index plus 1.

This function can be used to determine the string index for a mouse click or other event. This string index corresponds to the character before which the next character should be inserted. This determination is made by analyzing the string from which a typesetter was created and the corresponding glyphs as embodied by a particular line.
Available in OS X v10.5 and later.

63.8.15 TypographicBounds(byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the typographic bounds of a line.
Notes: ascent: On output, the ascent of the line.
descent: On output, the descent of the line.
leading: On output, the leading of the line.

Returns the typographic width of the line. If the line is invalid, this function returns 0.

63.8.16 Properties

63.8.17 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the total glyph count for the line object.
Notes: The total glyph count is equal to the sum of all of the glyphs in the glyph runs forming the line.
(Read only property)

63.8.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

63.8.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

63.8.20 TrailingWhitespaceWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the trailing whitespace width for a line.
Notes: The width of the line's trailing whitespace. If the line is invalid, this function will always return zero.

Creating a line for a width can result in a line that is actually longer than the desired width due to trailing whitespace. Although this is typically not an issue due to whitespace being invisible, this function can be used to determine what amount of a line's width is due to trailing whitespace.
Available in OS X v10.5 and later.
(Read only property)

63.8.21 Constants

Line Bounds

Constant	Value	Description
kCTLineBoundsExcludeTypographicLeading	1	Pass this option to exclude typographic leading.
kCTLineBoundsExcludeTypographicShifts	2	Pass this option to ignore cross-stream shifts due to positioning (suc or baseline alignment).
kCTLineBoundsUseGlyphPathBounds	8	Pass this option to use glyph path bounds rather than the default bounds.
kCTLineBoundsUseHangingPunctuation	4	Normally line bounds include all glyphs; pass this option to tre punctuation hanging off either end of the line as fully hanging.
kCTLineBoundsUseOpticalBounds	16	Pass this option to use optical bounds. This option overrides kCT sUseGlyphPathBounds.

Truncate Types

Constant	Value	Description
kCTLineTruncationEnd	1	Truncate the end of the line, leaving the start portion visible.
kCTLineTruncationMiddle	2	Truncate the middle of the line, leaving both the start and the end portions visible.
kCTLineTruncationStart	0	Truncate the beginning of the line, leaving the end portion visible.

63.9 class CTMutableFontCollectionMBS

63.9.1 class CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The mutable font collection class.
Notes: Subclass of the CTFontCollectionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.9.2 Methods

63.9.3 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

63.9.4 SetExclusionDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to exclude from the match.

63.9.5 SetQueryDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to match.

63.10 class CTParagraphStyleMBS

63.10.1 class CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTParagraphStyle opaque type represents paragraph or ruler attributes in an attributed string.
Notes: A paragraph style object represents a complex attribute value in an attributed string, storing a number of subattributes that affect paragraph layout for the characters of the string. Among these subattributes are alignment, tab stops, writing direction, line-breaking mode, and indentation settings.
Subclass of the CFObjectMBS class.

63.10.2 Methods

63.10.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.10.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes: Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.

63.10.5 Create as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes: Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 63.10.6 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS 11216

63.10.6 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes: settings: The settings with which to preload the paragraph style.

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 63.10.5 Create as CTParagraphStyleMBS 11216

63.10.7 CreateCopy as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable copy of a paragraph style.
Notes: A valid reference to an immutable CTParagraphStyle object that is a copy of the one passed into paragraphStyle, If the paragraphStyle reference is valid; otherwise nil, if any error occurred, including being supplied with an invalid reference.

63.10.8 CreateWithAlignment(Alignment as Integer) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Example:

```
Var a as Integer
Var t as CTParagraphStyleMBS

a = CTParagraphStyleMBS.kCTTextAlignmentRight
t = CTParagraphStyleMBS.CreateWithAlignment(a)

MsgBox str(T.Alignment) // shows 1
```

63.10.9 TabStops as CTTextTabMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style.
Notes: Type: Array of CTTextTabMBS. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

63.10.10 Properties

63.10.11 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The text alignment.
Notes: Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
(Read only property)

63.10.12 BaseWritingDirection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The base writing direction of the lines.
Notes: Type: CTWritingDirection. Default: kCTWritingDirectionNatural. Application: CTFramesetter, CTTypesetter.
(Read only property)

63.10.13 DefaultTabInterval as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The documentwide default tab interval.
Notes: Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0. Application: CTFramesetter, CTTypesetter.
(Read only property)

63.10.14 FirstLineHeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a frame to the beginning of the paragraph's first line.
Notes: This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.15 HeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a text container to the beginning of lines other than the first.
Notes: This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter
(Read only property)

63.10.16 LineBoundsOptions as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The options controlling the alignment of the line edges with the leading and trailing margins.
Notes: Type: CTLineBoundsOptions

Default: 0 (no options)
Application: CTTypesetter
(Read only property)

63.10.17 LineBreakMode as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The mode that should be used to break lines when laying out the paragraph's text.
Notes: Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter
(Read only property)

63.10.18 LineHeightMultiple as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The line height multiple.
Notes: The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.19 LineSpacingAdjustment as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space in points added between lines within the paragraph (commonly known as leading).
Notes: Available in OS X v10.7 and later.
(Read only property)

63.10.20 MaximumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes: Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.21 MaximumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum space in points between lines within the paragraph (commonly known as leading).
Notes: This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

63.10.22 MinimumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes: This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.23 MinimumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum space in points between lines within the paragraph (commonly known as leading).
Notes: This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

63.10.24 ParagraphSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space added at the end of the paragraph to separate it from the following paragraph.
Notes: This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.25 ParagraphSpacingBefore as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance between the paragraph's top and the beginning of its text content.
Notes: Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.26 TailIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the margin of a frame to the end of lines.
Notes: If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it's the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

63.10.27 Constants

Constants

Constant	Value	Description
kCTTextAlignmentCenter	2	One of the constants to specify text alignment. Text is visually center aligned.
kCTTextAlignmentJustified	3	One of the constants to specify text alignment. Text is fully justified. The last line in a paragraph is naturally aligned.
kCTTextAlignmentLeft	0	One of the constants to specify text alignment. Text is visually left aligned.
kCTTextAlignmentNatural	4	One of the constants to specify text alignment. Text uses the natural alignment of the text's script.
kCTTextAlignmentRight	1	One of the constants to specify text alignment. Text is visually right aligned.

Line Breaking

Constant	Value	Description
kCTLineBreakByCharWrapping	1	Wrapping occurs before the first character that doesn't fit.
kCTLineBreakByClipping	2	Lines are simply not drawn past the edge of the frame.
kCTLineBreakByTruncatingHead	3	Each line is displayed so that the end fits in the frame and the missing text indicated by an ellipsis glyph.
kCTLineBreakByTruncatingMiddle	5	Each line is displayed so that the beginning and end fit in the container a the missing text is indicated by an ellipsis glyph in the middle.
kCTLineBreakByTruncatingTail	4	Each line is displayed so that the beginning fits in the container and the missi text is indicated by an ellipsis glyph.
kCTLineBreakByWordWrapping	0	Wrapping occurs at word boundaries unless the word itself doesn't fit or single line.

Paragraph Styles

Constant	Value	Description
kCTParagraphStyleSpecifierAlignment	0	The text alignment. Natural text alignment is realized a ment, depending on the line sweep direction of the first sc paragraph. Type: CTTextAlignment. Default: kCTNa Application: CTFramesetter. Available in OS X v10.5 and later.
kCTParagraphStyleSpecifierBaseWritingDirection	13	The base writing direction of the lines. Type: CTWritin kCTWritingDirectionNatural. Application: CTFramesette
kCTParagraphStyleSpecifierDefaultTabInterval	5	The documentwide default tab interval. Tabs after the la ParagraphStyleSpecifierTabStops are placed at integer m tance (if positive). Type: CGFloat. Default: 0.0. Applic ter, CTTypesetter.
kCTParagraphStyleSpecifierFirstLineHeadIndent	1	The distance, in points, from the leading margin of a fram the paragraph's first line. This value is always nonnegati Default: 0.0. Application: CTFramesetter.
kCTParagraphStyleSpecifierHeadIndent	2	The distance, in points, from the leading margin of a te beginning of lines other than the first. This value is always CGFloat Default: 0.0 Application: CTFramesetter
kCTParagraphStyleSpecifierLineBoundsOptions	17	The options controlling the alignment of the line edges w trailing margins. Type: CTLineBoundsOptions Default: 0 (no options) Application: CTTypesetter
kCTParagraphStyleSpecifierLineBreakMode	6	The mode that should be used to break lines when laying text. Type: CTLineBreakMode. Default: kCTLineBrea Application: CTFramesetter
kCTParagraphStyleSpecifierLineHeightMultiple	7	The line height multiple. The natural line height of the r by this factor (if positive) before being constrained by mini line height. Type: CGFloat. Default: 0.0. Application: C
kCTParagraphStyleSpecifierLineSpacing	10	Deprecated. Use kCTParagraphStyleSpecifierMaximum ParagraphStyleSpecifierMinimumLineSpacing, and kCTP fierLineSpaceAdjustment to control space between lines. added between lines within the paragraph (commonly kno value is always nonnegative. Type: CGFloat. Default: 0. Framesetter.
kCTParagraphStyleSpecifierLineSpacingAdjustment	16	The space in points added between lines within the pa known as leading). Available in OS X v10.7 and later.
kCTParagraphStyleSpecifierMaximumLineHeight	8	The maximum height that any line in the frame will occu font size or size of any attached graphic. Glyphs and gra height will overlap neighboring lines. A maximum height height limit. This value is always nonnegative. Type: CG Application: CTFramesetter.
kCTParagraphStyleSpecifierMaximumLineSpacing	14	The maximum space in points between lines within the pa known as leading). This value is always nonnegative. Available in OS X v10.7 and later.
kCTParagraphStyleSpecifierMinimumLineHeight	9	The minimum height that any line in the frame will occu font size or size of any attached graphic. This value is Type: CGFloat. Default: 0.0. Application: CTFramesette
kCTParagraphStyleSpecifierMinimumLineSpacing	15	The minimum space in points between lines within the pa known as leading). This value is always nonnegative. Available in OS X v10.7 and later.
kCTParagraphStyleSpecifierParagraphSpacing	11	The space added at the end of the paragraph to separate i paragraph. This value is always nonnegative and is de the previous paragraph's kCTParagraphStyleSpecifierPa ting and the current paragraph's kCTParagraphStyleSpec ingBefore setting. Type: CGFloat. Default: 0.0. Applicati
kCTParagraphStyleSpecifierParagraphSpacingBefore	12	The distance between the paragraph's top and the beginnin Type: CGFloat. Default: 0.0. Application: CTFramesette

Writing Direction

Constant	Value	Description
kCTWritingDirectionLeftToRight	0	The writing direction is left to right.
kCTWritingDirectionNatural	-1	The writing direction is algorithmically determined using the Unicode Bidirectional Algorithm rules P2 and P3.
kCTWritingDirectionRightToLeft	1	The writing direction is right to left.

63.11 class CTParagraphStyleSettingMBS

63.11.1 class CTParagraphStyleSettingMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: This class is used to alter the paragraph style.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr11

63.11.2 Methods

63.11.3 SetTextTabs(textTabs() as CTTextTabMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the array of text tabs.
Notes: for use with kCTParagraphStyleSpecifierTabStops.

63.11.4 Properties

63.11.5 doubleValue as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The double value.
Notes: (Read and Write property)

63.11.6 intValue as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The integer value.
Notes: Also used for enumerations.
(Read and Write property)

63.11.7 Spec as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The specifier of the setting.
Notes: See CTParagraphStyleMBS for possible values.
(Read and Write property)

63.12 class CTRunDelegateMBS

63.12.1 class CTRunDelegateMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The class to get events for CTRun runs.
Notes: The CTRunDelegate opaque type represents a run delegate, which is assigned to a run (attribute range) to control typographic traits such glyph ascent, glyph descent, and glyph width.

The events defined for CTRunDelegate are used to modify glyph metrics during layout. The values returned by the delegate are applied to each glyph in the run or runs corresponding to the attribute with that delegate.
Subclass of the CFObjectMBS class.
Blog Entries

- CoreText Completed

63.12.2 Methods

63.12.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.12.4 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Shuts down the delegate.
Notes: Please call this to explicit end the delegate and avoid memory leaks.
See also:

- 63.12.7 Close 11228

63.12.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable instance of a run delegate.
Notes: The run-delegate object can be used for reserving space in a line or for eliding the glyphs for a range of text altogether.

63.12.6 Events

63.12.7 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Event called when item closes.
See also:

- 63.12.4 Close 11227

63.12.8 GetAscent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Event that determines typographic ascent of glyphs in the run.
Notes: Returns the typographic ascent of glyphs in the run associated with the run delegate.

63.12.9 GetDescent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Event that determines typographic descent of glyphs in the run.
Notes: Returns the typographic descent of glyphs in the run associated with the run delegate.

63.12.10 GetWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Event that determines the typographic width of glyphs in the run.
Notes: Returns the typographic width of glyphs in the run associated with the run delegate. A value of 0.0 indicates that the glyphs should not be drawn.

63.13 class CTRunMBS

63.13.1 class CTRunMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTRun opaque type represents a glyph run, which is a set of consecutive glyphs sharing the same attributes and direction.
Notes: The typesetter creates glyph runs as it produces lines from character strings, attributes, and font objects. That is, a line is constructed of one or more glyphs runs. Glyph runs can draw themselves into a graphic context, if desired, although most users have no need to interact directly with glyph runs.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.6pr1

63.13.2 Methods

63.13.3 Advances as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph advances into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

63.13.4 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.13.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.13.6 Draw(context as CGContextMBS, location as Integer, length as Integer = 0)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete run or part of one.
Notes: context: The context into which to draw the run.
range: The portion of the run to draw. If the length of the range is set to 0, then the draw operation continues from the start index of the range to the end of the run.

This is a convenience call, because the run could be drawn by accessing the glyphs. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

63.13.7 Glyphs as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyphs into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

63.13.8 ImageBounds(context as CGContextMBS, location as Integer, length as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a glyph range.
Notes: context: The context for the image bounds being calculated. This is required because the context could have settings in it that would cause changes in the image bounds.
range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the start index of the range to the end of the run.

Returns a rectangle that tightly encloses the paths of the run's glyphs, or, if run, context, or range is invalid, CGRectNull.
Available in OS X v10.5 and later.

63.13.9 Positions as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph positions into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

63.13.10 StringIndices as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of string indices into an array.
Notes: The indices are the character indices that originally spawned the glyphs that make up the run. They can be used to map the glyphs in the run back to the characters in the backing store.

Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

63.13.11 TypographicBounds(location as Integer, length as Integer, byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the typographic bounds of the run.
Notes: range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the range's start index to the end of the run.
ascent: On output, the ascent of the run.
descent: On output, the descent of the run.
leading: On output, the leading of the run.

Returns the typographic width of the run, or if run or range is invalid, 0.
Available in OS X v10.5 and later.

63.13.12 Properties

63.13.13 AttributeValues as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attribute dictionary that was used to create the glyph run.
Notes: Return a valid Dictionary or nil on error or if the run has no attributes.

The dictionary returned is either the same one that was set as an attribute dictionary on the original attributed string or a dictionary that has been manufactured by the layout engine. Attribute dictionaries can

be manufactured in the case of font substitution or if the run is missing critical attributes.
(Read only property)

63.13.14 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph count for the run.
Notes: run: The run for which to return the glyph count.

Returns the number of glyphs that the run contains, or if there are no glyphs in this run, a value of 0.
Available in OS X v10.5 and later.
(Read only property)

63.13.15 Status as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the run's status.
Notes: Runs have status that can be used to expedite certain operations. Knowing the direction and ordering of a run's glyphs can aid in string index analysis, whereas knowing whether the positions reference the identity text matrix can avoid expensive comparisons. This status is provided as a convenience, because this information is not strictly necessary but can be helpful in some circumstances.
(Read only property)

63.13.16 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes: The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

63.13.17 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes: The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

63.13.18 TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text matrix needed to draw this run.
Notes: To properly draw the glyphs in a run, the fields tx and ty of the CGAffineTransform returned by this function should be set to the current text position.
(Read only property)

63.13.19 Constants

Constants

Constant	Value	Description
kCTRunStatusHasNonIdentityMatrix	4	One of the possible values for the status bitfield. The run requires a specific text matrix to be set in the current Core Gra context for proper drawing. Use BitwiseAnd() to check if the status has a given value.
kCTRunStatusNonMonotonic	2	One of the possible values for the status bitfield. The run has been reordered in some way such that the string indices as ated with the glyphs are no longer strictly increasing (for left-to-right run decreasing (for right-to-left runs). Use BitwiseAnd() to check if the status has a given value.
kCTRunStatusNoStatus	0	One of the possible values for the status bitfield. The run has no special attributes.
kCTRunStatusRightToLeft	1	One of the possible values for the status bitfield. The run proceeds from right to left. Use BitwiseAnd() to check if the status has a given value.

63.14 class CTTextTabMBS

63.14.1 class CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab opaque type represents a tab in a paragraph style, storing an alignment type and location.
Notes: Core Text supports four alignment types: left, center, right, and decimal. These alignment types are absolute, not based on the line sweep direction of text. For example, tabbed text is always positioned to the left of a right-aligned tab, whether the line sweep direction is left to right or right to left. A tab's location, on the other hand, is relative to the back margin. A tab set at 1.5 inches, for example, is at 1.5 inches from the right in right-to-left text.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.14.2 Methods

63.14.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.14.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.14.5 Create(alignment as Integer, location as Double, options as Dictionary = nil) as CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates and initializes a new text tab object.
Notes: alignment: The tab's alignment. This is used to determine the position of text inside the tab column.

This parameter must be set to a valid CTTextAlignment value or this function returns nil.
location: The tab's ruler location, relative to the back margin.
options: Options to pass in when the tab is created. Currently, the only option available is kCTTabColumnTerminatorsAttributeName. This parameter is optional and can be set to nil if not needed.
Return a reference to a CTTextTab object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

63.14.6 kCTTabColumnTerminatorsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the options keys.
Notes: Specifies the terminating character for a tab column.

The value associated with this attribute is a CFCharacterSet object. The character set is used to determine the terminating character for a tab column. The tab and newline characters are implied even if they don't exist in the character set. This attribute can be used to implement decimal tabs, for instance. This attribute is optional.

63.14.7 Properties

63.14.8 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text alignment of the tab.
Notes: (Read only property)

63.14.9 Location as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the tab's ruler location.
Notes: The tab's ruler location relative to the back margin.
(Read only property)

63.14.10 Options as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the dictionary of attributes associated with the tab.
Notes: The dictionary of attributes associated with the tab, or if no dictionary is present, nil.
(Read only property)

63.15 class CTTypesetterMBS

63.15.1 class CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTypesetter opaque type represents a typesetter, which performs line layout.
Notes: Line layout includes word wrapping, hyphenation, and line breaking in either vertical or horizontal rectangles. A typesetter object takes as input an attributed string and produces a line of typeset glyphs (composed into glyph runs) in a CTLine object. The typesetter performs character-to-glyph encoding, glyph ordering, and positional operations, such as kerning, tracking, and baseline adjustments. If multiline layout is needed, it is performed by a framesetter object, which calls into the typesetter to generate the typeset lines to fill the frame.

A framesetter encapsulates a typesetter and provides a reference to it as a convenience, but a caller may also choose to create a freestanding typesetter.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- CoreText Completed

63.15.2 Methods

63.15.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

63.15.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

63.15.5 CreateLine(location as Integer, length as Integer, offset as Double = 0.0) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable line from the typesetter at a specified line offset.
Notes: location and length: The string range on which the line is based. If the length portion of range is set to 0, then the typesetter continues to add glyphs to the line until it runs out of characters in the string. The location and length of the range must be within the bounds of the string, or the call will fail.
offset: The line position offset.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.
The resultant line consists of glyphs in the correct visual order, ready to draw.
Available in OS X v10.6 and later.

63.15.6 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string.
Notes: s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.

Available in OS X v10.5 and later.
See also:

- 63.15.7 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS 11238

63.15.7 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string and a dictionary of options.
Notes: s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.
options: A dictionary of typesetter options, or nil if there are none.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.
Available in OS X v10.5 and later.
See also:

- 63.15.6 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS 11238

63.15.8 kCTTypesetterOptionDisableBidiProcessing as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter,Äôs bidirectional text processing.
Notes: Disables bidirectional processing. Value must be a CFBoolean object. Default value is false. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex #9. If a typesetter is created with this option set to true, no directional reordering is performed, and any directional control characters are ignored.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

63.15.9 kCTTypesetterOptionForcedEmbeddingLevel as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter,Äôs bidirectional text processing.
Notes: Specifies the embedding level. Value must be a CFNumberRef object. Default is unset. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex #9. If present, this option specifies the embedding level, and any directional control characters are ignored.
Available in OS X v10.5 and later.

63.15.10 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the width provided.
Notes: startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.

Return a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CTTypesetterCreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character in the stream. This function is equivalent to SuggestClusterBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 63.15.11 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer 11240

63.15.11 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the specified width and line offset.
Notes: startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.
offset: The line offset position.

Returns a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character in the stream.

Available in OS X v10.6 and later.
See also:

- 63.15.10 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer 11239

63.15.12 SuggestLineBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided.
Notes: startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.

Returns a count of the characters from startIndex that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters. This function is equivalent to SuggestLineBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 63.15.13 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer 11241

63.15.13 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided and the specified offset.
Notes: startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.
offset: The line position offset.

Returns a count of the characters from startIndex and offset that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters.
Available in OS X v10.6 and later.
See also:

- 63.15.12 SuggestLineBreak(startIndex as Integer, width as Double) as Integer 11240

Chapter 64

CPUInfo

64.1 class CPUIDMBS

64.1.1 class CPUIDMBS

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class around the CPUID command of x86 CPUs.
Example:

```
Var c as new CPUIDMBS
MsgBox c.BrandString
```

Notes: This class works only on x86 CPUs.
Values returned in the properties have very CPU vendor specific values.
So Intel and AMD use different meanings for a lot of values.

64.1.2 Methods

64.1.3 BrandString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brand string.
Notes: contains the brand string, e.g. "Intel(R) Xeon(TM) CPU 2.40GHz"
See also:

- 64.1.23 BrandString as String 11248

64.1.4 CodeName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brief and human-friendly CPU codename, which was recognized.

64.1.5 CPUID(Selector as Integer) as boolean

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls CPUID for the given selector.
Example:

```
Var c as new CPUIDMBS

if c.CPUID(0) then
MsgBox hex(c.EDX)
end if
```

Notes: Returns true on success and false on failure.
(always true on x86 CPUs and always false on PowerPC CPUs.)
Result values are stored in the four properties EAX, EBX, ECX and EDX.

64.1.6 ExtFamily as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended family.

64.1.7 ExtModel as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended model

64.1.8 Family as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU family.
See also:

- 64.1.28 Family as Integer 11250

64.1.9 FeatureName(index as Integer) as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short textual representation of a CPU flag.
Notes: A constant string like "fpu", "tsc", "sse2", etc.
See kFeature* constants.

64.1.10 Flags(index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries whether a given feature is available.
Example:

```
Var c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
```

end if

Notes: See kFeature* constants.

64.1.11 L1DataCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 data cache size in KB.
Notes: Could be zero, if the CPU lacks cache.
If the size cannot be determined, it will be -1.

64.1.12 L1InstructionCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 instruction cache size in KB.
Notes: Could be zero, if the CPU lacks cache. If the size cannot be determined, it will be -1.
On some Intel CPUs, whose instruction cache is in fact a trace cache, the size will be expressed in K uOps.

64.1.13 L2Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L2 cache size in KB.
Notes: Could be zero, if the CPU lacks L2 cache.
If the size of the cache could not be determined, it will be -1

64.1.14 L3Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L3 cache size in KB.
Notes: Zero on most systems.

64.1.15 Model as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU model.
See also:

- 64.1.29 Model as Integer 11250

64.1.16 NumCores as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of CPU cores on the current processor.

64.1.17 NumLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of logical processors on the current processor.
Notes: Could be more than the number of physical cores, e.g. when the processor has HyperThreading.

64.1.18 Stepping as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU stepping.
See also:

- 64.1.31 Stepping as Integer 11251

64.1.19 TotalLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of logical processors.
Notes: This is num_logical_cpus * { total physical processors in the system }

If you're writing a multithreaded program and you want to run it on all CPUs, this is the number of threads you need.

64.1.20 Vendor as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The recognized CPU vendor.
Notes: See kVendor constants.

64.1.21 VendorName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The vendor name.
Notes: contains the CPU vendor string, e.g. "GenuineIntel"

64.1.22 Properties

64.1.23 BrandString as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string (47 characters maximum) with the brand name of the CPU.
Example:

```
Var c as new CPUIDMBS
MsgBox c.BrandString
```

Notes: Is "" if not supported.
(Read and Write property)
See also:

- 64.1.3 BrandString as String 11244

64.1.24 EAX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EAX register value after a CPUID function call.
Example:

```
Var c as new CPUIDMBS
MsgBox str(c.EAX)
```

Notes: (Read and Write property)

64.1.25 EBX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EBX register value after a CPUID function call.
Example:

```
Var c as new CPUIDMBS
MsgBox str(c.EBX)
```

Notes: (Read and Write property)

64.1.26 ECX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ECX register value after a CPUID function call.
Example:

```
Var c as new CPUIDMBS
MsgBox str(c.ECX)
```

Notes: (Read and Write property)

64.1.27 EDX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EDX register value after a CPUID function call.
Example:

```
Var c as new CPUIDMBS
```

MsgBox str(c.EDX)

Notes: (Read and Write property)

64.1.28 Family as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Family ID of the CPU.
Example:

Var c as new CPUIDMBS
MsgBox str(c.Family)

Notes: e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 64.1.8 Family as Integer 11245

64.1.29 Model as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Model ID of the CPU.
Example:

Var c as new CPUIDMBS
MsgBox str(c.Model)

Notes: Every CPU Family has several Models.
e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 64.1.15 Model as Integer 11247

64.1.30 ProcessorVendor as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Name of the Processor Vendor.
Example:

```
Var c as new CPUIDMBS
MsgBox c.ProcessorVendor
```

Notes: Possible values:

CPUID_VID_INTEL	"GenuineIntel"
CPUID_VID_UMC	"UMC UMC UMC "
CPUID_VID_AMD	"AuthenticAMD"
CPUID_VID_CYRIX	"CyrixInstead"
CPUID_VID_NEXGEN	"NexGenDriven"
CPUID_VID_CENTAUR	"CentaurHauls"
CPUID_VID_RISE	"RiseRiseRise"
CPUID_VID_SIS	"SiS SiS SiS "
CPUID_VID_TRANSMETA	"GenuineTMx86"
CPUID_VID_NSC	"Geode by NSC"

(Read and Write property)

64.1.31 Stepping as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The stepping ID of the CPU.
Example:

```
Var c as new CPUIDMBS
MsgBox str(c.Stepping)
```

Notes: Can be seen as a revision number of the processor.
(Read and Write property)
See also:

- 64.1.18 Stepping as Integer 11247

64.1.32 Constants

Features

Constant	Value	Description
kFeature100MHzSteps	80	100 MHz multiplier control
kFeature3DNOW	56	AMD 3DNow! instructions supported
kFeature3DNOWEXT	57	AMD 3DNow! extended instructions supported
kFeature3DNOWPrefetch	68	PREFETCH/PREFETCHW support
kFeatureABM	65	LZCNT instruction support
kFeatureACPI	20	ACPI support (power states)
kFeatureAES	51	AES* instructions supported
kFeatureAPERFMPERF	91	MPERF/APERF MSRs support
kFeatureAPIC	9	APIC support
kFeatureAVX	54	Advanced vector extensions supported
kFeatureCID	40	Context ID supported
kFeatureCLFLUSH	18	CLFLUSH instruction supported
kFeatureCMOV	14	CMOVxx instructions supported
kFeatureCMP_LEGACY	63	core multi-processing legacy mode
kFeatureConstantTSC	82	TSC ticks at constant rate
kFeatureCPB	90	Core performance boost
kFeatureCX16	41	CMPXCHG16B instruction supported
kFeatureCX8	8	CMPXCHG8B instruction supported
kFeatureDCA	44	Direct cache access supported
kFeatureDE	2	Debugging extension
kFeatureDS_CPL	34	CPL Qualified Debug Store
kFeatureDTS	19	Debug store supported
kFeatureDTS64	32	64-bit Debug store supported
kFeatureEST	37	Enhanced SpeedStep
kFeatureF16C	87	16-bit FP convert instruction support
kFeatureFID	75	Frequency ID control
kFeatureFMA3	84	The FMA3 instruction set
kFeatureFMA4	85	The FMA4 instruction set
kFeatureFPU	0	Floating point unit
kFeatureFXSR	22	FXSAVE / FXRSTOR supported
kFeatureFXSR_OPT	59	FFXSR: FXSAVE and FXRSTOR optimizations
kFeatureHT	26	Hyper-threading supported (but might be disabled)
kFeatureHWPState	81	Hardware P-state control
kFeatureIA64	28	IA64 supported (Itanium only)
kFeatureIBS	70	Instruction-based sampling
kFeatureLAHF_LM	62	LAHF/SAHF supported in 64-bit mode
kFeatureLM	61	Long mode (x86_64/EM64T) supported
kFeatureMCA	13	Machine check architecture
kFeatureMCE	7	Machine check exception
kFeatureMisalignSSE	66	Misaligned SSE supported
kFeatureMMX	21	MMX instruction set supported
kFeatureMMXEXT	55	AMD MMX-extended instructions supported
kFeatureMONITOR	33	MONITOR / MWAIT supported
kFeatureMOVBE	49	MOVBE instruction supported
kFeatureMSR	5	Model-specific regsisters, RDMSR/WRMSR supported
kFeatureMTRR	10	Memory type range registers
kFeatureNX	58	No-execute bit supported
kFeatureOSVW	69	OS Visible Workaround (AMD)
kFeatureOSXSAVE	53	non-privileged copy of OSXSAVE supported
kFeaturePA	93	Processor accumulator
kFeaturePAE	6	Physical address extension
kFeaturePAT	15	Page attribute table
kFeaturePBE	29	Pending-break enable
kFeaturePCLMUL	31	PCLMULQDQ instruction supported
kFeaturePDCM	43	Performance capabilities MSR supported
kFeaturePFI	92	Processor Feedback Interface support
kFeaturePGE	12	Page global enable
kFeaturePN	17	Processor serial # implemented (Intel P3 only)

Vendors

Constant	Value	Description
kVendorAMD	1	AMD CPU
kVendorCentaur	6	x86 CPU by IDT
kVendorCyrix	2	Cyrix CPU
kVendorIntel	0	Intel CPU
kVendorNexGen	3	NexGen CPU
kVendorNSC	9	x86 CPU by National Semiconductor
kVendorRISE	7	x86 CPU by Rise Technology

kVendorUMC	5	x86 CPU by UMC
kVendorUnknown	-1	Unknown

Chapter 65

CUPS

65.1 class CUPSDestinationMBS

65.1.1 class CUPSDestinationMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for a CUPS destination.
Example:

```
Var lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

Blog Entries

- About plug-in functions returning array

65.1.2 Methods

65.1.3 Options as CUPSOptionMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop only.

Function: Options values.

65.1.4 Properties

65.1.5 Instance as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Local instance name or "".
Notes: (Read and Write property)

65.1.6 isDefault as Boolean

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Is this printer the default?
Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox c.Name
end if
next
```

Notes: (Read and Write property)

65.1.7 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The name of the printer.
Example:

```
Var lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

65.2 class CUPSErrorExceptionMBS

65.2.1 class CUPSErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The error exception raised by some CUPS functions.
Notes: Subclass of the RuntimeException class.

65.3 class CUPSJobMBS

65.3.1 class CUPSJobMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for job details.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsActive)

if UBound(jobs)<0 then
MsgBox "no job"
else

Var j as CUPSJobMBS = jobs(0)
Var lines(-1) as string

lines.Append "Title: "+j.Title
lines.Append "User: "+j.User
lines.Append "Format: "+j.Format
lines.Append "Dest: "+j.Dest
lines.Append "ID: "+str(j.ID)
lines.Append "Priority: "+str(j.Priority)
lines.Append "Size: "+str(j.Size)
lines.Append "State: "+str(j.State)

if j.CompletedTime<>nil then
lines.Append "CompletedTime: "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
else
lines.Append "CompletedTime: nil"
end if

if j.CreationTime<>nil then
lines.Append "CreationTime: "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
else
lines.Append "CreationTime: nil"
end if

if j.ProcessingTime<>nil then
lines.Append "ProcessingTime: "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
else
lines.Append "ProcessingTime: nil"
end if

MsgBox join(lines,EndOfLine)

end if
```

65.3.2 Properties

65.3.3 CompletedDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Notes: Value is nil if the value is not set.
(Read and Write property)

65.3.4 CompletedTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
Var j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
end if
```

Notes: Value is nil if the value is not set.
(Read and Write property)

65.3.5 CreationDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Notes: Value is nil if the value is not set.
(Read and Write property)

65.3.6 CreationTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
Var j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
end if
```

Notes: Value is nil if the value is not set.
(Read and Write property)

65.3.7 Dest as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Printer or class name.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
Var lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Dest
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

65.3.8 Format as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Document format.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsAll)
Var lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Format
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

65.3.9 ID as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The job ID.
Example:

```
Var jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has ID "+str(jobs(0).ID)
```

Notes: (Read and Write property)

65.3.10 Priority as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Priority (1-100).
Example:

```
Var jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has priority "+str(jobs(0).Priority)
```

Notes: (Read and Write property)

65.3.11 ProcessingDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Notes: Value is nil if the value is not set.

(Read and Write property)

65.3.12 ProcessingTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
Var j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
end if
```

Notes: Value is nil if the value is not set.
(Read and Write property)

65.3.13 Size as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Size in kilobytes.
Example:

```
Var sum as Integer
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)

if UBound(jobs)<0 then
MsgBox "no job"
else
for each j as CUPSJobMBS in jobs
sum=sum+j.Size
next

MsgBox "Total size of all print jobs: "+str(sum)+" KB"
end if
```

Notes: (Read and Write property)

65.3.14 State as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Job state.
Example:

```
Var jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
Var state as Integer = jobs(0).State // check state of first job
Var s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: (Read and Write property)

65.3.15 Title as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Title/job name.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
Var lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Title
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

65.3.16 User as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: User the submitted the job.
Example:

```
Var jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
Var lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.User
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

65.4 module CUPSMBS

65.4.1 module CUPSMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: All.

Function: The module to control the CUPS printing system.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Real Studio Plugins, version 12.5pr8
- About plug-in functions returning array

65.4.2 Methods

65.4.3 CancelJob(name as string, job as Int32)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Cancel a print job on the default server.
Notes: name: Name of printer or class
job: Job ID, kJobIDCurrent for the current job, or kJobIDAll for all jobs

Pass kJobIDAll to cancel all jobs or kJobIDCurrent to cancel the current job on the named destination.

Raises exception on error.

65.4.4 GetDefault as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the default printer or class for the default server.
Example:

MsgBox CUPSMBS.GetDefault

65.4.5 GetDestinations as CUPSDestinationMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the list of destinations from the default server.
Example:

```
Var lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

Notes: Starting with CUPS 1.2, the returned list of destinations include the printer-info, printer-is-accepting-jobs, printer-is-shared, printer-make-and-model, printer-state, printer-state-change-time, printer-state-reasons, and printer-type attributes as options. CUPS 1.4 adds the marker-change-time, marker-colors, marker-high-levels, marker-levels, marker-low-levels, marker-message, marker-names, marker-types, and printer-commands attributes as well.

65.4.6 GetJobs(name as string, OnlyMyJobs as boolean, whichjobs as Integer) as CUPSJobMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the jobs from the default server.
Notes: name: "" = all destinations, otherwise show jobs for named destination
OnlyMyJobs: false = all users, true = mine
whichjobs: kWhichJobsAll, kWhichJobsActive, or kWhichJobsComplete

A "whichjobs" value of kWhichJobsAll returns all jobs regardless of state, while kWhichJobsActive returns jobs that are pending, processing, or held and kWhichJobsComplete returns jobs that are stopped, canceled, aborted, or completed.

65.4.7 GetPassword(prompt as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get a password from the user.
Notes: Returns "" if the user does not provide a password.

65.4.8 GetPPD(name as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the PPD file for a printer on the default server.

Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox cupsmbs.GetPPD(c.Name)
end if
next
```

Notes: Returns Filename for PPD file.

For classes, cupsGetPPD returns the PPD file for the first printer in the class.

The returned filename is stored in a static buffer and is overwritten with each call to cupsGetPPD or cupsGetPPD2. The caller "owns" the file that is created and must unlink the returned filename.

65.4.9 LastError as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status code.

65.4.10 LastErrorString as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status-message.
Example:

```
MsgBox CUPSMBS.LastErrorString
```

Notes: Returns status-message text from last request.

65.4.11 PrintData(name as string, Data as String, Title as string) as Integer

MBS Tools Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes: Name: Destination name
Data: Data to print
Title: Title of job

Returns Job ID or 0 on error

65.4.12 PrintFile(name as string, file as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Example:

```
// Print file on default printer...
Var f as FolderItem = SpecialFolder.Desktop.Child("test.ps")

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then

call CUPSMBS.PrintFile(c.Name, f, f.Name)

end if
next
```

Notes: name: Destination name
filename: File to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 65.4.13 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

65.4.13 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes: name: Destination name
filename: File to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 65.4.12 PrintFile(name as string, file as folderitem, title as string) as Integer 11268

65.4.14 PrintFiles(name as string, files() as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes: name: Destination name
filename: Files to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 65.4.15 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer 11269

65.4.15 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes: name: Destination name
files: Files to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 65.4.14 PrintFiles(name as string, files() as folderitem, title as string) as Integer 11269

65.4.16 Server as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the hostname/address of the default server.
Example:

MsgBox CUPSMBS.Server

Notes: The returned value can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname.

65.4.17 SetDefaultPrinter(printer as string)

MBS Tools Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Sets the default printer.
Notes: Name must be one of CUPSDestinationMBS's name.

65.4.18 SetServer(server as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default server name.
Notes: server: Server name

The "server" string can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname. Pass "" to restore the default server name.

65.4.19 SetUser(user as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default user name.
Notes: user: User name

Pass "" to restore the default user name.

65.4.20 User as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the current user's name.
Example:

MsgBox CUPSMBS.User

65.4.21 Constants

Constants

Constant	Value	Description
kJobAborted	8	One of the constants for the job state. Job was aborted.
kJobCanceled	7	One of the constants for the job state. Job was canceled.
kJobCompleted	9	One of the constants for the job state. Job was completed.
kJobHeld	4	One of the constants for the job state. Job is held.
kJobIDAll	-1	A job constant for all jobs.
kJobIDCurrent	0	A job constant for the current job.
kJobPending	3	One of the constants for the job state. Job is pending
kJobProcessing	5	One of the constants for the job state. Job is processing.
kJobStopped	6	One of the constants for the job state. Job is stopped.
kPrinterAUTHENTICATED	&h400000	One of the printer type/capability bit constants. Printer requires authentication
kPrinterBIND	&h0400	One of the printer type/capability bit constants. Can bind output
kPrinterBW	&h0004	One of the printer type/capability bit constants. Can do B&W printing
kPrinterCLASS	&h0001	One of the printer type/capability bit constants. Printer class
kPrinterCOLLATE	&h0080	One of the printer type/capability bit constants. Can collage copies
kPrinterCOLOR	&h0008	One of the printer type/capability bit constants. Can do color printing
kPrinterCOMMANDS	&h800000	One of the printer type/capability bit constants. Printer supports maintenance commands
kPrinterCOPIES	&h0040	One of the printer type/capability bit constants. Can do copies
kPrinterCOVER	&h0200	One of the printer type/capability bit constants. Can cover output
kPrinterDEFAULT	&h20000	One of the printer type/capability bit constants. Default printer on network
kPrinterDELETE	&h100000	One of the printer type/capability bit constants. Delete printer
kPrinterDISCOVERED	&h1000000	One of the printer type/capability bit constants. Printer was automatically discovered and added.
kPrinterDUPLEX	&h0010	One of the printer type/capability bit constants. Can do duplexing
kPrinterFAX	&h40000	One of the printer type/capability bit constants. Fax queue
kPrinterIMPLICIT	&h10000	One of the printer type/capability bit constants. Implicit class
kPrinterLARGE	&h4000	One of the printer type/capability bit constants. Can do D/E/A1/A0
kPrinterLOCAL	&h0000	One of the printer type/capability bit constants. Local printer or class
kPrinterMEDIUM	&h2000	One of the printer type/capability bit constants. Can do Tabloid/B/C/A3/A2
kPrinterMFP	&h4000000	One of the printer type/capability bit constants. Printer with scanning capabilities
kPrinterNotShared	&h200000	One of the printer type/capability bit constants. Printer is not shared.
kPrinterOPTIONS	&h6fffc	One of the printer type/capability bit constants.
kPrinterPUNCH	&h0100	One of the printer type/capability bit constants.

65.5 class CUPSMissingFunctionExceptionMBS

65.5.1 class CUPSMissingFunctionExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The exception raised if a CUPS function is not found.
Notes: On Windows this method is raised for each function you call.
Subclass of the RuntimeException class.

65.6 class CUPSOptionMBS

65.6.1 class CUPSOptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for the options in CUPS.
Example:

```
Var options() as CUPSOptionMBS

Var o1 as new CUPSOptionMBS
o1.Name = "media"
o1.Value = "A4"
options.Append o1

Var o2 as new CUPSOptionMBS
o2.Name = "scaling"
o2.Value = "75"
options.Append o2

Var o3 as new CUPSOptionMBS
o3.Name = "Collate"
o3.Value = "True"
options.Append o3

Var o4 as new CUPSOptionMBS
o4.Name = "sides"
o4.Value = "two-sided-long-edge"
options.Append o4
```

65.6.2 Properties

65.6.3 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Name of option.
Notes: (Read and Write property)

65.6.4 Value as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Value of option.
Notes: (Read and Write property)

Chapter 66

CURL

66.1 class CURLEmailMBS

66.1.1 class CURLEmailMBS

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Our plugin class to help building and sending emails.
Example:

```
Var e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

Var c as new CURLSMBS

if c.SetupEmail(e) then

Var er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes: Please make sure you set from, to, subject, plaintext to have a minimum email always.

If your email misses required fields, the email server may silently discard it.

66.1.2 Methods

66.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes: name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 66.1.4 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11277
- 66.1.5 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 11278

66.1.4 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes: name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 66.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11276
- 66.1.5 AddAttachment(file as FolderItem, name as string = """, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11278

66.1.5 AddAttachment(file as FolderItem, name as string = """, type as string = """, InlineID as string = """, ContentTypeMethod as String = """)

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes: name: The name for the attachment. If empty, version 16.2 uses file name from folderitem.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
file: The file to use. This file is read and content used for attachment.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header.
Currently only for sending calendar invitiations.
See also:

- 66.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11276
- 66.1.4 AddAttachment(data as string, name as string, type as string = """, InlineID as string = """, ContentTypeMethod as String = """) 11277

66.1.6 AddBcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a blind copy recipient.
Example:

```
Var e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test M√ºller"

Var Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes: Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

66.1.7 Addcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a copy recipient.
Example:

```
Var e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test M√ºller"

Var ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes: Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

66.1.8 AddHeader(header as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a header entry.
Example:

```
Var e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

Var Headers() as string = e.Headers
MsgBox Headers(0)
```

Notes: This header is passed as is and not preprocessed.
You can use this function to pass custom headers for "X-Universally-Unique-Identifier:", "Date:", "X-Mailer:", "Message-Id:" and "Mime-Version:".

If you pass header without text following ":", the header is not included.

66.1.9 AddReplyTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient for a reply.
Example:

```
Var e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test M√ºller"

Var ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes: Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

66.1.10 AddTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient.
Example:

```
Var e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test M√ºller"

Var TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes: Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

66.1.11 Bccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of Bcc recipients.
Example:

```
Var e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test M√ºller"

Var Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes: Entries may be encoded if necessary.

66.1.12 ccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of cc recipients.
Example:

```
Var e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test M√ºller"

Var ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes: Entries may be encoded if necessary.

66.1.13 clearAttachments

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all attachments from this email.
Notes: Useful in case you want to send same email with different attachments to another recipient.

66.1.14 ClearHeaders

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all headers from this email.
Notes: Useful in case you want to send same email with different headers to another recipient.

66.1.15 clearRecipients

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: clears all recipients.
Notes: Removes all TO, cc, Bcc and ReplyTO entries.
Useful in case you want to send same email to another recipient.

66.1.16 constructor(Encoding as string = "UTF-8")

MBS CURL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Normally, ignore parameter and use UTF-8.
But alternative you can pass: UTF-8, AScII, MacRoman, Latin1 or Windows.

66.1.17 EmailSource as string

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the source code for the email.
Notes: This is more for debugging, than for real use.
You can write this into a EML file.

66.1.18 Headers as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of extra header entries.
Example:

```
Var e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

Var Headers() as string = e.Headers
MsgBox Headers(0)
```

66.1.19 ReplyTOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of ReplyTo recipients.
Example:

```
Var e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test M√ºller"

Var ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes: Entries may be encoded if necessary.

66.1.20 SetFrom(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the email from address.
Example:

```
Var e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian M√ºller"
```

Notes: Please pass email and name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

66.1.21 SetServer(server as string, UseSSL as boolean = false)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the server to use.
Example:

```
Var e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR%k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: Sets which SMTP server to use.
There are a few combinations possible.
First you can use SetServer with SSL and pass true for UseURL parameter.

Or you pass false for no SSL. Still you can use CURL's OptionFTPSSL set to 3 to allow TLS for an upgrade of the unencrypted connection to SSL later.

Some servers don't support unencrypted, SSL or TLS, so only one may work.

And ports can be difficult, too. You can use CURL OptionPort to set a port explicit or include it in the server with double colon on the end. common ports are 25, 587 or 465.

Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
Sets UseSSL property.

66.1.22 TOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of TO recipients.
Example:

```
Var e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test M√ºller"

Var TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes: Entries may be encoded if necessary.

66.1.23 Properties

66.1.24 Attachmentcount as Integer

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of attachments.
Notes: (Read only property)

66.1.25 BoundaryName as String

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name to use in boundaries for MIME parts.

Notes: by default MBS Plugin.
(Read and Write property)

66.1.26 EncodingName as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encoding used.
Notes: The property is there for you to inspect in debugger.
Set only via Constructor.
(Read only property)

66.1.27 FromEmail as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The from address with name.
Example:

```
Var e As New CURLEmailMBS

e.SetFrom "test@yahoo.com", "Christian M√ºller"

// shows name encoded due to √º character
MessageBox e.FromEmail
```

Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.28 HeaderList as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The list of header entries.
Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.29 HTMLText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The HTML text of the email.
Example:

```
Var e As New CURLEmailMBS

e.HTMLText = "<html><body><p>Hello World</p></body></html>"
```

Notes: This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

66.1.30 InReplyTo as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The in reply to message ID.
Notes: Here you can define the message ID of the email you reply to.
(Read and Write property)

66.1.31 MessageID as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a custom message ID.
Notes: The plugin normally creates one by default when setting from address.
(Read and Write property)

66.1.32 PlainText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
Var e as new CURLEmailMBS
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"
```

Notes: This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

66.1.33 RecipientsBCC as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of Bcc recipients.
Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.34 RecipientsCC as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of CC recipients.
Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.35 RecipientsReplyTo as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of reply to entries.
Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.36 RecipientsTO as String

MBS CURL Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of TO recipients.
Notes: The property is there for you to inspect in debugger.
(Read only property)

66.1.37 RichText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The enriched text of the email.
Example:

Var e As New CURLEmailMBS

e.RichText = "<bold>Hello, <italic>world!</italic></bold>"

Notes: This text is encoded as quoted printable UTF-8 text.
This is not to be confused with RTF file format. Enriched text is described here:
http://en.wikipedia.org/wiki/Enriched_text
Please note that most email clients do not support this nowadays.
(Read and Write property)

66.1.38 Server as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The effective server URL used.
Example:

```
Var e As New CURLEmailMBS

e.SetServer "smtp.mail.yahoo.com", True

MessageBox e.Server // shows smtp.mail.yahoo.com
```

Notes: Only for debugging.
(Read only property)

66.1.39 SMTPPassword as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password for SMTP server authentication.
Example:

```
Var e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR%k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

66.1.40 SMTPServer as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the SMTP Server to use.
Example:

```
Var e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR%k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes: (Read and Write property)

66.1.41 SMTPUsername as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The username for SMTP server authentication.
Example:

```
Var e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR%k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

66.1.42 Subject as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subject line.
Example:

```
Var e as new CURLEmailMBS

e.Subject = "Hello World ,òÔè"
```

Notes: If subject lines contains special characters, it is automatically encoded as UTF-8.
(Read and Write property)

66.1.43 Use8BitMime as Boolean

MBS CURL Plugin, Plugin Version: 25.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether 8bit encoding is used.
Example:

```
Var e as new CURLEmailMBS

e.Use8BitMime = true
e.Subject = "Hello World ,òÔè"
```

Notes: (Read and Write property)

66.1.44 UseSSL as Boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use SSL or not.
Example:

```
Var e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR%k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes: When using SSL right, please also check cAInfo, cAPath, OptionSSLVerifyHost and OptionSSLVerifyPeer properties on the CURLSMBS class.

Pass false for TLS and later configure CURL for TLS.
Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
(Read and Write property)

66.2 class CURLFileInfoMBS

66.2.1 class CURLFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSFileInfoMBS instead. **Function:** The class for file information.
Notes: Subclass of the CURLSFileInfoMBS class.

66.3 class CURLListMBS

66.3.1 class CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSListMBS instead.
Function: A class to hold a list of strings from the CURL library.
Notes: Subclass of the CURLSListMBS class.

66.4 class CURLMBS

66.4.1 class CURLMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSMBS instead.
Function: A class to wrap libCURL.
Notes: Subclass of the CURLSMBS class.

66.5 class CURLMimePartMBS

66.5.1 class CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSMimePartMBS instead. **Function:** The class for mime parts.
Notes: Subclass of the CURLSMimePartMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.6 class CURLMultiMBS

66.6.1 class CURLMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSMultiMBS instead.
Function: The class for multiple CURL transfers running in parallel.
Notes: Subclass of the CURLSMultiMBS class.

66.7 class CURLNFileInfoMBS

66.7.1 class CURLNFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSFileInfoMBS instead. **Function:** The class for file information.
Notes: Subclass of the CURLSFileInfoMBS class.

66.8 class CURLNListMBS

66.8.1 class CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSListMBS instead.
Function: A class to hold a list of strings from the CURL library.
Notes: Subclass of the CURLSListMBS class.

66.9 class CURLNMBS

66.9.1 class CURLNMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSMBS instead.
Function: A class to wrap libCURL.
Notes: We used to have a CURL with native SSL backend for macOS or windows.
Please move to CURLSMBS class, which can switch to using windows SSL backend instead fo openssl.
Subclass of the CURLSMBS class.

66.12 class CURLNSSLBackendMBS

66.12.1 class CURLNSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSSSLBackendMBS instead. **Function:** The class for a SSL backend.
Notes: Subclass of the CURLSSSLBackendMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.13 class CURLNURLMBS

66.13.1 class CURLNURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSURLMBS instead.
Function: The class for CURL's URL parser.
Notes: Subclass of the CURLSURLMBS class.

66.14 class CURLNVersionMBS

66.14.1 class CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSVersionMBS instead. **Function:** A class to hold version information from libCURL.
Notes: Subclass of the CURLSVersionMBS class.

- 17.5, page 38: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes
- 17.2, page 11: News
- 13.5, page 8: News

66.16.2 Properties

66.16.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes: As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property.

But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

66.16.4 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timstamp as a date object.
Notes: As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property.
But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

66.16.5 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes: (Read only property)

66.16.6 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file type.
Notes: (Read only property)

66.16.7 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

66.16.8 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group ID.
Notes: (Read only property)

66.16.9 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group string.
Notes: (Read only property)

66.16.10 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hard link count.
Notes: (Read only property)

66.16.11 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filename property is valid.
Notes: (Read only property)

66.16.12 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filetype property is valid.
Notes: (Read only property)

66.16.13 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if GID property is valid.
Notes: (Read only property)

66.16.14 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if hardlinks property is valid.
Notes: (Read only property)

66.16.15 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if permissions property is valid.
Notes: (Read only property)

66.16.16 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if size property is valid.
Notes: (Read only property)

66.16.17 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if time and date properties have values.
Notes: (Read only property)

66.16.18 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if UID field has a value.
Notes: (Read only property)

66.16.19 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a directory.
Notes: Same as FileType = FileTypeDirectory.
(Read only property)

66.16.20 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a regular file.
Notes: Same as FileType = FileTypeFile.
(Read only property)

66.16.21 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission value.
Notes: (Read only property)

66.16.22 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission string.
Notes: (Read only property)

66.16.23 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file size.
Notes: (Read only property)

66.16.24 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target for a symlink.
Notes: (Read only property)

66.16.25 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time value.
Notes: (Read only property)

66.16.26 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time string parsed.
Notes: (Read only property)

66.16.27 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID.
Notes: (Read only property)

66.16.28 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID as text.
Notes: (Read only property)

66.16.29 Constants

File Types

Constant	Value	Description
FileTypeDeviceBlock	3	Block Device
FileTypeDeviceChar	4	Character Device
FileTypeDirectory	1	Directory
FileTypeDoor	7	Door, is possible only on Sun Solaris now.
FileTypeFile	0	Regular file
FileTypeNamedPipe	5	Named Pipe
FileTypeSocket	6	Socket
FileTypeSymlink	2	Symbolic links
FileTypeUnknown	8	Unknown file type. Should never occur.

Flag Constants

Constant	Value	Description
FlagKnownFileName	1	Filename Known
FlagKnownFileType	2	File Type Known
FlagKnownGID	32	GID Known
FlagKnownHardLinks	128	Hardlink Count Known
FlagKnownPermissions	8	Permissions Known
FlagKnownSize	64	Size Known
FlagKnownTime	4	Time Known
FlagKnownUID	16	UID Known

66.17 class CURLSListMBS

66.17.1 class CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

66.17.2 Methods

66.17.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the item with the given index.
Notes: Index is zero based.

66.17.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

66.17.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

66.17.6 Properties

66.17.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of items in this list.
Notes: (Read only property)

66.18 class CURLSMBS

66.18.1 class CURLSMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap libCURL.
Example:

```
Var d As New CURLSMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
Var e as integer = d.Perform

// check result
Var data As String = d.OutputData
Var DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes: We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.

66.18.2 Methods

66.18.3 AddMimePart as CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

66.18.4 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Var URL As String = CURLSMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes: This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	"86400"
QueryParameters	List of query parameters to include.	
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	

Returns the pre-signed URL. May raise an exception in case of error.

66.18.5 CipherNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all cipher algorithms.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = CURLSMBS.CipherNames
Var DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

66.18.6 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears data properties.
Notes: Resets OutputData, DebugMessages and Headers.

66.18.7 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the debug output file for PerformMT.
Notes: Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

66.18.8 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the header output file for PerformMT.
Notes: Call after PerformMT finished.

With 15.2 version of plugin, this also works with Perform.

66.18.9 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the input file for PerformMT.
Notes: Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

66.18.10 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the output file for PerformMT.
Notes: Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

66.18.11 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 66.18.12 CreateMTDebugOutputFile(Path as String) as boolean 11317

66.18.12 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

See also:

- 66.18.11 CreateMTDebugOutputFile(file as folderitem) as boolean 11317

66.18.13 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 66.18.14 CreateMTHeaderOutputFile(Path as String) as boolean 11318

66.18.14 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 66.18.13 CreateMTHeaderOutputFile(file as folderitem) as boolean 11318

66.18.15 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

• 66.18.16 CreateMTOutputFile(Path as String) as boolean 11319

66.18.16 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes: Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

• 66.18.15 CreateMTOutputFile(file as folderitem) as boolean 11318

66.18.17 DecodeIMAPFolderName(encodedName as String) as String

MBS CURL Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes text from IMAP UTF-7.
Example:

```
// test a few cases
Var t1 As String = "Entw&APw-rfe"
Var t2 As String = "Test&AOk-&-"
Var t3 As String = "
textasciitilde peter/mail/&ZeVnLIqe-/&U,BTFw-"

Var d1 As String = CURLSMBS.DecodeIMAPFolderName(t1)
// shows "Entw√ºrfe"
Var d2 As String = CURLSMBS.DecodeIMAPFolderName(t2)
// shows "Test√©&"
Var d3 As String = CURLSMBS.DecodeIMAPFolderName(t3)
// shows "
textasciitilde peter/mail/Êó•Êú¨Ë™ûû/Âè∞Âåó"

Break
```

Notes: Use this for IMAP folder names to decode the name and show to user.

See RFC 2060:
http://www.faqs.org/rfcs/rfc2060.html

You may do a directory listing for IMAP, then decode the names for display, but keep the original encoded names to later do a query for folder content.

66.18.18 DigestNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = CURLSMBS.CipherNames
Var DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

66.18.19 FileInfos as CURLSFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with file information.
Notes: If you use OptionWildcard, you find after the transfer all CURLSFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

66.18.20 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes mime data.
Example:

```
Var c as new CURLSMBS

// add mime
Var p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"
```

```
c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

66.18.21 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
Var c as new CURLSMBS
Var file1 as string = "my-face.jpg"
Var file2 as string = "your-face.jpg"
Var formOptions(-1) as Integer
Var formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes: Lasterror is set.
See other FormAdd methods for details.

- 66.18.24 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 11323

- 66.18.25 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 11324
- 66.18.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 11324
- 66.18.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 11325
- 66.18.28 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 11328

66.18.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes: Lasterror is set.
See other FormAdd methods for details.
See also:

- 66.18.21 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 11321

- 66.18.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 11325
- 66.18.28 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 11328

66.18.23 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes: Lasterror is set.
See other FormAdd methods for details.
See also:

66.18.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes: Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename

(and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

66.18.28 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes: Lasterror is set.
See other FormAdd methods for details.
See also:

- 66.18.21 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 11321

66.18.29 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
Var d as new CURLSMBS
d.FormAddField("company", "Test, Inc.")
```

Notes: For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

66.18.30 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
Var file as folderitem = specialFolder.desktop.Child("test.txt")
Var b as BinaryStream = binarystream.Open(file)
Var FileContent as String = b.read(b.length)

// init some curl object
Var d as new CURLSMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes: For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

66.18.31 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

66.18.32 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

66.18.33 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes constructing a form.
Example:

```
Var c as new CURLSMBS
Var namebuffer as string = "name buffer"
Var namelength as Integer = lenb(namebuffer)
Var buffer as string = "test buffer"
Var htmlbuffer as string = "<HTML>test buffer</HTML>"
Var htmlbufferlength as Integer = lenb(htmlbuffer)
Var file1 as string = "my-face.jpg"
Var file2 as string = "your-face.jpg"
Var formOptions(-1) as Integer
Var formValues(-1) as string
Var recordbuffer as string = "record buffer"
Var recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
```

```
const CURLFORM_FILECONTENT = 7
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

'
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```

```
'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes: Lasterror is set.
The form is assigned to the HTTPPost property.

66.18.34 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive the active socket used by this curl session.
Notes: If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

66.18.35 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time stamp when app connected.

66.18.36 GetInfoCAInfo as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries default CAInfo value.

66.18.37 GetInfoCAPath as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries default CAPath value.

66.18.38 GetInfoCertInfo as CURLSListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information on the certificate chain.
Example:

```
Var c as new CURLSMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
c.OptionCertInfo = true
Var e as Integer = c.perform

// query certificate info
Var lists() as CURLSListMBS = c.GetInfoCertInfo

for each l as CURLSListMBS in lists
MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugMessages
```

Notes: Please set OptionCertInfo first.

66.18.39 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return if the time condition prevented the document to get transferred.

66.18.40 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.

Notes: The Lasterror property is set. 0 for success.

66.18.41 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-length of the download.
Notes: The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

66.18.42 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

66.18.43 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-type of the downloaded object.
Notes: The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

66.18.44 GetInfoCookieList as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes: The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

66.18.45 GetInfoEarlyDataSent as integer

MBS CURL Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the number of bytes sent as TLS early data.
Notes: TLS early data is only attempted when kSSLOptionEarlyData is set for the transfer. In addition, it is only used by libcurl when a TLS session exists that announces support.

The amount is negative when the sent data was rejected by the server. TLS allows a server that announces support for early data to reject any attempt to use it at its own discretion. When for example 127 bytes had been sent, but were rejected, it reports -127 as the amount "sent".

66.18.46 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

66.18.47 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

66.18.48 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
Var d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
Var e as Integer = d.Perform

// calculate date object
Var da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime
```

```
// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes: The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

66.18.49 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string holding the path of the entry path.
Notes: That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

66.18.50 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

66.18.51 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available.
Notes: The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

66.18.52 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received proxy response code to a CONNECT request.
Notes: The Lasterror property is set. 0 for success.

66.18.53 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

66.18.54 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetInfoActiveSocket instead. **Function:** Receive the last socket used by this CURL session.
Notes: If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

66.18.55 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Example:

```
Var c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
Var e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

66.18.56 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the local port of the most recent (primary) connection.
Example:

```
Var c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
Var e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

66.18.57 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

66.18.58 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes: The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

66.18.59 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

66.18.60 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes: The Lasterror property is set. 0 for success.

This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

66.18.61 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
Var c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
Var e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

66.18.62 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
Var c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
Var e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

66.18.63 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Get the protocol used in the connection.
Notes: See kProtocol* constants.

66.18.64 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

66.18.65 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries proxy error code.

66.18.66 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

66.18.67 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

66.18.68 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started.
Notes: The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

66.18.69 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The redirection URL.

66.18.70 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries referrer text.

66.18.71 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of the issued requests.
Notes: The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

66.18.72 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received HTTP or FTP code.
Notes: The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

66.18.73 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Retry-After retry delay.
Notes: Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

66.18.74 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Client sequence counter.

66.18.75 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP sequence counter received.

66.18.76 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Server sequence counter.

66.18.77 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP session ID.

66.18.78 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the URL scheme (sometimes called protocol) used in the connection

66.18.79 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were downloaded.
Notes: The Lasterror property is set. 0 for success.

The amount is only for the latest transfer and will be reset again for each new transfer.

66.18.80 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

66.18.81 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

66.18.82 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

66.18.83 GetInfoSSLEngines as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes: The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

66.18.84 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

66.18.85 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes: The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

66.18.86 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

66.18.87 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the default CURL library.
Notes: This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLSMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

66.18.88 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string from the LoadLibrary function.

66.18.89 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes: You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 66.18.90 LoadLibrary(path as string) as boolean 11345

66.18.90 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes: You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 66.18.89 LoadLibrary(file as folderitem) as boolean 11344

66.18.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Example:

```
Var c As New CURLSMBS
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"
c.CollectOutputData = false
```

```
Var e As Integer = c.Perform

Var ErrorMessage As String = c.LasterrorMessage
Var ErrorLog As String = c.DebugMessages
Var ResultData As String = c.OutputData

Break
```

Notes: The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.

The function returns false in case of an error, e.g. if file is already open by another application, the folderitem/path is invalid, the offset is negative or we can't determinate the file size.
It may be wise to have a fallback in your code to use a binarystream in that case (if that one can read the file) and then read all the data in a string and put into the InputData property.
See also:

- 66.18.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 11346

66.18.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Notes: The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.

The function returns false in case of an error, e.g. if file is already open by another application, the folderitem/path is invalid, the offset is negative or we can't determinate the file size.
It may be wise to have a fallback in your code to use a binarystream in that case (if that one can read the file) and then read all the data in a string and put into the InputData property.
See also:

- 66.18.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 11345

66.18.93 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer
Example:

```
// if you get a curl call like this

'curl -X PATCH "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } " \
'-H "Authorization: Bearer YOUR_TOKEN" \
'-H "Content-Type: application/json" \
'–data ' {
'"fields": {
'"Address": "1 Ferry Building",
'"Name": "Ferry Building",
'"Visited": True
' }
' } '

// you translate it to this:

Var c As New CURLSMBS

Var Payload As String = _
" { "+_
"""fields"": { "+_
"""Address"": ""1 Ferry Building"","+_
"""Name"": ""Ferry Building"","+_
"""Visited"": True"+_
" } "+_
" } "

c.OptionCustomRequest = "PATCH"
c.OptionURL = "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } "
c.SetOptionHTTPHeader Array("Content-Type: application/json", "Authorization: Bearer YOUR_TO-
KEN")
c.OptionPostFields = Payload

Var Error As Integer = c.Perform
Var ResponseCode As Integer = c.GetInfoResponseCode
Var DebugLog As String = c.DebugMessages
Var Output As String = c.OutputData

Break
```

Notes: This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

66.18.94 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer with preemptive multithreading.
Example:

```
Var c As New CURLSMBS
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"

Var e As Integer = c.PerformMT

Var ErrorMessage As String = c.LasterrorMessage
Var ErrorLog As String = c.DebugMessages
Var ResultData As String = c.OutputData
```

Break

Notes: Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLSMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

66.18.95 ProcessRelativeURL(BaseURL as String, RelativeURL as String) as String

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes an URL to come from relative URL to a new absolute URL.
Example:

```
Var baseURL As String = "https://monkeybreadsoftware.net/themes.shtml"
Var RelativeURL As String = "topic-curl.shtml"

Var URL As String = CURLSMBS.ProcessRelativeURL(baseURL, RelativeURL)
Break
```

Notes: Raises an UnsuppportedOperationException in case of failure.

66.18.96 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives raw data on a connection.
Notes: This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

66.18.97 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

66.18.98 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes: This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 66.18.99 SendData(data as string) as Integer 11351

66.18.99 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes: This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

- 66.18.98 SendData(data as Memoryblock) as Integer 11351

66.18.100 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Notes: If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 66.18.101 SetInputData(data as string) 11352

66.18.101 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Example:

```
Var c As New CURLSMBS

c.SetInputData "Hello World"

// do a HTTP Upload with PUT
c.OptionUpload = True
c.OptionURL = "https://monkeybreadsoftware.de/filemaker/examples/echo.php"

// or do a FTP upload
'c.OptionURL = "ftp://monkeybreadsoftware.de/folder/file.txt"
```

```
Var e As Integer = c.Perform

Var ErrorMessage As String = c.LasterrorMessage
Var ErrorLog As String = c.DebugMessages
Var ResultData As String = c.OutputData

Break
```

Notes: If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 66.18.100 SetInputData(data as MemoryBlock) 11352

66.18.102 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

const kError_SHARE_IN_USE	= 57	share is in use
const kError_SSL_CERTPROBLEM	= 58	problem with the local certificate
const kError_SSL_CIPHER	= 59	couldn't use specified cipher
const kError_SSL_CACERT	= 60	problem with the CA cert (path?)
const kError_BAD_CONTENT_ENCODING	= 61	Unrecognized transfer encoding
const kError_LDAP_INVALID_URL	= 62	Invalid LDAP URL
const kError_FILESIZE_EXCEEDED	= 63	Maximum file size exceeded
const kError_FTP_SSL_FAILED	= 64	Requested FTP SSL level failed
const kError_SEND_FAIL_REWIND	= 65	Sending the data requires a rewind that failed
const kError_SSL_ENGINE_INITFAILED	= 66	failed to initialise ENGINE
const kError_LOGIN_DENIED	= 67	user, password or similar was not accepted and we failed to login

66.18.103 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an empty password.
Notes: Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

66.18.104 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes: Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

66.18.105 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
Var c as new CURLSMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes: If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be

replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

66.18.106 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of email recipient addresses.

66.18.107 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
Var d as CURLSMBS // your CURL object

Var ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes: Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

66.18.108 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes: Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

66.18.109 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of headers used for proxy requests only.

66.18.110 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
Var curl as new CURLSMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes: This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

66.18.111 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send linked-list of name:port:address sets.

66.18.112 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes: The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

66.18.113 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
Var cacert as FolderItem // your cacert.pem file
Var CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes: This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

66.18.114 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
Var c as new CURLSMBS

Var cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes: The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

66.18.115 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes: When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

66.18.116 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to a CA certificate in PEM format.
Notes: If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

66.18.117 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes: If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

66.18.118 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes: Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

66.18.119 SetupAWS(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String, HashedPayload as String = """, Headers() as String = nil, queryParameters() as string = nil, NoSSL as boolean = false) as boolean

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setup CURL to transfer to Amazon Webservices.
Notes: This implements AWS4-HMAC-SHA256 signature for credentials, sets authentication, URL, HTTP Headers and other parameters.
For upload or post, please set input parameters first.

Returns true on success or false on failure.
Throws exceptions when parameters are insufficient (UnsupportedOperationException).

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, PATCH, GET or DELETE.	"PUT"
HashedPayload	The hashed payload. If empty, we calculate it automatically from input data or postfields. This is a lowercase hex SHA256.	
Headers	Optional extra HTTP headers to include.	"x-amz-acl: public-read"
queryParameters	Optional query parameter list with entries like "key=value", URL encoded.	

Added PATCH as verb in version 23.0.

Please be aware that this function depends on a correct time and date set on the computer. If the time is not set correct, the authentication will fail.

66.18.120 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups existing CURL session for an email transfer.
Example:

```
Var e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

Var c as new CURLSMBS

if c.SetupEmail(e) then

Var er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes: You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

66.18.121 SetupOAuth(ConsumerKey as String, ConsumerSecret as String, AccessToken as String, AccessTokenSecret as String, HTTPVerb as String, URL as String, Parameters() as String = nil, Headers() as String = nil, Datas() as String = nil, Nonce as String = "", Timestamp as String = "", HMAC as String = "", Verifier as String = "", Realm as String = "") as boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups an OAuth signed transfer.
Notes: The plugin calculates the signature and adds headers for authorization to the CURL handle.
Sets URL with parameters and optionally data values for POST.

Parameter	Description	Example
ConsumerKey	The oauth consumer key.	"xvz1evFS4wEEPTGEFPHBog"
ConsumerSecret	The oauth consumer secret.	"kAcSOqF21Fu85e7zjz7ZN2U4ZRhfV3WpwPAoE3Z7kBw"
AccessToken	The oauth access token.	"370773112-GmHxMAgYyLbNEtIKZeRNFsMKPR9EyMZeS9weJAEb"
AccessTokenSecret	The oauth access token secret. Can be empty if not yet known.	"LswwdoUaIvS8ltyTt5jkRh4J50vUPVVHtR2YPi5kE"
HTTPVerb	The HTTP verb. e.g. POST, PUT, GET, DELETE. Default if empty is GET.	"POST"
URL	The URL to query without parameters.	"https://api.twitter.com/1.1/statuses/update.json"
Parameters	List of parameters. Can be empty. Please pass list with newline as delimiter. Values should be URL encoded already.	"include_entities=true"
Headers	List of additional header entries to include. Can be empty. We automatically set Authorization header.	"Accept: application/json¶Content-Type: application/json"
Datas	Data value list for POST.	"status=Hello¶others=123"
Nonce	The nonce value. If empty, we generate it automatically for you.	"kYjzVBB8Y0ZFabxSWbWovY3uYSQ2pTgmZeNu2VS4cg"
Timestamp	The timestamp to use for signature. If empty, we query current timestamp (same as you calling Time.UnixTimeStamp)	1318622958
HMAC	Which HMAC algorithm to use. Can be HMAC-SHA512, HMAC-SHA256 or HMAC-SHA1. Default is HMAC-SHA1 if parameter is missing or empty.	"HMAC-SHA1"
Verifier	The verifier. Usually an ID shown on a website after login to the service and authorization of an app.	"3456789"

Added Realm parameter for version 20.5.

66.18.122 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform any connection upkeep checks.
Notes: Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

66.18.123 UseSystemCertificates as Integer

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Windows, Targets: All.

Function: Read certificate from system and installs them in CURL session,.
Notes: For macOS and Windows we load the available certificates from keychain or Windows Certificate Store and pass them to CURL. This is better than having no certificates at all.

Even better is normally to provide a cacert.pem file with only the expected certificates.

Returns number of certificates loaded.

No longer needed since MBS Plugin v16.0 with CURL 8.18 since CURL will query certificate storage in keychain automatically.

66.18.124 WebSocketMeta as CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries last frame metadata.
Notes: Only useful if called in Write event.

66.18.125 WebSocketReceive(BufferSize as Integer = 65536) as CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive WebSocket data.
Example:

```
Var curl as CURLSMBS // your curl handle

Var m as CURLSWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if
```

Notes: Retrieves as much as possible of a received WebSocket data fragment into the buffer, but not more than BufferSize bytes. The bytesReceived property in CURLSWebSocketFrameMBS is set to the number of bytes actually stored.

If there is more fragment data to deliver than what fits in the provided buffer, CURL returns a full buffer and the application needs to call this function again to continue draining the buffer.

The returned CURLSWebSocketFrameMBS contains the data and the metadata about the received data.

Lasterror property is set.

66.18.126 WebSocketSend(Data as MemoryBlock, FrameSize as Integer = 0, SendFlags as Integer = 0) as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send the specific message fragment over an established WebSocket connection.
Notes: The buffer holds the data to send.
Returns the number of payload bytes actually sent.

To send a (huge) fragment using multiple calls with partial content per invoke, set the kFlagOffset bit and the FrameSize argument as the total expected size for the first part, then set the kFlagOffset with a zero FrameSize for the following parts.

If not sending a partial fragment or if this is raw mode, FrameSize should be set to zero.

If kWebSocketRaw is enabled in WebSocketOptions, the flags argument should be set to 0.

Lasterror property is set.

66.18.127 Properties

66.18.128 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the CURL library was loaded.
Notes: The CURLSMBS constructor loads the library if it was not loaded before.
(Read only property)

66.18.129 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes: Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

66.18.130 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CollectDebugMessages instead. **Function:** Whether to collect debug message data.
Notes: If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

66.18.131 CollectDebugMessages as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect debug message data.
Notes: If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

66.18.132 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CollectHeaders instead. **Function:** Whether to collect headers.
Notes: If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.

Renamed to CollectHeaders in v23.0.
(Read and Write property)

66.18.133 CollectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect headers.
Notes: If you set this property to true, you can grab the data from the transfer in the Headers Property

instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

66.18.134 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect output data.
Notes: If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

66.18.135 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use DebugMessages instead.
Function: The debug data from CURL.
Notes: If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.

Newer code should use DebugMessages property instead.
(Read only property)

66.18.136 DebugMessages as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug messages from CURL.
Notes: If CollectDebugMessage property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.
(Read only property)

66.18.137 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to include data in debug messages.
Example:

```
Var c as new CURLSMBS
c.DebugWithData = true
c.OptionVerbose = true
c.CollectDebugMessages = true
```

Notes: (Read and Write property)

66.18.138 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

66.18.139 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The headers from CURL.
Notes: If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.

Renamed to Headers in v23.0.
(Read only property)

66.18.140 Headers as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use Headers instead. **Function:** The headers from CURL.
Notes: If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.
(Read only property)

66.18.141 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data.
Notes: If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

66.18.142 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The lasterror from the library.
Example:

```
Var d As New CURLSMBS

d.OptionSSLVersion = 123

Var LastError As Integer = d.LastError
// gives 43
Var LastErrorText As String = d.LastErrorText
// A libcurl function was given a bad argument

Break
```

Notes: Set in the constructor while doing initialization as well as by by various curl calls.
Check the kError* constants.
(Read and Write property)

66.18.143 LastErrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Example:

```
Var d As New CURLSMBS
```

```
d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Var ErrorCode As Integer = d.Perform

Var LastErrorMessage As String = d.LastErrorMessage
Var LastErrorText As String = d.LastErrorText

Break
```

Notes: The error message from the transfer.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read only property)

66.18.144 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text for the lasterror code.
Example:

```
Var d As New CURLSMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Var ErrorCode As Integer = d.Perform

Var LastErrorMessage As String = d.LastErrorMessage
Var LastErrorText As String = d.LastErrorText

Break
```

Notes: Static string matched to the error code, so you have an idea what's wrong.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read and Write property)

66.18.145 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which library is in use.
Notes: This is for debugging only to see which library is in use.
(Read only property)

66.18.146 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

66.18.147 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

66.18.148 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
Var c as new CURLSMBS
c.OptionAcceptEncoding = "deflate"
```

Notes: Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length

string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

66.18.149 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

66.18.150 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes: (Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

66.18.151 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes: This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

66.18.152 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

66.18.153 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes: Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4

is the same as calling this with "aws:amz" in parameter.
(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

66.18.154 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes: The main point of this would be that the write event gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

66.18.155 OptionCACacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the life-time for cached certificate stores.
Notes: Pass a number, this sets the timeout in seconds. This tells libcurl the maximum time any cached certificate store it has in memory may be kept and reused for new connections. Once the timeout has expired, a subsequent fetch requiring a certificate store will have to build a new one.
Building a certificate store from a CAINFO file (see OptionCAInfo) is a slow operation so curl may cache the generated certificate store internally to speed up future connections.
Set to zero to completely disable caching, or set to -1 to retain the cached store remain forever. By default, libcurl caches this info for 24 hours.
(Read and Write property)
See also CA_CACHE_TIMEOUT option in CURL manual.

66.18.156 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes: This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

66.18.157 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo as blob value.
Notes: Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.

(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

66.18.158 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
Var c as new CURLSMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes: The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

66.18.159 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes: With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

66.18.160 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the connection to the server to take.
Example:

```
Var d as new CURLSMBS

d.OptionConnectionTimeOutMS = 5000
d.OptionConnectOnly = 1

// try this URL
d.OptionURL = URL

// try connection
Var e as integer = d.Perform

// check result
Var s as string = d.OutputData
TextArea1.text = FixText(S)

if e = 0 then
MsgBox "Connected"
else
MsgBox "Failed to connect"
end if
```

Notes: This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

66.18.161 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes: This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

66.18.162 OptionConnectOnly as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes: This option is useful with the CURLSMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)

Type changed to integer in v23.0 to enable passing 2 for WebSockets.
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

66.18.163 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be used to set a cookie in the http request.
Notes: The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

66.18.164 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie file content.
Notes: It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

66.18.165 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: File path where to write the cookies to.
Example:

```
// Activate cookie engine without cookie file:
curl.OptionCookieJar = ""
```

Notes: This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEJAR option in CURL manual.

66.18.166 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie string.
Notes: Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

66.18.167 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to mark this as a new cookie "session".
Notes: It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

66.18.168 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

66.18.169 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

Notes: When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

66.18.170 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
Var c as CURLSMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes: This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)

See also CUSTOMREQUEST option in CURL manual.

66.18.171 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

66.18.172 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes: For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

66.18.173 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disallow specifying username/login in URL.
Notes: The value true tells the library to not allow URLs that include an username.
(Read and Write property)

66.18.174 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timeout in seconds.
Notes: Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

66.18.175 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes: This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

66.18.176 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv4 address that the resolver should bind to.
Notes: The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

66.18.177 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv6 address that the resolver should bind to.
Notes: The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)

See also DNS_LOCAL_IP6 option in CURL manual.

66.18.178 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

66.18.179 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to shuffle DNS addresses.
Notes: When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

66.18.180 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes: Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.

When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

66.18.181 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate.
Notes: Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.
Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

66.18.182 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate's status.
Notes: Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.

This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

66.18.183 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides the DNS-over-HTTPS URL.
Notes: Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

66.18.184 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The path name to the Entropy Gathering Daemon socket.

Notes: It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.185 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets Expect 100 timeout.
Notes: Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

66.18.186 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

66.18.187 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
Var d as new CURLSMBS
```

```
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
Var e as Integer = d.Perform

// calculate date object
Var da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes: If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

66.18.188 OptionFollowLocation as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
Var c as new CURLSMBS

c.OptionFollowLocation = 1
c.OptionMaxRedirs = 3
```

Notes: This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

A combination of these flags:
1 generic follow redirects
2 Do not use the custom method in the follow-up request if the HTTP code instructs so (301, 302, 303).

4 Only use the custom method in the first request, always reset in the next

This property was changed from boolean to integer in April 2025 for 25.2 release.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

66.18.189 OptionForbidReuse as Boolean

MBS CURL Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes: Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FORBID_REUSE option in CURL manual.

66.18.190 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes: Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.191 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
Var c as new CURLSMBS

c.OptionFreshConnect=True
```

Notes: If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

66.18.192 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FTP account name to use.
Notes: When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

66.18.193 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative username.
Notes: Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

66.18.194 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Function: True tells the library to append to the remote file instead of overwrite it.

Notes: This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.195 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes: CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

66.18.196 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer that should have one of the following values.
Notes: This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

66.18.197 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Notes: This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.198 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port to use for ftp.
Notes: It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

66.18.199 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionServerResponseTimeout instead. **Function:** Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes: With v22.4 or newer, please use newer property name OptionServerResponseTimeout.

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.200 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes: Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

66.18.201 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Function: Request using SSL / TLS for the transfer.
Example:

```
Var c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes: Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

66.18.202 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What kind of SSL authentication to use for FTP.
Notes: Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

66.18.203 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes: It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

66.18.204 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes: Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

66.18.205 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes: Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

66.18.206 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes: Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)

See also FTP_USE_PRET option in CURL manual.

66.18.207 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the true, this forces the HTTP request to get back to GET.
Notes: usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.208 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

66.18.209 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The happy eyeballs timeout.
Notes: Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

66.18.210 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to send an HAProxy PROXY protocol header.
Notes: Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection. The default action is not to send this header.

This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

66.18.211 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to include the header in the body output.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

66.18.212 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

66.18.213 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which http authentication to use.
Notes: Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text,

easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = &hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = &hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

66.18.214 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes: If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

66.18.215 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes: There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

66.18.216 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes: If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

66.18.217 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to one of the values described below.
Notes: They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

66.18.218 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore the Content-Length header.
Notes: This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

66.18.219 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes: Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also INFILESIZE option in CURL manual.

66.18.220 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes: This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.221 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This set the interface name to use as outgoing network interface.
Notes: The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

66.18.222 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
Var c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes: This is only interesting when using host names that resolve addresses using more than one version

of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

66.18.223 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding a CA certificate in PEM format.
Notes: If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

66.18.224 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set issuer SSL certificate from memory blob.
Notes: Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

66.18.225 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep sending on error.
Notes: Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

66.18.226 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set passphrase to private key.
Notes: It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key. You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

66.18.227 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Set the krb4 security level, this also enables krb4 awareness.
Notes: This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.228 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** FTP kerberos security level.
Notes: Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)

66.18.229 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This sets the local port number of the socket used for connection.
Notes: This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

66.18.230 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes: It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause

unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

66.18.231 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Login options string to use for the transfer.
Notes: For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

66.18.232 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

66.18.233 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

66.18.234 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes: This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

66.18.235 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

66.18.236 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum age the connection should have in seconds.
Notes: Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

66.18.237 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the persistent connection cache size.
Notes: The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that

support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

66.18.238 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes: If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

66.18.239 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Function:** This allows you to specify the maximum size (in bytes) of a file to download.
Notes: If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.240 OptionMaxLifeTimeConnection as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets maximum lifetime (since creation) allowed for reusing a connection.
Notes: Pass a number as parameter containing maxlifetime - the maximum time in seconds, since the creation of the connection, that you allow an existing connection to have to be considered for reuse for this request.

libcurl features a connection cache that holds previously used connections. When a new request is to be done, it will consider any connection that matches for reuse. The MaxLifeTimeConnection limit prevents libcurl from trying too old connections for reuse. This can be used for client-side load balancing. If a connection is found in the cache that is older than this set maxlifetime, it will instead be closed once any in-progress transfers complete.

If set to 0, this behavior is disabled: all connections are eligible for reuse.
(Read and Write property)

66.18.241 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum download speed.
Notes: If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

66.18.242 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Function:** Defines the maximum download speed.
Notes: If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)

(Read and Write property)

66.18.243 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the redirection limit.
Example:

```
Var c as new CURLSMBS

c.OptionFollowLocation = 1
c.OptionMaxRedirs = 3
```

Notes: If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time.
Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

66.18.244 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum upload speed.
Notes: If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

66.18.245 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Function:** Defines the maximum upload speed.
Notes: If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

66.18.246 OptionMimeOptions as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set MIME option flags.
Notes: Pass a number that holds a bitmask of CURLMIMEOPT constants. Each bit is a Boolean flag used while encoding a MIME tree or multipart form data.

Available bits are:

CURLMIMEOPT_FORMESCAPE = 1

Tells libcurl to escape multipart form field and file names using the backslash-escaping algorithm rather than percent-encoding (HTTP only).

Backslash-escaping consists in preceding backslashes and double quotes with a backslash. Percent encoding maps all occurrences of double quote, carriage return and line feed to %22, %0D and %0A respectively.

Before version 7.81.0, percent-encoding was never applied.

HTTP browsers used to do backslash-escaping in the past but have over time transitioned to use percent-encoding. This option allows to address server-side applications that have not yet have been converted.

As an example, consider field or file name strange\name"kind. When the containing multipart form is sent, this is normally transmitted as strange\name%22kind. When this option is set, it is sent as strange\\name\"kind.
(Read and Write property)
See also MIME_OPTIONS option in CURL manual.

66.18.247 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Controls usage of netrc file.
Notes: This parameter controls the preference of libCURL between using user names and passwords from your
textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

66.18.248 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes: If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

66.18.249 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes: The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use &o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

66.18.250 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes: The default value is &o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the &o prefix in Xojo.

(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

66.18.251 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to not include the body-part in the output.
Notes: This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.

66.18.252 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes: The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

66.18.253 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not use signals.
Notes: If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous

DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

66.18.254 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to use for the transfer.
Notes: The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

66.18.255 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass path as it is and do not resolve dots.
Notes: Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

66.18.256 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the peer public key.
Notes: Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

66.18.257 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)
See also PIPEWAIT option in CURL manual.

66.18.258 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

66.18.259 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes: This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

66.18.260 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
Var xml as string // XML or JSON to send as payload
Var c as new CURLSMBS

c.OptionFollowLocation = 1
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes: You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

66.18.261 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the post data.
Notes: Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

66.18.262 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Function:** The size of the post data. (64 bit version)
Notes: Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

66.18.263 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes: A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_ALL is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

66.18.264 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

66.18.265 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionProtocolsString instead. **Function:** A bitmask of kProtocol* constants.
Notes: If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)

66.18.266 OptionProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The protocols allowed-
Example:

```
Var c as new CURLSMBS
c.OptionProtocolsString = "http,tftp,sftp"
```

Notes: Pass a string that holds a comma-separated list of case insensitive protocol names (URL schemes) to allow in the transfer. This option allows applications to use libcurl built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default, libcurl accepts all protocols it was built with support for. See also OptionReditProtocolsString.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

CURLVersionMBS class can be used to get a list of all supported protocols in the current libcurl. GetInfoProtocol function is the recommended way to figure out the protocol used in a previous transfer.
(Read and Write property)

66.18.267 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set HTTP proxy to use.
Example:

```
Var c as CURLSMBS // your CURL object
Var psAddress as string // your proxy address
Var psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

66.18.268 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which proxy authentication to use.
Notes: Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

66.18.269 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
```

```
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes: Pass native file path.
This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

66.18.270 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo for proxy as blob value.
Notes: This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

66.18.271 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath directory used to validate the proxy certificate.
Notes: Pass native file path.
This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

66.18.272 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: CRL file for proxy.
Notes: Pass native file path.
(Read and Write property)

See also PROXY_CRLFILE option in CURL manual.

66.18.273 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes: Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

66.18.274 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set proxy issuer SSL certificate from memory blob.
Notes: Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)
See also PROXY_ISSUERCERT_BLOB option in CURL manual.

66.18.275 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

66.18.276 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes: The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option. (Added in 7.19.1)
(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

66.18.277 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the proxy public key.
Notes: This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

66.18.278 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

66.18.279 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

66.18.280 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

66.18.281 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets private key for proxy cert from memory blob.
Notes: Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

66.18.282 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes: Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

66.18.283 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)

See also PROXY_SSL_CIPHER_LIST option in CURL manual.

66.18.284 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-key for proxy.
Notes: Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

66.18.285 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for proxy cert from memory blob.
Notes: Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

66.18.286 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes: Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

66.18.287 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

66.18.288 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes: Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

66.18.289 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
```

d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1

Notes: set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

66.18.290 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version to specifically try to use for proxy.
Notes: The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.

Default	&h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	&h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	&h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	&h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	&h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

66.18.291 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes: The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

66.18.292 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

66.18.293 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set authentication type for authenticated TLS for proxy

Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

66.18.294 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

66.18.295 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes: Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)
See also PROXY_TRANSFER_MODE option in CURL manual.

66.18.296 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option is to set type of the proxy.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5.
The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

66.18.297 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.

Notes: In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

66.18.298 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUpload instead.
Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes: The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.299 OptionQuickExit as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to allow to exit quickly.
Notes: Pass a number as a parameter, 1 meaning that when recovering from a timeout, libcurl should skip lengthy cleanups that are intended to avoid all kinds of leaks (threads etc.), as the caller program is about to call exit() anyway. This allows for a swift termination after a DNS timeout for example, by canceling and/or forgetting about a resolver thread, at the expense of a possible (though short-lived) leak of associated resources.
(Read and Write property)
See also QUICK_EXIT option in CURL manual.

66.18.300 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A file name for the random file.
Notes: The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

66.18.301 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should contain the specified range you want.
Notes: It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

66.18.302 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionRedirProtocolsString instead. **Function:** An integer that holds a bitmask of kProtocol* constants.
Notes: If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)

66.18.303 OptionReditProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The protocols allowed to redirect to.
Example:

```
Var c as new CURLSMBS
c.OptionReditProtocolsString = "http,https"
```

Notes: Pass string that holds a comma-separated list of case insensitive protocol names (URL schemes). That list limits what protocols libcurl may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This option allows applications to limit specific transfers to only be allowed to use a subset of protocols in redirections.

Protocols denied by OptionProtocolsString are not overridden by this option.

By default libcurl will allow HTTP, HTTPS, FTP and FTPS on redirects (since 7.65.2). Older versions of libcurl allowed all protocols on redirect except several disabled for security reasons: Since 7.19.4 FILE and SCP are disabled, and since 7.40.0 SMB and SMBS are also disabled.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

Default

HTTP, HTTPS, FTP and FTPS (Added in 7.65.2).

Older versions defaulted to all protocols except FILE, SCP and since 7.40.0 SMB and SMBS.
(Read and Write property)

66.18.304 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The referer to pass to the server.
Notes: It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

66.18.305 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

66.18.306 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes: Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

66.18.307 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Function:** It contains the offset in number of bytes that you want the transfer to start from.
Notes: The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.308 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

66.18.309 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

66.18.310 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

66.18.311 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

66.18.312 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

66.18.313 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

66.18.314 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The authorisation identity (identity to act as).
Notes: Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

66.18.315 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)
See also SASL_IR option in CURL manual.

66.18.316 OptionServerResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Causes libcurl to set a timeout period (in seconds) on the amount of time that the server is

allowed to take in order to send a response message for a command before the session is considered dead.
Notes: While libcurl is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionServerResponseTimeout to a value smaller than OptionTimeout.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SERVER_RESPONSE_TIMEOUT option in CURL manual.

66.18.317 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

66.18.318 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

66.18.319 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to protect SOCKS5 connection is protected.
Notes: Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).
(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

66.18.320 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A string holding the name of the service.
Notes: The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)

66.18.321 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Define the SSH authorization types.
Example:

```
Var c as CURLSMBS // your instance

// only do password
c.OptionSSHAuthTypes = c.kSSHAuthKeyboard or c.kSSHAuthPassword
```

Notes: Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ to let libCURL pick one. (Added in 7.16.1)

See kSSHAuth* constants.
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

66.18.322 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

66.18.323 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's public key.
Notes: libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

66.18.324 OptionSSHHostPublicKeySHA256 as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: SHA256 hash of SSH server public key.
Notes: Pass a string containing a Base64-encoded SHA256 hash of the remote host's public key. The transfer will fail if the given hash does not match the hash the remote host provides.
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_SHA256 option in CURL manual.

66.18.325 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the file name of the known_host file to use.
Notes: The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

66.18.326 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Var c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes: If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword.

(Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

66.18.327 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Var c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes: If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

66.18.328 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your certificate.
Notes: The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

66.18.329 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set SSL client certificate from memory blob.
Notes: Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

66.18.330 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The certificate password.
Notes: (Read and Write property)

66.18.331 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your certificate.
Notes: Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

66.18.332 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the list of ciphers to use for the SSL connection.
Example:

```
// allow lower secure ciphers
curl.OptionSSLCipherList = "DEFAULT@SECLEVEL=0"
```

Notes: The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

66.18.333 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

66.18.334 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)
Notes: (Read and Write property)

66.18.335 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
Notes: If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

66.18.336 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes: If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

66.18.337 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Set if we should enable TLS false start.
Notes: (Read and Write property)

66.18.338 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your private key.
Notes: The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

66.18.339 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for client cert from memory blob.
Notes: Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

66.18.340 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The password required to use the OptionSSLKEY private key.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

66.18.341 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your private key.
Notes: Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

66.18.342 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

66.18.343 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use the SSL session ID cache.
Notes: Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

66.18.344 OptionSSLSignatureAlgorithms as String

MBS CURL Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TLS supported signature algorithms.
Notes: Specify colon-delimited list of signature scheme names.
e.g. "DSA+SHA256:rsa_pss_pss_sha256"
(Read and Write property)
See also SSL_SIGNATURE_ALGORITHMS option in CURL manual.

66.18.345 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.

Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes: When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

66.18.346 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

Var d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Var cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes: This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

66.18.347 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

66.18.348 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version of SSL/TLS to attempt to use.
Example:

```
Var c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes: The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVER-

SION_MAX_ macros.

Default	&h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	&h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	&h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	&h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	&h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

66.18.349 OptionStreamDepends as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

66.18.350 OptionStreamDependsE as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

66.18.351 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream weight, 1 - 256.
Notes: Default is 16.

(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

66.18.352 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suppress proxy CONNECT response headers from events.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

66.18.353 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set TCP Fast Open.
Notes: (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

66.18.354 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to true, TCP keepalive probes will be sent.
Notes: The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeepInterval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

66.18.355 OptionTCPKeepCount as Integer

MBS CURL Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of TCP keep-alive probes.
Notes: Sets the number of probes to send before dropping the connection. Not all operating systems support this option. (Added in curl 8.9.0)

The maximum value this option accepts is INT_MAX or whatever your system allows. Any larger value is capped to this amount.

Default is 9.
(Read and Write property)

66.18.356 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes: Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

66.18.357 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes: Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

66.18.358 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes: The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

66.18.359 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify block size to use for TFTP data transmission.
Notes: Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

66.18.360 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

66.18.361 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Time condition option.
Notes: This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

66.18.362 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes: Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

66.18.363 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes: Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

66.18.364 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes: The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

66.18.365 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes: string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

66.18.366 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication password.
Notes: Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

66.18.367 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TLS authentication type.
Notes: You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

66.18.368 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication user name.
Notes: Please also set OptionTLSAuthType.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

66.18.369 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes: If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

66.18.370 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes: For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

66.18.371 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

66.18.372 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes: This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

66.18.373 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connection upkeep interval.
Notes: Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

66.18.374 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to prepare for an upload.
Notes: The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

66.18.375 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set preferred upload buffer size.
Notes: Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

66.18.376 OptionUploadFlags as Integer

MBS CURL Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which flags to send the server relating to uploaded files.
Notes: The current supported flags are Answered (1), which sets the Answered flag for IMAP uploads, Deleted (2), which sets the Deleted flag for IMAP uploads, Draft (4), which sets the Draft flag for IMAP

uploads, Flagged (8), which sets the Flagged flag for IMAP uploads, and Seen (16), which sets the Seen flag for IMAP uploads.

See kUploadFlag* constants.
(Read and Write property)
See also UPLOAD_FLAGS option in CURL manual.

66.18.377 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual URL to deal with.
Example:

```
Var c As New CURLSMBS

// this example sends a xml request to a server
c.OptionURL = "http://www.someserver.com/service"

// some XML for a SOAP request
Var request As String = "<?xml version=""1.0""?><methodCall><methodName>application.getValue</methodName><params><param><value>info</value></param></params></methodCall>"

c.OptionPostFields = request

Var header(-1) As String
header.Append "Content-Type: text/xml"
c.SetOptionHTTPHeader header

// this should be c.kError_OK if okay.
Var result As Integer = c.Perform

Var output As String = c.OutputData
Var debugLog As String = c.DebugMessages
Var HTTPStatus As Integer = c.GetInfoResponseCode

Break
```

Notes: If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

66.18.378 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user agent string to pass to the server.
Example:

```
Var c As New CURLSMBS

// setup request and any options you need
c.OptionURL = URL
c.OptionUserAgent = "MyDownloader 1.0"
```

Notes: It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

66.18.379 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user name to be used in protocol authentication
Notes: In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

66.18.380 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request using SSL / TLS for the transfer.
Example:

```
Var c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes: Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)
See also USE_SSL option in CURL manual.

66.18.381 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether debug messages are sent to the DebugMessage event.
Notes: Default is false.

You need to subclass the CURLSMBS class to add code in the DebugMessage event.
Or you set CollectDebugMessages = true and later query DebugMessages property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

66.18.382 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable wildcard matching.
Notes: Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLSMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank,

graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '¬¥.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

66.18.383 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

66.18.384 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output data from CURL.
Example:

```
Var d As New CURLSMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
Var e as integer = d.Perform

// check result
Var data As String = d.OutputData
Var DebugMessage As String = d.DebugMessages // check in debugger on error
```

```
ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes: If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.

Limited to 2 GB. Please stream to file for bigger data with CreateMTOutputFile function.
(Read only property)

66.18.385 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether transfer is paused.
Notes: You can set it to true while transfer runs to pause it.
(Read and Write property)

66.18.386 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes downloaded so far.
Notes: (Read only property)

66.18.387 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to download in total.
Notes: (Read only property)

66.18.388 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current download/upload progress in percent.
Notes: Range from 0 to 100.
(Read only property)

66.18.389 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes uploaded so far.
Notes: (Read only property)

66.18.390 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to upload in total.
Notes: (Read only property)

66.18.391 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: You can store whatever reference value you need.
(Read and Write property)

66.18.392 Version as CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

66.18.393 WebSocketOptions as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: WebSocket behavior options.
Notes: Pass a bitmask to tell libcurl about specific WebSocket behaviors.

To detach a WebSocket connection and use the WebSocketSend and WebSocketReceive functions after the HTTP upgrade procedure, set the OptionConnectOnly option to 2.

Available bits in the bitmask:

kWebSocketRaw:
Deliver "raw" WebSocket traffic to the Write event.

In raw mode, libcurl does not handle pings or any other frame for the application.
(Read and Write property)

66.18.394 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether plugin should yield time.
Example:

```
Var curl as new CURLSMBS

curl.YieldTime = true
```

Notes: If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

66.18.395 Events

66.18.396 ChunkBegin(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this event is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

66.18.397 ChunkEnd(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Download of a chunk ended.
Notes: If splitting of data transfer is enabled this event is called after download of an individual chunk finished.
This event is called for skipped or downloaded files.

66.18.398 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A debug event to get data of ongoing process.
Notes: You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugMessages, the plugin will collect the messages and provide them via the DebugMessages property. You can still use this event to write your own log instead of in addition.

66.18.399 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Match a file against a pattern.
Notes: If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

66.18.400 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called when transfer has finished.
Notes: For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.

For use with CURLSMultiMBS, it is called after TransferFinished event and before TransfersFinished event. If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

66.18.401 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: New Header data was received.
Notes: You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

66.18.402 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An event to report progress of ongoing transfers.
Notes: This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the event will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

66.18.403 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes: Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 ”pre-maturely” (i.e before the server expected it, like when you’ve told you will upload N bytes and you upload less than N bytes), you may experience that the server ”hangs” waiting for the rest of the data that won’t come.

The read event may return CURL_READFUNC_ABORT (&h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

66.18.404 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes: Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

66.18.405 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called when CURL needs to perform a seek.
Notes: Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

66.18.406 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event for known hosts event for SFTP and SCP.
Notes: KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

66.18.407 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes: Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write event is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

66.18.408 Constants

Constants

Constant	Value	Description
kUpkeepIntervalDefault	50000	The default connection upkeep interval in milliseconds.

Authorization

Constant	Value	Description
kAUTH_ANY	&hFFFFFFEF	all types set
kAUTH_ANYSAFE	&hFFFFFFEE	
kAUTH_AWS_SIGV4	128	AWS Signature v4
kAUTH_BASIC	1	Basic (default)
kAUTH_Bearer	64	HTTP Bearer token authentication
kAUTH_DIGEST	2	Digest
kAUTH_DIGEST_IE	16	HTTP Digest authentication with an IE flavor. Digest authentication is de in RFC 2617 and is a more secure way to do authentication over public netw than the regular old-fashioned Basic method. The IE flavor is simply libCURL will use a special "quirk" that IE is known to have used before ve 7 and that some servers require the client to use.
kAUTH_GSSNEGOTIATE	4	GSS-Negotiate Please check SupportsGSSNEGOTIATE property in CURLSVersionMBS whether this is supported/implemented by your copy of the CURL librar
kAUTH_NEGOTIATE	4	HTTP Negotiate (SPNEGO) authentication. Negotiate authentication i fined in RFC 4559 and is the most secure way to perform authentication HTTP. You need to build libCURL with a suitable GSS-API library or SSPI on dows for this to work.
kAUTH_NONE	0	
kAUTH_NTLM	8	
kAUTH_Only	&h80000000	This is a meta symbol. OR this value together with a single specific auth to force libCURL to probe for un-restricted auth and if not, only that s auth algorithm is acceptable.

ChunkBegin result values

Constant	Value	Description
kChunkBeginFailed	1	Failed, so we exit downloads.
kChunkBeginOK	0	OK, download this file.
kChunkBeginSkip	2	Skip the file.

ChunkEnd result values

Constant	Value	Description
kChunkEndFailed	1	Failed, so we exit downloads.
kChunkEndOK	0	Download success.

Error Constants

Constant	Value	Description
kError_ABORTED_BY_CALLBACK	42	
kError_AGAIN	81	socket is not ready for send/recv, wait till it's ready and try ag CURL 7.18.2)
kError_Auth_Error	94	An authentication function returned an error.
kError_BAD_CONTENT_ENCODING	61	Unrecognized transfer encoding
kError_BAD_DOWNLOAD_RESUME	36	couldn't resume download
kError_BAD_FUNCTION_ARGUMENT	43	
kError_CHUNK_FAILED	88	Chunk event reported error.
kError_CONV_REQD	76	Not used with plugin.
kError_COULDNT_CONNECT	7	Could not connect. Proxy set? Firewall open?
kError_COULDNT_RESOLVE_HOST	6	
kError_COULDNT_RESOLVE_PROXY	5	
kError_FAILED_INIT	2	
kError_FILESIZE_EXCEEDED	63	Maximum file size exceeded
kError_FILE_COULDNT_READ_FILE	37	
kError_FTP_ACCEPT_FAILED	10	While waiting for the server to connect back when an active F used, an error code was sent over the control connection or simi
kError_FTP_ACCEPT_TIMEOUT	12	During an active FTP session while waiting for the server to OptionAcceptTimeoutMS (or the internal default) timeout expi
kError_FTP_BAD_FILE_LIST	87	Unable to parse FTP file list.
kError_FTP_CANT_GET_HOST	15	
kError_FTP_COULDNT_RETR_FILE	19	
kError_FTP_COULDNT_SET_TYPE	17	
kError_FTP_COULDNT_USE_REST	31	the REST command failed
kError_FTP_PORT_FAILED	30	FTP PORT operation failed
kError_FTP_PRET_FAILED	84	a PRET command failed
kError_FTP_WEIRD_227_FORMAT	14	
kError_FTP_WEIRD_PASS_REPLY	11	
kError_FTP_WEIRD_PASV_REPLY	13	
kError_FTP_WEIRD_SERVER_REPLY	8	The server sent data libcurl could not parse. This error code CURLE_FTP_WEIRD_SERVER_REPLY before 7.51.0.
kError_GOT_NOTHING	52	when this is a specific error
kError_HTTP2	16	A problem was detected in the HTTP2 framing layer. This is som and can be one out of several problems, see the error buffer for
kError_HTTP2_STREAM	92	stream error in HTTP/2 framing layer
kError_HTTP3	95	HTTP3 layer failed.
kError_HTTP_RETURNED_ERROR	22	
kError_INTERFACE_FAILED	45	
kError_LDAP_CANNOT_BIND	38	
kError_LDAP_INVALID_URL	62	Invalid LDAP URL
kError_LDAP_SEARCH_FAILED	39	
kError_LOGIN_DENIED	67	user, password or similar was not accepted and we failed to logi
kError_NOT_BUILT_IN	4	A requested feature, protocol or option was not found built-in in due to a build-time decision. This means that a feature or o enabled or explicitly disabled when libCURL was built and in o to function you have to get a rebuilt libCURL.
kError_NO_CONNECTION_AVAILABLE	89	For internal use only, will never be returned by libCURL. No connection available, the session will be queued. (added in 7
kError_OK	0	
kError_OPERATION_TIMEDOUT	28	
kError_OUT_OF_MEMORY	27	
kError_PARTIAL_FILE	18	
kError_PEER_FAILED_VERIFICATION	60	
kError_Proxy	96	Proxy handshake error.
kError_Quic_Connect_Error	96	Quic had a connect error.
kError_QUOTE_ERROR	21	
kError_RANGE_ERROR	33	
kError_READ_ERROR	26	could open/read from file

FileNameMatch Event Result Values

Constant	Value	Description
kFileNameMatchFailed	2	Failed.
kFileNameMatchIsMatch	0	Is Match.
kFileNameMatchNoMatch	1	No match.

Follow Location Modes

Constant	Value	Description
kFollowAll	1	Before 8.13.0 this bit had no name and 1L was just the value to enable this option. This makes a set custom method be used in all HTTP requests, even after redirects.
kFollowFirstOnly	3	When there is a custom request method set with OptionCustomRequest, that set method replaces what libcurl would otherwise use in the first outgoing request only. The second request is then done according to the redirect response code. If you prefer your custom method to remain in use after a 307/308 redirect, use kFollowObeyCode instead.
kFollowObeyCode	2	When there is a custom request method set with OptionCustomRequest, that set method replaces what libcurl would otherwise use. If a 301/302/303 response code is returned to signal a redirect, the method is changed from POST to GET. For 307/308, the custom method remains set and used. Note that only POST (or a custom post) is changed to GET on 301/302, its not change PUT etc - and therefore also not when libcurl issues a custom PUT. A 303 response makes it switch to GET independently of the original method (except for HEAD). To control for which of the 301/302/303 status codes libcurl should not switch back to GET for when doing a custom POST, and instead keep the custom method, use OptionPostRedir. If you prefer a custom POST method to be reset to exactly the method POST, use kFollowFirstOnly instead.

Form Constants

Constant	Value	Description
kFormArray	8	
kFormBuffer	11	
kFormBufferLength	13	
kFormBufferPtr	12	
kFormContentHeader	15	
kFormContentsLength	6	
kFormContentType	14	
kFormCopyContents	4	
kFormCopyName	1	
kFormEnd	17	
kFormFile	10	
kFormFileContent	7	
kFormFilename	16	
kFormNameLength	3	
kFormPtrContents	5	
kFormPtrName	2	

FTP Authorization

Constant	Value	Description
kFTPAUTH_DEFAULT	0	Allow libCURL to decide
kFTPAUTH_SSL	1	Try "AUTH SSL" first, and only if that fails try "AUTH TLS"
kFTPAUTH_TLS	2	Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

FTP CWD method

Constant	Value	Description
kFTPMethodDefault	0	let libcurl pick
kFTPMethodMultiCWD	1	single CWD operation for each path part
kFTPMethodNoCWD	2	no CWD at all
kFTPMethodSingleCWD	3	one CWD to full dir, then work on file

FTP SSL Option

Constant	Value	Description
kFTPSSL_ALL	3	Require SSL for all communication or fail with kError_FTP_SSL_FAILED.
kFTPSSL_CONTROL	2	Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.
kFTPSSL_NONE	0	Don't attempt to use SSL.
kFTPSSL_TRY	1	Try using SSL, proceed as normal otherwise.

GSS API delegation modes

Constant	Value	Description
kGSSAPIDelegationFlag	2	delegate always
kGSSAPIDelegationNone	0	no delegation (default)
kGSSAPIDelegationPolicyFlag	1	if permitted by policy

HTTP Versions

Constant	Value	Description
kHTTP_VERSION_1_0	1	Enforce HTTP 1.0 requests.
kHTTP_VERSION_1_1	2	Enforce HTTP 1.1 requests.
kHTTP_VERSION_2TLS	4	use version 2 for HTTPS, version 1.1 for HTTP
kHTTP_VERSION_2_0	3	please use HTTP 2 in the request
kHTTP_VERSION_2_PRIOR_KNOWLEDGE	5	please use HTTP 2 without HTTP/1.1 Upgrade
kHTTP_VERSION_3	30	please use HTTP 3 in the request
kHTTP_VERSION_3Only	31	Use HTTP/3 without fallback. For HTTPS only. For HTTP, t return error.
kHTTP_VERSION_NONE	0	We don't care about what version the library uses. libCURL it thinks fit.

Debug Message Info Types

Constant	Value	Description
kINFO_DATA_IN	3	The data is protocol data received from the peer.
kINFO_DATA_OUT	4	The data is protocol data sent to the peer.
kINFO_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kINFO_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kINFO_SSL_DATA_IN	5	The data is protocol data received from the peer.
kINFO_SSL_DATA_OUT	6	The data is protocol data sent to the peer.
kINFO_TEXT	0	The data is informational text.

IP Resolve Modes

Constant	Value	Description
kIPRESOLVE_V4	1	
kIPRESOLVE_V6	2	
kIPRESOLVE_WHATEVER	0	

NetRC Modes

Constant	Value	Description
kNETRC_IGNORED	0	The .netrc will never be read. This is the default.
kNETRC_OPTIONAL	1	A user:password in the URL will be preferred to one in the .netrc.
kNETRC_REQUIRED	2	A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

Protocols

Constant	Value	Description
kProtocolAll	-1	Enable all protocols.
kProtocolDICT	&h200	DICT
kProtocolFILE	&h400	File
kProtocolFTP	4	FTP
kProtocolFTPS	8	FTPS
kProtocolGopher	&h2000000	Gopher
kProtocolGophers	&h20000000	
kProtocolHTTP	1	HTTP
kProtocolHTTPS	2	HTTPS
kProtocolIMAP	&h1000	IMAP
kProtocolIMAPS	&h2000	IMAPS
kProtocolLDAP	&h80	LDAP
kProtocolLDAPS	&h100	LDAPS
kProtocolMQTT	&h10000000	MQTT
kProtocolPOP3	&h4000	POP3
kProtocolPOP3S	&h8000	POP3S
kProtocolRTMP	&h80000	RTMP
kProtocolRTMPE	&h200000	RTMPE
kProtocolRTMPS	&h800000	RTMPS
kProtocolRTMPT	&h100000	RTMPT
kProtocolRTMPTE	&h400000	RTMPTE
kProtocolRTMPTS	&h1000000	RTMPTS
kProtocolRTSP	&h40000	RTSP
kProtocolSCP	&h10	SCP
kProtocolSFTP	&h20	SFTP
kProtocolSMB	&h4000000	SMB
kProtocolSMBS	&h8000000	SMBS
kProtocolSMTP	&h10000	SMTP
kProtocolSMTPS	&h20000	SMTPS
kProtocolTelnet	&h40	Telnet
kProtocolTFTP	&h800	TFTP

Proxy Types

Constant	Value	Description
kPROXY_HTTP	0	
kPROXY_HTTP10	1	Force to use CONNECT HTTP/1.0.
kPROXY_HTTP11	0	Connect using HTTP/1.1.
kPROXY_SOCKS4	4	
kPROXY_SOCKS4A	6	Using SOCKS 4A.
kPROXY_SOCKS5	5	
kPROXY_SOCKS5_Hostname	7	Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

Seek Origin Constants

Constant	Value	Description
kSeekOriginCurrent	1	Seek relative to current file position.
kSeekOriginEnd	2	Seek relative to end of file.
kSeekOriginSet	0	Seek relative to start of file.

Seek Event Result Values

Constant	Value	Description
kSeekReturnCantSeek	3	Return this value if you can't seek as you are not using a file, but for example a stream.
kSeekReturnFail	2	Returns this value if your seek operation failed.
kSeekReturnOk	1	Returns this value if your seek operation succeeded.

SSH Authentication

Constant	Value	Description
kSSHAuthAgent	16	agent (ssh-agent, pageant...)
kSSHAuthAny	-1	Any allowed
kSSHAuthDefault	-1	Default: Any
kSSHAuthGSSAPI	32	gssapi (kerberos, ...)
kSSHAuthHost	4	host key files
kSSHAuthKeyboard	8	keyboard interactive
kSSHAuthNone	0	none allowed, silly but complete
kSSHAuthPassword	2	password
kSSHAuthPublicKey	1	public/private key files

SSL Option Flags

Constant	Value	Description
kSSLOptionAllowBeast	1	tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this way allow the vulnerability back.
kSSLOptionAutoClientCert	32	Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)
kSSLOptionEarlyData	64	Tell libcurl to try sending application data as TLS1.3 early data. This option is only supported for GnuTLS. This option works on a best effort basis, in cases when it wasn't possible to send early data the request is resent normally post-handshake. This option does not work when using QUIC. (Added in 8.11.0)
kSSLOptionNativeCA	16	tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.
kSSLOptionNoPartialChain	4	tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.
kSSLOptionNoRevoke	2	tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.
kSSLOptionRevokeBestEffort	8	tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those SSL backends where such behavior is present.

SSL Versions

Constant	Value	Description
kSSLVersionDefault	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
kSSLVersionSSLv2	2	SSL v2 (but not SSLv3)
kSSLVersionSSLv3	3	SSL v3 (but not SSLv2)
kSSLVersionTLSv1	1	TLS v1.0 or later
kSSLVersionTLSv10	4	TLS v1.0 or later (Added in 7.34.0)
kSSLVersionTLSv11	5	TLS v1.1 or later (Added in 7.34.0)
kSSLVersionTLSv12	6	TLS v1.2 or later (Added in 7.34.0)
kSSLVersionTLSv13	7	TLS v1.3 or later (Added in 7.52.0)

Maximum SSL Versions

Constant	Value	Description
kSSLVersionMaxDefault	&h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl uses a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it.
kSSLVersionMaxNone	0	No maximum.
kSSLVersionMaxTLSv10	&h40000	The flag defines maximum supported TLS version as TLS v1.0.
kSSLVersionMaxTLSv11	&h50000	The flag defines maximum supported TLS version as TLS v1.1.
kSSLVersionMaxTLSv12	&h60000	The flag defines maximum supported TLS version as TLS v1.2.
kSSLVersionMaxTLSv13	&h70000	The flag defines maximum supported TLS version as TLS v1.3.

Time Conditions

Constant	Value	Description
kTimeConditionIfModifiedSince	1	
kTimeConditionIfUnModifiedSince	2	
kTimeConditionNone	0	No condition.

Upload Flags for IMAP

Constant	Value	Description
kUploadFlagAnswered	1	Mark email as answered.
kUploadFlagDeleted	2	Mark email to be deleted.
kUploadFlagDraft	4	Mark email as draft.
kUploadFlagFlagged	8	Mark email as flagged.
kUploadFlagSeen	16	Mark email as seen.

SSL Option

Constant	Value	Description
kUseSSLall	3	Require SSL for all communication or fail with kError_FTP_SSL_FAILED.
kUseSSLcontrol	2	Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.
kUseSSLnone	0	Don't attempt to use SSL.
kUseSSLtry	1	Try using SSL, proceed as normal otherwise.

WebSocket Options

Constant	Value	Description
kWebSocketNoAutoPong	1	No Auto Pong.
kWebSocketRaw	1	RAW mode for WebSocketOptions.

66.19 class CURLSMimePartMBS

66.19.1 class CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for mime parts.
Notes: You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

Videos

- Presentation from Munich conference about MBS Plugins.
- Presentation from Xojo Developer Conference 2019 in Miami.

66.19.2 Methods

66.19.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

66.19.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries header.

66.19.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets header.

66.19.6 Properties

66.19.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

66.19.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Example:

```
Var c as new CURLSMBS

// add mime
Var p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

66.19.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime data transfer encoder.
Notes: If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

66.19.10 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to stream.
Notes: When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

66.19.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part remote file name.
Notes: If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

66.19.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from named file.
Notes: (Read and Write property)

66.19.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

66.19.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part type.
Notes: (Read and Write property)

66.19.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime/form part name.
Notes: (Read and Write property)

66.19.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

66.19.17 Constants

Encodings

Constant	Value	Description
kEncoding7bit	"7bit"	7bit
kEncoding8bit	"8bit"	8bit
kEncodingBase64	"base64"	Base64
kEncodingBinary	"binary"	Binary mode
kEncodingNone	""	No mode, so data is passed through and header has no encoding defin
kEncodingQuotedPrintable	"quoted-printable"	Quoted printable

Mime Types

Constant	Value	Description
kMimeTypeGIF	"image/gif"	GIF
kMimeTypeHTML	"text/html"	HTML
kMimeTypeJPEG	"image/jpeg"	JPEG
kMimeTypePDF	"application/pdf"	PDF
kMimeTypePNG	"image/png"	PNG
kMimeTypeSVG	"image/svg+xml"	SVG
kMimeTypeText	"text/plain"	Text
kMimeTypeXML	"application/xml"	XML

66.20 class CURLSMissingFunctionExceptionMBS

66.20.1 class CURLSMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if a CURL library function is not loaded.
Notes: If you call load library before you use the CURLSMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

66.21 class CURLSMultiMBS

66.21.1 class CURLSMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for multiple CURL transfers running in parallel.

66.21.2 Methods

66.21.3 AddCURL(curl as CURLSMBS, handler as CURLSTransferFinishedMBS = nil) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a standard CURL handle to the multi stack.
Notes: Lasterror is set.

We added handler parameter for v23.2 to make it easier to run things asynchronously.

66.21.4 ClearSharedInstance

MBS CURL Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the shared instance.
Notes: This will remove the global reference to the shared instance and thus free the CURLSMultiMBS object.
Only needed to debug memory leaks.

66.21.5 CURLs as CURLSMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of current CURL instances.

66.21.6 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries text message for a given error code.

66.21.7 NetworkChanged(ClearConns as Boolean, ClearDNS as Boolean)

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Signal network changed.
Notes: Informs CURL about a network change, so it can discard connections or DNS cache entries.

This method can be caled at any time and repeatedly. Each call only affects the currently cached connections and DNS information. Any connection created or DNS information added afterwards is cached the usual way again.

The call affects only the connection and DNS cache of the multi handle itself and not the ones owned by SHARE handles.

ClearConns: No longer reuse any existing connection in the multi handle's connection cache. This closes all connections that are not in use. Ongoing transfers continue on the connections they operate on.

ClearDNS: Clear the multi handle's DNS cache.

66.21.8 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for things to see.
Notes: When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

66.21.9 RemoveAll

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all curl handles.
Notes: Same as looping over CURLs() array and calling RemoveCURL for each.
This effectively cancels all requests.

66.21.10 RemoveCURL(CURL as CURLSMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a CURL handle from the multi stack again.
Notes: Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

66.21.11 SharedInstance as CURLSMultiMBS

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The shared instance.
Notes: Either you create a new CURLSMultiMBS object, which then takes this place.
Or you don't and the plugin creates an object for you to easily schedule transfers asynchronously.

66.21.12 Properties

66.21.13 AutoPerform as Boolean

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run a timer and run Perform automatically for you.
Notes: Set to true to run Perform automatically. For this the plugin manages a timer to call perform regularly.
We set this to true for the default shared instance, so it runs without you doing anything.
(Read and Write property)

66.21.14 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

66.21.15 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

66.21.16 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

66.21.17 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

66.21.18 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of concurrent connections to a server.
Notes: Maximum number of concurrent streams to support on a connection.
(Read and Write property)

66.21.19 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of entries in the connection cache.
Notes: If value is greater than 0, a fixed limit of the maximum number of entries we are allowed to grow the connection cache to.

Default is -1 for no limit.
(Read and Write property)

66.21.20 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of (pipelining) connections to one host.
Notes: If value is greater than 0, a fixed limit of the maximum number of connections per host.
(Read and Write property)

66.21.21 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Maximum number of requests in a pipeline.
Notes: (Read and Write property)

66.21.22 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of open connections in total.
Notes: If value is greater than 0, a fixed limit of the maximum number of connections in total.
(Read and Write property)

66.21.23 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to 1 to enable pipelining for this multi handle.
Notes: Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

66.21.24 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of running transfers.
Notes: Set by Perform method.
(Read only property)

66.21.25 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: You can store whatever reference value you need.
(Read and Write property)

66.21.26 TransfersAdded as UInt64

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cumulative number of all easy handles added to the multi, ever.
Notes: This includes internal handles added for tasks (like resolving via DoH, for example).

For the current number of easy handles managed by the multi, use TransfersCurrent.
(Read only property)

66.21.27 TransfersCurrent as UInt64

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of easy handles currently added to the multi handle.
Notes: This does not include already removed handles. It does include internal handles that get added for tasks (like resolving via DoH, for example).

For the total number of easy handles ever added to the multi, see TransfersAdded.
(Read only property)

66.21.28 TransfersDone as UInt64

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of easy handles currently finished, but not yet removed.
Notes: (Read only property)

66.21.29 TransfersPending as UInt64

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of current easy handles waiting to start.
Notes: An added transfer might become pending for various reasons: a connection limit forces it to wait, resolving DNS is not finished or it is not clear if an existing, matching connection may allow multiplexing (HTTP/2 or HTTP/3).
(Read only property)

66.21.30 TransfersRunning as UInt64

MBS CURL Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of easy handles currently running, e.g. where the transfer has started but not finished yet.
Notes: (Read only property)

66.21.31 Events

66.21.32 TransferFinished(CURL as CURLSMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: One transfer finished.
Notes: Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

66.21.33 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: All pending transfers finished.

66.21.34 Constants

Error Codes

Constant	Value	Description
kErrorAddedAlready	7	An easy handle already added to a multi handle was attempted to get added - again.
kErrorBadEadyHandle	2	An easy handle was not good/valid.
kErrorBadFunctionArgument	10	A function was called with a bad parameter.
kErrorBadHandle	1	The passed-in handle is not a valid CURLM handle.
kErrorBadSocket	5	The passed in socket argument did not match.
kErrorCallPerform	-1	Please call Perform soon to do some tasks.
kErrorInternalError	4	This is a libCURL bug.
kErrorOK	0	Everything OK.
kErrorOutOfMemory	3	Running low on memory.
kErrorRecursiveAPICall	8	An api function was called from inside an event.
kErrorUnknownOption	6	Tried to set unsupported option.
kErrorWakeupFailure	9	Wakeup is unavailable or failed.

Pipeling options

Constant	Value	Description
kPipeHTTP1	1	Pipe with HTTP/1.1.
kPipeMultiPlex	2	Pipe with multiplex.
kPipeNothing	0	No piping.

66.21.35 Delegates

66.21.36 CURLSTransferFinishedMBS(curl as CURLSMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes: ErrorCode is zero for a successful.
See kError* constants in CURLSMBS class.
Blog Entries

- Easier multi transfer for our Xojo CURL Plugin

66.22 class CURLSNotInitializedExceptionMBS

66.22.1 class CURLSNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if CURL library is not initialized.
Notes: If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

66.23 class CURLSSLBackendMBS

66.23.1 class CURLSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSSSLBackendMBS instead. **Function:** The class for a SSL backend.
Notes: Subclass of the CURLSSSLBackendMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

66.24 class CURLSSSLBackendMBS

66.24.1 class CURLSSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSL backend.
Example:

```
Var list() As CURLSSSLBackendMBS = CURLSSSLBackendMBS.List

Var names() As String
For Each l As CURLSSSLBackendMBS In list
names.Add l.name
Next

MessageBox "Available backends: " + string.FromArray(names, ", ")
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 22.5, page 10: News
- 22.4, page 9: News
- 21.1, page 9: News

66.24.2 Methods

66.24.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

66.24.4 List as CURLSSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lists the backends.
Example:

```
Var list() as CURLSSSLBackendMBS = CURLSSSLBackendMBS.List

for each l as CURLSSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

66.24.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the SSL backend.
Example:

```
Var error As Integer = CURLSSSLBackendMBS.SetSSLBackend(CURLSSSLBackendMBS.kSSLBackendSecureTransport)
Select Case error
Case CURLSSSLBackendMBS.kErrorOK
MessageBox "Backend set."
Case CURLSSSLBackendMBS.kErrorNoBackends
MessageBox "No Backends"
Case CURLSSSLBackendMBS.kErrorTooLate
MessageBox "Too late. Please set before using CURL."
Case CURLSSSLBackendMBS.kErrorUnknownBackend
MessageBox "Unknown backend name."
End Select
```

Notes: When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 66.24.6 SetSSLBackend(name as string) as Integer 11497

66.24.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the SSL backend.
Example:

```
Var error As Integer = CURLSSSLBackendMBS.SetSSLBackend("openssl")
Select Case error
Case CURLSSSLBackendMBS.kErrorOK
MessageBox "Backend set."
Case CURLSSSLBackendMBS.kErrorNoBackends
MessageBox "No Backends"
Case CURLSSSLBackendMBS.kErrorTooLate
MessageBox "Too late. Please set before using CURL."
Case CURLSSSLBackendMBS.kErrorUnknownBackend
MessageBox "Unknown backend name."
End Select
```

Notes: When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will

result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 66.24.5 SetSSLBackend(id as Integer) as Integer 11496

66.24.7 Properties

66.24.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID of this SSL backend.
Notes: (Read only property)

66.24.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this SSL backend.
Notes: (Read only property)

66.24.10 Constants

Error codes

Constant	Value	Description
kErrorNoBackends	3	libcurl was built without any SSL support
kErrorOK	0	OK
kErrorTooLate	2	You can't set SSL backend after SSL initialization.
kErrorUnknownBackend	1	Unknown backend name or ID.

SSL Backend IDs

Constant	Value	Description
kSSLBackendDarwinSSL	9	DarwinSSL
kSSLBackendGNUTLS	2	GNUTLS
kSSLBackendGSKIT	5	GSKIT
kSSLBackendMBEDTLS	11	MBEDTLS
kSSLBackendNone	0	
kSSLBackendNSS	3	NSS
kSSLBackendOpenSSL	1	OpenSSL or BoringSSL
kSSLBackendSChannel	8	SChannel
kSSLBackendSecureTransport	9	DarwinSSL
kSSLBackendWolfSSL	7	WolfSSL

66.25 class CURLSURLMBS

66.25.1 class CURLSURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for CURL's URL parser.
Example:

```
Var c as new CURLSURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

- 17.5, page 38: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

66.25.2 Methods

66.25.3 Clone as CURLSURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Duplicates the object.

66.25.4 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new URL object.

66.25.5 Properties

66.25.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags to use.
Notes: Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme
- kFlagsDefaultScheme

(Read and Write property)

66.25.7 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set fragment part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.8 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

66.25.9 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set host part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.10 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported by one of the functions.
Notes: This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

66.25.11 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set options part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.12 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set password part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.13 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set path part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.14 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set port part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.15 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set query part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.16 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set scheme part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.17 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set full URL.
Example:

```
Var c As New CURLSURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes: Sets lasterror property.

(Read and Write property)

66.25.18 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set user part of URL.
Notes: Sets lasterror property.
(Read and Write property)

66.25.19 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zone ID.
Notes: (Read and Write property)

66.25.20 Constants

Constants

Constant	Value	Description
kFlagsNoAuthority	1024	Allow URLs without authority. Allow empty authority when the scheme is unknown.
kFlagsNoGuessScheme	32768	One of the flags. For get, do not accept a guess.

Error Constants

Constant	Value	Description
kErrorBadFileURL	19	The file:// URL is invalid.
kErrorBadFragment	20	The fragment part of the URL contained bad or invalid characters.
kErrorBadHostname	21	The hostname contained bad or invalid characters.
kErrorBadIPv6	22	The IPv6 address hostname contained bad or invalid characters.
kErrorBadLogin	23	The login part of the URL contained bad or invalid characters.
kErrorBadPassword	24	The password part of the URL contained bad or invalid characters.
kErrorBadPath	25	The path part of the URL contained bad or invalid characters.
kErrorBadQuery	26	The query part of the URL contained bad or invalid characters.
kErrorBadScheme	27	The scheme part of the URL contained bad or invalid characters.
kErrorBadSlashes	28	The URL contained an invalid number of slashes.
kErrorBadUser	29	The user part of the URL contained bad or invalid characters.
kErrorNoZoneID	18	There is no zoneid set in the URL.

Error Codes

Constant	Value	Description
kErrorBadHandle	1	An argument that should be a CURLU pointer was passed in as a NULL. Should never happen with plugin as you would get exception.
kErrorBadPartpointer	2	A NULL pointer was passed to the 'part' argument of curl_url_get. Should never happen with plugin as you would get exception.
kErrorBadPortNumber	4	The port number was not a decimal number between 0 and 65535.
kErrorLacksIDN	30	IDN missing.
kErrorMalformedInput	3	A malformed input was passed to a URL API function.
kErrorNoFragment	17	There is no fragment part in the URL.
kErrorNoHost	14	There is no host part in the URL.
kErrorNoOptions	13	There is no options part in the URL.
kErrorNoPassword	12	There is no password part in the URL.
kErrorNoPort	15	There is no port part in the URL.
kErrorNoQuery	16	There is no query part in the URL.
kErrorNoScheme	10	There is no scheme part in the URL.
kErrorNoUser	11	There is no user part in the URL.
kErrorOk	0	No error.
kErrorOutOfMemory	7	A memory function failed.
kErrorUnknownPart	9	An unknown part ID was passed to a URL API function.
kErrorUnsupportedScheme	5	This libcurl build doesn't support the given URL scheme.
kErrorUrlDecode	6	
kErrorUserNotAllowed	8	Credentials was passed in the URL when prohibited.

Flags

Constant	Value	Description
kFlagsAllowSpace	2048	Whether to allow space character in URLs.
kFlagsAppendQuery	256	Append a form style part.
kFlagsDefaultPort	1	Return default port number.
kFlagsDefaultScheme	4	Return default scheme if missing.
kFlagsDisallowUser	32	No user+password allowed.
kFlagsGetEmpty	16384	Allow empty queries and fragments when extracting the URL or the components.
kFlagsGuessScheme	512	Legacy curl-style guessing.
kFlagsNoDefaultPort	2	Act as if no port number was set, if the port number matches the default for the scheme.
kFlagsNonSupportScheme	8	Allow non-supported scheme.
kFlagsPathAsIs	16	Leave dot sequences.
kFlagsPuny2IDN	8192	Whether to do punycode to IDN conversion
kFlagsPunyCode	4096	get the host name in pynycode
kFlagsURLDecode	64	URL decode on get.
kFlagsURLEncode	128	URL encode on set.

66.26 class CURLSVersionMBS

66.26.1 class CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold version information from libCURL.
Blog Entries

Xojo Developer Magazine

- 21.3, page 9: News
- 21.2, page 9: News

66.26.2 Methods

66.26.3 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

66.26.4 FeatureNames as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the feature names.
Example:

```
Var v as new CURLSVersionMBS
Var features() as string = v.FeatureNames
```

```
Var Names as string = string.FromArray(features)
MessageBox Names
```

Notes: Values are e.g. alt-svc AsynchDNS HSTS HTTPS-proxy IPv6 Largefile libz NTLM NTLM_WB SSL threadsafe TLS-SRP UnixSockets zstd

66.26.5 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes: The protocol names are the same as would be used in URLs.
Index is zero based.

66.26.6 Protocols as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Example:

```
Var v as new CURLSVersionMBS
Var Protocols() as string = v.Protocols
Var Names as string = string.FromArray(Protocols)
MessageBox Names
```

Notes: The protocol names are the same as would be used in URLs.

66.26.7 Properties

66.26.8 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli library version string.
Notes: Empty if library is not used in the CURL library you use.
(Read only property)

66.26.9 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of brotli version.
Notes: (Read only property)

66.26.10 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAINFO.
Notes: Should be empty within plugin.
(Read only property)

66.26.11 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAPATH.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Default CAPath: " + version.CAPath
```

Notes: Should be empty within plugin.
(Read only property)

66.26.12 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits which define what features libCURL can and can't.
Notes: Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

66.26.13 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

66.26.14 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string showing what host information that this libCURL was built for.
Notes: As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

66.26.15 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string.
Notes: (Read only property)

66.26.16 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version number of iconv library.
Notes: (Read only property)

66.26.17 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibIDN used.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "libIDN Version: " + version.libidnVersion
```

Notes: Empty if library is not used in the CURL library you use.
(Read only property)

66.26.18 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibSSH2 used.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "LibSSH Version: " + version.libsshVersion
```

Notes: Empty if library is not used in the CURL library you use.
(Read only property)

66.26.19 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string (there is no numerical version).
Example:

```
Var version As New CURLSVersionMBS
MessageBox "LibZ Version: " + version.LibZVersion
```

Notes: If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

66.26.20 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string for nghttp2 library.
Notes: (Read only property)

66.26.21 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number for nghttp2.
Notes: Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

66.26.22 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

66.26.23 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of quic version.
Notes: human readable quic (+ HTTP/3) library version.
(Read only property)

66.26.24 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the OpenSSL version used.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "SSL Version: " + version.SSLVersion
```

Notes: If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

66.26.25 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes: (added in 7.10.7)
(Read only property)

66.26.26 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli features are present.
Notes: (Read only property)

66.26.27 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Character conversions supported.
Notes: (Read only property)

66.26.28 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built against a GSS-API library.
Notes: (Read only property)

66.26.29 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes: (added in 7.10.6)
(Read only property)

66.26.30 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
Var c as new CURLSMBS
Var v as CURLSVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes: While our CURL Plugin with CURLSMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

66.26.31 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether HTTP3 features are present.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports HTTP/3: " + version.SupportsHTTP3.ToString
```

Notes: (Read only property)

66.26.32 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

66.26.33 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports IDN: " + version.SupportsIDN.ToString
```

Notes: (Added in 7.12.0)
(Read only property)

66.26.34 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports IPv6
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports IPv6: " + version.SupportsIPV6.ToString
```

Notes: (Read only property)

66.26.35 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

66.26.36 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

66.26.37 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for large files.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports large file: " + version.SupportsLARGEFILE.ToString
```

Notes: (Added in 7.11.1)
(Read only property)

66.26.38 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP deflate using libz
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports libz: " + version.SupportsLIBZ.ToString
```

Notes: (Added in 7.10)
(Read only property)

66.26.39 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiple SSL backends available.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Supports MultiSSL: " + version.SupportsMultiSSL.ToString
```

Notes: (Read only property)

66.26.40 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP NTLM
Example:

```
Var c as new CURLSMBS
Var v as CURLSVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes: (added in 7.10.6)
(Read only property)

66.26.41 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

66.26.42 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

66.26.43 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes: (Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

66.26.44 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes: (Added in 7.10)
(Read only property)

66.26.45 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SSPI.
Notes: This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

66.26.46 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

66.26.47 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether unicode for Windows is enabled.
Notes: libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

66.26.48 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unix domain sockets support.
Notes: (Read only property)

66.26.49 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supports HTTP zstd content encoding using zstd library.
Notes: Added in CURL 7.72.0
(Read only property)

66.26.50 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the libCURL version.
Example:

```
Var version As New CURLSVersionMBS
MessageBox "Version: " + version.Version
```

Notes: e.g. "7.13.1"
(Read only property)

66.26.51 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of libCURL as number.
Notes: a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

66.26.52 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string version for zstd library.
Notes: (Read only property)

66.26.53 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Numeric Zstd version.
Notes: Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

66.27 class CURLSWebSocketFrameMBS

66.27.1 class CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a WebSocket frame.
Notes: Var curl as CURLSMBS // your curl handle

Var m as CURLSWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if

66.27.2 Properties

66.27.3 BytesLeft as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of pending bytes left of the payload.
Notes: (Read only property)

66.27.4 BytesReceived as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of bytes received.
Notes: (Read only property)

66.27.5 Data as MemoryBlock

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read.
Notes: (Read only property)

66.27.6 FlagBinary as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is binary data.
Notes: (Read only property)

66.27.7 FlagClose as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Close this transfer.
Notes: (Read only property)

66.27.8 FlagContinue as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.
Notes: (Read only property)

66.27.9 FlagOffset as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a partial fragment.
Notes: The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.
(Read only property)

66.27.10 FlagPing as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This as a ping.

66.27.11 FlagPong as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a pong.
Notes: (Read only property)

66.27.12 Flags as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flags for this packet.
Notes: See kFlag* contants.
(Read only property)

66.27.13 FlagText as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The buffer contains text data.
Notes: Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.
(Read only property)

66.27.14 Offset as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The offset of this data into the frame.
Notes: (Read only property)

66.27.15 Text as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read as text.
Notes: If this is not a binary transfer, we put the text here.

(Read only property)

66.27.16 Constants

Flags

Constant	Value	Description
kFlagBinary	2	This is binary data.
kFlagClose	8	Close this transfer.
kFlagContinue	4	This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.
kFlagOffset	32	This is a partial fragment. The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.
kFlagPing	16	This as a ping.
kFlagPong	64	This is a pong.
kFlagText	1	The buffer contains text data. Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.

66.28 class CURLURLMBS

66.28.1 class CURLURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSURLMBS instead.
Function: The class for CURL's URL parser.
Notes: Subclass of the CURLSURLMBS class.

66.29 class CURLVersionMBS

66.29.1 class CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CURLSVersionMBS instead. **Function:** A class to hold version information from libCURL.
Notes: Subclass of the CURLSVersionMBS class.

66.31 Globals

66.31.1 FileExtensionToMimeTypeMBS(FileExtension as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a mime type for a file extension.
Example:

```
Var FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
Var MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes: Please report any missing mime type in our lookup table, so we can add more.
See also MimeTypeToFileExtensionMBS.
Returns empty string if not found.

66.31.2 MimeTypeToFileExtensionMBS(MimeType as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns file extension for given mime type.
Example:

```
Var FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
Var MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes: Extension is returned with dot prefix.
Please report any missing file extensions in our lookup table, so we can add more.
See also FileExtensionToMimeTypeMBS.
Returns empty string if not found.

Currency, Date and Time Format

67.1 Globals

67.1.1 CDblMBS(text as string, byref value as Double, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a double value from a text with given locale.
Example:

```
Var value as Double
if CDblMBS("12,345", value, "de_DE") then
MsgBox str(value)
end if
```

Notes: Returns true on success and false on failure.
Value is set to the value detected.
Raises exception on invalid locale.

67.1.2 FormatDateMBS(format as string, value as date, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Formats a date with C time formatting functions.
Example:

```
// for Mac, Windows and Linux we usually have different locale names
Var fr as string
#if TargetMacOS then
fr = "fr_FR"
#elseif TargetWin32 then
fr = "fra"
#elseif TargetLinux
fr = "fr_FR.UTF8"
#else
?
#endif

Var d as new date
MsgBox FormatDateMBS("%x %X", d, fr)
```

Notes: Please use FormatDateTimeMBS function for iOS.

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

The format specification is a string and may contain special character sequences called conversion specifications, each of which is introduced by a '%' character and terminated by some other character known as a conversion specifier character. All other character sequences are ordinary character sequences.

The characters of ordinary character sequences (including the null byte) are copied verbatim from format to s. However, the characters of conversion specifications are replaced as follows:

Some conversion specifications can be modified by preceding the conversion specifier character by the E or O modifier to indicate that an alternative format should be used. If the alternative format or specification does not exist for the current locale, the behavior will be as if the unmodified conversion specification were used. (SU) The Single UNIX Specification mentions %Ec, %EC, %Ex, %EX, %Ey, %EY, %Od, %Oe, %OH, %OI, %Om, %OM, %OS, %Ou, %OU, %OV, %Ow, %OW, %Oy, where the effect of the O modifier is to use alternative numeric symbols (say, roman numerals), and that of the E modifier is to use a locale-dependent alternative representation.

67.1.3 FormatDateTimeMBS(format as string, value as dateTime, locale as string = "") as string

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a date with C time formatting functions.
Notes: Same as FormatDateMBS, but using DateTime class instead.

67.1.4 FormatMBS(format as string, value as Double, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a double value.
Example:

```
MsgBox FormatMBS("%1.2f", 12.345, "de_DE")
```

Notes: locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for printf command in C.

The FormatMBS formats the value under control of the format. The format is a character string which contains three types of objects: plain characters, which are simply copied to standard output, character escape sequences which are converted and copied to the standard output, and format specifications, each of which causes printing of the next successive argument.

Character escape sequences are in backslash notation as defined in the ANSI X3.159-1989 ("ANSI C89"), with extensions. The characters and their meanings are as follows:

Each format specification is introduced by the percent character ("%"). The remainder of the format specification includes, in the following order:

Zero or more of the following flags:

67.1.5 ParseDateMBS(format as string, text as string, byref value as date, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parses a date.
Example:

```
Var s as string = "2013-11-12 18:31:01"
Var f as string = "%Y-%m-%d %H:%M:%S"
Var d as date

if ParseDateMBS(f, s, d) then
MsgBox d.LongDate + " "+ d.LongTime
end if
```

Notes: Please use ParseDateTimeMBS function for iOS.

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

On success returns true. But even for half parsed dates you can find values in date.
Locale not supported on Windows.
The plugin does not support parsing time zones.

The ParseDateMBS function is the converse function to FormateDateMBS and converts the character string pointed to by s to values which are stored in the date, using the format specified by format. Here format is a character string that consists of field descriptors and text characters, reminiscent of scanf (in C++). Each

field descriptor consists of a % character followed by another character that specifies the replacement for the field descriptor. All other characters in the format string must have a matching character in the input string, except for whitespace, which matches zero or more whitespace characters in the input string. There should be whitespace or other alphanumeric characters between any two field descriptors.

The ParseDateMBS function processes the input string from left to right. Each of the three possible input elements (whitespace, literal, or format) are handled one after the other. If the input cannot be matched to the format string the function stops. The remainder of the format and input strings are not processed.

The supported input field descriptors are listed below. In case a text string (such as a weekday or month name) is to be matched, the comparison is case insensitive. In case a number is to be matched, leading zeros are permitted but not required.

Some field descriptors can be modified by the E or O modifier characters to indicate that an alternative format or specification should be used. If the alternative format or specification does not exist in the current locale, the unmodified field descriptor is used.
The E modifier specifies that the input string may contain alternative locale-dependent versions of the date and time representation:

Returns true on success. If the functions fails to match all of the format string and therefore an error occurred the function returns false.

Before libc 5.4.13 whitespace (and the 'n' and 't' specifications) was not handled, no 'E' and 'O' locale modifier characters were accepted, and the 'C' specification was a synonym for the 'c' specification.

The 'y' (year in century) specification is taken to specify a year in the 20th century by libc4 and libc5. It is taken to be a year in the range 1950-2049 by glibc 2.0. It is taken to be a year in 1969-2068 since glibc 2.1.

For reasons of symmetry, glibc tries to support for ParseDateMBS the same format characters as for FormatDateMBS. (In most cases the corresponding fields are parsed, but no field in tm is changed.) This leads to

Similarly, because of GNU extensions to FormatDateMBS, %k is accepted as a synonym for %H, and %l should be accepted as a synonym for %I, and %P is accepted as a synonym for %p.

The glibc implementation does not require whitespace between two field descriptors.

67.1.6 ParseDateTimeMBS(format as string, text as string, byref value as dateTime, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a date.
Notes: Same as ParseDateMBS, but using DateTime class instead.

67.2 class LocaleMBS

67.2.1 class LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class which provides parameters for formatting numbers, especially currency values.
Example:

```
Var l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

67.2.2 Methods

67.2.3 Constructor

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

67.2.4 Locale(Locale as string = "") as LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries C locale for the given locale name.
Example:

```
Var l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: Returns nil if no locale for that name was found.

If name is empty, you get current locale. If you use locale name "C", you get the default C locale.
The locale name depends on the OS. For Mac and Linux you can see available locales in /usr/share/locale directory.
For Windows, please take a look here:
http://msdn.microsoft.com/en-us/library/hzz3tw78(v=vs.71).aspx

67.2.5 Properties

67.2.6 CurrencySymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local currency symbol.
Example:

```
Var l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: (Read only property)

67.2.7 DecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character, except for currency values, cannot be an empty string.
Notes: (Read only property)

67.2.8 FracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in the local style for currency values.
Notes: (Read only property)

67.2.9 Grouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sizes of the groups of digits, except for currency values.
Notes: This is a string where the asc value gives the actual value, representing group size from low order digit groups to high order (right to left). The list may be terminated with 0 or CHAR_MAX. If the list is terminated with 0, the last group size before the 0 is repeated to account for all the digits. If the list is terminated with CHAR_MAX, no more grouping is performed.

See example project for a function to decode.
(Read only property)

67.2.10 IntCurrSymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The standardized international currency symbol.
Notes: (Read only property)

67.2.11 IntFracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in an international-style currency value.
Notes: (Read only property)

67.2.12 IntNegCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes: For internationally formatted monetary quantities.
(Read only property)

67.2.13 IntNegSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes: For internationally formatted monetary quantities.
(Read only property)

67.2.14 IntNegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes: For internationally formatted monetary quantities.

Possible values:

(Read only property)

67.2.15 IntPosCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes: For internationally formatted monetary quantities.
(Read only property)

67.2.16 IntPosSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes: For internationally formatted monetary quantities.
(Read only property)

67.2.17 IntPosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes: For internationally formatted monetary quantities.

Possible values:

(Read only property)

67.2.18 monDecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character for currency values.
Notes: (Read only property)

67.2.19 monGrouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Like grouping but for currency values.
Notes: (Read only property)

67.2.20 monThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator for digit groups in currency values.
Notes: (Read only property)

67.2.21 Name as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the locale.
Notes: The name may be different to the one you asked for as some locales are mapped to others internally. (Read only property)

67.2.22 NegativeSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote negative currency values, usually a minus sign.
Notes: (Read only property)

67.2.23 NegCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes: (Read only property)

67.2.24 NegSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes: (Read only property)

67.2.25 NegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes: Possible values:

(Read only property)

67.2.26 PosCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes: (Read only property)

67.2.27 PositiveSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote nonnegative currency values, usually the empty string.
Notes: (Read only property)

67.2.28 PosSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes: (Read only property)

67.2.29 PosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes: Possible values:

(Read only property)

67.2.30 ThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator between groups of digits before the decimal point, except for currency values.
Notes: (Read only property)

%a The abbreviated weekday name according to the current locale.
%A The full weekday name according to the current locale.
%b The abbreviated month name according to the current locale.
%B The full month name according to the current locale.
%c The preferred date and time representation for the current locale.
%C The century number (year/100) as a 2-digit integer. (SU)
%d The day of the month as a decimal number (range 01 to 31).
%D Equivalent to %m/%d/%y. (Yecch-for Americans only. Americans should note that in other countries %d/%m/%y is rather common. This means that in international context this format is ambiguous and should not be used.) (SU)
%e Like %d, the day of the month as a decimal number, but a leading zero is replaced by a space. (SU)
%E Modifier: use alternative format, see below. (SU)
%F Equivalent to %Y-%m-%d (the ISO 8601 date format). (C99)
%G The ISO 8601 week-based year (see NOTES) with century as a decimal number. The 4-digit year corresponding to the ISO week number (see %V). This has the same format and value as %Y, except that if the ISO week number belongs to the previous or next year, that year is used instead. (TZ)
%g Like %G, but without century, that is, with a 2-digit year (00-99). (TZ)
%h Equivalent to %b. (SU)
%H The hour as a decimal number using a 24-hour clock (range 00 to 23).
%I The hour as a decimal number using a 12-hour clock (range 01 to 12).
%j The day of the year as a decimal number (range 001 to 366).
%k The hour (24-hour clock) as a decimal number (range 0 to 23); single digits are preceded by a blank. (See also %H.) (TZ)
%l The hour (12-hour clock) as a decimal number (range 1 to 12); single digits are preceded by a blank. (See also %I.) (TZ)
%m The month as a decimal number (range 01 to 12).
%M The minute as a decimal number (range 00 to 59).
%n A newline character. (SU)
%O Modifier: use alternative format, see below. (SU)
%p Either "AM" or "PM" according to the given time value, or the corresponding strings for the current locale. Noon is treated as "PM" and midnight as "AM".
%P Like %p but in lowercase: "am" or "pm" or a corresponding string for the current locale. (GNU)
%r The time in a.m. or p.m. notation. In the POSIX locale this is equivalent to %I:%M:%S %p. (SU)
%R The time in 24-hour notation (%H:%M). (SU) For a version including the seconds, see %T below.
%s The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). (TZ)
%S The second as a decimal number (range 00 to 60). (The range is up to 60 to allow for occasional leap seconds.)
%t A tab character. (SU)
%T The time in 24-hour notation (%H:%M:%S). (SU)
%u The day of the week as a decimal, range 1 to 7, Monday being 1. See also %w. (SU)
%U The week number of the current year as a decimal number, range 00 to 53, starting with the first Sunday as the first day of week 01. See also %V and

\a	Write a <bell>character.
\b	Write a <backspace>character.
\c	Ignore remaining characters in this string.
\f	Write a <form-feed>character.
\n	Write a <new-line>character.
\r	Write a <carriage return>character.
\t	Write a <tab>character.
\v	Write a <vertical tab>character.
\'	Write a <single quote>character.
\\	Write a backslash character.
\num or \0num	Write an 8-bit character whose ASCII value is the 1-, 2-, or 3-digit octal number num.

%%	The % character.
%a or %A	The weekday name according to the current locale, in abbreviated form or the full name.
%b or %B or %h	The month name according to the current locale, in abbreviated form or the full name.
%c	The date and time representation for the current locale.
%C	The century number (0-99).
%d or %e	The day of month (1-31).
%D	Equivalent to %m/%d/%y. (This is the American style date, very confusing to non-Americans, especially since %d/%m/%y is widely used in Europe. The ISO 8601 standard format is %Y-%m-%d.)
%H	The hour (0-23).
%I	The hour on a 12-hour clock (1-12).
%j	The day number in the year (1-366).
%m	The month number (1-12).
%M	The minute (0-59).
%n	Arbitrary whitespace.
%p	The locale's equivalent of AM or PM. (Note: there may be none.)
%r	The 12-hour clock time (using the locale's AM or PM). In the POSIX locale equivalent to %I:%M:%S %p. If t_fmt_ampm is empty in the LC_TIME part of the current locale then the behavior is undefined.
%R	Equivalent to %H:%M.
%S	The second (0-60; 60 may occur for leap seconds; earlier also 61 was allowed).
%t	Arbitrary whitespace.
%T	Equivalent to %H:%M:%S.
%U	The week number with Sunday the first day of the week (0-53). The first Sunday of January is the first day of week 1.
%w	The weekday number (0-6) with Sunday = 0.
%W	The week number with Monday the first day of the week (0-53). The first Monday of January is the first day of week 1.
%x	The date, using the locale's date format.
%X	The time, using the locale's time format.
%y	The year within century (0-99). When a century is not otherwise specified, values in the range 69-99 refer to years in the twentieth century (1969-1999); values in the range 00-68 refer to years in the twenty-first century (2000-2068).
%Y	The year, including century (for example, 1991).

%Ec	The locale's alternative date and time representation.
%EC	The name of the base year (period) in the locale's alternative representation.
%Ex	The locale's alternative date representation.
%EX	The locale's alternative time representation.
%Ey	The offset from %EC (year only) in the locale's alternative representation.
%EY	The full alternative year representation. The O modifier specifies that the numerical input may be in an alternative locale-dependent format:
%Od or %Oe	The day of the month using the locale's alternative numeric symbols; leading zeros are permitted but not required.
%OH	The hour (24-hour clock) using the locale's alternative numeric symbols.
%OI	The hour (12-hour clock) using the locale's alternative numeric symbols.
%Om	The month using the locale's alternative numeric symbols.
%OM	The minutes using the locale's alternative numeric symbols.
%OS	The seconds using the locale's alternative numeric symbols.
%OU	The week number of the year (Sunday as the first day of the week) using the locale's alternative numeric symbols.
%Ow	The number of the weekday (Sunday=0) using the locale's alternative numeric symbols.
%OW	The week number of the year (Monday as the first day of the week) using the locale's alternative numeric symbols.
%Oy	The year (offset from %C) using the locale's alternative numeric symbols.

%F	Equivalent to %Y-%m-%d, the ISO 8601 date format.
%g	The year corresponding to the ISO week number, but without the century (0-99).
%G	The year corresponding to the ISO week number. (For example, 1991.)
%u	The day of the week as a decimal number (1-7, where Monday = 1).
%V	The ISO 8601:1988 week number as a decimal number (1-53). If the week (starting on Monday) containing 1 January has four or more days in the new year, then it is considered week 1. Otherwise, it is the last week of the previous year, and the next week is week 1.
%z	An RFC-822/ISO 8601 standard timezone specification.
%Z	The timezone name.
%s	The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). Leap seconds are not counted unless leap second support is available.

67.3 class NSLocaleDateMBS

67.3.1 class NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a date format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.
Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4

67.3.2 Methods

67.3.3 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes: Creates a different object than the once you get by the NSLocaleMBS class. But this date information you get than works on Mac OS X 10.0. The NSLocaleMBS class is Mac OS X 10.4 only.
See also:

- 67.3.4 Constructor(locale as NSLocaleMBS) 11544

67.3.4 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
Var n1 as new NSLocaleDateMBS
Var n2 as new NSLocaleDateMBS(NSLocaleMBS.currentLocale)
Var n3 as new NSLocaleDateMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 67.3.3 Constructor 11544

67.3.5 eraSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of era symbols.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.eraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "BC, AD" (in USA)
// shows for example "av. J.-C., ap. J.-C." (in France)
```

Notes: for example, "BCE", "CE" in the USA.
On error returns an empty array.

67.3.6 longEraSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the long era symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.longEraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "Before Christ, Anno Domini" (in USA)
// shows for example "avant J√©sus-Christ, apr√®s J√©sus-Christ" (in France)
```

Notes: An array containing strings representing the era symbols for the receiver (for example, { "Before Common Era", "Common Era" }).
Available in Mac OS X v10.5 and later.

67.3.7 monthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the month symbols.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.monthSymbols

MsgBox join(s,", ")

// shows for example "Januar, Februar, M√§rz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, f√©vrier, mars, avril, mai, juin, juillet, ao√ªt, septembre, octobre, novembre, d√©cembre" (in France)
```

Notes: On error returns an empty array.

67.3.8 quarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the quarter symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.quarterSymbols

MsgBox join(s,", ")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.9 shortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of short month.
Example:

```
Var l as new NSLocaleMBS
```

```
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, Mrz, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., f√©vr., mars, avr., mai, juin, juil., ao√ªt, sept., oct., nov., d√©c." (in France)
```

Notes: On error returns an empty array.

67.3.10 shortQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short quarter symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortQuarterSymbols

MsgBox join(s,", ")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.11 shortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone month symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortStandaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, M√§r, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
```

// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., f√©vr., mars, avr., mai, juin, juil., ao√ªt, sept., oct., nov., d√©c." (in France)

Notes: Available in Mac OS X v10.5 and later.

67.3.12 shortStandaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone quarter symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortStandaloneQuarterSymbols

MsgBox join(s,", ")
```

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)

Notes: Available in Mac OS X v10.5 and later.

67.3.13 shortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of short standalone weekday symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortStandaloneWeekdaySymbols

MsgBox join(s,", ")
```

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)

Notes: Available in Mac OS X v10.5 and later.

67.3.14 shortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Sets the short weekday symbols.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.shortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)
```

Notes: On error returns an empty array.

67.3.15 standaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone month symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.standaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Januar, Februar, M√§rz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, f√©vrier, mars, avril, mai, juin, juillet, ao√ªt, septembre, octobre, novembre, d√©cembre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.16 standaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone quarter symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.standaloneQuarterSymbols

MsgBox join(s,", ")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.17 standaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of standalone weekday symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.standaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.18 veryShortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.veryShortMonthSymbols
```

```
MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.19 verySHortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.verySHortStandaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.20 verySHortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short standalone weekday symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.verySHortStandaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.21 veryShortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short weekday symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.veryShortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

67.3.22 weekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of weekday symbols for the receiver.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
Var s(-1) as string = n.weekdaySymbols

MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.4 and later.

67.3.23 Properties

67.3.24 AMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the AM symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong

MsgBox n.AMSymbol // shows for example "vorm." (in Germany)
```

Notes: (Read only property)

67.3.25 dateFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the date format string,
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong

MsgBox n.dateFormat // shows for example: "d. MMMM yyyy" (in Germany)
```

Notes: Format of this string (if object was made with new):
http://developer.apple.com/documentation/Cocoa/Conceptual/DataFormatting/Articles/dfDateFormatter-Syntax.html#//apple_ref/doc/uid/20000194

If you got this object from NSLocale, it uses a different format.
(Read only property)

67.3.26 PMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the PM symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleDateMBS = l.DateLong
```

MsgBox n.PMSymbol // shows for example "nachm." (in Germany)

Notes: (Read only property)

67.4 class NSLocaleMBS

67.4.1 class NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The class for Cocoas localization data.
Example:

Var n as NSLocaleMBS

n=NSLocaleMBS.currentLocale

MsgBox n.CountryCode

Notes: Available in Mac OS X v10.4 and later.

67.4.2 Methods

67.4.3 autoupdatingCurrentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the current logical locale for the current user.
Notes: The current logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

The object always reflects the current state of the current user's locale settings.

Settings you get from this locale do change as the user's settings change (contrast with currentLocale).

Note that if you cache values based on the locale or related information, those caches will of course not be automatically updated by the updating of the locale object.

Available in Mac OS X v10.5 and later.

67.4.4 availableLocaleIdentifiers as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings, each of which identifies a locale available on the system.
Example:

```
MsgBox join(NSLocaleMBS.availableLocaleIdentifiers,", ")

// shows "zh_Hans_CN, sq_AL, he_IL, uz_Latn, en_CA, zh, kk_Cyrl, sr_Cyrl,
// fr_CA, sr_Cyrl_RS, fr_LU, bg_BG, es_ES, da_DK, el_CY, ja_JP, kok_IN,
// mt_MT, ar_JO, de_LU, uz_Cyrl, pt_PT, af, ms_MY, nl_BE, es_US, en_PH,
// es_HN, be, sr_Latn_BA, es_CR, ca, vi_VN, zh_Hant_HK, bg, gu_IN, si_LK,
// am, or_IN, en_ZA, ar_YE, da, uk_UA, ar_OM, es_PE, cs_CZ, kk_Cyrl_KZ,
// de_AT, lv_LV, en_NZ, ar_BH, ar, en_AU, az_Cyrl, de, as, bn, zh_Hans_SG,
// es_PY, es_EC, ne_IN, pa_Guru_IN, fa, sw_KE, es_AR, az, fr_FR,
// en_US_POSIX, sr_Cyrl_BA, cs, zh_Hans, eu_ES, ga, en_PK, ar_LB, el,
// zh_Hant_TW, et_EE, fi, en, uz_Arab_AF, sw_TZ, it_CH, en_ZW, ha, eo,
// ar_SA, cy, th_TH, bn_BD, te_IN, ml_IN, he, es, fo, en_IN, et, om_KE,
// haw, eu, gl, ta_IN, zh_Hans_MO, id, fr, hi, ja, es_SV, hu_HU, en_SG,
// nn_NO, az_Latn, ii, id_ID, es_DO, fr_CH, ka, es_UY, en_MT, ar_QA, ar_TN,
// gu, de_CH, gv, sk_SK, hr, kn_IN, de_LI, ar_EG, el_GR, ar_SD, hu, af_NA,
// zh_Hant, ti_ER, ar_LY, is, ka_GE, it, om_ET, hy, ii_CN, hr_HR, ps_AF,
// pa_Arab_PK, es_NI, en_TT, pa_Guru, kk, kl, be_BY, km, zh_Hans_HK, kn,
// sv_SE, es_BO, ko, nb, ne_NP, pa_Arab, fr_MC, is_IS, ne, ar_SY, mk,
// uz_Arab, so_KE, ml, it_IT, hy_AM, sl_SI, ti_ET, uz_Latn_UZ, ar_AE,
// lt_LT, kw, pa, lt, nl, lv, so_SO, mr, nn, ru_RU, ms, ga_IE, fo_FO, mt,
// om, ar_MA, ms_BN, pl, ha_Latn, kok, mk_MK, or, uz_Cyrl_UZ, so_ET, de_DE,
// gl_ES, en_BW, en_JM, ar_IQ, ps, az_Latn_AZ, ta, pt, so_DJ, nl_NL, af_ZA,
// nb_NO, en_HK, fr_SN, si, km_KH, te, ro, ko_KR, mr_IN, sk, en_BE, en_MH,
// sl, th, ti, fr_BE, es_CL, pt_BR, en_VI, es_VE, sr_Latn_ME, so, hi_IN,
//as_IN, ru, de_BE, sq, en_GB, sr, fa_AF, es_MX, kw_GB, es_PR, ro_RO, uk,
// cy_GB, en_NA, fi_FI, ca_ES, az_Cyrl_AZ, en_IE, gv_GB, sv, tr, sw, vi,
// en_BZ, en_US, hy_AM_REVISED, ru_UA, ur_PK, ur, sr_Latn_RS, am_ET, bn_IN,
// ar_KW, haw_US, sr_Cyrl_ME, es_PA, es_CO, kl_GL, sr_Latn, uz, ur_IN,
// zh_Hant_MO, ha_Latn_NG, es_GT, tr_TR, fa_IR, pl_PL, sv_FI, ar_DZ"
```

Notes: Available in Mac OS X v10.4 and later.

67.4.5 canonicalLanguageIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: eturns a canonical language identifier by mapping an arbitrary locale identification string to the canonical identifier.
Notes: s: A string representation of an arbitrary locale identifier.
Returns a string that represents the canonical language identifier for the specified arbitrary locale identifier.
Available in Mac OS X v10.6 and later.

67.4.6 canonicalLocaleIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the canonical identifier for a given locale identification string.
Notes: Available in Mac OS X v10.4 and later.

67.4.7 characterDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the character direction for the specified ISO language code.
Notes: Returns the character direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

67.4.8 commonISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array of common ISO currency codes.
Example:

```
MsgBox join(NSLocaleMBS.commonISOCurrencyCodes,", ")

// shows "AED, AFN, ALL, AMD, ANG, AOA, ARS, AUD, AWG, AZN,
// BAM, BBD, BDT, BGN, BHD, BIF, BMD, BND, BOB, BRL, BSD, BTN,
// BWP, BYR, BZD, CAD, CDF, CHF, CLP, CNY, COP, CRC, CUP, CVE,
// CZK, DJF, DKK, DOP, DZD, EEK, EGP, ERN, ETB, EUR, FJD, FKP,
// GBP, GEL, GHS, GIP, GMD, GNF, GTQ, GWP, GYD, HKD, HNL, HRK,
// HTG, HUF, IDR, ILS, INR, IQD, IRR, ISK, JMD, JOD, JPY, KES,
// KGS, KHR, KMF, KPW, KRW, KWD, KYD, KZT, LAK, LBP, LKR, LRD,
```

```
// LSL, LTL, LVL, LYD, MAD, MDL, MGA, MKD, MMK, MNT, MOP, MRO,
// MUR, MVR, MWK, MXN, MYR, MZE, MZN, NAD, NGN, NIO, NOK, NPR,
// NZD, OMR, PAB, PEN, PGK, PHP, PKR, PLN, PYG, QAR, RON, RSD,
// RUB, RWF, SAR, SBD, SCR, SDG, SEK, SGD, SHP, SKK, SLL, SOS,
// SRD, STD, SVC, SYP, SZL, THB, TJS, TMM, TND, TOP, TRY, TTD,
// TWD, TZS, UAH, UGX, USD, UYU, UZS, VEF, VND, VUV, WST, XAF,
// XCD, XOF, XPF, YER, ZAR, ZMK, ZWD"
```

Notes: Common codes may include, for example, AED, AUD, BZD, DKK, EUR, GBP, JPY, KES, MXN, OMR, STD, USD, XCD, and ZWD.
Available in Mac OS X v10.5 and later.

67.4.9 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes: Available in Mac OS X v10.4 and later.
Loads the same values for this object as if you just take the object from NSLocaleMBS.currentLocale.
See also:

- 67.4.10 Constructor(Identifier as string) 11558

67.4.10 Constructor(Identifier as string)

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
Var a(-1) as string = NSLocalembs.availableLocaleIdentifiers

// show all identifers:
Var s(-1) as string
s.Append "All available Locale Identifiers:"

Var c as Integer = UBound(a)

for i as Integer=0 to c
Var identifier as string=a(i)
s.Append identifier
next

MsgBox Join(s)
```

```
// now show the currency symbols:

redim s(-1)
s.Append "All Currency symbols:"

c = UBound(a)
for i as Integer=0 to c
Var identifier as string=a(i)
Var n as new NSLocaleMBS(identifier)
s.Append n.CurrencySymbol
next

MsgBox Join(s)
```

Notes: Available in Mac OS X v10.4 and later.
Pass in the country identifier which you get with the availableLocaleIdentifiers function.
See also:

- 67.4.9 Constructor 11558

67.4.11 currentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the logical locale for the current user.
Notes: Available in Mac OS X v10.4 and later.

The logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

This method may return a retained cached object.

Discussion:
Settings you get from this locale do not change as System Preferences are changed so that your operations are consistent. Typically you perform some operations on the returned object and then allow it to be disposed of. Moreover, since the returned object may be cached, you do not need to hold on to it indefinitely.

67.4.12 displayName(key as string, value as string) as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the display name for the given value.
Example:

```
Var displayNameString as string

// The first uses the fr_FR locale.

Var frLocale as new NSLocaleMBS("fr_FR")

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in fr_FR: "+displayNameString
// shows: "display name for fr_FR in fr_FR: fran√ßais (France)"

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in fr_FR: "+displayNameString
// shows: "display name for en_US in fr_FR: anglais (√âtats-Unis)"

// The following example uses the en_GB locale.

Var gbLocale as new NSLocaleMBS("en_US")

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in en_US: "+displayNameString
// shows: "display name for fr_FR in en_US: French (France)"

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in en_US: "+displayNameString
// shows: "display name for en_US in en_US: English (United States)"
```

Notes: Not all locale property keys have values with display name values.

You can use the NSLocaleIdentifier key to get the name of a locale in the language of another locale, as illustrated in the example code above.

67.4.13 ExemplarCharacterSet as Variant

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The exemplar character set for the locale.
Example:

```
Var n as NSLocaleMBS = NSLocaleMBS.currentLocale

MsgBox n.ExemplarCharacterSet.StringValue
// shows "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz√Ñ√ñ√ú√ü√§√√º" in Germany
```

Notes: Returns a NSCharacterSetMBS object.
Available in Mac OS X v10.4 and later.

67.4.14 GetString(key as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string for one of the NSLocate keys.
Notes: Available in Mac OS X v10.4 and later.
This keys can be found int he NSLocale reference from Apple.

67.4.15 ISOCountryCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal country codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOCountryCodes,", ")

// shows "AD, AE, AF, AG, AI, AL, AM, AN, AO, AQ, AR, AS, AT, AU,
// AW, AX, AZ, BA, BB, BD, BE, BF, BG, BH, BI, BJ, BL, BM, BN, BO,
// BR, BS, BT, BV, BW, BY, BZ, CA, CC, CD, CF, CG, CH, CI, CK, CL,
// CM, CN, CO, CR, CU, CV, CX, CY, CZ, DE, DJ, DK, DM, DO, DZ, EC,
// EE, EG, EH, ER, ES, ET, FI, FJ, FK, FM, FO, FR, GA, GB, GD, GE,
// GF, GG, GH, GI, GL, GM, GN, GP, GQ, GR, GS, GT, GU, GW, GY, HK,
// HM, HN, HR, HT, HU, ID, IE, IL, IM, IN, IO, IQ, IR, IS, IT, JE,
// JM, JO, JP, KE, KG, KH, KI, KM, KN, KP, KR, KW, KY, KZ, LA, LB,
// LC, LI, LK, LR, LS, LT, LU, LV, LY, MA, MC, MD, ME, MF, MG, MH,
// MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ,
// NA, NC, NE, NF, NG, NI, NL, false, NP, NR, NU, NZ, OM, PA, PE, PF,
// PG, PH, PK, PL, PM, PN, PR, PS, PT, PW, PY, QA, RE, RO, RS, RU,
// RW, SA, SB, SC, SD, SE, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SR,
// ST, SV, SY, SZ, TC, TD, TF, TG, TH, TJ, TK, TL, TM, TN, TO, TR,
// TT, TV, TW, TZ, UA, UG, UM, US, UY, UZ, VA, VC, VE, VG, VI, VN,
// VU, WF, WS, YE, YT, ZA, ZM, ZW"
```

Notes: Available in Mac OS X v10.4 and later.
Note that many of country codes do not have any supporting locale data in Mac OS X.

67.4.16 ISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO currency codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOCurrencyCodes,", ")

// shows "ADP, AED, AFA, AFN, ALK, ALL, AMD, ANG, AOA, AOK, AON, AOR,
// ARA, ARP, ARS, ATS, AUD, AWG, AZM, AZN, BAD, BAM, BBD, BDT, BEC,
// BEF, BEL, BGL, BGM, BGN, BHD, BIF, BMD, BND, BOB, BOP, BOV, BRB,
// BRC, BRE, BRL, BRN, BRR, BSD, BTN, BUK, BWP, BYB, BYR, BZD, CAD,
// CDF, CHE, CHF, CHW, CLF, CLP, CNX, CNY, COP, COU, CRC, CSD, CSK,
// CUP, CVE, CYP, CZK, DDM, DEM, DJF, DKK, DOP, DZD, ECS, ECV, EEK,
// EGP, EQE, ERN, ESA, ESB, ESP, ETB, EUR, FIM, FJD, FKP, FRF, GBP,
// GEK, GEL, GHC, GHS, GIP, GMD, GNF, GNS, GQE, GRD, GTQ, GWE, GWP,
// GYD, HKD, HNL, HRD, HRK, HTG, HUF, IDR, IEP, ILP, ILS, INR, IQD,
// IRR, ISK, ITL, JMD, JOD, JPY, KES, KGS, KHR, KMF, KPW, KRW, KWD,
// KYD, KZT, LAK, LBP, LKR, LRD, LSL, LSM, LTL, LTT, LUC, LUF, LUL,
// LVL, LVR, LYD, MAD, MAF, MDL, MGA, MGF, MKD, MLF, MMK, MNT, MOP,
// MRO, MTL, MTP, MUR, MVR, MWK, MXN, MXP, MXV, MYR, MZE, MZM, MZN,
// NAD, NGN, NIC, NIO, NLG, NOK, NPR, NZD, OMR, PAB, PEI, PEN, PES,
// PGK, PHP, PKR, PLN, PLZ, PTE, PYG, QAR, RHD, ROL, RON, RSD, RUB,
// RUR, RWF, SAR, SBD, SCR, SDD, SDG, SDP, SEK, SGD, SHP, SIT, SKK,
// SLL, SOS, SRD, SRG, STD, SUR, SVC, SYP, SZL, THB, TJR, TJS, TMM,
// TND, TOP, TPE, TRL, TRY, TTD, TWD, TZS, UAH, UAK, UGS, UGX, USD,
// USN, USS, UYP, UYI, UYU, UZS, VEB, VEF, VND, VUV, WST, XAF, XAG,
// XAU, XBA, XBB, XBC, XBD, XCD, XDR, XEU, XFO, XFU, XOF, XPD, XPF,
// XPT, XRE, XTS, XXX, YDD, YER, YUD, YUM, YUN, ZAL, ZAR, ZMK, ZRN,
// ZRZ, ZWD"
```

Notes: Available in Mac OS X v10.4 and later.

Note that some of the currency codes may not have any supporting locale data in Mac OS X.

67.4.17 ISOLanguageCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO language codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOLanguageCodes,", ")

// shows "aa, ab, ace, ach, ada, ady, ae, af, afa, afh, ain, ak, akk,
```

// ale, alg, alt, am, an, ang, anp, apa, ar, arc, arn, arp, art, arw,
// as, ast, ath, aus, av, awa, ay, az, ba, bad, bai, bal, ban, bas,
// bat, be, bej, bem, ber, bg, bh, bho, bi, bik, bin, bla, bm, bn, bnt,
// bo, br, bra, bs, btk, bua, bug, byn, ca, cad, cai, car, cau, cch,
// ce, ceb, cel, ch, chb, chg, chk, chm, chn, cho, chp, chr, chy, cmc,
// co, cop, cpe, cpf, cpp, cr, crh, crp, cs, csb, cu, cus, cv, cy, da,
// dak, dar, day, de, del, den, dgr, din, doi, dra, dsb, dua, dum, dv,
// dyu, dz, ee, efi, egy, eka, el, elx, en, enm, eo, es, et, eu, ewo,
// fa, fan, fat, ff, fi, fil, fiu, fj, fo, fon, fr, frm, fro, frr, frs,
// fur, fy, ga, gaa, gay, gba, gd, gem, gez, gil, gl, gmh, gn, goh,
// gon, gor, got, grb, grc, gsw, gu, gv, gwi, ha, hai, haw, he, hi,
// hil, him, hit, hmn, ho, hr, hsb, ht, hu, hup, hy, hz, ia, iba, id,
// ie, ig, ii, ijo, ik, ilo, inc, ine, inh, io, ira, iro, is, it, iu,
// ja, jbo, jpr, jrb, jv, ka, kaa, kab, kac, kaj, kam, kar, kaw, kbd,
// kcg, kfo, kg, kha, khi, kho, ki, kj, kk, kl, km, kmb, kn, ko, kok,
// kos, kpe, kr, krc, krl, kro, kru, ks, ku, kum, kut, kv, kw, ky, la,
// lad, lah, lam, lb, lez, lg, li, ln, lo, lol, loz, lt, lu, lua, lui,
// lun, luo, lus, lv, mad, mag, mai, mak, man, map, mas, mdf, mdr, men,
// mg, mga, mh, mi, mic, min, mis, mk, mkh, ml, mn, mnc, mni, mno, mo,
// moh, mos, mr, ms, mt, mul, mun, mus, mwl, mwr, my, myn, myv, na,
// nah, nai, nap, nb, nd, nds, ne, new, ng, nia, nic, niu, nl, nn, no,
// nog, non, nqo, nr, nso, nub, nv, nwc, ny, nym, nyn, nyo, nzi, oc,
// oj, om, or, os, osa, ota, oto, pa, paa, pag, pal, pam, pap, pau,
// peo, phi, phn, pi, pl, pon, pra, pro, ps, pt, qu, raj, rap, rar, rm,
// rn, ro, roa, rom, ru, rup, rw, sa, sad, sah, sai, sal, sam, sas,
// sat, sc, scn, sco, sd, se, sel, sem, sg, sga, sgn, shn, si, sid,
// sio, sit, sk, sl, sla, sm, sma, smi, smj, smn, sms, sn, snk, so,
// sog, son, sq, sr, srn, srr, ss, ssa, st, su, suk, sus, sux, sv, sw,
// syc, syr, ta, tai, te, tem, ter, tet, tg, th, ti, tig, tiv, tk, tkl,
// tl, tlh, tli, tmh, tn, to, tog, tpi, tr, ts, tsi, tt, tum, tup, tut,
// tvl, tw, ty, tyv, udm, ug, uga, uk, umb, und, ur, uz, vai, ve, vi,
// vo, vot, wa, wak, wal, war, was, wen, wo, xal, xh, yao, yap, yi, yo,
// ypk, za, zap, zbl, zen, zh, znd, zu, zun, zxx, zza"

Notes: Available in Mac OS X v10.4 and later.

Note that many of the language codes will not have any supporting locale data in Mac OS X.

67.4.18 lineDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the line direction for the specified ISO language code.
Notes: Returns the line direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

67.4.19 localeIdentifierFromWindowsLocaleCode(code as Integer) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a locale identifier from a Windows locale code.
Notes: Available in Mac OS X v10.6 and later.

67.4.20 localeWithLocaleIdentifier(LocaleIdentifier as String) as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns a locale initialized using the given locale identifier.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.localeWithLocaleIdentifier("en_US")
MessageBox l.localeIdentifier+": "+l.localizedStringForLocaleIdentifier(l.localeIdentifier)
```

67.4.21 localizedStringForCalendarIdentifier(CalendarIdentifier as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified calendar identifier.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.localizedStringForCalendarIdentifier(l.calendarIdentifier)
```

Notes: calendarIdentifier: The calendar identifier indicating the calendar whose name you want. Use one of the values listed in Calendar Identifiers.

Returns a human readable string suitable for display to the user corresponding to the given calendar.

For example, on an American English (en_US) locale, passing NSCalendarIdentifierGregorian as the identifier, produces the string "Gregorian Calendar".

67.4.22 localizedStringForCollationIdentifier(CollationIdentifier as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified variant code.
Notes: variantCode: The variant code whose name you want.

Returns the localized name of the variant.

For example, calling this method on an American English (en_US) locale, passing "POSIX" for variantCode, produces the string "Computer".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleVariantCode key and variantCode value.

67.4.23 localizedStringForCollatorIdentifier(CollatorIdentifier as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified collator identifier.
Notes: collatorIdentifier: The identifier for the collator whose name you want.

Returns the localized name of the collator.

This method is equivalent to calling the displayNameForKey method passing the NSLocaleCollatorIdentifier key and collatorIdentifier value.

67.4.24 localizedStringForCountryCode(CountryCode as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for a country or region code.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.countryCode + ": " + l.localizedStringForCountryCode(l.countryCode)
```

Notes: countryCode: The code of the country or region that indicates the name you want.

Returns the localized name of the country or region.

For example, calling this method on an American English (en_US) locale, passing "GB" for countryCode,

produces the string "United Kingdom".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleCountryCode key and countryCode value.

67.4.25 localizedStringForCurrencyCode(CurrencyCode as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified currency code.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.currencyCode + ": " + l.localizedStringForCurrencyCode(l.currencyCode)
```

Notes: currencyCode: The code for the currency whose name you want.

Returns the localized name of the currency.

For example, calling this method on an American English (en_US) locale, passing "JPY" for currencyCode, produces the string "Japanese Yen".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleCurrencyCode key and currencyCode value.

67.4.26 localizedStringForLanguageCode(LanguageCode as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified language code.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.languageCode + ": " + l.localizedStringForLanguageCode(l.languageCode)
```

Notes: languageCode: The language code indicating the language whose name you want.

Returns the localized name of the language.

For example, calling this method on an American English (en_US) locale, passing "zh" for languageCode, produces the string "Chinese".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleLanguageCode key and languageCode value.

67.4.27 localizedStringForLocaleIdentifier(LocaleIdentifier as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified locale identifier.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.localeIdentifier + ": " + l.localizedStringForLocaleIdentifier(l.localeIdentifier)
```

Notes: localeIdentifier: The identifier for which you want the localized name.

Returns the localized name of the locale.

For example, calling this method on an American English (en_US) locale, passing "fr_FR" for localeIdentifier, produces the string "French (France)".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleIdentifier key and localeIdentifier value.

67.4.28 localizedStringForScriptCode(ScriptCode as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified script code.
Notes: scriptCode: The script code for the script whose name you want.

Returns the localized name of the script.

For example, calling this method on an American English (en_US) locale, passing "Hant" for scriptCode, produces the string "Traditional Han".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleScriptCode key and scriptCode value.

67.4.29 localizedStringForVariantCode(VariantCode as String) as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the localized string for the specified variant code.
Notes: variantCode: The variant code whose name you want.

Returns the localized name of the variant.

For example, calling this method on an American English (en_US) locale, passing "POSIX" for variantCode, produces the string "Computer".
This method is equivalent to calling the displayNameForKey() method passing the NSLocaleVariantCode key and variantCode value.

67.4.30 NSBuddhistCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Buddhist calendar.
Available in Mac OS X v10.4 and later.

67.4.31 NSChineseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Chinese calendar (unsupported).

Note that the Chinese calendar is not supported in Mac OS X v10.4-10.5. Although you can create a calendar using this constant, the object will not function correctly.

Available in Mac OS X v10.4 and later.

67.4.32 NSCurrentLocaleDidChangeNotification as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: A notification that indicates that the user,Äôs locale changed.
Notes: Register for this notification if your app displays content (dates, times, numbers, and so on) that is affected by the locale. Use the notification to trigger updates to your app's interface.

67.4.33 NSGregorianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Gregorian calendar.

Available in Mac OS X v10.4 and later.

67.4.34 NSHebrewCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Hebrew calendar.

Available in Mac OS X v10.4 and later.

67.4.35 NSIndianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Indian calendar

Available in Mac OS X v10.6 and later.

67.4.36 NSIslamicCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Islamic calendar.

Available in Mac OS X v10.4 and later.

67.4.37 NSIslamicCivilCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Islamic civil calendar.

Available in Mac OS X v10.4 and later.

67.4.38 NSISO8601Calendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the ISO8601. The ISO8601 calendar is not yet implemented.

Available in Mac OS X v10.6 and later.

67.4.39 NSJapaneseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Japanese calendar.
Available in Mac OS X v10.4 and later.

67.4.40 NSLocaleAlternateQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes: The key for the alternating begin quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationBeginDelimiterKey, then NSLocaleAlternateQuotationBeginDelimiterKey, etc.

The corresponding value is a string.
Available in Mac OS X v10.6 and later.

67.4.41 NSLocaleAlternateQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes: The key for the alternating enda quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationEndDelimiterKey, then NSLocaleAlternateQuotationEndDelimiterKey, etc.

The corresponding value is a string.

Available in Mac OS X v10.6 and later.

67.4.42 NSLocaleCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.

67.4.43 NSLocaleCollationIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.44 NSLocaleCollatorIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes: The key for the collation identifier for the locale.
The corresponding value is a string. If unknown, "" is returned.
Available in Mac OS X v10.6 and later.

67.4.45 NSLocaleCountryCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.46 NSLocaleCurrencyCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.47 NSLocaleCurrencySymbol as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.48 NSLocaleDecimalSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.49 NSLocaleExemplarCharacterSet as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.50 NSLocaleGroupingSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.51 NSLocaleIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Example:

```
Var n as new NSLocaleMBS("de")

MsgBox n.displayName(n.NSLocaleIdentifier, "en")
```

67.4.52 NSLocaleLanguageCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.53 NSLocaleMeasurementSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.54 NSLocaleQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes: The key for the begin quotation symbol associated with the locale.
The corresponding value is a string.
Available in Mac OS X v10.6 and later.

67.4.55 NSLocaleQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes: The key for the begin quotation symbol associated with the locale.
The corresponding value is string.
Available in Mac OS X v10.6 and later.

67.4.56 NSLocaleScriptCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.57 NSLocaleUsesMetricSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.58 NSLocaleVariantCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

67.4.59 NSPersianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Persian calendar.
Available in Mac OS X v10.6 and later.

67.4.60 NSRepublicOfChinaCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes: Identifier for the Republic of China (Taiwan) calendar.

A Chinese calendar can be created, and one can do calendrical calculations with it, but it should not be used for formatting as the necessary underlying functionality is not functioning correctly yet.

Available in Mac OS X v10.6 and later.

67.4.61 preferredLanguages as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the user's language preference order as an array of strings.
Example:

```
MsgBox join(NSLocaleMBS.preferredLanguages,", ")

// shows "de, en, fr, es, it, pt, pt-PT, nl, sv, nb, da, fi, ru, pl, zh-Hans, ja, zh-Hant, ko"
```

Notes: The user's language preference order as an array of String objects, each of which is a canonicalized IETF BCP 47 language identifier.

Available in Mac OS X v10.5 and later.
This is the language the user prefers. To get the country linked to the number and date formats, use the CountryCode property.

67.4.62 systemLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the "root", canonical locale, that contains fixed "backstop" settings that provide values for otherwise undefined keys.
Notes: Available in Mac OS X v10.4 and later.

67.4.63 windowsLocaleCodeFromLocaleIdentifier(s as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a Window locale code from the locale identifier.
Notes: Available in Mac OS X v10.6 and later.

67.4.64 Properties

67.4.65 alternateQuotationBeginDelimiter as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The alternate begin quotation symbol for the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.alternateQuotationBeginDelimiter+" "+l.alternateQuotationEndDelimiter
```

Notes: Examples of alternate begin quotation symbols include ",Äò", ",Ä", and "„Äé".
(Read only property)

67.4.66 alternateQuotationEndDelimiter as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The alternate end quotation symbol for the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.alternateQuotationBeginDelimiter+" "+l.alternateQuotationEndDelimiter
```

Notes: Examples of alternate end quotation symbols include ",Äô", ",Ä", and "„Äè".
(Read only property)

67.4.67 calendarIdentifier as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The calendar identifier for the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.calendarIdentifier
```

Notes: Possible values are listed in Calendar Identifiers.
Use localizedStringForCalendarIdentifier() to obtain a version of the value suitable for display to the user.
(Read only property)

67.4.68 CollationIdentifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The collation associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.CollationIdentifier // shows "" in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.69 collatorIdentifier as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The collator identifier for the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.collatorIdentifier+EndOfLine+l.collationIdentifier
```

Notes: An example collator identifier is "en".
Use localizedStringForCollatorIdentifier() to obtain a version of the value suitable for display to the user.
(Read only property)

67.4.70 CountryCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The country code.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.CountryCode // shows "DE" in Germany
```

Notes: An example value might be "ES".
Available in Mac OS X v10.4 and later.

This code here is the country where the number and date settings belong to. This is not the language the user has. To get the languages, check the preferredLanguages array.
(Read only property)

67.4.71 CurrencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency code associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.CurrencyCode // shows "EUR" in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.72 CurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency symbol associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.CurrencySymbol // shows ",Ç¨" in Germany
```

Notes: Available in Mac OS X v10.4 and later.

(Read only property)

67.4.73 DateFull as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The full date format.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.74 DateLong as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The long date format.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.75 DateMedium as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The medium date format.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.76 DateShort as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The short date format.
Example:

```
MsgBox NSLocaleMBS.currentLocale.DateShort.dateFormat
// in Germany: "dd.MM.yy"
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.77 DecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The decimal separator associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.DecimalSeparator // shows "," in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.78 GroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The numeric grouping separator associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.GroupingSeparator // shows "." in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.79 Identifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale identifier.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.Identifier // shows "de_DE" in Germany
```

Notes: An example value might be "es_ES_PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

67.4.80 LanguageCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The language code.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.LanguageCode // shows "de" in Germany
```

Notes: An example value might be "es".
Available in Mac OS X v10.4 and later.
(Read only property)

67.4.81 languageIdentifier as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the identifier for the language part of the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.languageIdentifier+EndOfLine+l.languageCode
```

Notes: For example, returns "en-US" for "en_US@rg=gbzzzz" locale.
(Read only property)

67.4.82 localeIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the identifier for the receiver.
Notes: The identifier for the receiver. This may not be the same string that the locale was created with, since NSLocale may canonicalize it.

Available in Mac OS X v10.4 and later.

Examples of locale identifiers include "en_GB", "es_ES_PREEURO", and "zh-Hant_HK_POSIX@collation=pinyin;currenc
(Read only property)

67.4.83 MeasurementSystem as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The measurement system associated with the locale.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.MeasurementSystem // shows "Metric" in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.84 NumberCurrency as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency style for number formatting.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.85 NumberDecimal as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a decimal style for numbers.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.86 NumberPercent as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The percent style for number formatting.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.87 NumberScientific as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a scientific style for numbers.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.88 NumberSpellOut as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a spell-out format; for numbers, ”23” becomes ”twenty-three”.
Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.89 quotationBeginDelimiter as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The begin quotation symbol associated with the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.quotationBeginDelimiter+” ”+l.quotationEndDelimiter
```

Notes: The corresponding value is an NSString object; for example, ”,Äú”, ”,Äû”, ”¬´”, or ”„Äå”.
(Read only property)

67.4.90 quotationEndDelimiter as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: The end quotation symbol associated with the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.quotationBeginDelimiter+” ”+l.quotationEndDelimiter
```

Notes: The corresponding value is an NSString object; for example, ”,Äù”, ”,Äú”, ”¬ª”, or ”„Äç”.
(Read only property)

67.4.91 regionCode as String

MBS MacBase Plugin, Plugin Version: 24.3, Platform: macOS, Targets: All.

Function: Returns the region code of the locale.
Example:

```
Var l As NSLocaleMBS = NSLocaleMBS.currentLocale
MessageBox l.regionCode
```

Notes: If the ‘rg‘ subtag is present, the value of the subtag will be used. For example, returns ”GB” for ”en_US@rg=gbzzzz” locale.
If the ‘localeIdentifier‘ doesn,Äôt contain a region, returns empty string.
(Read only property)

67.4.92 ScriptCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale script code.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.ScriptCode // shows "" in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.93 UsesMetricSystem as Boolean

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The flag that indicates whether the locale uses the metric system.
Example:

```
Var n as new NSLocaleMBS
Var v as Variant

v=n.UsesMetricSystem
MsgBox v // shows "True" in Germany
```

Notes: Available in Mac OS X v10.4 and later.
(Read only property)

67.4.94 VariantCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale variant code.
Example:

```
Var n as new NSLocaleMBS

MsgBox n.VariantCode // shows "" in Germany
```

Notes: An example value might be "PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

67.4.95 Constants

Constants

Constant	Value	Description
NSLocaleLanguageDirectionBottomToTop	4	One of the constants describing the text direction for a language. The language direction is from bottom to top. Available in Mac OS X v10.6 and later.
NSLocaleLanguageDirectionLeftToRight	1	One of the constants describing the text direction for a language. The language direction is from left to right. Available in Mac OS X v10.6 and later.
NSLocaleLanguageDirectionRightToLeft	2	One of the constants describing the text direction for a language. The language direction is from right to left. Available in Mac OS X v10.6 and later.
NSLocaleLanguageDirectionTopToBottom	3	One of the constants describing the text direction for a language. The language direction is from top to bottom. Available in Mac OS X v10.6 and later.
NSLocaleLanguageDirectionUnknown	0	One of the constants describing the text direction for a language. The direction of the language is unknown. Available in Mac OS X v10.6 and later.

67.5 class NSLocaleNumberMBS

67.5.1 class NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a number format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.
Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Plugins 10.3 Release Notes

67.5.2 Methods

67.5.3 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: Loads values.
No the same values as if you get when using this class with NSLocaleMBS.
See also:

- 67.5.4 Constructor(locale as NSLocaleMBS) 11585

67.5.4 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
Var n1 as new NSLocaleNumberMBS
Var n2 as new NSLocaleNumberMBS(NSLocaleMBS.currentLocale)
Var n3 as new NSLocaleNumberMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 67.5.3 Constructor 11585

67.5.5 Properties

67.5.6 alwaysShowsDecimalSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver always shows a decimal separator, even if the number is an integer.
Notes: (Read and Write property)

67.5.7 currencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency code.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g "EUR" (in Germany)
```

Notes: A currency code is a three-letter code that is, in most cases, composed of a country's two-character Internet country code plus an extra character to denote the currency unit. For example, the currency code for the Australian dollar is "AUD". Currency codes are based on the ISO 4217 standard.

Available in Mac OS X v10.4 and later.
(Read and Write property)

67.5.8 currencyDecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency decimal separator as a string.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencyDecimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

67.5.9 currencyGroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The currency grouping separator for the receiver.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

67.5.10 currencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the local currency symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g ",Ç¨" (in Germany)
```

Notes: (Read and Write property)

67.5.11 decimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the character to represent decimal separators.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.decimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

67.5.12 exponentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as an exponent symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.exponentSymbol
// shows for example: e.g "E" (in Germany)
```

Notes: The exponent symbol is the "E" or "e" in the scientific notation of numbers, as in 1.0e+56.
(Read and Write property)

67.5.13 format as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The format used by the receiver.
Notes: (Read and Write property)

67.5.14 groupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the grouping separator.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.groupingSeparator
// shows for example: e.g "." (in Germany)
```

Notes: For example, the grouping separator used in the United States is the comma ("10,000") whereas in France it is the period ("10.000").
(Read and Write property)

67.5.15 hasThousandSeparators as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

67.5.16 internationalCurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the international currency symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.internationalCurrencySymbol
// shows for example: e.g "EUR" (in Germany)
```

Notes: A country typically has a local currency symbol and an international currency symbol. The local symbol is used within the country, while the international currency symbol is used in international contexts to specify that country's currency unambiguously. The international currency symbol is often represented by a Unicode code point.
(Read and Write property)

67.5.17 Lenient as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses heuristics to guess at the date which is intended by a string.
Notes: (Read and Write property)

67.5.18 localizesFormat as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver localizes formats.
Notes: (Read and Write property)

67.5.19 minusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent the minus sign.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.minusSign
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

67.5.20 negativeFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display negative numbers.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "#,##0.00 ¬§" (in Germany)
```

Notes: (Read and Write property)

67.5.21 negativeInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent negative infinity.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

67.5.22 negativePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which is inserted as a prefix to negative values.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativePrefix
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

67.5.23 negativeSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which adds as a suffix to negative values.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeSuffix
// shows for example: e.g ",Ç¨" (in Germany)
```

Notes: (Read and Write property)

67.5.24 nilSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent a nil value.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.nilSymbol
```

// shows for example: e.g "" (in Germany)

Notes: (Read only property)

67.5.25 notANumberSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent NaN ("not a number") when it converts values.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.notANumberSymbol
// shows for example: e.g "NaN" (in Germany)
```

Notes: (Read only property)

67.5.26 paddingCharacter as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the padding character.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.paddingCharacter
// shows for example: e.g "*" (in Germany)
```

Notes: (Read and Write property)

67.5.27 PartialStringValidationEnabled as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether partial string validation is enabled.
Notes: (Read and Write property)

67.5.28 percentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used to represent the percent symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.percentSymbol
// shows for example: e.g "%" (in Germany)
```

Notes: (Read and Write property)

67.5.29 perMillSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used for the per-thousands symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.perMillSymbol
// shows for example: e.g ",Ä∞" (in Germany)
```

Notes: (Read and Write property)

67.5.30 plusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the plus sign.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.plusSign
// shows for example: e.g "+" (in Germany)
```

Notes: (Read and Write property)

67.5.31 positiveFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display positive numbers.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "#,##0.00 ¬§" (in Germany)
```

Notes: (Read and Write property)

67.5.32 positiveInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the positive infinity symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

67.5.33 positivePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the prefix for positive values.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positivePrefix
```

// shows for example: e.g "" (in Germany)

Notes: (Read and Write property)

67.5.34 positiveSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the suffix for positive values.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveSuffix
// shows for example: e.g " ,Ç¨" (in Germany)
```

Notes: (Read and Write property)

67.5.35 thousandSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

67.5.36 usesGroupingSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses the grouping separator.
Notes: (Read and Write property)

67.5.37 usesSignificantDigits as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses significant digits.
Notes: (Read and Write property)

67.5.38 zeroSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the zero symbol.
Example:

```
Var l as new NSLocaleMBS
Var n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.zeroSymbol
// shows for example: e.g "0" (in Germany)
```

Notes: (Read and Write property)

67.6 class WinLocalizationMBS

67.6.1 class WinLocalizationMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for details about the current localization
Example:

Var l as WinLocalizationMBS
l=new WinLocalizationMBS

Notes: This class has a constructor to specify whether you want unicode or not.

You may write yourself functions to acquire the details you need in your application from the Windows and from the Mac classes.
Also you may consider to update your values as the user may change them while your application is running.

67.6.2 Methods

67.6.3 AbbreviatedDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes: Index from 0 to 6.
e.g. on a German Windows XP system: AbbreviatedDayName(0)="Mo"

67.6.4 AbbreviatedMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes: Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: AbbreviatedMonthName(0)="Jan"

67.6.5 Constructor

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to get the values for the current locale.
Notes: There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 67.6.6 Constructor(LanguageID as Integer, SortID as Integer) 11598
- 67.6.7 Constructor(LCID as Integer) 11599
- 67.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 11599

67.6.6 Constructor(LanguageID as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes: There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 67.6.5 Constructor 11598
- 67.6.7 Constructor(LCID as Integer) 11599
- 67.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 11599

67.6.7 Constructor(LCID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes: There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 67.6.5 Constructor 11598
- 67.6.6 Constructor(LanguageID as Integer, SortID as Integer) 11598
- 67.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 11599

67.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes: There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 67.6.5 Constructor 11598
- 67.6.6 Constructor(LanguageID as Integer, SortID as Integer) 11598
- 67.6.7 Constructor(LCID as Integer) 11599

67.6.9 LongDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes: Index from 0 to 6.
e.g. on a German Windows XP system: LongDayName(0)="Montag"

67.6.10 LongMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes: Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: LongMonthName(0)="Januar"

67.6.11 Properties

67.6.12 CalendarTypeSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Current calendar type.
Notes: This type can be one of these values:

Value	Meaning
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.13 CalendarTypeSpecifier2 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Additional calendar types.
Notes: This can be a zero-separated list of one or more of these calendars type values:

Value	Meaning
0	No additional types valid
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: ""
(Read only property)

67.6.14 CountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code, based on international phone codes, also referred to as IBM country codes.
Notes: The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

67.6.15 CountryNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the country from the ISO Standard 3166.
Notes: e.g. on a German Windows XP system: "DEU"
(Read only property)

67.6.16 CountryNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated country name.
Notes: e.g. on a German Windows XP system: "DE"
(Read only property)

67.6.17 CountryNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the country.
Notes: This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "English"
(Read only property)

67.6.18 CountryNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the country.
Notes: e.g. on a German Windows XP system: "Deutschland"
(Read only property)

67.6.19 CountryNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the country.
Notes: e.g. on a German Windows XP system: "Deutschland"
(Read only property)

67.6.20 CurrencyDecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary decimal separator.
Notes: e.g. on a German Windows XP system: ","
(Read only property)

67.6.21 CurrencyDigitsInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the international monetary format.
Notes: The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

67.6.22 CurrencyDigitsLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the local monetary format.
Notes: The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

67.6.23 CurrencyGroupingMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of monetary digits to the left of the decimal.
Notes: An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

67.6.24 CurrencyNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full English name of the currency associated with the locale.
Notes: e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

67.6.25 CurrencyNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The native name of the currency associated with the locale.
Notes: e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

67.6.26 CurrencyNegativeMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative currency mode.
Notes: The maximum number of characters allowed for this string is 3. The mode can be one of the following values:

Value	Example
0	($ 1.1)
1	–$ 1.1
2	$ –1.1
3	$ 1.1–
4	(1.1$)
5	–1.1$
6	1.1–$
7	1.1$ –
8	–1.1 $ (space before $)
9	–$ 1.1 (space after $)
10	1.1 $ –(space before $)
11	$ 1.1–(space after $)
12	$ –1.1 (space after $)
13	1.1–$ (space before $)
14	($ 1.1) (space after $)
15	(1.1 $) (space before $)

e.g. on a German Windows XP system: "8"
(Read only property)

67.6.27 CurrencyPositiveMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Positive currency mode.
Notes: The maximum number of characters allowed for this string is 2. The mode can be one of the following values:

e.g. on a German Windows XP system: "3"
(Read only property)

Value	Meaning
0	Prefix, no separation
1	Suffix, no separation
2	Prefix, 1-char. separation
3	Suffix, 1-char. separation

67.6.28 CurrencySymbolInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Three characters of the international monetary symbol specified in ISO 4217, "Codes for the Representation of Currencies and Funds," followed by the character separating this string from the amount.
Example:

```
Var WinLoc As WinLocalizationMBS
Var s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes: e.g. on a German Windows XP system: "EUR"
(Read only property)

67.6.29 CurrencySymbolLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String used as the local monetary symbol.
Example:

```
Var WinLoc As WinLocalizationMBS
Var s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes: e.g. on a German Windows XP system: ",Ç¨"
(Read only property)

67.6.30 CurrencyThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary separator between groups of digits to the left of the decimal.
Notes: e.g. on a German Windows XP system: "."
(Read only property)

67.6.31 DateLeadingZerosDay as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in day fields.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for days
1	Leading zeros for days

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.32 DateLeadingZerosMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in month fields.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for months
1	Leading zeros for months

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.33 DateLongFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date format-ordering specifier.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.34 DateLongFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date formatting string for this locale.
Notes: The string can consist of a combination of day, month, and year format pictures defined in the Day, Month, Year, and Era Format Pictures table in National Language Support Constants and any string of characters enclosed in single quotes. Characters in single quotes remain as given.
e.g. on a German Windows XP system: "dddd, d. MMMM yyyy"
(Read only property)

67.6.35 DateSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the date separator.
Notes: e.g. on a German Windows XP system: "."
(Read only property)

67.6.36 DateShortFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date format-ordering specifier.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.37 DateShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date formatting string for this locale.
Example:

```
Var w as new WinLocalizationMBS

MsgBox w.DateShortFormatString
```

Notes: The string can consist of a combination of day, month, and year format pictures defined in Day, Month, Year, and Era Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "dd.MM.yyyy"
(Read only property)

67.6.38 DateShortYearMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Year/Month formatting string for the locale.
Notes: This string shows the proper format for a date string that contains only the year and the month.
e.g. on a German Windows XP system: "MMMM yyyy"
Introduced with Windows 2000.
(Read only property)

67.6.39 DecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the decimal separator.
Notes: e.g. on a German Windows XP system: ","
(Read only property)

67.6.40 DefaultCodePageANSI as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: American National Standards Institute (ANSI) code page associated with this locale.
Notes: The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "1252"
(Read only property)

67.6.41 DefaultCodePageEBCDIC as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default EBCDIC code page associated with the locale.
Notes: The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "20273"
Introduced with Windows 2000.
(Read only property)

67.6.42 DefaultCodePageMac as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the country.
Notes: The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "10000"
(Read only property)

67.6.43 DefaultCodePageOEM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the locale.
Notes: The maximum number of characters allowed for this string is 6.

e.g. on a German Windows XP system: ”850”
(Read only property)

67.6.44 DefaultCountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code for the principal country in this locale.
Notes: This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: ”49”
(Read only property)

67.6.45 DefaultLanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier for the principal language spoken in this locale.
Notes: This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: ”0407”
(Read only property)

67.6.46 DigitGrouping as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of digits to the left of the decimal.
Notes: An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: ”3;0”
(Read only property)

67.6.47 DigitSubstitution as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes: 0 = context, 1 = none, 2 = national
e.g. on a German Windows XP system: ”1”
Introduced with Windows 2000.

(Read only property)

67.6.48 FirstDayOfWeek as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first day in a week.
Notes: Value from 0 to 6.
e.g. on a German Windows XP system: "0"
(Read only property)

67.6.49 FirstWeekOfYear as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first week of the year.
Notes: The specifier can be one of these values:

Value	Meaning
0	Week containing 1/1 is the first week of that year.
1	First full week following 1/1 is the first week of that year.
2	First week containing at least 4 days is the first week of that year.

e.g. on a German Windows XP system: "2"
(Read only property)

67.6.50 LanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier indicating the language.
Notes: The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

67.6.51 LanguageNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the language, created by taking the 2-letter language abbreviation from the ISO Standard 639 and adding a third letter, as appropriate, to indicate the sublanguage.
Notes: e.g. on a German Windows XP system: "DEU"
(Read only property)

67.6.52 LanguageNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated language name.
Notes: e.g. on a German Windows XP system: "de"
(Read only property)

67.6.53 LanguageNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the language from the International Organization for Standardization (ISO) Standard 639.
Notes: This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "German"
(Read only property)

67.6.54 LanguageNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the language.
Notes: e.g. on a German Windows XP system: "Deutsch (Deutschland)"
(Read only property)

67.6.55 LanguageNameNativ as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the language.
Notes: e.g. on a German Windows XP system: "Deutsch"
(Read only property)

67.6.56 LeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in decimal fields.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros
1	Leading zeros

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.57 ListItemSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate list items.
Notes: For example, a comma is used in many locales.
e.g. on a German Windows XP system: ";"
(Read only property)

67.6.58 MeasureSystem as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: System of measurement.
Notes: This value is 0 if the metric system (Syst√©me International d'Unit√©s, or S.I.) is used and 1 if the U.S. system is used. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

67.6.59 NativeASCII0to9 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native equivalents to ASCII 0 through 9.
Notes: e.g. on a German Windows XP system: "0123456789"

(Read only property)

67.6.60 NegativeNumberMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative number mode.
Notes: The mode can be one of these values:

Value	Meaning
0	(1.1)
1	–1.1
2	–1.1
3	1.1–
4	1.1 –

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.61 NegSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a negative monetary value.
Notes: This value is 1 if the monetary symbol is separated by a space from the negative amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

67.6.62 NegSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a negative monetary value.
Notes: This value is 1 if the monetary symbol precedes the negative amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

67.6.63 NumberOfFraction as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits.
Notes: The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

67.6.64 Papersize as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default paper size associated with the locale.
Notes: Possible values:

1	Letter
5	Legal
8	DIN A3
9	DIN A4

e.g. on a German Windows XP system: "9"
Introduced with Windows 2000.
(Read only property)

67.6.65 PosSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a positive monetary value.
Notes: This value is 1 if the monetary symbol is separated by a space from a positive amount, 0 if it is not.
The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

67.6.66 PosSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a positive monetary value.
Notes: This value is 1 if the monetary symbol precedes the positive amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

67.6.67 SignNegative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the negative sign.
Notes: e.g. on a German Windows XP system: "-"
(Read only property)

67.6.68 SignNegativePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for negative values.
Notes: This index uses the same values as SignPositivePosition. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

67.6.69 SignPositive as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the positive sign.
Notes: e.g. on a German Windows XP system: ""
(Read only property)

67.6.70 SignPositivePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for positive values.
Notes: The maximum number of characters allowed for this string is 2. The index can be one of the following values:

Value	Meaning
0	Parentheses surround the amount and the monetary symbol.
1	The sign string precedes the amount and the monetary symbol.
2	The sign string succeeds the amount and the monetary symbol.
3	The sign string immediately precedes the monetary symbol.
4	The sign string immediately succeeds the monetary symbol.

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.71 Sortname as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full localized name of the sort for the given locale ID.
Notes: e.g. on a German Windows XP system: "W√rterbuch"
Introduced with Windows 2000.
(Read only property)

67.6.72 ThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate groups of digits to the left of the decimal.
Notes: e.g. on a German Windows XP system: "."
(Read only property)

67.6.73 TimeAM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the AM designator.
Notes: e.g. on a German Windows XP system: ""
(Read only property)

67.6.74 TimeCenturyFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for full 4-digit century.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Abbreviated 2-digit century
1	Full 4-digit century

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.75 TimeFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time format specifier.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	AM / PM 12-hour format
1	24-hour format

e.g. on a German Windows XP system: "1"
(Read only property)

67.6.76 TimeLeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in time fields.
Notes: The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

e.g. on a German Windows XP system: "1"
(Read only property)

Value	Meaning
0	No leading zeros for hours
1	Leading zeros for hours

67.6.77 TimeMarkerPosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes: e.g. on a German Windows XP system: "0"
(Read only property)

67.6.78 TimePM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the PM designator.
Notes: e.g. on a German Windows XP system: ""
(Read only property)

67.6.79 TimeSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the time separator.
Notes: e.g. on a German Windows XP system: ":"
(Read only property)

67.6.80 TimeShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time formatting strings for this locale.
Notes: The string can consist of a combination of the hour, minute, and second format pictures defined in the Hour, Minute, and Second Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "HH:mm:ss"
(Read only property)

67.6.81 Constants

Constants

Constant	Value	Description
LANG_AFRIKAANS	&h36	One of the constants for the LanguageID.
LANG_ALBANIAN	&h1c	One of the constants for the LanguageID.
LANG_ARABIC	1	One of the constants for the LanguageID.
LANG_ARMENIAN	&h2b	One of the constants for the LanguageID.
LANG_ASSAMESE	&h4d	One of the constants for the LanguageID.
LANG_AZERI	&h2c	One of the constants for the LanguageID.
LANG_BASQUE	&h2d	One of the constants for the LanguageID.
LANG_BELARUSIAN	&h23	One of the constants for the LanguageID.
LANG_BENGALI	&h45	One of the constants for the LanguageID.
LANG_BULGARIAN	2	One of the constants for the LanguageID.
LANG_CATALAN	3	One of the constants for the LanguageID.
LANG_CHINESE	4	One of the constants for the LanguageID.
LANG_CROATIAN	&h1a	One of the constants for the LanguageID.
LANG_CZECH	5	One of the constants for the LanguageID.
LANG_DANISH	6	One of the constants for the LanguageID.
LANG_DUTCH	&h13	One of the constants for the LanguageID.
LANG_ENGLISH	9	One of the constants for the LanguageID.
LANG_ESTONIAN	&h25	One of the constants for the LanguageID.
LANG_FAEROESE	&h38	One of the constants for the LanguageID.
LANG_FARSI	&h29	One of the constants for the LanguageID.
LANG_FINNISH	&h0b	One of the constants for the LanguageID.
LANG_FRENCH	&h0c	One of the constants for the LanguageID.
LANG_GEORGIAN	&h37	One of the constants for the LanguageID.
LANG_GERMAN	7	One of the constants for the LanguageID.
LANG_GREEK	8	One of the constants for the LanguageID.
LANG_GUJARATI	&h47	One of the constants for the LanguageID.
LANG_HEBREW	&h0d	One of the constants for the LanguageID.
LANG_HINDI	&h39	One of the constants for the LanguageID.
LANG_HUNGARIAN	&h0e	One of the constants for the LanguageID.
LANG_ICELANDIC	&h0f	One of the constants for the LanguageID.
LANG_INDONESIAN	&h21	One of the constants for the LanguageID.
LANG_ITALIAN	&h10	One of the constants for the LanguageID.
LANG_JAPANESE	&h11	One of the constants for the LanguageID.
LANG_KANNADA	&h4b	One of the constants for the LanguageID.
LANG_KASHMIRI	&h60	One of the constants for the LanguageID.
LANG_KAZAK	&h3f	One of the constants for the LanguageID.
LANG_KONKANI	&h57	One of the constants for the LanguageID.
LANG_KOREAN	&h12	One of the constants for the LanguageID.
LANG_LATVIAN	&h26	One of the constants for the LanguageID.
LANG_LITHUANIAN	&h27	One of the constants for the LanguageID.
LANG_MACEDONIAN	&h2f	One of the constants for the LanguageID.
LANG_MALAY	&h3e	One of the constants for the LanguageID.
LANG_MALAYALAM	&h4c	One of the constants for the LanguageID.
LANG_MANIPURI	&h58	One of the constants for the LanguageID.
LANG_MARATHI	&h4e	One of the constants for the LanguageID.
LANG_NEPALI	&h61	One of the constants for the LanguageID.
LANG_NEUTRAL	0	One of the constants for the LanguageID.
LANG_NORWEGIAN	&h14	One of the constants for the LanguageID.
LANG_ORIYA	&h48	One of the constants for the LanguageID.
LANG_POLISH	&h15	One of the constants for the LanguageID.
LANG_PORTUGUESE	&h16	One of the constants for the LanguageID.
LANG_PUNJABI	&h46	One of the constants for the LanguageID.
LANG_ROMANIAN	&h18	One of the constants for the LanguageID.
LANG_RUSSIAN	&h19	One of the constants for the LanguageID.
LANG_SANSKRIT	&h4f	One of the constants for the LanguageID.
LANG_SERBIAN	&h1a	One of the constants for the LanguageID.
LANG_SINDHI	&h59	One of the constants for the LanguageID.
LANG_SLOVAK	&h1b	One of the constants for the LanguageID.

Chapter 68

Data Types

68.1 class ComplexDoubleMBS

68.1.1 class ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(4,7)

Var sum as ComplexDoubleMBS = c+d

MsgBox sum.str
```

Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

68.1.2 Methods

68.1.3 abs as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.abs)
```

68.1.4 Add(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 68.1.5 Add(x as Double) 11624

68.1.5 Add(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 68.1.4 Add(c as ComplexDoubleMBS) 11624

68.1.6 arg as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.arg)
```

68.1.7 conj as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var e as ComplexDoubleMBS = c.conj
MsgBox e.str
```

68.1.8 Constructor(other as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 68.1.9 Constructor(x as Double = 0.0, y as Double = 0.0) 11625

68.1.9 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

- 68.1.8 Constructor(other as ComplexDoubleMBS) 11625

68.1.10 cos as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.cos.str
```

68.1.11 cosh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.cosh.str
```

68.1.12 Divide(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

- 68.1.13 Divide(x as Double) 11626

68.1.13 Divide(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 68.1.12 Divide(c as ComplexDoubleMBS) 11626

68.1.14 exp as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes: Var c as new ComplexDoubleMBS(1,2)
MsgBox c.exp.str

68.1.15 log as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

```
Var c as new ComplexDoubleMBS(10,10)
MsgBox c.log.str
```

68.1.16 log10 as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

```
Var c as new ComplexDoubleMBS(10,0)
MsgBox c.log10.str
```

68.1.17 Multiply(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

- 68.1.18 Multiply(x as Double) 11627

68.1.18 Multiply(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

- 68.1.17 Multiply(c as ComplexDoubleMBS) 11627

68.1.19 norm as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.norm)
```

68.1.20 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c+d
MsgBox e.str
```

See also:

- 68.1.21 Operator_Add(x as Double) as ComplexDoubleMBS 11628

68.1.21 Operator_Add(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
Var c as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c+2
MsgBox e.str
```

See also:

- 68.1.20 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS 11627

68.1.22 Operator_Compare(c as ComplexDoubleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

68.1.23 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c/d
MsgBox e.str
```

See also:

- 68.1.24 Operator_Divide(x as Double) as ComplexDoubleMBS 11629

68.1.24 Operator_Divide(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
Var c as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c/2
MsgBox e.str
```

See also:

- 68.1.23 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS 11628

68.1.25 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c*d
MsgBox e.str
```

See also:

- 68.1.26 Operator_Multiply(x as Double) as ComplexDoubleMBS 11630

68.1.26 Operator_Multiply(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a double to a complex number.
Example:

```
Var c as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c*2
MsgBox e.str
```

See also:

- 68.1.25 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS 11629

68.1.27 Operator_Power(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c^d
MsgBox e.str
```

68.1.28 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c-d
MsgBox e.str
```

See also:

- 68.1.29 Operator_Subtract(x as Double) as ComplexDoubleMBS 11631

68.1.29 Operator_Subtract(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
Var c as new ComplexDoubleMBS(3,4)
Var e as ComplexDoubleMBS = c-2
MsgBox e.str
```

See also:

- 68.1.28 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS 11630

68.1.30 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

```
MsgBox str(ComplexDoubleMBS.PI)
```

68.1.31 polar(rho as Double, theta as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexDoubleMBS.polar(10, 0.5).str
```

68.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var d as new ComplexDoubleMBS(2,0)
Var m as ComplexDoubleMBS = c.pow(d)
```

```
MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 68.1.33 pow(x as Double) as ComplexDoubleMBS 11632
- 68.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 11632

68.1.33 pow(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var m as ComplexDoubleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 68.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 11631
- 68.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 11632

68.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
Var x as new ComplexDoubleMBS(2,3)
Var c as ComplexDoubleMBS = ComplexDoubleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 68.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 11631
- 68.1.33 pow(x as Double) as ComplexDoubleMBS 11632

68.1.35 sin as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.sin.str
```

68.1.36 sinh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.sinh.str
```

68.1.37 sqrt as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
Var r as ComplexDoubleMBS = c.sqrt
Var m as ComplexDoubleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

68.1.38 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

68.1.39 Subtract(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 68.1.40 Subtract(x as Double) 11634

68.1.40 Subtract(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 68.1.39 Subtract(c as ComplexDoubleMBS) 11634

68.1.41 tan as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.tan.str
```

68.1.42 tanh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox c.tanh.str
```

68.1.43 Properties

68.1.44 Imag as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

68.1.45 Real as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
Var c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

68.2 class ComplexSingleMBS

68.2.1 class ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(4,7)

Var sum as ComplexSingleMBS = c+d

MsgBox sum.str
```

68.2.2 Methods

68.2.3 abs as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.abs)
```

68.2.4 Add(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 68.2.5 Add(x as single)

68.2.5 Add(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 68.2.4 Add(c as ComplexSingleMBS) 11636

68.2.6 arg as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.arg)
```

68.2.7 conj as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var e as ComplexSingleMBS = c.conj
MsgBox e.str
```

68.2.8 Constructor(other as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

• 68.2.9 Constructor(x as single = 0.0, y as single = 0.0) 11638

68.2.9 Constructor(x as single = 0.0, y as single = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

• 68.2.8 Constructor(other as ComplexSingleMBS) 11637

68.2.10 cos as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.cos.str
```

68.2.11 cosh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.cosh.str
```

68.2.12 Divide(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

• 68.2.13 Divide(x as single) 11639

68.2.13 Divide(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 68.2.12 Divide(c as ComplexSingleMBS) 11638

68.2.14 exp as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes: Var c as new ComplexSingleMBS(1,2)
MsgBox c.exp.str

68.2.15 log as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

```
Var c as new ComplexSingleMBS(10,10)
MsgBox c.log.str
```

68.2.16 log10 as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

```
Var c as new ComplexSingleMBS(10,0)
MsgBox c.log10.str
```

68.2.17 Multiply(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

• 68.2.18 Multiply(x as single) 11640

68.2.18 Multiply(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

• 68.2.17 Multiply(c as ComplexSingleMBS) 11639

68.2.19 norm as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.norm)
```

68.2.20 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c+d
MsgBox e.str
```

See also:

• 68.2.21 Operator_Add(x as single) as ComplexSingleMBS 11640

68.2.21 Operator_Add(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
Var c as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c+2
MsgBox e.str
```

See also:

- 68.2.20 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS 11640

68.2.22 Operator_Compare(c as ComplexSingleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

68.2.23 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c/d
MsgBox e.str
```

See also:

- 68.2.24 Operator_Divide(x as single) as ComplexSingleMBS 11641

68.2.24 Operator_Divide(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
Var c as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c/2
MsgBox e.str
```

See also:

- 68.2.23 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS 11641

68.2.25 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c*d
MsgBox e.str
```

See also:

- 68.2.26 Operator_Multiply(x as single) as ComplexSingleMBS 11642

68.2.26 Operator_Multiply(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a single to a complex number.
Example:

```
Var c as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c*2
MsgBox e.str
```

See also:

- 68.2.25 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS 11642

68.2.27 Operator_Power(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c^d
MsgBox e.str
```

68.2.28 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c-d
MsgBox e.str
```

See also:

- 68.2.29 Operator_Subtract(x as single) as ComplexSingleMBS 11643

68.2.29 Operator_Subtract(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
Var c as new ComplexSingleMBS(3,4)
Var e as ComplexSingleMBS = c-2
MsgBox e.str
```

See also:

- 68.2.28 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS 11643

68.2.30 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

MsgBox str(ComplexSingleMBS.PI)

68.2.31 polar(rho as single, theta as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexSingleMBS.polar(10, 0.5).str
```

68.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var d as new ComplexSingleMBS(2,0)
Var m as ComplexSingleMBS = c.pow(d)

MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 68.2.33 pow(x as single) as ComplexSingleMBS 11644
- 68.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 11645

68.2.33 pow(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var m as ComplexSingleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 68.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS 11644
- 68.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 11645

68.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
Var x as new ComplexSingleMBS(2,3)
Var c as ComplexSingleMBS = ComplexSingleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 68.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS 11644
- 68.2.33 pow(x as single) as ComplexSingleMBS 11644

68.2.35 sin as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.sin.str
```

68.2.36 sinh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.sinh.str
```

68.2.37 sqrt as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
Var r as ComplexSingleMBS = c.sqrt
Var m as ComplexSingleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

68.2.38 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

68.2.39 Subtract(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 68.2.40 Subtract(x as single) 11646

68.2.40 Subtract(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 68.2.39 Subtract(c as ComplexSingleMBS) 11646

68.2.41 tan as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.tan.str
```

68.2.42 tanh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox c.tanh.str
```

68.2.43 Properties

68.2.44 Imag as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

68.2.45 Real as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
Var c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

68.3 Globals

68.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: Memoryblock contains DoubleValue values (8 byte each).
If N is not provided, the plugin chooses a value.
See also:

- 68.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double() 11648
- 68.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 11648

68.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:

- 68.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double() 11648
- 68.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 11648

68.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.

68.3.4 FFTDoubleMBS(x() as ComplexDoubleMBS, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Notes: If N is not provided, the plugin chooses a value.
See also:

- 68.3.5 FFTDoubleMBS(x() as Double, N as Integer = -1) as ComplexDoubleMBS() 11649

68.3.5 FFTDoubleMBS(x() as Double, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Notes: If N is not provided, the plugin chooses a value.

- 68.3.6 FFTSingleAbsMBS(x as MemoryBlock, N as Integer = -1) as single() 11649
- 68.3.7 FFTSingleAbsMBS(x() as ComplexSingleMBS, N as Integer = -1) as single() 11649

68.3.9 FFTSingleMBS(x() as ComplexSingleMBS, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
See also:

- 68.3.10 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS() 11650

68.3.10 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a Fast Fourier Transformation.
Notes: If N is not provided, the plugin chooses a value.

68.4 class IntegerHashSetIteratorMBS

68.4.1 class IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerHashSet class.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.4.2 Methods

68.4.3 isEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS
```

```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

68.4.4 isNotEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.4.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.4.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.5 class IntegerHashSetMBS

68.5.1 class IntegerHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with integers.
Example:

```
Var s as new IntegerHashSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.5.2 Methods

68.5.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.5.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.5.5 Constructor(Keys() as Integer) 11654

68.5.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

• 68.5.4 Constructor 11654

68.5.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.5.7 find(key as Integer) as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.5.8 first as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.5.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.5.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.5.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.5.12 last as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)
```

```
// get iterators pointing to first and after last element
Var i as IntegerHashSetIteratorMBS = m.first
Var e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.5.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.5.15 Remove(key as Integer) as Integer 11657
- 68.5.16 Remove(pos as IntegerHashSetIteratorMBS) 11658

68.5.15 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 11657
- 68.5.16 Remove(pos as IntegerHashSetIteratorMBS) 11658

68.5.16 Remove(pos as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 11657
- 68.5.15 Remove(key as Integer) as Integer 11657

68.5.17 Properties

68.5.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new IntegerHashSetMBS

v.insert 1
v.insert 5

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.5.19 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new IntegerHashSetMBS
```

```
set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

68.5.20 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.5.21 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.6 class IntegerOrderedSetIteratorMBS

68.6.1 class IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerOrderedSet class.
Example:

```
// Create a map
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.6.2 Methods

68.6.3 isEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

68.6.4 isNotEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.6.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.6.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.6.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.7 class IntegerOrderedSetMBS

68.7.1 class IntegerOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with integers.
Example:

```
Var s as new IntegerOrderedSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.7.2 Methods

68.7.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.7.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.7.5 Constructor(Keys() as Integer) 11663

68.7.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.7.4 Constructor 11663

68.7.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.7.7 find(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.7.8 first as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.7.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.7.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.7.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.7.12 last as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)
```

```
// get iterators pointing to first and after last element
Var i as IntegerOrderedSetIteratorMBS = m.first
Var e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

68.7.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.7.14 LowerBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.7.16 Remove(key as Integer) as Integer

- 68.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 11667

68.7.16 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 11666
- 68.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 11667

68.7.17 Remove(pos as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 11666
- 68.7.16 Remove(key as Integer) as Integer 11667

68.7.18 UpperBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.7.19 Properties

68.7.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2
```

MsgBox str(set.Count)

Notes: (Read only property)

68.7.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.7.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.8 class IntegerToIntegerHashMapIteratorMBS

68.8.1 class IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerHashMap class.
Example:

```
// Create a map
Var m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.8.2 Methods

68.8.3 isEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.8.4 isNotEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.8.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.8.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.8.7 Properties

68.8.8 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.9 class IntegerToIntegerHashMapMBS

68.9.1 class IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and values.
Example:

```
Var s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.9.2 Methods

68.9.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.9.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.9.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.9.6 Clone as IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.9.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.9.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.9.9 Constructor(dic as dictionary) 11673
- 68.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 11673

68.9.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.9.8 Constructor 11673
- 68.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 11673

68.9.10 Constructor(other as IntegerToIntegerHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.9.8 Constructor 11673
- 68.9.9 Constructor(dic as dictionary) 11673

68.9.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.9.12 find(key as Integer) as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.9.13 first as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.9.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.9.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.9.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.9.17 last as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToIntegerHashMapMBS
```

```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerHashMapIteratorMBS = m.first
Var e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.9.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToIntegerHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.9.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.9.21 Remove(key as Integer) as Integer 11677
- 68.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 11677

68.9.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 11677
- 68.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 11677

68.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 11677
- 68.9.21 Remove(key as Integer) as Integer 11677

68.9.23 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.9.24 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.9.25 Properties

68.9.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new IntegerToIntegerHashMapMBS

v.value(1)=10
v.value(2)=20

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.9.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new IntegerToIntegerHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

68.9.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.9.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.9.30 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.10 class IntegerToIntegerOrderedMapIteratorMBS

68.10.1 class IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerOrderedMap class.
Example:

```
// Create a map
Var m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.10.2 Methods

68.10.3 isEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.10.4 isNotEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.10.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.10.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.10.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.10.8 Properties

68.10.9 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.11 class IntegerToIntegerOrderedMapMBS

68.11.1 class IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map for integers for keys and values.
Example:

```
Var s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.11.2 Methods

68.11.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.11.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.11.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.11.6 Clone as IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.11.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.11.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.11.9 Constructor(dic as dictionary) 11684
- 68.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 11684

68.11.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.11.8 Constructor 11684
- 68.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 11684

68.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.11.8 Constructor 11684
- 68.11.9 Constructor(dic as dictionary) 11684

68.11.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.11.12 find(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.11.13 first as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.11.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.11.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.11.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.11.17 last as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToIntegerOrderedMapMBS
```

```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToIntegerOrderedMapIteratorMBS = m.first
Var e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.11.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToIntegerOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.11.19 LowerBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.11.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.11.22 Remove(key as Integer) as Integer 11688
- 68.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 11688

68.11.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 11688
- 68.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 11688

68.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 11688
- 68.11.22 Remove(key as Integer) as Integer 11688

68.11.24 UpperBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.11.25 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.11.26 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.11.27 Properties

68.11.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new IntegerToIntegerOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

68.11.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.11.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.11.31 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.12 class IntegerToStringHashMapIteratorMBS

68.12.1 class IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringHashMap class.
Example:

```
// Create a map
Var m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.12.2 Methods

68.12.3 isEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.12.4 isNotEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.12.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.12.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.12.7 Properties

68.12.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.13 class IntegerToStringHashMapMBS

68.13.1 class IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and strings as values.
Example:

```
Var s as new IntegerToStringHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.13.2 Methods

68.13.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.13.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.13.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.13.6 Clone as IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.13.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.13.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.13.9 Constructor(dic as dictionary) 11695
- 68.13.10 Constructor(other as IntegerToStringHashMapMBS) 11695

68.13.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.13.8 Constructor 11695
- 68.13.10 Constructor(other as IntegerToStringHashMapMBS) 11695

68.13.10 Constructor(other as IntegerToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.13.8 Constructor 11695
- 68.13.9 Constructor(dic as dictionary) 11695

68.13.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.13.12 find(key as Integer) as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.13.13 first as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.13.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.13.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.13.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.13.17 last as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToStringHashMapMBS
```

```
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringHashMapIteratorMBS = m.first
Var e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.13.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.13.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.13.21 Remove(key as Integer) as Integer 11699
- 68.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 11699

68.13.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 11699
- 68.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 11699

68.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 11699
- 68.13.21 Remove(key as Integer) as Integer 11699

68.13.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.13.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.13.25 Properties

68.13.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new IntegerToStringHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.13.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new IntegerToStringHashMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.13.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.13.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.13.30 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.14 class IntegerToStringOrderedMapIteratorMBS

68.14.1 class IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringOrderedMap class.
Example:

```
// Create a map
Var m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.14.2 Methods

68.14.3 isEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.14.4 isNotEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.14.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.14.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.14.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.14.8 Properties

68.14.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.15 class IntegerToStringOrderedMapMBS

68.15.1 class IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integer keys and string values.
Example:

```
Var s as new IntegerToStringOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.15.2 Methods

68.15.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.15.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.15.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.15.6 Clone as IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.15.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.15.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.15.9 Constructor(dic as dictionary) 11706
- 68.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 11706

68.15.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.15.8 Constructor 11706
- 68.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 11706

68.15.10 Constructor(other as IntegerToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.15.8 Constructor 11706
- 68.15.9 Constructor(dic as dictionary) 11706

68.15.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.15.12 find(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.15.13 first as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.15.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.15.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.15.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.15.17 last as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToStringOrderedMapMBS
```

```
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
Var i as IntegerToStringOrderedMapIteratorMBS = m.first
Var e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.15.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.15.19 LowerBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.15.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.15.22 Remove(key as Integer) as Integer 11710
- 68.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 11710

68.15.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 11710
- 68.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 11710

68.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 11710
- 68.15.22 Remove(key as Integer) as Integer 11710

68.15.24 UpperBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.15.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.15.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.15.27 Properties

68.15.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new IntegerToStringOrderedMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.15.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.15.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.15.31 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.16 class IntegerToVariantHashMapIteratorMBS

68.16.1 class IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantHashMap class.
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.16.2 Methods

68.16.3 isEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.16.4 isNotEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.16.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.16.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.16.7 Properties

68.16.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.17 class IntegerToVariantHashMapMBS

68.17.1 class IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and variants as values.
Example:

```
Var s as new IntegerToVariantHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.17.2 Methods

68.17.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.17.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.17.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.17.6 Clone as IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.17.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.17.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.17.9 Constructor(dic as dictionary) 11717
- 68.17.10 Constructor(other as IntegerToVariantHashMapMBS) 11717

68.17.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.17.8 Constructor 11717
- 68.17.10 Constructor(other as IntegerToVariantHashMapMBS) 11717

68.17.10 Constructor(other as IntegerToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.17.8 Constructor 11717
- 68.17.9 Constructor(dic as dictionary) 11717

68.17.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.17.12 find(key as Integer) as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.17.13 first as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.17.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.17.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.17.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.17.17 last as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS
```

```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantHashMapIteratorMBS = m.first
Var e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.17.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToVariantHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.17.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.17.21 Remove(key as Integer) as Integer 11721
- 68.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 11721

68.17.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 11721
- 68.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 11721

68.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 11721
- 68.17.21 Remove(key as Integer) as Integer 11721

68.17.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.17.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
Var m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.17.25 Properties

68.17.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new IntegerToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.17.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.

Example:

```
Var map as new IntegerToVariantHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

68.17.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.17.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.17.30 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.18 class IntegerToVariantOrderedMapIteratorMBS

68.18.1 class IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantOrderedMap class.
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.18.2 Methods

68.18.3 isEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.18.4 isNotEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.18.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.18.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.18.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.18.8 Properties

68.18.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.19 class IntegerToVariantOrderedMapMBS

68.19.1 class IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integers as keys and variants as values.
Example:

```
Var s as new IntegerToVariantOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

68.19.2 Methods

68.19.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.19.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.19.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.19.6 Clone as IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.19.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.19.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 68.19.9 Constructor(dic as dictionary) 11728
- 68.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 11728

68.19.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.19.8 Constructor 11728
- 68.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 11728

68.19.10 Constructor(other as IntegerToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.19.8 Constructor 11728
- 68.19.9 Constructor(dic as dictionary) 11728

68.19.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.19.12 find(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.19.13 first as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.19.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.19.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.19.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.19.17 last as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS
```

```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as IntegerToVariantOrderedMapIteratorMBS = m.first
Var e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.19.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new IntegerToVariantOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.19.19 LowerBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.19.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.19.22 Remove(key as Integer) as Integer 11732
- 68.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 11732

68.19.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 11732
- 68.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 11732

68.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 11732
- 68.19.22 Remove(key as Integer) as Integer 11732

68.19.24 UpperBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.19.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.19.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
Var m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.19.27 Properties

68.19.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new IntegerToVariantOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

68.19.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.19.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.19.31 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.20 class StackDoubleMBS

68.20.1 class StackDoubleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of doubles.
Example:

```
Var s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

68.20.2 Methods

68.20.3 Bottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Bottom)
```

68.20.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackDoubleMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

68.20.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.20.6 Contains(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given double value.
Example:

```
Var s as new StackDoubleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.20.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackDoubleMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
```

68.20.8 Pop as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

68.20.9 PopBottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.PopBottom)
```

68.20.10 Push(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackDoubleMBS

call s.Push 5
```

Notes: Returns true if successfull.
May fail on low memory.

68.20.11 Top as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackDoubleMBS
call s.Push 5
```

```
MsgBox str(s.Top)
```

Notes: Returns 0 on any error.

68.20.12 Properties

68.20.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackDoubleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.21 class StackIntegerMBS

68.21.1 class StackIntegerMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of integers.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

68.21.2 Methods

68.21.3 Bottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.Bottom)
```

68.21.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
```

```
end if
```

68.21.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.21.6 Contains(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given integer value.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.21.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackIntegerMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
```

68.21.8 Pop as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

68.21.9 PopBottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.PopBottom)
```

68.21.10 Push(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackIntegerMBS
call s.Push 5
```

Notes: Returns true if successfull.
May fail on low memory.

68.21.11 Top as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

68.21.12 Properties

68.21.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackIntegerMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.22 class StackObjectMBS

68.22.1 class StackObjectMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of objects.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

68.22.2 Methods

68.22.3 Bottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
MsgBox window(s.Bottom).title
```

68.22.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackObjectMBS

call s.Push window1

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

68.22.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.22.6 Contains(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the object references on the stack is equal to the given object reference.
Example:

```
Var s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.22.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackObjectMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```

68.22.8 Pop as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
MsgBox window(s.pop).title
```

Notes: Returns nil on any error.

68.22.9 PopBottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
MsgBox window(s.PopBottom).title
```

68.22.10 Push(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
```

Notes: Returns true if successfull.
May fail on low memory.
Does not push nil.

68.22.11 Top as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackObjectMBS
call s.Push window1
```

```
MsgBox window(s.top).title
```

Notes: Returns nil on any error.

68.22.12 Properties

68.22.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackObjectMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push window1

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.23 class StackSingleMBS

68.23.1 class StackSingleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of singles.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

68.23.2 Methods

68.23.3 Bottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Bottom)
```

68.23.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
```

```
end if
```

68.23.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.23.6 Contains(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given single value.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.23.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackSingleMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
```

68.23.8 Pop as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Pop)
```

Notes: Returns 0 on any error.

68.23.9 PopBottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

MsgBox str(S.PopBottom)
```

68.23.10 Push(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackSingleMBS
call s.Push 5
```

Notes: Returns true if successfull.
May fail on low memory.

68.23.11 Top as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

68.23.12 Properties

68.23.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackSingleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.24 class StackStringMBS

68.24.1 class StackStringMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of strings.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

68.24.2 Methods

68.24.3 Bottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
MsgBox s.bottom
```

68.24.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackStringMBS

call s.Push "abc"

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

68.24.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.24.6 Contains(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the string references on the stack is equal to the given double reference.
Example:

```
Var s as new StackStringMBS

call s.Push "Hello"

if s.Contains("Hello") then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.24.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackStringMBS

MsgBox str(s.Deep)

call s.Push "Hello"

MsgBox str(s.Deep)
```

68.24.8 Pop as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

Notes: Returns "" on any error.

68.24.9 PopBottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
MsgBox s.PopBottom
```

68.24.10 Push(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
```

Notes: Returns true if successfull.
May fail on low memory.

68.24.11 Top as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Top
```

Notes: Returns "" on any error.

68.24.12 Properties

68.24.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackStringMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push "Hello"

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.25 class StackVariantMBS

68.25.1 class StackVariantMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of variants.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

68.25.2 Methods

68.25.3 Bottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

MsgBox s.Bottom
```

68.25.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
```

```
end if
```

68.25.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

68.25.6 Contains(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the variant references on the stack is equal to the given variant reference.
Example:

```
Var s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

68.25.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
Var s as new StackVariantMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```

68.25.8 Pop as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

MsgBox s.pop
```

Notes: Returns nil on any error.

68.25.9 PopBottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

68.25.10 Push(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
Var s as new StackVariantMBS
call s.Push 5
```

Notes: Returns true if successfull.
May fail on low memory.

68.25.11 Top as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
Var s as new StackVariantMBS

call s.Push 5

MsgBox s.top
```

Notes: Returns nil on any error.

68.25.12 Properties

68.25.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
Var s as new StackVariantMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

68.26 class StringHashSetIteratorMBS

68.26.1 class StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringHashSet class.
Example:

```
// Create a map
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.26.2 Methods

68.26.3 isEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

68.26.4 isNotEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.26.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.26.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.27 class StringHashSetMBS

68.27.1 class StringHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with strings.
Example:

```
Var s as new StringHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.27.2 Methods

68.27.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.27.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.27.5 Constructor(Keys() as string) 11762

68.27.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
Var s() as string = array("Hello", "World", "test")

Var set as new StringHashSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.27.4 Constructor(CaseSensitive as Boolean = true) 11762

68.27.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.27.7 find(key as string) as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.27.8 first as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.27.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.27.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.27.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.27.12 last as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringHashSetIteratorMBS = m.first
Var e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.27.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new StringHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.27.15 Remove(key as string) as Integer 11766
- 68.27.16 Remove(pos as StringHashSetIteratorMBS) 11766

68.27.15 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 11765
- 68.27.16 Remove(pos as StringHashSetIteratorMBS) 11766

68.27.16 Remove(pos as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 11765
- 68.27.15 Remove(key as string) as Integer 11766

68.27.17 Properties

68.27.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new StringHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.27.19 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringHashSetMBS(true)
Var s2 as new StringHashSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.27.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new StringHashSetMBS

set.insert "a"
set.insert "b"

MsgBox str(set.Count)
```

Notes: (Read only property)

68.27.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.27.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.28 class StringOrderedSetIteratorMBS

68.28.1 class StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringOrderedSet class.
Example:

```
// Create a map
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.28.2 Methods

68.28.3 isEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

68.28.4 isNotEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.28.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.28.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.28.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.29 class StringOrderedSetMBS

68.29.1 class StringOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set of strings.
Example:

```
Var s as new StringOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.29.2 Methods

68.29.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.29.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.29.5 Constructor(Keys() as string) 11772

68.29.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
Var s() as string = array("Hello", "World", "test")

Var set as new StringOrderedSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.29.4 Constructor(CaseSensitive as Boolean = true) 11772

68.29.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.29.7 find(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.29.8 first as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.29.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.29.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.29.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.29.12 last as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
Var i as StringOrderedSetIteratorMBS = m.first
Var e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.29.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new StringOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.29.14 LowerBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.29.16 Remove(key as string) as Integer 11776
- 68.29.17 Remove(pos as StringOrderedSetIteratorMBS) 11776

68.29.16 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 11776
- 68.29.17 Remove(pos as StringOrderedSetIteratorMBS) 11776

68.29.17 Remove(pos as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 11776
- 68.29.16 Remove(key as string) as Integer 11776

68.29.18 UpperBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.29.19 Properties

68.29.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringOrderedSetMBS(true)
Var s2 as new StringOrderedSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.29.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new StringOrderedSetMBS

set.insert "a"
set.insert "b"

MsgBox str(set.Count)
```

Notes: (Read only property)

68.29.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.29.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.30 class StringToStringHashMapIteratorMBS

68.30.1 class StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringHashMap class.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.30.2 Methods

68.30.3 isEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
```

```
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.30.4 isNotEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.30.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.30.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.30.7 Properties

68.30.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.31 class StringToStringHashMapMBS

68.31.1 class StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and values.
Example:

```
Var s as new StringToStringHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.
Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

68.31.2 Methods

68.31.3 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.31.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

68.31.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.31.6 Clone as StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.31.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.
Example:

```
Var d as new Dictionary
d.Value("Hello") = "World"

// convert o map
Var m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
Var o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

68.31.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.31.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

- 68.31.10 Constructor(other as StringToStringHashMapMBS) 11784

68.31.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
Example:

```
Var d as new Dictionary
d.Value("Hello") = "World"

// convert o map
Var m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
Var o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

See also:

- 68.31.8 Constructor(CaseSensitive as Boolean = true) 11783
- 68.31.10 Constructor(other as StringToStringHashMapMBS) 11784

68.31.10 Constructor(other as StringToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
Example:

```
Var d as new Dictionary
d.Value("Hello") = "World"

// convert o map
Var m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
Var o as StringToStringHashMapMBS = m.Clone
MsgBox o.Value("Hello")
```

See also:

- 68.31.8 Constructor(CaseSensitive as Boolean = true) 11783

• 68.31.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11784

68.31.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.31.12 find(key as string) as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.31.13 first as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.31.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.31.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.31.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.31.17 last as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"
```

```
// get iterators pointing to first and after last element
Var i as StringToStringHashMapIteratorMBS = m.first
Var e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.31.18 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new StringToStringHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.31.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.
Example:

```
Var d as new Dictionary
d.Value("Hello") = "World"

// convert o map
Var m as StringToStringHashMapMBS = d
MsgBox str(m.Count)

// convert back
Var o as Dictionary = m
```

MsgBox o.Value("Hello")

68.31.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.31.21 Remove(key as string) as Integer 11788
- 68.31.22 Remove(pos as StringToStringHashMapIteratorMBS) 11788

68.31.21 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.31.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 11788
- 68.31.22 Remove(pos as StringToStringHashMapIteratorMBS) 11788

68.31.22 Remove(pos as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.31.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 11788
- 68.31.21 Remove(key as string) as Integer 11788

68.31.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.31.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.31.25 Properties

68.31.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new StringToStringHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.31.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringToStringHashMapMBS(true)
Var s2 as new StringToStringHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.31.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new StringToStringHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.31.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.31.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.

(Read only property)

68.31.31 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.32 class StringToStringOrderedMapIteratorMBS

68.32.1 class StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringOrderedMap class.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

- MonkeyBread Software Releases the MBS Plugins 8.2

68.32.2 Methods

68.32.3 isEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
```

```
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.32.4 isNotEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.32.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.32.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.32.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.32.8 Properties

68.32.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.33 class StringToStringOrderedMapMBS

68.33.1 class StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings for keys and values.
Example:

```
Var s as new StringToStringOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

- MonkeyBread Software Releases the MBS Plugins 8.2

68.33.2 Methods

68.33.3 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.33.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

68.33.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.33.6 Clone as StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.33.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.33.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.33.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11796
- 68.33.10 Constructor(other as StringToStringOrderedMapMBS) 11797

68.33.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.33.8 Constructor(CaseSensitive as Boolean = true) 11796
- 68.33.10 Constructor(other as StringToStringOrderedMapMBS) 11797

68.33.10 Constructor(other as StringToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.33.8 Constructor(CaseSensitive as Boolean = true) 11796
- 68.33.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11796

68.33.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.33.12 find(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.33.13 first as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

68.33.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.33.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.33.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.33.17 last as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToStringOrderedMapIteratorMBS = m.first
Var e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.33.18 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new StringToStringOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.33.19 LowerBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.33.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.33.21 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.33.22 Remove(key as string) as Integer 11800
- 68.33.23 Remove(pos as StringToStringOrderedMapIteratorMBS) 11800

68.33.22 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.33.21 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 11800
- 68.33.23 Remove(pos as StringToStringOrderedMapIteratorMBS) 11800

68.33.23 Remove(pos as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.33.21 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 11800
- 68.33.22 Remove(key as string) as Integer 11800

68.33.24 UpperBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.33.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.33.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.33.27 Properties

68.33.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringToStringOrderedMapMBS(true)
Var s2 as new StringToStringOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"
```

```
s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.33.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new StringToStringOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.33.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.33.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.33.32 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.34 class StringToVariantHashMapIteratorMBS

68.34.1 class StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantHashMap class.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantHashMapIteratorMBS = m.first
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

68.34.2 Methods

68.34.3 isEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
```

```
Var i as StringToVariantHashMapIteratorMBS = m.first
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.34.4 isNotEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantHashMapIteratorMBS = m.first
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.34.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.34.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantHashMapIteratorMBS = m.first
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.34.7 Properties

68.34.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.35 class StringToVariantHashMapMBS

68.35.1 class StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and variants as values.
Example:

```
Var s as new StringToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

- MBS Real Studio Plugins, version 12.5pr10
- MonkeyBread Software Releases the MBS Plugins 8.2

68.35.2 Methods

68.35.3 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.35.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.35.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.35.6 Clone as StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.35.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.35.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11808
- 68.35.10 Constructor(other as StringToVariantHashMapMBS) 11809

68.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.35.8 Constructor(CaseSensitive as Boolean = true) 11808
- 68.35.10 Constructor(other as StringToVariantHashMapMBS) 11809

68.35.10 Constructor(other as StringToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.35.8 Constructor(CaseSensitive as Boolean = true) 11808
- 68.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11808

68.35.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.35.12 find(key as string) as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.35.13 first as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantHashMapIteratorMBS = m.first
```

```
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.35.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.35.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Example:

```
Var v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.35.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
```

next

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.35.17 last as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantHashMapIteratorMBS = m.first
Var e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.35.18 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new StringToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.35.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.35.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.35.21 Remove(key as string) as Integer 11812
- 68.35.22 Remove(pos as StringToVariantHashMapIteratorMBS) 11812

68.35.21 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.35.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 11812
- 68.35.22 Remove(pos as StringToVariantHashMapIteratorMBS) 11812

68.35.22 Remove(pos as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.35.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 11812
- 68.35.21 Remove(key as string) as Integer 11812

68.35.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Example:

```
Var v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.35.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.35.25 Properties

68.35.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new StringToVariantHashMapMBS

v.value("1")="Hello"
```

```
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.35.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringToVariantHashMapMBS(true)
Var s2 as new StringToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.35.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new StringToVariantHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.35.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.35.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.35.31 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Example:

```
Var v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.36 class StringToVariantOrderedMapIteratorMBS

68.36.1 class StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantOrderedMap class.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.36.2 Methods

68.36.3 isEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
```

```
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.36.4 isNotEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.36.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.36.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.36.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.36.8 Properties

68.36.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.37 class StringToVariantOrderedMapMBS

68.37.1 class StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings as keys and variants as values.
Example:

```
Var s as new StringToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

- MonkeyBread Software Releases the MBS Plugins 8.2

68.37.2 Methods

68.37.3 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.37.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

68.37.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.37.6 Clone as StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.37.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.37.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.37.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11820
- 68.37.10 Constructor(other as StringToVariantOrderedMapMBS) 11821

68.37.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.37.8 Constructor(CaseSensitive as Boolean = true) 11820
- 68.37.10 Constructor(other as StringToVariantOrderedMapMBS) 11821

68.37.10 Constructor(other as StringToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.37.8 Constructor(CaseSensitive as Boolean = true) 11820
- 68.37.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11820

68.37.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.37.12 find(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.37.13 first as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

68.37.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.37.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.37.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.37.17 last as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
Var i as StringToVariantOrderedMapIteratorMBS = m.first
Var e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

68.37.18 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new StringToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.37.19 LowerBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.37.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.37.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.37.22 Remove(key as string) as Integer 11824
- 68.37.23 Remove(pos as StringToVariantOrderedMapIteratorMBS) 11824

68.37.22 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.37.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 11824
- 68.37.23 Remove(pos as StringToVariantOrderedMapIteratorMBS) 11824

68.37.23 Remove(pos as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.37.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 11824
- 68.37.22 Remove(key as string) as Integer 11824

68.37.24 UpperBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.37.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.37.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
Var m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.37.27 Properties

68.37.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new StringToVariantOrderedMapMBS(true)
Var s2 as new StringToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"
```

```
s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.37.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new StringToVariantOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.37.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.37.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.37.32 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.38 class VariantHashSetIteratorMBS

68.38.1 class VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantHashSet class.
Example:

```
// Create a map
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.38.2 Methods

68.38.3 isEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

68.38.4 isNotEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.38.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.38.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.39 class VariantHashSetMBS

68.39.1 class VariantHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with variants.
Example:

```
Var s as new VariantHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes: When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.39.2 Methods

68.39.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.39.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.39.5 Constructor(Keys() as string) 11832

- 68.39.6 Constructor(Keys() as Variant) 11832

68.39.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.39.4 Constructor(CaseSensitive as Boolean = true) 11831
- 68.39.6 Constructor(Keys() as Variant) 11832

68.39.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.39.4 Constructor(CaseSensitive as Boolean = true) 11831
- 68.39.5 Constructor(Keys() as string) 11832

68.39.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.39.8 find(key as Variant) as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.39.9 first as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.39.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.39.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.39.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new VariantHashSetMBS

m.insert("1")
```

```
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.39.13 last as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantHashSetIteratorMBS = m.first
Var e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.39.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new VariantHashSetMBS

set.insert "Hello"
set.insert "World"
```

```
MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.39.16 Remove(key as Variant) as Integer 11835
- 68.39.17 Remove(pos as VariantHashSetIteratorMBS) 11835

68.39.16 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 11835
- 68.39.17 Remove(pos as VariantHashSetIteratorMBS) 11835

68.39.17 Remove(pos as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 11835
- 68.39.16 Remove(key as Variant) as Integer 11835

68.39.18 Properties

68.39.19 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new VariantHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.39.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new VariantHashSetMBS(true)
Var s2 as new VariantHashSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.39.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new VariantHashSetMBS

set.insert 1
set.insert 2
```

MsgBox str(set.Count)

Notes: (Read only property)

68.39.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.39.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.40 class VariantOrderedSetIteratorMBS

68.40.1 class VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantOrderedSet class.
Example:

```
// Create a map
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.40.2 Methods

68.40.3 isEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

68.40.4 isNotEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.40.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.40.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.40.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.41 class VariantOrderedSetMBS

68.41.1 class VariantOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with variants.
Example:

```
Var s as new VariantOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes: When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

68.41.2 Methods

68.41.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.41.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.41.5 Constructor(Keys() as string) 11842

- 68.41.6 Constructor(Keys() as Variant) 11842

68.41.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.41.4 Constructor(CaseSensitive as Boolean = true) 11841
- 68.41.6 Constructor(Keys() as Variant) 11842

68.41.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 68.41.4 Constructor(CaseSensitive as Boolean = true) 11841
- 68.41.5 Constructor(Keys() as string) 11842

68.41.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

68.41.8 find(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.41.9 first as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.41.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

68.41.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.41.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
Var m as new VariantOrderedSetMBS

m.insert("1")
```

```
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.41.13 last as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
Var m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
Var i as VariantOrderedSetIteratorMBS = m.first
Var e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

68.41.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
Var set as new VariantOrderedSetMBS

set.insert "Hello"
set.insert "World"
```

```
MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

68.41.15 LowerBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.41.17 Remove(key as Variant) as Integer 11845
- 68.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 11845

68.41.17 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 11845
- 68.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 11845

68.41.18 Remove(pos as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 11845
- 68.41.17 Remove(key as Variant) as Integer 11845

68.41.19 UpperBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.41.20 Properties

68.41.21 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new VariantOrderedSetMBS(true)
Var s2 as new VariantOrderedSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.41.22 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
Var set as new VariantOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

68.41.23 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.41.24 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.42 class VariantToVariantHashMapIteratorMBS

68.42.1 class VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantHashMap class.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

- MonkeyBread Software Releases the MBS Plugins 8.2

68.42.2 Methods

68.42.3 isEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
```

```
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.42.4 isNotEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.42.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.42.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.42.7 Properties

68.42.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.43 class VariantToVariantHashMapMBS

68.43.1 class VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an hash map with variants and keys and values.
Example:

```
Var s as new VariantToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: Think of this class like the reimplementation for dictionary class with being case sensitive.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

- MonkeyBread Software Releases the MBS Plugins 8.2

68.43.2 Methods

68.43.3 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.43.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.43.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.43.6 Clone as VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.43.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.43.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.43.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11852
- 68.43.10 Constructor(other as VariantToVariantHashMapMBS) 11853

68.43.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.43.8 Constructor(CaseSensitive as Boolean = true) 11852
- 68.43.10 Constructor(other as VariantToVariantHashMapMBS) 11853

68.43.10 Constructor(other as VariantToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.43.8 Constructor(CaseSensitive as Boolean = true) 11852
- 68.43.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11852

68.43.11 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.43.12 find(key as Variant) as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.43.13 first as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8
```

```
// get iterators pointing to first and after last element
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.43.14 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.43.15 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.43.16 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.43.17 last as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantHashMapIteratorMBS = m.first
Var e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.43.18 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new VariantToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.43.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.43.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.43.21 Remove(key as Variant) as Integer 11856
- 68.43.22 Remove(pos as VariantToVariantHashMapIteratorMBS) 11856

68.43.21 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.43.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 11856
- 68.43.22 Remove(pos as VariantToVariantHashMapIteratorMBS) 11856

68.43.22 Remove(pos as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.43.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 11856
- 68.43.21 Remove(key as Variant) as Integer 11856

68.43.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.43.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
Var m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.43.25 Properties

68.43.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
Var v as new VariantToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

68.43.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new VariantToVariantHashMapMBS(true)
Var s2 as new VariantToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.43.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new VariantToVariantHashMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.43.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.43.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.43.31 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

68.44 class VariantToVariantMapIteratorMBS

68.44.1 class VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantMap class.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.44.2 Methods

68.44.3 isEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.44.4 isNotEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.44.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

68.44.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
```

```
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.44.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

68.44.8 Properties

68.44.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

68.45 class VariantToVariantOrderedMapMBS

68.45.1 class VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with variants as keys and values.
Example:

```
Var s as new VariantToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes: Think of this class like the reimplementation for dictionary class with being case sensitive and with storing items ordered.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.
Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

68.45.2 Methods

68.45.3 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.45.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

68.45.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

68.45.6 Clone as VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

68.45.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

68.45.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 68.45.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11864
- 68.45.10 Constructor(other as VariantToVariantOrderedMapMBS) 11865

68.45.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 68.45.8 Constructor(CaseSensitive as Boolean = true) 11864
- 68.45.10 Constructor(other as VariantToVariantOrderedMapMBS) 11865

68.45.10 Constructor(other as VariantToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 68.45.8 Constructor(CaseSensitive as Boolean = true) 11864
- 68.45.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 11864

68.45.11 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

68.45.12 find(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

68.45.13 first as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8
```

```
// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.45.14 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

68.45.15 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.45.16 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

68.45.17 last as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
Var i as VariantToVariantMapIteratorMBS = m.first
Var e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

68.45.18 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
Var map as new VariantToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

68.45.19 LowerBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

68.45.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

68.45.21 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 68.45.22 Remove(key as Variant) as Integer 11868
- 68.45.23 Remove(pos as VariantToVariantMapIteratorMBS) 11868

68.45.22 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 68.45.21 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 11868
- 68.45.23 Remove(pos as VariantToVariantMapIteratorMBS) 11868

68.45.23 Remove(pos as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 68.45.21 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 11868
- 68.45.22 Remove(key as Variant) as Integer 11868

68.45.24 UpperBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

68.45.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

68.45.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
Var m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

68.45.27 Properties

68.45.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
Var s1 as new VariantToVariantOrderedMapMBS(true)
Var s2 as new VariantToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

68.45.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
Var map as new VariantToVariantOrderedMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

68.45.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

68.45.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
(Read only property)

68.45.32 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

Chapter 69

DDE

69.1 class DDEBinaryDataMBS

69.1.1 class DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binary Data for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

69.1.2 Methods

69.1.3 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a memoryblock.

69.1.4 size as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the size of this data object.

69.1.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a string.

69.1.6 Properties

69.1.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

69.1.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

69.2 class DDEContextInfoMBS

69.2.1 class DDEContextInfoMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Details for a connection.

69.2.2 Properties

69.2.3 Ansi as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Ansi strings (the normal ones).
Notes: Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

69.2.4 CountryID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The country ID for this connection.
Notes: Some Windows country constants:

(Read and Write property)

69.2.5 Flags as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for this connection.
Notes: Currently not used by Windows.
(Read and Write property)

69.2.6 LangID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language ID for this connection.
Notes: Some Windows language constants:

(Read and Write property)

69.2.7 Security as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A user defined security code.
Notes: A security value, which may be anything you need.
Maybe a code to verify that it is your app or the encryption code?
(Read and Write property)

69.2.8 Unicode as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Unicode strings.
Notes: Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

69.3 class DDEMBS

69.3.1 class DDEMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gives access to Windows DDE functions.
Notes: DDE on Windows is like AppleEvents on Mac OS, but not so comfortable.
Blog Entries

- MBS Xojo Plugins, version 25.6pr7

69.3.2 Methods

69.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransaction with datatype=CF_TEXT and data=nil.
See also:

- 69.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 11879
- 69.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 11880

69.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Shortversion of ClientTransaction with datatype=CF_TEXT.
See also:

- 69.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 11879
- 69.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 11880

69.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Example:

```
// List all Excel Topics

Var d as DDEMBS
Var s,topic as DDEStringMBS
Var g as DDEStringMBS
Var m as DDEBinaryDataMBS
Var t,enter,z as string
Var i,c as Integer

list.deleteAllRows
d=new DDEMBS
if d.InitClient then
s=d.newDDEString("Excel")
topic=d.newDDEString("System")
if topic<>nil and s<>nil and d.ConnectToServer(s,topic) then
g=d.newDDEString("Topics")
if g<>nil then
m=d.ClientTransaction(d.XTYP_REQUEST,g)
if m<>nil then
t=m.str
t=left(t,len(t)-1) // remove chr(0) at end
enter=chr(9)
c=countfields(t,Enter)
for i=1 to c
z=nthfield(t,enter,i)

list.addRow z
next
list.listindex=0
else
msgBox "Failed to transfer."
end if
else
msgBox "Fail to create second string."
end if
g=nil // must be released before close
else
msgBox "Fail to create connect."
end if
s=nil // must be released before close
```

```
d.close
else
msgBox "Fail to init for Client."
end if
```

Notes: Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 69.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 11879
- 69.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 11879

69.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with datatype=CF_TEXT and data=nil.
See also:

- 69.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 11881
- 69.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 11882

69.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with Datatype=CF_TEXT.
See also:

- 69.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 11881
- 69.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 11882

69.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 69.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 11881
- 69.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 11881

69.3.9 close

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the running connection.
Example:

```
Var d as DDEMBS
// work with dde object

if d<>nil then
d.close
d=nil
end if
```

Notes: RB seems to crash, if the object is not destroyed before application is quit.

69.3.10 ConnectToServer(appname as DDEStringMBS, topic as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects to the application for the given topic.
Example:

```
Var a,b as DDEStringMBS
Var d as DDEMBS

d=new DDEMBS
if d.InitClient then
```

```
a=d.newDDEString("servicename")
b=d.newDDEString("topicname")
if a<>nil and b<>nil then
if d.ConnectToServer(a,b) then
msgBox "Connected."
return // ok, so leave before closing.
else
msgBox "Failed to connect."
end if
else
msgBox "Unable to make DDE Strings."
end if
d.close // failed

else
msgBox "Failed to initClient."
end if
```

Notes: Using nil for appname or topic you can try to connect to anyone who accepts.
Renamed in v4.3 to ConnectToServer from Connect for better RB 6 compatibility.

69.3.11 InitClient as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE, but only for Client stuff.
Notes: With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

69.3.12 InitServer as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE for client and server stuff.
Notes: With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

69.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
See also:

- 69.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 11884
- 69.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 11884

69.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: A short version of NewDDEBinaryData which takes the whole string.
See also:

- 69.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 11883
- 69.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 11884

69.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: The offset and length is optional.
See also:

- 69.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 11883
- 69.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 11884

69.3.16 NewDDEString(ansistring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new ANSI DDE string.
Example:

```
Var d as DDEMBS // your DDE object
Var a as DDEStringMBS
```

```
a=d.newDDEString("servicename")
```

Notes: ANSI is the normal string encoding on Windows.

69.3.17 NewDDEStringUnicode(unicodestring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Unicode DDE string.
Example:

```
Var d as DDEMBS // your DDE object
Var a as DDEStringMBS
a=d.NewDDEStringUnicode("servicename")
```

Notes: Currently this DDE Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.

69.3.18 RegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers a service name.
Example:

```
Var d as DDEMBS // your dde object
Var s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.registerService(s) then
msgBox "Registered."
else
msgBox "Register fails."
end if
else
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

69.3.19 UnRegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unregisters a service name.
Example:

```
Var d as DDEMBS // your dde object
Var s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.UnRegisterService(s) then
msgBox "Unregistered."
else
msgBox "Unregister fails."
end if
else
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

69.3.20 Properties

69.3.21 LastError as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read only property)

69.3.22 Timeout as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Timeout in milliseconds.
Example:

```
Var d as DDEMBS // your DDE object
d.timeout=10000 // 10 Seconds
```

Notes: Default is 1000.
(Read and Write property)

69.3.23 Events

69.3.24 AdviceData(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A dynamic data exchange (DDE) client receives the AdviceData event after establishing an advise loop with a server. This transaction informs the client that the value of the data item has changed.

Return Values:
A DDE callback function should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

Remarks:
An application must copy the data associated with the DDEBinaryDataMBS object if the application must process the data after the callback function returns.

69.3.25 AdviceRequest(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,remaincount as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: The system sends the AdviceRequest event to a server after the server calls the DdePostAdvise function. This transaction informs the server that an advise transaction is outstanding on the specified topic name and item name pair and that data corresponding to the topic name and item name pair has changed.

Return Values:
The server should first call the NewDDEBinaryData function to create a data object that identifies the changed data and then return this object. The server should return nil if it is unable to complete the transaction.

69.3.26 AdviceStart(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A client uses this event to establish an advise loop with a server.

69.3.27 AdviceStop(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A client uses this event to end an advise loop with a server.

69.3.28 ConfirmConnect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: Your connection was accepted.

69.3.29 Connect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean,info as DDEContextInfoMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: Return true if you accept this connection.

69.3.30 Disconnect(myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: The connection was closed.

69.3.31 Error(errorcode as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A dynamic data exchange (DDE) object receives the Error event when a critical error occurs.

Possible errors:

DMLERR_ADVACKTIMEOUT	&h4000	
DMLERR_BUSY	&h4001	
DMLERR_DATAACKTIMEOUT	&h4002	
DMLERR_DLL_NOT_INITIALIZED	&h4003	
DMLERR_DLL_USAGE	&h4004	
DMLERR_EXECACKTIMEOUT	&h4005	
DMLERR_INVALIDPARAMETER	&h4006	
DMLERR_LOW_MEMORY	&h4007	Memory is low; advise, poke, or execute data may be lost, or the system may fail.
DMLERR_MEMORY_ERROR	&h4008	
DMLERR_NOTPROCESSED	&h4009	
DMLERR_NO_CONV_ESTABLISHED	&h400a	
DMLERR_POKEACKTIMEOUT	&h400b	
DMLERR_POSTMSG_FAILED	&h400c	
DMLERR_REENTRANCY	&h400d	
DMLERR_SERVER_DIED	&h400e	
DMLERR_SYS_ERROR	&h400f	
DMLERR_UNADVACKTIMEOUT	&h4010	
DMLERR_UNFOUND_QUEUE_ID	&h4011	

69.3.32 Execute(topic as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A dynamic data exchange (DDE) server object receives the Execute event when a client specifies XTYP_EXECUTE in the ClientTransaction function. A client uses this transaction to send a command string to the server.

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

The data property is only valid while inside the event.

69.3.33 Poke(topic as DDEStringMBS,item as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

69.3.34 Register(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A service is registered. You may add it to your own list.

69.3.35 Request(topic as DDEStringMBS,item as DDEStringMBS,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: The server should create a DDEBinaryDataMBS object that identifies the data and then return this object. The server should return nil if it is unable to complete the transaction. If the server returns nil, the client will receive a DDE_FNOTPROCESSED flag.

69.3.36 UnRegister(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A service was unregistered.

69.3.37 WildConnect(topic as DDEStringMBS,service as DDEStringMBS, myself as boolean,info as DDEContextInfoMBS) as DDEStringPairListMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DDE events.
Notes: A connection is tried to all available servers. Return true if you accept.

69.3.38 Constants

Constants

Constant	Value	Description
CF_BITMAP	2	A constant for the format parameter. Specifies a Windows bitmap format
CF_DIB	8	A constant for the format parameter. Specifies the Windows Device Independent Bitmap (DIB) format.
CF_DIBV5	17	A constant for the format parameter. Specifies the Windows Device Independent Bitmap (DIB) format of Windows 2000 and newer.
CF_DIF	5	A constant for the format parameter. Specifies the Windows data interchange format.
CF_ENHMETAFILE	14	A constant for the format parameter. Specifies the Windows enhanced metafile format.
CF_HDROP	15	A constant for the format parameter. Specifies the Windows file drop format.
CF_LOCALE	16	A constant for the format parameter. Specifies the Windows locale format.
CF_METAFILEPICT	3	A constant for the format parameter. Specifies the Windows metafile format.
CF_OEMTEXT	7	A constant for the format parameter. Specifies the standard Windows original equipment manufacturer (OEM) text format.
CF_PALETTE	9	A constant for the format parameter. Specifies the Windows Palette format.
CF_PENDATA	10	A constant for the format parameter. Specifies the Windows pen data format.
CF_RIFF	11	A constant for the format parameter. Specifies the Resource Interchange File Format (RIFF) audio format.
CF_SYLK	4	A constant for the format parameter. Specifies the Windows symbolic link format.
CF_TEXT	1	A constant for the format parameter. Specifies the standard American National Standards Institute (ANSI) text format.
CF_TIFF	6	A constant for the format parameter. Specifies the Tagged Image File Format (TIFF).
CF_UNICODETEXT	13	A constant for the format parameter. Specifies the standard Windows Unicode text format.
CF_WAVE	12	A constant for the format parameter. Specifies the wave audio format.
DDE_FACK	&h8000	A constant for the return parameter of some events. Return DDE_FACK if everything was handled well.
DDE_FBUSY	&h4000	A constant for the return parameter of some events. Return DDE_FBUSY if your application is busy and can't currently handle the request.
DDE_FNOTPROCESSED	0	A constant for the return parameter of some events. Return DDE_FNOTPROCESSED if something went wrong will processing this event.
XTYP_EXECUTE	&h4050	A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.
XTYP_POKE	&h4090	A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.
XTYP_REQUEST	&h20B0	A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

69.4 class DDEStringMBS

69.4.1 class DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

69.4.2 Methods

69.4.3 Len as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the length of this string.

69.4.4 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo Memoryblock.

69.4.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo string.

69.4.6 Properties

69.4.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

69.4.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

69.5 class DDEStringPairListMBS

69.5.1 class DDEStringPairListMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A list of DDE string pairs.
Notes: Used for the wild connect event.

69.5.2 Methods

69.5.3 Append(item as DDEStringPairMBS)

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds another item to the list.

69.5.4 Count as Integer

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Counts the number of items in the list.

69.5.5 Item(index as Integer) as DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an item from this list.
Notes: Returns nil on any error.
Index is from 0 to count-1.

69.6 class DDEStringPairMBS

69.6.1 class DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A pair of topic and service DDEString objects.
Notes: Used for the wild connect event.

69.6.2 Properties

69.6.3 Service as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The service of this pair.
Notes: (Read and Write property)

69.6.4 Topic as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The topic of this pair.
Notes: (Read and Write property)

Chapter 70

Declare

70.1 class BlockMBS

70.1.1 class BlockMBS

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A class to use blocks on Mac OS X with declares.
Blog Entries

- Three new controls for iOS in Xojo
- MBS Xojo / Real Studio plug-ins version 16.2
- MBS Xojo / Real Studio Plugins, version 16.2pr6
- MBS Xojo / Real Studio Plugins, version 13.4pr4

Xojo Developer Magazine

- 14.4, page 10: News

70.1.2 Methods

70.1.3 Close

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Releases all blocks.

70.1.4 GetBlockB(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockB event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

70.1.5 GetBlockBI(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockBI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

70.1.6 GetBlockBII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockBII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

70.1.7 GetBlockBIII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockBIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value

in the AsyncBoolResult property.

70.1.8 GetBlockBIIII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockBIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

70.1.9 GetBlockV(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockV event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

70.1.10 GetBlockVI(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockVI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

70.1.11 GetBlockVII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockVII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

70.1.12 GetBlockVIII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockVIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

70.1.13 GetBlockVIIII(tag as Variant = nil) as Integer

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes: Tag is passed to the event.
Later when the block is invoked, the BlockVIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

70.1.14 Properties

70.1.15 AsyncBoolResult as Boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The result for a boolean block called on a non main thread.
Notes: If you use one of the BlockB methods to get a block and it's called on another thread but the main thread, we return the value of this property instead of the actual event result.
(Read only property)

70.1.16 Synchronous as Boolean

MBS Util Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Whether to call events synchronously.
Notes: If the block is called on another thread, the plugin calls the event on the main thread.
If Synchronous is true, we call the main thread synchronously, else asynchronously.
Default is asynchronously to avoid dead locks.
(Read and Write property)

70.1.17 Events

70.1.18 BlockB(Async_ as boolean, tag as Variant) as boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

70.1.19 BlockBI(Async_ as boolean, tag as Variant, value as Integer) as boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

70.1.20 BlockBII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer) as boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

70.1.21 BlockBIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer) as boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

70.1.22 BlockBIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer) as boolean

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

70.1.23 BlockV(Async_ as boolean, tag as Variant)

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.

70.1.24 BlockVI(Async_ as boolean, tag as Variant, value as Integer)

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

70.1.25 BlockVII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer)

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

70.1.26 BlockVIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer)

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

70.1.27 BlockVIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer)

MBS Util Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Called when block is invoked.
Notes: Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

70.2 class SoftDeclareMBS

70.2.1 class SoftDeclareMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A way to do soft linking to libraries.
Example:

```
// Load the Stuffit Bundle on Mac OS X:
Var f as FolderItem
Var s as SoftDeclareMBS

f=FrameworksFolderMBS(-32765).Child("StuffIt.framework")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "ok"
end if
```

Notes: Deprecated. Please move to newer DeclareLibraryMBS and DeclareFunctionMBS classes.

You can make a declare like this:

Declare Function SpeakString lib "SpeechLib" (SpeakString as pstring) as Integer

But what if the SpeechLib is not installed?
Simple, but your application won't even launch on this machine.
Now you can of course use this MBS Plugin using the SpeechMBS functions, which are all week linked.
But you can also use this class to weak link to the SpeechMBS library like this:

```
Var b as boolean, m,p as memoryblock, c as SoftDeclareMBS

c=new SoftDeclareMBS
p=newmemoryBlock(256) // make the string for the first parameter
p.pstring(0)="Hello World!"

m=newmemoryBlock(4) // make the memoryblock for the parameters
m.long(0)=p.Address(0) // set the first parameter to the address of the string buffer

if c.loadlibrary("SpeechLib") then // Load librarys
if c.loadfunction("SpeakString") then // Load function
b=c.Call(1,m)
end if
end if
```

This way your application will be loaded, you can call the function, but people who don't have the SpeechLib will also here it.

70.2.2 Methods

70.2.3 CallFunction(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
Var c as SoftDeclareMBS
Var m,p,b as memoryBlock
Var f as folderItem
Var path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction("iii",m) then
```

```
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes: The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 70.2.4 CallFunction(paramcount as Integer,data as memoryblock) as boolean 11906

70.2.4 CallFunction(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
Var c as SoftDeclareMBS
Var m,p,b as memoryBlock
Var f as folderItem
Var path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
```

```
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction(3,m) then
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes: If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin. You can even use only one memoryblock for all 3 parameters in the example like this:

```
m=newmemoryBlock(2100)
m.cstring(1024)=path
m.long(0)=m.address(20)
m.long(4)=m.address(1024)
m.long(8)=1024
```

First 12 bytes for the parameter table, the next 1000 bytes for the result buffer and finally a thousand bytes for the input string.

Before RB 3.1 this function was named "Call", but RB5 requires that the word "Call" is no longer valid for a function name.

Softdeclare is limited to only 6 parameters for plugin version 3.2. Plugin version 3.3 extends this to 8 parameters.
See also:

- 70.2.3 CallFunction(param as string,data as memoryblock) as boolean 11905

70.2.5 CallFunctionDouble(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes: The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 70.2.6 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean 11908

70.2.6 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes: Fills the ResultDouble property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

- 70.2.5 CallFunctionDouble(param as string,data as memoryblock) as boolean 11908

70.2.7 CallFunctionInteger64(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes: The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

• 70.2.8 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean 11909

70.2.8 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes: Fills the ResultInt64 property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

• 70.2.7 CallFunctionInteger64(param as string,data as memoryblock) as boolean 11908

70.2.9 CallMethod(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes: The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

• 70.2.10 CallMethod(paramcount as Integer,data as memoryblock) as boolean 11909

70.2.10 CallMethod(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes: If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using

memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
Returns true on success.
See also:

- 70.2.9 CallMethod(param as string,data as memoryblock) as boolean 11909

70.2.11 CopyLibrary(byref target as SoftDeclareMBS)

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the library handle to another softdeclare object.
Notes: if target is nil, a new object is created.
The library handle in the target object is set to point to the same library as the original object.

70.2.12 FreeLibrary as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Releases the library.
Notes: Only for Windows currently this function releases the handles and unloads the library. Windows internally has a reference counter for the library so memory is only released when the last reference is freed. Lasterror is set.

70.2.13 LoadConstant(constname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a constant from inside the library.
Example:

```
Var c as SoftDeclareMBS
Var s as CFStringMBS
Var m as MemoryBlock
Var handle as Integer

// Test Mac OS X
// Load the constant kABFirstNameProperty from the Addressbook framework

c=new SoftDeclareMBS

if c.LoadFramework("Addressbook.framework") then
msgbox "Loaded "+c.libname+" to "+format(c.libhandle,"-0")+"."
if c.LoadConstant("kABFirstNameProperty") then
```

```
msgbox "Loaded constant "+c.ConstantName+" to "+format(c.ConstantPointer,"-0")+"."

m=NewMemoryBlockFromPtrMBS(c.ConstantPointer) // I hope it's not nil!

handle=m.Long(0)
if handle<>0 then
s=new CFStringMBS
s.Handle=handle

msgbox "Got value: "+s.str
end if
else
msgbox "Loading of constant "+c.ConstantName+" failed."
end if
else
msgbox "Loading of Addressbook.framework failed."
end if
```

Notes: Lasterror is set.

70.2.14 LoadDLL(libname as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Loads a Windows DLL.
Notes: Lasterror is set.
libname can be name (e.g. "KERNEL32"), filename (e.g. "KERNEL32.DLL") or path (e.g. "C:\WINDOWS\KERNEL32.DLL").

70.2.15 LoadDLLfromMemory(data as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platform: Windows, Targets: All.

Function: Loads a Windows DLL from a string.
Notes: Some libraries don't like to be loaded from a string.
But else you can pass any DLL file content to this function.

The string is locked so it stays in memory.
On success the handle property is not zero and the function returns true.

70.2.16 LoadDylib(path as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a library in Mac OS X dylib format.
Notes: Lasterror and Liberror are set.

70.2.17 LoadFramework(frameworkfilename as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a framework in Mac OS X.
Example:

```
// A user's question:
// I am trying to call this to Carbon.framework using the softdeclare function:

// UInt32 SwapQDTextFlags(UInt32 newFlags);

// flags are OR'd

// kQDUseDefaultTextRendering = 0
// kQDUseTrueTypeScalerGlyphs = (1 «0)
// kQDUseCGTextRendering = (1 «1)
// kQDUseCGTextMetrics = (1 «2)
// kQDDontChangeFlags = 0xFFFFFFFF

// The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTE-
Field). How should I call this?

// The solution code:

Var s as SoftDeclareMBS
Var m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadFramework("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
```

```
end if

// Without any error checking!
```

Notes: frameworkfilename is e.g. "Carbon.framework"
Lasterror is set.

70.2.18 LoadFrameworkFile(frameworkpath as folderitem) as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Loads on Mac OS X a framework from the given file specification.
Example:

```
Var f as FolderItem
Var s as SoftDeclareMBS

f=SpecialFolder.Desktop.Child("spellcheck.bundle")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "OK"
end if
```

Notes: Returns true if successfull.
Lasterror is set.

70.2.19 LoadFunction(funcname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a function from inside the library.
Example:

```
Var s as SoftDeclareMBS
Var m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadLibrary("Carbon.Framework") then
```

```
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if
```

Notes: A user's question:
I am trying to call this to Carbon.framework using the softdeclare function:

UInt32 SwapQDTextFlags(UInt32 newFlags);

flags are OR'd

kQDUseDefaultTextRendering = 0
kQDUseTrueTypeScalerGlyphs = (1 «0)
kQDUseCGTextRendering = (1 «1)
kQDUseCGTextMetrics = (1 «2)
kQDDontChangeFlags = 0xFFFFFFFF

The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTEField).
How should I call this?

The solution code is above without any error checking!

Lasterror is set.

70.2.20 LoadLibrary(libname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes: On Mac OS X e.g. "Carbon.framework" or "System.framework".
On Mac OS Carbon inside Classic e.g. "CarbonLib".
On Windows e.g. "KERNEL32" or "USER32".

Lasterror is set.

70.2.21 ParametersSupported(param as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether plugin supports the given parameter string.
Notes: The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

Any new parameter string can be added. Please send an email to support to get a new combination added.

70.2.22 Properties

70.2.23 CallingMode as Integer

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What calling mode to use.
Notes: 0 = Pascal (default)
1 = C

The Windows API works with Pascal, but calls to QuickTime DLL use C.
(Read and Write property)

70.2.24 ConstantFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the constant loaded?
Notes: Set by the LoadConstant function.
(Read and Write property)

70.2.25 ConstantName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the constant to load.
Notes: Set by the LoadConstant function.
(Read and Write property)

70.2.26 ConstantPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the constant loaded.
Notes: Set by the LoadConstant function.
(Read and Write property)

70.2.27 FunctionFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the function loaded?
Notes: Set by the LoadFunction function.
(Read only property)

70.2.28 FunctionName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function to load.
Notes: Set by the LoadFunction function.
(Read and Write property)

70.2.29 FunctionPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the function loaded.
Notes: Set by the LoadFunction function.
(Read and Write property)

70.2.30 Lasterror as Integer

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: LoadLibraryFile, LoadLibrary, LoadFunction, LoadConstant and FreeLibrary set this property.
(Read and Write property)

70.2.31 Liberror as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: An error message from loadlibrary.
Notes: Set by the LoadLibrary function.
(Read and Write property)

70.2.32 Libfound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the library loaded?
Notes: Set by the LoadLibrary function.
(Read only property)

70.2.33 Libhandle as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle of the library loaded.
Notes: Set by the LoadLibrary function.
On Mac OS Classic a CFragConnectionID.
On Mac OS X a CFBundleRef.
On Windows a HINSTANCE.
(Read and Write property)

70.2.34 Libname as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the library to load.
Notes: Set by the LoadLibrary function.
(Read and Write property)

70.2.35 Result as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function.
Notes: Set by the Call function.

(Read and Write property)

70.2.36 ResultDouble as Double

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionDouble.
Notes: (Read and Write property)

70.2.37 ResultInt64 as MemoryBlock

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionInteger64.
Example:

```
Var s as SoftDeclareMBS
Var m as MemoryBlock

s=new SoftDeclareMBS
if s.LoadDLL("test64bit.dll") then
if s.LoadFunction("Get64bitNumber") then
if s.CallFunctionInteger64(0,nil) then
MsgBox hex(s.ResultInt64.long(4))+hex(s.ResultInt64.long(0))
end if
end if
end if

' DLL was created with a function like this:
' IMPEXP long long Get64bitNumber()
' {
' return 0x1122334455667788;
' }
```

Notes: (Read and Write property)

Chapter 71

DirectShow

71.1 class DirectShowAMCameraControlMBS

71.1.1 class DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface provides local or remote control over a camera.
Example:

```
Var srcFilter as DirectShowBaseFilterMBS // your device
Var a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
Var ZoomMin as integer
Var ZoomMax as integer
Var ZoomStep as integer
Var ZoomDefault as Integer
Var ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
Var ErrorCode as integer = a.Lasterror
Var ErrorText as string = a.LasterrorMessage

Break // check in debugger

// set a minimum value
a.Set(a.kPropertyZoom, (ZoomMax-ZoomMin)/2, 0)
ErrorCode = a.Lasterror
ErrorText = a.LasterrorMessage

Break // check in debugger
```

Notes: Applications can use this interface to control camera settings such as zoom, pan, aperture adjustment, or shutter speed. To obtain this interface, query the filter that controls the camera.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Real Studio Plugins, version 12.4pr9

71.1.2 Methods

71.1.3 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.1.4 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the current setting of a camera property.
Notes: PropertySelector: A long value that specifies the property to retrieve, see kProperty* constants.
Value: receives the value of the property.
Flags: Receives a member of the CameraControlFlags enumeration. The returned value indicates whether the setting is controlled manually or automatically.

Lasterror is set.

71.1.5 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the range and default value of a specified camera property.
Example:

```
Var srcFilter as DirectShowBaseFilterMBS // your device
Var a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
```

```
Var ZoomMin as integer
Var ZoomMax as integer
Var ZoomStep as integer
Var ZoomDefault as Integer
Var ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
Var ErrorCode as integer = a.Lasterror
Var ErrorText as string = a.LasterrorMessage

Break // check in debugger
```

Notes: PropertySelector: A long value that specifies the property to query, see kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives an element of the CameraControlFlags enumeration, indicating whether the property is controlled automatically or manually.

Lasterror is set.

71.1.6 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method sets a specified property on the camera.
Notes: PropertySelector: A long value that specifies the property to set, see kProperty* constants.
Value: A long value that specifes the new value of the property.
Flags: A long value that specifies the desired control setting. See kFlags* constants.

Lasterror is set.

71.1.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.1.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 11922

71.1.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.1.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 11921

71.1.9 Properties

71.1.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IAMCameraControl interface.
(Read and Write property)

71.1.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.1.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.1.13 Constants

Flags

Constant	Value	Description
kFlagsAuto	1	The setting is controlled automatically.
kFlagsManual	2	The setting is controlled manually.

Properties

Constant	Value	Description
kPropertyExposure	4	Identifies the exposure setting, in log base 2 seconds. In other words, for values less than zero, the exposure time is 1/2n seconds, and for values zero or above, the exposure time is 2n seconds. For example: Value Seconds -3 1/8 -2 1/4 -1 1/2 0 1 1 2 2 4
kPropertyFocus	6	Specifies the camera's focus setting, as the distance to the optimally focused target, in millimeters. The range and default value are specific to the device.
kPropertyIris	5	Specifies the camera's iris setting, in units of fstop * 10.
kPropertyPan	0	Identifies the camera's pan setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values are clockwise from the origin (the camera rotates clockwise when viewed from above), and negative values are counterclockwise from the origin.
kPropertyRoll	2	Identifies the camera's roll setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values cause a clockwise rotation of the camera along the image-viewing axis, and negative values cause a counterclockwise rotation of the camera.
kPropertyTilt	1	Identifies the camera's tilt setting, in degrees. Values range from –180 to +180, with the default set to zero. Positive values point the imaging plane up, and negative values point the imaging plane down.
kPropertyZoom	3	Identifies the camera's zoom setting, in millimeters. Values range from 10 to 600, and the default is specific to the device.

71.2 class DirectShowAMCrossbarMBS

71.2.1 class DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMCrossbar interface routes signals from an analog or digital source to a video capture filter.
Notes: This interface is implemented by the Analog Video Crossbar Filter. The Analog Video Crossbar filter is modeled after a general switching matrix, with n inputs and m outputs. For example, a video card might have two external connectors: a coaxial connector for TV, and an S-video input. These would be represented as input pins on the filter. To select one of the inputs, an application would use the IAMCrossbar interface to "route" an input pin to the filter's output pin, by calling the Route method.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd389171(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Xojo / Real Studio Plugins, version 14.1pr3
- MBS Real Studio Plugins, version 12.5pr1

71.2.2 Methods

71.2.3 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter for the crossbar.
Notes: See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

71.2.4 CanRoute(OutputPinIndex as Integer, InputPinIndex as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CanRoute method queries whether a specified input pin can be routed to a specified output pin.
Notes: OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of input pin.
Lasterror is set.

Returns true if two pins can be routed.

To route the pins, call the Route method. Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

71.2.5 Constructor

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.2.6 GetCrossbarPinInfo(IsInputPin as boolean, PinIndex as Integer, byref PinIndexRelated as Integer, byref PhysicalType as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getCrossbarPinInfo method retrieves information about a specified pin.
Notes: IsInputPin: Specifies the direction of the pin. Use one of the following values.

Value	Meaning
True	Input pin
False	Output pin

PinIndex: Specifies the index of the pin.
PinIndexRelated: Variable that receives the index of the related pin, or –1 if no pin is related to this pin. The related pin is a pin on the same filter, with the same direction; it typically represents the same physical jack or connector. For example, a video tuner and an audio tuner might be related pins. Typically, if two pins are related, you should route them together.
PhysicalType: Variable that receives a member of the PhysicalConnectorType enumeration, indicating the pin's physical type.

Lasterror is set.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

71.2.7 GetPinCounts(byref OutputPinCount as Integer, byref InputPinCount as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getPinCounts method retrieves the number of input and output pins on the crossbar filter.
Notes: OutputPinCount: Variable that receives the number of output pins.
InputPinCount: Variable that receives the number of input pins.

Lasterror is set.

The other IAMCrossbar methods take parameters that specify pins by index number. For these methods, output pins and input pins are both indexed from zero. Use the getPinCounts method to determine the upper bounds for each.

71.2.8 IsRoutedTo(InputPinIndex as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsRoutedTo method retrieves the input pin that is currently routed to the specified output pin.
Notes: OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Variable that receives the index of the input pin, or -1 if no input pin is routed to this output pin.

Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.
Lasterror is set.

71.2.9 PhysicalPinName(type as Integer) as string

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the name for a given type.
Notes: Just a convenience method to return english names for types.

71.2.10 Route(OutputPinIndex as Integer, InputPinIndex as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Route method routes an input pin to an output pin.
Notes: OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of the input pin.

Lasterror is set.

Routing two pins causes the output pin to deliver data from that input pin. Only one input pin at a time can be routed to a given output pin.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

71.2.11 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.2.12 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 11927

71.2.12 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
Var Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
Var srcfilter as DirectShowBaseFilterMBS // your source filter

Var AMCrossbar As DirectShowAMCrossbarMBS = srcfilter.AMCrossbar
If AMCrossbar <>Nil Then
AMCrossbar.ShowPropertyDialog
MsgBox "Result: "+Str(AMCrossbar.Lasterror)+": "+AMCrossbar.LasterrorMessage
Else
MsgBox "No AMCrossbar."
End If
```

Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.2.11 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 11927

71.2.13 Properties

71.2.14 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IAMCrossbar interface.
(Read and Write property)

71.2.15 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.2.16 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.2.17 Constants

Physical Type Constants

Constant	Value	Description
PhysConn_Audio_1394	4103	Specifies an IEEE 1394 pin for audio.
PhysConn_Audio_AESDigital	4099	Specifies an AES/EBU (Audio Engineering Society/European Broadcas Union) digital pin for audio.
PhysConn_Audio_AudioDecoder	4105	Specifies an audio decoder pin.
PhysConn_Audio_AUX	4102	Specifies an AUX pin for audio.
PhysConn_Audio_Line	4097	Specifies a line pin for audio.
PhysConn_Audio_Mic	4098	Specifies a microphone pin.
PhysConn_Audio_SCSI	4101	Specifies a SCSI pin for audio.
PhysConn_Audio_SPDIFDigital	4100	Specifies an S/PDIF (Sony/Philips Digital Interface Format) digital pin fo audio.
PhysConn_Audio_Tuner	4096	Specifies a tuner pin for audio.
PhysConn_Audio_USB	4104	Specifies a USB pin for audio.
PhysConn_Video_1394	10	Specifies an IEEE 1394 pin for video.
PhysConn_Video_AUX	9	Specifies an AUX (auxiliary) pin for video.
PhysConn_Video_Black	15	Not used.
PhysConn_Video_Composite	2	Specifies a composite pin for video.
PhysConn_Video_ParallelDigital	7	Specifies a parallel digital pin for video.
PhysConn_Video_RGB	4	Specifies an RGB pin for video.
PhysConn_Video_SCART	14	Specifies a SCART (Peritel) pin for video.
PhysConn_Video_SCSI	8	Specifies a SCSI (Small Computer System Interface) pin for video.
PhysConn_Video_SerialDigital	6	Specifies a serial digital pin for video.
PhysConn_Video_SVideo	3	Specifies an S-Video (Y/C video) pin.
PhysConn_Video_Tuner	1	Specifies a tuner pin for video.
PhysConn_Video_USB	11	Specifies a USB (Universal Serial Bus) pin for video.
PhysConn_Video_VideoDecoder	12	Specifies a video decoder pin.
PhysConn_Video_VideoEncoder	13	Specifies a video encoder pin.
PhysConn_Video_YRYBY	5	Specifies a YRYBY (Y, R–Y, B–Y) pin for video.

71.3 class DirectShowAMStreamConfigMBS

71.3.1 class DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMStreamConfig interface sets the output format on certain capture and compression filters, for both audio and video.
Notes: Applications can use this interface to set format properties, such as the output dimensions and frame rate (for video) or the sample rate and number of channels (for audio).
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.3.2 Methods

71.3.3 AudioCaps as DirectShowAudioStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the audio capabilities.
Notes: Lasterror is set.
Returns empty array for video streams.

71.3.4 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.3.5 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries media types.
Notes: Lasterror is set.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319787(v=vs.85).aspx

71.3.6 NumberOfCapabilities as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of format capabilities that this pin supports.
Notes: Lasterror is set.

71.3.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.3.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 11931

71.3.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
Var Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
Var srcfilter as DirectShowBaseFilterMBS // your source filter

Var AMStreamConfig2 As DirectShowAMStreamConfigMBS = capture.GetStreamConfig(False, srcfilter)
If AMStreamConfig2 <>Nil Then
AMStreamConfig2.ShowPropertyDialog

MsgBox "Result: "+Str(AMStreamConfig2.Lasterror)+": "+AMStreamConfig2.LasterrorMessage
Else
MsgBox "No AMStreamConfig with srcfilter."
End If
```

Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.

Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.3.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 11931

71.3.9 VideoCaps as DirectShowVideoStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video capabilities.
Notes: Lasterror is set.
Returns empty array for audio streams.

71.3.10 Properties

71.3.11 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

71.3.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.3.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.3.14 Format as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the preferred output format.
Notes: Lasterror is set.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319785(v=vs.85).aspx
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319788(v=vs.85).aspx
(Read and Write computed property)

71.4 class DirectShowAMVideoCompressionMBS

71.4.1 class DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoCompression interface sets and retrieves video compression properties.
Notes: It is supported by some video compression filters, and also by some video capture filters that output compressed video. Filters that support this interface expose it through their output pins.
An application can use this interface to control how video is compressed, including characteristics such as the key-frame rate or the compression quality.
A filter that supports this interface might not support every method. Use the Capabilities property to determine which methods the filter supports.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr4
- MBS Xojo Plugins, version 19.1pr3

Xojo Developer Magazine

- 17.5, page 43: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

71.4.2 Methods

71.4.3 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter.
Notes: Lasterror and LastErrorMessage are set.

71.4.4 Constructor

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.4.5 OverrideFrameSize(FrameNumber as Integer, Size as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The frame size of a specified frame.
Notes: The first frame that the filter delivers is numbered zero.
If the filter supports this method, the CompressionCaps_CanCrunch flag is in the Capabilities property. However, this flag can also indicate that the filter supports setting the bit rate, so it does not guarantee that the OverrideFrameSize method is supported.

Lasterror and LastErrorMessage are set.

71.4.6 OverrideKeyFrame(FrameNumber as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The filter to compress a particular frame as a key frame.
Notes: The first frame that the filter delivers is numbered zero.
If the filter supports this method, you can use it to override the normal key-frame distribution for a particular frame. After the filter creates a key frame, it might reset its count to determine when the next key frame should occur. For example, if the key-frame rate is 10, and an application uses this method to force frame 5 as a key frame, the filter might wait another 10 frames (until frame 15) before it creates the next key frame.

Lasterror and LastErrorMessage are set.

71.4.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.4.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

71.4.8 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
Var Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
Var encoder as DirectShowBaseFilterMBS // your encoder filter

Var AMVideoCompression As DirectShowAMVideoCompressionMBS = encoder.AMVideoCompression
If AMVideoCompression <>Nil Then
AMVideoCompression.ShowPropertyDialog
MsgBox "Result: "+Str(AMVideoCompression.Lasterror)+": "+AMVideoCompression.LasterrorMessage
Else
MsgBox "No AMVideoCompression."
end if
```

Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.4.7 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 11935

71.4.9 Properties

71.4.10 Capabilities as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the compression capabilities, as a bitwise combination of zero or more CompressionCaps flags.
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.11 DefaultKeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default key-frame rate.
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.12 DefaultPFramesPerKey as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default rate of predicted (P) frames per key frame.
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.13 DefaultQuality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default quality.
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.14 Description as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a description string, such as "My Video Compressor."
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.15 Handle as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

71.4.16 KeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The key-frame rate.
Notes: If the value is negative, the filter will use the default key-frame rate. If the value is zero, only the first frame will be a key frame.

To determine if the filter supports this method, call the Capabilities property and check for the CompressionCaps_CanKeyFrame flag.

Lasterror and LastErrorMessage are set.
(Read and Write property)

71.4.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.4.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.4.19 PFramesPerKeyFrame as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The rate of predicted (P) frames per key frame.
Notes: If the value is negative, the filter will use the default rate.
To determine if the filter supports this method, check for the CompressionCaps_CanBFrame flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

71.4.20 Quality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The compression quality.
Notes: Specifies the quality as a value between 0.0 and 1.0, where 1.0 indicates the best quality and 0.0 indicates the worst quality. If the value is negative, the filter will use the default quality.
To determine if the filter supports this method, check for the CompressionCaps_CanQuality flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

71.4.21 Version as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a version string, such as "Version 2.1.0."
Notes: Lasterror and LastErrorMessage are set.
(Read only property)

71.4.22 WindowSize as UInt64

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of frames over which the compressor must maintain an average data rate.
Notes: For example, assuming a data rate of 100K/sec and a frame rate of 10 frames per second, if the window size is 1, then every frame will be 10K or less. If the window size is 5, then every five consecutive frames must average 10K per frame, but individual frames may exceed this size.
The window size, expressed as a number of frames.

Lasterror and LastErrorMessage are set.
(Read and Write property)

71.4.23 Constants

Compression Capabilities

Constant	Value	Description
CompressionCapsCanBFrame	&h08	Video compressor supports the PFramesPerKeyFrame properties.
CompressionCapsCanCrunch	&h02	Video compressor can compress video to a specified data rate. If the compressor has this capability then the output pins media type will contain the data rate in the VIDEOINFOHEADER structure's BitRate member. The only way to set the data rate is to set BitRate.
CompressionCapsCanKeyFrame	&h04	Video compressor supports the KeyFrameRate properties.
CompressionCapsCanQuality	&h01	Video compressor supports the Quality property.
CompressionCapsCanWindow	&h10	Video compressor supports the WindowSize properties.

71.5 class DirectShowAMVideoControlMBS

71.5.1 class DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoControl interface controls certain video capture operations such as enumerating available frame rates and image orientation.
Notes: For Windows Driver Model (WDM) devices, the WDM Video Capture Filter automatically exposes this interface if the WDM driver supports the PROPSETID_VIDCAP_VIDEOCONTROL property set. For more information, see the Windows Driver Kit (WDK) documentation.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 19.3, page 10: News

71.5.2 Methods

71.5.3 Caps(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCaps method retrieves the capabilities of the underlying hardware.
Notes: Result is a combination of the flags from the VideoControl Flags, which specify the video control mode.

Possible capabilities include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

71.5.4 Constructor

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.5.5 CurrentActualFrameRate(pin as DirectShowPinMBS) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCurrentActualFrameRate method retrieves the actual frame rate, expressed as a frame duration in 100-nanosecond units. USB (Universal Serial Bus) and IEEE 1394 cameras may provide lower frame rates than requested because of bandwidth availability. This is only available during video streaming.
Notes: Pin: the pin to retrieve the frame rate from.

Lasterror is set.

71.5.6 FrameRateList(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64()

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetFrameRateList method retrieves a list of available frame rates.
Notes: Pin: The pin to query for the list of frame rates.
Index: Index of the format to query for frame rates. This index corresponds to the order in which formats are enumerated by DirectShowVideoStreamConfigCapsMBS structures returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.

Returns an array of frame rates in 100-nanosecond units.

Lasterror is set.

71.5.7 MaxAvailableFrameRate(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxAvailableFrameRate method retrieves the maximum frame rate currently available, based on bus bandwidth usage for connections, such as USB and IEEE 1394, where the maximum frame rate may be limited by bandwidth availability.
Notes: Pin: The pin to retrieve the maximum frame rate from.
Index: Index of the format to query for maximum frame rate. This index corresponds to the order in which formats are enumerated by GetStreamCaps. The value must range between zero and the number of supported DirectShowVideoStreamConfigCapsMBS returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.
MaxAvailableFrameRate: Pointer to the maximum available frame rate. The frame rate is expressed as frame duration in 100-nanosecond units.

Lasterror is set.

71.5.8 Mode(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMode method retrieves the video control mode of operation.
Notes: Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

71.5.9 SetMode(pin as DirectShowPinMBS, mode as Integer)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetMode method sets the video control mode of operation.
Example:

```
Var pin as DirectShowPinMBS // your till image pin
Var filter as DirectShowBaseFilterMBS

Var vc as DirectShowAMVideoControlMBS = filter.AMVideoControl
vc.SetMode(pin, vc.FlagExternalTriggerEnable + vc.FlagTrigger)
```

Notes: Value specifying a combination of the flags from the VideoControl Flags to set the video control mode.

Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

71.5.10 Properties

71.5.11 Handle as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IAMVideoControl interface.
(Read and Write property)

71.5.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.5.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.5.14 Constants

Capabilities Flags

Constant	Value	Description
FlagExternalTriggerEnable	2	Sets up a stream to capture a trigger from an external source, for example, a push button on a camera. Buffers can be queued to the driver but will not be passed up from the WDM capture driver (for compression, display, or writing to a file) until the external event happens.
FlagFlipHorizontal	0	Specifies that the picture is flipped horizontally.
FlagFlipVertical	1	Specifies that the picture is flipped vertically.
FlagTrigger	3	In software, simulates an external trigger when the stream has the VideoControlFlag_ExternalTriggerEnable flag set.

71.6 class DirectShowAMVideoProcAmpMBS

71.6.1 class DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AMVideoProcAmp interface adjusts the qualities of an incoming video signal, such as brightness, contrast, hue, saturation, gamma, and sharpness.
Notes: The WDM Video Capture filter exposes this interface if the hardware supports image adjustment.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

71.6.2 Methods

71.6.3 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.6.4 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets video quality for a specified property.
Notes: PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: Receives the value of the property.
Flags: Receives the flags. The returned value indicates whether the setting is controlled manually or automatically.
Lasterror is set.

71.6.5 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum, maximum, and default values for setting properties.
Notes: PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
MinValue: Receives the minimum value of the property.

MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives a member of the VideoProcAmpFlags enumeration, indicating whether the property is controlled automatically or manually.
Lasterror is set.

71.6.6 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets video quality for a specified property.
Notes: PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: The new value of the property.
Flags: The desired control setting. See kFlags* constants.

Lasterror is set.

71.6.7 Properties

71.6.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IAMVideoProcAmp interface.
(Read and Write property)

71.6.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.6.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.6.11 Constants

Flags

Constant	Value	Description
kFlagsAuto	1	The setting is controlled automatically.
kFlagsManual	2	The setting is controlled manually.

Properties

Constant	Value	Description
kPropertyBacklightCompensation	8	Specifies the backlight compensation setting. Possible values are 0 (off) and (on).
kPropertyBrightness	0	Specifies the brightness, also called the black level. For NTSC, the value i expressed in IRE units * 100. For non-NTSC sources, the units are arbitrary with zero representing blanking and 10,000 representing pure white. Value range from –10,000 to 10,000.
kPropertyColorEnable	6	Specifies the color enable setting. The possible values are 0 (off) and 1 (on).
kPropertyContrast	1	Specifies the contrast, expressed as gain factor * 100. Values range from zer to 10,000.
kPropertyGain	9	Specifies the gain adjustment. Zero is normal. Positive values are brighter an negative values are darker. The range of values depends on the device.
kPropertyGamma	5	Specifies the gamma, as gamma * 100. Values range from 1 to 500.
kPropertyHue	2	Specifies the hue, in degrees * 100. Values range from -180,000 to 180,000 (-18 to +180 degrees).
kPropertySaturation	3	Specifies the saturation. Values range from 0 to 10,000.
kPropertySharpness	4	Specifies the sharpness. Values range from 0 to 100.
kPropertyWhiteBalance	7	Specifies the white balance, as a color temperature in degrees Kelvin. Th range of values depends on the device.

71.7 class DirectShowAudioStreamConfigCapsMBS

71.7.1 class DirectShowAudioStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of audio formats.
Notes: Audio compression and capture filters use this structure to describe the formats they can produce. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.7.2 Methods

71.7.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.7.4 Properties

71.7.5 BitsPerSampleGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the bits per sample.
Notes: For example, the filter might specify 8 bits per sample through 32 bits per sample, in steps of 8.
(Read only property)

71.7.6 ChannelsGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the channels.
Notes: For example, the filter might specify channels 2 through 4, in steps of 2.
(Read only property)

71.7.7 MaximumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

71.7.8 MaximumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum number of channels.
Notes: (Read only property)

71.7.9 MaximumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

71.7.10 MinimumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum bits per sample.
Notes: (Read only property)

71.7.11 MinimumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum number of channels.
Notes: (Read only property)

71.7.12 MinimumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum sample frequency.
Notes: (Read only property)

71.7.13 SampleFrequencyGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the frequency.
Notes: For example, the filter might specify 11025 Hz to 44100 Hz, in steps of 11025 Hz.
(Read only property)

71.8 class DirectShowBaseFilterMBS

71.8.1 class DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The BaseFilter interface is the primary interface for DirectShow filters.
Notes: All DirectShow filters must expose this interface. The Filter Graph Manager uses this interface to control filters. Applications can use this interface to enumerate pins and query for filter information, but should not use it to change the state of a filter. Instead, use the MediaControl interface on the Filter Graph Manager.
Subclass of the DirectShowMediaFilterMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- News from the MBS Xojo Plugins Version 21.1
- MBS Xojo Plugins, version 19.1pr4

71.8.2 Methods

71.8.3 AMCameraControl as DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries camera control object.
Example:

```
Var srcfilter as DirectShowBaseFilterMBS // your basefilter
Var value, flags as Integer
Var c as DirectShowAMCameraControlMBS = srcfilter.AMCameraControl
if c<>nil then

c.Get(c.kPropertyZoom, value, flags)
if c.Lasterror = 0 then
MsgBox "Zoom: "+str(value)
else
MsgBox "Zoom: "+c.LasterrorMessage
end if

c.Get(c.kPropertyFocus, value, flags)
if c.Lasterror = 0 then
MsgBox "Focus: "+str(value)
else
MsgBox "Focus: "+c.LasterrorMessage
end if
```

```
c.Get(c.kPropertyExposure, value, flags)
if c.Lasterror = 0 then
MsgBox "Exposure: "+str(value)
else
MsgBox "Exposure: "+c.LasterrorMessage
end if

end if
```

Notes: Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

71.8.4 AMCrossbar as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the IAMCrossbar interface for this filter.
Notes: Returns nil if no such interface exists.

71.8.5 AMVideoCompression as DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video compression settings for the filter.

71.8.6 AMVideoControl as DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video controls for this filter.
Notes: Should work for capture filters.
Lasterror is set.

71.8.7 AMVideoProcAmp as DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video properties object.
Example:

```
Var srcfilter as DirectShowBaseFilterMBS // your basefilter
Var value, flags as Integer
Var v as DirectShowAMVideoProcAmpMBS = srcfilter.AMVideoProcAmp
if v<>nil then
v.Get(v.kPropertyHue, value, flags)
if v.Lasterror = 0 then
MsgBox "Hue: "+str(value)
else
MsgBox "Hue: "+v.LasterrorMessage
end if

v.Get(v.kPropertyBrightness, value, flags)
if v.Lasterror = 0 then
MsgBox "Brightness: "+str(value)
else
MsgBox "Brightness: "+v.LasterrorMessage
end if

end if
```

Notes: Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

71.8.8 ConfigAviMux as DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config avimux object.
Notes: Lasterror is set.
Works only with filters which support this interface.

71.8.9 ConfigInterleaving as DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config interleaving object.
Notes: Lasterror is set.
Works only with filters which support this interface.

71.8.10 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.8.11 EnumPins as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EnumPins method enumerates the pins on this filter.
Example:

```
Var filter as DirectShowBaseFilterMBS // your device filter

Var pn as DirectShowEnumPinsMBS = srcfilter.EnumPins

// loop over them and show names of pins
Var p as DirectShowPinMBS = pn.NextObject
while p <>nil
Var name as string = p.Name

MsgBox name

p = pn.NextObject
wend
```

Notes: Lasterror is set.

71.8.12 FindPin(name as string) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves the pin with the specified identifier.
Notes: name: string that identifies the pin.

Returns the pin object.
Lasterror is set.

This method supports graph persistence. Use the DirectShowPinMBS.QueryId method to save a pin's state, and use this method to restore the state. The pin's identifier string is defined by the filter implementation. The identifier must be unique within the filter.

71.8.13 Info as DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the filter.
Notes: Lasterror is set.
Returns nil on error.

71.8.14 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog for the filter.
Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.8.15 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 11955

71.8.15 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog for the filter.
Example:

```
Var srcfilter as DirectShowBaseFilterMBS // your filter

srcfilter.ShowPropertyDialog
MsgBox "Result: "+Str(srcfilter.Lasterror)+": "+srcfilter.LasterrorMessage
```

Notes: Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 71.8.14 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 11955

71.8.16 VendorInfo as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a string containing vendor information.
Notes: Lasterror is set.
This method is optional; filters are not required to support it.

71.9 class DirectShowBindContextMBS

71.9.1 class DirectShowBindContextMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to a bind context, which is an object that stores information about a particular moniker binding operation.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr2

71.9.2 Methods

71.9.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to create a new bind context.

71.9.4 Properties

71.9.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IConfigAviMux interface.
(Read and Write property)

71.9.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.9.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.10 class DirectShowCaptureGraphBuilderMBS

71.10.1 class DirectShowCaptureGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds capture graphs and other custom filter graphs.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd376359(v=vs.85).aspx

71.10.2 Methods

71.10.3 AllocCapFile(FilePath as string, Size as UInt64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AllocCapFile method preallocates a capture file to a specified size. For best results, always capture to a defragmented, preallocated capture file that is larger than the size of the capture data.
Notes: FilePath: a string that contains the name of the file to create or resize.
Size: Size of the file to allocate, in bytes.

Lasterror is set.

This method fails if the file is read-only.
It is best to allocate as much space as possible—ideally, more than needed. However, this can result in a very large file that contains relatively little data. For example, a 1-gigabyte (GB) capture file might contain a few megabytes of captured video. Use the CopyCaptureFile method to copy the data into a new file. That method copies only the data and ignores the empty portion of the original file.
If you use this method to preallocate the file, call SetMode on the file-writer filter with the value zero. If the filter is set to AM_FILE_OVERWRITE, it will delete the preallocated file. Note that some file-writer filters do not support mode 0.

71.10.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

71.10.5 Crossbar(filter as DirectShowBaseFilterMBS) as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds a crossbar in the graph.
Notes: See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

This function implements the FindInterface call with LOOK_UPSTREAM_ONLY and the filter you provide.

71.10.6 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes: Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where

n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.
See also:

- 71.10.7 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 11961

71.10.7 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes: Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.

See also:

- 71.10.6 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 11960

71.10.8 GetFiltergraph as DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the filter graph that the builder is using.
Notes: Sets lasterror.

71.10.9 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Example:

```
Var graph as DirectShowCaptureGraphBuilderMBS // your graph
Var filter as DirectShowBaseFilterMBS // your filter

Var StreamConfig as DirectShowAMStreamConfigMBS
StreamConfig = g.GetStreamConfig(DirectShowPinMBS.PIN_CATEGORY_STILL, filter)
```

Notes: Lasterror is set.
e.g. pass PIN_CATEGORY_CAPTURE or PIN_CATEGORY_PREVIEW for category, as defined in PinMBS class.
See also:

- 71.10.10 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 11962

71.10.10 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Notes: Lasterror is set.

Preview: Pass true to get the preview pin or pass false for the capture pin instead.
See also:

- 71.10.9 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 11962

71.10.11 MEDIATYPE_Audio as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Audio.

71.10.12 MEDIATYPE_AUXLine21Data as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Line 21 data. Used by closed captions.

71.10.13 MEDIATYPE_Interleaved as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Interleaved audio and video. Used for Digital Video (DV).

71.10.14 MEDIATYPE_Midi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: MIDI format.

71.10.15 MEDIATYPE_ScriptCommand as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Data is a script command, used by closed captions.

71.10.16 MEDIATYPE_Stream as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Byte stream with no time stamps.

71.10.17 MEDIATYPE_Text as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Text.

71.10.18 MEDIATYPE_Timecode as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Timecode data. Note: DirectShow does not provide any filters that support this media type.

71.10.19 MEDIATYPE_Video as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Video.

71.10.20 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes: Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATE-

GORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

71.10.21 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes: Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

- 71.10.20 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil) 11964

71.10.22 SetFiltergraph(graph as DirectShowGraphBuilderMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Tells the graph builder object which filter graph to use.
Notes: Lasterror is set.

graph: specifies the filter graph to use for subsequent calls to the AddFilter method.

The graph builder will automatically create a filter graph if you don't call this method. If you call this method after the graph builder has created its own filter graph, the call will fail.

71.10.23 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes: Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 71.10.24 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS) 11966

71.10.24 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes: Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 71.10.23 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string) 11966

71.10.25 SetupHighestResolution(videoInputFilter as DirectShowBaseFilterMBS, preview as boolean = false)

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to query stream config and select the one with highest resolution.
Notes: Queries internally GetStreamConfig, walks over all VideoCaps, picks best and sets it as format.

71.10.26 Properties

71.10.27 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an ICaptureGraphBuilder interface.
(Read and Write property)

71.10.28 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.10.29 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.11 class DirectShowConfigAviMuxMBS

71.11.1 class DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class configures the AVI Mux filter.
Notes: Applications can use this class to set the master stream and to create an AVI 1.0 index.

DirectShowConfigAviMuxMBS provides backward compatibility with older Video for Windows (VFW) Audio-Video Interleaved (AVI) index formats (idx1) as well as extended AVI 2.0 index formats (indx) to allow for file sizes greater than 1 gigabyte (GB). Set and retrieve the compatibility indexes by using the OutputCompatibilityIndex property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.11.2 Methods

71.11.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.11.4 Properties

71.11.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IConfigAviMux interface.
(Read and Write property)

71.11.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.

(Read and Write property)

71.11.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.11.8 MasterStream as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the master stream that will be used to synchronize the other streams in the file.
Notes: Specifies the index of the stream, or –1 to indicate no master stream. The AVI Mux writes one stream for each connected input pin. Stream numbers are indexed from zero.
Lasterror is set.

If you are capturing audio and video from two different sources, use this method to synchronize the streams. Streams coming from separate capture sources may be captured at slightly different rates. If you specify a master stream, the AVI Mux adjusts the playback rates for the other streams, to compensate for any drift that might occur.
It is recommended to use the audio stream as the master stream, because minor adjustments to the video playback rate are less noticeable than changes to the audio playback rate. Also, modifying the audio playback rate will cause the audio to be resampled by the audio driver.
This method works by adjusting the dwScale and dwRate values in the AVISTREAMHEADER structure.
(Read and Write computed property)

71.11.9 OutputCompatibilityIndex as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the AVI index format.
Notes: Lasterror is set.
True: Create an AVI 1.0 index, as well as an AVI 2.0 index.
False: Create an AVI 2.0 index, but not an AVI 1.0 index.

The AVI Mux filter always creates an AVI 2.0 index ('indx' format). If the value given in fOldIndex is TRUE, the AVI Mux also creates an AVI 1.0 index ('idx1' format), for backward compatibility with Video for Windows.
The AVI 2.0 index format allows for larger files, incremental growth of files, and minimized disk seeks.

(Read and Write computed property)

71.12 class DirectShowConfigInterleavingMBS

71.12.1 class DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConfigInterleaving interface controls how the AVI Mux filter interleaves audio and video samples.
Notes: Video-authoring applications that handle capturing should use this interface when they need to control how audio samples and video frames will be saved on a disk.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.12.2 Methods

71.12.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.12.4 Properties

71.12.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IConfigInterleaving interface.
(Read and Write property)

71.12.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.12.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.12.8 Mode as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The interleaving quality setting.
Notes: Lasterror is set.
See kInterleaving* constants.
(Read and Write computed property)

71.12.9 Constants

Interleaving Mode Constants

Constant	Value	Description
kInterleaveBuffered	3	Noninterleaved. This mode is equivalent to kInterleaveNone but uses less file space and system overhead.
kInterleaveCapture	1	Approximate interleaving with less overhead than kInterleaveFull. This mode is suitable for video capture. The AVI Mux attempts to use unbuffered, overlapped write operations. Unless the interleaving parameters are configured properly, however, frames may be dropped if one stream blocks while it waits for data from another stream. In particular, audio buffers should be less than .5 second, or else the video stream will block for excessive periods of time.
kInterleaveFull	2	Full, precise interleaving of audio samples and video frames. Streams will block indefinitely, waiting for equal amounts of data before interleaving. This mode is suitable for authoring and playback.
kInterleaveNone	0	Noninterleaved. Frames are written in the order they arrive. Files must be interleaved for playback at a later time. In this mode, the AVI Mux filter attempts to use unbuffered, overlapped write operations, to increase throughput.

71.13 class DirectShowDVInfoMBS

71.13.1 class DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a digital video (DV) stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.13.2 Methods

71.13.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.13.4 Properties

71.13.5 DVAAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control Pack for the first audio block.
Notes: (Read and Write property)

71.13.6 DVAAuxCtl1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control pack for the second audio block.
Notes: (Read and Write property)

71.13.7 DVAAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the audio auxiliary (AAUX) source pack for the first audio block.
Notes: (Read and Write property)

71.13.8 DVAAuxSrc1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source pack for the second audio block.
Notes: (Read and Write property)

71.13.9 DVVAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the VAUX source control pack.
Notes: (Read and Write property)

71.13.10 DVVAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the video auxiliary (VAUX) source pack.
Notes: (Read and Write property)

71.14 class DirectShowEnumMonikerMBS

71.14.1 class DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the monikers in a table of monikers.
Blog Entries

- MBS Xojo Plugins, version 21.5pr2

71.14.2 Methods

71.14.3 Clone as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new enumerator that contains the same enumeration state as the current one.
Notes: This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Returns nil on any error.
Lasterror is set.

71.14.4 CLSID_AudioCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Compressors

71.14.5 CLSID_AudioInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Capture Sources

71.14.6 CLSID_AudioRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Renderers

71.14.7 CLSID_DeviceControlCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Device Control Filters

71.14.8 CLSID_DVDHWDecodersCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: WDM Stream Decompression Devices
This category contains hardware DVD decoders.

71.14.9 CLSID_LegacyAmFilterCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: DirectShow Filters

71.14.10 CLSID_MidiRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Midi Renderers

71.14.11 CLSID_TransmitCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: External Renderers

71.14.12 CLSID_VideoCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Compressors

71.14.13 CLSID_VideoInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Capture Sources

71.14.14 Constructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to find filters.
Notes: Uses IFilterMapper2::EnumMatchingFilters to find installed filters in the registry.
Lasterror is set on failure.
See also:

- 71.14.15 Constructor(clsidDeviceClass as DirectShowGUIDMBS) 11978

71.14.15 Constructor(clsidDeviceClass as DirectShowGUIDMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator for a specified device category.
Notes: This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Lasterror is set.
See also:

- 71.14.14 Constructor 11978

71.14.16 Destructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

71.14.17 NextObject as DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the next item in the enumeration sequence.
Notes: Returns nil on any error.
Lasterror is set.

71.14.18 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration sequence to the beginning.
Notes: Lasterror is set.
There is no guarantee that the same set of objects will be enumerated after the reset operation has completed. A static collection is reset to the beginning, but it can be too expensive for some collections, such as files in a directory, to guarantee this condition.

71.14.19 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips over the specified number of items in the enumeration sequence.
Notes: Lasterror is set.

71.14.20 Properties

71.14.21 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IEnumMoniker interface.
(Read and Write property)

71.14.22 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.14.23 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.15 class DirectShowEnumPinsMBS

71.15.1 class DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates pins on a filter.
Notes: The BaseFilterMBS.EnumPins method returns this interface. It is based on the standard Component Object Model (COM) enumerators.
The filter graph manager uses this interface when it connects filters. Applications can use it to retrieve pins on a filter. For more information, see Enumerating Objects in a Filter Graph.
If the number of pins on the filter changes, some methods on this interface return VFW_E_ENUM_OUT_OF_SYNC. Call the Reset method to resynchronize the enumerator.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.15.2 Methods

71.15.3 Clone as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Clone method makes a copy of the enumerator with the same enumeration state.
Notes: Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Clone method safely.

71.15.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.15.5 NextObject as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Next method retrieves the next pin in the enumeration sequence.
Notes: Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Next method safely.

71.15.6 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Reset method resets the enumeration sequence to the beginning.
Notes: Lasterror is set.

71.15.7 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Skip method skips over a specified number of pins.
Notes: n: Number of pins to skip.

Lasterror is set.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Skip method safely.

71.15.8 Properties

71.15.9 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IEnumPins interface.
(Read and Write property)

71.15.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.15.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.16 class DirectShowFileSinkFilterMBS

71.16.1 class DirectShowFileSinkFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FileSinkFilter interface is implemented on filters that write media streams to a file.
Notes: A file sink filter in a video capture filter graph, for instance, writes the output of the video compression filter to a file. Typically, the application running this filter graph should enable the user to enter the name of the file to be written to. This interface enables the communication of this information.
If a filter needs the name of an output file, it should expose this interface to allow an application to set the file name. Note that there is currently no base class implementation of this interface.
Any application that must set the name of the file into which the file sink filter will write should use this interface to get and set the file name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.16.2 Methods

71.16.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.16.4 MEDIASUBTYPE_Asf as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for ASF video files.

71.16.5 MEDIASUBTYPE_Avi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for AVI video files.

71.16.6 Properties

71.16.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IFileSinkFilter interface.
(Read and Write property)

71.16.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.16.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.17 class DirectShowFilterGraphMBS

71.17.1 class DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods for building a filter graph.
Notes: An application can use it to add filters to the graph, connect or disconnect filters, remove filters, and perform other basic operations. However, the DirectShowGraphBuilderMBS interface inherits from this interface and provides additional methods that are more sophisticated. Therefore, applications should use DirectShowGraphBuilderMBS rather than using DirectShowFilterGraphMBS directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.17.2 Methods

71.17.3 AddFilter(SourceFilter as DirectShowBaseFilterMBS, Name as string = "")

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a filter to the graph.
Notes: Filter: The filter to add.
Name: name for filter.

Lasterror is set.

The name of the filter can be "", in which case the Filter Graph Manager generates a name. If the name is not "" and is not unique, this method will modify the name in an attempt to generate a new unique name. If this is successful, this method sets lasterror to VFW_S_DUPLICATE_NAME. If it cannot generate a unique name, it sets lasterror to VFW_E_DUPLICATE_NAME.
AddFilter calls the filter's JoinFilterGraph method to inform the filter that it has been added. AddFilter must be called before attempting to use the Connect, ConnectDirect, or Render method to connect or render pins belonging to the added filter.
The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

71.17.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.17.5 SetDefaultSyncSource

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the reference clock to the default clock.
Notes: Lasterror is set.

This method instructs the Filter Graph Manager to choose a reference clock using its default algorithm. For more information about the algorithm that it uses, see Reference Clocks.
Usually you do not need to call this method, because the Filter Graph Manager automatically selects a clock. However, if you call SetSyncSource to override the clock, you can use SetDefaultSyncSource to restore the default clock.
This method fails if the filter graph is running or paused.

71.17.6 Properties

71.17.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IFilterGraph interface.
(Read and Write property)

71.17.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.17.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.18 class DirectShowFilterInfoMBS

71.18.1 class DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for information about a filter.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.18.2 Methods

71.18.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.18.4 Properties

71.18.5 Graph as DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns filter graph.
Notes: If the filter is member of a filter graph, this is a reference to the filter graph's FilterGraph interface. If the filter is not a member of a filter graph, this value of this member is nil.
(Read and Write property)

71.18.6 Name as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the filter.
Notes: (Read and Write property)

71.19 class DirectShowGraphBuilderMBS

71.19.1 class DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods that enable an application to build a filter graph.
Notes: The GraphBuilder interface inherits from the FilterGraph interface. FilterGraph provides basic operations, such as adding a filter to the graph or connecting two pins. GraphBuilder adds further methods that construct graphs from partial information. For example, the RenderFile method builds a graph for file playback, given the name of the file. The Render method renders data from an output pin by connecting new filters to the pin.

Using these methods, an application does not need to specify every filter and pin connection in the graph. Instead, the Filter Graph Manager selects filters that are registered on the user's system, adds them to the graph, and connects them.

Subclass of the DirectShowFilterGraphMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

71.19.2 Methods

71.19.3 Abort

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Abort method requests the Filter Graph Manager to halt its current task as quickly as possible.
Notes: The current task may or may not fail to complete. Possibly the fastest option for the Filter Graph Manager is to complete the task.

Lasterror is set.

71.19.4 AddSourceFilter(FileName as string, FilterName as string) as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a source filter for a specified file to the filter graph.

Notes: FileName: the name of the file to load.
FilterName: name for the source filter.

Lasterror is set.

This method searches for an installed filter that can read the specified file. If it finds one, the method adds it to the filter graph and returns a pointer to the filter's IBaseFilter interface. To determine the media type and compression scheme of the file, the Filter Graph Manager reads the first few bytes of the file, looking for specific patterns of bytes, as documented in the article Registering a Custom File Type.

The application is responsible for building the rest of the filter graph. To do so, call EnumPins to enumerate the output pins on the source filter. Then use either the Connect method or the Render method.

If the method succeeds, the BaseFilter interface has an outstanding reference count. The caller must release the interface.

To render a file for default playback, use the RenderFile method.

The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

71.19.5 Connect(pinOut as DirectShowPinMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects the two pins, using intermediates if necessary.
Notes: pinOut: the output pin.
pinIn: the input pin.

Lasterror is set.

This method connects two pins directly or indirectly, adding intermediate filters if necessary. The method starts by attempting a direct connection. If that fails, it tries to use any filters that are already in the filter graph and have unconnected input pins. (It enumerates these in an arbitrary order.) If that fails, it searches for filters in the registry, and tries them in order of merit.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

http://msdn.microsoft.com/en-us/library/windows/desktop/dd390088(v=vs.85).aspx

71.19.6 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect an output pin to a filter.
Notes: Lasterror is set.
See also:

- 71.19.7 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 11991
- 71.19.8 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 11991

71.19.7 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect two filters.
Notes: Lasterror is set.
See also:

- 71.19.6 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 11991
- 71.19.8 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 11991

71.19.8 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect a filter to an input pin.
Notes: Lasterror is set.
See also:

- 71.19.6 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 11991
- 71.19.7 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 11991

71.19.9 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

71.19.10 MediaControl as DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media control object.
Notes: Lasterror is set.

71.19.11 MediaEventEx as DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media event object.
Notes: Lasterror is set.

71.19.12 Render(pinOut as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Render method builds a filter graph that renders the data from a specified output pin.
Notes: pinOut: an output pin.
Lasterror is set.

This method renders the data from a specified output pin, adding new filters to the graph as needed. Filters are tried in the same order as for the Connect method. For more information, see Intelligent Connect.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

71.19.13 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes: FilePath: string that contains the name of a media file.

Lasterror is set.

If the FilePath parameter specifies a media file, the method builds a filter graph for default playback. First it adds a source filter that can read the file, using the same process as the AddSourceFilter method. Then it renders the output pins on the source filter, adding intermediate filters if necessary. It tries filters in the same order as the Connect method.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).
Note that the RenderFile method does not remove any filters from the graph. If you call RenderFile twice, the second call simply adds more filters to the graph. When you run the graph, both sources will play at the same time.

71.19.14 SetLogFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetLogFile method sets the file for logging actions taken when attempting to perform an operation.
Notes: This method is for use in debugging; it is intended to help you determine the cause of any failure to automatically build a filter graph.
Lasterror is set.

71.19.15 VideoWindow as DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video window related to this graph builder.
Notes: Lasterror is set.

71.20 class DirectShowGUIDMBS

71.20.1 class DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windows unique ID.
Notes: If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.

71.20.2 Methods

71.20.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a GUID with only zeros.
Example:

```
Var g as new DirectShowGUIDMBS

MsgBox g.DisplayString
```

See also:

- 71.20.4 Constructor(Value as String) 11994

71.20.4 Constructor(Value as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates GUID based on a text string.
Notes: Raises exception if text has wrong format.
See also:

- 71.20.3 Constructor 11994
- 71.20.5 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer) 11995

71.20.5 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new GUID with the given byte values.
Example:

```
Var g as new DirectShowGUIDMBS(&h14, &h3e, &h4e, &h83, &h64, &h97, &h11, &hd2, &ha2, &h31, &h00, &hc0, &h4f, &ha3, &h18, &h09)

MsgBox g.DisplayString
```

See also:

- 71.20.3 Constructor 11994

71.20.6 Equal(other as DirectShowGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether two GUIDs are equal.
Notes: Returns true if both items are equals.

71.20.7 Operator_Convert as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts GUID to text.
Notes: Same as DisplayName.
See also:

- 71.20.8 Operator_Convert(text as String) 11996

71.20.8 Operator_Convert(text as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts text to GUID.
Notes: Same as Constructor.
Raises exception if text has wrong format.
See also:

- 71.20.7 Operator_Convert as String 11995

71.20.9 Parse(GUID as String) as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parses GUID string into a GUID object.

71.20.10 Properties

71.20.11 Data as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UID as binary string.
Notes: (Read and Write property)

71.20.12 DisplayString as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID well formatted.
Notes: (Read only property)

71.20.13 Memory as MemoryBlock

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set GUID with memory block.
Notes: (Read and Write property)

71.20.14 Ptr as Ptr

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw GUID data.
Notes: (Read only property)

71.20.15 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Read or write the byte value.
Example:

```
Var g as new DirectShowGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

Notes: (Read and Write computed property)

71.21 class DirectShowMediaControlMBS

71.21.1 class DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides methods for controlling the flow of data through the filter graph.
Notes: It includes methods for running, pausing, and stopping the graph. The Filter Graph Manager implements this interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.21.2 Methods

71.21.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.21.4 GetState(msTimeout as Integer = -1) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the state of the filter graph—paused, running, or stopped.
Notes: msTimeout: Duration of the time-out, in milliseconds, or INFINITE (-1) to specify an infinite time-out.

State transitions are not necessarily synchronous. Therefore, when you call this method, the filter graph might be in transition to a new state. In that case, the method blocks until the transition completes or until the specified time-out elapses.

Lasterror is set.

Applications can use this method to determine whether playback has started after a call to Run. Generally, applications should have their own mechanism for tracking which state they have put the filter graph into. Applications typically use the current state to determine which user interface controls are enabled or disabled. For example, once the graph goes into the running state, the application might disable a "Play" button and enable "Stop" and "Pause" buttons.
If the filter graph is in a transition to a new state, the returned state is the new state, not the previous state.
This method returns an error if there is a call on another thread to change the state while this method is blocked.
Avoid specifying a time-out of INFINITE, because threads cannot process messages while waiting in Get-

State. If you call GetState from the thread that processes Windows messages, specify small wait times on the call in order to remain responsive to user input. This is especially important when the source is streaming over a network or from the Internet because state transitions in these environments can take significantly more time to complete.

71.21.5 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses all the filters in the filter graph.
Notes: Lasterror is set.

Pausing the filter graph cues the graph for immediate rendering when the graph is next run. While the graph is paused, filters process data but do not render it. Data is pushed through the graph and processed by transform filters as far as buffering permits, but renderer filters do not render the data. However, video renderers display a static poster frame of the first sample.

If the method returns S_FALSE, call the GetState method to wait for the state transition to complete, or to check if the transition has completed. When you call Pause to display the first frame of a video file, always follow it immediately with a call to GetState to ensure that the state transition has completed. Failure to do this can result in the video rectangle being painted black.
If the method fails, it stops the graph before returning.

71.21.6 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes: Lasterror is set.

filePath: Specifies the name of the file to load.

71.21.7 Run

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs all the filters in the filter graph.
Notes: While the graph is running, data moves through the graph and is rendered.
Lasterror is set.

If the filter graph is stopped, this method pauses the graph before running. If the graph is already running, the method returns S_OK but has no effect.
The graph runs until the application calls the Pause or Stop method. When playback reaches the end of the stream, the graph continues to run, but the filters do not stream any more data. At that point, the application can pause or stop the graph. For information about the end-of-stream event, see Pause and EC_COMPLETE.
This method does not seek to the beginning of the stream. Therefore, if you run the graph, pause it, and then run it again, playback resumes from the paused position. If you run the graph after it has reached the end of the stream, nothing is rendered. To seek the graph, use the MediaSeeking interface.
If method returns S_FALSE, it means that the method returned before all of the filters switched to a running state. The filters will complete the transition after the method returns. Optionally, you can wait for the transition to complete by calling the GetState method with a timeout value. However, this is not required.
If the Run method returns an error code, it means that one or more filters failed to run. However, some filters might be in a running state. In a multistream graph, entire streams might be playing successfully. Typically the application would tear down the graph and report an error in this case.

71.21.8 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops all the filters in the graph.
Notes: Lasterror is set.

If the graph is running, this method pauses the graph before stopping it. While paused, video renderers can copy the current frame to display as a poster frame.

This method does not seek to the beginning of the stream. If you call this method and then call the Run method, playback resumes from the stopped position. To seek, use the IMediaSeeking interface.

The Filter Graph Manager pauses all the filters in the graph, and then calls the Stop method on all filters, without waiting for the pause operations to complete. Therefore, some filters might have their Stop method called before they complete their pause operation. If you develop a custom rendering filter, you might need to handle this case by pausing the filter if it receives a stop command while in a running state. However, most filters do not need to take any special action in this regard.

71.21.9 StopWhenReady

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses the filter graph, allowing filters to queue data, and then stops the filter graph.
Notes: Lasterror is set.

This method is useful if you want to seek the filter graph while the graph is stopped. As long as the filter graph is stopped, changes in the current position do not repaint the video window with a new frame. Therefore, calling SetPositions does not update the video window. To update the window after the seek operation, call StopWhenReady. This method transitions the graph to a paused state, waits for the pause operation to complete, and then transitions the graph back to stopped. The pause operation queues data in the graph, so that the video renderer receives and displays the new frame.

This method is asynchronous. It waits on a separate thread for the pause to complete. The calling thread does not block, which enables the application to respond to user input. When the method returns, the logical state of the graph is stopped, even before the pause operation completes. If you call the GetState method at this point, it returns State_Stopped.

If the application issues another state-change command (such as pause, run, or seek) before the pause operation completes, the new command cancels the pending stop command. The pause operation completes, but the graph does not stop.

71.21.10 Properties

71.21.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IMediaControl interface.
(Read and Write property)

71.21.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.21.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.21.14 Constants

State Constants

Constant	Value	Description
kStatePaused	1	Paused
kStateRunning	2	Running
kStateStopped	0	Stopped.

71.22 class DirectShowMediaEventExMBS

71.22.1 class DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for extended options for media event handling.
Notes: The DirectShowMediaEventExMBS interface inherits the DirectShowMediaEventMBS interface, which contains methods for retrieving event notifications and for overriding the filter graph's default handling of events. MediaEventEx adds methods that enable an application window to receive messages when events occur.
Subclass of the DirectShowMediaEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.22.2 Methods

71.22.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.22.4 Properties

71.22.5 NotifyFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables event notifications.
Notes: Value indicating whether to enable or disable event notifications. Must be one of the following values: 0 = Enable event notifications or AM_MEDIAEVENT_NONOTIFY = Disable event notifications.

Lasterror is set.

By default, the Filter Graph Manager posts event notifications for the application. If the NotifyFlags parameter is AM_MEDIAEVENT_NONOTIFY, the Filter Graph Manager clears any pending event notifications from the queue, and does not post any new ones.
If event notifications are disabled, the handle returned by the GetEventHandle method is signaled at the end of each stream—that is, whenever the Filter Graph Manager receives an EC_COMPLETE event.
(Read and Write computed property)

71.22.6 Constants

Constants

Constant	Value	Description
AM_MEDIAEVENT_NONOTIFY	1	One of the notify flags constant. Pass this value to NotifyFlags to disable event notification.

71.23 class DirectShowMediaEventMBS

71.23.1 class DirectShowMediaEventMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for media event handling.
Notes: The MediaEvent interface contains methods for retrieving event notifications and for overriding the Filter Graph Manager's default handling of events. The MediaEventEx interface inherits this interface and extends it.

The Filter Graph Manager implements this interface. Applications can use it to respond to events that occur in the filter graph, such as the end of a stream or a rendering error. Filters post events to the filter graph using the IMediaEventSink interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.23.2 Methods

71.23.3 CancelDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cancels the Filter Graph Manager's default handling for a specified event.
Notes: The event notification is passed to the application.
Lasterror is set.

To restore the default handling for an event, call the RestoreDefaultHandling method with the event code.

71.23.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.23.5 FreeEventParams(eventCode as Integer, Param1 as Integer, Param2 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Frees resources associated with the parameters of an event.
Notes: EventCode: Event code.

Param1: First event parameter.
Param2: Second event parameter.

Lasterror is set.
After you call the GetEvent method to retrieve an event notification, you must call FreeEventParams. This method frees any resources that were allocated for the event parameters. Pass in the same variables used for the GetEvent call.

71.23.6 RestoreDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the Filter Graph Manager's default handling for a specified event.
Notes: Lasterror is set.
By default, the Filter Graph Manager handles some events (such as EC_REPAINT) without passing them to the application. If you call the CancelDefaultHandling method to override the default handling for an event, you can restore the default behavior by calling RestoreDefaultHandling with the same event code.

71.23.7 Properties

71.23.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IMediaEvent interface.
(Read and Write property)

71.23.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.23.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.23.11 Constants

Constants

Constant	Value	Description
AM_MEDIAEVENT_NONOTIFY	1	One of the notify flags constant. Pass this value to NotifyFlags to disable event notification.

71.24 class DirectShowMediaFilterMBS

71.24.1 class DirectShowMediaFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MediaFilter interface controls the streaming state of a filter.
Notes: All DirectShow filters implement this interface. It provides methods for switching the filter between states (stopped, paused, and running); for retrieving the filter's current state; and for setting a reference clock. Applications should not call MediaFilter methods on filters.

The Filter Graph Manager also exposes this interface. Applications can use the SetSyncSource method to set the graph reference clock, and GetSyncSource to retrieve the clock. Applications should not call the other methods on this interface. Instead, use the corresponding methods on the MediaControl interface.
The BaseFilter interface inherits from MediaFilter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.24.2 Methods

71.24.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.24.4 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Pause method pauses the filter.
Notes: Lasterror is set.

When a filter is paused, it can receive, process, and deliver samples. However, a renderer filter will only accept one sample while paused. Therefore, when the filter graph is paused, samples move through the graph until the first sample reaches the renderer. At that point, streaming is paused until the Run method is called. Video renderers display the first sample as a still frame.

Live capture filters do not deliver any samples while paused, only while running.

The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1. A renderer filter does not complete the transition to paused until either (1) it receives one sample, or (2) it receives an end-of-stream notification. While the state transition is pending, State gives

lasterror VFW_S_STATE_INTERMEDIATE.

71.24.5 Run(StartTime as Int64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Run method runs the filter.
Notes: StartTime: Reference time corresponding to stream time 0.
Lasterror is set.

When a filter is running, it can receive, process, and deliver samples. Source filters generate new samples, and renderer filters render them.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
Stream time is calculated as the current reference time minus StartTime. To calculate when a media sample should be rendered, the renderer compares the time stamp with the current stream time. Thus, a media sample with a time stamp of zero should be rendered at time StartTime. For more information, see Time and Clocks in DirectShow.
When an application calls the Run method, the Filter Graph Manager calls Run on each filter. It sets the value of StartTime slightly in the future, to account for graph latency.

71.24.6 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Stop method stops the filter.
Notes: Lasterror is set.
When a filter is stopped, it does not process or deliver any samples, and it rejects samples from upstream filters.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
This method always sets the filter's state to kStateStopped, even if the method returns an error code.

71.24.7 Properties

71.24.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IMediaFilter interface.

(Read and Write property)

71.24.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.24.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.24.11 Constants

Filter State Constants

Constant	Value	Description
kStatePaused	1	Paused. The filter is processing data, but not rendering it.
kStateRunning	2	Running. The filter is processing and rendering data.
kStateStopped	0	Stopped. The filter is not processing data.

71.25 class DirectShowMediaTypeMBS

71.25.1 class DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a media sample.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd373477(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.25.2 Methods

71.25.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.25.4 SetHeight(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets height of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

71.25.5 SetWidth(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets width of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

71.25.6 Properties

71.25.7 DVINFO as DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as DVInfo.
Notes: Returns nil if format is not a DVInfo.
(Read only property)

71.25.8 FixedSizeSamples as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are of a fixed size.
Notes: This field is informational only. For audio, it is generally set to true. For video, it is usually true for uncompressed video and false for compressed video.
(Read and Write property)

71.25.9 FormatType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the structure used for the format block.
Notes: (Read and Write property)

71.25.10 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

71.25.11 Height as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries height of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

71.25.12 MajorType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Globally unique identifier (GUID) that specifies the major type of the media sample. F
Notes: or a list of possible major types, see Media Types.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

71.25.13 SampleSize as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size of the sample in bytes. For compressed data, the value can be zero.
Notes: (Read and Write property)

71.25.14 SubType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the subtype of the media sample.
Notes: For a list of possible subtypes, see Media Types. For some formats, the value might be MEDIA-SUBTYPE_None, which means the format does not require a subtype.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

71.25.15 TemporalCompression as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are compressed using temporal (interframe) compression.
Notes: A value of true indicates that not all frames are key frames. This field is informational only.
(Read and Write property)

71.25.16 VideoInfoHeader as DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader.
Notes: Returns nil if format is not a VideoInfoHeader.
(Read only property)

71.25.17 VideoInfoHeader2 as DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader2.
Notes: Returns nil if format is not a VideoInfoHeader2.
(Read only property)

71.25.18 WaveFormat as DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as WaveFormat.
Notes: Returns nil if format is not a WaveFormat.
(Read only property)

71.25.19 Width as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries width of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

71.26 class DirectShowMonikerMBS

71.26.1 class DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The moniker class to query information about devices.
Notes: In this plugin we use monikers to enumerate filters and devices in order to connect with BindBaseFilter method.

Enables you to use a moniker object, which contains information that uniquely identifies a COM object. An object that has a pointer to the moniker object's IMoniker interface can locate, activate, and get access to the identified object without having any other specific information on where the object is actually located in a distributed system.
Monikers are used as the basis for linking in COM. A linked object contains a moniker that identifies its source. When the user activates the linked object to edit it, the moniker is bound; this loads the link source into memory.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms679705(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 12.1pr2

71.26.2 Methods

71.26.3 BindBaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binds moniker to a base filter.
Notes: Lasterror is set.

This implements the primary function of a moniker, which is to locate the object identified by the moniker and return a pointer to one of its interfaces.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms691433(v=vs.85).aspx

71.26.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.26.5 DisplayName(BindContext as DirectShowBindContextMBS = nil) as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the display name for the moniker.
Notes: BindContext: The DirectShowBindContextMBS interface on the bind context to be used in this operation. The bind context caches objects bound during the binding process, contains parameters that apply to all operations using the bind context, and provides the means by which the moniker implementation should retrieve information about its environment. If you provide nil, the plugin creates a temporary context.

GetDisplayName provides a string that is a displayable representation of the moniker. A display name is not a complete representation of a moniker's internal state; it is simply a form that can be read by users. As a result, it is possible (though rare) for two different monikers to have the same display name.

This is not a text to show to user.

71.26.6 EnumMonikers(forward as boolean) as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves enumerator for the components of a composite moniker.
Notes: Lasterror is set.

71.26.7 Hash as UInt32

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a hash value using the internal state of the moniker.
Notes: Lasterror is set.

71.26.8 IsEqual(other as DirectShowMonikerMBS) as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether this moniker is identical to the specified moniker.
Notes: Returns true if both are identical.
Lasterror is set.

71.26.9 Properties(BindContext as DirectShowBindContextMBS = nil) as DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates property bag with properties of the moniker.
Notes: Lasterror is set.

71.26.10 Properties

71.26.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IMoniker interface.
(Read and Write property)

71.26.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.26.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.27 class DirectShowNullRendererMBS

71.27.1 class DirectShowNullRendererMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The null renderer filter.
Notes: The Null Renderer filter is a renderer that discards every sample it receives, without displaying or rendering the sample data.

Use this filter when an output pin in the graph requires a downstream connection, but you do not wish to render the data from that pin. By connecting the output pin to the Null Renderer, you complete the connection without rendering the data.
Subclass of the DirectShowBaseFilterMBS class.

- MBS Real Studio Plugins, version 12.3pr8

71.27.2 Methods

71.27.3 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Null filter.
Notes: On success the handle property is not zero.

71.28 class DirectShowPinMBS

71.28.1 class DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface is exposed by all input and output pins.
Notes: The filter graph manager uses this interface to connect pins and perform flushing operations. Applications can use this interface to query the pin for information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.28.2 Methods

71.28.3 Accept(Type as DirectShowMediaTypeMBS) as Boolean

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Accept method determines whether the pin accepts a specified media type.
Notes: Lasterror is set.

A return value of true indicates that the pin will accept the media type, either on the next sample, or after a pin reconnection. The implementation should take into account the current state of the filter, including connections on other pins, and any properties that can be set on the filter.

Any other return value, including false, means that the pin rejects the media type. Therefore, test for true explicitly.

If the filter is running, a return value of true is ambiguous. The pin might accept a format change on the next media sample, without reconnecting; or it might need to reconnect. If the pin supports the IPinConnection interface, call the IPinConnection::DynamicQueryAccept method, which specifically tests whether the pin can accept the new type without reconnecting.

71.28.4 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries base filter.
Notes: Lasterror is set.

71.28.5 ConnectedTo as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectedTo method retrieves a pointer to the connected pin, if any.
Notes: Lasterror is set.

71.28.6 ConnectionMediaType as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectionMediaType method retrieves the media type for the current pin connection, if any.
Notes: Lasterror is set.
Returns nil if not connected.

71.28.7 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.28.8 Direction as Integer

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryDirection method gets the direction of the pin (input or output).
Notes: Lasterror is set.

71.28.9 Disconnect

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Disconnect method breaks the current pin connection.
Notes: The Filter Graph Manager calls this method when it disconnects two filters. Applications and filters should not call this method. Instead, call the DirectShowFilterGraphMBS.Disconnect method on the Filter Graph Manager.
Sets lasterror.

This method fails if the filter is paused or running. If the pin supports the PinConnection interface, call PinConnection DynamicDisconnect to disconnect the pin when the filter is paused or running.
This method does not disconnect the other pin in the pin connection.

71.28.10 Id as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Id method retrieves an identifier for the pin.
Notes: Returns a string containing the pin identifier.
Lasterror is set.

71.28.11 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the pin's preferred media types.
Notes: Lasterror is set.

71.28.12 Name as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of the pin.
Notes: Lasterror is set.

71.28.13 PIN_CATEGORY_ANALOGVIDEOIN as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Input pin of the capture filter that takes analog and digitizes it.

71.28.14 PIN_CATEGORY_CAPTURE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Capture pin.

71.28.15 PIN_CATEGORY_CC as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing closed captioning data from Line 21.

71.28.16 PIN_CATEGORY_EDS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing Extended Data Services (Line 21, even fields).

71.28.17 PIN_CATEGORY_NABTS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing North American Videotext Standard data.

71.28.18 PIN_CATEGORY_PREVIEW as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Preview pin.

71.28.19 PIN_CATEGORY_STILL as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin that provides a still image. The filter's capture pin must be connected before the still-image pin is connected.

71.28.20 PIN_CATEGORY_TELETEXT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing teletext (a closed captioning variant).

71.28.21 PIN_CATEGORY_TIMECODE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing timecode data.

71.28.22 PIN_CATEGORY_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin to be connected to the VBI Surface Allocator, the VBI surface allocator filter that is needed to allocate the correct video memory for things like closed captioning overlays in scenarios where a video port is being used. PCI, IEEE 1394, and USB scenarios do not use this filter.

71.28.23 PIN_CATEGORY_VIDEOPORT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Video output pin to be connected to input pin zero on the Overlay Mixer.

71.28.24 PIN_CATEGORY_VIDEOPORT_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing vertical blanking interval data.

71.28.25 Properties

71.28.26 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IPin interface.
(Read and Write property)

71.28.27 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.28.28 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.28.29 Constants

Pin Direction

Constant	Value	Description
kPinDirectionInput	0	Input
kPinDirectionOutput	1	Output

71.29 class DirectShowPropertyBagMBS

71.29.1 class DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides an object with a property bag in which the object can save its properties persistently.
Notes: used for Monikers to store properties like description and user friendly name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

71.29.2 Methods

71.29.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.29.4 CountProperties as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of properties in the property bag.
Notes: Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

71.29.5 Description as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read description.
Notes: Lasterror is set.

71.29.6 DevicePath as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read device path.
Notes: Lasterror is set.

71.29.7 FriendlyName as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read friendly name.
Notes: Lasterror is set.

71.29.8 PropertyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of a property.
Notes: Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

71.29.9 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads one of the properties into a variant.
Notes: As we only need 3 properties for DirectShowMonikerMBS.Properties, we have direct accessors.
Lasterror is set.

71.29.10 Properties

71.29.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IPropertyBag interface.
(Read and Write property)

71.29.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.29.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.30 class DirectShowSampleGrabberMBS

71.30.1 class DirectShowSampleGrabberMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a sample grabber.
Notes: The Sample Grabber filter provides a way to retrieve samples as they pass through the filter graph. It is a transform filter with one input pin and one output pin. It passes all samples downstream unchanged, so you can insert it into a filter graph without altering the data stream. Your application can then retrieve individual samples from the filter by calling methods on the ISampleGrabber interface.
If you want to retrieve samples without rendering the data, connect the Sample Grabber filter to the Null Renderer filter.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

71.30.2 Methods

71.30.3 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the filter for this grabber.
Notes: So you can add it to a graph builder.

71.30.4 ConnectedMediaType as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetConnectedMediaType method retrieves the media type for the connection on the input pin of the Sample Grabber.
Notes: Lasterror is set.

71.30.5 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the sample grabber.

71.30.6 Current as Picture

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Queries current picture.
Notes: This actually makes a copy of the internal buffer into a new picture object.
Lasterror is set.

71.30.7 Destructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

71.30.8 SetOneShot(OneShot as boolean)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetOneShot method specifies whether the Sample Grabber filter halts after the filter receives a sample.

71.30.9 Properties

71.30.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an ISampleGrabber interface.
(Read and Write property)

71.30.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.30.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.30.13 Events

71.30.14 NewFrame(Time as Double)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event for a new video frame.
Notes: time is the starting time of the sample, in seconds.
Use the Current method to get the picture.

71.31 class DirectShowVideoInfoHeader2MBS

71.31.1 class DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image, including interlace, copy protection, and pixel aspect ratio information.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.31.2 Methods

71.31.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.31.4 Properties

71.31.5 AvgTimePerFrame as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The desired average display time of the video frames, in 100-nanosecond units.
Notes: The actual time per frame may be longer.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.6 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

71.31.7 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

71.31.8 ControlFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control flags.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.9 CopyProtectFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flag set with the AMCOPYPROTECT_RestrictDuplication value (0x00000001) to indicate that the duplication of the stream should be restricted.
Notes: If undefined, specify zero or else the connection will be rejected.
(Read and Write property)

71.31.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

71.31.11 InterlaceFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags that specify how the video is interlaced.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

71.31.12 PictAspectRatioX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X dimension of picture aspect ratio. For example, 16 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

71.31.13 PictAspectRatioY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y dimension of picture aspect ratio. For example, 9 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

71.31.14 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.15 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.16 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.17 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.31.18 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.19 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.20 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.21 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.31.22 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

71.32 class DirectShowVideoInfoHeaderMBS

71.32.1 class DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

(Read and Write property)

71.32.6 BitCount as Integer

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap bit count value.
Notes: The number of bits-per-pixel. Determines the number of bits that define each pixel and the maximum number of colors in the bitmap. This member must be one of the following values.

Can be 0 for PNG/JPEG images, 1 for B/W, 4 for 16 colors, 8 for 256 colors, 16 for thousands of colors, 24 for millions of colors or 32 for millions of colors with alpha.
(Read and Write property)

71.32.7 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

71.32.8 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

71.32.9 BMIHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to BITMAPINFOHEADER structure.
Notes: You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

71.32.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

71.32.11 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.

(Read and Write property)

71.32.12 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.13 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.14 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes: This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

71.32.15 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.16 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.17 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.18 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

71.32.19 VideoInfoHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to VIDEOINFOHEADER structure.
Notes: You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

71.32.20 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

71.33 class DirectShowVideoStreamConfigCapsMBS

71.33.1 class DirectShowVideoStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of video formats.
Notes: Video compression and video capture filters use this structure to describe what formats they can produce.
Microsoft deprecated this strucutre some time ago in favor of DirectShowMediaTypeMBS class.

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.33.2 Methods

71.33.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.33.4 Properties

71.33.5 CropAlignX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required horizontal alignment of the source rectangle.
Notes: Deprecated.
(Read only property)

71.33.6 CropAlignY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required vertical alignment of the source rectangle.
Notes: Deprecated.

(Read only property)

71.33.7 CropGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal granularity of the source rectangle.
Notes: This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Deprecated.
(Read only property)

71.33.8 CropGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical granularity of the source rectangle.
Notes: This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Note Deprecated.
(Read only property)

71.33.9 InputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes: For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

71.33.10 InputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes: For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

71.33.11 MaxBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum data rate this pin can produce.
Notes: Deprecated
(Read only property)

71.33.12 MaxCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes: Deprecated.
(Read only property)

71.33.13 MaxCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes: Deprecated.
(Read only property)

71.33.14 MaxFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum frame duration, in 100-nanosecond units.
Notes: This value applies only to capture filters.
(Read and Write property)

71.33.15 MaxOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes: Deprecated.
(Read only property)

71.33.16 MaxOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes: Deprecated.
(Read only property)

71.33.17 MinBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum data rate this pin can produce.
Notes: Deprecated.
(Read only property)

71.33.18 MinCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes: The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

71.33.19 MinCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes: The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

71.33.20 MinFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum frame duration, in 100-nanosecond units. This value applies only to capture filters.

Notes: (Read and Write property)

71.33.21 MinOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes: Deprecated.
(Read only property)

71.33.22 MinOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes: Deprecated.
(Read only property)

71.33.23 OutputGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the output width.
Notes: This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

71.33.24 OutputGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of output height.
Notes: This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

71.33.25 ShrinkTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image horizontally.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.26 ShrinkTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image vertically.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.27 StretchTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image horizontally.
Notes: Deprecated.

(Read only property)

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

71.33.28 StretchTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image vertically.
Notes: Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

71.33.29 VideoStandard as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The analog video standard supported.
Notes: The value is a bitwise combination of flags from the AnalogVideoStandard enumeration type, or zero.
(Read only property)

71.34 class DirectShowVideoWindowMBS

71.34.1 class DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The direct show class for a video window.
Notes: The DirectShowVideoWindowMBS interface sets properties on the video window. Applications can use it to set the window owner, the position and dimensions of the window, and other properties.

The Video Renderer filter and the Filter Graph Manager both expose this interface. The Filter Graph Manager forwards all method calls to the Video Renderer. It also forwards certain window messages that the Video Renderer needs to receive, such as WM_DISPLAYCHANGE. Because the video window is usually a child of an application window, the filter would not otherwise receive these messages. Therefore it relies on the Filter Graph Manager to forward them.

In most cases, an application should query the Filter Graph Manager for this interface, and not call the filter directly, because of the messaging issue just described. However, if the filter graph has more than one Video Renderer, the Filter Graph Manager only communicates with one of them, selected arbitrarily. Therefore, if your application uses multiple video windows, use the DirectShowVideoWindowMBS interface directly on the filters. In that case, you must forward window messages to each Video Renderer instance, using the NotifyOwnerMessage method.

Properties set on a video renderer persist between successive connections and disconnections.

Error codes: If the video renderer filter is not connected to another filter, all methods return the error code VFW_E_NOT_CONNECTED. For the Filter Graph Manager's implementation, if the graph does not contain a video renderer filter, all methods return E_NOINTERFACE. Note that the Filter Graph Manager exposes the interface even when the graph does not contain a video renderer, so an application can query for the interface before it builds the graph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 21.6pr3
- MBS Xojo Plugins, version 21.0pr7

71.34.2 Methods

71.34.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor to create a new video window.

71.34.4 GetMaxIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxIdealImageSize method retrieves the maximum ideal image size for the video image.
Notes: Width: Receives the maximum ideal width, in pixels.
Height: Receives the maximum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

71.34.5 GetMinIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMinIdealImageSize method retrieves the minimum ideal size for the video image.
Notes: Width: Receives the minimum ideal width, in pixels.
Height: Receives the minimum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

71.34.6 GetRestorePosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetRestorePosition method retrieves the restored window position.
Notes: Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.
Lasterror is set.

If the video window is minimized or maximized, you can use this method to get the window's restored position.

71.34.7 GetWindowPosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetWindowPosition method retrieves the position of the video window.
Notes: Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.

Lasterror is set.
This method has the same effect as querying left, top, width and height methods.

71.34.8 HideCursor(hide as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The HideCursor method shows or hides the cursor when the mouse is positioned over the video window.
Notes: Hide: Whether to hide or show the cursor.
Lasterror is set.

71.34.9 IsCursorHidden as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsCursorHidden method queries whether the cursor is hidden.
Notes: Lasterror is set.

71.34.10 SetWindowForeground(Focus as Boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowForeground method places the video window at the top of the Z order.
Notes: Focus: whether to give the window focus.
Lasterror is set.

71.34.11 SetWindowPosition(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowPosition method sets the position of the video window.
Notes: Left: The x-coordinate, in pixels.
Top: The y-coordinate, in pixels.
Width: The width, in pixels.
Height: The height, in pixels.
Lasterror is set.

This method has the same effect as setting the Left, Top, Width, and Height methods.
If resizing the window to the specified dimensions is impossible, this method modifies the window's size and location to make the window fit. Call the GetWindowPosition method to determine the result.

71.34.12 Properties

71.34.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Points to an IVideoWindow interface.
(Read and Write property)

71.34.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

71.34.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

71.34.16 MessageDrain as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window to receive mouse and keyboard messages from the video window.
Notes: Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Window or DesktopWindow object.
(Read and Write property)

71.34.17 messageDrainControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The control to receive mouse and keyboard messages from the video window.
Notes: Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Control or DesktopControl object.
(Read and Write property)

71.34.18 Owner as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The parent window for the video window.
Notes: Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Window or DesktopWindow object.
(Read and Write property)

71.34.19 OwnerControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The parent control for the video window.
Notes: Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Control or DesktopControl object.
(Read and Write property)

71.34.20 AutoShow as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video renderer automatically shows the video window when it receives video data.
Notes: Lasterror is set.
By default, when the filter graph changes state to paused or running, the video renderer shows the video window and moves it to the foreground. If the user closes the window, it will not automatically reappear.
(Read and Write computed property)

71.34.21 BackgroundPalette as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video window realizes its palette in the background.
Notes: Lasterror is set.
If BackgroundPalette is true and the video image requires a palette, the video renderer will realize that palette in the background. Any colors that the palette uses will change to their closest match in the display palette prior to drawing. This ensures that an application will not have its palette disturbed. However, it imposes severe performance penalties on the video.
(Read and Write computed property)

71.34.22 BorderColor as color

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The color that appears around the edges of the destination rectangle.
Notes: Lasterror is set.
If the destination rectangle is smaller than the client area of the video window, a border is exposed around

the edges of the video. The default color is black. Use this method to override the default color. If a palette is in use, a nonsystem color is converted to its closest match.
(Read and Write computed property)

71.34.23 Caption as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The video window caption.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.24 FullScreenMode as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables full-screen video rendering.
Notes: Set to true to switch to full-screen mode. Set to false to disable full-screen mode. (Default.)
Lasterror is set.

Depending on the video renderer, the switch to full-screen mode may not be visible until the application runs or pauses the graph. In full-screen mode, if the user switches away from the application (for example, using ALT + TAB), the Filter Graph Manager sends an EC_FULLSCREEN_LOST event.
The following remarks describe how the Filter Graph Manager implements full-screen mode. Application developers can probably ignore this information, but it may be useful if you are writing a custom video renderer.
When an application switches to full-screen mode, the Filter Graph Manager searches for a video renderer that will function most efficiently. In order of preference, these are:

- Any video renderer in the filter graph that natively supports full-screen mode.
- Any video renderer in the filter graph that can stretch the video to full-screen without a significant performance cost.
- The Full Screen Renderer filter.
- Any video renderer in the filter graph that supports DirectShowVideoWindowMBS.

For the first option, the Filter Graph Manager sets FullScreenMode on every video renderer in the graph. Most renderers return E_NOTIMPL, indicating the filter does not natively support full-screen mode. If any renderer returns a value not equal to E_NOTIMPL, the Filter Graph Manager uses that one.
For the second option, the Filter Graph Manager calls GetMaxIdealImageSize and GetMinIdealImageSize on every video renderer in the graph. If the size of the display falls within the filter's reported range, it

indicates that the filter can stretch the video without a significant performance cost.
Note If the graph is stopped, the Filter Graph Manager pauses each renderer before calling these methods. This gives the renderer an opportunity to initialize any resources it needs, because many renderers cannot determine these values while they are stopped.
Except on older hardware, the second option will generally succeed. The third option is to use the Full Screen Renderer filter, adding it to the graph if necessary. The fourth option is simply to find the first renderer in the graph that supports DirectShowVideoWindowMBS, and stretch the video regardless of performance.
(Read and Write computed property)

71.34.25 Height as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.26 Left as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x-coordinate of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.27 Top as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y-coordinate of the video window.
Notes: Lasterror is set.
(Read and Write computed property)

71.34.28 Visible as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows or hides the video window.
Notes: Set to true to show the window or set to false to hide the window.
Lasterror is set.

(Read and Write computed property)

71.34.29 Width as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the video window.
Notes: (Read and Write computed property)

71.34.30 WindowState as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows, hides, minimizes, or maximizes the video window.
Notes: Lasterror is set.

See MSDN page for ShowWindow for SW_* constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms633548(v=vs.85).aspx
(Read and Write computed property)

71.34.31 WindowStyle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window styles on the video window.
Notes: Lasterror is set.
See MSDN for SetWindowLong for details on the WS_* constants.
(Read and Write computed property)

71.34.32 WindowStyleEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window extended styles on the video window.
Notes: Lasterror is set.
See MSDN for SetWindowLong for details on the WS_EX_* constants.
(Read and Write computed property)

71.34.33 Constants

Window Show Modes

Constant	Value	Description
SW_FORCEMINIMIZE	11	
SW_HIDE	0	
SW_MAXIMIZE	3	
SW_MINIMIZE	6

71.35 class DirectShowWaveFormatMBS

71.35.1 class DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Defines the format of waveform-audio data.
Notes: Only format information common to all waveform-audio data formats is included in this structure. For formats that require additional information, this structure is included as the first member in another structure, along with the additional information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

71.35.2 Methods

71.35.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

71.35.4 Properties

71.35.5 AvgBytesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required average data-transfer rate, in bytes per second, for the format tag.
Notes: If wFormatTag is WAVE_FORMAT_PCM, nAvgBytesPerSec must equal nSamplesPerSec x nBlockAlign. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

71.35.6 BitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bits per sample for the FormatTag format type.
Notes: If wFormatTag is WAVE_FORMAT_PCM, then BitsPerSample should be equal to 8 or 16. For non-PCM formats, this member must be set according to the manufacturer's specification of the format tag. If FormatTag is WAVE_FORMAT_EXTENSIBLE, this value can be any integer multiple of 8.

Some compression schemes do not define a value for BitsPerSample, so this member can be zero.
(Read and Write property)

71.35.7 BlockAlign as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Block alignment, in bytes.
Notes: The block alignment is the minimum atomic unit of data for the wFormatTag format type. If wFormatTag is WAVE_FORMAT_PCM, nBlockAlign must equal (nChannels √ó wBitsPerSample) / 8. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
Software must process a multiple of nBlockAlign bytes of data at a time. Data written to and read from a device must always start at the beginning of a block. For example, it is illegal to start playback of PCM data in the middle of a sample (that is, on a non-block-aligned boundary).
(Read and Write property)

71.35.8 Channels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of channels in the waveform-audio data.
Notes: Monaural data uses one channel and stereo data uses two channels.
(Read and Write property)

71.35.9 Data as Ptr

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw data of WAVEFORMATEX structure.
Notes: (Read only property)

71.35.10 FormatTag as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Waveform-audio format type.
Notes: Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. For one- or two-channel Pulse Code Modulation (PCM) data, this value should be WAVE_FORMAT_PCM.

- If FormatTag equals WAVE_FORMAT_EXTENSIBLE, the structure is interpreted as a WAVEFORMATEXTENSIBLE structure.
- If FormatTag equals WAVE_FORMAT_MPEG, the structure is interpreted as an MPEG1WAVEFORMAT structure.
- If FormatTag equals WAVE_FORMAT_MPEGLAYER3, the structure is interpreted as an MPEGLAYER3WAVEFORMAT structure.

Before reinterpreting a WAVEFORMATEX structure as one of these extended structures, verify that the actual structure size is sufficiently large and that the cbSize member indicates a valid size.

Please contact MBS if you need the above structures as classes in Xojo.
(Read and Write property)

71.35.11 SamplesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sample rate, in samples per second (hertz).
Notes: If FormatTag is WAVE_FORMAT_PCM, then common values for SamplesPerSec are 8.0 kHz, 11.025 kHz, 22.05 kHz, and 44.1 kHz. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

71.35.12 Size as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size, in bytes, of extra format information appended to the end of the WAVEFORMATEX structure.
Notes: This information can be used by non-PCM formats to store extra attributes for the wFormatTag. If no extra information is required by the wFormatTag, this member must be set to zero. For WAVE_FORMAT_PCM formats (and only WAVE_FORMAT_PCM formats), this member is ignored. However it is still recommended to set the value.
(Read and Write property)

Chapter 72

DiscRecording

72.1 class DRBurnMBS

72.1.1 class DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class to perform and monitor the burning of a CD or DVD disc.
Notes: Each time you want to burn to a disc, an instance of DRBurnMBS needs to be created.

When an instance is created, you pass in an instance of DRDevice to let the DRBurn object know what device to use. This object is retained for the life of the DRBurn instance. Before burning, you can set several options that control the behavior of the burn and the handling of the disc once the burn completes.

A DRBurn object will send out notifications through the DRNotificationCenter mechanism to broadcast the burn state to any interested observers. However, if for some reason you don't want to use notifications, you can poll the burn object at any time for the current status using the status properties. This is not recommended in any application using a run loop, because it involves polling.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.1.2 Methods

72.1.3 abort

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Stops the burn.
Notes: When this method returns the burn might not actually be fully stopped but it has been cancelled and only cleanup is going on. If a burn has not completed writing data to disc, you just made a coaster.

Typically this method is only used as a result of the user hitting a cancel/stop button somewhere in the user interface.

72.1.4 burnForDevice(device as DRDeviceMBS) as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates an autoreleased burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

72.1.5 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

72.1.6 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the burn.
Notes: Returns nil on any error.

72.1.7 DRBurnAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will still be appendable after the burn. If this key is not present, the burn will default to a value of false and the disc will be marked as not

appendable.

72.1.8 DRBurnCompletionActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction indicating that the burn object should eject the disc from the drive when the burn completes.

72.1.9 DRBurnCompletionActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a String containing one of the completion actions possible for the disc handling. If this key is not present, the burn will default to a value of DRBurnCompletionActionEject and the disc will be ejected.

72.1.10 DRBurnCompletionActionMount as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction property indicating that the burn object should mount the disc on the desktop when the burn completes.

72.1.11 DRBurnDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property key whose value is an double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least 40000h per specification. If the value is less than 1.0, it will specify the

percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.

72.1.12 DRBurnFailureActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should eject the disc from the drive if the burn fails.

72.1.13 DRBurnFailureActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.

72.1.14 DRBurnFailureActionNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should do nothing with the disc if the burn fails.

72.1.15 DRBurnOverwriteDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn. If this key is not present, the burn will default to a value of false and the disc will be appended.

72.1.16 DRBurnRequestedSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a number containing the speed at which the burn should run, expressed as a float value of kilobytes per second. If this key is not present, the speed will default to DRDeviceBurnSpeedMax.

72.1.17 DRBurnStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The notification name for a status update on a burn operation.
Notes: See the "DataBurn with Events and Notification" example project.

72.1.18 DRBurnStrategyBDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An string value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for BD (Blu-ray). This strategy applies only to BDs.

72.1.19 DRBurnStrategyCDSAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the SAO (session-at-once) burn strategy for CD.

72.1.20 DRBurnStrategyCDTAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the TAO (track-at-once) burn strategy for CD.

72.1.21 DRBurnStrategyDVDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for DVD. This strategy applies only to DVDs; it is invalid when burning to CD media.

72.1.22 DRBurnStrategyIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a BOOL indicating whether the burn strategy/strategies listed for DRBurnStrategyKey are the only strategies allowed. If this key is not present, the burn will default to a value of false.

If this value is set to true, and the device does not support the type(s) of burn requested, the burn will fail with kDRDeviceBurnStrategyNotAvailableErr .

If this value is set to false, and the device does not support the type(s) of burn requested, the engine will choose an alternate burn strategy automatically - one that will provide an equivalent disc.

72.1.23 DRBurnStrategyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a string, or array of strings, indicating the burn strategy or strategies that are suggested. If this key is not present, the burn engine picks an appropriate burn strategy automatically. Most clients will not need to specify a specific burn strategy.

When more than one strategy is suggested, the burn engine will attempt to use the first strategy in the list which is available. A burn strategy will never be used if it cannot write the required data: for example, TAO cannot be used to write CD-Text.

The presence of this key by itself is just a suggestion, and if the burn engine cannot fulfill the request it will burn using whatever strategy is available. To make the suggestion into a requirement, add DRBurnStrategyIsRequiredKey with a value of true.

72.1.24 DRBurnTestingKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the burn will run as a test burn.

When this is set and the burn object is sent writeLayout, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.

72.1.25 DRBurnUnderrunProtectionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if burn underrun protection will be on or off for devices which support it.

For those devices which support it, burn underrun protection is enabled by default.

If the device supports burn underrun protection and this key is not present, the burn will default to a value of true and burn underrun protection will be enabled.

72.1.26 DRBurnVerifyDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be verified after being burned. If this key is not present, the burn will default to a value of true and the disc will be verified.

72.1.27 DRCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: This key points to a DRCDTextBlockMBS, or array of DRCDTextBlockMBS objects containing the

CD-Text information for the disc. If this key is not present, the burn will not write CD-Text.

Before using this key, you should to make sure that the device supports CD-Text by checking the value of DRDeviceCanWriteCDTextKey in the device's write capabilities dictionary.

If this value is set to true, and the device does not support writing CD-Text, the burn will fail with kDRDeviceCantWriteCDTextErr.

72.1.28 DRErrorStatusAdditionalSenseStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC additional sense code and additional sense code qualifier pair returned by the device. If no sense is reported, this key will not be present.

72.1.29 DRErrorStatusErrorInfoStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing extended error information in a user appropriate manner.

72.1.30 DRErrorStatusErrorKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number containing the OS error code for the error.

72.1.31 DRErrorStatusErrorStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the error in a user appropriate manner.

72.1.32 DRErrorStatusKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: The key in the status dictionary for the error dictionary.

72.1.33 DRErrorStatusSenseCodeStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC sense code returned by the device. If no sense is reported, this key will not be present.

72.1.34 DRErrorStatusSenseKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String containing the raw RBC sense information structure reported by the device. If no sense is reported, this key will not be present.

72.1.35 DRMediaCatalogNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See ean-int.org and uc-council.org for more details on the UPC/EAN standard.

http://www.ean-int.org/
http://www.uc-council.org/

72.1.36 DRStatusCurrentSessionKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current session being burned.

72.1.37 DRStatusCurrentSpeedKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current burn speed.

72.1.38 DRStatusCurrentTrackKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current track being burned.

72.1.39 DRStatusEraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String indicating the type of erase operation.

72.1.40 DRStatusPercentCompleteKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A key for the status dictionaries.
Number containing the percent complete of the operation expressed as a floating point number from 0 to 1.

72.1.41 DRStatusProgressCurrentKPS as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in kilobytes per second.
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a Number containing the write speed of the burn.

72.1.42 DRStatusProgressCurrentXFactor as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in a media appropriate x-factor
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a number containing the appropriate x-factor for the media.

72.1.43 DRStatusProgressInfoKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A dictionary of extended progress information.
A key for the status dictionary. The value of this key is a reference to a Dictionary object containing extended progress information.

72.1.44 DRStatusStateDone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it succeeded.

72.1.45 DRStatusStateErasing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the erase status dictionary.
Notes: Indicates the erase is currently in progress.

72.1.46 DRStatusStateFailed as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it failed.

72.1.47 DRStatusStateFinishing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is finishing up (closing the last session, writing the TOC, etc).

72.1.48 DRStatusStateKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: A key for the status dictionaries.
String indicating the current state of the operation.

72.1.49 DRStatusStateNone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation has not yet begun.

72.1.50 DRStatusStatePreparing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is preparing to begin.

72.1.51 DRStatusStateSessionClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a session on disc. The exact session being closing is contained in DRStatusCurrentSessionKey.

72.1.52 DRStatusStateSessionOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a session on disc. The exact session being opened is contained in DRStatusCurrentSessionKey.

72.1.53 DRStatusStateTrackClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a track on disc. The exact track being closed is contained in DRStatusCurrentTrackKey.

72.1.54 DRStatusStateTrackOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a track on disc. The exact track being opened is contained in DRStatusCurrentTrackKey.

72.1.55 DRStatusStateTrackWrite as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is writing a track on disc. The exact track being written is contained in DRStatusCurrentTrackKey.

72.1.56 DRStatusStateVerifying as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is verifying what it did.

72.1.57 DRStatusTotalSessionsKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of sessions being burned.

72.1.58 DRStatusTotalTracksKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of tracks in the current session being burned.

72.1.59 DRSynchronousBehaviorKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a BOOL indicating if burn operations will behave synchronously. If this key is not present, it will default to a value of false and burn operations will behave asynchronously.

Synchronous operations do not post status notifications, and will not return until they are completed. Status can still be queried at any time, and will remain valid even after the burn operation has finished.

72.1.60 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary describing the status of the burn.
Notes: The same dictionary is returned through the DRBurnStatusChangedNotification notification.

72.1.61 writeImageFile(ImageFile as FolderItem) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

• 72.1.62 writeImageFile(ImagePath as String) as boolean 12077

72.1.62 writeImageFile(ImagePath as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

• 72.1.61 writeImageFile(ImageFile as FolderItem) as boolean 12076

72.1.63 writeLayout(track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the track to the disc.
Notes: A single session disc will be created with the given track.
See also:

• 72.1.64 writeLayout(tracks() as DRTrackMBS) 12077

72.1.64 writeLayout(tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the tracks to the disc.
Notes: A multi session disc will be created with the given tracks.
See also:

• 72.1.63 writeLayout(track as DRTrackMBS) 12077

72.1.65 Properties

72.1.66 appendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the burn is appendable.
Example:

```
Var b as DRBurnMBS // get a burn object
b.appendable=true
```

Notes: When a burn completes, it can mark the disc so that no more data can be written to it. This creates a closed or non-appendable disc (which is the most compatible with audio CD players). If this method returns false, then the disc will be marked as closed and no data can be appended to it. A return value of true indicates further burns can be appended to the disc.
(Read and Write computed property)

72.1.67 BurnFailureAction as string

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: What to do on a failure.
Notes: The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.
(Read and Write computed property)

72.1.68 completionAction as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The action to be performed at the end of the burn.
Notes: Value must be DRBurnCompletionActionEject, DRBurnCompletionActionMount or empty for default.
(Read and Write computed property)

72.1.69 DoubleLayerL0DataZoneBlocks as Double

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.
Notes: The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least &h40000 per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.
(Read and Write computed property)

72.1.70 MediaCatalogNumber as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The media catalog number as a binary data string.
Notes: The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See
http://www.ean-int.org/
and
http://www.uc-council.org/
for more details on the UPC/EAN standard.
(Read and Write computed property)

72.1.71 Overwrite as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn.
Notes: If this key is not present, the burn will default to a value of false and the disc will be appended.
(Read and Write computed property)

72.1.72 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the burn.
Notes: (Read and Write computed property)

72.1.73 requestedBurnSpeed as single

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The speed at which this burn will attempt to write data.
Notes: The actual speed also depends on the capabilities of the bus the device is on, the maximum speed of the device itself, and the media used.

Value is a float indicating the speed the burn should run at in kilobytes per second.
(Read and Write computed property)

72.1.74 Testing as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether the burn will run as a test burn.
Notes: When this is set and the burn starts, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.
(Read and Write computed property)

72.1.75 UnderrunProtection as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating if burn underrun protection will be on or off for devices which support it.
Notes: For those devices which support it, burn underrun protection is enabled by default.
If the device supports burn underrun protection and this key is not present, the burn will default to a value of trueand burn underrun protection will be enabled.
(Read and Write computed property)

72.1.76 verifyDisc as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the resulting disc will be verified.
Example:

```
Var b as DRBurnMBS // get a burn object
b.verifyDisc=true
```

Notes: After data is written to disc, the data can be verified. The verification process will read the data on the disc back into memory and compare it to the data originally used to write to disc. The type of verification is determined by a track property on a track-by-track basis. See the DRTrackMBS documentation for more information on verification types.
(Read and Write computed property)

72.2 class DRBurnProgressPanelMBS

72.2.1 class DRBurnProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Run and display progress while burning data to media.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

72.2.2 Methods

72.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 72.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS) 12083

72.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 72.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS) 12083

72.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and

correctly referenced in the .cue/.toc file.
See also:

- 72.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean 12084

72.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean 12083

72.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 72.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS) 12085

72.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 72.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS) 12084

72.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean 12086

72.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes: docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 72.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean 12085

72.2.11 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn progress panel.

72.2.12 DRBurnProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes: Posted when the DRBurnProgressPanel has finished and is about to go away.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be closed.

72.2.13 DRBurnProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.

Notes: Posted when the DRBurnProgressPanel is about to begin displaying progress.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be displayed.

72.2.14 stopBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's stop button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.2.15 Properties

72.2.16 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes: If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the burn.
(Read and Write computed property)

72.2.17 VerboseProgressStatus as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The vebosity of the progress feedback.
Notes: If verbose is true, the panel will update status for every change. If verbose is false, the panel will filter some status messages and only update for major changes. The default for the panel is filter the status messages.
(Read and Write computed property)

72.2.18 Events

72.2.19 burnProgressPanelBurnDidFinish(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to handle the end-of-burn feedback.
Notes: This method allows the delegate to handle or modify the end-of-burn feedback performed by the progress panel. Return true to indicate the delegate handled the burn completion and the standard feedback should be supressed. If this method returns false, the normal end-of-burn handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

72.2.20 burnProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel after ordering out.
Notes: If the delegate implements this method it will receive the message after the panel is removed from display.

72.2.21 burnProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel before display.
Notes: If the delegate implements this method it will receive the message immediately before the panel is displayed.

72.2.22 Screenshots

72.2.23 DiscRecording2.jpg

Function: The burn progress panel running.

72.3 class DRBurnSetupPanelMBS

72.3.1 class DRBurnSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an burn.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes: This class supports choosing the the device to use, whether or not to verify the burned data and how to handle the burned disc when it completes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRSetupPanelMBS class.

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

Xojo Developer Magazine

- 6.1, pages 29 to 30: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.3.2 Methods

72.3.3 appendable

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's appendable checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.4 burnObject as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRBurn object that's configured to write data to the currently selected device.
Notes: The new DRBurn object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session because the burn object information is only updated just before the modal session ends.

Returns nil on any error.

72.3.5 burnSpeed

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's burn speed popup button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.6 completionAction

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks one of the panel's completion action radio buttons.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn setup panel.

72.3.8 DRBurnSetupPanelDefaultButtonDefaultTitle as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant to use for the build title so it is replaced by the real default title string.

72.3.9 expand

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's expand button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.10 setCanSelectAppendableMedia(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to leave the disc appendable.
Notes: This method controls whether the appendable checkbox is enabled.

If the data being writen to disc does not lend itself to having more data appended on to it, you can disable the ability of the user to leave the disc open.

This method must be called before the panel is displayed.

Set to yes to enable the appendable checkbox, false to disable.

72.3.11 setCanSelectTestBurn(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to make a test burn.
Notes: This method controls whether a checkbox should be added to the receiver that allows the user to set the burn to be a test burn. By default, the test burn button is not displayed.

This method must be called before the panel is displayed.

Set to yes to show the test burn checkbox, false to hide it.

72.3.12 setDefaultButtonTitle(title as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sets the title for the receiver's default button to title.
Example:

```
Var panel as new DRBurnSetupPanelMBS

panel.setDefaultButtonTitle "Do Burn"
```

Notes: Normally, the default button is "Burn".

72.3.13 testBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's test burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.14 verifyBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's verify burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.3.15 Screenshots

72.3.16 DiscRecording1.jpg

Function: The burn setup panel running.

72.4 class DRCDTextBlockMBS

72.4.1 class DRCDTextBlockMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for a Text block.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

72.4.2 Methods

72.4.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.4.4 encoding as Integer

MBS MacControls Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The text encoding to use.

72.4.5 language as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The language of this text block.

72.5 class DRDeviceMBS

72.5.1 class DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a physical CD/DVD drive connected to the computer.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 11.3pr1
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

Xojo Developer Magazine

- 6.1, page 30: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.5.2 Methods

72.5.3 acquireExclusiveAccess as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Attempts to acquire an exclusive access session with the device.
Notes: Acquiring exclusive access to the device prevents any process other than the one acquiring access from communicating with the device. So once exclusive access is granted, the device is unusable by any other process. Because of this all volumes mounted from media in the drive must be unmounted before exclusive access can be granted.

Exclusive access can be acquired multiple times. Each time this method is called, a call to releaseExclusiveAccess must be made at a later time, otherwise the process will never release its exclusive access.

Returns true if the exclusinve access is acquired and false if not.

72.5.4 acquireMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicate an interest in the blank media reservation.
Example:

```
Var d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes: Blank media participates in a reservation system thats allows applications to express their claim on blank media to other applications. Indicating an interest in the reservation isn't enough to assume its been acquired, as there are likely to be other applications in the system whom have also indicated an interest in the blank media reservation.

72.5.5 bsdName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the bsd /dev node name.

72.5.6 closeTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to close its tray.
Notes: Does nothing if the device does not have a tray (slotload).
Returns true if the tray could be closed and false if not.

72.5.7 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.5.8 device(index as UInt32) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the device with the given index.
Notes: Index from 0 to deviceCount-1.

Same as devices(), but if you only need one, this method is more efficient.

72.5.9 deviceCount as UInt32

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the number of devices on this computer.

72.5.10 deviceForBSDName(bsdName as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device corresponding to the bsd /dev node.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

72.5.11 deviceForIORegistryEntryPath(path as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device at the path.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

72.5.12 devices as DRDeviceMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Obtains a static list of devices connected to the computer.
Example:

```
// shows all devices with their product names:
Var devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: Returns all CD/DVD devices connected to the computer at the time this method is called. Since devices can come and go at any time, the output of this method is simply a snapshot of the set of devices connected.

72.5.13 displayName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a string suitable for display in the user interface.

72.5.14 DRDeviceAppearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when a device is added to the system.

This notification is registered for only by name.

The object associated with this notification is the the device that has appeared. The userInfo is the same dictionary returned by info for that device.

72.5.15 DRDeviceBurnSpeedBD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4496.0 KB/sec.

72.5.16 DRDeviceBurnSpeedCD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 176.4 KB/sec.

72.5.17 DRDeviceBurnSpeedDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 1385.0 KB/sec.

72.5.18 DRDeviceBurnSpeedHDDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4568.0 KB/sec.

72.5.19 DRDeviceBurnSpeedMax as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: A value representing the maximum speed at which a device can burn. The actual speed will vary from device to device.

72.5.20 DRDeviceBurnSpeedsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing the possible burn speeds available to use. This key may not be present if no media is inserted.

72.5.21 DRDeviceCanTestWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Value for this key is a boolean value indicating whether the device can perform a test burn to CD media.

72.5.22 DRDeviceCanTestWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: A boolean value indicating whether the device can perform a test burn to DVD media.

72.5.23 DRDeviceCanUnderrunProtectCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to

CD media.

72.5.24 DRDeviceCanUnderrunProtectDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to DVD media.

72.5.25 DRDeviceCanWriteBDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of BD (Blu-ray) based media.

72.5.26 DRDeviceCanWriteBDREKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-RE media.

72.5.27 DRDeviceCanWriteBDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-R media.

72.5.28 DRDeviceCanWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of CD based media.

72.5.29 DRDeviceCanWriteCDRawKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a raw mode burn strategy for CD. Raw mode is sometimes incorrectly referred to as DAO (disc-at-once).

72.5.30 DRDeviceCanWriteCDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-R media.

72.5.31 DRDeviceCanWriteCDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-RW media.

72.5.32 DRDeviceCanWriteCDSAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a SAO (session-at-once) burn strategy for CD.

72.5.33 DRDeviceCanWriteCDTAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a TAO (track-at-once) burn strategy for CD.

72.5.34 DRDeviceCanWriteCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write CD-Text information to media.

72.5.35 DRDeviceCanWriteDVDDAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a DAO (disc-at-once) burn strategy on DVD media.

72.5.36 DRDeviceCanWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of DVD based media.

72.5.37 DRDeviceCanWriteDVDPlusRDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R DL media.

72.5.38 DRDeviceCanWriteDVDPlusRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R media.

72.5.39 DRDeviceCanWriteDVDPlusRWDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW DL media.

72.5.40 DRDeviceCanWriteDVDPlusRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW media.

72.5.41 DRDeviceCanWriteDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RAM media.

72.5.42 DRDeviceCanWriteDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R DL media.

72.5.43 DRDeviceCanWriteDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R media.

72.5.44 DRDeviceCanWriteDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW DL media.

72.5.45 DRDeviceCanWriteDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW media.

72.5.46 DRDeviceCanWriteHDDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of HDDVD based media.

72.5.47 DRDeviceCanWriteHDDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RAM media.

72.5.48 DRDeviceCanWriteHDDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R DL media.

72.5.49 DRDeviceCanWriteHDDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R media.

72.5.50 DRDeviceCanWriteHDDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW DL media.

72.5.51 DRDeviceCanWriteHDDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW media.

72.5.52 DRDeviceCanWriteIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write index points to CD media.

72.5.53 DRDeviceCanWriteISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write ISRC to CD media.

72.5.54 DRDeviceCanWriteKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of media.

72.5.55 DRDeviceCurrentWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the current burning speed of this device.

72.5.56 DRDeviceDisappearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when a device is removed from the system.

The object associated with this notification is the the device that has disappeared. The userInfo is the same dictionary returned by info for that device.

72.5.57 DRDeviceFirmwareRevisionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the firmeware revision extracted from the device.

72.5.58 DRDeviceIORegistryEntryPathKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: String containing the path of the device in the IO Registry.
Notes: One of the keys in the dictionary returned by the info method.

72.5.59 DRDeviceIsBusyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device is busy or not.

72.5.60 DRDeviceIsTrayOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device's tray is open or not.

72.5.61 DRDeviceLoadingMechanismCanEjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can eject.

72.5.62 DRDeviceLoadingMechanismCanInjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can inject.

72.5.63 DRDeviceLoadingMechanismCanOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can open.

72.5.64 DRDeviceMaximumWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the maximum burning speed of this device.

72.5.65 DRDeviceMediaBlocksFreeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

72.5.66 DRDeviceMediaBlocksOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the total amount of writable space available (in blocks) on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the

DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

72.5.67 DRDeviceMediaBlocksUsedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space currently used (in blocks) for exising data.

72.5.68 DRDeviceMediaBSDNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the BSD /dev node name assigned to the media in the device.

72.5.69 DRDeviceMediaClassBD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of BD (Blu-ray) based media.

72.5.70 DRDeviceMediaClassCD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of CD based media.

72.5.71 DRDeviceMediaClassDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of DVD based media.

72.5.72 DRDeviceMediaClassHDDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of HD DVD based media.

72.5.73 DRDeviceMediaClassKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the class of media present in the drive.

72.5.74 DRDeviceMediaClassUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media class is unknown.

72.5.75 DRDeviceMediaDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on layer 0 of a double layer piece of media.

72.5.76 DRDeviceMediaFreeSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space available on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

72.5.77 DRDeviceMediaInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary of information describing the media currently in the device. This key may not be present if no media is inserted.

72.5.78 DRDeviceMediaIsAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that data can be appended to the exisiting data (if any).

72.5.79 DRDeviceMediaIsBlankKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether data has previously been written to the media.

72.5.80 DRDeviceMediaIsErasableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether this media can be erased.

72.5.81 DRDeviceMediaIsOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that the data on the disc (if any) can be overwritten. Rewritable media can always be erased, and then rewritten in its entirety, so it is always considered overwritable.

Write-once media, if its blank, can also be written in its entirety and is also considered overwritable.

Write-once media, that has been partially written, can never again enter a state where it is entirely writable and will have lost its overwritable designation.

72.5.82 DRDeviceMediaIsReservedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether the media is reserved for exclusive use by the current process.

72.5.83 DRDeviceMediaOverwritableSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of writable space available on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

72.5.84 DRDeviceMediaSessionCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the current number of sessions present on the media.

72.5.85 DRDeviceMediaStateInTransition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: The media is transitioning from one state to another (i.e., being spun up/down).

72.5.86 DRDeviceMediaStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: String describing the state of the media.

72.5.87 DRDeviceMediaStateMediaPresent as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: Device contains media of some type.

72.5.88 DRDeviceMediaStateNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: No media is present in the device.

72.5.89 DRDeviceMediaTrackCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the number of tracks present on the media.

72.5.90 DRDeviceMediaTypeBDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-R.

72.5.91 DRDeviceMediaTypeBDRE as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-RE.

72.5.92 DRDeviceMediaTypeBDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-ROM.

72.5.93 DRDeviceMediaTypeCDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-R.

72.5.94 DRDeviceMediaTypeCDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-ROM.

72.5.95 DRDeviceMediaTypeCDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-RW.

72.5.96 DRDeviceMediaTypeDVDPlusR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R.

72.5.97 DRDeviceMediaTypeDVDPlusRDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R Double Layer.

72.5.98 DRDeviceMediaTypeDVDPlusRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

72.5.99 DRDeviceMediaTypeDVDPlusRWDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW Double Layer.

72.5.100 DRDeviceMediaTypeDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

72.5.101 DRDeviceMediaTypeDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RAM.

72.5.102 DRDeviceMediaTypeDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-R DL.

72.5.103 DRDeviceMediaTypeDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-ROM.

72.5.104 DRDeviceMediaTypeDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW.

72.5.105 DRDeviceMediaTypeDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW DL.

72.5.106 DRDeviceMediaTypeHDDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R.

72.5.107 DRDeviceMediaTypeHDDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RAM.

72.5.108 DRDeviceMediaTypeHDDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R DL.

72.5.109 DRDeviceMediaTypeHDDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-ROM.

72.5.110 DRDeviceMediaTypeHDDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW.

72.5.111 DRDeviceMediaTypeHDDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW DL.

72.5.112 DRDeviceMediaTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the type of media inserted in the device.

72.5.113 DRDeviceMediaTypeUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: The type of the media cannot be determined.

72.5.114 DRDeviceMediaUsedSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space currently used for exising data.

72.5.115 DRDevicePhysicalInterconnectATAPI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on an ATAPI interface.

72.5.116 DRDevicePhysicalInterconnectFibreChannel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Fibre Channel interface.

72.5.117 DRDevicePhysicalInterconnectFireWire as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Firewire interface.

72.5.118 DRDevicePhysicalInterconnectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the connection of the device to the computer.

72.5.119 DRDevicePhysicalInterconnectLocationExternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine externally.

72.5.120 DRDevicePhysicalInterconnectLocationInternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine internally.

72.5.121 DRDevicePhysicalInterconnectLocationKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the location of the device (e.g. internal/external).

72.5.122 DRDevicePhysicalInterconnectLocationUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: It's not known how the device is connected.

72.5.123 DRDevicePhysicalInterconnectSCSI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on a SCSI interface.

72.5.124 DRDevicePhysicalInterconnectUSB as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a USB interface.

72.5.125 DRDeviceProductNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Example:

```
// shows all devices with their product names:
Var devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: String containing the product name extracted from the device.

72.5.126 DRDeviceStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when the media in a device changes state. This can include being ejected, inserted, becoming busy, etc.

The object for this notification is the device who's media is changing state. The userInfo for this notification is the same dictionary returned by status for that device.

72.5.127 DRDeviceSupportLevelAppleShipping as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is shipping in some Apple machine.

72.5.128 DRDeviceSupportLevelAppleSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by Apple for support.

72.5.129 DRDeviceSupportLevelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the support level the device enjoys from the engine.

72.5.130 DRDeviceSupportLevelNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is not supported.

72.5.131 DRDeviceSupportLevelUnsupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates the device is unsupported, but the engine will try to use it anyway.

72.5.132 DRDeviceSupportLevelVendorSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by a third party for support.

72.5.133 DRDeviceTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary containing dictionaries describing the tracks. DRTracks from the DRDeviceTrackRefsKey are used as keys into this dictionary.

72.5.134 DRDeviceTrackRefsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing a list of DRTrack objects describing any tracks that are already on the disc.

72.5.135 DRDeviceVendorNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the vendor name extracted from the device.

72.5.136 DRDeviceWriteBufferSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number containing the size of the write buffer of the device.

72.5.137 DRDeviceWriteCapabilitiesKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Dictionary containing the capabilities of the device for writing different kinds of media.

72.5.138 ejectMedia as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to eject the media.
Notes: This command first unmounts any volumes associated with the media and then eject the media from the drive. If the media could not be ejected, most likely this is because a volume associated with the media could not be unmounted.

Returns true if the media could be ejected and false if not.

72.5.139 info as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the device.
Notes: The information returned include the types of media the device can write to, how it's connected and its identifying information such as the vendor and product name.

72.5.140 ioRegistryEntryPath as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the path to the device in the IO Registry.

72.5.141 isEqualToDevice(value as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares the receiver to another device.
Notes: Returns true if the receiver is equal to otherDevice.

72.5.142 isValid as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns whether or not the device represented by the receiver is still attached to the computer.
Notes: Because of the way some physical interconnects work, a device which is unplugged and replugged in does not necessarily look like the same device to the computer and would be invalid in that instance.

Returns true if the device is valid and false if not.

72.5.143 mediaIsAppendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can have more data appended to any existing data.

72.5.144 mediaIsBlank as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true the media in the device is blank.

72.5.145 mediaIsBusy as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in use by some process - even the one making this call.

72.5.146 mediaIsErasable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media can be erased (i.e., CD-RW, DVD-RW, etc).

72.5.147 mediaIsOverwritable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can be fully (re)written.

72.5.148 mediaIsPresent as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the presence of the media.

72.5.149 mediaIsReserved as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the application calling this method currently holds the reservation on the media.

72.5.150 mediaIsTransitioning as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in transition (spinning up or down for example).

72.5.151 mediaSpaceFree as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of free space on the media.

72.5.152 mediaSpaceOverwritable as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of writable space on the media.

72.5.153 mediaSpaceUsed as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of used space on the media.

72.5.154 mediaType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the type of media currently inserted into the device.

72.5.155 openTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to open it's tray.
Notes: Does nothing if the device does not have a tray (slotload). If there is media in the drive this method will do nothing and return false. In this case use ejectMedia to eject the media and open the tray.

Returns true if the tray could be opened and false if not.

72.5.156 PhysicalInterconnect as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The connection of the device to the computer.

72.5.157 PhysicalInterconnectLocation as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The location of the device (internal/external/unknown).
Notes: Use the DRDevicePhysicalInterconnectLocation* constants.

72.5.158 releaseExclusiveAccess

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases the latest exclusive access request for the device.
Notes: A call to this method must be made for every call to acquireExclusiveAccess, otherwise the process will never release its exclusive access.

72.5.159 releaseMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases any media reservation that might be in place for the device.
Notes: If media is inserted and reserved, then the reservation will be passed on to the next process with a reservation request.

72.5.160 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the media in the device.
Notes: In addition to information about the media (type, space available/used, etc), the dictionary returned includes those pieces of information about the device itself which are in part determined by the media (i.e., maximum burn speed).

72.5.161 trayIsOpen as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the tray state of the device.
Notes: Returns true if the device has a tray and it is open.

72.5.162 writesCD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to CD-type media.
Notes: Returns true if the device has the ability to write to CD-R media.

72.5.163 writesDVD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to DVD-type media.
Notes: Returns true if the device has the ability to write to DVD-R media.

72.6 class DREraseMBS

72.6.1 class DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Perform and monitor the erasing a rewritable CD or DVD disc.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

- MBS REALbasic Plugins, version 10.4pr7

72.6.2 Methods

72.6.3 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Initializes an erase object.

72.6.4 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the erase.

72.6.5 DREraseStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names you can use to register notifications on the erase status.

72.6.6 DREraseTypeComplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a complete erase, erasing every byte on the disk. This oper-

ation is slow (on the order of 30 minutes) to complete.

72.6.7 DREraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property names in the properties dictionary of the erase object.

72.6.8 DREraseTypeQuick as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a quick erase, doing the minimal amount of work to make the disc appear blank. This operation typically takes only a minute or two.

72.6.9 eraseForDevice(device as DRDeviceMBS) as DREraseMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns an erase object.
Notes: Returns nil on any error.

72.6.10 start

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Begin the process of erasing media.
Notes: This method only kicks off the erase. Once the erasure starts, control returns to the caller.

72.6.11 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing the status of the erase.
Notes: The same dictionary is returned through the DREraseStatusChangedNotification notification.

72.6.12 Properties

72.6.13 eraseType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of erase to be performed.
Notes: (Read and Write computed property)

72.6.14 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the erase.
Notes: (Read and Write computed property)

72.7 class DREraseProgressPanelMBS

72.7.1 class DREraseProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Panel to display progress while erasing media.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

72.7.2 Methods

72.7.3 beginProgressPanelForErase(erase as DREraseMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the erase process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

72.7.4 beginProgressSheetForErase(erase as DREraseMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the erase process.
Notes: erase: The object performing the erase.
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

72.7.5 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor which creates the erase progress panel.

72.7.6 DREraseProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes: Posted when the DREraseProgressPanel has finished and is about to go away.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be closed.

72.7.7 DREraseProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes: Posted when the DREraseProgressPanel is about to begin displaying progress.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel thatwill be displayed.

72.7.8 Properties

72.7.9 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes: If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the erase.
(Read and Write computed property)

72.7.10 Events

72.7.11 eraseProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel after ordering out.

72.7.12 eraseProgressPanelEraseDidFinish(erase as DREraseMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to handle the end-of-erase feedback.
Notes: This method allows the delegate to handle or modify the end-of-erase feedback performed by the progress panel. Return true to indicate the delegate handled the erase completion and the standard feedback should be supressed. If this method returns false, the normal end-of-erase handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

72.7.13 eraseProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Notification sent by the panel before display.

72.8 class DREraseSetupPanelMBS

72.8.1 class DREraseSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an erase.
Notes: This class supports choosing the device to use and what sort of erase to perform. When the panel is closed by the user choosing to erase the media in the device, the device is exclusively held by the application for its own use to prevent possible bad or corrupt media from causing problem for the rest of the system. This means that if the erase object obtained from the panel is not used to do an erase, the device will remain unavailable to other applications until the exclusive access is released.
Subclass of the DRSetupPanelMBS class.

72.8.2 Methods

72.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create the erase setup panel.
Example:

```
Var d as DREraseSetupPanelMBS

d=new DREraseSetupPanelMBS
call d.runSetupPanel
```

72.8.4 eraseObject as DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRErase object that's configured to erase the disc in the currently selected device.
Notes: The new DRErase object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session runSetupPanel because the erase object information is only updated just before the modal session ends.

Returns a new DRErase object.

72.9 class DRFileMBS

72.9.1 class DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a file to be created on the disc.
Notes: A file can be either a pointer to an exiting file (residing on a hard drive for example) or can be created at burn time from data passed into the file object as requested. DRFiles can only exist inside of DRFolder objects.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.

72.9.2 Methods

72.9.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.
See also:

- 72.9.4 Constructor(name as string) 12137
- 72.9.5 Constructor(name as string, data as memoryblock) 12137
- 72.9.6 Constructor(path as folderitem) 12137

72.9.4 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data produced to the output disc, creating a file with the passed in name.

You need to subclass the DRFileMBS class and handle the events.
See also:

- 72.9.3 Constructor 12136
- 72.9.5 Constructor(name as string, data as memoryblock) 12137
- 72.9.6 Constructor(path as folderitem) 12137

72.9.5 Constructor(name as string, data as memoryblock)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.
See also:

- 72.9.3 Constructor 12136
- 72.9.4 Constructor(name as string) 12137
- 72.9.6 Constructor(path as folderitem) 12137

72.9.6 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a "real" file object
Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.3 Constructor 12136
- 72.9.4 Constructor(name as string) 12137
- 72.9.5 Constructor(name as string, data as memoryblock) 12137

72.9.7 DRLinkTypeFinderAlias as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a Finder alias.

72.9.8 DRLinkTypeHardLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a hard link.

72.9.9 DRLinkTypeSymbolicLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a symbolic link.

72.9.10 fileWithPath(path as folderitem) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
Var file as FolderItem = GetFolderItem("/System/Library/Fonts/Helvetica.dfont", FolderItem.PathTypeShell)
Var f as DRFileMBS = DRFileMBS.fileWithPath(file)

MsgBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.11 fileWithPath(path as string) as DRFileMBS 12138

72.9.11 fileWithPath(path as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
Var f as DRFileMBS = DRFileMBS.fileWithPath("/System/Library/Fonts/Helvetica.dfont")

MsgBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 72.9.10 fileWithPath(path as folderitem) as DRFileMBS 12138

72.9.12 finderAliasPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a Finder alias to another file on the output disc.
Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to create an empty file only (no alias).

72.9.13 hardLinkPointingTo(original as DRFileMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a hard link to another file on the output disc.
Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to crash always.

72.9.14 linkWithLinkType(linkType as string, original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a file object to point to another file on the output disc.
Example:

```
Var SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test
```

```
Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name
Var testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
Var SymLink as DRFileMBS = DRFileMBS.linkWithLinkType(DRFileMBS.DRLinkTypeSymbolicLink, test-
file, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes: linkType: The type of link that will be created.
original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

72.9.15 symLinkPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a symbolic link to another file on the output disc.
Example:

```
Var SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name
Var testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
Var SymLink as DRFileMBS = DRFileMBS.symLinkPointingTo(testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes: original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to work just fine.

72.9.16 virtualFileWithName(name as string, data as memoryblock) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Example:

```
Var data as string = "Hello World" // file content
Var name as string = "test.txt" // file name

Var f as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

MsgBox f.baseName
```

Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.

72.9.17 Events

72.9.18 calculateSizeOfFile(fork as Integer, estimating as boolean) as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Calculates the size of a file's fork.
Notes: This method may be sent at any time after the file object has been instantiated. Requests that the recevier calculate the file size of file fork (for instance data or resource).

If estimate is true, you are being asked for an estimate of the final fork size, perhaps to provide an estimate of the track size, and do not have to be exact. Estimates should err on the high side; it's better to overestimate than underestimate.

An estimate call may be made at any time.

If estimate is false, you are being asked for the actual fork size, to be used in the burn. This call is only made in the burn phase.

fork: The fork of the file whose size is to be calculated.
estimate: If the file size should be estimated or exact.

Return the length of the file's fork.

72.9.19 cleanupFileAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleanup the file once the burn is complete.
Notes: Sent to the receiver after the burn completes. This would be an appropriate place to close files, or do any other teardown work needed. This message will always be sent regardless of whether the burn succeeded or failed.

72.9.20 prepareFileForBurn as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the file object for burning.
Notes: Sent to the recevier before the burn begins. This would be an appropriate method to open files, or do any other prep work needed. The disc's entire hierarchy is completely in place and can be queried if needed.

After this call, the burn's content is locked down, and you should be able to respond to the calculateSizeOfFile messages with exact values.

72.9.21 prepareFileForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the file object for verification.
Notes: Called during the burn (after production, before the cleanupFileAfterBurn event is called) to indicate that verification is about to begin. Now would be a good time to rewind to the start of the file, reset state machines, or do whatever else is needed to prepare to produce again.

72.9.22 produceFile(fork as Integer, buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Calculates the size of a file's fork.
Notes: Sent during the burn (after the prepareFileForBurn message) requesting that the receiver produce

the data fork contents.

The recevier should fill up the buffer passed in as full as possible and then return control to the caller. Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

You may be asked to produce twice, once during the actual burn and once during verification.

fork: The fork of the file to produce.
buffer: The buffer to produce data into.
bufferLength: The length of the buffer to produce data into
blockSize: The size of the track blocks

Return the number of bytes produced.

72.9.23 Constants

Constants

Constant	Value	Description
DRFileForkData	0	The constant which specifies which fork is currently needed. The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc. The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.
DRFileForkResource	1	The constant which specifies which fork is currently needed. The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc. The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

72.10 class DRFolderMBS

72.10.1 class DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for folder objects used in filesystem creation.
Notes: A DRFile object is a subclass of DRFSObject and represents a folder on the finished disc. DRFolders can be either a pointer to an existing folder (residing on a hard drive for example) or can be a "virtual" folder which existsonly on the resulting burned disc. A DRFolder pointing to an existing folder ("real" folder) cannot have it's contents changed - only those files/folders which are children of the actual folder on disk will be included on the resulting disc. "Virtual" folders are entirely created programatically and any virtual folder structure can exist and be burned to disc. It is possible to convert a "real" folder to a "virtual" folder using the makeVirtual method.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.
Xojo Developer Magazine

- 6.1, page 47: Finding Work, How to Find Work as a REALbasic Developer
- 6.1, pages 29 to 31: DiscRecording, How to burn a CD from REALbasic on Mac OS X by Christian Schmitz

72.10.2 Methods

72.10.3 addChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

72.10.4 children as DRFSObjectMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns an array containing the children of a virtual folder.
Notes: The order of children in the array is arbitrary – since the various filesystems being generated may have different sorting requirements, there is no one true way to sort the children. The ordering will change only when children are added or removed. You should sort the children according to the needs of your display, and in a consistent manner. This function only applies to virtual folders. Real folders are considered

”leaf nodes” and should not be passed into this call.

72.10.5 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 72.10.6 Constructor(name as string) 12145
- 72.10.7 Constructor(path as folderitem) 12145

72.10.6 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a ”virtual” folder object with a name.
See also:

- 72.10.5 Constructor 12145
- 72.10.7 Constructor(path as folderitem) 12145

72.10.7 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.5 Constructor 12145
- 72.10.6 Constructor(name as string) 12145

72.10.8 count as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of children of a virtual folder.
Notes: This method returns a ”shallow” count of only those children that are immediately contained within the virtual folder. This method only applies to virtual folders. Real folders are considered ”leaf nodes” and should not be passed into this call.

72.10.9 folderWithPath(path as folderitem) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.10 folderWithPath(path as string) as DRFolderMBS 12146

72.10.10 folderWithPath(path as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 72.10.9 folderWithPath(path as folderitem) as DRFolderMBS 12146

72.10.11 makeVirtual

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Changes the real DRFolder object into a "virtual" DRFolder object.
Notes: The virtual folder created in this way is a snapshot of the on-disk folder at the moment of the call. The newly created virtual folder will contain real folder and file objects corresponding to the on-disk children of the original on-disk folder. If the on-disk folder is modified (eg, if the folder attributes change, or if children are added to or removed from the on-disk tree): during this call, the virtual folder may or may not reflect the changes. If modified after this call, the virtual folder will not reflect the changes.

72.10.12 removeChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Removes an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

72.10.13 virtualFolderWithName(name as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a ”virtual” folder object with a name.

72.11 class DRFSObjectMBS

72.11.1 class DRFSObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class which defines common features of all filesystem content objects.
Notes: Please read Apples documentation for more details.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

72.11.2 Methods

72.11.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.11.4 DRAccessDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's last-accessed date.

72.11.5 DRAllFilesystems as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the name or properties for the file in all filesystems together.
Notes: When this key is used to refer to a name, it refers to the base name (which has no naming restrictions).

72.11.6 DRAttributeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's attribute modification date.

72.11.7 DRBackupDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's backup date.

72.11.8 DRContentModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's content modification date.

72.11.9 DRCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's creation date.

72.11.10 DREffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's effective date.

72.11.11 DRExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's expiration date.

72.11.12 DRHFSPlus as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the HFS+ name/properties for the file.
Notes: HFS+ names can be up to 255 decomposed unicode characters long.

72.11.13 DRHFSPlusCatalogNodeID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing item's catalog node ID (HFS+ only). Currently, this value if set is only a suggestion. The burn engine will attempt to use this node ID, but may use another value if it needs to resolve conflicts. Default behavior is to allocate node IDs incrementally from kHFSFirstUserCatalogNodeID.

72.11.14 DRHFSPlusTextEncodingHint as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's text encoding hint (HFS+ only).

This value is used by the MacOS to help when converting the natively UTF-16 filename into an 8-bit-per-character representation (such as MacRoman, Shift-JIS, or UTF8). If not set, default behavior is to call CFStringGetMostCompatibleMacStringEncoding (CFStringGetSmallestEncoding()).

72.11.15 DRInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Boolean indicating whether the item is invisibile or not.

72.11.16 DRISO9660 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 properties for the file.
Notes: This key cannot be used to refer to the name of the file; it is ambiguous, since the name may be in either level 1 or level 2 format.

72.11.17 DRISO9660LevelOne as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 1 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 1. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 1 names are in the form typically known as 8.3 - eight characters of name and three characters of extension (if it's a file; directories can't have extensions). Character set is limited to A-Z, 0-9, and _.

72.11.18 DRISO9660LevelTwo as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 2 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 2. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 2 names can be 32 chars long, are limited to a subset of the 7-bit ASCII chars (capital letters, numbers, space, punctuation), and are only allowed one "." character.

72.11.19 DRISO9660VersionNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the ISO9660 version number for the object. Default value is 1.

72.11.20 DRJoliet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the Joliet name/properties for the file.
Notes: Joliet names can be 64 precomposed unicode characters long, but are only allowed one "." character and many punctuation characters are illegal.

72.11.21 DRMacExtendedFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's extended Finder flags (MacOS only).

72.11.22 DRMacFileCreator as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file creator (MacOS only).

72.11.23 DRMacFileType as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file type (MacOS only).

72.11.24 DRMacFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's Finder flags (MacOS only). The invisible bit is ignored - use DRInvisible instead.

72.11.25 DRMacFinderHideExtension as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A boolean indicating whether the extension should be hidden in the Finder or not. The default is

false and only applies to files.

72.11.26 DRMacIconLocation as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing a Point (not NSPoint) for the item's icon location in its parent folder (MacOS only).

72.11.27 DRMacScrollPosition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Point (not NSPoint) for the folder's scroll position (MacOS only).

72.11.28 DRMacWindowBounds as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Rect (not NSRect) for the window bounds for a folder (MacOS only).

72.11.29 DRMacWindowView as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the folder's window view type (MacOS only).

72.11.30 DRPosixFileMode as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX file mode.

72.11.31 DRPosixGID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX GID.

72.11.32 DRPosixUID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX UID.

72.11.33 DRRecordingDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's recording date.

72.11.34 DRUDF as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the UDF name/properties for the file.

72.11.35 DRUDFApplicationIdentifierSuffix as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Binary string of up to 8 bytes in length, for application use. The presence of this key requires the DRApplicationIdentifier key.

72.11.36 DRUDFExtendedFilePermissions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating the extended UDF file permissions of this file.

Bit 0: Change attributes for others (low order bit) Bit 1: Delete permissions for others Bit 2: Change attributes for group Bit 3: Delete permissions for group Bit 4: Change attributes for owner Bit 5: Delete permissions for owner Bit 6 & 7: Reserved If this key is not present, DRPosixFileMode will be used with the above bits being set to the corresponding write bit for owner, group, and others. If DRPosixFileMode is not present, the file mode from the file on disc will be used, again using the write bit for these permissions.

72.11.37 DRUDFInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume interchange level. See the UDF specs for details.

72.11.38 DRUDFMaxInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume interchange level number. See the UDF specs for details.

72.11.39 DRUDFMaxVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume sequence number. See the UDF specs for details.

72.11.40 DRUDFPrimaryVolumeDescriptorNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the primary volume sequence number. See the UDF specs for details.

72.11.41 DRUDFRealTimeFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating whether the file is a UDF Real-Time file.

72.11.42 DRUDFVersion102 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

72.11.43 DRUDFVersion150 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

72.11.44 DRUDFVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume sequence number. See the UDF specs for details.

72.11.45 DRUDFVolumeSetIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. The Volume Set Identifier for the UDF volume set. If this key is not present, DRVolumeSet will be used if present. The Volume Set Identifier is composed of the Volume Set Timestamp, the Implementation Use, and a the string contained in this property.

72.11.46 DRUDFVolumeSetImplementationUse as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A binary string (8 bytes in length) for implementation use data. See the UDF specs for details.

72.11.47 DRUDFVolumeSetTimestamp as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A date object for the volume set timestamp. See the UDF specs for details.

72.11.48 DRUDFWriteVersion as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. This property key defines the version for the UDF structures written to disk. Values are definde in UDF Version types.

72.11.49 effectiveFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The effective filesystem mask set for the receiver.

72.11.50 isVirtual as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the receiver is real or virtual.
Notes:

True if the receiver is virtual and false if real.

72.11.51 mangledNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single mangled filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or

DRAllFilesystems for the filesystem parameter.

72.11.52 mangledNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing all of the filesystem-specific names for the receiver, each one mangled for uniqueness.
Notes: The dictionary will return only the names which are indicated by the receiver's effective mask. If the receiver's effective mask is zero, an empty dictionary is returned.

72.11.53 parent as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The parent object.

72.11.54 propertiesForFilesystem(filesystem as string, mergeWithOtherFilesystems as boolean) as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns all the filesystem properties set for the specified filesystem.
Notes: filesystem: The filesystem to look in.
merge: If true, also look for properties in the umbrella DRAllFilesystems .

Normally you would call this method with merge set to true since you are interested in the set of properties that will be used when writing the object to disc. But if you have a need to determine what properties are set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if filesystem is set to DRHFSPlus and merge is false then the properties dictionary contains the values set for the HFS+ filesytem only. If no properties have been directly set for HFS+ yet, then this properties dictionary will be empty.

72.11.55 propertyForKey(key as string, filesystem as string, mergeWithOtherFilesystems as boolean) as Variant

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a file/folder property specified by key for the specified filesystem.
Notes: key: The property to return.

filesystem: The filesystem to look in.
merge: If true, also look for the property in the umbrella DRAllFilesystems .

Returs the value associated with the property.

Normally you would call this method with merge set to true since you are interested in the property that will be used when writing the object to disc. But if you have a need to determine what property is set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if DRHFSPlus is passed in for filesystem and merge is false then the property returned is the value set for the HFS+ filesytem only. If that property has not been directly set for HFS+ yet, then the returned value will be nil.

72.11.56 setProperties(Value as dictionary, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of all the receiver's properties specified by the keys in properties for the specific filesystem.
Notes: properties: The value of the property.
filesystem: The filesystem to set the property in.

The properties are set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case he umbrella property affecting all filesystems at once will be set. Setting properties for DRAllFilesystems does not preclude setting a filesystem specific property.

72.11.57 setProperty(Value as Variant, key as string, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of the receiver's property specified by key for the specific filesystem.
Notes: property: The value of the property.
key: The property key.
filesystem: The filesystem to set the property in.

The property is set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting a property for DRAllFilesystems does not preclude setting a filesystem specific property.

72.11.58 sourcePath as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The source path.

72.11.59 Properties

72.11.60 baseName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the base name for the receiver.
Notes: The base name is the name from which any necessary filesystem-specific names are automatically generated.

Because the content creation API is able to generate multiple filesystems which require multiple varied naming conventions, a sensible system for naming is required. Thus each file has a "base name" which corresponds to its default name in any filesystem.

Whenever possible, the "base name" will be used in the generated filesystem without modification. If the name cannot be used as-is (if, for example, it contains illegal characters, exceeds the length requirements, doesn't meet the required format, or a name collision is detected) then an acceptable name that meets the filesystem's criteria will be generated automatically from the base name.

The default base name for a real file or folder is the actual on-disk name of the item.
(Read and Write computed property)

72.11.61 explicitFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The explicit filesystem mask set for the receiver.
Notes: (Read and Write computed property)

72.11.62 specificNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or

DRAllFilesystems for the filesystem parameter.
(Read and Write computed property)

72.11.63 specificNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The names used for the receiver in the different filesystems all at once.
Notes: An Dictionary of filesystem keys with corresponding name strings as their values for each specific filesystem name that should be set.

Every effort will be made to use the names passed in. However, if a name is illegal, it will be modified to fit the rules for that filesystem's names. Because of this, you should always call specificNames after setSpecificNames: to ensure that you are always displaying the most current names to the user.
(Read and Write computed property)

72.11.64 Constants

Constants

Constant	Value	Description
DRFilesystemInclusionMaskHFSPlus	8	The value which indicates the object should be included in the HFS+ filesy
DRFilesystemInclusionMaskISO9660	1	The value which indicates the object should be included in the ISO filesytem.
DRFilesystemInclusionMaskJoliet	2	The value which indicates the object should be included in the Joliet filesy
DRFilesystemInclusionMaskUDF	4	The value which indicates the object should be included in the UDF filesy

72.12 class DRMSFMBS

72.12.1 class DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Minutes/Seconds/Frames handling.
Notes: On CDs, minutes/seconds/frames are used to identify positioning on a disc (which is most useful on an audio disc), but applies to any position on a disc no matter what type of data is present.

A frame is equivalent to a sector or block in normal disk parlance. 75 frames make up one second, so a 2 second pause (typical pregap size) is 150 frames.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.12.2 Methods

72.12.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 72.12.4 Constructor(frames as Integer) 12162
- 72.12.5 Constructor(s as string) 12162

72.12.4 Constructor(frames as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
See also:

- 72.12.3 Constructor 12162
- 72.12.5 Constructor(s as string) 12162

72.12.5 Constructor(s as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string
See also:

- 72.12.3 Constructor 12162
- 72.12.4 Constructor(frames as Integer) 12162

72.12.6 description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation.

72.12.7 descriptionWithFormat(format as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation of the receiver.
Notes: The format string is very similar to
A printf-style format string with %-escaped formatting characters.

%%	A "%" character
%m	Minutes as a decimal number
%s	Seconds as a decimal number
%f	Frames as a decimal number

In addition to these formatting characters an optional length specifier can come between then % and the formatting character. This length specifier will force the field in question to be at least that wide. For example a format specifier of "%02m:%02s" will cause a DRMSF object representing 3 minutes 9 seconds to be formatted as "03:09".

A formatter is aware of and respects rounding. If a bit of the msf is no zero, but the format does not display that value, the next higher value will be increased by one to reflect that. Extending our example above, an DRMSF with a value of 3 minutes, 9 seconds, 15 frames using a format specfier of "%02m:%02s", will be formatted as "03:10" since the 15 frames rounds up the seconds to the next value

Returns a string containing a textual representation of the object utilizing the specified format.

72.12.8 frames as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of frames represented by the receiver.
Notes: This method differs from sectors in that it returns to the caller the number of frames remaining in the current second. For example an DRMSF value of 5:30:72 will return 72 from frames.

72.12.9 isEqualToMSF(value as DRMSFMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares on emsf to another.
Notes: True if the two object are equal, false otherwise.

72.12.10 minutes as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of minutes represented by the receiver.
Notes: If the receiver represents a non integral number of minutes, only the whole minute value is returned. For example an DRMSF value of 5:30:72 will return 5 from a minutes.

72.12.11 msf as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object with no length/time.
Notes: Returns nil on any error.

72.12.12 msfByAdding(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an msf to the receiver.
Notes: Returns nil on any error.

72.12.13 msfBySubtracting(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Subtracts an msf to the receiver.
Notes: Returns nil on any error.

72.12.14 msfWithFrames(frames as Integer) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
Notes: Returns nil on any error.

72.12.15 msfWithString(s as string) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string.
Notes: Returns nil on any error.

72.12.16 seconds as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of seconds represented by the receiver.
Notes: If the receiver represents a non integral number of seconds, only the whole second value is returned.
For example an DRMSF value of 5:30:72 will return 30 from seconds.

72.12.17 sectors as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the total number of frames/sectors represented by the receiver.
Notes: This method differs from frames in that it returns to the caller the total number of frames/sectors represented by the object.
For example an DRMSF value of 5:30:72 will return 24822 from sectors.

72.13 class DRNotificationCenterMBS

72.13.1 class DRNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for notifications.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.13.2 Methods

72.13.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes: observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

72.13.4 Constructor

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes: A DRNotificationCenter object (or simply, notification center) is essentially a notification dispatch table. It notifies all observers of notifications meeting specific criteria. This information is encapsulated in NSNotification objects, also known as notifications. Client objects register themselves with the notification center as observers of specific notifications posted by DiscRecording. When an event occurs, DiscRecording posts an appropriate notification to the notification center. The notification center dispatches a message to each registered observer, passing the notification as the sole argument.

There are two main differences between a DRNotificationCenter and the NSNotificationCenter from Foundation. First is that only Disc Recording posts notifications received through this mechanism. You use this to

obtain device plug/unplug events, burn status, etc. Second, there can be multple notification centers active at once. Each run loop of your application will have it's own notification center and notifications from that notification center will be posted to the runloop it was created on.

72.13.5 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Removes matching entries from the receiver's dispatch table.
Notes: notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.

72.14 class DRSetupPanelMBS

72.14.1 class DRSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Base class for the DiscRecordingUI setup panels.
Notes: Provides a base framework for handling device selection, media ejection and confirming or cancelling the panel.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS REALbasic Plugins, version 10.4pr7

72.14.2 Methods

72.14.3 cancel

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's cancel button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.4 close

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's close button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

72.14.6 eject

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's eject button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.7 ok

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's default button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.8 open

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's open button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

72.14.9 runSetupPanel as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop.
Notes: Returns NSOKButton (if the user clicks the default button) or NSCancelButton (if the user clicks the Cancel button).

72.14.10 Events

72.14.11 determineBestDevice(deviceA as DRDeviceMBS, deviceB as DRDeviceMBS) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Called to let you decide which device is better to use.
Notes: Default returns device A.

72.14.12 DeviceContainsSuitableMedia(device as DRDeviceMBS, byref prompt as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: This delegate method allows the delegate to determine if the media inserted in the device is suitable for whatever operation is to be performed.
Notes:

device:	The device that contains the media being asked about.
prompt:	Pass back a string object describing the media state.

Return false to disable the default button.

72.14.13 DeviceCouldBeTarget(device as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Allows the delegate to determine if device can be used as a target.
Notes: This method is used to limit the menu to only those devices that you want to appear. For example, a DVD burning application might use this to limit the menu to only devices that are capable of writing DVD-Rs.

device: The candidate device.
Returns true if the device is acceptable, false if not.

72.14.14 DeviceSelectionChanged(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sent by the default notification center when the device selection in the panel has changed.

72.14.15 SetupPanelShouldHandleMediaReservations as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: This event allows the delegate to control how media reservations are handled.
Notes: Return false to indicate the delegate will handle media reservations. Return true to indicate the setupPanel should handle media reservations itself.

72.14.16 Constants

Constants

Constant	Value	Description
NSCancelButton	0	The value runSetupPanel returns if the Cancel button is clicked.
NSOKButton	1	The value runSetupPanel returns if the OK button is clicked.

72.15 class DRTrackMBS

72.15.1 class DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The DRTrack class represents a track on the burned disc.
Example:

```
Var track as DRTrackMBS
Var bsp as DRBurnSetupPanelMBS
Var bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes: A DRTrack provides data to the for the burn and contains a description of the track on disc (length, block type, data format, etc). Data is provided for the burn in a real-time thread. It is up to the track to provide this data in a timely manner, otherwise a burn underrun can occur and ruin a disc.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

72.15.2 Methods

72.15.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.

72.15.4 DRAbstractFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS object pointing to the abstract file for ISO and Joliet volumes. The file must be in the root directory.

72.15.5 DRApplicationIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the application identifier for ISO, Joliet and UDF volumes.

72.15.6 DRAudioFourChannelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track data has four channels, as opposed to the two channels of normal stereo. If this key is not present, the engine will use a default value of false and standard two-channel stereo is assumed.

Note that while four-channel is technically allowed in the Red Book, it never caught on and is probably being replaced by SACD, so you probably shouldn't attempt to use it.

On the media, this key corresponds to bit 3 of the control field in sub-channel Q.

72.15.7 DRAudioPreEmphasisKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track includes pre-emphasis of 50/15us. If this key is not present, the engine will use a default value of false. On the media, this key corresponds to bit 0 of the control field in sub-channel Q.

72.15.8 DRBibliographicFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFile pointing to the bibliographic file for ISO and Joliet volumes. The file must be in the root directory.

72.15.9 DRBlockSize as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number indicating the block size of the track. Currently always 2048. Do not change.

72.15.10 DRBlockSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the size in bytes of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.11 DRBlockTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the type of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.12 DRCopyrightFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS pointing to the copyright file for ISO and Joliet volumes. The file must be in the root directory.

72.15.13 DRDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the data form of each block in the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.14 DRDataPreparer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the data preparer for ISO and Joliet volumes.

72.15.15 DRDefaultDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the default date to use for any unspecified dates in the filesystem. The current date and time is used if unspecified.

72.15.16 DRDVDCopyrightInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. A binary string containing the DVD copyright info structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

72.15.17 DRDVDTimestampKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. Binary string containing the DVD timestamp structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

72.15.18 DRFreeBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the length, in blocks, which is still available in a writable track.

72.15.19 DRIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. This key points to an NSArray of NSNumbers, indicating the index points inside the track. Each index point is specified as a number of blocks (frames) relative to the start of the track. There are 75 blocks in one second of CD audio. No more than 98 index points may be specified for a track.

Not all drives are capable of writing index points, and not all consumer CD players report or use them. If this key is present in any track and the drive cannot write index points, the burn will fail with kDRDeviceCantWriteIndexPointsErr.

72.15.20 DRISOLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the ISO level of the ISO-9660 filesystem on the track. Currently should be 1 or 2.

72.15.21 DRISOMacExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have Mac extensions.

72.15.22 DRISORockRidgeExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have RockRidge (POSIX) extensions.

72.15.23 DRMaxBurnSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the maximum burn speed at which data can be produced. The speed is represented in KB/s (1 KB = 1000 bytes). This key can only be used to limit the speed at which the burn runs.

72.15.24 DRNextWritableAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the next writable address in the track. This key is not present in closed tracks.

72.15.25 DRPreGapIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number indicating whether the pregap listed for the track is required. If this

key is not present, the track will behave as though the key were false.

If this key's value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr .

If this key's value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

72.15.26 DRPreGapLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number containing the length of silence or data at the beginning of the track. This defaults to 2 seconds of silence. If this key is present, the track producer will be asked for the pregap data first. If the producer implements the proper selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.

72.15.27 DRPublisher as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the publisher for ISO and Joliet volumes.

72.15.28 DRSCMSCopyrightFree as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track has no copying restrictions. Copies of this track should also be copyright free.

72.15.29 DRSCMSCopyrightProtectedCopy as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is a first-generation copy of an original that was subject to copy protection. No further digital copying should be

allowed.

72.15.30 DRSCMSCopyrightProtectedOriginal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is an original subject to copyright protection. Digital copying of this track should be allowed, but copies should be marked with SCMS.

72.15.31 DRSerialCopyManagementStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. This key points to a string value indicating the SCMS state of the track. If this key is not present, no SCMS data is written.

Not all drives are capable of writing SCMS. If this key is present in any track and the drive cannot write SCMS, the burn will fail with kDRDeviceCantWriteSCMSErr.

72.15.32 DRSessionFormatKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the session format of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.33 DRSessionNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical session number of a track.

72.15.34 DRSubchannelDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: The property whose value is the data mode of the subchannel data sent to the drive. If this key is not present, the track will default to a value of DRSubchannelDataFormNone and no subchannel information will be requested from the producer.

Subchannel data is returned from the producer in the same production method that produces normal user data. Normally a producer returns user data in chunks of DRBlockSizeKey size. When subchannel data is also produced, the producer is expected to return user data of DRBlockSizeKey in length with an additional 96 bytes of subchannel data. Depending on the data form specified in this key, the format of this 96 bytes is either in raw or pack format. When subchannel data is requested from the producer, the DRFlagSubchannelDataRequested flag is set in the flags parameter of producePreGapForTrack or produceDataForTrack and blockSize is increased by 96 bytes.

72.15.35 DRSubchannelDataFormNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A value for DRSubchannelDataFormKey indicating that the subchannel data will not be provided by the producer.

72.15.36 DRSubchannelDataFormPack as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide pack format subchannel data for the track. If this form is selected, the drive will perform P and Q parity calculations on each pack and interleave the packs before writing them to disc. This corresponds to a subchannel data form of 0xC0.

72.15.37 DRSubchannelDataFormRaw as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide raw format subchannel data for the track. If this form is selected, the producer must have performed P and Q parity calculations for each pack and done proper interleaving of the subchannel data. The drive will fill in the P-Q subchannel information and write the R-W subchannel data as is to the disc. This corresponds to

a subchannel data form of &h40.

72.15.38 DRSuppressMacSpecificFiles as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should suppress Mac-specific files from non-HFS filesystems.

72.15.39 DRSystemIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the system identifier for ISO and Joliet volumes.

72.15.40 DRTrackIsEmptyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing a boolean value and indicates whether the track is empty.

72.15.41 DRTrackISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to an memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. More details:
http://www.ifpi.org/isrc/

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

72.15.42 DRTrackLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number representing the length of the track.

72.15.43 DRTrackModeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the track mode of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

72.15.44 DRTrackNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical track number of a track.

72.15.45 DRTrackPacketSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the number of blocks per packet for the disc. It will only be present if the disc contains fixed packets. This key will contain 16 for DVD media, and typically contains either 16 or 32 for CD media.

72.15.46 DRTrackPacketTypeFixed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is writen with fixed sized packets. When this value is present the DRPacketSizeKey will also be present.

72.15.47 DRTrackPacketTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the kind of packets being written.

72.15.48 DRTrackPacketTypeVariable as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with sequential variable sized packets. The presence of this value indicates the lack of the DRPacketSizeKey.

72.15.49 DRTrackStartAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the start address for the track.

72.15.50 DRTrackTypeClosed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track has been written and is closed.

72.15.51 DRTrackTypeIncomplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track is not invisible or reserved and is available for writing.

72.15.52 DRTrackTypeInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is invisible and available to writing. If

it is packet written and not closed, DRPacketTypeKey will be present, along with DRTrackPacketType and DRTrackPacketSize keys.

72.15.53 DRTrackTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of track. Possible values are: DRTrackTypeInvisible , DRTrackTypeIncomplete , DRTrackTypeReserved or DRTrackTypeClosed.

72.15.54 DRTrackTypeReserved as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is reserved for writing.

72.15.55 DRVerificationTypeChecksum as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType.
Notes: The engine will verify the track data with an internally calculated checksum.

72.15.56 DRVerificationTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of verification to be performed. If this is not present, the track will not be verified.

72.15.57 DRVerificationTypeNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: No verification is desired, so verification will be skipped.

72.15.58 DRVerificationTypeProduceAgain as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will simply begin another production cycle and start calling produceDataForTrack again.

72.15.59 DRVerificationTypeReceiveData as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will begin reading data from the disc and calling verifyDataForTrack.

72.15.60 DRVolumeCheckedDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume-checked date for HFS+ volumes. DRDefaultDate is used if unspecified.

72.15.61 DRVolumeCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume creation date. DRDefaultDate is used if unspecified.

72.15.62 DRVolumeEffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the date and time at which the volume is effective for ISO and Joliet volumes.

72.15.63 DRVolumeExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume expiration date for ISO and Joliet volumes.

72.15.64 DRVolumeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume modification date. DRDefaultDate is used if unspecified.

72.15.65 DRVolumeSet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the volume set name for ISO and Joliet volumes.

72.15.66 estimateLength as UInt64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Asks the track producer for a size estimate.
Notes: This method calls the track producer to ask it to estimate the size needed for its data.

For some types of track, this call may be very expensive. For example, a DRFilesystemTrack may need to iterate folders on disk to provide an accurate estimate, which (if a large number of files and folders are involved) can cause this call to take 30 seconds or more. Since your main thread should not be allowed to block for this long, you may wish to call this function on a separate thread.

Requires Mac OS X 10.3.

72.15.67 testProductionSpeedForInterval(seconds as Double) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified interval.
Notes: Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer for the specified time interval.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

72.15.68 testProductionSpeedForLength(length as Integer) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified byte count.
Notes: Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer:length:atAddress:blockSize:ioFlags: until the specified length number of bytes have been produced.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

Length: length of test in seconds.

72.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Example:

```
Var f as FolderItem
f=SelectFolder
if f<>nil then
// Create tracks for the audio files
Var tracks(-1) as DRTrackMBS
Var c as Integer=f.Count
for i as Integer=1 to c
Var g as FolderItem=f.Item(i)
if g<>nil and g.visible then
Var track as DRTrackMBS=DRTrackMBS.trackForAudioFile(g)
if track<>nil then
tracks.Append track
end if
```

```
end if
next

// display gui
if UBound(tracks)>=0 then
Var bsp as DRBurnSetupPanelMBS=new DRBurnSetupPanelMBS // you may want to use your own subclass to catch events
if bsp.runSetupPanel=bsp.NSOKButton then
Var bpp as new DRBurnProgressPanelMBS // you may want to use your own subclass to catch events
bpp.beginProgressPanelForBurn(bsp.burnObject, tracks)
end if
end if
end if
```

Notes: This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 72.15.70 trackForAudioFile(path as string) as DRTrackMBS 12188

72.15.70 trackForAudioFile(path as string) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Notes: This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 72.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS 12187

72.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 72.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS 12189

72.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 72.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS 12188

72.15.73 Properties

72.15.74 BlockSize as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The size in bytes of each track block.
Notes: (Read and Write computed property)

72.15.75 BlockType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of each track block.
Notes: (Read and Write computed property)

72.15.76 DataForm as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The data form of each block in the track.
Notes: (Read and Write computed property)

72.15.77 length as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the length of the track data.
Notes: The length returned does not include the length of the pregap. Only the length of the track data

itself is returned.
(Read and Write computed property)

72.15.78 MaxBurnSpeed as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the maximum burn speed at which data can be produced.
Notes: The speed is represented in KB/s (1 KB = 1000 bytes). This value can only be used to limit the speed at which the burn runs.
(Read and Write computed property)

72.15.79 preGap as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The length of the pre gap.
Notes: (Read and Write computed property)

72.15.80 PreGapIsRequired as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating whether the pregap listed for the track is required.
Notes: For CD tracks only.
If this value is not set, the track will behave as though the value were false.

If this value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.

If this value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.
(Read and Write computed property)

72.15.81 PreGapLength as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the length of silence or data at the beginning of the track.
Notes: For CD tracks only.

This defaults to 2 seconds of silence. If this value is set, the track producer will be asked for the pregap data first.
If the producer implements the proper event, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.
(Read and Write computed property)

72.15.82 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the track
Notes: (Read and Write computed property)

72.15.83 SessionFormat as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The session format of the track.
Notes: (Read and Write computed property)

72.15.84 TrackISRC as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The property for the tracks ISRC data.
Notes: For CD-DA audio tracks only. This key points to a memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. See
http://www.ifpi.org/isrc/ for more details on the ISRC standard.

Not all drives are capable of the write modes necessary to write the ISRC.
If this key is present in any track and the drive cannot write the ISRC, the
burn will fail with kDRDeviceCantWriteISRCErr.
(Read and Write computed property)

72.15.85 TrackMode as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The track mode of the track.
Notes: (Read and Write computed property)

72.15.86 VerificationType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of verification requested.
Notes: Value should be DRVerificationTypeReceiveData, DRVerificationTypeProduceAgain, DRVerificationTypeNone or DRVerificationTypeChecksum.
(Read and Write computed property)

72.15.87 Events

72.15.88 cleanupTrackAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the burn completes.
Notes: Called after burning is complete. Typically you'll clean up what was setup is prepareTrackForBurn. Since this method is called after the laser is turned off and the burn is finished, this method can perform time consuming tasks.

True to indicate that the burn should proceed and false to indicate a failure occurred.

72.15.89 cleanupTrackAfterVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the verification completes.
Notes: Once the verification phase is complete, this method is called. The class implementing the method has a chance to do anything up to and including failing the verification.

Return true to indicate success, false to indicate failure.

72.15.90 estimateLengthOfTrack as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Estimates the size of the track to be burned.
Notes: This message is sent outside of a burn cycle in response to a -estimateLength message sent to the track.

Returns the number of blocks of data that the track will occupy. The estimate should be reasonably accurate, and no smaller than the actual size that will be needed.

Only on Mac OS X 10.3 and newer.

72.15.91 prepareTrack(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepares the track for burning.
Notes: Called before any burning starts. Do any sort of setup that needs to be performed (such as opening files). This method can calculate and update the exact track length that will be burned.

Since this method is called before the laser is turned on, this method can perform time consuming tasks.

burn: The burn object controlling the burn

Return true to indicate that the burn should proceed and false to indicate a failure occurred.

72.15.92 prepareTrackForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Prepare the track to be verified.
Notes: This method is called after the burn complets writing data to disc and before verification phase starts. Now would be a good time to prepare to produce data again by rewinding to the start of files, etc.

Return true to indicate that the verification should proceed and false to indicate a failure occurred.

72.15.93 produceDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Produces the track data.

Notes: This method is called many times over the course of a burn to obtain data for the track. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not yet used.

Return the number of bytes produced.

72.15.94 producePreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Produces the pregap data.
Notes: This method is called to obtain data for the track's pregap. If the DRPreGapLengthKey key is present in the track properties, the track producer will be asked for the pregap data first. If the producer implements this selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by DiscRecording.

The buffer passed in will be a multiple of blockSize (bufferLength = blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags (not used).

Return the number of bytes produced.

72.15.95 verifyDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Cleans up the track after the burn completes.
Notes: If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the data again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not used.

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

72.15.96 verifyPreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Checks the integrity track pregap after a burn.
Notes: If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the pregap again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. (not used)

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

72.15.97 Constants

Constants

Constant	Value	Description
DRFlagSubchannelDataRequested	2	A flag passed to producePreGapForTrack or produceDataForTrack. Indicates that the blockSize passed in includes room for subchannel data. Data producers should check this flag and perform subchannel data productio in addition to user fata production. Each block requested from the produc in this case will be formatted as [user data (as specified in track properties) [subchannel data(96 bytes)] . For example an audio producer callback should repeatedly produce 2352 byt of audio data into bytes 0-2351 of the block and an additional 96 bytes subchannel data into bytes 2352-2447.
kDRBlockSizeAudio	2352	One of the block size constants. Audio data.
kDRBlockSizeDVDData	2048	One of the block size constants. DVD data.
kDRBlockSizeMode1Data	2048	One of the block size constants. Mode 1 data.
kDRBlockSizeMode2Data	2332	One of the block size constants. Mode 2 data. Photo CD and CD-i use this.
kDRBlockSizeMode2Form1Data	2048	One of the block size constants. Mode 2 Form 1 data.
kDRBlockSizeMode2Form2Data	2324	One of the block size constants. Mode 2 Form 2 data.
kDRBlockTypeAudio	0	One of the block type constants. Audio data.
kDRBlockTypeDVDData	8	One of the block type constants. DVD data.
kDRBlockTypeMode1Data	8	One of the block type constants. Mode 1 data.
kDRBlockTypeMode2Data	13	One of the block type constants. Mode 2 data. Photo CD and CD-i use this.
kDRBlockTypeMode2Form1Data	10	One of the block type constants. Mode 2 Form 1 data.
kDRBlockTypeMode2Form2Data	12	One of the block type constants. Mode 2 Form 2 data.
kDRDataFormAudio	0	One of the data form constants. Audio data.
kDRDataFormDVDData	16	One of the data form constants. DVD data.
kDRDataFormMode1Data	16	One of the data form constants. Mode 1 data.
kDRDataFormMode2Data	32	One of the data form constants. Mode 2 data. Photo CD and CD-i use this.
kDRDataFormMode2Form1Data	32	One of the data form constants. Mode 2 Form 1 data.
kDRDataFormMode2Form2Data	32	One of the data form constants. Mode 2 Form 2 data.
kDRSessionFormatAudio	0	One of the constants for the session format. Audio data.
kDRSessionFormatCDI	16	One of the constants for the session format. CD-I disc.
kDRSessionFormatCDXA	32	One of the constants for the session format. CD-ROM XA disc.
kDRSessionFormatDVDData	0	One of the constants for the session format. DVD data.
kDRSessionFormatMode1Data	0	One of the constants for the session format. Mode 1 data.
kDRTrackMode1Data	4	One of the track mode constants. Mode 1 data.
kDRTrackMode2Data	4	One of the track mode constants.

72.16 class WindowsBurnMBS

72.16.1 class WindowsBurnMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Exposes methods that determine whether a system has hardware for writing to CD, the drive letter of a CD writer device, and programmatically initiate a CD writing session.

72.16.2 Methods

72.16.3 CDBurn

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.4 CDBurn(hostwindow as DesktopWindow) 12198
- 72.16.5 CDBurn(hostwindow as window) 12199

72.16.4 CDBurn(hostwindow as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: Hostwindow: parent window of the user interface (UI)

The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.3 CDBurn 12198
- 72.16.5 CDBurn(hostwindow as window) 12199

72.16.5 CDBurn(hostwindow as window)

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes: Hostwindow: parent window of the user interface (UI)

The staging area has a default location of %userprofile%\Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 72.16.3 CDBurn 12198
- 72.16.4 CDBurn(hostwindow as DesktopWindow) 12198

72.16.6 HasRecordableDrive as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scans the system for a CD drive with write-capability, returning true if one is found.
Notes: This search does not rely on the state of the Enable cd writing on this drive option found on the drive's property sheet. Instead, the determination is based on IMAPI.

72.16.7 RecorderDriveLetter as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the drive letter of a CD drive that has been marked as write-enabled.
Notes: The drive whose letter designation is returned by this method is the drive that has the Enable cd writing on this drive option selected. This option is found on the drive's property sheet. Only one drive on a system can have this option selected.

If a recordable CD drive is present but that option has been deselected, the method will return ane empty string.

72.16.8 Properties

72.16.9 Available as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the Shell extension on Windows for CD Burning is available.
Notes: Available should be true on Windows XP and newer.
(Read only property)

72.16.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the methods.
Notes: (Read and Write property)

Chapter 73

DispatchIO

73.1 class DispatchDataMBS

73.1.1 class DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The class to wrap memory for dispatch I/O operations.
Example:

```
// make a memoryblock
Var m As New MemoryBlock(100)
m.StringValue(0,5) = "Hello"

// wrap into data obect
Var d As New DispatchDataMBS(m)
Var size As Integer = d.Size

// copy back out
Var data As MemoryBlock = d.CopyData
// and check content
Var da As String = data.StringValue(0,5)

// release it
d = Nil
```

Notes: Dispatch data objects describe contiguous or sparse regions of memory that may be managed by the system or by the application.

Dispatch data objects are immutable, any direct access to memory regions represented by dispatch objects must not modify that memory.

We usually just wrap a MemoryBlock and avoid copying it for better performance.

- MBS Xojo Plugins, version 25.3pr1

73.1.2 Methods

73.1.3 Concat(other as DispatchDataMBS) as DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns a new dispatch data object representing the concatenation of the specified data objects.
Example:

```
Var m1 As MemoryBlock = "Hello"
Var m2 As MemoryBlock = "World"

Var d1 As New DispatchDataMBS(m1)
Var d2 As New DispatchDataMBS(m2)

Var d As DispatchDataMBS = d1.Concat(d2)
Var m As MemoryBlock = d.CopyData

// shows HelloWorld
MessageBox m.StringValue(0, m.size)
```

Notes: Those objects may be released by the application after the call returns (however, the system might not deallocate the memory region(s) described by them until the newly created object has also been released).

73.1.4 Constructor(data as DispatchDataMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The copy constructor.
Notes: Creates a new Xojo object referencing the same dispatch data.
See also:

- 73.1.5 Constructor(data as MemoryBlock, copy as boolean = false) 12203
- 73.1.6 Constructor(data as Ptr, Length as Integer) 12203

73.1.5 Constructor(data as MemoryBlock, copy as boolean = false)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a dispatch data object from the given contiguous buffer of memory.
Notes: If copy is true, we make a copy of the content of the MemoryBlock.
If copy is false, we reference the MemoryBlock to avoid the copy.
See also:

- 73.1.4 Constructor(data as DispatchDataMBS) 12202
- 73.1.6 Constructor(data as Ptr, Length as Integer) 12203

73.1.6 Constructor(data as Ptr, Length as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a new data object with the given memory.
Notes: If there is a parent object for the MemoryBlock, you can store it in ReferencedMemory property or any other thing in the tag property.
See also:

- 73.1.4 Constructor(data as DispatchDataMBS) 12202
- 73.1.5 Constructor(data as MemoryBlock, copy as boolean = false) 12203

73.1.7 CopyData as MemoryBlock

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a copy of the data into a new MemoryBlock.

73.1.8 SubRange(offset as UInt64, length as UInt64) as DispatchDataMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Creates a smaller data object for a given range.
Notes: Returns a new dispatch data object representing a subrange of the specified data object, which may be released by the application after the call returns (however, the system might not deallocate the memory region(s) described by that object until the newly created object has also been released).

offset: The offset into the data object where the subrange starts.
length: The length of the range.

Returns a newly created object representing the specified subrange of the data object.

73.1.9 Properties

73.1.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

73.1.11 ReferencedMemory as MemoryBlock

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The referenced MemoryBlock for this data object.
Notes: Only set if you initialized the data object with a MemoryBlock and without copying.
(Read and Write property)

73.1.12 SegementCount as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Queries the number of segments.
Notes: Usually data objects are stored in a continuous memory area, but that is not guaranteed.
(Read only property)

73.1.13 Size as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns the logical size of the memory region(s) represented by the specified dispatch data object.
Notes: (Read only property)

73.1.14 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The tag value.
Notes: Use this property to store whatever you like.
(Read and Write property)

73.2 class DispatchIOMBS

73.2.1 class DispatchIOMBS

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Dispatch I/O provides both stream and random access asynchronous read and write operations on file descriptors.
Notes: One or more dispatch I/O channels may be created from a file descriptor as either the kTypeStream type or kTypeRandom type. Once a channel has been created the application may schedule asynchronous read and write operations.

The application may set policies on the dispatch I/O channel to indicate the desired frequency of I/O handlers for long-running operations.

Dispatch I/O also provides a memory management model for I/O buffers that avoids unnecessary copying of data when pipelined between channels. Dispatch I/O monitors the overall memory pressure and I/O access patterns for the application to optimize resource utilization.

73.2.2 Methods

73.2.3 Barrier(theDelegate as DispatchIOBarrierMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a barrier operation on the specified I/O channel.
Notes: All previously scheduled operations on the channel will complete before the provided barrier block is enqueued onto the global queue determined by the channel's target queue, and no subsequently scheduled operations will start until the barrier block has returned.

If multiple channels are associated with the same file descriptor, a barrier operation scheduled on any of these channels will act as a barrier across all channels in question, i.e. all previously scheduled operations

on any of the channels will complete before the barrier block is enqueued, and no operations subsequently scheduled on any of the channels will start until the barrier block has returned.

While the barrier block is running, it may safely operate on the channel's underlying file descriptor with fsync, lseek etc. (but not close).

We call either the given delegate or the BarrierCompleted event.

73.2.4 Close(flags as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Close the specified I/O channel to new read or write operations; scheduling operations on a closed channel results in their handler returning an error.
Notes: If the kCloseFlagStop flag is provided, the system will make a best effort to interrupt any outstanding read and write operations on the I/O channel, otherwise those operations will run to completion normally. Partial results of read and write operations may be returned even after a channel is closed with the kCloseFlagStop flag. The final invocation of an I/O handler of an interrupted operation will be passed an ECANCELED (89) error code, as will the I/O handler of an operation scheduled on a closed channel.

Flags: The flags for the close operation.

73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a folderitem.
Notes: Same as Constructor with path, just with a FolderItem.
See also:

- 73.2.6 Constructor(type as Integer, Other as DispatchIOMBS) 12207
- 73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755) 12208
- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12209

73.2.6 Constructor(type as Integer, Other as DispatchIOMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a new dispatch I/O channel from an existing dispatch I/O channel.
Notes: The new channel inherits the file descriptor or path name associated with the existing channel, but not its channel type or policies.

If the existing channel is associated with a file descriptor, control by the system over that file descriptor is extended until the new channel is also closed, an error occurs on the file descriptor, or all references to both channels are released.

While a file descriptor is under the control of a dispatch I/O channel, file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an error for the application to modify a file descriptor directly while it is under the control of a dispatch I/O channel, but it may create additional channels associated with that file descriptor.

type: The desired type of I/O channel (kTypeStream or kTypeRandom).
Other: The existing channel to create the new I/O channel from.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12207
- 73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755) 12208
- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12209

73.2.7 Constructor(type as Integer, Path as String, OFlag as Integer = &h200, Mode as Integer = &o755)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a path name.
Notes: The specified path, oflag and mode parameters will be passed to open when the first I/O operation on the channel is ready to execute and the resulting file descriptor will remain open and under the control of the system until the channel is closed, an error occurs on the file descriptor or all references to the channel are released. At that time the file descriptor will be closed.

Type: The desired type of I/O channel (kTypeStream or kTypeRandom).
path: The absolute path to associate with the I/O channel.
OFlag: The flags to pass to open when opening the file at path.
Mode: The mode to pass to open when creating the file at path (i.e. with flag kOFlagCreate), zero otherwise.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12207
- 73.2.6 Constructor(type as Integer, Other as DispatchIOMBS) 12207

- 73.2.8 Constructor(type as Integer, Stream as BinaryStream) 12209

73.2.8 Constructor(type as Integer, Stream as BinaryStream)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Create a dispatch I/O channel associated with a stream.
See also:

- 73.2.5 Constructor(type as Integer, File as FolderItem, OFlag as Integer = &h200, Mode as Integer = &o755) 12207

73.2.9 Read(offset as Int64, length as UInt64, theDelegate as DispatchIOReadMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Reads data from the file.
Example:

```
Const path = "/Users/cs/test.dmg"

// we copy asynchronous
DispatchIORead = New DispatchIOMBS(DispatchIOMBS.kTypeStream, path, 0)
DispatchIOWrite = New DispatchIOMBS(DispatchIOMBS.kTypeStream, "/tmp/test", DispatchIOMBS.kOFlagCreate + DispatchIOMBS.kOFlagTruncate)

// let's ask to read whole file
DispatchIORead.Read(0, 10000000000000, AddressOf ReadDone)
```

Notes: Schedule a read operation for asynchronous execution on the specified I/O channel. The I/O handler is enqueued one or more times depending on the general load of the system and the policy specified on the I/O channel.

Any data read from the channel is described by the dispatch data object passed to the I/O handler.

An invocation of the I/O handler with the done flag set indicates that the read operation is complete and that the handler will not be enqueued again.

If an unrecoverable error occurs on the I/O channel's underlying file descriptor, the I/O handler will be enqueued with the done flag set, the appropriate error code and a nil data object.

An invocation of the I/O handler with the done flag set, an error code of zero and an empty data object indicates that EOF was reached.

offset: The offset relative to the channel position from which to start reading (only for kTypeRandom).
length: The length of data to read from the I/O channel, or SIZE_MAX (-1) to indicate that data should be read until EOF is reached.

We either call the delegate if you provide one or the ReadCompleted event.

73.2.10 ReadStream(Stream as BinaryStream, Length as UInt64, theDelegate as DispatchIOReadStreamMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a read operation for asynchronous execution on the specified stream.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("mond.jpg")

stream = BinaryStream.Open(file)

System.DebugLog "ReadStream..."
DispatchIOMBS.ReadStream(stream, 10000000, AddressOf ReadDone)
System.DebugLog "ReadStream done."
```

Notes: The specified delegate is enqueued with the data read from the file descriptor when the operation has completed or an error occurs.

The data object passed to the handler will only contain as much data as is currently available from the file descriptor (up to the specified length).

If an unrecoverable error occurs on the file descriptor, the handler will be enqueued with the appropriate error code along with a data object of any data that could be read successfully.

An invocation of the handler with an error code of zero and an empty data object indicates that EOF was reached.

The system takes control of the file descriptor until the handler is enqueued, and during this time file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an

error for the application to modify a file descriptor directly while it is under the control of the system, but it may create additional dispatch I/O convenience operations or dispatch I/O channels associated with that file descriptor.

length: The length of data to read from the file descriptor, or SIZE_MAX (-1) to indicate that all of the data currently available from the file descriptor should be read.

73.2.11 Write(offset as Int64, Data as DispatchDataMBS, theDelegate as DispatchIOWriteMBS = nil)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a write operation for asynchronous execution on the specified I/O channel.
Notes: The I/O handler is enqueued one or more times depending on the general load of the system and the policy specified on the I/O channel.

Any data remaining to be written to the I/O channel is described by the dispatch data object passed to the I/O handler.

An invocation of the I/O handler with the done flag set indicates that the write operation is complete and that the handler will not be enqueued again.

If an unrecoverable error occurs on the I/O channel's underlying file descriptor, the I/O handler will be enqueued with the done flag set, the appropriate error code and an object containing the data that could not be written.

An invocation of the I/O handler with the done flag set and an error code of zero indicates that the data was fully written to the channel.

offset: The offset relative to the channel position from which to start writing (only for kTypeRandom).
data: The data to write to the I/O channel. The data object will be retained by the system until the write operation is complete.

We call either the given delegate or the event of the class.

73.2.12 WriteStream(Stream as BinaryStream, Data as DispatchDataMBS, theDelegate as DispatchIOWriteStreamMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Schedule a write operation for asynchronous execution on the specified stream.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.txt")

stream = BinaryStream.Create(file, True)

Var mem As New MemoryBlock(10 * 1024 * 1024)
Var data As New DispatchDataMBS(mem)

System.DebugLog "WriteStream..."
DispatchIOMBS.WriteStream(stream, data, AddressOf WriteDone)
System.DebugLog "WriteStream done."

// later the WriteDone method is called
```

Notes: The specified delegate is enqueued when the operation has completed or an error occurs.

If an unrecoverable error occurs on the stream, the delegate will be enqueued with the appropriate error code along with the data that could not be successfully written.

An invocation of the delegate with an error code of zero indicates that the data was fully written to the channel.

The system takes control of the file descriptor until the delegate is enqueued, and during this time file descriptor flags such as O_NONBLOCK will be modified by the system on behalf of the application. It is an error for the application to modify a file descriptor directly while it is under the control of the system, but it may create additional dispatch I/O convenience operations or dispatch I/O channels associated with that file descriptor.

stream: The stream to which to write the data.
data: The data object to write to the file descriptor.
delegate: The method to call.

73.2.13 Properties

73.2.14 Descriptor as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: Returns the file descriptor underlying a dispatch I/O channel.
Notes: Will return -1 for a channel closed with Close() and for a channel associated with a path name that has not yet been opened.

If called from a barrier block scheduled on a channel associated with a path name that has not yet been opened, this will trigger the channel open operation and return the resulting file descriptor.

Returns the file descriptor underlying the channel, or -1.
(Read only property)

73.2.15 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

73.2.16 HighWater as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The high water mark on the I/O channel for all operations.
Notes: The system will make a best effort to enqueue I/O handlers with partial results as soon the number of bytes processed by an operation (i.e. read or written) reaches the high water mark.

The size of data objects passed to I/O handlers for this channel will never exceed the specified high water mark.

The default value for the high water mark is unlimited (i.e. SIZE_MAX).

Value is the number of bytes to use as a high water mark.
(Read and Write property)

73.2.17 Interval as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The nanosecond interval at which I/O handlers are to be enqueued on the I/O channel for all operations.
Notes: This allows an application to receive periodic feedback on the progress of read and write operations, e.g. for the purposes of displaying progress bars.

If the amount of data ready to be delivered to an I/O handler at the interval is inferior to the channel low water mark, the handler will only be enqueued if the kIntervalFlagStrictInterval flag is set.

Note that the system may defer enqueueing interval I/O handlers by a small unspecified amount of leeway in order to align with other system activity for improved system performance or power consumption.
(Read and Write property)

73.2.18 IntervalFlags as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The flags for the interval.
Notes: (Read and Write property)

73.2.19 LowWater as UInt64

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The low water mark on the I/O channel for all operations.
Notes: The system will process (i.e. read or write) at least the low water mark number of bytes for an operation before enqueueing I/O handlers with partial results.

The size of data objects passed to intermediate I/O handler invocations for this channel (i.e. excluding the final invocation) will never be smaller than the specified low water mark, except if the channel has an interval with the kIntervalFlagStrictInterval flag set or if EOF or an error was encountered.

I/O handlers should be prepared to receive amounts of data significantly larger than the low water mark in general. If an I/O handler requires intermediate results of fixed size, set both the low and and the high water mark to that size.

The default value for the low water mark is unspecified, but must be assumed to be such that intermediate handler invocations may occur. If I/O handler invocations with partial results are not desired, set the low water mark to SIZE_MAX.

Value is the number of bytes to use as a low water mark.
(Read and Write property)

73.2.20 Path as String

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The file path.

Notes: (Read only property)

73.2.21 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The tag value.
Notes: Use this property to store whatever you like.
(Read and Write property)

73.2.22 Type as Integer

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The type of stream.
Notes: Either kTypeStream and kTypeRandom constants.
(Read only property)

73.2.23 Events

73.2.24 BarrierCompleted

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when the barrier is reached.
Notes: Called by Barrier method if there is no delegate.

73.2.25 Closing(error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when stream is closing.
Notes: Error: An errno condition if control is relinquished because channel creation or opening of the specified file failed, zero otherwise.

73.2.26 ReadCompleted(offset as Int64, Data as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when a Read method finished.
Notes: offset: The original offset requested.
done: A flag indicating whether the operation is complete.
data: An object with the data most recently read from the I/O channel as part of this read operation, or nil.
error: An errno condition for the read operation or zero if the read was successful.

73.2.27 WriteCompleted(offset as Int64, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The event called when Write() finished.
Notes: done: A flag indicating whether the operation is complete.
Data: An object of the data remaining to be written to the I/O channel as part of this write operation, or nil.
error: An errno condition for the write operation or zero if the write was successful.

73.2.28 Constants

Flags

Constant	Value	Description
kCloseFlagStop	1	If used, the system will make a best effort to interrupt any outstanding read and write operations on the I/O channel, otherwise those operations will run to completion normally. P
kIntervalFlagStrictInterval	1	Enqueue I/O handlers at a channel's interval setting even if the amount of data ready to be delivered is inferior to the low water mark (or zero).
kOFlagAppend	8	Append to existing file
kOFlagCreate	&h200	Create file if it doesn't exist.
kOFlagReadOnly	0	Open file read only.
kOFlagReadWrite	2	Open file read & write.
kOFlagTruncate	&h400	Truncate existing file.
kOFlagWriteOnly	1	Open file write only.
kTypeRandom	1	A dispatch I/O channel representing a random access file. Read and write operations on a channel of this type may be performed concurrently and read/write data at the specified offset. Offsets are interpreted relative to the file pointer position current at the time the I/O channel is created. Attempting to create a channel of this type for a file descriptor that is not seekable will result in an error.
kTypeStream	0	A dispatch I/O channel representing a stream of bytes. Read and write operations on a channel of this type are performed serially (in order of creation) and read/write data at the file pointer position that is current at the time the operation starts executing. Operations of different type (read vs. write) may be performed simultaneously. Offsets passed to operations on a channel of this type are ignored.

73.2.29 Delegates

73.2.30 DispatchIOBarrierMBS(DispatchIO as DispatchIOMBS)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when the barrier is reached.
Notes: Called by Barrier method if there is a delegate given.

73.2.31 DispatchIOReadMBS(DispatchIO as DispatchIOMBS, offset as Int64, Data as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when a Read method finished.
Example:

```
Public Sub ReadDone(DispatchIO as DispatchIOMBS, offset as Int64, Data as DispatchDataMBS, done as Boolean, Error as Integer)
System.DebugLog CurrentMethodName
```

```
System.DebugLog "got " + data.Size.ToString + " at offset " + Offset.ToString

if Error <>0 then Break

WriteCounter = WriteCounter + 1
// let's output what we got to
DispatchIOWrite.Write(offset, data, AddressOf WriteDone)

If done Then
System.DebugLog "Done reading."
DispatchIORead.Close
End If
End Sub
```

Notes: offset: The original offset requested.
done: A flag indicating whether the operation is complete.
data: An object with the data most recently read from the I/O channel as part of this read operation, or nil.
error: An errno condition for the read operation or zero if the read was successful.

73.2.32 DispatchIOReadStreamMBS(Stream as BinaryStream, Length as UInt64, Data as DispatchDataMBS, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate to be called when the read operation finished.
Example:

```
Public Sub ReadDone(Stream as BinaryStream, Length as UInt64, Data as DispatchDataMBS, Error as Integer)
System.DebugLog CurrentMethodName
System.DebugLog "got "+data.Size.ToString+" of "+Length.ToString
End Sub
```

Notes: Length: The requested length.
Data: The data read.
Error: The error code.

73.2.33 DispatchIOWriteMBS(DispatchIO as DispatchIOMBS, offset as Int64, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when Write() finished.
Example:

```
Public Sub WriteDone(DispatchIO as DispatchIOMBS, offset as Int64, OriginalData as DispatchDataMBS,
RemainingData as DispatchDataMBS, done as Boolean, Error as Integer)
System.DebugLog CurrentMethodName

if Error <>0 then Break

If done Then
System.DebugLog "wrote "+OriginalData.Size.ToString+" bytes"

WriteCounter = WriteCounter - 1

If WriteCounter = 0 Then
System.DebugLog "write done."
DispatchIOWrite.Close
End If
End If
End Sub
```

Notes: done: A flag indicating whether the operation is complete.
Data: An object of the data remaining to be written to the I/O channel as part of this write operation, or nil.
error: An errno condition for the write operation or zero if the write was successful.

73.2.34 DispatchIOWriteStreamMBS(Stream as BinaryStream, OriginalData as DispatchDataMBS, RemainingData as DispatchDataMBS, Error as Integer)

MBS MacOSX Plugin, Plugin Version: 25.3, Platforms: macOS, iOS, Targets: All.

Function: The delegate called when write finished.
Example:

```
Sub WriteDone(Stream as BinaryStream, OriginalData as DispatchDataMBS, RemainingData as Dispatch-
DataMBS, Error as Integer)
System.DebugLog CurrentMethodName

End Sub
```

Notes: data: The data that could not be written to the I/O channel, or nil.
error: An errno condition for the write operation or zero if the write was successful.

Chapter 74

DNS

74.1 class DNSAddressRecordMBS

74.1.1 class DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an address record.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

74.1.2 Properties

74.1.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv4 address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

Notes: (Read and Write property)

74.2 class DNSAFSDBRecordMBS

74.2.1 class DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an AFSDB record.

74.2.2 Properties

74.2.3 hostname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The hostname.
Notes: (Read and Write property)

74.2.4 subtype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The sub type.
Notes: (Read and Write property)

74.3 class DNSDomainNameRecordMBS

74.3.1 class DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a domain name record.

74.3.2 Properties

74.3.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The queried name.
Notes: (Read and Write property)

74.4 class DNSHeaderMBS

74.4.1 class DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a header of a DNS query.

74.4.2 Properties

74.4.3 AdditionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional items.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AdditionalCount: "+str(r.Header.AdditionalCount)
end if
```

Notes: (Read and Write property)

74.4.4 AnswerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answers in this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AnswerCount: "+str(r.Header.AnswerCount)
end if
```

Notes: (Read and Write property)

74.4.5 AuthorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AuthorityCount: "+str(r.Header.AuthorityCount)
end if
```

Notes: (Read and Write property)

74.4.6 Flags as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The flags.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Flags: "+str(r.Header.Flags)
end if
```

Notes: (Read and Write property)

74.4.7 QuestionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions in this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "QuestionCount: "+str(r.Header.QuestionCount)
end if
```

Notes: (Read and Write property)

74.4.8 xid as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The xid value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "xid: "+str(r.Header.xid)
end if
```

Notes: (Read and Write property)

74.5 class DNSHINFORecordMBS

74.5.1 class DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for the host information record.

74.5.2 Properties

74.5.3 CPU as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The CPU information string.
Notes: (Read and Write property)

74.5.4 OS as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The operation system name.
Notes: (Read and Write property)

74.6 class DNSIN6AddressRecordMBS

74.6.1 class DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an IPv6 address record.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

74.6.2 Properties

74.6.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv6 address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

Notes: (Read and Write property)

74.6.4 rawaddress as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw address as a memoryblock.
Notes: (Read and Write property)

74.7 class DNSISDNRecordMBS

74.7.1 class DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an ISDN record.

74.7.2 Properties

74.7.3 isdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The ISDN address.
Notes: (Read and Write property)

74.7.4 subAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The subaddress.
Notes: (Read and Write property)

74.8 class DNSLocRecordMBS

74.8.1 class DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The location record class.

74.8.2 Properties

74.8.3 altitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The altitude value.
Notes: (Read and Write property)

74.8.4 horizontalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The horizontal precision value.
Notes: (Read and Write property)

74.8.5 latitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The latitude value.
Notes: (Read and Write property)

74.8.6 longitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The longitude value.
Notes: (Read and Write property)

74.8.7 size as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The size value.
Notes: (Read and Write property)

74.8.8 version as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The version value.
Notes: (Read and Write property)

74.8.9 verticalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The vertical precision value.
Notes: (Read and Write property)

74.9 class DNSMINFORecordMBS

74.9.1 class DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The MINFO record class.

74.9.2 Properties

74.9.3 emailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The emailbx value.
Notes: (Read and Write property)

74.9.4 rmailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The rmailbx value.
Notes: (Read and Write property)

74.10 class DNSMXRecordMBS

74.10.1 class DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a mx (mailbox) record.

74.10.2 Properties

74.10.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name of this email server.
Notes: (Read and Write property)

74.10.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value for this email server.
Notes: (Read and Write property)

74.11 class DNSQuestionMBS

74.11.1 class DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query question.

74.11.2 Properties

74.11.3 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes: See the Class* constants in DNSUtilMBS module.
(Read and Write property)

74.11.4 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes: See the Type* constants in DNSUtilMBS module.
(Read and Write property)

74.11.5 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The query in the question.
Notes: (Read and Write property)

74.12 class DNSRawResourceRecordMBS

74.12.1 class DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a raw resource record.

74.12.2 Properties

74.12.3 data as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The data as a string with no encoding set.
Notes: Just the raw bytes as string.
(Read and Write property)

74.12.4 length as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The length of the data.
Notes: (Read and Write property)

74.13 class DNSReplyMBS

74.13.1 class DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query reply.

74.13.2 Methods

74.13.3 Additional(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the additional record with the given index.
Notes: index is zero based.

74.13.4 Additionals as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the additional records.

74.13.5 Answer(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the answer with the given index.
Notes: index is zero based.

74.13.6 Answers as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the answer records.

74.13.7 Authority(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the authority with the given index.
Notes: index is zero based.

74.13.8 Authoritys as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the authority records.

74.13.9 Question(index as Integer) as DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The question with the given index.
Notes: index is zero based.

74.13.10 Questions as DNSQuestionMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the question records.

74.13.11 Properties

74.13.12 additionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "additionalCount: "+str(r.additionalCount)
end if
```

Notes: (Read and Write property)

74.13.13 answerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answer records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "answerCount: "+str(r.answerCount)
end if
```

Notes: (Read and Write property)

74.13.14 authorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "authorityCount: "+str(r.authorityCount)
end if
```

Notes: (Read and Write property)

74.13.15 Header as DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The header values for this query.
Notes: (Read and Write property)

74.13.16 questionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "questionCount: "+str(r.questionCount)
end if
```

Notes: (Read and Write property)

74.13.17 Server as DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The server details from this query.
Notes: (Read and Write property)

74.13.18 Status as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The status of this query.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Status: "+str(r.Status)
end if
```

Notes: See the Status* constants.
(Read and Write property)

74.13.19 Constants

Constants

Constant	Value	Description
StatusBadHandle	1	One of the status constants for the status property.
StatusConnectionFailed	6	One of the status constants for the status property.
StatusMalformedQuery	2	One of the status constants for the status property.
StatusOK	0	One of the status constants for the status property.
StatusReceiveFailed	5	One of the status constants for the status property.
StatusSendFailed	4	One of the status constants for the status property.
StatusTimeout	3	One of the status constants for the status property.
StatusWrongQuestion	9	One of the status constants for the status property.
StatusWrongServer	7	One of the status constants for the status property.
StatusWrongXID	8	One of the status constants for the status property.

74.14 class DNSResourceRecordMBS

74.14.1 class DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a resource record.
Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

74.14.2 Properties

74.14.3 A as DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.4 AAAA as DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.5 AFSDB as DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.6 CNAME as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.7 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes: See the Class* constants in DNSUtilMBS module.
(Read and Write property)

74.14.8 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes: See the Type* constants in DNSUtilMBS module.
(Read and Write property)

74.14.9 HINFO as DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.10 ISDN as DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.11 LOC as DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.12 MB as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.13 MD as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.14 MF as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.15 MG as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.16 MINFO as DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.17 MR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.18 MX as DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.19 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name.
Notes: (Read and Write property)

74.14.20 NS as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.21 PTR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.22 RAW as DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.
(Read and Write property)

74.14.23 Record as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content as a variant.
Notes: Each resource record contains only one subrecord. So this record property has a reference to it and the corresponding property.
(Read and Write property)

74.14.24 RP as DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.25 RT as DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.26 SOA as DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.27 SRV as DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.28 ttl as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The time to live value.
Notes: (Read and Write property)

74.14.29 TXT as DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.30 WKS as DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.14.31 X25 as DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

74.15 class DNSRPRecordMBS

74.15.1 class DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RP record.

74.15.2 Properties

74.15.3 mailbox as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mailbox value.
Notes: (Read and Write property)

74.15.4 txtdname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The txtdname value.
Notes: (Read and Write property)

74.16 class DNSRTRecordMBS

74.16.1 class DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RT record.

74.16.2 Properties

74.16.3 intermediate as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The intermediate value.
Notes: (Read and Write property)

74.16.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value.
Notes: (Read and Write property)

74.17 class DNSServiceQueryRecordMBS

74.17.1 class DNSServiceQueryRecordMBS

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The class to query for an arbitrary DNS record.
Notes: Subclass of the DNSServiceBaseMBS class.
Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

74.17.2 Methods

74.17.3 QueryRecord(InterfaceIndex as Integer, FullName as string, rrType as Integer, rrClass as Integer, Flags as Integer = 0) as boolean

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: Query for an arbitrary DNS record.
Notes: Flags: kFlagsForceMulticast or kFlagsLongLivedQuery. Pass kFlagsLongLivedQuery to create a "long-lived" unicast query to a unicast DNS server that implements the protocol. This flag has no effect on link-local multicast queries.
interfaceIndex: If non-zero, specifies the interface on which to issue the query (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the name to be queried for on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record to be queried for.
rrtype: The numerical type of the resource record to be queried for (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).

Lasterror is set: Returns kErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred.
Returns false in case of error or true in case of success.

You can use DNSServiceBaseMBS.ConstructFullName to build the full name.

74.17.4 Events

74.17.5 ServiceQueryRecord(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, rrType as Integer, rrClass as Integer, Length as Integer, Data as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The event called when data is received for DNS query.
Notes: flags: Possible values are kFlagsMoreComing and kFlagsAdd. The Add flag is NOT set for PTR records with a ttl of 0, i.e. "Remove" events.
InterfaceIndex: The interface on which the query was resolved.
errorCode: Will be kErr_NoError on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.
fullname: The resource record's full domain name.
rrtype: The resource record's type (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).
Length: The length, in bytes, of the resource record rdata.
Data: The raw record data of the resource record.
ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.

74.18 class DNSSOARecordMBS

74.18.1 class DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The SOA record class.
Notes: The Start of Authority (SOA) record contains information about the zone.

74.18.2 Properties

74.18.3 expire as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The expire value.
Notes: (Read and Write property)

74.18.4 minimum as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The minimum value.
Notes: (Read and Write property)

74.18.5 mname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mname value.
Notes: (Read and Write property)

74.18.6 refresh as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The refresh delay in seconds before the slave contacts the master.
Notes: (Read and Write property)

74.18.7 retry as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The retry delay in seconds before the slave contacts the master again.
Notes: (Read and Write property)

74.18.8 rname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name value.
Notes: (Read and Write property)

74.18.9 serial as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The serial value.
Notes: (Read and Write property)

74.19 class DNSSocketAddressMBS

74.19.1 class DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS socket address class.

74.19.2 Properties

74.19.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.address: "+r.Server.address
end if
```

Notes: This is IPv4 or IPv6.
(Read and Write property)

74.19.4 data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw data of this socket address.
Notes: (Read and Write property)

74.19.5 Family as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The family value.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
```

```
if r<>Nil then
MsgBox "Server.Family: "+str(r.Server.Family)
end if
```

Notes: (Read and Write property)

74.19.6 Port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port for this socket address.
Example:

```
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.Port: "+str(r.Server.Port)
end if
```

Notes: (Read and Write property)

74.20 class DNSSRVRecordMBS

74.20.1 class DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RV record.

74.20.2 Properties

74.20.3 port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port value.
Notes: (Read and Write property)

74.20.4 priority as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The priority value.
Notes: (Read and Write property)

74.20.5 target as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The target value.
Notes: (Read and Write property)

74.20.6 weight as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The weight value.
Notes: (Read and Write property)

74.21 class DNSTXTRecordMBS

74.21.1 class DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a text record.

74.21.2 Methods

74.21.3 Strings(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The strings by index.
Notes: Index is zero based.

74.21.4 Properties

74.21.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of strings in this text record.
Notes: (Read only property)

74.22 module DNSUtilMBS

74.22.1 module DNSUtilMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The module for DNS queries.
Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- Problems with killing Xojo threads with plugin calls.
- Multithreaded plugin functions can increase speed of Real Studio application

- MBS REALbasic Plugins, version 10.5pr1

74.22.2 Methods

74.22.3 ClassNumber(dnsClass as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS class constants.
Example:

```
Var n as Integer

if DNSUtilMBS.ClassNumber("CH", n) then
MsgBox str(n) // shows 3
end if
```

Notes: Returns true on success.

74.22.4 ClassString(dnsclass as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this class value.
Example:

```
MsgBox DNSUtilMBS.ClassString(DNSUtilMBS.ClassCHAOS) // shows "CH"
```

74.22.5 Lookup(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Example:

```
// lookup MX record for email sending
Var r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MsgBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

74.22.6 LookupMT(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

74.22.7 TypeNumber(dnsType as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS type constants.
Example:

```
Var n as Integer

if DNSUtilMBS.TypeNumber("AAAA", n) then
MsgBox str(n) // shows 28
end if
```

Notes: Returns true on success.

74.22.8 TypeString(dnstype as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this type value.
Example:

MsgBox DNSUtilMBS.TypeString(DNSUtilMBS.TypeMD) // shows "MD"

74.22.9 Constants

Constants

Constant	Value	Description
ClassALL	&hff	One of the DNS class constants.
ClassANY	&hff	One of the DNS class constants.
ClassCHAOS	3	One of the DNS class constants.
ClassCSNET	2	One of the DNS class constants.
ClassHESIOD	4	One of the DNS class constants.
ClassINTERNET	1	One of the DNS class constants.
ClassNONE	&hfe	One of the DNS class constants.
TypeA	1	One of the DNS type constants.
TypeAAAA	&h1c	One of the DNS type constants.
TypeAFSDB	&h12	One of the DNS type constants.
TypeALL	&hff	One of the DNS type constants.
TypeANY	&hff	One of the DNS type constants.
TypeATMA	&h22	One of the DNS type constants.
TypeAXFR	&hfc	One of the DNS type constants.
TypeCNAME	5	One of the DNS type constants.
TypeGPOS	&h1b	One of the DNS type constants.
TypeHINFO	&h0d	One of the DNS type constants.
TypeISDN	&h14	One of the DNS type constants.
TypeIXFR	&hfb	One of the DNS type constants.
TypeKEY	&h19	One of the DNS type constants.
TypeLOC	&h1d	One of the DNS type constants.
TypeMAILA	&hfe	One of the DNS type constants.
TypeMAILB	&hfd	One of the DNS type constants.
TypeMB	7	One of the DNS type constants.
TypeMD	3	One of the DNS type constants.
TypeMF	4	One of the DNS type constants.
TypeMG	8	One of the DNS type constants.
TypeMINFO	&h0e	One of the DNS type constants.
TypeMR	9	One of the DNS type constants.
TypeMX	&h0f	One of the DNS type constants.
TypeNS	2	One of the DNS type constants.
TypeNSAP	&h16	One of the DNS type constants.
TypeNSAPPTR	&h17	One of the DNS type constants.
TypeNULL	&h0a	One of the DNS type constants.
TypeNXT	&h1e	One of the DNS type constants.
TypePTR	&h0c	One of the DNS type constants.
TypePX	&h1a	One of the DNS type constants.
TypeRP	&h11	One of the DNS type constants.
TypeRT	&h15	One of the DNS type constants.
TypeSIG	&h18	One of the DNS type constants.
TypeSOA	6	One of the DNS type constants.
TypeSRV	&h21	One of the DNS type constants.
TypeTEXT	&h10	One of the DNS type constants.
TypeTKEY	&hf9	One of the DNS type constants.
TypeTSIG	&hfa	One of the DNS type constants.
TypeWKS	&h0b	One of the DNS type constants.
TypeX25	&h13	One of the DNS type constants.

74.23 class DNSWKSRecordMBS

74.23.1 class DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a WKS record.

74.23.2 Methods

74.23.3 Map(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The map values.
Notes: Index is zero based.

74.23.4 Properties

74.23.5 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address.
Notes: (Read and Write property)

74.23.6 maplength as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of items in the map array.
Notes: (Read and Write property)

74.23.7 protocol as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The protocol.
Notes: (Read and Write property)

74.24 class DNSX25RecordMBS

74.24.1 class DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a X25 record.

74.24.2 Properties

74.24.3 psdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The psdn address.
Notes: (Read and Write property)

Chapter 75

Dongle

75.1 class HASPHLDMBS

75.1.1 class HASPHLDMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for accessing HASP HL or Sentinel dongles.
Example:

```
// Load your vendor library or the demo one
Var LibFile as FolderItem = GetFolderItem("hasp_darwin_12345.dylib")

if HASPHLDMBS.LoadLibrary(LibFile) then
'MsgBox "OK"
else
MsgBox "Failed to load library."
Return
end if

// init dongle
' This method runs the actual tests on the given program number
Var blob as MemoryBlock // container for data for en-/decryption

Var FeatureID = HASPHLDMBS.HASP_DEFAULT_FID
Var VendorCode = "123456" // your vendor code here, some big Base64 encoded block

Var hasp as new HASPHLDMBS(FeatureID, VendorCode)
Select case hasp.Lasterror
case HASPHLDMBS.HASP_STATUS_OK
// ok
```

```
case HASPHLDMBS.HASP_HASP_NOT_FOUND
MsgBox "Dongle not found."
return
case HASPHLDMBS.HASP_INV_VCODE
MsgBox "Invalid vendor code"
Return
else
MsgBox "Error: "+str(hasp.Lasterror)
return
end Select

// read a file ID
Var fileid as Integer = 65524
Var size as Integer = hasp.GetSize( fileid )

if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then // ONLY IF FILE IS SUPPORTED

// read to memoryblock
blob = hasp.ReadMemory( fileid, 0, size )
if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then
// show in MsgBox
s = Blob.stringvalue(0,blob.size)
MsgBox DefineEncoding(s,Encodings.UTF8)
end if
end if
```

Notes: Please use HASP Master Wizard Suite to generate your own runtime libraries. Than you get a couple of DLLs which you can load with this class. For the demo keys, you can use the demo DLLs.
The demo DLL for example is named "hasp_windows_x64_demo.dll" or including your vendor code "hasp_windows_x64_12345.dll" (64bit). 32bit Windows DLL is named hasp_windows_12345.dll, hasp_windows_demo.dll or haspvlib_12345.dll.

Now when you have the platform dependent libraries, you can use LoadLibrary() function in this class to load the right one.

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

75.1.2 Methods

75.1.3 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library was loaded.
Notes: Returns true if library was loaded successfully or we use internal library.

75.1.4 Close

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs out from a context or session.
Notes: Called automatically for you by the destructor.

Use this function to end a connection to an API session object. Once logged out from a session, all memory allocated for the session is released.

Lasterror is set.

75.1.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature to establish a session, according to predefined search parameters.
Notes: This function is used to specify conditions that describe where login information is to searched for.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

This function does not work with legacy HASP Features.

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
Scope: Definition of the search parameters for this Feature ID. See the additional HASP API Reference documentation for more information about Scope XML Tags.
VendorCode: the vendor code

Lasterror is set. This calls SDK function hasp_login_scope.
See also:

- 75.1.6 Constructor(FeatureID as Integer, VendorCode as string) 12268

75.1.6 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature and thereby establishes a session context.
Notes: This function establishes a context to a Sentinel HASP protection key containing a license for the requested Feature ID.
The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

Legacy HASP Remarks
For local prognum Features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network "prognum" features continue to use the old HASP LM login logic, with its inherent limitations.

There is only support for concurrent usage of one server (global server address).

With "Program Number" features (see HASP_FEATURETYPE_MASK), 8 bits are reserved for legacy options (see HASP_PROGNUM_OPT_MASK, currently 5 bits are used):

- only local
- only remote
- login is counted per process ID
- disable terminal server check

- enable access to old (HASP3/HASP4) keys

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
VendorCode: the Vendor Code

Lasterror is set. This calls SDK function hasp_login.
See also:

- 75.1.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string) 12267

75.1.7 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a date and time value to hasptime (the number of elapsed seconds since January 1 1970).
Notes: Time values are in UTC.
Memoryblock has 8 bytes.

75.1.8 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes: Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_decrypt.

75.1.9 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes: Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
Returns the decrypted data.
Lasterror is set. This calls SDK function hasp_decrypt.

75.1.10 Detach(detachAction as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detaches or cancels an attached license, according to customizable parameters
Notes: You do not need to be logged in to a Sentinel HASP Feature in order to use this function.
This function is used to detach a license for a Product (i.e. all Sentinel HASP Features and Memory files which belong to this Product) from a HASP SL Protection key. The function returns a H2R file which must then be applied on the recipient machine using hasp_update() or the ACC.
This function only works with HASP SL Protection Keys; HASP HL Protection Keys are ignored.
This function can also be used on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to NULL. For cancelling, the function returns a R2H file which must be applied on the host machine using hasp_update() or the ACC. If the detached Product is already expired, no R2H file will be returned.
The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

75.1.11 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes: Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails,

Parameter	Description
detachAction:	Parameters for the operation, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
scope:	Search parameters for the Product that is to be detached
VendorCode:	The Vendor Code.
recipient:	Definition in XML format of the recipient computer, on which the detached Product will be installed. This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier HASP_RECIPIENT. Set to "" if an attached protection key is cancelled.
info:	The information that is retrieved, in XML format. This information is a V2C, which can then be installed on the recipient computer via Update.

Return code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_INV_DETACH_ACTION	Invalid XML "detach_action" parameter
HASP_INV_RECIPIENT	Invalid XML "recipient" parameter
HASP_TOO_MANY_PRODUCTS	Scope for Detach does not specify a unique Parameter
HASP_TOO_MANY_USERS	Too many users currently connected, or: at least one detachable Feature does not have enough network seats available
HASP_ACCESS_DENIED	Request cannot be processed due to ACC restrictions
HASP_FEATURE_EXPIRED	All detachable Features are expired
HASP_INV_PRODUCT	Invalid Product information
HASP_INV_DURATION	In the case of a new detachable license, duration exceeds maximum allowed OR, in the case of a detachable license extension, expiration date earlier than original date or too short (if an existing detached Product is extended, and the new expiration date is earlier than the original expiration date)
HASP_INSUF_MEM	Out of memory
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key,USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager

the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_encrypt.

75.1.12 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes: Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt. (16 bytes minimum)

Returns encrypted string.

Lasterror is set. This calls SDK function hasp_encrypt.

75.1.13 GetInfo(scope as string, format as string, VendorCode as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about system components, according to customizable search parameters, and presents it according to customizable formats.
Notes: You do not need to be logged in to a Sentinel HASP Feature in order to use this function.

This function is used to specify conditions about where to search for information. In addition, it enables you to specify conditions about the format in which the retrieved information is presented. If retrieved information is appropriately formatted, it can be used as a template in the Constructor.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

This function cannot be used to retrieve legacy HASP Features.

scope: Definition of the data that is to be searched, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation
format: Definition of the format in which the data is to be displayed, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
VendorCode: the Vendor Code
info: The information that is retrieved, in XML format

Return Code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_SCOPE_RESULTS_EMPTY	Unable to locate a Feature matching the scope
HASP_INSUF_MEM	Out of memory
HASP_INV_VCODE	Invalid Vendor Code
HASP_UNKNOWN_VCODE	Vendor Code not recognized
HASP_INVALID_PARAMETER	Scope or format string too long (max. length 32 kb)
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key, USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager
HASP_INV_FORMAT	Unrecognized format string
HASP_INV_SCOPE	Unrecognized scope string
HASP_BROKEN_SESSION	Session has been interrupted

75.1.14 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the current time.
Notes: Only HASP HL keys with a Real-time clock (rtc) and HASP SL keys can provide the current time.
Primarily used to obtain reliable timestamps that are independent from the system clock.
Time values are returned as the number of seconds that have elapsed since Jan-01-1970 0:00:00 UTC.
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME.
Returns time as a 8 byte memoryblock.
Lasterror is set.

75.1.15 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information regarding a session context.
Notes: format: Definition for the type of output data structure, in XML format.
There are three format options:

- HASP_KEYINFO For retrieving information on the Sentinel HASP protection key
- HASP_SESSIONINFO For retrieving information on the login session
- HASP_UPDATEINFO For retrieving information on a license update usually contained in a C2V file. The retrieved information includes the current state of the key, including update counters, license

availability and memory images

Returns answer. Lasterror is set.

HASP_KEYINFO is ”<haspformat format=””keyinfo””/>”
HASP_SESSIONINFO is ”<haspformat format=””sessioninfo””/>”
HASP_UPDATEINFO is ”<haspformat format=””updateinfo””/>”

75.1.16 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte size of a memory file from a HASP protection key.
Notes: This function is used to determine the file size of a HASP memory file.
FileID: Identifier for the file that is to be queried.
Returns file size. Lasterror is set.

Possible File ID constants: HASP_FILEID_LICENSE, HASP_FILEID_MAIN, HASP_FILEID_RO or HASP_FILEID_RW.

75.1.17 GetVersion(byref MajorVersion as Integer, byref MinorVersion as Integer, byref BuildServer as Integer, byref BuildNumber as Integer, VendorCode as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves version and build number of the HASP library.
Notes: Returns error code.

75.1.18 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a time value (elapsed seconds since January 1 1970) into a date and time
Notes: Memoryblock has 8 bytes.

Time values are in UTC.

75.1.19 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are decrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to decrypt.
Size: Size of the data in the memoryblock to decrypt.

Lasterror is set.

75.1.20 LegacyDecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

75.1.21 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are encrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to encrypt.
Size: Size of the data in the memoryblock to encrypt.

Lasterror is set.

75.1.22 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

75.1.23 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the LM idle time.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

time: The idle time in minutes.

Lasterror is set.

75.1.24 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to HASP4-compatible real-time clock.
Notes: This object must have been created by calling Constructor() with a "prognum" Feature ID.

This request is only supported on locally accessed keys. Attempting to set the time on a remotely accessed key will return HASP_NO_TIME.

time: The new time value (8 byte Memoryblock)

Lasterror is set.

75.1.25 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes: Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 75.1.26 LoadLibrary(path as string) as boolean 12277

75.1.26 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes: Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 75.1.25 LoadLibrary(file as folderitem) as boolean 12277

75.1.27 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes: Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file

Size: Number of bytes to read.

Lasterror is set.

75.1.28 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes: Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

75.1.29 Transfer(action as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Performs a transfer operation.
Notes: Sentinel Licensing API Usage Notes
You do not need to be logged in to a Sentinel Feature in order to use this function.

This function is used to perform the following task as per its
"action" parameter.
for "detach" action: detach a license for a Product (i.e. all Sentinel Features and Memory files which belong to this Product) from a Sentinel SL/SL-AdminMode/SL-UserMode key. The function returns a bufferwhich should be saved as H2R file.

for "cancel" action: This action runs on the recipient machine to cancel an attached license. In this case, the
recipient parameter is ignored and should be set to "". For cancelling, the function returns a buffer which

must be applied on the host machine using Update() or ACC If the detached Product is already expired, no buffer will be returned.

for "rehost" action: create a tranferable a license for given container (i.e. all Sentinel Features and Memory files
which belong to this container) from SL-AdminMode/SL-UserMode Protection key. The function returns buffer on success which must be saved as V2C file. Update() or ACC is used to apply this on destination machine.

This function only works with Sentinel SL/SL-AdminMode/SL-UserMode Protection Keys; Sentinel HL Protection Keys are ignored.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

action: Parameters for the operation, in XML format. For more information, see the accompanying Sentinel Licensing API help documentation.
scope: Search parameters for the conatiner-id that is to be re-hosted. For more information, see the accompanying
Sentinel Licensing API help documentation.
VendorCode: The Vendor Code
recipient: Definition in XML format of the recipient computer, on which the detached Product will be installed.

This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier

info: String for the information that is retrieved, in XML format. This information is a V2C, which can then be installed on the destination computer via Update.

75.1.30 Update(data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a Sentinel HASP protection key.
Notes: This function writes update information. Note that the Sentinel HASP protection key must be locally connected.

The update code contains all necessary data to perform the update on a deployed Sentinel HASP protection key including:

- The Sentinel HASP protection key on which the updated information is to be written
- The necessary Vendor Code that is required to access the Sentinel HASP key
- The actual update information

Depending on the update data, the function returns an acknowledgement code that is signed/encrypted by the key. The code is evidence that an update has been applied to a license.

data: The update data.
Returns the acknowledge data.

Lasterror is set.

75.1.31 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes: Valid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock.

Lasterror is set.

75.1.32 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes: alid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data

Lasterror is set.

75.1.33 Properties

75.1.34 Handle as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal handle for the session.
Notes: (Read and Write property)

75.1.35 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error value.
Notes: (Read and Write property)

75.1.36 Constants

Constants

Constant	Value	Description
HASP_DEFAULT_FID	0	The HASP default Feature ID. Available in every HASP key.
HASP_FEATURETYPE_MASK	&hffff0000	Legacy HASP HL Run-time API: ”Feature Type” mask. AND-mask used to identify Feature type.
HASP_INVALID_HANDLE_VALUE	0	Invalid handle value for Handle property.
HASP_MIN_BLOCK_SIZE	16	Minimum block size for encrypt and decrypt functions.
HASP_MIN_BLOCK_SIZE_LEGACY	8	Minimum block size for legacy encrypt and legacy decrypt f
HASP_PROGNUM_DEFAULT_FID	&hffff0000	Legacy HASP HL Run-time API: The HASP default Featur Available in every legacy HASP hardware key.
HASP_PROGNUM_FEATURETYPE	&hffff0000	Legacy HASP HL Run-time API: ”Program Number Featur After AND-ing with HASP_FEATURETYPE_MASK the tain this value.
HASP_PROGNUM_MASK	&h000000ff	Legacy HASP HL Run-time API: ”Program Number Mask” AND-mask used to extract the Program Number from a ” ID.
HASP_PROGNUM_OPT_CLASSIC	&h00001000	Legacy HASP HL Run-time API: ”Program Number” optio Enables the API to access ”classic” (HASP4 or earlier) keys
HASP_PROGNUM_OPT_MASK	&h0000ff00	Legacy HASP HL Run-time API: ”Program Number Optior AND-mask used to identify Program Number options: * HASP_PROGNUM_OPT_NO_LOCAL * HASP_PROGNUM_OPT_NO_REMOTE * HASP_PROGNUM_OPT_PROCESS * HASP_PROGNUM_OPT_CLASSIC * HASP_PROGNUM_OPT_TS 3 bits of the mask are reserved for future extensions and cu Initialize them with zero.
HASP_PROGNUM_OPT_NO_LOCAL	&h00008000	Legacy HASP HL Run-time API: ”Program Number” optio Disables the search for local licenses.
HASP_PROGNUM_OPT_NO_REMOTE	&h00004000	Legacy HASP HL Run-time API: ”Program Number” optio Disables the search for network licenses.
HASP_PROGNUM_OPT_PROCESS	&h00002000	Legacy HASP HL Run-time API: ”Program Number” optio Sets session count of network licenses to ”per-process”.
HASP_PROGNUM_OPT_TS	&h00000800	Legacy HASP HL Run-time API: ”Program Number” optio Ignores the presence of terminal servers.

HASP Error Codes

Constant	Value	Description
HASP_ACCESS_DENIED	5	Access to Feature, HASP protection key or functionality denied.
HASP_ALREADY_LOGGED_IN	502	C++ API: Logging in twice to the same object.
HASP_ALREADY_LOGGED_OUT	503	C++ API: Logging out twice of the same object
HASP_BROKEN_SESSION	39	Session been interrupted.
HASP_CANNOT_READ_FILE	72	File not found or access denied.
HASP_CLONE_DETECTED	64	Cloned HASP SL secure storage detected.
HASP_CONTAINER_NOT_FOUND	7	Deprecated - use HASP_HASP_NOT_FOUND.
HASP_DETACHED_LICENSE_FOUND	76	Format SL-AdminMode or migrate SL-Legacy to SL-AdminMod as container has detached license.
HASP_DETACH_DISABLED	74	Detach of license not allowed as product. contains VM disabled feature and host machine is a virtual mac
HASP_DEVICE_ERR	43	Input/Output error occurred in secure storage area of HASP SL l error occurred when communicating with a HASP HL key
HASP_DUPLICATE_HOSTNAME	79	Duplicate Hostname found while key contains Hostname Finger
HASP_ENC_NOT_SUPP	23	Sentinel HASP protection key does not support encryption type
HASP_EXTENSION_NOT_ALLOWED	73	Extension of license not allowed as number of detached. licenses is greater than current concurrency count.
HASP_FEATURE_EXPIRED	41	Feature expired.
HASP_FEATURE_NOT_FOUND	31	Requested Feature not available.
HASP_FEATURE_TYPE_NOT_IMPL	28	Requested Feature type not implemented.
HASP_FILEID_DYNAMIC_FIRST	1	Sentinel dynamic memory file ID avaliable range File ID lower limit for Sentinel dynamic memory file.
HASP_FILEID_DYNAMIC_LAST	&hffbf	Sentinel dynamic memory file ID avaliable range File ID upper limit for Sentinel dynamic memory file.
HASP_FIRST_HASP_ACT	3001	Reserved for HASP Activation API
HASP_FIRST_HELPER	2001	Reserved for HASP helper libraries.
HASP_HARDWARE_MODIFIED	52	HASP SL key incompatible with machine hardware; HASP SL to different hardware. OR: In the case of a V2C file, conflict b SL key data and machine hardware data; HASP SL key locke hardware
HASP_HASP_INACTIVE	66	Specified Hasp Id is in Inactive state
HASP_HASP_NOT_FOUND	7	Sentinel HASP protection key not available.
HASP_INCOMPAT_FEATURE	6	Legacy decryption function cannot work on Feature.
HASP_INSUF_MEM	3	System is out of memory.
HASP_INT_ERR	699	Internal error occurred in API.
HASP_INVALID_OBJECT	500	C++ API: Object incorrectly initialized.
HASP_INVALID_PARAMETER	501	Invalid function parameter.
HASP_INV_ACTION	59	Invalid XML "action" parameter
HASP_INV_API_DYLIB	401	API dispatcher: Unable to load API; DLL possibly corrupt?
HASP_INV_DETACH_ACTION	59	Invalid XML "action" parameter.
HASP_INV_DURATION	63	Invalid duration.
HASP_INV_FILEID	10	Specified File ID not recognized by API.
HASP_INV_FORMAT	15	Invalid XML format.
HASP_INV_HND	9	Invalid login handle passed to function.
HASP_INV_PORT	651	Internal use: invalid port value.
HASP_INV_PORT_TYPE	650	Internal use: invalid port type.
HASP_INV_PRODUCT	61	Invalid Product information.
HASP_INV_PROGNUM_OPT	2	Legacy HASP HL Run-time API: Unknown/Invalid Feature ID
HASP_INV_RECIPIENT	58	Invalid XML "recipient" parameter.
HASP_INV_SCOPE	36	Invalid XML scope.
HASP_INV_SIG	30	Signature verification operation failed.
HASP_INV_SPEC	35	Invalid XML specification.
HASP_INV_TIME	24	Passed time value outside supported value range.
HASP_INV_UPDATE_CNTR	21	Update counter set incorrectly.
HASP_INV_UPDATE_DATA	19	Required XML tags not found; Contents in binary data are miss
HASP_INV_UPDATE_NOTSUPP	20	Update request not supported by Sentinel HASP protection key
HASP_INV_UPDATE_OBJ	17	Binary data passed to function does not contain valid update.
HASP_INV_VCODE	22	Invalid Vendor Code passed.

Memory File ID constants

Constant	Value	Description
HASP_FILEID_LICENSE	&hfff2	Legacy HASP HL Run-time API: HASP4 FAS memory file (Dummy) File ID for the license data area of memory contents.
HASP_FILEID_MAIN	&hfff0	Legacy HASP HL Run-time API: HASP4 memory file File ID for HASP4-compatible memory contents w/o FAS.
HASP_FILEID_RO	&hfff5	Sentinel HASP secure read only memory file. File ID for HASP Sentinel HASP read only memory.
HASP_FILEID_RW	&hfff4	Sentinel HASP secure writable memory file File ID for Sentinel HASP secure writable memory.

75.2 class Rockey4NDMBS

75.2.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to handle calls to the Rockey4ND Dongle API.
Notes: Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.
Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

75.2.2 Methods

75.2.3 Available as Boolean

MBS Dongle Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether the class is available
Example:

```
if Rockey4NDMBS.Available then

// check dongle

else

// can't check dongle

end if
```

Notes: Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

75.2.4 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the Rockey Dongle API.
Example:

```
Var r as RockeyMBS
Var e as Integer

r=new RockeyMBS
r.p1=&HC44C
r.p2=&HC8F8
r.p3=0
```

```
r.p4=0

e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

Notes: See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present

75.2.5 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Same as Rockey but a different name for compatibility.
Notes: The original Rockey dongle calls the function RockeyCall.

75.2.6 Properties

75.2.7 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A one KB big buffer.
Notes: (Read and Write property)

75.2.8 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The 16bit handle value.
Notes: (Read and Write property)

75.2.9 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 32bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.10 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 32bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.11 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.12 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.13 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.2.14 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The forth 16bit parameter for the rockey function.
Notes: (Read and Write property)

75.3 module SGLockMBS

75.3.1 module SGLockMBS

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MBS Module for using SG-Lock dongles in Xojo.
Notes: See website:
https://www.sg-lock.com

Please read manual from SG Intec for details.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

75.3.2 Methods

75.3.3 Authenticate(AuthentCode as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes: This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 75.3.4 Authenticate(AuthentCode() as UInt32)

75.3.4 Authenticate(AuthentCode() as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes: This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 75.3.3 Authenticate(AuthentCode as MemoryBlock) 12290

75.3.5 CloseLibrary

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unloads and closes DLL.

75.3.6 CryptLock(ProductId as UInt32, KeyNum as UInt32, CryptMode as UInt32, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts or decrypts data on the dongle.
Notes: En- or decrypts one or more 64-bit data blocks with 128-bit key. The crypto- graphic algorithm is TEA.

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of key to use 0 to 1 - SG-Lock U3 0 to 15 - SG-Lock U4
CryptMode: Working mode. kCryptModeEncrypt = 0 for Encrypt, kCryptModeDecrypt = 1 for Decrypt.
Data: Input data. Should be multiply of 4 in length.

Returns the output data.

Lasterror property is set.

75.3.7 LoadLibraryFile(File as folderItem) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes: Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

75.3.8 LoadLibraryPath(Path as String) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes: Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

75.3.9 ReadConfig(ProductId as UInt32, Category as UInt32 = 0) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads configuration information about SG-Lock.
Notes: ProductId: Indicates the ProductId of the SG-Lock
Category: Type of requested information. currently only 0 for Information about SG-Lock modul.

Returns memoryblock with an array of 8 integers of 32-bit. The meaning of the single values are:

Index 0: Type
Index 1: Interface
Index 2: Software Version
Index 3: Hardware Version
Index 4: Serial number

Index 5: Memory size in Dwords
Index 6: Number of counters
Index 7: Number of 128-Bit Keys

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

Lasterror is set.

75.3.10 ReadCounter(ProductId as UInt32, CntNum as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a 32-bit count value from the SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 15 - SG-Lock U3 0 to 63 - SG-Lock U4

Returns the value read.
Lasterror property is set.

Counters are simple 32 bit data values in the SG-Lock memory. If desired, they can also be used for everything a 32 bit read/write variable is suitable for. By doing so you can extend the general purpose memory over the indicated size.

75.3.11 ReadData(ProductId as UInt32, Address as UInt32, LongCount as UInt32) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read 32-bit data from the SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
Address: Startadress of data value block 0 to 63 - SG-Lock U3 or 0 to 255 - SG-Lock U4
Count: Number of data values to read, each 4 bytes.

Returns memoryblock with data values.
Lasterror property is set.

75.3.12 ReadProductId as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the 16-bit ProductId from the SG-Lock.
Notes: Lasterror property is set.

The ProductId is an identifier that eases to distinguish between different protected applications of SG-Lock users. For example company X protects its application A and B with SG-Lock and gives all keys for application A the ProductId 1 and the keys for application B the ProductId 2, then all keys of application B are ‚Äùhidden‚Äú for application A and vice versa. This simple mechanism offers an effective way to prevent confusion between keys of different applications. Setting of the ProductId should be integrated into the initial- ization process of the SG-Locks before distributing with the protected software.

Returns the ProductId assigned to dongle.
Lasterror is set.

75.3.13 ReadSerialNumber(ProductId as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the for every SG-Lock unique serial number.
Notes: ProductId: Indicates the ProductId of the SG-Lock

Returns the serial number will be given back to the calling application

Lasterror property is set.

Every SG-Lock has a serial number that is unique, which is also not depending on type and interface.

75.3.14 SearchLock(ProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for a SG-Lock device.
Notes: ProductId: Indicates the ProductId of the SG-Lock looked for

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, Soft-

wareVersion, Type and InterfaceType properties.

75.3.15 SignData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Signs the data.
Notes: The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.

Returns signature as memoryblock.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

75.3.16 TeaDecipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt data.
Notes: Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

75.3.17 TeaEncipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt data.
Notes: Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

75.3.18 VerifyData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock, Signature as MemoryBlock) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Verifies the signature with the data.
Notes: The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.

LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.
Signature: The signature as memory block.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

75.3.19 WriteCounter(ProductId as UInt32, CntNum as UInt32, Data as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 32-bit count value to the SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 63 - SG-Lock U3 0 to 255 - SG-Lock U4
Data: Counter value to be written

Lasterror property is set.

75.3.20 WriteData(ProductId as UInt32, Address as UInt32, Data as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes 32-bit data values to SG-Lock memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
Address: Startaddress of data value block 0 to 63 - SG-Lock U3, 0 to 255 - SG-Lock U4
Count: Number of data values
Data: Memoryblock, where data values be copied from. (size is multiply of 4)

Lasterror property is set.

75.3.21 WriteKey(ProductId as UInt32, Address as UInt32, Key as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 128-bit key to the SG-Lock key memory.
Notes: ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of the key to be written 0 to 1 - SG-Lock U3, 0 to 15 - SG-Lock U4
Key: 128-bit Key to be written. Pointer to data array of 4 integer values of 32-bit, that form the 128-bit key

Lasterror property is set.
The 128-bit key of the U2 is read only and not changeable.

75.3.22 WriteProductId(OldProductId as UInt32, NewProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a new 16-bit ProductId to the SG-Lock.
Notes: OldProductId: Indicates the actual ProductId of the SG-Lock
NewProductId: Indicates the new ProductId of the SG-Lock

Returns true on success or false on failure.

Lasterror property is set.

75.3.23 Properties

75.3.24 Available as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library has been loaded and functions are available.
Notes: Returns true if you can call functions without getting a FunctionNotFoundException.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
(Read only property)

75.3.25 CounterCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of counters.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.26 HardwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hardware version number.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.27 InterfaceType as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of interface.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.28 KeyCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of 128-bit keys.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.29 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code returned by a function.
Notes: (Read and Write property)

75.3.30 LibraryError as String

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error message from loading the library.
Notes: (Read only property)

75.3.31 MemorySize as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in data words.
Notes: MemorySizeBytes = 4 * MemorySize
Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.32 MemorySizeBytes as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in bytes.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.33 SerialNumber as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the dongle.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.

(Read only property)

75.3.34 SoftwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The software version.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.35 Type as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of dongle.
Notes: Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

75.3.36 Constants

SG-Lock Types

Constant	Value	Description
kConfigLockSeries2	1	Series 2
kConfigLockSeries3	2	Series 3
kConfigLockSeries4	3	Series 4

Crypto Modes

Constant	Value	Description
kCryptModeDecrypt	1	Decrypt it
kCryptModeEncrypt	0	Encrypt it

Errors

Constant	Value	Description
kErrorAuthenticationFailed	6	Authentification with Authenticate failed.
kErrorAuthenticationRequired	5	Authentication with Authenticate function not or not error free processed.
kErrorDongleNotFound	1	Dongle not found.
kErrorFunctionNotSupported	7	The called function is not supported by the found SG-Lock.
kErrorLPTBusy	2	The LPT (printer port) is busy.
kErrorLPTOpenError	3	The LPT (printer port) could not be opened.
kErrorNoLPTPortFound	4	The LPT (printer port) was not found.
kErrorParameterInvalid	8	Parameter of the called function is out of the vaild value range.
kErrorSignatureInvalid	9	Signature invalid.
kErrorSuccess	0	All okay.
kErrorUSBBusy	10	Another application is claming the SG-Lock for more than 5 seconds.

Interface Types

Constant	Value	Description
kInterfaceLPT	1	Printer port connection.
kInterfaceUSB	0	USB connection.

Sign Modes

Constant	Value	Description
kSignModeSign	0	Sign the data.
kSignModeVerify	1	Verify the signature.

75.4 class UnikeyMBS

75.4.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to enable Xojo to use Unikey dongles.
Notes: Website:
http://www.esecutech.com

Available for:

- MacOS 64-bit on ARM
- MacOS 64-bit on Intel
- MacOS 32-bit on Intel
- Linux 32-bit on ARM
- Linux 32-bit on Intel
- Linux 64-bit on ARM
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel

Unavailable for:

- iOS
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.
Blog Entries

- MBS Xojo Plugins, version 25.3pr5
- MBS Xojo Plugins, version 25.3pr4
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

75.4.2 Methods

75.4.3 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.
Notes: See Unikey API Reference for details on UniKey_Calculate1 function.
Returns error code.

75.4.4 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.
Notes: See Unikey API Reference for details on UniKey_Calculate2 function.
Returns error code.

75.4.5 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
Notes: See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

75.4.6 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey license module.
Notes: See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

75.4.7 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

75.4.8 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module now.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.

75.4.9 CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module Now PC.
Notes: See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

75.4.10 Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt an amount of memory with a key.
Notes: The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

75.4.11 Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt an amount of memory with a key.
Notes: The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

75.4.12 EraseTimeModule(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Erase/Reset a real time module, and all the info in the module will be erased including start, end or duration.
Notes: See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.

75.4.13 Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if a specific UniKey is attached to the USB port.
Notes: This is the first API to start a UniKey session.
Sets handle property.

See Unikey API Reference for details on UniKey_Find function.

75.4.14 FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if another UniKey is attached to the USB port.
Notes: Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

75.4.15 GenerateKey(KeyNumber as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage.
Notes: See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

75.4.16 GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage via seed.
Notes: See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function.
Returns error code.

75.4.17 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password.

Notes: See Unikey API Reference for details on UniKey_Generate_New_Password function.
Returns error code.

75.4.18 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the UniKey client number.
Notes: See Unikey API Reference for details on UniKey_Get_Cli_Num function.
Returns error code.

75.4.19 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the Server IP, if it is local, return 127.0.0.1.
Notes: See Unikey API Reference for details on UniKey_Get_Dongle_Location function.
Returns error code.

75.4.20 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the maximum client number.
Notes: See Unikey API Reference for details on UniKey_Get_Max_Num function.
Returns error code.

75.4.21 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a value from a specific UniKey license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module function.
Returns error code.

75.4.22 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the end time of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module_End_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

75.4.23 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the start time of a specific UniKey Time license module.
Notes: See Unikey API Reference for details on UniKey_Get_Module_Start_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

75.4.24 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get UniKey Time,Äôs real time clock,Äôs time.
Notes: See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

75.4.25 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GetType can help you get the type of the UniKey dongle.
Notes: The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

75.4.26 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current UniKey library version.
Notes: See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

75.4.27 Lock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Locks the unikey.

75.4.28 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logoff a UniKey dongle with a specific handle.
Notes: This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

75.4.29 MD5(BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Make an MD5 digest for a mount of content or data.
Notes: See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

75.4.30 ModuleDecrease(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrease the value in a specified UniKey license module by ,Äú1,Äù.
Notes: See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

75.4.31 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a random number from the dongle.
Notes: See Unikey API Reference for details on UniKey_Random function.
Returns error code.

75.4.32 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the contents of the Memory.
Notes: This API needs to be called after logon of a UniKey dongle.
See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

75.4.33 ReadSoftID(byref SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the user defined SoftID.
Notes: See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

75.4.34 ReadUpdateTag(byref UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read UpdateTag from a specific dongle.
Notes: See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

75.4.35 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get return codes from the input of a seed code.
Notes: This API return for values which are related to Seed and UniKey dongle,Äôs password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

75.4.36 SetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the maximum client number.
Notes: See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.

Not supported for Mac PPC.

75.4.37 SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: To write a value to a specific UniKey license module and set the Decrement attribute.
Notes: See Unikey API Reference for details on UniKey_Set_Module function.
Returns error code.

75.4.38 SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets ini location.
Notes: See Unikey API Reference for details on UniKey_SetNETINILocation function.
Returns error code.

75.4.39 SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time.
Notes: See Unikey API Reference for details on UniKey_Set_Time function.
Returns error code.
Year is 10 for 2010.

75.4.40 SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

75.4.41 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs end time.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

75.4.42 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

75.4.43 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in UniKey dongle,Äôs clock.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

75.4.44 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in host computer.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.

75.4.45 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time by the host computer,Äôs clock.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

75.4.46 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the unikey function with the values from this object.
Notes: See the unikey documentation for what values to use.

75.4.47 UnLock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unlocks the unikey.

75.4.48 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle with specified passwords.
Notes: This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

75.4.49 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle in vendor mode with specified passwords.
Notes: This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full

permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendor,Äôs usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
Returns error code.

Not supported on Linux.

75.4.50 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write user-defined mathematical algorithms.
Notes: See Unikey API Reference for details on UniKey_Write_Arithmetic function.
Returns error code.

75.4.51 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write data into the memory.
Notes: This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function.
Returns error code.

75.4.52 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write the vendor defined SoftID.
Notes: See Unikey API Reference for details on UniKey_Write_SoftID function.
Returns error code.

75.4.53 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write UpdateTag into a specific dongle.
Notes: See Unikey API Reference for details on UniKey_Write_UpdateTag function.
Returns error code.

75.4.54 Properties

75.4.55 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memoryblock to use when calling the unikey function.
Notes: (Read and Write property)

75.4.56 Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the dongle.
Notes: (Read and Write property)

75.4.57 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP1.
Notes: (Read and Write property)

75.4.58 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP2.

Notes: (Read and Write property)

75.4.59 P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p1.
Notes: (Read and Write property)

75.4.60 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p2.
Notes: (Read and Write property)

75.4.61 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p3.
Notes: (Read and Write property)

75.4.62 P4 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p4.
Notes: (Read and Write property)

75.4.63 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The result of the last function call.
Notes: (Read and Write property)

75.4.64 Constants

Encryption Modes

Constant	Value	Description
CBC_MODE	2	CBC Mode
	DES1 1	DES1
	DES2 2	DES2
	DES3 3	DES3
DES_KEY	2	DES Key
DES_KEY_LEN	24	DES Key Len
ECB_MODE	1	ECB Mode
RSA	4	RSA
RSA_KEY	1	RSA Key
	RSA_KEY_1024 3	RSA Key 1024 bit.
	RSA_KEY_2048 4	RSA Key 2048 bit.
RSA_KEY_LEN	1408	RSA Key Len

Errors

Constant	Value	Description
ERROR_KEY_INDEX	259	Error with key in
ERROR_MAX_KEYS	258	Error with max k
ERROR_MAX_USERS	257	Error with max u
ERROR_UNIKEY_ALREADY_LOCKED	236	Dongle Already L
ERROR_UNIKEY_AR_BAD_COMMAND	217	Arithmetic Instru
ERROR_UNIKEY_AR_UNKNOWN_OPCODE	218	Arithmetic Opera
ERROR_UNIKEY_AR_VALUE_OVERFLOW	221	Const Number >6
ERROR_UNIKEY_AR_WRONG_BEGIN	219	Const Number Ca
ERROR_UNIKEY_AR_WRONG_END	220	Const Number Ca
ERROR_UNIKEY_CALCULATE	211	Calculate Failed
ERROR_UNIKEY_COMPARE_TIME_MODULE	233	The Specific Time
ERROR_UNIKEY_DECRYPT_FAILED	229	Decrypt Data Fai
ERROR_UNIKEY_ENCRYPT_FAILED	228	Encrypt Data Fai
ERROR_UNIKEY_FILE_LOCK_CLOSE	261	close lock file erro
ERROR_UNIKEY_FILE_LOCK_OPEN	260	open lock file erro
ERROR_UNIKEY_FS_ERR_OPEN_FILE	247	Can't Open File
ERROR_UNIKEY_FS_ERR_SYS_UNINIT	246	File Sys Is Not In
ERROR_UNIKEY_FS_FILE_EXIST	245	File Already Exis
ERROR_UNIKEY_FS_FILE_NAME	240	Wrong Or Invalid
ERROR_UNIKEY_FS_FILE_OFFSET	242	Offset Of File Err
ERROR_UNIKEY_FS_NO_FILE	241	No Such File Nam
ERROR_UNIKEY_FS_NO_MEMORY	244	Not Enough Free
ERROR_UNIKEY_FS_UNKONW	243	Unknown Error
ERROR_UNIKEY_GENERATE_NEW_PASSWORD	225	Generate New Pa
ERROR_UNIKEY_GET_TYPE	256	Failed to get type
ERROR_UNIKEY_INVALID_ADDR_OR_SIZE	204	Read/Write Addr
ERROR_UNIKEY_INVALID_KEY	222	The Key In The I
ERROR_UNIKEY_INVALID_KEY_STORE	224	Wrong Key Stora
ERROR_UNIKEY_INVALID_PASSWORD	201	Found UniKey Do
ERROR_UNIKEY_INVALID_PASSWORD_OR_ID	202	Wrong Password
ERROR_UNIKEY_KEY_INDEX	239	Dongle Over Keyi
ERROR_UNIKEY_LOGOUT	251	Logout error?
ERROR_UNIKEY_MAX_KEYS	238	Dongle Already M
ERROR_UNIKEY_MAX_USERS	237	Dongle Already M
ERROR_UNIKEY_MODULE	216	License Module E
ERROR_UNIKEY_NEED_FIND	215	No Find Before F
ERROR_UNIKEY_NEED_OPEN	212	Need Open Dongl
ERROR_UNIKEY_NOMORE	214	No More Dongle
	ERROR_UNIKEY_NOTBELEVEL3 206	Internal Error
ERROR_UNIKEY_NOT_FOUND	200	No UniKey Dongl
ERROR_UNIKEY_NO_ENCYYPT	248	No Secure Drive
ERROR_UNIKEY_OPEN_OVERFLOW	213	Too Many Open I
ERROR_UNIKEY_PARAMETER	254	Some parameter i
ERROR_UNIKEY_PASSWORD	249	Password Error

NetUniKey Error Codes

Constant	Value	Description
NET_UNIKEY_AREADY_START	111	The Server Has Already Started
NET_UNIKEY_CLIENT_EXSIT	106	The Client Already Exists, Per This Mode
NET_UNIKEY_DISCARD_BY_SERVER	118	The Client Is Discarded By The Server
NET_UNIKEY_ERROR_BASE	100	NetUniKey Error Base
NET_UNIKEY_INIFILE_NOT_EXISTS	120	ZhaoHJ: 2015-08-13, INI file not exists
NET_UNIKEY_IN_BLACKLIST	108	The Client Is In The Black List
NET_UNIKEY_MEMORY_ERROR	101	Memory Allocation Error
NET_UNIKEY_MESSAGE_CHANGE	110	The Message Packet Was Changed
NET_UNIKEY_MESSAGE_WRONG	104	Communication Message Is Modified
NET_UNIKEY_NOT_WORKING	117	Cannot Connect Remote Netunikey Server
NET_UNIKEY_OUT_WHITELIST	109	The Client Is Not In The White List
NET_UNIKEY_RECEIVE_ERROR	103	Receive Error
NET_UNIKEY_SEND_ERROR	102	Send Error
NET_UNIKEY_SERVER_RESOURCE_INADEQUACY	119	by lzm
NET_UNIKEY_SETUP_SOCKET_ERROR	105	Setup Socket Error
NET_UNIKEY_SOCKET_BIND_FAILED	113	Cannot Bind The Port With The Socket
NET_UNIKEY_SOCKET_INIT_FAILED	112	Cannot Initialize The Socket
NET_UNIKEY_SOCKET_LISTEN_FAILED	114	Cannot Start Listening With The Socket
NET_UNIKEY_START_UDP_SERVER_FAILED	115	Start Udp Server Failed
NET_UNIKEY_TOO_LONG_MESSAGE	116	Too Long Message
NET_UNIKEY_TOO_MANY_CLIENT	107	The Number Of Client Reach The Limitation

Functions

Constant	Value	Description
NET_UNIKEY_GET_NUM_CLIENT	226	get the number of client for netunikey
NET_UNIKEY_SET_NUM_CLIENT	225	set the number of client for netunikey
UNIKEY_CALCULATE1	14	Calculate 1
UNIKEY_CALCULATE2	15	Calculate 2
UNIKEY_CALCULATE3	16	
UNIKEY_CHECK_MODULE	12	Check Module
UNIKEY_DECRYPT	21	Decrypt the Buffer with a Specific Key
UNIKEY_ENCRYPT	20	Encrypt the Buffer with a Specific Key
UNIKEY_FIND	1	Find UniKey
UNIKEY_FIND_NEXT	2	Find next UniKey
UNIKEY_GENERATE_KEY	19	Generate a New Key in specific Key Store
UNIKEY_GET_MODULE	25	Get Module. p1 [in] Number [p3] out Value
UNIKEY_GET_TYPE	100	get the Unikey type
UNIKEY_LOCK	41	Lock
UNIKEY_LOGOFF	4	Close UniKey
UNIKEY_LOGON	3	Open UniKey
UNIKEY_MD5	22	Make an MD5 Digest for a Certain Content
UNIKEY_MODULE_DECREASE	17	Decrease Module Unit
UNIKEY_RANDOM	7	Generate Random Number
UNIKEY_READ_MEMORY	5	Read UniKey
UNIKEY_READ_SOFTID	10	Read Software ID
UNIKEY_READ_UPDATETAG	23	Read UpdateTag from a Specific Key
UNIKEY_SEED	8	Generate Seed Code
UNIKEY_SET_KEY	222	
UNIKEY_SET_MODULE	11	Set Module
UNIKEY_SET_NEW_PASSWORD	18	Set New Password via a New Seed
UNIKEY_UNLOCK	42	Unlock
UNIKEY_WRITE_ARITHMETIC	13	Write Arithmetic
UNIKEY_WRITE_MEMORY	6	Write UniKey
UNIKEY_WRITE_SOFTID	9	Write Software ID
UNIKEY_WRITE_UPDATETAG	24	Write UpdateTag to a Specific Key
UNKEY_GET_CLI_NUM	101	Get client number now.
UNKEY_GET_MAX_NUM	226	Get Max number.

Real Time Clock Functions

Constant	Value	Description
UNIKEY_CHECK_TIME_MODULE	35	check if a time >START_TIME and START_TIME+DURATION) (p1,p2,p3,p4 =
UNIKEY_CHECK_TIME_MODULE_NOW	36	check if now >START_TIME a START_TIME+DURATION) use dongle tim
UNIKEY_CHECK_TIME_MODULE_NOW_PC	37	check if now >START_TIME a START_TIME+DURATION) use host time
UNIKEY_ERASE_TIME_MODULE	29	ERASE TIME MODULE to NULL. (lp1 = m
UNIKEY_GET_MODULE_END_TIME	39	get module end time (lp1 = module index)
UNIKEY_GET_MODULE_START_TIME	38	get module start time (lp1 = module index)
UNIKEY_GET_TIME	26	read rtc time (lp1,lp2,p1,p2,p3,p4 = year,mon
UNIKEY_SET_TIME	27	write rtc time (lp1,lp2,p1,p2,p3,p4 = year,mo
UNIKEY_SET_TIME_MODULE_DURATION	34	write rtc time module duration (lp2,p1 = day
UNIKEY_SET_TIME_MODULE_END_TIME	33	write rtc time module end time (p1,p2,p3,p4 =
UNIKEY_SET_TIME_MODULE_START_TIME	30	write rtc time module start time(p1,p2,p3,p4
UNIKEY_SET_TIME_MODULE_START_TIME_NOW	31	write rtc time module start time use dongle ti
UNIKEY_SET_TIME_MODULE_START_TIME_NOW_PC	32	write rtc time module start time use host tim
UNIKEY_SET_TIME_NOW	28	write rtc time use host time (lp1 = module in

Types

Constant	Value	Description
UNIKEY_TYPE_PRO	102	Pro Unikey
UNIKEY_TYPE_STD	103	Standard Unikey
UNIKEY_TYPE_TIME	101	Time Unikey

Chapter 76

Drag & Drop

76.1 class DragItem

76.1.1 class DragItem

Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The dragitem class from Xojo framework.

76.1.2 Methods

76.1.3 NSDraggingInfoMBS as NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Provides the NSDraggingInfo object for the DragItem.

76.2 class NSDraggingImageComponentMBS

76.2.1 class NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingImageComponent class represents a single object in a dragging item.
Notes: An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

76.2.2 Methods

76.2.3 Constructor(key as string)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging image component with the specified key.
Notes: key: The key.
Available in OS X v10.7 and later.

76.2.4 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a dragging image component with the specified key.
Notes: Available in OS X v10.7 and later.

76.2.5 NSDraggingImageComponentIconKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes: Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.

76.2.6 NSDraggingImageComponentLabelKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes: Key with a corresponding value that represents a textual label associate with the item, for example, a file name.
Available in OS X v10.7 and later.

76.2.7 Properties

76.2.8 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

76.2.9 contents as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: An object providing the image contents of the component.
Notes: Typically you set an NSImage instance as content.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.2.10 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The coordinate space is the bounds of the parent dragging item.
Notes: The frame is { { 0,0 } , { draggingFrame.size.width, draggingFrame.size.height } } .

The coordinate space is the bounds of the parent NSDraggingItem instance's draggingFrame.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.2.11 key as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The unique name of this image component instance.
Notes: The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component's image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)

76.3 class NSDraggingInfoMBS

76.3.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingInfo protocol declares methods that supply information about a dragging session.
Notes: NSDraggingInfo protocol methods are designed to be invoked from within a class's implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr7
- MBS Real Studio Plugins, version 13.1pr9

76.3.2 Methods

76.3.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 76.3.4 Constructor(Handle as Integer) 12329

76.3.4 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to build an NSDraggingInfo object with a handle.
Notes: Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol.
See also:

- 76.3.3 Constructor 12329

76.3.5 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the names of the files that the receiver promises to create there.
Notes: dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

76.3.6 promisedFilesDroppedAtDestination(dropDestination as FolderItem) as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the files that the receiver promises to create there.
Notes: dropDestination: A folderitem specifying the drop location for promised files.

Return an array of folderitems for the files.
The files may not yet exist.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

76.3.7 slideDraggedImageTo(screenPoint as NSPointMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Slides the image to a specified location.
Notes: screenPoint: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination's implementation of prepareForDragOperation, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

76.3.8 Properties

76.3.9 animatesToDestination as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the dragging formation animates while the drag is over this destination.
Notes: During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item's draggingFrame to the correct destinations.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.10 draggedImage as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image being dragged.
Notes: Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still cannot get the current drag image.
(Read only property)

76.3.11 draggedImageLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the dragged image's origin.
Notes: Returns the dragged image's origin, in the base coordinate system of the destination object's window.
The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.

(Read only property)

76.3.12 draggingDestinationWindow as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination window for the dragging operation.
Notes: Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.

Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

76.3.13 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging formation while the drag is over this destination.
Notes: Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.

The default value is the current drag formation.

Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class's method enumerateDraggingItemsWithOptions not inside the enumeration Block.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.14 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the mouse pointer in the base coordinate system of the destination object's window.
Notes: (Read only property)

76.3.15 draggingPasteboard as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that holds the data being dragged.
Notes: Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

76.3.16 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session.
Notes: (Read only property)

76.3.17 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the source, or owner, of the dragged data.
Notes: This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

76.3.18 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging operation mask of the dragging source.
Notes: The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.

The modifier keys are associated with the dragging operation options shown below:

Modifier Key	Dragging Operation
Control	NSDragOperationLink
Option	NSDragOperationCopy
Command	NSDragOperationGeneric

(Read only property)

76.3.19 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.3.20 numberOfValidItemsForDrop as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the number of valid items for a drop operation.
Notes: During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later.
(Read and Write property)

76.3.21 Constants

Visual Format Constants

Constant	Value	Description
NSDraggingFormationDefault	0	The system determined formation. Available in OS X v10.7 and later.
NSDraggingFormationList	3	Drag images are laid out vertically, non-overlapping with the left edges aligned. Available in OS X v10.7 and later.
NSDraggingFormationNone	1	Drag images maintain their set positions relative to each other/ Available in OS X v10.7 and later.
NSDraggingFormationPile	2	Drag images are placed on top of each other with random rotations. Available in OS X v10.7 and later.
NSDraggingFormationStack	4	Drag images are laid out overlapping diagonally. Available in OS X v10.7 and later.

Drag Operations Constants

Constant	Value	Description
NSDragOperationAll_Obsolete	15	The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.
NSDragOperationCopy	1	The data represented by the image can be copied.
NSDragOperationDelete	32	The data can be deleted.
NSDragOperationEvery	-1	All of the above.
NSDragOperationGeneric	4	The operation can be defined by the destination.
NSDragOperationLink	2	
NSDragOperationMove	16	The data can be moved.
NSDragOperationNone	0	No drag operations are allowed.
NSDragOperationPrivate	8	The operation is negotiated privately between the source and the destination.

76.4 class NSDraggingItemMBS

76.4.1 class NSDraggingItemMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.
Notes: See NSDraggingSessionMBS Class Reference for more information

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

76.4.2 Methods

76.4.3 Constructor(item as NSPasteboardItemMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging item using the specified content.
Notes: item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

76.4.4 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)
Notes: When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.

76.4.5 setDraggingFrame(frame as NSRectMBS, contents as Variant)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Sets the item's dragging frame and contents.
Notes: frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImage-Component instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties.
Available in OS X v10.7 and later.

76.4.6 Properties

76.4.7 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.4.8 draggingFrame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The frame of the dragging item.
Notes: The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance implantation of enumerateDraggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)

76.5 class NSDraggingSessionMBS

76.5.1 class NSDraggingSessionMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingSession class encompases a drag and drop action and allows modification of the drag while in progress.
Notes: You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MBS Real Studio Plugins, version 13.1pr9

76.5.2 Methods

76.5.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

76.5.4 draggingLeaderIndex as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The index of the dragging item under the cursor.
Notes: The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

76.5.5 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The current cursor location of the drag in screen coordinates. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.6 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that contains the data being dragged. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.7 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session. (read-only)
Notes: Available in OS X v10.7 and later.

76.5.8 Properties

76.5.9 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

76.5.10 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.
Notes: This property should be set immediately after creating the dragging session.

The default value is true.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.5.11 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls the dragging formation when the drag is not over the source or a valid destination.
Notes: Setting this value causes the dragging formation to change immediately, provided a valid destination has not overriden the behavior. If the dragging session hasn't started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.
Available in OS X v10.7 and later.
(Read and Write computed property)

76.5.12 Constants

Constants

Constant	Value	Description
NSDraggingContextOutsideApplication	0	Whether a drag terminates within or outside the application. The dragging terminates outside the application. Available in OS X v10.7 and later.
NSDraggingContextWithinApplication	1	Whether a drag terminates within or outside the application. The dragging terminates within the application. Available in OS X v10.7 and later.

Visual Format Constants

Constant	Value	Description
NSDraggingFormationDefault	0	The system determined formation. Available in OS X v10.7 and later.
NSDraggingFormationList	3	Drag images are laid out vertically, non-overlapping with the left edges aligned. Available in OS X v10.7 and later.
NSDraggingFormationNone	1	Drag images maintain their set positions relative to each other/ Available in OS X v10.7 and later.
NSDraggingFormationPile	2	Drag images are placed on top of each other with random rotations. Available in OS X v10.7 and later.
NSDraggingFormationStack	4	Drag images are laid out overlapping diagonally. Available in OS X v10.7 and later.

76.6 Globals

76.6.1 InstallDragImageMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Install drag image patch.
Notes: This allows you to use retina NSImage for drag image with using Xojo's built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.1
- MBS Xojo Plugins, version 21.1pr5

76.6.2 SetNextDragImageMBS(Img as NSImageMBS, DragItemCount as Integer = 1)

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets which image to use for next drag.
Notes: Once image has been replaced for Xojo's drag, the image reference is freed by plugin.

Please call setSize on the NSImageMBS to set the size to use.
e.g. half the pixels, so the picture is sharp on a retina screen.

Added DragItemCount parameter for version 23.0 to define how many drag items you have, so all can get the new picture.

76.7 class WinDataObjectMBS

76.7.1 class WinDataObjectMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a data object for Drag and Drop.
Example:

```
// take some picture
Var p as Picture = LogoMBS(500)

// create data object
Var w as new WinDataObjectMBS(p)
```

Notes: While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

76.7.2 Methods

76.7.3 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes: pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it's mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.

- 76.7.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color) 12344

76.7.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes: pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.
See also:

- 76.7.3 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer) 12343

76.7.5 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file references in the format the explorer can understand them.
See also:

- 76.7.6 AddFiles(pathes() as string) 12345

76.7.6 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file pathes in the format the explorer can understand them.
Notes: Folder pathes should have no backslash on the end.
See also:

- 76.7.5 AddFiles(files() as folderitem) 12344

76.7.7 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a picture to the data object.

76.7.8 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds raw data to the data object.
Notes: Depending of the format you may need to add chr(0) on the end.

76.7.9 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds the text to the data object.

76.7.10 Constructor

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an empty data object.
See also:

- 76.7.11 Constructor(files() as folderitem) 12346
- 76.7.12 Constructor(pic as picture) 12346
- 76.7.13 Constructor(text as string) 12346

76.7.11 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a data object and adds the files.
See also:

- 76.7.10 Constructor 12345
- 76.7.12 Constructor(pic as picture) 12346
- 76.7.13 Constructor(text as string) 12346

76.7.12 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Creates a new data object and adds the given picture.
Example:

```
// take some picture
Var p as Picture = LogoMBS(500)

// create data object
Var w as new WinDataObjectMBS(p)
```

See also:

- 76.7.10 Constructor 12345
- 76.7.11 Constructor(files() as folderitem) 12346
- 76.7.13 Constructor(text as string) 12346

76.7.13 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new data object and adds the given text.
Example:

```
// create data object with text
Var w as new WinDataObjectMBS("Hello World")
```

See also:

- 76.7.10 Constructor 12345

- 76.7.11 Constructor(files() as folderitem) 12346
- 76.7.12 Constructor(pic as picture) 12346

76.7.14 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of formats in the data object.
Notes: Helps for debugging to see what is inside.

76.7.15 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes: Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

Only accepts data provided as blob.
See also:

- 76.7.16 GetFileContents(index as integer, byref IsPath as boolean) as string 12347

76.7.16 GetFileContents(index as integer, byref IsPath as boolean) as string

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes: Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

IsPath is set to true, when the returned data is a file path instead of data itself.
See also:

- 76.7.15 GetFileContents(index as Integer) as string 12347

76.7.17 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file descriptors.
Example:

```
Var dataObject as WinDataObjectMBS // your data object

Var des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
// we got file descriptions. Some metadata and the data. No path.
Var data as string = dataObject.GetFileContents(0)
msgbox "File """+d.FileName+""" with "+str(lenb(data))+" bytes data."
next
```

Notes: Result array is empty on any error.

76.7.18 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries filename from data object.
Notes: Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

76.7.19 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Example:

```
Var dataObject as WinDataObjectMBS // your data object

Var files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
// we got a file you can use like any other file (e.g. copy)
listbox1.AddRow "Path """+f.NativePath+"""
next
```

Notes: Checks for a CF_HDROP type. May return one or more folderitems.

76.7.20 GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Notes: Checks for a CF_HDROP type. May return one or more folderitems.

76.7.21 GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Queries the picture from the data object.
Notes: Supports CF_BITMAP/TYMED_GDI.

76.7.22 GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the raw data for the given type.

76.7.23 GetText as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the text from the data object.
Notes: Returns unicode or ANSI text depending on what is available. Unicode is preferred.

76.7.24 HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file descriptors.
Notes: Returns true if a path is found.
Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.

76.7.25 HasFileName as boolean

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks to see if a filename entry is in the data object.

76.7.26 HasPaths as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file paths.
Notes: Returns true if a path is found.
Checks for CF_HDROP.

76.7.27 HasPicture as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if a picture is part of this data object.
Notes: Returns true if a picture is found.
Checks for CF_BITMAP.

76.7.28 HasRaw(format as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains data in the given format.

76.7.29 HasText as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains Text or UnicodeText.
Notes: Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.

76.7.30 Properties

76.7.31 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drag image.
Notes: Used to show user what he is dragging.
(Read only property)

76.7.32 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.7.33 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal helper object to handle the drag image.
Notes: This value is not zero if the AddDragImage call was successful.
(Read and Write property)

76.7.34 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

76.7.35 Constants

Constants

Constant	Value	Description
CF_BITMAP	2	One of the constants for the data types.
CF_DIB	8	One of the constants for the data types.
CF_DIBV5	17	One of the constants for the data types.
CF_DIF	5	One of the constants for the data types.
CF_ENHMETAFILE	14	One of the constants for the data types.
CF_HDROP	15	One of the constants for the data types.
CF_LOCALE	16	One of the constants for the data types.
CF_METAFILEPICT	3	One of the constants for the data types.
CF_OEMTEXT	7	One of the constants for the data types.
CF_PALETTE	9	One of the constants for the data types.
CF_PENDATA	10	One of the constants for the data types.
CF_RIFF	11	One of the constants for the data types.
CF_SYLK	4	One of the constants for the data types.
CF_TEXT	1	One of the constants for the data types.
CF_TIFF	6	One of the constants for the data types.
CF_UNICODETEXT	13	One of the constants for the data types.
CF_WAVE	12	One of the constants for the data types.

76.8 class WindowsDragSourceMBS

76.8.1 class WindowsDragSourceMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Drag and Drop on Windows to create a drag source.
Notes: The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user's selection.
- Initiating the drag-and-drop operation based on the user's mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user's mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

When To Implement

Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

When To Use

You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDragDrop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!
Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

76.8.2 Methods

76.8.3 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Carries out an OLE drag and drop operation.
Notes: Parameters:

dataObject: The WinDataObjectMBS data object that contains the data being dragged.
OKEffects: Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
Effect: Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_S_DROP	The OLE drag-and-drop operation was successful.
DRAGDROP_S_CANCEL	The OLE drag-and-drop operation was canceled.
E_UNSPEC	Unexpected error occurred.

Remarks

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting as the data source must also implement WindowsDragSourceMBS, while the target application must imple-

ment WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.GiveFeedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse's position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.

76.8.4 Properties

76.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.8.6 Events

76.8.7 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables a source application to give visual feedback to the end user during a drag-and-drop operation by providing the DoDragDrop function with an enumeration value specifying the visual effect.
Notes: Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, WindowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful completion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the DoDragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target window.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the drag-scrolling variation of the appropriate pointer.

Notes to Implementers

This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

76.8.8 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.
Notes: The OLE DoDragDrop function calls this method during a drag-and-drop operation.

EscapePressed: Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

Return code	Description
S_OK	The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected.
DRAGDROP_S_DROP	The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released.
DRAGDROP_S_CANCEL	The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed.

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.

76.8.9 Constants

Constants

Constant	Value	Description
DRAGDROP_S_CANCEL	&H00040101	One of the OLE error codes. Drag and Drop was cancelled.
DRAGDROP_S_DROP	&h00040100	One of the OLE error codes. Do the drop operation.
DRAGDROP_S_USEDEFAULTCURSORS	&h00040102	One of the OLE error codes.
DROPEFFECT_COPY	1	One of the drop effect constants. Drop results in a copy. The original data is untouched by t Your application should always mask drop effect constants ibility with future implementations. Presently, only some in a drop effect value have meaning. In the future, more the bits will be added. Drag sources and drop targets sho these values appropriately before comparing. They shoul drop effect value against, say, DROPEFFECT_COPY by if DropEffect = DROPEFFECT_COPY then Instead, the application should always mask for the value or as using one of the following techniques: if bitwiseAnd(DropEffect, DROPEFFECT_COPY) FECT_COPY then This allows for the definition of new drop effects, while pr compatibility with existing code.
DROPEFFECT_LINK	4	One of the drop effect constants. Drag source should create a link to the original data.
DROPEFFECT_MOVE	2	One of the drop effect constants. Drag source should remove the data.
DROPEFFECT_NONE	0	One of the drop effect constants. Drop target cannot accept the data.
DROPEFFECT_SCROLL	&h80000000	One of the drop effect constants. Scrolling is about to start or is currently occurring in the t used in addition to the other values.
MK_CONTROL	8	One of the key state constants. The CTRL key is down.
MK_LBUTTON	1	One of the key state constants. The left mouse button is down.
MK_MBUTTON	&h10	One of the key state constants. The middle mouse button is down.
MK_RBUTTON	2	One of the key state constants. The right mouse button is down.
MK_SHIFT	4	One of the key state constants. The SHIFT key is down.
MK_XBUTTON1	&h20	One of the key state constants. The first X button is down.
MK_XBUTTON2	&h40	One of the key state constants. The second X button is down.
S_FALSE	1	One of the OLE error codes.
S_OK	0	One of the OLE error codes.

76.9 class WindowsDropTargetMBS

76.9.1 class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application.
Notes: It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow functions.

When To Implement

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

When To Use

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!
Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

76.9.2 Methods

76.9.3 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes: This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

- 76.9.4 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer 12362

76.9.4 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes: This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls Windows-

DropTargetMBS.Drop.

76.9.7 Properties

76.9.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

76.9.9 Helper as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the helper object.
Notes: (Read and Write property)

76.9.10 Events

76.9.11 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a drop can be accepted, and, if so, the effect of the drop.
Notes: dataObject: This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

x and y: A point containing the current cursor coordinates in screen coordinates.

effect: The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect parameter is NULL on input.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

76.9.12 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes target feedback and releases the data object.
Notes: Return S_OK on success. Other possible values include the following.

Return code	Description
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

76.9.13 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides target feedback to the user and communicates the drop's effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.
Notes: KeyState: The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect value is not valid.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by

examining the FORMATETC defining the data object's formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.

76.9.14 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Incorporates the source data into the target window, removes target feedback, and releases the data object.
Notes: dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The pdwEffect parameter is not valid.
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.

76.9.15 Constants

Constants

Constant	Value	Description
DROPEFFECT_COPY	1	One of the drop effect constants. Drop results in a copy. The original data is untouched by the drag source. Your application should always mask drop effect constants to ensure compa ibility with future implementations. Presently, only some of the bit positio in a drop effect value have meaning. In the future, more interpretations f the bits will be added. Drag sources and drop targets should carefully ma these values appropriately before comparing. They should never compare drop effect value against, say, DROPEFFECT_COPY by doing the followin if DropEffect = DROPEFFECT_COPY then Instead, the application should always mask for the value or values being soug as using one of the following techniques: if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPE FECT_COPY then This allows for the definition of new drop effects, while preserving backwar compatibility with existing code.
DROPEFFECT_LINK	4	One of the drop effect constants. Drag source should create a link to the original data.
DROPEFFECT_MOVE	2	One of the drop effect constants. Drag source should remove the data.
DROPEFFECT_NONE	0	One of the drop effect constants. Drop target cannot accept the data.
DROPEFFECT_SCROLL	&h80000000	One of the drop effect constants. Scrolling is about to start or is currently occurring in the target. This value used in addition to the other values.
E_INVALIDARG	&h80070057	One of the OLE error codes. An invalid argument was passed.
E_OUTOFMEMORY	&h80000002	One of the OLE error codes. There was insufficient memory available for this operation.
E_UNEXPECTED	&h8000FFFF	One of the OLE error codes. An unexpected error has occurred.
MK_CONTROL	8	One of the key state constants. The CTRL key is down.
MK_LBUTTON	1	One of the key state constants. The left mouse button is down.
MK_MBUTTON	&h10	One of the key state constants. The middle mouse button is down.
MK_RBUTTON	2	One of the key state constants. The right mouse button is down.
MK_SHIFT	4	One of the key state constants. The SHIFT key is down.
MK_XBUTTON1	&h20	One of the key state constants. The first X button is down.
MK_XBUTTON2	&h40	One of the key state constants. The second X button is down.
S_FALSE	1	One of the OLE error codes.
S_OK	0	One of the OLE error codes.

76.10 class WindowsFileDescriptorMBS

76.10.1 class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a file description.
Notes: Describes the properties of a file that is being copied by means of the clipboard during a Microsoft ActiveX drag-and-drop operation.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

76.10.2 Properties

76.10.3 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file type identifier.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

Notes: Only valid if FD_CLSID is set in the flags.
(Read and Write property)

76.10.4 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of file creation.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
Var da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
```

```
end if
```

Notes: Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

76.10.5 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: File attribute flags.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEMPORARY then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

Notes: This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

76.10.6 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the file.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

MsgBox d.FileName
```

Notes: (Read and Write property)

76.10.7 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size, in bytes.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

Notes: Only valid if FD_FILESIZE is set in flags.
(Read and Write property)

76.10.8 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of flags that indicate which of the other structure members contain valid data.
Notes: A combination of the FD_* constants.
(Read and Write property)

76.10.9 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the file icon.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.10 IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the file icon.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+strR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.11 Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of the file descriptor.
Notes: Use this entry for GetFileContent call.
(Read and Write property)

76.10.12 LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time that the file was last accessed.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
Var da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

Notes: Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

76.10.13 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the last write operation.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
Var da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

Notes: Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

76.10.14 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x screen coordinate of the file object.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.15 PointY as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y screen coordinate of the file object.
Example:

```
Var d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
```

```
MsgBox "file object at "+strR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes: Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

76.10.16 Constants

Flag constants

Constant	Value	Description
FD_ACCESSTIME	&h0010	The LastAccessTime member is valid.
FD_ATTRIBUTES	4	The FileAttributes member is valid.
FD_CLSID	1	The ClassID member is valid.
FD_CREATETIME	8	The CreationTime member is valid.
FD_FILESIZE	&h0040	Whether the FileSize member is valid.
FD_LINKUI	&h8000	Treat the operation as a shortcut.
FD_PROGRESSUI	&h4000	A progress indicator is shown with drag-and-drop operations.
FD_SIZEPOINT	2	The Icon* and point* members are valid.
FD_WRITESTIME	&h0020	Whether the LastWriteTime property is valid.

File attribute constants

Constant	Value	Description
FILE_ATTRIBUTE_ARCHIVE	&h00000020	A file or directory that is an archive file or directory. Appl use this attribute to mark files for backup or removal .
FILE_ATTRIBUTE_ATOMIC_WRITE	&h00000200	
FILE_ATTRIBUTE_COMPRESSED	&h00000800	A file or directory that is compressed. For a file, all of the compressed. For a directory, compression is the default for n and subdirectories.
FILE_ATTRIBUTE_DIRECTORY	&h00000010	The handle that identifies a directory.
FILE_ATTRIBUTE_HIDDEN	&h00000002	The file or directory is hidden. It is not included in an o listing.
FILE_ATTRIBUTE_NORMAL	&h00000080	A file that does not have other attributes set. This attribute i used alone.
FILE_ATTRIBUTE_OFFLINE	&h00001000	The data of a file is not available immediately. This attribute file data is physically moved to offline storage. This attribute i Storage, which is the hierarchical storage management softw should not arbitrarily change this attribute.
FILE_ATTRIBUTE_READONLY	&h00000001	A file that is read-only. Applications can read the file, but c or delete it.
FILE_ATTRIBUTE_SYSTEM	&h00000004	A file or directory that the operating system uses a part of, o
FILE_ATTRIBUTE_TEMPORARY	&h00000100	A file that is being used for temporary storage. File systems a back to mass storage if sufficient cache memory is available, an application deletes a temporary file after the handle is scenario, the system can entirely avoid writing the data. Ot is written after the handle is closed.
FILE_ATTRIBUTE_XACTION_WRITE	&h00000400	

Chapter 77

DVD Playback

77.1 class DVDPlaybackMBS

77.1.1 class DVDPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: A class for DVD Playback on Mac OS X 10.3
Notes: Requires Mac OS X 10.3 or newer.

The DVD Playback application programming interface (API) gives you access to the DVDPlayback framework, allowing you to offer DVD playback functionality from within your application.

During a playback "session," the application must perform specific minimum operations, as follows:

1. Initialize the playback framework with calling Open. The DVDPlayback framework can only be opened by one process at a time. If a second process attempts to initialize it, an error will be returned.
2. Set the playback window with SetPlayWindow.
4. Set the video bounds with SetVideoBounds. This is the bounds within the window and is in port coordinates.
5. Open the media with OpenMediaVolume (DVD disc) or OpenMediaFile (VIDEO_TS folder).
6. Play the media.
7. When finished or switching media, close with the appropriate call (CloseMediaVolume or CloseMediaFile)
8. When quitting or finishing session, tear down the DVDPlayback framework with calling close.

77.1.2 Methods

77.1.3 Available as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the DVD playback is installed on this Mac.
Notes: Requires Mac OS X 10.3 or newer.

77.1.4 ClearLastPlayBookmark

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position to the beginning of the disc.
Notes: This function sets the video playback position to the beginning of the disc, but does not begin playing the media. Calling this function is equivalent to calling the function DVDStop twice in succession. Before calling this function, media needs to be open.
Available in Mac OS X v10.4 and later.
Lasterror is set.

77.1.5 close

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when completely done with playback. Usually when the application is quitting.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.6 CloseMediaFile

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened VIDEO_TS folder.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.7 CloseMediaVolume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened DVD disc.

Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.8 DisplaySubPicture(value as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Turns the display of subpictures on or off.
Notes: value: A Boolean value that specifies whether to display subpictures in the current title. To display subpictures, specify TRUE. To hide subpictures, specify FALSE.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started. You can use this function to display or hide additional bitmap graphic elements such as subtitles.

Available in Mac OS X v10.3 and later.

77.1.9 DoButtonActivate(inIndex as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects and activates a menu button by index.
Notes: InIndex: The 1-based index of the menu button the user has selected.

If the index coincides with an active button, this function executes the action corresponding to the button.

Available in Mac OS X v10.4 and later.

77.1.10 DoMenuCGClick(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be selected.
Notes: Requires Mac OS X 10.5.
Lasterror is set.

77.1.11 DoMenuCGMouseOver(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be hightlighted.
Notes: Requires Mac OS X 10.5.
Lasterror is set.

77.1.12 DoMenuClick(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be selected.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.13 DoMenuMouseOver(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be hightlighted and it's index returned in outIndex.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.14 DoUserNavigation(navigation as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the user to navigate between menu buttons.
Notes: This is usually done using keyboard keys (arrow keys to move and Enter key to choose a menu item).
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

77.1.15 EnableWebAccess(enable as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

kDVDUserNavigationMoveUp	1
kDVDUserNavigationMoveDown	2
kDVDUserNavigationMoveLeft	3
kDVDUserNavigationMoveRight	4
kDVDUserNavigationEnter	5

Function: Turns DVD@ccess support on or off.
Notes: Lasterror is set.
Requires Mac OS X 10.3 or newer.

77.1.16 GetAngle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the camera angle displayed.
Notes: Returnsthe integer contains the 1-based index of the current camera angle.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

77.1.17 GetAspectRatio as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the aspect ratio of the current title or menu.
Notes: Returns the variable specifies the aspect ratio of the current title. For a list of possible aspect ratios see the aspect ration constants.

Lasterror is set.

The aspect ratio of the video can change whenever a different title or menu is displayed. You can use this function together with GetNativeVideoSize to calculate the bounds of the video area in a window.

Available in Mac OS X v10.3 and later.

77.1.18 GetAudioLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio language code and extension.
Notes: DVDLanguageCode: On return, the variable contains the language code for the current audio stream. For a list of possible values, see the Language Codes constants.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the current audio stream. For a list of possible values, see Audio Extension Codes constants.

Lasterror is set.

Available in Mac OS X v10.3 and later.

77.1.19 GetAudioLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio language code and extension for a specified stream.
Notes: StreamIndex: An integer in the range 1 to 8 that specifies an audio stream in the current title.

DVDLanguageCode: On return, the variable contains the language code for the specified audio stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the specified audio stream. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

77.1.20 GetAudioOutputMode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio mode setting.

Notes: Lasterror is set.

77.1.21 GetAudioOutputModeCapabilities as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current possible audio output mode possibilities.
Notes: Lasterror is set.

77.1.22 GetAudioStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio stream currently being used.
Notes: Returns the number of the current audio stream, or 0 if the current title has no audio streams.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

77.1.23 GetAudioStreamFormat(byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio format (AC3,for example).
Notes: Lasterror is set.
Requires Mac OS X 10.3.

DVDAudioStreamFormat constants - The different possible audio stream formats.

kDVDAudioUnknownFormat	0
kDVDAudioAC3Format	1
kDVDAudioMPEG1Format	2
kDVDAudioMPEG2Format	3
kDVDAudioPCMFormat	4
kDVDAudioDTSFormat	5
kDVDAudioSDDSFormat	6

77.1.24 GetAudioStreamFormatByStream(index as Integer, byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio format for a specified stream.
Notes: index: An integer that specifies an audio stream in the current title.

outFormat: On return, the variable contains the audio format of the audio stream for the current title. For a list of possible formats, see "Audio Stream Formats."

outBitsPerSample: On return, the integer contains the number of bits per sample in the current audio stream.

outSamplesPerSecond: On return, the integer contains the number of samples per second in the current audio stream.

outChannels: On return, the integer contains the number of audio channels in the current audio stream.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.4 and later.

77.1.25 GetAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback audio volume setting (0 - 255).
Notes: Returns the current playback volume in the range 0 to 255.

Lasterror is set.

This function passes back the current playback audio volume setting. For more information, see DVDSetAudioVolume.

Available in Mac OS X v10.3 and later.

77.1.26 GetBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the current play position.
Notes: This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open and playing. This function passes back a bookmark to the current play position in the current DVD-Video playback session.

For information about requesting a bookmark when the media is not playing, see GetLastPlayBookmark.

The result is a binary string!

Available in Mac OS X v10.4 and later.

77.1.27 GetButtoninfo(byref numberOfButtons as Integer, byref selectedButton as Integer, byref forcedActivateButton as Integer, byref userButtonOffset as Integer, byref numberOfUserButtons as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets information about all available menu buttons in the current title, domain, or content.
Notes: numberOfButtons: On return, the integer contains the number of buttons in the current menu.

selectedButton: On return, the integer contains the 1-based index of the selected button.

forcedActivateButton: On return, the integer contains the index of the button whose action is performed when a specified period of time elapses after the menu is first displayed.

userButtonOffset: On return, the integer contains the index of the first user-selectable button. If the number of user-selectable buttons in a menu is smaller than the total number of buttons, this index may be greater than zero.

numberOfUserButtons: On return, the integer contains the number of user-selectable buttons in the current menu.

Lasterror is set.

Available in Mac OS X v10.4 and later.

77.1.28 GetButtonPosition(index as Integer, byref x as Double, byref y as Double, byref w as Double, byref h as Double, byref autoAction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the position and default action of a menu button.
Notes: index: The zero-based index of a menu button. If your button index is 1-based, you should decrement the index before you pass it to this function.

x,y,w,h: On return, the rectangle contains the position and dimensions of the specified button in window local coordinates.

autoAction: On return, a value of 1 indicates the button is a forced activate button—that is, the button's action is executed immediately when the button is selected. A value of 0 indicates the button is not a forced activate button.

Lasterror is set.

Available in Mac OS X v10.4 and later.

77.1.29 GetChapter as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current chapter.
Notes: Lasterror is set.

77.1.30 GetCurrentAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current video playback volume.
Notes: Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

77.1.31 GetDiscRegionCode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the region codes available on a DVD-Video disc.
Notes: Returns a bitfield that specifies one or more region codes. For more information about region codes, see Region Codes.

Lasterror is set.

This function passes back the region codes assigned to the DVD-Video disc that's currently in use. Before calling this function, you need to call the function DVDOpenMediaVolume to open the media folder on the disc.

To test whether a disc is authorized for playback in region n, you need to compute the bitwise AND of outCode with region code n. If the result is equal to region code n, the disc is authorized for playback in region n.

Available in Mac OS X v10.3 and later.

77.1.32 GetDriveRegionCode(byref regioncode as Integer, byref NumberChangesLeft as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the region code the drive is set to and how many changes are left.
Notes: Lasterror is set.
Requires Mac OS X 10.3.

Region Codes:
The drive region code must match the DVD disc region code. These calls allow getting the disc region code and getting or setting the drive region code.
NOTE: The drive region code is stored in the drive and can only be set a total of 5 times.
On the last time, the drive will be permanently locked to that region code.

77.1.33 GetFormatStandard as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the video broadcast format of current DVD-Video media.
Notes: Returns the video broadcast format of the current media. For a list of possible values, see Video Broadcast Formats.

Lasterror is set.

This function determines which video broadcast format (NTSC or PAL) is used in the current media. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

77.1.34 GetGPRMValue(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current value of a general parameter (GPRM) register.
Notes: index: An integer index that specifies the desired GPRM register. The valid range is 1 to 16.

Returns the current value of the specified GPRM register.

Lasterror is set.

Available in Mac OS X v10.4 and later.

77.1.35 GetLastPlayBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the last play position.
Notes: Returnns a binary string!

Lasterror is set.
Available in Mac OS X v10.4 and later.

77.1.36 GetMaxAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum video playback volume
Notes: Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

77.1.37 GetMediaUniqueID as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets a unique identifier for a media folder.
Notes: Returns the unique identifier of the current media.

This function passes back a 64-bit identifier that can help you distinguish between different media folders. While the identifiers generated by this function are not guaranteed to be unique (see below), duplicate identifiers are extremely rare.

There are two known limitations of this function:

Two copies of the same DVD that are produced at different times do not necessarily have the same identifier. This can happen when the two media folders have minor differences.
Two different DVDs with similar content—collections of episodes from a television series, for example—do not always have different identifiers. This can happen when the two media folders are identical.

Available in Mac OS X v10.4 and later.

77.1.38 GetMediaVolumeName as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the volume name of the current media.
Notes: This function passes back the media volume name as a string. This is the name seen on the desktop when Mac OS X mounts a DVD-Video disc.

Available in Mac OS X v10.4 and later.

77.1.39 GetMenuLanguageCode as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the menu language code for the current title.
Notes: Returns the menu language code for the current title. For a list of possible values, see Language Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

77.1.40 GetMinAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the minimum video playback volume.
Notes: Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

77.1.41 GetNativeVideoHeight as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native height of the current title.
Notes: Available in Mac OS X v10.3 and later.
Lasterror is set.

77.1.42 GetNativeVideoSize(byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The native video size.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.43 GetNativeVideoWidth as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native width of the current title.
Notes: Available in Mac OS X v10.3 and later.
Lasterror is set.

77.1.44 GetNumberOfAngles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of camera angles currently available.
Notes: Returns the number of different camera angles in the current title. DVD-Video media supports up to 9 camera angles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

77.1.45 GetNumberOfAudioStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of audio streams currently available.
Notes: Returns the number of audio streams available in the current title.
Lasterror is set.
Before calling this function, DVD-Video media needs to be open.
Available in Mac OS X v10.3 and later.

77.1.46 GetNumberOfChapters(title as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of chapters in the specified title.
Notes: title: An integer in the range 1 to 99 that specifies a title on the current media.
Returns the number of chapters in the specified title.
Lasterror is set.
If the specified chapter does not exist, this function does nothing and returns an error.
Available in Mac OS X v10.3 and later.

77.1.47 GetNumberOfSubPictureStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of subpicture streams currently available.
Notes: Returns the number of subpicture streams available in the current title. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

77.1.48 GetNumberOfTitles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of titles available on the media.
Notes: Returns the number of titles on the current media in the range 0 to 99.
Lasterror is set.
Available in Mac OS X v10.3 and later.

77.1.49 GetScanRate(byref scanrate as Integer, byref direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current scan direction and rate.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.50 GetSPDIFDataOutDevice as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the selected SPDIF capable audio device.
Notes: Lasterror is set.

77.1.51 GetSPDIFDataOutDeviceCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of SPDIF capable audio devices.
Notes: Lasterror is set.

77.1.52 GetSPDIFDataOutDeviceName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the name of a SPDIF capable audio device
Notes: Lasterror is set.

77.1.53 GetState as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current play state of the DVDPlayback framework.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

The current play state of the framework.

Constants:

kDVDStateUnknown	0	
kDVDStatePlaying	1	playing 1x or less (slow mo)
kDVDStatePlayingStill	2	
kDVDStatePaused	3	pause and step frame
kDVDStateStopped	4	
kDVDStateScanning	5	playing greater than 1x
kDVDStateIdle	6	

77.1.54 GetSubPictureLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for the current subpicture stream.
Notes: DVDLanguageCode: On return, the variable contains the language code for the current subpicture. For a list of possible values, see Language Codes.
DVDSubpictureExtensionCode: On return, the variable contains the extension code for the current subpicture. For a list of possible values, see Subpicture Extension Codes.

If subpictures are not available, this function does nothing and lasterror is set to 0.
Lasterror is set.

Available in Mac OS X v10.3 and later.

77.1.55 GetSubPictureLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for a specified subpicture stream.
Notes: StreamIndex: A subpicture stream number in the current title. Subpicture stream numbers range from 1 to 32.

DVDLanguageCode: On return, the variable contains the language code for the subpicture stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the extension code for the subpicture stream. For a list of possible values, see Subpicture Extension Codes.

Lasterror is set.

If subpictures are not available, this function does nothing and lasterror is not 0.

Available in Mac OS X v10.3 and later.

77.1.56 GetSubPictureStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current subpicture stream.
Notes: Returns the identifier of the current subpicture stream, or 0 if the current title has no subpictures. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

77.1.57 GetTime(timecode as Integer, byref time as Integer, byref frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback position in the current title in seconds relative to the requested time code (elapsed,remaining).
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

kDVDTimeCodeUninitialized	0	
kDVDTimeCodeElapsedSeconds	1	
kDVDTimeCodeRemainingSeconds	2	
kDVDTimeCodeTitleDurationSeconds	3	only useable for GetTime
kDVDTimeCodeChapterElapsedSeconds	4	only useable for GetTime
kDVDTimeCodeChapterRemainingSeconds	5	only useable for GetTime
kDVDTimeCodeChapterDurationSeconds	6	only useable for GetTime

77.1.58 GetTimeEventRate as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the rate of the time event.
Notes: Returns the current interval between time events in milliseconds.

Lasterror is set.
Available in Mac OS X v10.3 and later.

77.1.59 GetTitle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of the current title.
Notes: Returns the current title number, or 0 if a menu is active. DVD-Video media can contain up to 99 titles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

77.1.60 GetVideoBounds(byref x as Integer, byref y as Integer, byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns (in port coordinates) the rect used to play video.
Notes: Lasterror is set.
Requires Mac OS X 10.3.

77.1.61 GetVideoDisplay as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the graphics display for the current DVD-Video playback session.
Notes: Returns the display ID is set to the current video playback display.

Lasterror is set.

Before calling this function, you need to set the video playback display using SetVideoDisplay or SwitchToDisplay.

Available in Mac OS X v10.3 and later.

77.1.62 GetVideoKeyColor as color

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the key color used by the video driver.
Notes: Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

This function does nothing and returns the color black.

77.1.63 GetVideoWindowID as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the window ID of the Cocoa window in use for DVD-Video playback.
Notes: Returns the window ID of the Cocoa window currently in use for DVD-Video playback, or zero if there is no Cocoa window.

Lasterror is set.
Available in Mac OS X v10.3 and later.

77.1.64 GoBackOneLevel

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If a submenu is active, moves up one level in the same domain.
Notes: Lasterror is set.

This function is used to navigate one level up in a hierarchical structure in the same domain—for example, from a scene selection menu back to the main menu. This action is comparable to navigating upwards in the directory or folder hierarchy of a file system.

Available in Mac OS X v10.3 and later.

77.1.65 GotoBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark, and resumes play.
Notes: This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, and begins playing the media.

Bookmark ist a binary string. Make sure you did not destroy it by an encoding conversion!

Requires Mac OS X 10.4 or newer.
Lasterror is set.

77.1.66 GoToMenu(menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Jump to a particular menu (Root Menu,Sub Picture Menu, etc.).
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.67 HasMedia as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the playback framework has media to play and the framework had received an Open call on the media.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.68 HasMenu(menu as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns if input menu type is available.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.69 HasNextChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter after the current chapter.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.70 HasPreviousChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter before the current chapter.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.71 Idle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the framework to get a consistent time to process at. (Might be removed in the future).
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.72 IsDisplayingSubPicture as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if subpictures are currently being displayed.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.73 IsMuted as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes: Returns true if the playback volume is currently muted.
Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.74 IsOnMenu(byref OnMenu as boolean, byref menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Are we currently on a menu, and if so, which one.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.75 IsPaused as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is paused.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.76 IsPlaying as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is playing (even if paused).
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.77 IsSupportedDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the display is supported.
Notes: Lasterror is set.
Requires Mac OS X 10.3 or newer.
You can use the handle from a CGDisplayMBS object.

77.1.78 IsValidMedia(folder as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the folderitem points to a valid media layout.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.79 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The last error code reported.
Notes: Requires Mac OS X 10.3 or newer.

kDVDErrorUnknown	-70001	Catch all error
kDVDErrorInitializingLib	-70002	There was an error initializing the playback framework
kDVDErrorUninitializedLib	-70003	The playback framework has not been initialized.
kDVDErrorNotAllowedDuringPlayback	-70004	action is not allowed during playback
kDVDErrorUnassignedGrafPort	-70005	A grafport was not set.
kDVDErrorAlreadyPlaying	-70006	Media is already being played.
kDVDErrorNoFatalErrCallBack	-70007	The application did not install a callback routine for fatal errors returned by the framework.
kDVDErrorIsAlreadySleeping	-70008	The framework has already been notified to sleep.
kDVDErrorDontNeedWakeup	-70009	DVDWakeUp was called when the framework was not asleep.
kDVDErrorTimeOutOfRange	-70010	Time code is outside the valid range for the current title.
kDVDErrorUserActionNoOp	-70011	The operation was not allowed by the media at this time.
kDVDErrorMissingDrive	-70012	The DVD drive is not available.
kDVDErrorNotSupportedConfiguration	-70013	The current system configuration is not supported.
kDVDErrorNotSupportedFunction	-70014	The operation is not supported. For example, trying to slow mo backwards.
kDVDErrorNoValidMedia	-70015	The media was not valid for playback.
kDVDErrorWrongParam	-70016	The invalid parameter was passed.
kDVDErrorMissingGraphicsDevice	-70017	A valid graphics device is not available.
kDVDErrorGraphicsDevice	-70018	A graphics device error was encountered.
kDVDErrorPlaybackOpen	-70019	The framework is already open (probably by another process).
kDVDErrorInvalidRegionCode	-70020	The region code was not valid.
kDVDErrorRgnMgrInstall	-70021	The region manager was not properly installed or missing from the system.
kDVDErrorMismatchedRegionCode	-70022	The disc region code and the drive region code do not match.
kDVDErrorNoMoreRegionSets	-70023	The drive does not have any region changes left.
kDVDErrordRegionCodeUninitialized	-70024	The drive region code was not initialized.
kDVDErrorAuthentification	-70025	The user attempting to change the region code could not be authenticated.
kDVDErrorOutOfVideoMemory	-70026	The video driver does not have enough video memory available to playback the media.
kDVDErrorNoAudioOutputDevice	-70027	An appropriate audio output device could not be found.
kDVDErrorSystem	-70028	A system error was encountered.
kDVDErrorNavigation	-70029	The user has made a selection not supported in the current menu.

77.1.80 LastErrorString as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns an error message for the lasterror code.
Notes: Requires Mac OS X 10.3 or newer.

77.1.81 Mute(mute as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes: mute: a boolean value that specifies whether to turn the mute setting on or off. To mute the video playback volume, pass TRUE. To restore the previous volume setting, pass FALSE.

Lasterror is set.

Available in Mac OS X v10.3 and later.

77.1.82 NextChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the next chapter on the current title.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.83 Open

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when preparing for playback. Usually when the application is initializing.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.
Returns an error of kDVDErrorPlaybackOpen if the playback framework is already being used.

77.1.84 OpenMediaFile(folder as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a VIDEO_TS folder (can be on a hard drive or a dvd disc).
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.85 OpenMediaVolume(disc as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a DVD disc for playback.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.86 Pause

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Pauses the media if currently playing.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.87 Play

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing the media.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.88 PreviousChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the previous chapter on the current title.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.89 Resume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing if currently paused.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.90 ReturnToTitle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns from the menu back to the current position within the title.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.91 SetAngle(angle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the camera angle to display.
Notes: angle: A 1-based index that specifies the camera angle to display. The angle number of the main angle is 1. DVD-Video media supports up to nine camera angles.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started. The DVD-Video author decides how many camera angles are used. If the specified angle does not exist, this function does nothing.

Available in Mac OS X v10.3 and later.

77.1.92 SetAspectRatio(AspectRatio as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the aspect ratio for the current title.
Notes: AspectRatio: A constant that specifies the desired aspect ratio for the current title. For a list of possible values, see Aspect Ratios.

Lasterror is set.
This function does nothing and returns noErr.

Available in Mac OS X v10.3 and later.

77.1.93 SetAudioOutputMode(Mode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Set the audio mode.

Notes: Lasterror is set.

77.1.94 SetAudioStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the audio stream to use.
Notes: index: An integer from 1 to 8 that specifies an audio stream in the current title. DVD-Video media supports up to 8 audio streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

77.1.95 SetAudioVolume(Volume as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the playback audio volume setting (0 - 255).
Notes: Volume: An integer in the range 0 to 255 that specifies the new video playback volume setting. Larger values are clamped to 255.

Lasterror is set.

This function changes the current playback audio volume setting, not the system audio volume setting. The actual audio volume experienced by the user is a function of these two settings:

Actual audio volume = system volume * playback audio volume / 255

For example, if you set the playback volume to 127, the actual volume is approximately one-half the current system volume.

Available in Mac OS X v10.3 and later.

77.1.96 SetChapter(Chapter as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the chapter to play.
Notes: Chapter: An integer that specifies the chapter to play.

Lasterror is set.
This function defines the specified chapter to be the current video playback chapter. If video playback is paused, this function starts playing the chapter immediately. Note that some discs do not allow jumping directly to a chapter.

Available in Mac OS X v10.3 and later.

77.1.97 SetDefaultAudioLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default audio language code and extension.
Notes: DVDLanguageCode: A constant that specifies the default audio language for the specified audio extension.. For a list of possible values, see Language Codes. If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default audio language is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies an audio extension. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

This function selects an audio language other than the DVD's default language for a specified audio extension. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

77.1.98 SetDefaultMenuLanguageCode(Code as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default menu language code.
Notes: Code: An integer code that specifies the default menu language for the current title. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default menu language is matched to the language setting in the International Preferences Panel.

Lasterror is set.

This function selects a language other than the DVD's default language for menus in the current title. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

77.1.99 SetDefaultSubPictureLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default subpicture language and extension when subpictures are enabled.
Notes: DVDLanguageCode: A constant that specifies the default language for the specified subpicture extension. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone—the default subpicture language code is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies a subpicture extension. For a list of possible values, see "Subpicture Extension Codes."

Lasterror is set.
If the current title is playing, this function does nothing and lasterror is set to kDVDErrorAlreadyPlaying.

This function is used to select a subpicture language other than the system default language. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

77.1.100 SetDriveRegionCode(regioncode as Integer, AuthorizationHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the drive region code (requires user authentication).
Notes: Lasterror is set.
Requires Mac OS X 10.3.

DVDRegionCode constants - The different possible region codes (used for both the disc and the drive):

kDVDRegionCodeUninitialized	&hff
kDVDRegionCode1	&hfe
kDVDRegionCode2	&hfd
kDVDRegionCode3	&hfb
kDVDRegionCode4	&hf7
kDVDRegionCode5	&hef
kDVDRegionCode6	&hdf
kDVDRegionCode7	&hbf
kDVDRegionCode8	&h7f

77.1.101 SetLastPlayBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark.
Notes: Lasterror is set.

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, but does not begin playing the media. See also GotoBookmark.

Available in Mac OS X v10.4 and later.

77.1.102 SetScanRate(scanrate as Integer, direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Fast forwards or rewinds depending on the direction parameter at the speed specified in the scanrate parameter.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

The rate at which to scan:

Direction constants:

kDVDScanRateOneEigth	-8
kDVDScanRateOneFourth	-4
kDVDScanRateOneHalf	-2
kDVDScanRate1x	1
kDVDScanRate2x	2
kDVDScanRate4x	4
kDVDScanRate8x	8
kDVDScanRate16x	16
kDVDScanRate32x	32

kDVDScanDirectionForward	0
kDVDScanDirectionBackward	1

77.1.103 SetSPDIFDataOutDevice(Device as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects a SPDIF capable audio device.
Notes: Lasterror is set.

77.1.104 SetSubPictureStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current subpicture stream.
Notes: index: A positive integer that specifies the subpicture stream to display. Subpicture stream numbers range from 1 to 32.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

77.1.105 SetTime(timecode as Integer, time as Integer, frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current playback position in the current title based on a time position in seconds relative to the time code (elapsed,remaining).
Notes: timecode: A time code constant. You must specify one of two values: kDVDTimeCodeElapsedSeconds or kDVDTimeCodeRemainingSeconds.

time: An integer that specifies the position in seconds.

frames: An integer that specifies the frame number. For the NTSC video format, the range of frame numbers is 0 to 29. For the PAL format, the range is 0 to 24.

his function sets the video playback position in the current title. Not all titles permit this operation, so it's important to check the result code returned by this function.

Before calling this function, DVD-Video media needs to be open and video playback started.

Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.106 SetTimeEventRate(rate as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the rate of the DVD Playback time event.
Notes: The new interval between time events, specified in milliseconds.

Lasterror is set.

The default interval between DVD Playback time events is 900 milliseconds. You can use this function to lengthen or shorten the interval between time events. This function is relevant when you have used the function DVDRegisterEventCallBack to register a callback for one or both of the time events: kDVDEvent-TitleTime and kDVDEventChapterTime . Time event callbacks are typically used for tasks such as updating the elapsed time or remaining time displayed in your user interface.

Available in Mac OS X v10.3 and later.

77.1.107 SetTitle(Title as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the title to play.
Notes: Title: An integer in the range 1 to 99 that specifies the title to play.

Lasterror is set.
If the specified title exists on the current media and the media permits this operation, this function begins playing the title.

Available in Mac OS X v10.3 and later.

77.1.108 SetVideoBounds(x as Integer, y as Integer, w as Integer, h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the bounds in which to display the video.
Notes: x,y,w,h: A rectangle that contains the desired bounds in window local coordinates.

Lasterror is set.

This function is used to set the area inside the current window in which to display the video. The video area is not required to fill the entire window. Generally you should set the video area to be smaller than the window whenever the aspect ratio of the current title and window are different. To find the aspect ratio of the current title, use the function GetAspectRatio.

Because the aspect ratios of the titles in a DVD-Video media folder are not always the same, you may need to call this function repeatedly to reset the video area as the user makes different viewing choices.

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

77.1.109 SetVideoDisplay(CGVideoDisplayHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the graphics display for the current DVD-Video playback session.
Notes: The Quartz display ID for the graphics display you want to use for video playback. For information about how to get a display ID, see Quartz Display Services Reference. (or CGDisplayMBS class)

Lasterror is set.

You need to call this function or DVDSetVideoDevice each time you move the video playback window to a new graphics display. To avoid degrading video performance, you should not attempt to draw a video playback window that spans two different displays.

Available in Mac OS X v10.3 and later.

77.1.110 SetVideoWindowID(WindowID as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Enables or disables DVD-Video playback in a Cocoa window.
Notes: WindowID: The window ID associated with a Cocoa window, or NULL. For information about when to pass 0, see the Discussion below.

Lasterror is set.

If you're using a Cocoa window for DVD-Video playback, you need to use this function in two different

situations:

Immediately after calling the constructor to start a new DVD-Video playback session, you should call this function and pass the window ID associated with the Cocoa window.

When video is not playing and you want to draw into the area of the window you set by calling the function SetVideoBounds, you should call this function and pass 0 in the inVidWindowID parameter.

To learn how to obtain the window number for a Cocoa window, see the description of the windowNumber method in the NSWindow class.

Availability
Available in Mac OS X v10.3 and later.

77.1.111 Sleep

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is putting machine to sleep so playback information can be saved.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

77.1.112 StepFrame(direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Steps one frame in the direction specified in DVDScanDirection.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.
Currently only supports kDVDScanDirectionForward.

77.1.113 Stop

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Stops if playing.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.114 SwitchToDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Switches the output to the given display.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.
You can use the handle from a CGDisplayMBS object.

77.1.115 UpdateVideo

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Forces the video to be updated.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.

77.1.116 WakeUp

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is waking up so playback information can be reset.
Notes: Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

77.1.117 Events

77.1.118 DVDEvent(eventcode as Integer, value1 as Integer, value2 as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: A DVD event.
Notes: Lasterror is set.
Requires Mac OS X 10.3.

DVDEventCode constants - The different event a client can register for to get notified (return value: UInt32)

kDVDEventTitle	1	value1: Title
kDVDEventPTT	2	value1: Chapter
kDVDEventValidUOP	3	value1: UOP code mask (DVDUOPCode)
kDVDEventAngle	4	value1: StreamID
kDVDEventAudioStream	5	value1: StreamID
kDVDEventSubpictureStream	6	value1: streamID / (value2 ! 0): visible
kDVDEventDisplayMode	7	value1: DVDAspectRatio
kDVDEventDomain	8	value1: DVDDomainCode
kDVDEventBitrate	9	value1: Bits / sec
kDVDEventStill	10	value1: On (1) - Off (0)
kDVDEventPlayback	11	value1: DVDState
kDVDEventVideoStandard	12	value1: DVDFormat
kDVDEventStreams	13	value1: None (trigger for general stream change)
kDVDEventScanSpeed	14	value1: Speed (1x,2x,3x,...)
kDVDEventMenuCalled	15	value1: DVDMenu
kDVDEventParental	16	value1: parental level number
kDVDEventPGC	17	value1: PGC number
kDVDEventGPRM	18	value1: GPRM index / value2: data
kDVDEventRegionMismatch	19	value1: disc region
kDVDEventTitleTime	20	value1: elapsed time / value2: duration of title [ms]
kDVDEventSubpictureStreamNumbers	21	value1: number of subpicture streams in title
kDVDEventAudioStreamNumbers	22	value1: number of audio streams in title
kDVDEventAngleNumbers	23	value1: number of angles in title
kDVDEventError	24	value1: DVDErrorCode
kDVDEventCCInfo	25	value1: cc event opcode, value2: cc event data
kDVDEventChapterTime	26	value1: elapsed time / value2: duration of current chapter [ms]

77.1.119 FatalError(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: A fatal error. Quit the application as soon as possible.
Notes: Lasterror is set.
Requires Mac OS X 10.3.

77.1.120 Constants

Constants

Constant	Value	Description
kDVDAMGMDomain	5	A constant that specifies playback domains or m sible actions. Audio Manager Menu domain (DVD-Audio only,
kDVDAspectRatio16x9	3	A constant that specifies the current aspect ratio The process of displaying a 16:9 video frame on a ratio.
kDVDAspectRatio4x3	1	A constant that specifies the current aspect ratio The process of displaying a 4:3 video frame on a ratio.
kDVDAspectRatio4x3PanAndScan	2	A constant that specifies the current aspect ratio The process of choosing a sample area of a 16:9 4:3 screen, using center-of-interest information st
kDVDAspectRatioLetterBox	4	A constant that specifies the current aspect ratio The process of displaying the entire 16:9 video fra ing the frame and adding mattes or black bars al
kDVDAspectRatioUninitialized	0	A constant that specifies the current aspect ratio Available in Mac OS X v10.3 and later.
kDVDAudioAC3Format	1	A constant that specifies the audio stream forma The Dolby Digital AC-3 format.
kDVDAudioDDPlusFormat	8	A constant that specifies an audio mode.
kDVDAudioDTSFormat	5	A constant that specifies the audio stream forma The Digital Theater Systems (DTS) format. Thi
kDVDAudioDTSHDFormat	9	A constant that specifies an audio mode.
kDVDAudioExtensionCodeDirectorsComment1	3	A constant that specifies the purpose of an audio First audio channel for the artistic director's com
kDVDAudioExtensionCodeDirectorsComment2	4	A constant that specifies the purpose of an audio Second audio channel for the artistic director's c
kDVDAudioExtensionCodeNormalCaptions	1	A constant that specifies the purpose of an audio Audio channel for extended information about th
kDVDAudioExtensionCodeNotSpecified	0	A constant that specifies the purpose of an audio Audio extension not specified.
kDVDAudioExtensionCodeNVisualImpaired	2	A constant that specifies the purpose of an audio Audio channel for the visually impaired.
kDVDAudioMLPFormat	7	A constant that specifies an audio mode.
kDVDAudioModeProLogic	1	A constant that specifies an audio mode.
kDVDAudioModeSPDIF	2	A constant that specifies an audio mode.
kDVDAudioModeUninitialized	0	A constant that specifies an audio mode.
kDVDAudioMPEG1Format	2	A constant that specifies the audio stream forma The MPEG-1 Layer II digital format.
kDVDAudioMPEG2Format	3	A constant that specifies the audio stream forma The MPEG-2 digital format.
kDVDAudioPCMFormat	4	A constant that specifies the audio stream forma The linear pulse-code modulation (PCM) format
kDVDAudioSDDSFormat	6	A constant that specifies the audio stream forma The Sony Dynamic Digital Sound (SDDS) form ported.
kDVDAudioUnknownFormat	0	A constant that specifies the audio stream forma An unspecified audio format.
kDVDButtonIndexNone	-1	A constant for an index of the selected menu but
kDVDErrorAlreadyPlaying	-70006	A constant that specify the result codes defined f See kDVDErrorNotAllowedDuringPlayback.
kDVDErrorAuthentification	-70025	A constant that specify the result codes defined f An attempt to change the DVD drive region cod
kDVDErrorDontNeedWakeup	-70009	A constant that specify the result codes defined f DVDWakeUp was called without first calling Slee
kDVDErrorGraphicsDevice	-70018	A constant that specify the result codes defined f A graphics device error was encountered.
kDVDErrorInitializingLib	-70002	A constant that specify the result codes defined f

77.2 class DVDPlaybackMissingFunctionExceptionMBS

77.2.1 class DVDPlaybackMissingFunctionExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised if a DVDPlayback function is not available on this Mac OS X version.
Notes: Check the message property.
Subclass of the RuntimeException class.

77.3 class DVDPlaybackNotInitializedExceptionMBS

77.3.1 class DVDPlaybackNotInitializedExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised when you use a method on the DVDPlaybackMBS class without initializing it.
Notes: Subclass of the RuntimeException class.

Chapter 78

DynamicDeclares

78.1 class DeclareCallBackMBS

78.1.1 class DeclareCallBackMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a callback for use in declares.
Notes: Allows you to dynamically create callback functions.
Pass the function pointer to a C function which later calls back your callback.

Please make sure this callback object stays alive, e.g. stored in a global property. When the object is released and the callback later invoked, the application will crash.

When you code sign on macOS, you may need to use the entitlement for just-in-time compiler and for unsigned executable memory, e.g. the com.apple.security.cs.allow-unsigned-executable-memory entitlement.

78.1.2 Methods

78.1.3 Constructor(Signature as String)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new callback object.
Notes: Please pass a valid signature, e.g. "(pi)v" for a function taking one pointer, one integer and return nothing (void).
If the signature doesn't match the values put on the stack, the app may crash.

78.1.4 ParameterType(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries type of a parameter.
Notes: Index in range from 0 to ParameterCount-1.

78.1.5 Properties

78.1.6 AllowAsync as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the callbacks are allowed to go asynchronously.
Notes: For MacOS/iOS only.

Asynchronous callbacks have no chance to return a value as the call to the Xojo event happens later and the C function returns before the Xojo event is started.
Synchronous callbacks would let the callback wait for the Xojo main thread to react to the event and then return the result back.

AllowAsync is set to true automatically for callbacks with void as return automatically.
(Read and Write property)

78.1.7 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes: We call how often the callback is called.
(Read only property)

78.1.8 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function pointer for the callback.
Notes: Pass this to the C functions to pass a callback function pointer.
(Read only property)

78.1.9 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the callback.
Notes: You can set this to later read value in debugging.
(Read and Write property)

78.1.10 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes: We currently limit this to 32 parameters.
(Read only property)

78.1.11 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

78.1.12 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

78.1.13 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

78.1.14 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: Store whatever you need to keep referenced.
(Read and Write property)

78.1.15 ParameterCFRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via CFRetain() call.
Notes: If the callback is within Apple's frameworks passing a CoreFoundation object, you can set this property to true, so we call CFRetain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with CoreFoundation objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

78.1.16 ParameterCopyString(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be copied as a zero terminated string.
Notes: If the callback receives a C string, you can set this property to true, so we copy it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with strings passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer or string.
(Read and Write computed property)

78.1.17 ParameterNSRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via [NSObject retain] call.
Notes: If the callback is within Apple's frameworks passing a Objective-C object, you can set this property to true, so we call retain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with NSObject objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

78.1.18 Events

78.1.19 Callback(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The callback event.
Notes: Parameters are converted to variants and passed as array.
The result is converted to the required data type and returned.

78.1.20 Constants

Call Modes

Constant	Value	Description
kCallModeARM	"A"	ARM calling
kCallModeARMThumb	"a"	ARM calling in thumb mode
kCallModeCDecl	"c"	x86 specific CDecl
kCallModeDefault	":"	Default calling conv (platform native)
kCallModeEllipsisVarargs	"."	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeSysCall	"$ "	SysCall mode
kCallModeThisCallGNU	"#"	x86 specific, GNU C++ this calls are cdecl, but keep specific sig char for clarity.

Calling Conventions

Constant	Value	Description
kCallModeEllipsis	"e"	C ellipsis function call
kCallModeFastCallGNU	"f"	C x86 Windows GCC fast call
kCallModeFastCallMS	"F"	C x86 Windows Microsoft fast call
kCallModePrefix	"_"	The character to indicate that next character in the signature is a calling convention prefix.
kCallModeStdCall	"s"	C x86 Windows standard call
kCallModeThisCallMS	"+"	C x86 Windows Microsoft this call

Types

Constant	Value	Description
kTypeBool	"B"	bool
kTypeChar	"c"	char, 8 bit signed byte
kTypeDouble	"d"	Double, 64-bit and 8 bytes big.
kTypeEndArg	")"	end of arguments symbol.
kTypeFloat	"f"	Single, 32-bit and 4 bytes big.
kTypeInt	"i"	32-bit signed integer.
kTypeInt64	"l"	64-bit signed integer.
kTypeLong	"j"	32/64-bit signed integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypePtr	"p"	Pointer. Maybe a reference to an object or array.
kTypeShort	"s"	16-bit signed integer.
kTypeString	"Z"	C String with zero byte as terminator.
kTypeStruct	"T"	Structure
kTypeUnsignedChar	"C"	8 bit unsigned byte
kTypeUnsignedInt	"I"	32-bit unsigned integer.
kTypeUnsignedInt64	"L"	64-bit unsigned integer.
kTypeUnsignedLong	"J"	32/64-bit unsigned integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypeUnsignedShort	"S"	16-bit unsigned integer.
kTypeVoid	"v"	Nothing to return.

78.2 class DeclareFunctionMBS

78.2.1 class DeclareFunctionMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C function call.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes: Compared to built-in declares in Xojo, those functions allow a much more dynamic calling of functions with various calling conventions.

We have

- more dynamic
- the possibility to define declares at runtime
- more calling conventions
- support for variable arguments in C (dots in argument list)
- thread safe callbacks with DeclareCallBackMBS class.

78.2.2 Methods

78.2.3 ClearParameters

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters.
Notes: Sets them all to zero/nil.

78.2.4 Constructor(Signature as String, FunctionPtr as Ptr)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes: Pass the signature and function pointer from a C function.
If signature is incorrect, the application will probably crash with stack corruption.

78.2.5 Invoke as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")
```

```
// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

See also:

- 78.2.6 Invoke(Parameters() as Variant) as Variant 12429

78.2.6 Invoke(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Notes: First calls SetParameters with the given array to set parameters.
Then invokes the function.
See also:

- 78.2.5 Invoke as Variant 12428

78.2.7 SetParameters(paramArray Parameters as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all parameters together with passing arguments to this function.
Example:

```
// We try to run sysctlbyname on macOS

Var d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// int sysctlbyname(const char *name, void *oldp, size_t *oldlenp, void *newp, size_t newlen);

Var p As ptr = d.Symbol("sysctlbyname")

'const char* ->CString for name ->Z
'void* ->pointer to data ->p
'size_t * ->pointer to 32/64 bit integer for length ->p
'void* ->pointer to data ->p
'size_t ->32/64bit unsigned int ->L in 64-bit
```

```
Var f As New DeclareFunctionMBS("(ZpppL)i", p)

Var mData As New MemoryBlock(8)
Var mLen As New MemoryBlock(8)
Var pData As ptr = mData
Var pLen as ptr = mLen

mLen.UInt64Value(0) = mData.Size

f.SetParameters "hw.ncpu", pData, pLen, Nil, 0
Var n As Integer = f.Invoke
// result is zero on result or -1 on failure

Var CPUCount As Integer = mData.UInt32Value(0)

If n = 0 Then
MsgBox "CPU count: "+Str(CPUCount)
Else
MsgBox "Failed."
End If

Break // see in debugger
```

Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.

Please pass C Strings as Xojo strings, not CString data type.
See also:

- 78.2.8 SetParameters(Parameters() as Variant) 12430

78.2.8 SetParameters(Parameters() as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all arguments by passing an array of values.
Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.

Please pass C Strings as Xojo strings, not CString data type.
See also:

- 78.2.7 SetParameters(paramArray Parameters as Variant) 12429

78.2.9 Properties

78.2.10 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes: We call how often the function is called.
(Read only property)

78.2.11 CallMode as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The calling convention mode to use.
Notes: Default is to use default mode for the given platform.
(Read and Write property)

78.2.12 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer for the C function.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")

// call via delegate
' define delgate like this:
' Public Function zlibVersionDelegate() As CString

Var z As New zlibVersionDelegate(p)
Var v As String = z.Invoke
MsgBox "zlibVersion: "+v
```

Notes: (Read and Write property)

78.2.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function.
Notes: (Read and Write property)

78.2.14 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes: We currently limit this to 32 parameters.
(Read only property)

78.2.15 Parameters as Dictionary

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all parameters.
Notes: Mainly to inspect parameters in debugger.
Keys are indexes and values are the parameter values.
(Read only property)

78.2.16 RawResult as Integer

MBS Util Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw result of the last invocation.
Notes: This is useful to get the pointer for a returned string.
(Read and Write property)

78.2.17 Result as Variant

MBS Util Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the last invocation.
Notes: (Read and Write property)

78.2.18 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

78.2.19 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

78.2.20 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

78.2.21 StackSize as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stack size to use.
Notes: Defaults to 4096 bytes.
(Read and Write property)

78.2.22 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: Store whatever you need to keep referenced.
(Read and Write property)

78.2.23 ParameterBoolean(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as boolean.
Notes: You can get and set value here.
(Read and Write computed property)

78.2.24 ParameterDouble(Index as Integer) as Double

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter value as double.
Notes: You can get and set value here.
(Read and Write computed property)

78.2.25 ParameterInteger(Index as Integer) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as integer value.
Notes: You can get and set value here.
(Read and Write computed property)

78.2.26 ParameterPointer(Index as Integer) as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as pointer value.
Notes: You can get and set value here.
(Read and Write computed property)

78.2.27 ParameterSingle(Index as Integer) as Single

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as single value.
Notes: You can get and set value here.
(Read and Write computed property)

78.2.28 ParameterString(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as string value.
Example:

```
// We try to run strstr on C Library on macOS to find string in string with strstr as example:

Var d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// char *strstr(Const char *__big, Const char *__little);

Var p As ptr = d.Symbol("strstr")
Var f As New DeclareFunctionMBS("(ZZ)Z", p)

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "World"

Var n1 As String = f.Invoke
// gives back World! as that was found

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "xxx"

Var n2 As String = f.Invoke
// gives empty string as not found

Break // see in debugger
```

Notes: To avoid crashes, we only read strings from parameters with type string or pointer.
But you can assign a string value to all types, which may not make sense for numbers.
You can get and set value here.
(Read and Write computed property)

78.2.29 ParameterValue(Index as Integer) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the value as variant.
Notes: We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.
You can get and set value here.

Please pass C Strings as Xojo strings, not CString data type.
(Read and Write computed property)

78.2.30 Constants

Call Modes

Constant	Value	Description
kCallModeARM	"A"	ARM calling
kCallModeARMThumb	"a"	ARM calling in thumb mode
kCallModeCArm64	22	C arm64 call (AArch64)
kCallModeCArmArmhf	30	C arm call (arm hardÔ¨Çoat - e.g. raspberry pi)
kCallModeCDecl	"c"	x86 specific CDecl
kCallModeCDefault	0	C default function call for current platform
kCallModeCDefaultThis	99	C default function call for current platform with this pointer.
kCallModeCEllipsis	100	C ellipsis function call (named arguments (before ,Äô...,Äô))
kCallModeCEllipsisVarargs	101	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeCX64Win64	7	C x64 Windows standard call
kCallModeCX86Cdecl	1	C x86 platforms standard call
kCallModeCX86Win32FastGnu	4	C x86 Windows GCC fast call
kCallModeCX86Win32FastMs	3	C x86 Windows Microsoft fast call
kCallModeCX86Win32Std	2	C x86 Windows standard call
kCallModeCX86Win32This	70	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeCX86Win32ThisGnu	1	C x86 Windows GCC this call
kCallModeCX86Win32ThisMs	5	C x86 Windows Microsoft this call
kCallModeDefault	":"	Default calling conv (platform native)
kCallModeEllipsisVarargs	"."	C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))
kCallModeSysCall	"$ "	SysCall mode
kCallModeSysDefault	200	C default syscall for current platform
kCallModeSysX64SyscallSysV	204	C syscall for x64 System V platforms
kCallModeSysX86Int80HBSD	202	C syscall for x86 BSD platforms
kCallModeSysX86Int80HLinux	201	C syscall for x86 Linux
kCallModeThisCallGNU	"#"	x86 specific, GNU C++ this calls are cdecl, but keep specific sig char for clarity.

Calling Conventions

Constant	Value	Description
kCallModeEllipsis	"e"	C ellipsis function call
kCallModeFastCallGNU	"f"	C x86 Windows GCC fast call
kCallModeFastCallMS	"F"	C x86 Windows Microsoft fast call
kCallModePrefix	"_"	The character to indicate that next character in the signature is a calling convention prefix.
kCallModeStdCall	"s"	C x86 Windows standard call
kCallModeThisCallMS	"+"	C x86 Windows Microsoft this call

Types

Constant	Value	Description
kTypeBool	"B"	bool
kTypeChar	"c"	char, 8 bit signed byte
kTypeDouble	"d"	Double, 64-bit and 8 bytes big.
kTypeEndArg	")"	end of arguments symbol.
kTypeFloat	"f"	Single, 32-bit and 4 bytes big.
kTypeInt	"i"	32-bit signed integer.
kTypeInt64	"l"	64-bit signed integer.
kTypeLong	"j"	32/64-bit signed integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypePtr	"p"	Pointer. Maybe a reference to an object or array.
kTypeShort	"s"	16-bit signed integer.
kTypeString	"Z"	C String with zero byte as terminator.
kTypeStruct	"T"	Structure
kTypeUnsignedChar	"C"	8 bit unsigned byte
kTypeUnsignedInt	"I"	32-bit unsigned integer.
kTypeUnsignedInt64	"L"	64-bit unsigned integer.
kTypeUnsignedLong	"J"	32/64-bit unsigned integer. 64-bit only for MacOS and Linux in 64-bit application. Always 32-bit on Windows.
kTypeUnsignedShort	"S"	16-bit unsigned integer.
kTypeVoid	"v"	Nothing to return.

78.3 class DeclareLibraryMBS

78.3.1 class DeclareLibraryMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C library loaded into Xojo.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Allows you to load a DLL on Windows, dylib on MacOS and shared object (so) on Linux and inspect the available functions and load functions by name.

78.3.2 Methods

78.3.3 Constructor(LibFile as folderItem)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes: Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 78.3.4 Constructor(LibPath as string) 12438

78.3.4 Constructor(LibPath as string)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 78.3.3 Constructor(LibFile as folderItem) 12438

78.3.5 Symbol(name as string) as ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries function or data pointer for a symbol.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Var p As ptr = d.Symbol("zlibVersion")
Var f As New DeclareFunctionMBS("()Z", p)

Var n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes: Returns nil if not found.

78.3.6 SymbolName(index as Integer) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol.
Notes: Index is in range from 0 to SymbolCount-1.
See also:

- 78.3.7 SymbolName(p as Ptr) as string 12440

78.3.7 SymbolName(p as Ptr) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol from the ptr.
Notes: Looks up the symbol table to find the entry with the right pointer and returns the name.
Returns "" if not found.
See also:

- 78.3.6 SymbolName(index as Integer) as string 12439

78.3.8 SymbolNames as string()

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of symbols of a library.
Example:

```
// change path if you like to try this on Windows or Linux
Var d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Var lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: This may show more symbols as defined in public C headers.

78.3.9 Properties

78.3.10 Handle as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object handle.
Notes: (Read only property)

78.3.11 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of the library.
Notes: (Read only property)

78.3.12 Path as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries path of the library.
Notes: May return the path used to load the library.
(Read only property)

78.3.13 SymbolCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of symbols in the library.
Notes: (Read only property)

Chapter 79

DynaPDF

79.1 class DynaPDFAnnotationExMBS

79.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended annotation information.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 11.1pr4

79.1.2 Methods

79.1.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.1.4 DashPattern(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dash pattern.
Notes: If BorderStyle is kbsDashed.

79.1.5 InkList(index as UInt32) as Single()

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ink list.
Notes: Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

79.1.6 Operator_Convert as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to older DynaPDFAnnotationMBS.
Example:

```
Var d As New DynaPDFMBS

// create a new annotation
Call d.CreateNewPDF
Call d.append
Var n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Var a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Var a2 As DynaPDFAnnotationExMBS = a1
```

```
// now query as new class and convert to old class
Var e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Var e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are lost in the conversion.

79.1.7 QuadPoints(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a quad point value.
Notes: Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

79.1.8 Vertices(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertices array.
Notes: Line, PolyLine, and Polygon annotations only.

79.1.9 Properties

79.1.10 AnnotFlags as UInt32

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for this annotation.
Notes: You can use this constants:

(Read only property)

79.1.11 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

```
kafNone        = &h0000000
kafInvisible   = &h0000001
kafHidden      = &h0000002
kafPrint       = &h0000004
kafNoZoom      = &h0000008
kafNoRotate    = &h0000010
kafNoView      = &h0000020
kafReadOnly    = &h0000040
```

Function: Annotation's author.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.1.12 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

79.1.13 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

79.1.14 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

79.1.15 BorderEffect as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border effect.
Notes: Circle, Square, FreeText, and Polygon annotations.
(Read only property)

79.1.16 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

79.1.17 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

79.1.18 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation string Content is used as caption.
Notes: The string is shown in a PopUp annotation otherwise.
(Read only property)

79.1.19 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read only property)

79.1.20 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read only property)

79.1.21 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read only property)

79.1.22 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.1.23 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation Date ->Optional
Notes: (Read only property)

79.1.24 DashPatternCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read only property)

79.1.25 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

79.1.26 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes: For File link or web link annotations.

(Read only property)

79.1.27 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes: For Page link annotations only.

(Read only property)

79.1.28 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes: For Page link annotations only.

(Read only property)

79.1.29 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes: For Page link annotations only.

(Read only property)

79.1.30 EmbeddedFileHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle for the embedded file.
Notes: For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.

(Read only property)

79.1.31 Grouped as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only if Parent <>-1 and Type <>katPopUp.
Notes: If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.
(Read only property)

79.1.32 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

79.1.33 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: (Read only property)

79.1.34 Icon as Integer

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon type for this annotation.
Notes: The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp).
For any other annotion type this value is not set (-1).
(Read only property)

79.1.35 InkListCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ink arrays.
Notes: (Read only property)

79.1.36 Intent as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Markup annotations only.
Notes: The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.
(Read only property)

79.1.37 LE1 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the start point ->Line and PolyLine annotations only.
Notes: (Read only property)

79.1.38 LE2 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the end point ->Line and PolyLine annotations only.
Notes: (Read only property)

79.1.39 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line.
Notes: (Read only property)

79.1.40 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative)
Notes: (Read only property)

79.1.41 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines.
Notes: (Read only property)

79.1.42 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation is a markup annotation.
Notes: Markup annotations can be flattened separately, see FlattenAnnots function.
(Read only property)

79.1.43 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification Date ->Optional
Notes: (Read only property)

79.1.44 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.1.45 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1 if not set.
Notes: Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller &h40000000.
(Read only property)

79.1.46 Opacity as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The annotation's opacity.
Notes: Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

79.1.47 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only for annotations which have a corresponding PopUp annotation.
Notes: (Read only property)

79.1.48 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page index is used to sort form fields.
Notes: See SortFieldsByIndex().
(Read only property)

79.1.49 PageNum as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

79.1.50 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.
Notes: In this case, the annotation type is always atText and only the following members should be considered:

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

State	The current state
StateModel	Marked, Review, and so on
CreateDate	Creation Date
ModDate	Modification Date
Author	The user who has set the state
Content	Not displayed in Adobe's Acrobat...
Subject	Not displayed in Adobe's Acrobat...

79.1.51 PopUp as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of the corresponding PopUp annotation if any.
Notes: (Read only property)

79.1.52 QuadPointsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of quad points.
Notes: Highlight, Link, and Redact annotations only.
(Read only property)

79.1.53 RD as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rectangular difference between the annotations bounding box and the content area.
Notes: Caret, Circle, Square, and FreeText annotations.
(Read only property)

79.1.54 RichStyle as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default style string.
Notes: For FreeText annotations.

(Read only property)

79.1.55 RichText as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional rich text string (RC key).
Notes: For Markup annotations.
(Read only property)

79.1.56 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation for caret annotations.
Notes: Caret and FreeText annotations only. Must be zero or a multiple of 90.
(Read only property)

79.1.57 StampName as String

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stamp name.
Notes: Set only, if Icon property is rsUserDefined.
(Read only property)

79.1.58 State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state of the annotation.
Notes: (Read only property)

79.1.59 StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state model (Marked, Review, and so on).
Notes: (Read only property)

79.1.60 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.1.61 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subtype.
Notes: Set only, if Type = katUnknownAnnot.
(Read only property)

79.1.62 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes: See at* constants.
(Read only property)

79.1.63 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the vertices array.
Notes: This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)

79.2 class DynaPDFAnnotationMBS

79.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for annotation information.
Example:

```
Var pdf as DynaPDFMBS // your instance

Var c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
Var a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 23.5pr1
- MBS Xojo / Real Studio Plugins, version 14.5pr4

79.2.2 Methods

79.2.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.2.4 Operator_Convert as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to newer DynaPDFAnnotationExMBS.
Example:

```
Var d As New DynaPDFMBS
```

```
// create a new annotation
Call d.CreateNewPDF
Call d.append
Var n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Var a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Var a2 As DynaPDFAnnotationExMBS = a1

// now query as new class and convert to old class
Var e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Var e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are all zero.

79.2.5 Properties

79.2.6 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.2.7 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

79.2.8 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

79.2.9 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

79.2.10 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

79.2.11 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

79.2.12 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.2.13 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

79.2.14 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation handle.
Notes: (Read only property)

79.2.15 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: See hm* constants.
(Read only property)

79.2.16 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.2.17 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

79.2.18 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

79.2.19 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes: See at* constants.

(Read only property)

79.3 class DynaPDFBarcode2MBS

79.3.1 class DynaPDFBarcode2MBS

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for barcode creation parameters.

Xojo Developer Magazine

- 19.2, pages 30 to 31: Getting Started with DynaPDF, If you've never tried DynaPDF, you don't know how easy it is! by Stefanie Juchmes

79.3.2 Properties

79.3.3 BarcodeType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of barcode that should be created.
Notes: See kbct* constants.
(Read and Write property)

79.3.4 BgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: Default: NO_COLOR (transparent)
(Read and Write property)

79.3.5 BorderWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width
Notes: Default is zero.

(Read and Write property)

79.3.6 Data as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data in the barcode.
Notes: (Read and Write property)

79.3.7 DataType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type and escape flag.
Notes: Default is kbcdtBinary.
See kbcdt* constants.
(Read and Write property)

79.3.8 DotSize as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dotty mode only.
Notes: Default is 4.0/5.0.
(Read and Write property)

79.3.9 Eci as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended Channel Interpretation mode.
Notes: Default 0.
(Read and Write property)

79.3.10 FgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: RGB Foreground color
Notes: (Read and Write property)

79.3.11 FSizeFactor as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size correction factor.
Notes: Default 0.7.
(Read and Write property)

79.3.12 Option1 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is -1.

For QRCode:
Option1 is the ECC Level with values from 1 = low, 2 = middle, 3 = better, 4 high. Default is low.
Option2 is version code from 1 to 40. Default is 0 to auto select.
For MicroQR you can use ECC Level 1 to 3 as 4 is not supported.

For Data Matrix:
Option2 size from 1 to 30. 0 is auto. See table in zint manual pdf.
Option3 can be 100 to force square size.

For Code 39:
You can set Option2 to 1 to add module 43 checksum.

For MaxiCode:
Option 1 is the mode.

For PDF 417:
Option 1 is a number between 0 and 8 where the number of codewords used for check information is determined by 2^(value + 1).
Option 2 is the number of columns between 1 and 30.
(Read and Write property)

79.3.13 Option2 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is 0.
(Read and Write property)

79.3.14 Option3 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes: Default value is 0.
(Read and Write property)

79.3.15 Options as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output options.
Notes: See kbco* constants.
(Read and Write property)

79.3.16 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of the barcode.
Notes: Supported values: 0, 90, -90, 180, -180, 270, -270.
(Read and Write property)

79.3.17 OuterBorder as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional border around the scaled barcode measured in user space.
Notes: The member OuterBorder can be used to extend the background rectangle. Each side of OuterBorder specifies the line width of the corresponding side of the rectangle. OuterBorder is measured in user space whereas BorderWidth is measured in pixels of the reference grid.

Note that the background rectangle is drawn only if BgColor is set to another value than NO_COLOR (default).
(Read and Write property)

79.3.18 Primary as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Primary data message (max 127 bytes).
Notes: Composite codes only.
Image based barcodes only.
(Read and Write property)

79.3.19 Scale as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image based barcodes only.
Notes: Default value is 1.0.
(Read and Write property)

79.3.20 ShowText as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Show human readable text?
Notes: Default is true.
(Read and Write property)

79.3.21 SpaceWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whitespace width in pixels
Notes: Default value is 0 (auto).
(Read and Write property)

79.3.22 SymbHeight as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Symbol height
Notes: Default is 50.
(Read and Write property)

79.3.23 TextOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offset to correct the y-coordinate of text.
Notes: The default value is zero.
(Read and Write property)

79.3.24 Constants

Data Type Flags

Constant	Value	Description
kbcdtBinary	0	Binary data.
kbcdtEscapeMode	8	Scan input data for escape sequences. This is a flag that can be combined with the other constants, e.g. pass EscapeMode and Unicode.
kbcdtGS1Mode	2	Encodes GS1 data using FNC1 characters.
kbcdtUnicode	1	UTF-8.

Output Flags

Constant	Value	Description
kbcoBind	2	Boundary bars above and below the symbol and between rows if stacking multiple symbols.
kbcoBoldText	64	Embolden human readable text.
kbcoBox	4	Add a box surrounding the symbol and whitespace.
kbcoDefault	0	Use default settings.
kbcoDottyMode	&h00000100	Plot a matrix symbol using dots rather than squares.
kbcoGS1_GS_Separator	&h00000200	Use GS instead FNC1 as GS1 separator.
kbcoImageOutput	&h01000000	Draw the barcode as an image. Images are usually larger than vectors and require more processing time.
kbcoNoASCII	1	Consider non-ASCII characters when creating the barcode.
kbcoReaderInit	16	Add a reader initialisation symbol to the data before encoding.
kbcoSmallText	32	Use a smaller font for human readable text.
kbcoUseActiveFont	&h02000000	Vector output only. If set, text is output with the active font. Helvetica is used otherwise.

Barcode Types

Constant	Value	Description
kbctAustraliaPost	63	Australia Post Standard Customer
kbctAustraliaRedir	68	Australia Post Redirection
kbctAustraliaReply	66	Australia Post Reply Paid
kbctAustraliaRout	67	Australia Post Routing
kbctAztec	92	Aztec Code
kbctAztecRunes	&h00000080	Aztec Runes
kbctC2Of5IATA	4	Code 2 of 5 IATA
kbctC2Of5Industrial	7	Code 2 of 5 Industrial
kbctC2Of5Interleaved	3	Interleaved 2 of 5
kbctC2Of5Logic	6	Code 2 of 5 Data Logic
kbctC2Of5Matrix	2	Standard Code 2 of 5
kbctChannelCode	&h0000008C	Channel Code
kbctCodabar	18	Codabar
kbctCodablockF	74	Codablock-F
kbctCode11	1	Code 11
kbctCode128	20	Code 128 (automatic subset switching)
kbctCode128B	60	Code 128 (Subset B)
kbctCode16K	23	Code 16K
kbctCode32	&h00000081	Code 32
kbctCode39	8	Code 3 of 9 (Code 39)
kbctCode49	24	Code 49
kbctCode93	25	Code 93
kbctCodeOne	&h0000008D	Code One
kbctDAFT	93	DAFT Code
kbctDataBarExpanded	31	GS1 DataBar Expanded / RSS_EXP
kbctDataBarExpStacked	81	GS1 DataBar Expanded Stacked
kbctDataBarLimited	30	GS1 DataBar Limited / RSS_LTD
kbctDataBarOmniTrunc	29	GS1 DataBar-14 Omnidirectional and truncated / RSS14
kbctDataBarStacked	79	GS1 DataBar-14 Stacked
kbctDataBarStackedO	80	GS1 DataBar-14 Stacked Omnidirectional
kbctDataMatrix	71	Data Matrix ECC200
kbctDotCode	&h00000073	DotCode
kbctDPD	96	DPD code
kbctDPIdentCode	22	Deutsche Post Identcode
kbctDPLeitcode	21	Deutsche Post Leitcode
kbctEAN128	16	GS1-128 (UCC.EAN-128)
kbctEAN128_CC	&h00000083	Composite Symbol with GS1-128 linear component
kbctEAN14	72	EAN-14
kbctEANX	13	EAN in various sizes.
kbctEANXCheck	14	EAN + Check Digit
kbctEANX_CC	&h00000082	Composite Symbol with EAN linear component
kbctExtCode39	9	Extended Code 3 of 9 (Code 39+)
kbctFIM	49	FIM
kbctFlattermarken	28	Flattermarken
kbctHIBC_Aztec	&h00000070	HIBC Aztec Code
kbctHIBC_CodablockF	&h0000006E	HIBC Codablock-F
kbctHIBC_Code128	98	HIBC Code 128
kbctHIBC_Code39	99	HIBC Code 39
kbctHIBC_DataMatrix	&h00000066	HIBC Data Matrix ECC200
kbctHIBC_MicroPDF417	&h0000006C	HIBC MicroPDF417
kbctHIBC_PDF417	&h0000006A	HIBC PDF417
kbctHIBC_QR	&h00000068	HIBC QR Code
kbctISBNX	69	ISBN (EAN-13 with verification stage)
kbctITF14	89	ITF-14
kbctJapanPost	76	Japanese Postal Code
kbctKIX	90	Dutch Post KIX Code
kbctKoreaPost	77	Korea Post
kbctLOGMARS	50	LOGMARS

79.4 class DynaPDFBarcodeMBS

79.4.1 class DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for detail information on barcode fields.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

79.4.2 Properties

79.4.3 Caption as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, the caption.
Notes: (Read and Write property)

79.4.4 ECC as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error correction code.
Notes: 0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

79.4.5 Height as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in inches.
Notes: (Read and Write property)

79.4.6 nCodeWordCol as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode coloumn.
Notes: Required for PDF417.

(Read and Write property)

79.4.7 nCodeWordRow as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode row.
Notes: Required for PDF417.
(Read and Write property)

79.4.8 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The resolution.
Notes: Required. Should be 300.
(Read and Write property)

79.4.9 Symbology as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The symbology.
Notes: PDF417, QRCode, or DataMatrix.
(Read and Write property)

79.4.10 Version as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of this object.
Notes: Should be 1
(Read and Write property)

79.4.11 Width as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in inches.
Notes: (Read and Write property)

79.4.12 XSymHeight as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical distance between two barcode modules, measured in pixels.
Notes: Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

79.4.13 XSymWidth as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required. The horizontal distance, in pixels, between two barcode modules.
Notes: (Read and Write property)

79.5 class DynaPDFBitmapMBS

79.5.1 class DynaPDFBitmapMBS

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap in DynaPDF.
Notes: Currently only used for RenderAnnotOrField function.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.5.2 Methods

79.5.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.5.4 Properties

79.5.5 Buffer as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw image buffer.
Notes: To avoid problems, this is a copy of the image data.
(Read and Write property)

79.5.6 BufSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

79.5.7 DestX as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: x-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

79.5.8 DestY as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: y-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

79.5.9 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixels.
Notes: (Read and Write property)

79.5.10 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanline length in bytes.
Notes: (Read and Write property)

79.5.11 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Notes: (Read and Write property)

79.6 class DynaPDFBookmarkMBS

79.6.1 class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for bookmark information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.6.2 Methods

79.6.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.6.4 Properties

79.6.5 ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bookmark color (PDF 1.4).
Notes: (Read and Write property)

79.6.6 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page.
Notes: (Read and Write property)

79.6.7 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes: (Read and Write property)

79.6.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read and Write property)

79.6.9 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bookmark handle.
Notes: Index from 0 to GetBookmarkCount-1.
(Read and Write property)

79.6.10 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the bookmark appears open.
Notes: (Read and Write property)

79.6.11 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent bookmark if any or -1.
Notes: (Read and Write property)

79.6.12 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text style (PDF 1.4).
Notes: (Read and Write property)

79.6.13 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title string.
Notes: This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

79.6.14 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title length.
Notes: (Read and Write property)

79.7 class DynaPDFChoiceValueMBS

79.7.1 class DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for choice values in a PDF.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

79.7.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

79.7.4 Properties

79.7.5 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ExpValue.
Notes: (Read and Write property)

79.7.6 Selected as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the choice value is selected.
Notes: (Read and Write property)

79.7.7 Value as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value.
Notes: (Read and Write property)
