MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Sets the list of player identifiers for players to invite to the match.
Notes: The property holds an array of GKPlayer objects, each of which contains an identifier for a player on Game Center. If the value of the property is non-nil, when you use the request to create a match, Game Center invites those players to the match. No automatching is done and the GKMatchRequestmaxPlayers and minPlayers properties are ignored. If nil (the default), no players are invited. The exact behavior for matchmaking depends on the kind of match being created and the class used to create the match. For more information, see Game Center Programming Guide.

Available in OS X v10.10 and later.

89.18.11 Properties

89.18.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

89.18.13 defaultNumberOfPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The default number of players for the match.
Notes: If this property is not set, then the default number of players is equal to the value stored in the maxPlayers property. The default number of players determines the number of invitees shown in the standard matchmaking user interface. The player can choose to override this to add or remove slots.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

89.18.14 inviteMessage as string

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Message sent to invited players, may be modified if using Game Center UI.
Notes: Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

89.18.15 maxPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The maximum number of players to join the match.
Notes: The maximum number of players must be equal or greater than the minimum number of players. The maximum number of players may be no more than 4 for a peer-to-peer match and no more than 16 for a hosted match.
(Read and Write computed property)

89.18.16 minPlayers as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The minimum number of players to join the match.
Notes: The minimum number of players must be at least 2.
(Read and Write computed property)

89.18.17 playerAttributes as UInt32

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A mask that specifies the role that the local player would like to play in the game.
Notes: If this value is 0 (the default), this property is ignored. If the value is nonzero, then automatching uses the value as a mask that restricts the role the player can play in the group. Automatching with player attributes follows two rules:

A new player can only be added to the match if the bitwise AND of that player's mask and the mask of any player already in the match equals &h00000000.
Players are added to the match until the bitwise OR of the masks of all the players in the match equals &hFFFFFFFF.

(Read and Write computed property)

89.18.18 playerGroup as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A number identifying a subset of players allowed to join the match.
Notes: If your game sets the playerGroup property, only players whose requests share the same playerGroup value are automatched by Game Center. You can use any values you want for player groups. For example, you could define different playerGroup values to implement any of the following filters:

- A game could restrict players based on skill level.
- A game that provides multiple games could use it to filter players into the specific game they want to play.
- A game with multiple victory conditions (for example, Capture-The-Flag, Survival) could match players to others interested in the same rules.
- A game that provides bonus content through in-app purchase could match players who own the same content with each other.

(Read and Write computed property)

89.19 class GKPlayerMBS

89.19.1 class GKPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: GKPlayer objects provide information about a player connected to Game Center.
Notes: see also
https://developer.apple.com/library/mac/#documentation/GameKit/Reference/GKPlayer_Ref/Reference/Reference.html
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

89.19.2 Methods

89.19.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

89.19.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

89.19.5 GKPlayerDidChangeNotificationName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The name of the notification posted when a player object's data changes.
Notes: Used internally for GameKitMBS.playerChanged event.

89.19.6 loadPhotoForSize(size as Integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads a photo depicting this player from Game Center.
Notes: size: A constant that determines the size of the photo to load.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPhotoForSizeCompleted.

Important The size of the image returned to your game is dependent on both the constant you provided in the initial request and the user interface idiom of the device your game is running on.

89.19.7 loadPlayersForIdentifiers(identifiers() as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads information from Game Center about a list of players.
Notes: identifiers: An array of strings, each a unique identifier for a Game Center player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPlayersForIdentifiersCompleted event.

89.19.8 Properties

89.19.9 alias as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string chosen by the player to identify themselves to other players. (read-only)
Notes: Your game uses the alias property when it wants to display a user-visible string for a particular player.
(Read only property)

89.19.10 displayName as String

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: A string to display for the player.
Notes: The display name for a player depends on whether the player is a friend of the local player authenticated on the device. If the player is a friend of the local player, then the display name is the actual name of the player. If the player is not a friend, then the display name is the player,Äôs alias.
Available in Mac OS X 10.8 and newer.
(Read only property)

89.19.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

89.19.12 isFriend as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the local player has identified this player as a friend. (read-only)
Notes: The Game Center application allows players to declare other players as friends.
(Read only property)

89.19.13 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string assigned by Game Center to uniquely identify a player. (read-only)
Notes: The player identifier should not be displayed to the user. Your game should use this string whenever it needs to persistently store information for a specific player.

Do not make assumptions about the contents of the player identifier string. Its format and length are subject to change.
(Read only property)

89.19.14 Constants

Constants

Constant	Value	Description
GKPhotoSizeNormal	1	One of the size constants of a photo loaded by Game Center. Load a normal sized photo.
GKPhotoSizeSmall	0	One of the size constants of a photo loaded by Game Center. Load a small photo.

89.20 class GKScoreChallengeMBS

89.20.1 class GKScoreChallengeMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: A GKScoreChallenge object represents a challenge based on a score in a leaderboard.
Notes: To complete the challenge, the player must score an equal or better score than the score used to create the challenge. When a player beats a score challenge, a new score challenge is automatically issued to the player that issued the challenge unless there is already a pending score challenge that requires a better score.

Available on Mac OS X 10.8.2 and newer.
Subclass of the GKChallengeMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

89.20.2 Methods

89.20.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
Notes: Available on Mac OS X 10.8.2 and newer.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

89.20.4 score as GKScoreMBS

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The score to beat. (read-only)
Notes: Available on Mac OS X 10.8.2 and newer.

89.21 class GKScoreMBS

89.21.1 class GKScoreMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKScore class holds information for a score that was earned by the player.
Notes: Your game creates GKScore objects to post scores to a leaderboard on Game Center. When your game retrieves score information from a leaderboard those scores are returned as GKScore objects.

see also
https://developer.apple.com/library/mac/#documentation/GameKit/Reference/GKScore_Ref/Reference/Reference.html

89.21.2 Methods

89.21.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

89.21.4 Constructor(category as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a score object.
Notes: Category: A category identifier for a specific leaderboard you've configured on iTunes Connect. Must not be "".

Your game explicitly allocates and initializes a score object when it needs to report a new score to Game Center.

89.21.5 date as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date and time when the score was earned. (read-only)
Notes: When you initialize the new score object, the date property is automatically set to the current date

and time.

89.21.6 formattedValue as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the player's score as a localized string. (read-only)
Notes: This property is invalid on a newly initialized score object. On a score returned from Game Kit, it contains a formatted string based on the player's score. You control the formatting of this string by configuring your leaderboards on iTunes Connect.

Never convert the value property into a string; always configure your leaderboard and call this method to receive the formatted string.

89.21.7 issueChallengeToPlayers(playerIDs() as string, message as string)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Use this method to issue GKScoreChallenges and GKAchievementChallenges to an array of playerIDs.
Notes: Players may not issue challenges to themselves nor to non-friends. Please see the GameKit reference documentation for further details on these methods.
Available on Mac OS X 10.8.2 and newer.

89.21.8 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The player identifier for the player that earned the score. (read-only)
Notes: When you initialize a new score object, the playerID property is set to the identifier for the local player. If you read the property on a score object retrieved from Game Center, playerID identifies the player who recorded that score.

89.21.9 rank as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The position of the score in the results of a leaderboard search. (read-only)
Notes: The value of this property is undefined on a newly initialized GKScore object. It is only valid on score objects received from Game Center. The rank property represents the position of the score in the

returned results, with 1 being the best score, 2 being the second best, and so on.

89.21.10 reportScore(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Reports a score to Game Center.
Notes: The value property must be set before calling this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.reportScoreCompleted.

If the score object successfully reports progress to Game Center, your game may release it. Otherwise, your game should inspect the error. If the error is a network error and your game is running on iOS 4.3 or earlier, your game should periodically attempt to report the progress until the score is successfully reported. On iOS 5.0 and later and on OS X, the background reporting task automatically handles network errors on your game's behalf.

89.21.11 reportScores(scores() as GKScoreMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Reports a list of scores to Game Center.
Notes: scores: An array of score objects to report to Game Center.

Calls later GameKitMBS.reportScoresCompleted on completion.

Use this class method whenever you need to submit multiple scores at the same time. Calling this method reports each of the scores, exactly as if you called the reportScore method on each score object in the array. However, the entire operation can typically be processed more efficiently using this method, and the completion handler is only called once.
Available on Mac OS X 10.8.2 and newer.

89.21.12 Properties

89.21.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.

Notes: (Read and Write property)

89.21.14 category as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The leaderboard that this score belongs to.
Notes: The category string must match an identifier you created when you defined your leaderboards on iTunes Connect.
(Read and Write computed property)

89.21.15 context as UInt64

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An integer value used by your game.
Notes: The context property allows your game to associate an arbitrary 64-bit unsigned integer value with the score data reported to Game Center. You decide how this integer value is interpreted by your game. For example, your game might use the context property to store flags that provide game-specific details about a player's score, or it might use the context as a key to some other data stored on the device or on your own server. In either case, your game typically uses this information when it displays a custom leaderboard to the player.
(Read and Write computed property)

89.21.16 shouldSetDefaultLeaderboard as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether this score should also update the default leaderboard.
Notes: If the value of this property is true, when the score is reported to Game Center, Game Center also updates the default leaderboard to match the value stored in the category property of the score object. This matches the behavior of the GKLeaderboardMBS class's setDefaultLeaderboard class method. If the value of this property is true, the default leaderboard is not changed by reporting the score. The default value of this property is false.
(Read and Write computed property)

89.21.17 value as Int64

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The score earned by the player.

Notes: You can use any algorithm you want to to calculate scores in your game. The value provided by a score object must match the formatting string configured for your leaderboard on iTunes Connect. Your game must set the value property before reporting a score, otherwise an error is returned.
(Read and Write computed property)

89.22 class GKTurnBasedMatchmakerViewControllerMBS

89.22.1 class GKTurnBasedMatchmakerViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKTurnBasedMatchmakerViewController class displays a user interface that allows players to manage the turn-based matches that they are participating in.
Notes: see also
https://developer.apple.com/library/mac/#documentation/GameKit/Reference/GKTurnBasedMatchmakerViewController_Ref/Reference/Reference.html

See also GameKitMBS.turnBasedMatchmakerViewController* events.
Subclass of the NSViewControllerMBS class.

89.22.2 Methods

89.22.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 89.22.4 Constructor(request as GKMatchRequestMBS) 13959

89.22.4 Constructor(request as GKMatchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new matchmaker view controller.
Notes: request: A match request with parameters for the match.
See also:

- 89.22.3 Constructor 13959

89.22.5 Properties

89.22.6 showExistingMatches as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view controller shows existing matches.
Notes: If the value of this property is true, the view controller shows matches that are already in progress.

If the value of this property is false, the view controller only offers the ability to create new matches. The default value is true.
(Read and Write computed property)

89.23 class GKTurnBasedMatchMBS

89.23.1 class GKTurnBasedMatchMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The GKTurnBasedMatch class allows your game to implement turn-based matches between sets of players on Game Center.
Notes: A turn-based match uses a store-and-forward approach to share data between the participants. When a player participating in the match performs actions to advance the state of the match, your game uploads data to Game Center that defines the new state of the match and tells Game Center which player act next in the match. Later, when the next player launches your game, it downloads the match data from Game Center and continues the match. Players continue to take turns acting (based on whatever internal logic your game implements) until the match ends. A key advantage of turn-based matches is that a player may participate in multiple matches simultaneously.

- 12.5, page 32: Writing OS X Apps for Game Center, Part 2: Requesting a Match by Tom Baumgartner

89.23.2 Methods

89.23.3 acceptInvite(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Programmatically accept an invitation to a turn-based match.
Notes: When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.acceptInviteCompleted event.

Available on Mac OS X 10.8.2 and newer.

89.23.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

89.23.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

89.23.6 creationDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date that the match was created. (read-only)

89.23.7 currentParticipant as GKTurnBasedParticipantMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The participant whose turn it is to act next. (read-only)
Notes: After a match starts and until it ends, the current player is the one who needs to take action to drive the match to completion. Other players are not allowed to change the state of the match.

89.23.8 declineInvite(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Programmatically decline an invitation to a turn-based match.
Notes: When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.declineInviteCompleted event.

Available on Mac OS X 10.8.2 and newer.

89.23.9 endMatchInTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Ends the match.
Notes: matchData: The end state for the match.

Calling this method ends the match for all players. This method may only be called by the current participant. Before your game calls this method, the matchOutcome property on each participant object stored in the participants property must have been set to a value other than GKTurnBasedMatchOutcomeNone.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.endMatchInTurnWithMatchDataCompleted event.

89.23.10 endTurnWithNextParticipant(nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Updates the data stored on Game Center for the current match.
Notes: nextParticipant: The next player in the match who needs to take an action. It must be one of the object's stored in the match's participants property.
matchData: The game-specific state for the match.
completionHandler

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls the GameKitMBS.endTurnWithNextParticipant event.

89.23.11 endTurnWithNextParticipants(nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Updates the data stored on Game Center for the current match.
Notes: nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match's participants property.
timeout: The length of time the next player has to complete their turn.
matchData: The game-specific state for the match.

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.endTurnWithNextParticipantsCompleted event.

Available on Mac OS X 10.8.2 and newer.

89.23.12 findMatchForRequest(request as GKMatchRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Programmatically searches for a new match to join.
Notes: request: A match request that specifies the properties that the new match must fulfill.

When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.findMatchForRequest2Completed event.

This method may either create a new match or it may place the player into an existing match that does not yet have its full complement of players and needs a new player to advance the match further. Regardless of how the player is placed in the match, the local player is always the current participant in the returned match. Your game should immediately display the match in its user interface and allow the player to take a turn.

89.23.13 loadMatchData(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the game-specific data associated with a match.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadMatchDataCompleted event.

89.23.14 loadMatches(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Loads the set of turn-based matches involving the local player and creates a match object for each match.
Notes: When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadMatchesCompleted event.

89.23.15 loadMatchWithID(matchID as string, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Loads a specific match.
Notes: matchID: The identifier for the turn-based match.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.loadMatchWithIDCompleted event.

Available on Mac OS X 10.8.2 and newer.

89.23.16 matchData as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Game-specific data that reflects the details of the match. (read-only)
Notes: Although Game Center knows who is participating in the match and who is expected to act next, it does not know anything about your game's internal logic. Your game provides the match data and all the programming logic required to interpret it. This data should include the current state of the game and provide any necessary details about what actions the current player is expected to take. It can also be helpful for your game to record information about recent moves made by other players. The game can then replay those moves visually for the player to show exactly how the match reached the state it is in now.

Your game never directly updates the match state associated with this property. Instead, when the data is updated to reflect the actions of the current player, your game serializes the updated state into dictionary and calls one of the match's instance methods that transmit the updated state to Game Center.

The value of this property is nil until after your game calls the loadMatchDataWithCompletionHandler: method and the load task is complete. After this task completes, the matchData property holds the data that the last player to act transmitted to Game Center.

89.23.17 matchDataMaximumSize as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Returns the limit the Game Center servers place on the size of the match data. (read-only)
Notes: Game Kit returns an error if your game sends updated data larger than this value.
Available on Mac OS X 10.8.2 and newer.

89.23.18 matchID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A string that uniquely identifies the match. (read-only)
Notes: This string is not intended to be displayed to players. Your game should use this string whenever it needs to refer to a specific match. For example, if you want your game to store additional information on a device, it might store it in a database using the match ID as a key.

89.23.19 message as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A message displayed to all players in the match.
Notes: The message property is displayed by the standard user interface; this allows your game to use the message to inform players of the current state of the match.

Important This property can be changed only by an instance of your game associated with the current player. If an instance of your game associated with another player in the match attempts to write to this property, an exception is thrown.

89.23.20 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Resigns the current player from the match without ending the match.
Notes: matchOutcome: The end outcome of the current player in the match.
nextParticipant: The next player in the match who needs to take an action. It must be one of the object's stored in the match's participants property.

matchData: A dictionary the game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player's turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game's internal logic).

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitInTurnWithOutcome event.
See also:

- 89.23.21 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil) 13967

89.23.21 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Resigns the current player from the match without ending the match.
Notes: matchOutcome: The end outcome of the current player in the match.
nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match's participants property.
timeout: The length of time the next player has to complete their turn.
matchData: The game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player's turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game's internal logic).

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.participantQuitInTurnWithOutcomeCompleted event.

Available on Mac OS X 10.8.2 and newer.
See also:

- 89.23.20 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil) 13966

89.23.22 participantQuitOutOfTurnWithOutcome(matchOutcome as Integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Resigns the player from the match when that player is not the current player. This action does not end the match.
Notes: matchOutcome: The end outcome of the current player in the match.

If the local player decided they wanted to resign from the match but is not the current participant in the match, your game calls this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitOutOfTurnWithOutcomeCompleted event.

89.23.23 participants as GKTurnBasedParticipantMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Information about the players participating in the match. (read-only)
Notes: The elements of this array are GKTurnBasedParticipantMBS objects representing each participant in the match. Your game uses these objects to retrieve more information about the participants in the match. Your game also uses one of the objects in this array as a parameter whenever it calls a method that sets a different participant to act in the match.

The size of the array and the order in which the participants appear in the array are set when the match is first created, and never changes. When a match is first created, some participants may not hold actual players yet. Game Center searches for a player to fill that spot in the match only after your game sets that participant as the current player.

89.23.24 rematch(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Create a new match with the list of players from an existing match.
Notes: Calling this method uses auto-matching to recreate a previous match. A new match with the same set of players is created and returned. If your game attempts to recreate matches using this method, each instance of your game on each device should call this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GKGameKitMBS.rematch-

Completed event.

89.23.25 remove(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Programmatically removes a match from Game Center.
Notes: Even after a player's participation in a match ends, the data associated with the match continues to be stored on Game Center. Storing the data on Game Center allows the player to continue to watch the match's progress, or even see the final state of the match when it ends. However, players may also want to delete matches that they have finished playing. If you choose not to use the standard matchmaker user interface, your game should offer the ability to delete a finished match from Game Center. When a player chooses to delete a match from Game Center, call this method. It is a programming error to call this method on a match that has the local player as an active participant.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.removeCompleted event passing the tag. Keep in mind that the completion handler may be called on a thread other than the one originally used to invoke the method. This means that the code in your block needs to be thread-safe.

When the task completes, the match is no longer visible to the local player whose device made the call. Other players involved in the match still see the match.

89.23.26 saveCurrentTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Update the match data without advancing the game to another player.
Notes: Available on Mac OS X 10.8.2 and newer.

matchData: The game-specific state for the match.

This method updates the match data stored on Game Center. Call this method when the current player takes an action that advances the state of the match but does not end the player's turn. For example, if your game has a fog-of-war mechanic, you might call this method when the player revealed new information on the map.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.saveCurrentTurnWithMatchDataCompleted event.

89.23.27 status as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The current state of the match. (read-only)

89.23.28 TimeoutDefault as Double

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Indicates that the player has one week to take a turn.
Example:

MsgBox str(GKTurnBasedMatchMBS.TimeoutDefault)

Notes: One of the common values for turn timeouts.
Available on Mac OS X 10.8.2 and newer.
Currently this function returns 604800 seconds (7 weeks), but this may change in the future.

89.23.29 TimeoutNone as Double

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Indicates that the player's turn never times out.
Example:

MsgBox str(GKTurnBasedMatchMBS.TimeoutNone)

Notes: One of the common values for turn timeouts.
Available on Mac OS X 10.8.2 and newer.
Currently this function returns 0 seconds, but this may change in the future.

89.23.30 Properties

89.23.31 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

89.23.32 Constants

Constants

Constant	Value	Description
GKTurnBasedMatchStatusEnded	2	One of the states a match can enter. The match has been completed.
GKTurnBasedMatchStatusMatching	3	One of the states a match can enter. The match is currently being played.
GKTurnBasedMatchStatusOpen	1	One of the states a match can enter. Game Center is still searching for other players to join the match.
GKTurnBasedMatchStatusUnknown	0	One of the states a match can enter. The match is in an unexpected state.
GKTurnBasedParticipantStatusActive	4	One of the states the participant is in during the match. The participant has joined the match and is an active player in it.
GKTurnBasedParticipantStatusDeclined	2	One of the states the participant is in during the match. The participant declined the invitation to join the match. When ticipant declines an invitation to join a match, the match is auto terminated.
GKTurnBasedParticipantStatusDone	5	One of the states the participant is in during the match. The participant has exited the match. Your game sets the match property to state why the participant left the match.
GKTurnBasedParticipantStatusInvited	1	One of the states the participant is in during the match. The participant was invited to the match, but has not responded to tation.
GKTurnBasedParticipantStatusMatching	3	One of the states the participant is in during the match. The participant is an unfilled position in the match that Game Center to fill when needed. When your game sets this participant as the participant in the match, Game Center fills the position and updates t and playerID properties.
GKTurnBasedParticipantStatusUnknown	0	One of the states the participant is in during the match. The participant is in an unexpected state.

89.24 class GKTurnBasedParticipantMBS

89.24.1 class GKTurnBasedParticipantMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKTurnBasedParticipant object stores information for a participant in a turn-based match.
Notes: Your game never creates objects of this class directly; instead it retrieves an array of GKTurnBasedParticipant objects from an GKTurnBasedMatch object.

Most information stored by a GKTurnBasedParticipant object is read-only, and is provided by Game Kit to assist you in implementing your game logic. However, the matchOutcome property is quite important; before your game may end a match, it must set the matchOutcome property in every GKTurnBasedParticipant object associated with the match.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 12.6, page 29: Writing OS X Apps for Game Center, Part 3: Turn-Based Games by Tom Baumgartner

89.24.2 Methods

89.24.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

89.24.4 Properties

89.24.5 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

89.24.6 lastTurnDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date and time that this participant last took a turn in the game. (read-only)
Notes: The value of this property is invalid until the participant first takes a turn in the match.
(Read only property)

89.24.7 lastTurnDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time that this participant last took a turn in the game. (read-only)
Notes: The value of this property is invalid until the participant first takes a turn in the match.
(Read only property)

89.24.8 matchOutcome as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The end-state of this participant in the match.
Notes: Initially, this property holds GKTurnBasedMatchOutcomeNone. Before your game can end a match, it must set the match outcome to some other value that reflects the outcome of this participant when he or she left the match. Your game must use any of the values provided in the "GKTurnBasedMatchOutcome" enumerated type. Optionally, it may also use an OR operation to include a custom match outcome for your specific game. Game Center does not use the custom value; it exists to allow your game to provide additional information at the end of the match. The custom value must fit in the range provided by the GKTurnBasedMatchOutcomeCustomRange constant.
(Read and Write property)

89.24.9 player as GKPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The GKPlayer object that identifies this participant. (read-only)
Notes: The value of this property may be nil if this slot in the match has not yet been filled by an actual player.
Available in OS X v10.10 and later.
(Read only property)

89.24.10 playerID as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The player identifier for this participant. (read-only)
Notes: The value of this property may be nil if this slot in the match has not been filled by an actual player.
(Read only property)

89.24.11 status as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The current status of the participant. (read-only)
Notes: This property is updated by Game Kit to reflect the status of the participant.
(Read only property)

89.24.12 timeoutDate as date

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: The date and time that the participant's turn times out. (read-only)
Notes: If a timeout was set when the turn state was advanced, this property holds when the player's turn expires. Otherwise, this property is nil.
Available on Mac OS X 10.8.2 and newer.
(Read only property)

89.24.13 timeoutDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time that the participant's turn times out. (read-only)
Notes: If a timeout was set when the turn state was advanced, this property holds when the player's turn expires. Otherwise, this property is nil.
Available on Mac OS X 10.8.2 and newer.
(Read only property)

89.24.14 Constants

Constants

Constant	Value	Description
GKTurnBasedMatchOutcomeCustomRange	&h00FF0000	One of the states the participant was in when they left the A mask used to allow your game to provide its own custo custom value must fit inside the mask.
GKTurnBasedMatchOutcomeFirst	6	One of the states the participant was in when they left the The participant finished first.
GKTurnBasedMatchOutcomeFourth	9	One of the states the participant was in when they left the The participant finished fourth.
GKTurnBasedMatchOutcomeLost	3	One of the states the participant was in when they left the The participant lost the match.
GKTurnBasedMatchOutcomeNone	0	One of the states the participant was in when they left the The participant's outcome has not been set yet (typically l is still in progress).
GKTurnBasedMatchOutcomeQuit	1	One of the states the participant was in when they left the The participant forfeited the match.
GKTurnBasedMatchOutcomeSecond	7	One of the states the participant was in when they left the The participant finished second.
GKTurnBasedMatchOutcomeThird	8	One of the states the participant was in when they left the The participant finished third.
GKTurnBasedMatchOutcomeTied	4	One of the states the participant was in when they left the The participant tied the match.
GKTurnBasedMatchOutcomeTimeExpired	5	One of the states the participant was in when they left the The participant was ejected from the match because he or s timely fashion.
GKTurnBasedMatchOutcomeWon	2	One of the states the participant was in when they left the The participant won the match.
GKTurnBasedParticipantStatusActive	4	One of the states the participant is in during the match. The participant has joined the match and is an active playe
GKTurnBasedParticipantStatusDeclined	2	One of the states the participant is in during the match. The participant declined the invitation to join the match ticipant declines an invitation to join a match, the matc terminated.
GKTurnBasedParticipantStatusDone	5	One of the states the participant is in during the match. The participant has exited the match. Your game sets t property to state why the participant left the match.
GKTurnBasedParticipantStatusInvited	1	One of the states the participant is in during the match. The participant was invited to the match, but has not resp tation.
GKTurnBasedParticipantStatusMatching	3	One of the states the participant is in during the match. The participant is an unfilled position in the match that Gam to fill when needed. When your game sets this participa participant in the match, Game Center fills the position and and playerID properties.
GKTurnBasedParticipantStatusUnknown	0	One of the states the participant is in during the match. The participant is in an unexpected state.

89.25 class GKVoiceChatMBS

89.25.1 class GKVoiceChatMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A GKVoiceChat object provides a voice channel that allows a set of players in a match to speak with each other.
Notes: see also:
https://developer.apple.com/library/mac/#documentation/GameKit/Reference/GKVoiceChat_Ref/Reference/Reference.html

Available in OS X v10.8 and later.

89.25.2 Methods

89.25.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

89.25.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new voice chat.

89.25.5 enablePlayerStateUpdate(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Enables player state update event in GameKitMBS class.
Notes: You enable GameKit.playerStateUpdate event to be called when the state of any participant in the chat changes (including the local player). The event receives the following parameters:

player: The player identifier for the player whose status changed.
state: The new state of the player.

89.25.6 isVoIPAllowed as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns whether voice chat is allowed to be used on the device.
Notes: True if voice chat is available to the game.

Some countries or phone carriers may restrict the availability of voice over IP services. Before retrieving a GKVoiceChat object, your game should first check to see whether voice over IP is permitted on the device.

89.25.7 name as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The name of the voice chat (read-only).

89.25.8 playerIDs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An array of player identifiers for the players connected to the channel. (read-only)

89.25.9 setMute(mute as boolean, playerID as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Mutes a participant in the chat.
Notes: isMuted: Determines whether the player is to be muted or not.
player: The player identifier string for a player in the match.

While a player is muted, the local player does not hear voice data transmitted by that player.

89.25.10 start

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Starts communication with other participants in the voice chat.
Notes: When start is called, the voice chat connects to the channel and notifies other connected players that the local player joined the chat. When the voice chat object is connected, it plays voice data from other

participants in the channel. It sends voice data to other participants when its active property is true.

A device only connects to the channel when the device has a microphone and is connected via wi-fi. However, your game may configure and start a voice chat channel when the device is not currently capable of using voice chat. If conditions change to allow voice chat—for example, the device connects to a wi-fi network—the GKVoiceChat object automatically connects to the channel.

89.25.11 stop

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Ends communication with other participants in the voice chat.
Notes: When stop is called, the voice chat object disconnects from the other players. You should call stop on a channel before releasing it.

89.25.12 Properties

89.25.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

89.25.14 active as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that states whether the channel is sampling the microphone.
Notes: When active is true, the voice chat samples the microphone and transmits the voice data to other players connected to the channel. Default value is false.

Only one GKVoiceChat object is allowed to sample the microphone at any given time. When your game sets the active property to true on a voice chat object, the previous voice chat object that owned the microphone (if there was one) sets its active property to false.

Available in OS X v10.8 and later.
(Read and Write computed property)

89.25.15 volume as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The volume level for the voice channel.
Notes: All voice data received from other participants is mixed and then scaled by the volume property. The volume property has a range between 0.0 and 1.0, inclusive. A volume level of 0.0 means the entire channel is muted; a value of 1.0 plays voice samples at full volume. The default value is 1.0.
(Read and Write computed property)

89.25.16 Constants

Constants

Constant	Value	Description
GKVoiceChatPlayerConnected	0	One of the states returned to your game about other players in a voice chat. A new player connected to the chat.
GKVoiceChatPlayerConnecting	4	One of the states returned to your game about other players in a voice chat. A new player is connecting to the chat.
GKVoiceChatPlayerDisconnected	1	One of the states returned to your game about other players in a voice chat. A player left the chat.
GKVoiceChatPlayerSilent	3	One of the states returned to your game about other players in a voice chat. A player stopped speaking.
GKVoiceChatPlayerSpeaking	2	One of the states returned to your game about other players in a voice chat. A player began speaking.

Chapter 90

GIF

90.1 Globals

90.1.1 GifStringToGifMBS(data as string) as GIFMBS

MBS Images Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a Gif GIFPictureMBS from memory.
Notes: Returns nil on any error.
Else it should be identical to the folderitem function.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

90.1.2 GifStringToPictureMBS(data as string) as Picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a Gif picture from memory and returns first picture with mask.
Notes: Returns nil on any error.
Not always a mask is available.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

90.2 class GifBlockMBS

90.2.1 class GifBlockMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif block.
Notes: May have a GIFPictureMBS or an extension, but not both.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

90.2.2 Methods

90.2.3 Clone as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.2.4 Properties

90.2.5 Extension as GifExtensionMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extension data of this gif block.
Notes: (Read and Write property)

90.2.6 Intro as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intro value of the gif block.
Notes: The type of data.
(Read and Write property)

90.2.7 Picture as GifPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The GIFPictureMBS data of this gif block.
Notes: Not all blocks have a picture, so this property can be nil.
(Read and Write property)

90.3 class GifDataMBS

90.3.1 class GifDataMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for binary data in a gif image.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

90.3.2 Methods

90.3.3 Clone as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.3.4 Properties

90.3.5 DataMemory as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data as a memoryblock.
Notes: (Read and Write property)

90.3.6 DataString as String

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data as a string.
Notes: (Read and Write property)

90.3.7 Length as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length in bytes of this data.
Notes: Returns 0 on any error.
(Read only property)

90.4 class GifExtensionMBS

90.4.1 class GifExtensionMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif extension.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

90.4.2 Methods

90.4.3 Add(data as GifDataMBS)

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a data object to this extension.

90.4.4 Clone as GifExtensionMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.4.5 Data(index as Integer) as GifDataMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this extension.
Notes: Index is 0 based.

90.4.6 Properties

90.4.7 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of data objects attached to this extension.
Notes: Returns 0 on any error.

(Read only property)

90.4.8 FirstData as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first data.
Notes: Same as calling Data(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

90.4.9 Marker as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The marker field of this extension.
Notes: (Read and Write property)

90.5 class GIFMBS

90.5.1 class GIFMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for reading or writing gif files.
Notes: There are patents on the lzw compression used in this class for writing gif files. This patents may be timeout out for some countries, but please check for your target countries.
Blog Entries

- Tip of day: Load GIF into WebImageView

90.5.2 Methods

90.5.3 Add(block as GifBlockMBS)

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a block to this gif object.

90.5.4 Block(index as Integer) as GifBlockMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blocks attached to this gif object.
Notes: Index is 0 based.

90.5.5 Clone as GIFMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.5.6 MakeFirstMask as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns the matching mask.
Notes: Returns nil on any error.

90.5.7 MakeFirstPicture as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns this picture.
Notes: Returns nil on any error.
There is not always a mask available!

90.5.8 MakeFirstPictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first picture in this gif object and returns this picture with mask (if exists).
Notes: Returns nil on any error.
There is not always a mask available!

90.5.9 Properties

90.5.10 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of blocks attached to this gif object.
Notes: Not every block has a picture attached, so this is not the picture count.
(Read only property)

90.5.11 FirstBlock as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first block.
Notes: Same as calling Block(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

90.5.12 Header as String

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header string for this gif object.
Notes: e.g. "GIF89a"
(Read and Write property)

90.5.13 Screen as GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screen object attached to this gif object.
Notes: (Read and Write property)

90.6 class GifPaletteMBS

90.6.1 class GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a color palette.
Example:

```
Var p as new GifPaletteMBS

p.Count = 256

p.Value(0)=&cFFEECC

MsgBox hex(p.red(0))+" "+hex(p.Green(0))+" "+hex(p.Blue(0))
```

Notes: Maximum 256 colors.
Blog Entries

- MBS REALbasic Plugins, version 10.4pr6

90.6.2 Methods

90.6.3 Clone as GifPaletteMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.6.4 Properties

90.6.5 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in this palette.
Example:

```
Var p as new GifPaletteMBS
```

```
p.Count = 256
```

Notes: Value is 2, 4, 16 or 256.
(Read and Write property)

90.6.6 Blue(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the blue color components in this color palette.
Example:

```
Var p as new GifPaletteMBS

p.Count = 1
p.Value(0)=&cFFEECC

MsgBox str(p.blue(0))
```

Notes: Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

90.6.7 Green(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the green color components in this color palette.
Example:

```
Var p as new GifPaletteMBS

p.Count = 1
p.Value(0)=&cFFEECC

MsgBox str(p.green(0))
```

Notes: Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

90.6.8 Red(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The array of the red color components in this color palette.
Example:

```
Var p as new GifPaletteMBS

p.Count = 1
p.Value(0)=&cFFEECC

MsgBox str(p.red(0))
```

Notes: Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

90.6.9 Value(index as Integer) as color

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The colors in this palette.
Example:

```
Var p as new GifPaletteMBS

p.Count = 1
p.Value(0)=&cFFEECC

MsgBox hex(p.value(0))
```

Notes: Index from 0 to count-1. (ignores bad indexes)
(Read and Write computed property)

90.7 class GIFPictureMBS

90.7.1 class GIFPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a gif GIFPictureMBS.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr6

90.7.2 Methods

90.7.3 Clone as GifPictureMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.7.4 CopyData as memoryblock

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the data of this picture object.
Notes: Returns a new memoryblock with a copy of the data so you can modify it.

90.7.5 MakeMask as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the matching mask for this picture and returns it as picture.
Notes: May return nil.
See also:

- 90.7.6 MakeMask(TransparentColorIndex as Integer) as picture 13994

90.7.6 MakeMask(TransparentColorIndex as Integer) as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a mask for this picture based on the current transparent color index.
Notes: Returns nil on low memory.
See also:

- 90.7.5 MakeMask as picture 13994

90.7.7 MakePicture as picture

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the picture and returns it.
Notes: Returns nil on any error.

90.7.8 PixelData(row as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw Pixel data for a given row.
Notes: Row is 0 based.
Returns nil on any error.

90.7.9 Properties

90.7.10 Data as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this GIFPictureMBS as a big memoryblock.
Notes: (Read and Write property)

90.7.11 HasPalette as Boolean

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether we have a color map (palette).
Notes: This property was named HasCMap in older plugin versions.
(Read and Write property)

90.7.12 Height as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in pixels.
Notes: (Read and Write property)

90.7.13 Interlace as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the GIFPictureMBS is interlaced.
Notes: Interlacing makes GIFPictureMBS loading faster in a browser, but requires the newer GIF format 89a.
(Read and Write property)

90.7.14 Left as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x position of the GIFPictureMBS.
Notes: On an animation gif each GIFPictureMBS may have it's own position.
(Read and Write property)

90.7.15 Palette as GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The palette for this GIFPictureMBS.
Notes: (Read and Write property)

90.7.16 PaletteDepth as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth of the palette of this GIFPictureMBS.
Notes: Value should be 2, 4, 16 or 256.
(Read and Write property)

90.7.17 Sorted as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the color palette is sorted.
Notes: (Read and Write property)

90.7.18 Top as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y position of this GIFPictureMBS.
Notes: On an animation gif each GIFPictureMBS may have it's own position.
(Read and Write property)

90.7.19 Width as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the GIFPictureMBS in pixels.
Notes: (Read and Write property)

90.8 class GifScreenMBS

90.8.1 class GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the gif screen information.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

90.8.2 Methods

90.8.3 Clone as GifScreenMBS

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a clone of the object.

90.8.4 Properties

90.8.5 Aspect as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The aspect ration of this GIFPictureMBS.
Notes: (Read and Write property)

90.8.6 BackgroundColor as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Index of the background color for this GIFPictureMBS.
Notes: (Read and Write property)

90.8.7 ColorResolution as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color resolution of the screen area.
Notes: (Read and Write property)

90.8.8 HasPalette as Boolean

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this screen defines a palette.
Notes: (Read and Write property)

90.8.9 Height as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the screen area used.
Notes: (Read and Write property)

90.8.10 Palette as GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color palette to use for the screen area used.
Notes: (Read and Write property)

90.8.11 PaletteDepth as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The palette depth of the screen area used.
Notes: (Read and Write property)

90.8.12 Sorted as Boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the color palette is sorted.
Notes: (Read and Write property)

90.8.13 Width as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the screen area used.
Notes: (Read and Write property)

Chapter 91

Graphics & Pictures

91.1 class Graphics

91.1.1 class Graphics

Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends Xojo's Graphics Class.

91.1.2 Methods

91.1.3 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Draws a PDF on the graphics object inside the given rectangle.
Notes: Requires Mac OS X to work.

If destination is scaled page size, you need to also scale the rectangle here.

Seems broken in MacOS Mojave for us with drawing in print context.
See also:

- 91.1.4 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean) 14002

91.1.4 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Draws a PDF on the graphics object inside the given rectangle.
Notes: Requires Mac OS X to work.

You can pass for interpolation:

0	Let the context decide.
1	Never interpolate.
2	Low quality, fast interpolation.
4	Medium quality, slower than kCGInterpolationLow.
3	Highest quality, slower than kCGInterpolationMedium.

Set Antialias to true to allow anti aliasing and to false to disallow.
Set FontSmoothing to true to allow font smoothing and false to disallow it.

If destination is scaled page size, you need to also scale the rectangle here.

Seems broken in MacOS Mojave for us with drawing in print context.

91.1.5 DrawRotatedTextMBS(Rotation as Double, text as string, x as Integer, y as Integer, Center as Boolean = false, alpha as Double = 1.0, NoSwapY as boolean = false, FontWidth as Integer = 0)

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Draws rotated text.
Example:

```
Sub Paint(g As Graphics)

g.DrawRotatedTextMBS 45, "Hello World", 100, 100

End Sub
```

Notes: Rotation is the angle in degree.
Currently only supported for Mac OS X and Windows in GUI applications.

The plugin does not see the clipping offset for the graphics object. So for graphics objects from printer or canvas, you need to offset the position. Seems like with a Canvas the coordinates are relative to canvas in Cocoa, but relative to Windows in Carbon.

We have the optional parameter Center which tells the plugin to center the rotated text, so the rotation point is in the middle of the text.
The plugin queries Bold, Italic, Underline, ForeColor, TextUnit, TextSize or TextFont.

Alpha gives the alpha value for Mac OS X. Can be 1.0 (Full color) to 0.0 (no color).

On Mac targets the Y coordinate needs to be swapped internally from top down coordinates to bottom up coordinates. As this does not work 100% correct on printers (the plugin doesn't know page margins), you can provide correct Y coordinate yourself and pass NoSwapY = true. (added in plugin version 13.1)
On Windows the OS function used (ExtTextOut) does not support multiple lines.

FontWidth is only for Windows to define the width of the font. Default is 0 to use default width.
The average width, in logical units, of characters in the font. If FontWidth is zero, the aspect ratio of the device is matched against the digitization aspect ratio of the available fonts to find the

On Windows for drawing in a picture, make sure the font size and font name are set. Else it may not draw.
For Windows, we only use HDC for drawing, so if you have a graphics context not using a HDC, this function doesn't draw. The function is not updated for DirectDraw.

91.1.6 DrawWindowsIconMBS(file as folderitem, IconID as Integer, x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

Function: Draws a windows icon on the given rectangle.
Notes: The folderitem should point to a file with icons (exe, dll, ico or something else). If IconID is zero, the first icon is used. Else IconID is the id of the icon.
If w or h is 0, the default size is used.
Returns true on success and false on failure.

91.1.7 MeasureRotatedTextMBS(text as string, byref Width as Double, byref Height as Double, FontWidth as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 17.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Measure size of text.
Notes: This is compatible to text drawing in DrawRotatedTextMBS, so you can use it to calculate the required space.
No rotation is used for measurement.
Returns true on success and false on failure.

91.1.8 PaintdesktopMBS

MBS Picture Plugin, Platform: Windows, Targets: Desktop only.

Function: Draws on Windows the desktop into the current graphics port.
Notes: May not draw a desktop picture.

91.1.9 StretchBltMBS(nXOriginDest as Integer, nYOriginDest as Integer, nWidthDest as Integer, nHeightDest as Integer, source as graphics, nXOriginSrc as Integer, nYOriginSrc as Integer, nWidthSrc as Integer, nHeightSrc as Integer, dwRop as Integer) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop only.

Function: The StretchBlt function copies a bitmap from a source rectangle into a destination rectangle, stretching or compressing the bitmap to fit the dimensions of the destination rectangle, if necessary.
Notes: This is just a wrapper to the StretchBlt function from the Windows API.

The system stretches or compresses the bitmap according to the stretching mode currently set in the destination device context.

Parameters:

nXOriginDest	Specifies the x-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nYOriginDest	Specifies the y-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nWidthDest	Specifies the width, in logical units, of the destination rectangle.
nHeightDest	Specifies the height, in logical units, of the destination rectangle.
hdcSrc	The source device context.
nXOriginSrc	Specifies the x-coordinate, in logical units, of the upper-left corner of the source rectangle.
nYOriginSrc	Specifies the y-coordinate, in logical units, of the upper-left corner of the source rectangle.
nWidthSrc	Specifies the width, in logical units, of the source rectangle.
nHeightSrc	Specifies the height, in logical units, of the source rectangle.
dwRop	Specifies the raster operation to be performed. Raster operation codes define how the system combines colors in output operations that involve a brush, a source bitmap, and a destination bitmap. See BitBlt for a list of common raster operation codes (ROPs). Note that the CAPTUREBLT ROP generally cannot be used for printing device contexts.

Return Values

If the function succeeds, the return value is true.
If the function fails, the return value is false.

Possible operation modes:

91.1.10 StretchDIBitsMBS(XDest as Integer, YDest as Integer, DestWidth as Integer, DestHeight as Integer, XSource as Integer, YSource as Integer, SourceWidth as Integer, SourceHeight as Integer, Bits as memoryblock, ImageWidth as Integer, ImageHeight as Integer, ImageBitCount as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

Function: The StretchDIBits function copies the color data for a rectangle of pixels in a DIB image to the

SRCCOPY	&h00CC0020	dest = source	Copies the source rectangle directly to the destination rectangle.
SRCPAINT	&h00EE0086	dest = source OR dest	Combines the colors of the source and destination rectangles by using the Boolean OR operator.
SRCAND	&h008800C6	dest = source AND dest	Combines the colors of the source and destination rectangles by using the Boolean AND operator.
SRCINVERT	&h00660046	dest = source XOR dest	Combines the colors of the source and destination rectangles by using the Boolean XOR operator.
SRCERASE	&h00440328	dest = source AND (NOT dest)	Combines the inverted colors of the destination rectangle with the colors of the source rectangle by using the Boolean AND operator.
NOTSRCCOPY	&h00330008	dest = (NOT source)	Copies the inverted source rectangle to the destination.
NOTSRCERASE	&h001100A6	dest = (NOT src) AND (NOT dest)	Combines the colors of the source and destination rectangles by using the Boolean OR operator and then inverts the resultant color.
MERGECOPY	&h00C000CA	dest = (source AND pattern)	Merges the colors of the source rectangle with the brush currently selected in hdcDest, by using the Boolean AND operator.
MERGEPAINT	&h00BB0226	dest = (NOT source) OR dest	Merges the colors of the inverted source rectangle with the colors of the destination rectangle by using the Boolean OR operator.
PATCOPY	&h00F00021	dest = pattern	Copies the brush currently selected in hdcDest, into the destination bitmap.
PATPAINT	&h00FB0A09	dest = DPSnoo	Combines the colors of the brush currently selected in hdcDest, with the colors of the inverted source rectangle by using the Boolean OR operator. The result of this operation is combined with the colors of the destination rectangle by using the Boolean OR operator.
PATINVERT	&h005A0049	dest = pattern XOR dest	Combines the colors of the brush currently selected in hdcDest, with the colors of the destination rectangle by using the Boolean XOR operator.
DSTINVERT	&h00550009	dest = (NOT dest)	Inverts the destination rectangle.
BLACKNESS	&h00000042	dest = BLACK	Fills the destination rectangle using the color associated with index 0 in the physical palette. (This color is black for the default physical palette.)
WHITENESS	&h00FF0062	dest = WHITE	Fills the destination rectangle using the color associated with index 1 in the physical palette. (This color is white for the default physical palette.)
NOMIRRORBITMAP	&h80000000	Do not Mirror the bitmap in this call.	Prevents the bitmap from being mirrored.
CAPTUREBLT	&h40000000	Include layered windows.	Includes any windows that are layered on top of your window in the resulting image. By default, the image only contains your window. Note that this generally cannot be used for printing device contexts.

specified destination rectangle.
Example:

```
Var m as MemoryBlock
Var p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyBGRtoMemoryblockMBS(m,0) then

Var XDest as Integer = 0
Var YDest as Integer = 0
Var DestWidth as Integer = 100
Var DestHeight as Integer = 100
Var XSource as Integer = 0
Var YSource as Integer = 0
Var SourceWidth as Integer = 100
Var SourceHeight as Integer = 100
Var Bits as memoryblock = m
```

```
Var ImageWidth as Integer = 100
Var ImageHeight as Integer = 100
Var ImageBitCount as Integer = 24

call g.StretchDIBitsMBS(XDest, YDest, DestWidth, DestHeight, XSource, YSource, SourceWidth, Source-
Height, bits, ImageWidth, ImageHeight, ImageBitCount)

end if
```

Notes: If the destination rectangle is larger than the source rectangle, this function stretches the rows and columns of color data to fit the destination rectangle. If the destination rectangle is smaller than the source rectangle, this function compresses the rows and columns by using the specified raster operation.

You specify the dest rectangle in the graphics object, the source rectangle in the picture, the memoryblock with the bits, the size of the image and the bit count of the image (24 or 32).

The origin of a bottom-up DIB is the bottom-left corner; the origin of a top-down DIB is the upper-left corner.

StretchDIBits creates a mirror image of a bitmap if the signs of the nSrcWidth and nDestWidth parameters, or if the nSrcHeight and nDestHeight parameters differ. If nSrcWidth and nDestWidth have different signs, the function creates a mirror image of the bitmap along the x-axis. If nSrcHeight and nDestHeight have different signs, the function creates a mirror image of the bitmap along the y-axis.

Returns true on success and false on failure.

91.1.11 WinApplyDevModeMBS(devmode as WindowsDeviceModeMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Updates the specified printer or plotter device context (graphics) using the specified information.
Notes: Returns true on success.

This function cannot be used to change the driver name, device name, or the output port. When the user changes the port connection or device name, the application must delete the original graphics and create a new graphics object with the new information.

Windows seems not to allow changing graphics object for printer while a page is open, so use WinEndPageMBS to close page before changing settings.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.
Blog Entries

- More on printing on Windows

91.1.12 WindowsGraphicsInfoMBS as WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Query information about graphics object on Windows.
Notes: Returns nil on any error.

91.1.13 WinEndPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The EndPage function notifies the device that the application has finished writing to a page.
Notes: This function is typically used to direct the device driver to advance to a new page.

Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Use the WinApplyDevModeMBS function to change the device mode, if necessary, after calling the EndPage function. Note that a call to WinApplyDevModeMBS resets all device context attributes back to default values. Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again before printing the next page; however, doing so will produce the same results and reduce code differences between versions of Windows.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- More on printing on Windows

91.1.14 WinStartPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The StartPage function prepares the printer driver to accept data.
Notes: Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The system disables the WinApplyDevModeMBS function between calls to the StartPage and EndPage functions. This means that you cannot change the device mode except at page boundaries. After calling EndPage, you can call WinApplyDevModeMBS to change the device mode, if necessary. Note that a call to WinApplyDevModeMBS resets all device context attributes back to default values.

Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again before printing the next page; however, doing so will produce the same results and reduce code differences between versions of Windows.

Does not work for Xojo 2016r4 and newer due to switch to DirectDraw for printing.

91.2.2 Methods

91.2.3 SaveImageAtPathToSavedPhotosAlbum(ImageFile as FolderItem, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Notes: ImageFile: The image file to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.
See also:

- 91.2.4 SaveImageAtPathToSavedPhotosAlbum(ImagePath as String, CompletionDelegate as ImageSaveCompletedMBS) 14012

91.2.4 SaveImageAtPathToSavedPhotosAlbum(ImagePath as String, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Notes: ImagePath: The image path to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.

- 91.2.3 SaveImageAtPathToSavedPhotosAlbum(ImageFile as FolderItem, CompletionDelegate as ImageSaveCompletedMBS) 14011

91.2.5 SaveVideoAtPathToSavedPhotosAlbum(VideoFile as FolderItem, CompletionDelegate as VideoSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the movie from the specified path to the user,Äôs Camera Roll album.
Notes: videoPath: The filesystem path to the movie file you want to save to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the movie has been written to the Camera Roll album.

Before calling this function, call the VideoAtPathIsCompatibleWithSavedPhotosAlbum function to determine if it is possible to save movies to the Camera Roll album. For a code example, refer to Camera Programming Topics for iOS.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the movie to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.

When used on an iOS device without a camera, this method adds the movie to the Saved Photos album rather than to the Camera Roll album.

- 91.2.6 SaveVideoAtPathToSavedPhotosAlbum(VideoPath as String, CompletionDelegate as VideoSaveCompletedMBS) 14013

91.2.6 SaveVideoAtPathToSavedPhotosAlbum(VideoPath as String, CompletionDelegate as VideoSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the movie from the specified path to the user,Äôs Camera Roll album.
Notes: videoPath: The filesystem path to the movie file you want to save to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the movie has been written to the Camera Roll album.

Before calling this function, call the VideoAtPathIsCompatibleWithSavedPhotosAlbum function to determine if it is possible to save movies to the Camera Roll album. For a code example, refer to Camera Programming Topics for iOS.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the movie to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.

When used on an iOS device without a camera, this method adds the movie to the Saved Photos album rather than to the Camera Roll album.

- 91.2.5 SaveVideoAtPathToSavedPhotosAlbum(VideoFile as FolderItem, CompletionDelegate as VideoSaveCompletedMBS) 14012

91.2.7 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoFile as FolderItem) as Boolean

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether the specified video is compatible to save to the user,Äôs Camera Roll album.
Notes: VideoFile: The folderitem to the movie file you want to save.

Returns true if the video can be saved to the Camera Roll album or false if it cannot.

Not all devices are able to play video files placed in the user,Äôs Camera Roll album. Before attempting to save a video, call this function and check its return value to ensure that saving the video is supported for the current device. For a code example, refer to Camera Programming Topics for iOS.
When used on an iOS device without a camera, this method indicates whether the specified movie can be saved to the Saved Photos album rather than to the Camera Roll album.
See also:

- 91.2.8 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoPath as String) as Boolean 14014

91.2.8 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoPath as String) as Boolean

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether the specified video is compatible to save to the user,Äôs Camera Roll album.
Notes: videoPath: The filesystem path to the movie file you want to save.

Returns true if the video can be saved to the Camera Roll album or false if it cannot.

Not all devices are able to play video files placed in the user,Äôs Camera Roll album. Before attempting to save a video, call this function and check its return value to ensure that saving the video is supported for the current device. For a code example, refer to Camera Programming Topics for iOS.
When used on an iOS device without a camera, this method indicates whether the specified movie can be saved to the Saved Photos album rather than to the Camera Roll album.
See also:

- 91.2.7 VideoAtPathIsCompatibleWithSavedPhotosAlbum(VideoFile as FolderItem) as Boolean 14013

91.2.9 WriteImageToSavedPhotosAlbum(Pic as Picture, CompletionDelegate as ImageSaveCompletedMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: Adds the specified image to the user,Äôs Camera Roll album.
Example:

```
Var pic As Picture = LogoMBS(500)

iOSPictureMBS.WriteImageToSavedPhotosAlbum(pic, AddressOf ImageSaved)
```

Notes: Pic: The image to write to the Camera Roll album.
CompletionDelegate: Optionally, the delegate which should be called after the image has been written to the Camera Roll album.

The use of the CompletionDelegate parameter is optional and necessary only if you want to be notified asynchronously when the function finishes writing the image to the user,Äôs Camera Roll or Saved Photos album. If you do not want to be notified, pass nil for these parameters.
When used on an iOS device without a camera, this method adds the image to the Saved Photos album rather than to the Camera Roll album.

91.2.10 Delegates

91.2.11 ImageSaveCompletedMBS(error as NSErrorMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: The delegate called when image saving is done.
Example:

```
// sample method you could reference via AddressOf
Sub ImageSaved(error as NSErrorMBS)
If error <>Nil Then
MessageBox "Failed to save"+EndOfLine+EndOfLine+error.LocalizedDescription
Else
MessageBox "Saved."
End If
End Sub
```

Notes: If error is nil, the save was successful.

91.2.12 VideoSaveCompletedMBS(videoPath as String, error as NSErrorMBS)

MBS Picture Plugin, Plugin Version: 21.1, Platform: iOS, Targets: iOS only.

Function: The delegate called when video saving is done.
Notes: If error is nil, the save was successful.

91.3 Globals

91.3.1 NewPictureReaderMBS(pic as picture) as PictureReaderMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture reader.
Example:

```
Var pic as Picture = LogoMBS(500)
Var p as PictureReaderMBS
Var m as MemoryBlock
Var r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

Var sum as Double

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

sum = sum + m.UInt8Value(r)
sum = sum + m.UInt8Value(g)
sum = sum + m.UInt8Value(b)

r=r+bpp
g=g+bpp
b=b+bpp
next

next
```

```
// show the sum of all pixels:
MsgBox "Sum with plugin is: "+str(sum)

// now try same in RB code:

Var surface as RGBSurface = pic.RGBSurface
Var c as color

sum = 0.0

for y=0 to h1
for x=0 to w1
c = surface.Pixel(x,y)

sum = sum + c.red
sum = sum + c.Green
sum = sum + c.Blue

next

next

surface = nil

MsgBox "Sum with RB Code is: "+str(sum)
quit
```

Notes: Returns nil on failure.
Please report if nil is returned as it should work always (except for low memory).

91.3.2 NewPictureWriterMBS(width as Integer, height as Integer, AlphaChannel as boolean = false) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture writer.
Example:

```
Var p as PictureWriterMBS
Var m as MemoryBlock
Var r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture writer
p=NewPictureWriterMBS(512,512)
```

```
h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

m.UInt8Value(r)=x\2
m.UInt8Value(g)=y\2
m.UInt8Value(b)=x*y\2

r=r+bpp
g=g+bpp
b=b+bpp
next

next

// Use Render to make a picture object
Var pic as Picture = p.Render
Backdrop = pic
```

Notes: Returns nil on failure (low memory).
If alpha is requested, but not possible in the given version of Xojo (or Xojo), we return a picture without.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr12

91.3.3 MemoryblockARGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, LittleEndian as boolean) as picture

MBS Picture Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
Var m as MemoryBlock
Var p,q,k as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// make the picture from this Memoryblock
q=MemoryblockARGBtoPictureMBS(m,0,100,100,false)

// make the mask from this Memoryblock
k=MemoryblockGrayToPictureMBS(m,kAlphaOffset,100,100,4)

// combine picture and mask
q.Mask.Graphics.DrawPicture k,0,0

Backdrop=q
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

91.3.4 MemoryblockRGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
Var m as MemoryBlock
Var p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then

q=MemoryblockRGBtoPictureMBS(m,0,100,100)

Backdrop=q

end if
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.5 BlendPicturesMBS(source as picture, sourcepercent as Double, dest as picture, destpercent as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
Var a,b,c as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
' ... draw something in a and b
c=New Picture(100,100,32)
c=BlendPicturesMBS(a,0.5,b,0.5)
```

Notes: Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning nil:
- One of the two pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The two parameter pictures have not the same size as the others.

91.3.6 BlendPicturesWithMaskMBS(source as picture, dest as picture, mask as picture) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
Var a,b,c,m as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
m=New Picture(100,100,32)
' ... draw something in a and b
c=BlendPicturesWithMaskMBS(a,b,m)
```

Notes: The mask defines how much from one picture is used.

Reason for returning false:
- One of the three pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The three parameter pictures have not the same size as the others.

91.3.7 CombinePicturesMBS(red as picture, blue as picture, green as picture) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines the red, green and blue channels of three images into the a new one.
Notes: Returns nil on any error.

91.3.8 MergePictureMBS(source1 as picture, source2 as picture) as picture

MBS Picture Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merges the two pictures into one.
Example:

```
// in RB this method would work like this:

Var i,j as Integer
Var col2 as color
Var r1,r2,g1,g2,b1,b2 as Integer
Var dest as Picture // destination
Var source1, source2 as Picture // source pictures

col2 = source1.graphics.pixel(i,j)
r1 = col2.red
g1 = col2.green
b1 = col2.blue
col2 = source2.graphics.pixel(i,j)
r2 = col2.red
g2 = col2.green
b2 = col2.blue

dest.graphics.pixel(i,j) = RGB(max(r1,r2), max(g1,g2), max(b1,b2))
```

Notes: Masks are ignored.
Returns nil on low memory.
Both pictures must have the same size and not be nil.

91.3.9 NewPictureWithColorMBS(width as Integer, height as Integer, c as color) as picture

MBS Picture Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture and fills it with the given color.

Example:

window1.backdrop = NewPictureWithColorMBS(200, 200, &c3366CC)

Notes: This function is mostly to check if the picture writer code in our plugins work.
Blog Entries

- MBS REALbasic Plugins, version 10.6pr4

91.3.10 RenderSamplesMBS(Samples as memoryblock, SampleCount as Integer, Smooth as Integer, Width as Integer, Height as Integer, outlinewidth as Integer, BackColor as color=&c88B5C4, ForeColor as color=&c274C5A OutLineColor as color=&c203F4E, Bits as Integer = 8, AutoScale as boolean = false) as Picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renders audio samples into a picture.
Notes: Samples has one byte for each audio value and 2 bytes for each stereo sample.
SampleCount: Number of Samples. = Samples.size/2
Smooth: How smooth the samples should be made.
Width: Width of picture
Height: Height of picture
outlinewidth: The width of the outline (0=no outline)
BackColor: The back color.
ForeColor: the fore color.
OutLineColor: The color for the outline.
Bits: Pass 7 for signed bytes, 8 for unsigned bytes, 15 for signed shorts and 16 for unsigned short values. Pass -32 for Float32 and -64 for Float64.
AutoScale: Whether to scale automatically depending on highest values.

See SoundFileMBS class to get samples cross platform.

- MBS Real Studio Plugins, version 12.5pr7

91.3.11 TintPictureMBS(source as picture, GreyBase as color, SepiaBase as color) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tints the image.
Example:

```
// The code does the same thing as this Xojo code:

Sub TintPicture(theImg as Picture, pGreyBase as Color, pSepiaBase as Color)
Var theRGBSurface as RGBSurface
Var theWidth, theHeight as Integer
Var pColor as Color
Var x, y as Integer
Var theGrey as Integer

Var SepiaBaseR as Double
Var SepiaBaseG as Double
Var SepiaBaseB as Double

Var GreyBaseR as Double
Var GreyBaseG as Double
Var GreyBaseB as Double

SepiaBaseR=pSepiaBase.Red / 255.0
SepiaBaseG=pSepiaBase.Green / 255.0
SepiaBaseB=pSepiaBase.Blue / 255.0

GreyBaseR=pGreyBase.Red / 255.0
GreyBaseG=pGreyBase.Green / 255.0
GreyBaseB=pGreyBase.Blue / 255.0

theRGBSurface = theImg.RGBSurface

theWidth = theImg.Width-1
theHeight = theImg.Height-1

For x = 0 to theWidth
For y = 0 to theHeight
pColor = theImg.RGBSurface.Pixel( x, y )

theGrey = ( GreyBaseR * pColor.Red ) + ( GreyBaseG * pColor.Green ) + ( GreyBaseB * pColor.Blue )
theImg.RGBSurface.Pixel( x, y ) = RGB( theGrey * SepiaBaseR, theGrey * SepiaBaseG, theGrey * Sepi-
aBaseB )

Next
Next
End Sub
```

Notes: You can use the code to do something like a Sepia effect.
Returns a new picture on success.

91.3.12 BlendPicturesMBS(result as picture, source as picture, sourcepercent as Double, dest as picture, destpercent as Double, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
Var a,b,c as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
' ... draw something in a and b
c=New Picture(100,100,32)
call BlendPicturesMBS(c, a,0.5,b,0.5, 0, 0, 100, 100)
```

Notes: Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning false:
- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The two parameter pictures have not the same size as the others.

91.3.13 BlendPicturesWithMaskMBS(result as picture, source as picture, dest as picture, mask as picture, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends two pictures.
Example:

```
Var a,b,c,m as picture

a=New Picture(100,100,32)
b=New Picture(100,100,32)
m=New Picture(100,100,32)
' ... draw something in a and b
call BlendPicturesWithMaskMBS(c,a,b,m,0,0,a.width,a.height)
```

Notes: The mask defines how much from one picture is used.

Reason for returning false:

- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The three parameter pictures have not the same size as the others.

91.3.14 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends a picture with another picture.
Notes: If DestImage is nil, white is used for the background.
If no mask is specified, a full black mask is used.
Result must be valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:

- 91.3.15 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean 14026

91.3.15 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Blends a picture with another picture.
Notes: If DestImage is nil, BackgroundColour is used for the background.
If no mask is specified, a full black mask is used.
Result must be valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:

- 91.3.14 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean 14026

91.3.16 DiffPicturesMBS(source as picture, dest as picture, square as boolean) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the difference between two pictures.
Example:

```
// our test Picture
Var p as Picture = LogoMBS(500)

// compress with JPEG and 10%
Var d as string = PictureToJPEGStringMBS(p, 10)

// decompress
Var q as Picture = JPEGStringToPictureMBS(d, true)

// compare them
window1.Backdrop = DiffPicturesMBS(p, q, true)
```

Notes: Source and dest pictures must have same size. If square, the error is squared, so you see it much better.

Returns nil in case not enough memory is available or pictures do not have same size or are nil.

If both pictures are equal, all pixels in the returned picture are black.
See also Picture.isBlackMBS, and Picture.CompareMBS.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr10

91.3.17 ColorizePictureMBS(Pict As Picture, Mask As Picture, foreR as Double, foreG as Double, foreB as Double, foreA as Double, backR as Double, backG as Double, backB as Double, backA as Double) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Colorizes a picture.
Example:

```
Var p as Picture = SpecialFolder.Pictures.Child("test2.tif").OpenAsPicture

if ColorizePictureMBS(p, p.mask, 1.0, 0.0, 0.0, 1.0, 0.0, 0.0, 1.0, 0.1) then
Backdrop=p
```

```
end if
```

Notes: The given pictures are edited. As editing pictures works only on Mac and Windows if the pictures are 24 or 32 bit, this does not work on Linux.
Returns true on success and false on failure.

91.3.18 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

91.3.19 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As Picture
Var Image As Picture
Var Mask As Picture
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=LogoMBS(500)
Mask=nil
DestImage=New Picture(700,700,32)

if PictureCombineMBS(DestImage, image, Mask, DestX, DestY, SourceX, SourceY, Width, Height, true,&c777777,&c777777)
then
window1.Backdrop=DestImage
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy

Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As Picture
Var Image As Picture
Var Mask As Picture
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=LogoMBS(500)
Mask=nil
DestImage=New Picture(700,700,32)

if PictureCombineMBS(DestImage,image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true,&h777777,&h777777)
then
window1.Backdrop=DestImage
```

end if

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

- 91.3.27 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 14044

91.3.25 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean

MBS Picture Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

91.3.28 PictureCopyPixelFastMBS(DestImage As Picture, Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
const x=100 // mouse coordinates for example
const y=100

Var p,logo as picture

logo=LogoMBS(500)

p=New Picture(800,800,32)

p.Graphics.ForeColor=&cFFFFFF
p.Graphics.FillRect 0,0,p.Width,p.Height

if PictureCopyPixelFastMBS(p, logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then
' ok
else
beep
end if

window1.Backdrop=p
```

Notes: Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

91.3.29 NewPictureEditorMBS(pic as picture) as PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture editor editing the given picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as PictureEditorMBS

p = NewPictureEditorMBS(l)
```

Notes: Returns nil on failure.
Works only for bitmap images.

91.3.30 NewPictureMBS(width as Integer, height as Integer, pixeltype as Integer, buffer as memoryblock, rowbytes as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a picture from a memory block.
Notes: This wraps the REALBuildPictureFromBuffer plugin function and copies the pixels.

rowbytes must be the number of bytes per row. Typical width*3 or width*4.

Pixeltype constants:

91.3.31 NewPictureWriterMBS(pic as picture, width as Integer, height as Integer) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture writer.
Notes: Returns nil on failure (low memory).
If you provide an existing picture we reuse it if it has the right size. But you can pass nil to get a new one always.

91.3.32 GetMBfromPictureMBS(pic as picture, mask as picture, mode as string) as memoryblock

MBS Picture Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock from the picture data with the given format.
Example:

```
Var p as Picture = LogoMBS(500)
Var m as MemoryBlock = GetMBfromPictureMBS(p, p.mask, "RGB32")
```

Notes: Returns nil on any error.
Mode can be a string with the following strings: RGB16, ARGB16, RGB16_565, ARGB32, RGB32, RGB24 or MASK8.
See the example project "Picture To Memoryblock.rbp" for the RB code matching the plugin code.

- 91.3.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock 14048

91.3.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock

MBS Picture Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock from the picture data with the given format.
Example:

```
Var p as Picture = LogoMBS(500)
Var m as MemoryBlock = GetMBfromPictureMBS(p, "RGB32")
```

Notes: Same as the other GetMBfromPictureMBS function, but takes the mask from the picture.

91.3.34 MemoryblockABGRtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 91.3.35 MemoryblockABGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture 14049

91.3.35 MemoryblockABGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
Var m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
Var m as MemoryBlock
Var p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
```

```
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyARGBtoMemoryblockMBS(m,0,0) then

Var x as Picture = New Picture(100,100,32)

q=MemoryblockARGBtoPictureMBS(x, m,0,100,100)

Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if
end if
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!

- 91.3.41 MemoryblockBGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture 14055

91.3.41 MemoryblockBGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 91.3.40 MemoryblockBGRtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture 14054

91.3.42 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer) as picture

MBS Picture Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
Var m as MemoryBlock
Var p,q,k as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// make the picture from this Memoryblock
q=MemoryblockARGBtoPictureMBS(m,0,100,100,false)

// make the mask from this Memoryblock
k=MemoryblockGrayToPictureMBS(m,kAlphaOffset,100,100,4)

// combine picture and mask
q.Mask.Graphics.DrawPicture k,0,0
```

Backdrop=q

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.43 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red as Integer, Blue as Integer, Green as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Notes: This variantion of this method Multiplies the gray value with Red, Blue and Green and divided by 256.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!

91.3.44 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red() as Integer, Blue() as Integer, Green() as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Notes: This variantion of this method lookups the Red, Green and Blue values for the next pixel by using the gray value as index.

The arrays should have 256 elements.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!

91.3.45 MemoryblockRGBAtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
Var m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyRGBAtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockRGBAtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 91.3.46 MemoryblockRGBAtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 14059

91.3.46 MemoryblockRGBAtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
// some memory with pixel data
Var m as MemoryBlock = NewMemoryBlock(100*100*32)

for i as Integer = 1 to 1000
// place random pixels
m.Int8Value(rnd*m.size) = rnd*256
next

// and make a picture
Var l as Picture = MemoryBlockRGBAtoPictureMBS(m, 0, 100, 100)

// display in window
window1.backdrop = l
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.47 MemoryblockRGBtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a memoryblock into a picture object.
Example:

```
Var m as MemoryBlock
Var p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
```

```
// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then

Var x as Picture = New Picture(100,100,32)

q=MemoryblockRGBtoPictureMBS(x, m,0,100,100)

Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if
end if
```

Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.48 PtrABGRtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a pointer into a picture object.
Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in

the memory pointed to by pointer plus offset.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.60 PtrRGBAtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a pointer into a picture object.
Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
See also:

- 91.3.61 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 14068

91.3.61 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data from a pointer into a picture object.
Notes: Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

91.3.64 MandelbrotSetMBS(Threaded as Integer, width as Integer, height as Integer, fx as Double = 4.0, fy as Double = 4.0, dx as Double = -2.0, dy as Double = -2.0, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the mandelbrot picture.
Example:

```
Backdrop = MandelbrotSetMBS(0,300,300)
```

Notes: Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

Width & Height specifiy the output image size.
fx and fy are the scale values and dx/dy specify the the position of the mandelbrot image.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- Problems with killing Xojo threads with plugin calls.

91.3.65 BinaryStringtoPictureMBS(data as String) as Picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use PNG format instead.
Function: Creates the picture back from the binary data inside the string.
Example:

```
Var pic as Picture = LogoMBS(500)

// encode
Var s as string = PicturetoBinaryStringMBS(pic)

// decode
Backdrop = BinaryStringtoPictureMBS(s)
```

Notes: Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

+ 0 Kenn, PPIC for Packed Picture
+ 4 Length of whole block
+ 8 Width (BigEndian)
+12 Height (BigEndian)
+16 Depth (BigEndian, 32 for 32bit)
+20 Offset of the binary data. maybe 40.
+24 Reserved for future use. Should be 0.
+40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 ->270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside

the database.
Does not handle mask or alpha channel.

- MBS Xojo / Real Studio Plugins, version 17.0pr1

91.3.66 PicturetoBinaryStringMBS(p as picture) as string

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use PNG format instead.
Function: Creates a string with the picture content for saving.
Example:

```
Var s as string
Var pic as picture = LogoMBS(100)

s=PicturetoBinaryStringMBS(pic)
```

Notes: Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

+ 0 Kenn, PPIC for Packed Picture
+ 4 Length of whole block
+ 8 Width (BigEndian)
+12 Height (BigEndian)
+16 Depth (BigEndian, 32 for 32bit)
+20 Offset of the binary data. maybe 40.
+24 Reserved for future use. Should be 0.
+40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 ->270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression.
Does not handle mask or alpha channel.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside the database.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with

another you should check the encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

- MBS Xojo / Real Studio Plugins, version 17.0pr1

91.4 class PaletteCalculatorMBS

91.4.1 class PaletteCalculatorMBS

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class allows you to calculate an 8 bit image from a RGB image and back.
Notes: You can create the best matching palette for a given image.
If you have several images which should share the same palette, you can draw them first on one big picture before calculating the

- MBS Xojo Plugins, version 18.5pr2
- MBS Xojo / Real Studio Plugins, version 15.4pr4
- MBS Real Studio Plugins, version 12.3pr3

91.4.2 Methods

91.4.3 CountColors as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how many different colors are in the palette.

91.4.4 CreatePicturePalette(Pic as picture) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a picture palette based on the picture.
Notes: This function checks which colors are very often used in the image and builds a palette which may be better for this image than the default system palette.

91.4.5 GetIndexOfColor(col as color) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the index in the palette for the given color.
Notes: Returns -1 if the color is not found.
See also:

- 91.4.6 GetIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer 14074

91.4.6 GetIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the index in the palette for the given color.
Notes: Returns -1 if the color is not found.
See also:

- 91.4.5 GetIndexOfColor(col as color) as Integer 14074

91.4.7 GetNearestIndexOfColor(col as color) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the index in the palette for the best matching color.
Notes: The best color is the color with the lowest value:
value=(r-col(index).red)^2+(g-col(index).green)^2+(b-col(index).blue)^2

Returns -1 if the color is not found (should never happen).
See also:

- 91.4.8 GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer 14074

91.4.8 GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the index in the palette for the best matching color.
Notes: The best color is the color with the lowest value:
value=(r-col(index).red)^2+(g-col(index).green)^2+(b-col(index).blue)^2

Returns -1 if the color is not found (should never happen).
See also:

• 91.4.7 GetNearestIndexOfColor(col as color) as Integer 14074

91.4.9 Transform(mem as memoryblock, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms a 8 bit picture to a RGB picture.
Notes: The memoryblock must have the 8 bit picture data inside with each row being width bytes big. The memoryblock must have at least width*height bytes.

Returns nil on any error.
See also:

• 91.4.10 Transform(Pic as picture) as memoryblock 14075

91.4.10 Transform(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock with 8 bit picture data.
Notes: The resulting memoryblock has width*height bytes.
Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
See also:

• 91.4.9 Transform(mem as memoryblock, width as Integer, height as Integer) as picture 14075

91.4.11 TransformBetterDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock with 8 bit picture data.
Notes: The resulting memoryblock has width*height bytes.
Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
This method uses dithering to make the picture looking better than with a better transform using code like Floyd-Steinberg.

91.4.12 TransformFastDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock with 8 bit picture data.
Notes: The resulting memoryblock has width*height bytes.

Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
This method uses dithering to make the picture looking better than with a simple transform.

91.4.13 Properties

91.4.14 Count as Integer

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How many colors are inside this PaletteMBS.
Notes: This property should be 2, 4, 16 or 256.
Default is 256.
(Read and Write property)

91.4.15 Col(i as Integer) as color

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color array.
Notes: Index goes from 0 to count-1.
(Read and Write computed property)

91.5 class Picture

91.5.1 class Picture

Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends Xojo's Picture Class.

91.5.2 Methods

91.5.3 AddSteganographyMBS(flags as Integer, data as Memoryblock) as Picture

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds steganography to a new picture.
Example:

```
Var p as Picture = LogoMBS(500)
// this example uses chr(0) as end marker
Var s as string = "Hello World. This is just a test." + chr(0)
Var pic as Picture = p.AddSteganographyMBS(1, s)

Var data as MemoryBlock = pic.SteganographyMBS(1)
Var d as string = data.CString(0)

MsgBox d
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).
Returns a new picture or nil. The existing picture is not modified.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it's okay via checksum and than decrypt your data.
Please store image in a loss less format like PNG.
Function does not handle mask or alpha channel.

91.5.4 AddSteganographyPictureMBS(flags as Integer, data as Picture) as Picture

MBS Picture Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds steganography to a new picture.
Example:

```
const AllChannels = &h111

Var p as new Picture(500, 500, 32)

Var w as new window1
w.Title = "white"
w.Backdrop = p

Var l as Picture = LogoMBS(500)

w = new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
Var x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
Var y as Picture = x.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).
Returns a new picture or nil. The existing picture is not modified.

Function does not handle mask or alpha channel.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr2

91.5.5 AutoLevelCopyMBS as picture

MBS Picture Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns nil on any error.
Thanks to Jeff Thoman for his code.

This version of the method makes a copy of the picture so it works on any kind of picture.

Renamed in version 9.2 from AutoLevelMBS to AutoLevelCopyMBS.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

91.5.6 AutoLevelMBS as boolean

MBS Picture Plugin, Plugin Version: 9.1, Platforms: macOS, Windows, Targets: All.

Function: Applies auto levels on the picture.
Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.
Thanks to Jeff Thoman for his code.

This version of the method modifies the pixels on the picture. Works on 32bit and 24bit pictures.

If you get a type mismatch error on using this function, you may want to use AutoLevelCopyMBS which is the old behavior.
Blog Entries

- Using zbar library with Xojo

91.5.7 BitmapMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the picture as a bitmap picture.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.BitmapMBS
canvas1.backdrop=p
```

Notes: A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.
This function takes a look on the picture and returns it unchanged if it is allready a bitmap, but if not, the picture is Cloned as a bitmap. If you prefer to get a copy of the picture as a bitmap picture, use clone instead.

The Cloned picture does not have a mask.

91.5.8 BlueChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel of the picture copied into a new picture.
Example:

```
Var p as Picture = LogoMBS(500)
Backdrop = p.BlueChannelMBS
```

Blog Entries

- MBS REALbasic Plugins, version 10.6pr4

91.5.9 BlurMBS(Radius as Double, yield as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a blur effect to the image.
Example:

```
Var p as Picture = LogoMBS(500)
window1.Backdrop = p.BlurMBS(2)
```

Notes: This is not a gaussian blur, but a faster box blur.
Returns nil on any error.

Does ignore mask or alpha channel.

- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr7

91.5.10 BMPDataMBS(ResolutionValueDPI as Integer=72) as string

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a String with the BMP File content for the given picture.
Example:

```
// Make a picture
Var p as Picture = LogoMBS(100)

// Encode as BMP
Var s as string = p.BMPDataMBS

// display length in title
Title = str(lenb(s))

// and display picture
Backdrop= BMPStringtoPictureMBS(s)
```

Notes: Does not handle masks.
Returns an empty string on any error.

91.5.11 CalcSteganographyMBS(flags as Integer) as Integer

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the steganography size.
Example:

```
Var p as Picture = LogoMBS(500)

Var size1 as Integer = p.CalcSteganographyMBS(&h100)
MsgBox "Red only: "+str(size1)

Var size2 as Integer = p.CalcSteganographyMBS(&h111)
MsgBox "RGB only: "+str(size2)
```

Notes: Returns number of bytes that can be stored in an image of the size of this picture.
Flags can be a combination of red (&h100), green (&h010) and blue (&h001).

91.5.12 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Queries the colorspace profile for a picture.
Example:

```
Var p as new Picture(32,32,32)
Var c as CGColorSpaceMBS = p.CGColorSpaceMBS
MsgBox c.Name
```

Notes: Only for Cocoa targets.

In Version 19.3 changed to default to Generic RGB, which Xojo uses if none is set.

91.5.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness of an image.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeBrightnessAbsoluteMBS(30)

// show in window
window1.Backdrop = n
```

Notes: To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.
See also:

- 91.5.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14082

91.5.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness of an image.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeBrightnessAbsoluteMBS(10,20,30)
```

```
// show in window
window1.Backdrop = n
```

Notes: To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.

PS: This function may be optimized, if someone needs it to be faster.

Basicly Picture.ChangeBrightnessAbsoluteMBS does this:

```
for each pixel in picture
pixel.red = pixel.red + r
pixel.green = pixel.green + g
pixel.blue = pixel.blue + b
next
```

and it limits the pixel values to the range 0 to 255.
See also:

- 91.5.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture 14082

91.5.15 ChangeBrightnessLinearMBS(Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness of an image linear.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeBrightnessLinearMBS(30)

// show in window
window1.Backdrop = n
```

Notes: Value is fraction of change. Range -255 to 255. For example 127 would move all colors half the way to white.
Returns nil if the picture is no bitmap picture.
See also:

- 91.5.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14084

91.5.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness of an image linear.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeBrightnessLinearMBS(10,20,30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
PS: This function may be optimized, if someone needs it to be faster (e.g. using Altivec).
Blog Entries

- MBS Xojo Plugins, version 18.0pr9

91.5.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness and contrast of an image.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5,30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
See also:

- 91.5.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double,

ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14085

91.5.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness and contrast of an image.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
See also:

- 91.5.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture 14084

91.5.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness and contrast of an image linear.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5,30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
Contrast range is 0 to 1.0.
Brightness range is -255 to 255.
See also:

- 91.5.20 ChangeContrastBrightnessLinearMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14086

91.5.20 ChangeContrastBrightnessLinearMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the bightness and contrast of an image linear.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
Contrast range is 0 to 1.0.
Brightness range is -255 to 255.
See also:

- 91.5.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture 14085

91.5.21 ChangeContrastMBS(Contrast as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the contrast of the picture.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastMBS(-0.5)

// show in window
window1.Backdrop = n
```

Notes: All three color channels are handled with the same contrast change.
Returns a picture on success or nil on any error.

Parameters can have any value.
(values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

- 91.5.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture 14087

91.5.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the contrast of the picture.
Example:

```
// get test picture
Var p as Picture = LogoMBS(500)

Var n as Picture = p.ChangeContrastMBS(-0.5,0.0,0.5)

// show in window
window1.Backdrop = n
```

Notes: Three different values, one for each channel.
Returns a picture on success or nil on any error.
(values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

91.5.25 ChangeSaturationMBS(Amount as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the picture with a changed saturation.
Notes: Range of amount is from -255 to 255.

Value 0 does nothing.
Value -255 returns a gray level picture.
Blog Entries

- MBS REALbasic plug-ins version 9.4

91.5.26 cloneMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the picture as a bitmap.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.clonembs
canvas1.backdrop=p
```

Notes: A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.

If a picture is a bitmap can be easily tested with the graphics property like this:

```
if p.graphics=nil then // if no bitmap
p = p.clonembs // make one
end if
```

The Cloned picture does include the mask, if one exists.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask.
See also:

- 91.5.27 CloneMBS(NewMask as Picture) as picture 14089
- 91.5.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 14089
- 91.5.29 CloneMBS(width as Integer, height as Integer) as picture 14090

91.5.27 CloneMBS(NewMask as Picture) as picture

MBS Picture Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the picture as a bitmap.
Notes: Same as CloneMBS, but adds the mask.
See also:

- 91.5.26 cloneMBS as picture 14088
- 91.5.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 14089
- 91.5.29 CloneMBS(width as Integer, height as Integer) as picture 14090

91.5.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the picture as a bitmap.
Notes: Same as CloneMBS, but adds the mask.
See also:

- 91.5.26 cloneMBS as picture 14088
- 91.5.27 CloneMBS(NewMask as Picture) as picture 14089
- 91.5.29 CloneMBS(width as Integer, height as Integer) as picture 14090

91.5.29 CloneMBS(width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the picture as a bitmap with given size.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.clonembs(100,100)
canvas1.backdrop=p
```

Notes: A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.
If a picture is a bitmap can be easily tested with the graphics property like this:

```
if p.graphics=nil then // if no bitmap
p=p.clonembs // make one
end if
```

The Cloned picture does not have a mask or alpha channel.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask.

91.5.30 ColorizeMBS(hue as Double, sat as Double, light as Double) as picture

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorizes a picture.
Notes: Hue, Sat and Light in range 0.0 to 1.0 please.
Returns new picture.

91.5.31 ColornessMBS(threshold as Integer = 10) as Double

MBS Picture Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the color coverage of the picture.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var pic as Picture = Picture.Open(file)

MsgBox str(pic.ColornessMBS)
```

Notes: Counts how many pixels have color and returns percentage depending on a given threshold.
Changed in 12.3pr5 to ignore nearly black pictures when counting.

This function loops over all pixels to calculate the difference between green and red channel and green and blue channel. If the differences are greater than the threshold, the pixel counts as colored.

Threshold is between 0 and 255. The value of 10 makes sure almost gray pictures don't count as colored ones.

Finally we calculate the percentage of colored pixels vs total pixels.

91.5.32 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

91.5.33 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As Picture
Var Image As Picture
Var Mask As Picture
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500
Var UseColours as Boolean = true
Var ForeColour as color = &cFF0000

image=LogoMBS(500)
Mask=nil
DestImage=New Picture(700,700,32)

if DestImage.CombineMBS(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,UseColours,ForeColour)
then
window1.Backdrop=DestImage
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As Picture
Var Image As Picture
Var Mask As Picture
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=LogoMBS(500)
Mask=nil
DestImage=New Picture(700,700,32)

if DestImage.CombineMBS(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true,&h777777,&h777777)
then
window1.Backdrop=DestImage
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color

MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

91.5.42 CombineMBS(Mode as Integer, SecondPicture As Picture, X as Integer = 0, Y as Integer = 0, Width as Integer = 0, Height as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines pixels of two images with the given mode.
Example:

```
Var pic as picture // some picture
Var other as picture // some other picture
Var result as picture = pic.CombineMBS(1, other)
```

```
// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as Integer, y as Integer) as Integer
Return BitwiseXor(x,y)
End Function
```

Notes: Each pixel is sent through an operation for each channel.
X, Y, Width and Height can limit effect of a certain portion of the source image.

Modes:

1	Bitwise XOR
2	Bitwise OR
3	Bitwise AND
4	Min
5	Max
6	AddPin (add with limit)
7	AddOver (add with overflow)
8	Difference
9	Difference squared (with limit 255)
10	Sub Pin (sub with limit)

- 91.5.41 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 14108

91.5.43 CombinePixelMBS(Mode as Integer, SecondPicture As Picture) as picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines pixels of two images with the given mode.
Example:

```
Var pic as picture // some picture
Var other as picture // some other picture
Var result as picture = pic.CombinePixelMBS(1, other)

// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as color, y as color) As color
Return rgb(x.red+y.red, x.green+y.green, x.blue+y.blue)
End Function
```

Notes: Each pixel is sent through an operation.

Modes:

1	Average (50% first and 50% second picture)
2	Gray
3	LighterPixel
4	DarkerPixel
5	Difference Max
6	Difference Max Squared

91.5.44 CompareBrightnessMBS(other as picture, mode as Integer, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two pictures in brightness.
Example:

```
Var p as picture = New Picture(100,100,32)
Var q as Picture = New Picture(100,100,32)

Var diff as Double = p.CompareBrightnessMBS(q, 0, 0)

MsgBox str(Diff) // shows 0 = equal
```

Notes: Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.
If width and height are not equal, the result is 1.0.
If you need to check the mask also, please call this method a second time for the masks.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

Only compares raw pixels without checking mask or alpha channel.

91.5.45 CompareMBS(other as picture, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two pictures.
Example:

```
Var p as picture = New Picture(100,100,32)
Var q as Picture = New Picture(100,100,32)

Var diff as Double = p.CompareMBS(q, 0)

MsgBox str(Diff) // shows 0 = equal

p.Graphics.ForeColor = &cFF0000
p.Graphics.FillRect 0, 0, p.Width, p.Height

q.Graphics.ForeColor = &cFF0001
q.Graphics.FillRect 0, 0, q.Width, q.Height

Var diff1 as Double = p.CompareMBS(q, 0)
Var diff2 as Double = p.CompareMBS(q, 2)

MsgBox str(Diff1)+" "+str(Diff2) // shows 1 (all pixels different) and shows 0 (all equal)
```

Notes: Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.
If width and height are not equal, the result is 1.0.
If you need to check the mask also, please call this method a second time for the masks.

Only compares raw pixels without checking mask or alpha channel.

91.5.46 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the

memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 91.5.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean 14114

91.5.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
Var m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
```

Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)

```
break // look into memoryblock with debugger
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

- 91.5.50 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean 14118

91.5.49 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, LittleEndian as boolean, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
Var m as MemoryBlock
Var p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

If Alphavalue is in range of 0 to 255 the alpha value of all pixel is set to this value. If the AlphaValue is

outside this range the alpha value is not touched for all pixels.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 91.5.50 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean 14118

91.5.50 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
Var m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyARGBtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockARGBtoPictureMBS(m, 0, p.Width, p.Height)
```

```
break // look into memoryblock with debugger
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. 91.5.55 CopyBtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
Var m as MemoryBlock
Var p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy Blue channel from mask image into Memoryblock
if p.mask.CopyBtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This function takes the blue channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.56 CopyGtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
Var m as MemoryBlock
Var p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This

function takes the green channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.57 CopyMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the mask of the picture into a new and independend picture object.
Example:

```
Var p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.ForeColor=&cFFFFFF
p.mask.Graphics.Fillrect 0,0,300,300

p.mask.Graphics.ForeColor=&c000000
p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyMaskMBS
```

Notes: Returns nil on low memory.

91.5.61 CopyPixelFastMBS(Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
const x=100 // mouse coordinates for example
const y=100

Var p,logo as picture

logo=LogoMBS(500)

p=New Picture(800,800,32)

p.Graphics.ForeColor=&cFFFFFF
p.Graphics.FillRect 0,0,p.Width,p.Height

if p.CopyPixelFastMBS(logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then
' ok
else
beep
end if

window1.Backdrop=p
```

Notes: Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position

Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

91.5.62 CopyRGBAtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
// get some picture
Var pic as Picture = LogoMBS(500)
// and a memoryblock of 1000 by 1000 pixels with 4 bytes per pixel
Var m as new MemoryBlock(1000* 1000 *4)

// calculate some offset for the image with 50 rows from top and 60 pixels from left
Var Offset50Lines as Integer = 1000*4 *50 +60*4

// copy picture to memoryblock
if pic.CopyRGBAtoMemoryblockMBS(m, Offset50Lines, 127, 0, pic.Height-1, 0, 4*1000) then

// show MemoryBlock content
Backdrop = MemoryblockRGBAtoPictureMBS(nil, m, 0, 1000, 1000)
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
Var m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyRGBAtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockRGBAtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.66 CopyRtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
Var m as MemoryBlock
Var p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy Red channel from mask image into Memoryblock
if p.mask.CopyRtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.

By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This function takes the red channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.67 CopyXBGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.68 CopyXRGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies raw image data into a memoryblock.
Notes: Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

91.5.69 CountColorMBS(col as color) as Integer

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the pixels with the given colors.
Example:

```
Var p as Picture
Var n1,n2 as Integer

p=New Picture(300,300,32)

p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 0,0,100,100

n1=p.CountColorMBS(&cFF0000)
n2=p.CountColorMBS(&cFFFFFF)
```

```
if n1=100*100 then
if n2=300*300-100*100 then
MsgBox "OK"
else
MsgBox "white failed"
end if
else
MsgBox "red failed"
end if
```

Notes: Returns the number of pixels found.

- Tipp of the day: Blank HTMLViewer

91.5.70 CountColorsMBS(byref red as memoryblock, byref blue as memoryblock, byref green as memoryblock, byref count as Integer)

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the color parts of each pixel.
Notes: red, blue and green are filled with 1024 bytes big memoryblocks. One 4 byte integer for each color value possible.
Count is filled with the number of pixels processed.

91.5.71 DrawPictureFMBS(pic as picture, x as Double, y as Double, alpha as Double = 1.0, yield as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws picture with floating point coordinates.
Notes: Supports a mask on the picture.
Returns true on success.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr3

91.5.72 ExtractColorMBS(SearchColor as color, ReplaceWithColor as color, BackGroundColor as color) as picture

MBS Picture Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the first color and writes matching pixels with the secon color.
Example:

```
Var p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 000,100,100,100

p.Graphics.ForeColor=&c00FF00
p.Graphics.FillRect 100,100,100,100

p.Graphics.ForeColor=&c0000FF
p.Graphics.FillRect 200,100,100,100

p.Graphics.ForeColor=&c777700
p.Graphics.FillRect 100,200,100,100

// shows just a violet box on the left
backdrop=p.ExtractColorMBS(&cFF0000,&cFF00FF,&c000000)
```

Notes: All pixels which do not match the search color are written to the new picture using the given background color.
Returns nil on any error.

91.5.73 ExtractColorRectangleMaskMBS as picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a mask picture with all the rectangles marked visible which contain color.
Example:

```
Var invertedpic as picture
Var pic as Picture

pic=New Picture(300,300,32)
pic.graphics.drawpicture LogoMBS(100), 150,50

Backdrop=pic.ExtractColorRectangleMaskMBS
// marks black where the logo is drawn
```

Notes: If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.
See also:

- 91.5.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture 14137

91.5.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a mask picture with all the rectangles marked visible which contain color.
Notes: If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.

All pixel outside the rectangle specified will be white.
See also:

- 91.5.73 ExtractColorRectangleMaskMBS as picture 14136

91.5.75 FindPictureMBS(pic as picture, byref x as Integer, byref y as Integer, StartX as Integer = 0, StartY as Integer = 0, Tolerance as Integer = 3) as boolean

MBS Picture Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the given picture inside the picture.
Example:

```
// this is search image
Var p as new Picture(20,20,32)
p.Graphics.ForeColor = &c0000FF
p.Graphics.FillRect 0, 0, 20, 20

// this is target image
Var q as new Picture(500, 500, 32)

// with some color at Random position
q.Graphics.ForeColor = &c0000FF
q.Graphics.FillRect rnd*480, rnd*480, 30, 30
```

```
// do a search
Var x, y as Integer

if q.FindPictureMBS(p, x,y) then
// found image, so draw rectangle there

q.Graphics.ForeColor = &cFF0000
q.Graphics.DrawRect x, y, p.Width, p.Height
end if

window1.Backdrop = q
```

Notes: Returns true on success and fills x/y variables.
Pixels are compared exactly, so a little bit color correction and make the picture being not found.

StartX/StartY can give start position. Tolerance defines how much two pixel component values can differ and still be considered the same. This helps with color matching and other drawings which may alter pixels a little bit.
If function returns true, you can use x+1, y as the new start position and search again.

91.5.76 GetMaskMBS(create as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the mask for that picture.
Notes: Same as Picture.Mask in Xojo, but over the Plugin API.
We added it to test for leaks in plugin API.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr3

91.5.77 GrayScale2MBS(mode as Integer) as boolean

MBS Picture Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Turns picture into grayscale.
Example:

```
Var l as Picture = LogoMBS(500)
if l.GrayScale2MBS(0) then
```

```
Backdrop = l
end if
```

Notes: Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr3

91.5.78 GrayScaleMBS(mode as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a grayscale copy of the picture.
Example:

```
Var l as Picture = LogoMBS(500)
Backdrop = l.GrayScaleMBS(0)
```

Notes: If you have a mask on the picture, you need to draw that mask in the new picture's mask if you want to keep it.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.

91.5.79 GreenChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel of the picture copied into a new picture.
Example:

```
Var p as Picture = LogoMBS(500)
Backdrop = p.GreenChannelMBS
```

Blog Entries

- MBS REALbasic Plugins, version 10.6pr4

91.5.80 HashMBS as UInt32

MBS Picture Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates CRC 32 over all pixels.
Example:

```
Var p as new Picture(100, 100, 32)

Var hash1 as UInt32 = p.HashMBS

// one black pixel
p.Graphics.Pixel(50, 50) = &c000000

Var hash2 as UInt32 = p.HashMBS

MsgBox hex(hash1)+" "+hex(hash2)
```

Notes: You can use hash to see if two pictures have 100% identical pixel values. Changing just one pixel should give different number.
Does not include alpha channel or mask for the hash, but only RGB channels.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

91.5.81 HasMaskMBS as boolean

MBS Picture Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture has a mask or not.
Notes: Returns true if yes or false if not.

91.5.82 HMirrorMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture horizontally (flip).
Example:

```
// load picture
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as PNGPictureMBS = f.OpenAsPNGMBS

// get parts
Var pic as Picture = p.Pict.HMirrorMBS
Var mask as Picture = p.mask.HMirrorMBS

// save as png
Var g as FolderItem = SpecialFolder.Desktop.Child("output.png")
call g.SaveAsPNGMBS(pic, mask, 0)

// now apply mask to show it
pic.Mask = mask
Backdrop = pic
```

Notes: This method returns a copy of the picture mirrored.
Returns nil on low memory.

91.5.83 HMirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture horizontally (flip).
Example:

```
if pic.HMirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.HMirrorMBS // mirror a copy
end if
```

Notes: This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

91.5.84 InvertGrayMBS as picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the gray pixels inside the picture.
Example:

```
Var invertedpic as picture
Var pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS

Backdrop=invertedpic
```

Notes: Returns nil on any error.
See also:

- 91.5.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

91.5.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the gray pixels inside the picture.
Example:

```
Var invertedpic as picture
Var pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS(0,0,250,250)

Backdrop=invertedpic
```

Notes: Returns nil on any error.
The part of the picture which is not inverted will be all black.
See also:

- 91.5.84 InvertGrayMBS as picture 14142

91.5.86 InvertMBS as picture

MBS Picture Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the whole picture.
Example:

```
Var invertedpic as picture
Var pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS

Backdrop=invertedpic
```

Notes: Supports RGB and RGBA pictures, but does not look into a mask as that is not needed.
Alpha stays untouched as only RGB is inverted.
Returns nil on any error.
See also:

- 91.5.87 InvertMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture 14143

91.5.87 InvertMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the picture.
Example:

```
Var invertedpic as picture
Var pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS(0,0,250,250)

Backdrop=invertedpic
```

Notes: Returns nil on any error.
The part of the picture which is not inverted will be all black.

See also:

- 91.5.86 InvertMBS as picture 14143

91.5.88 isBlackMBS as boolean

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the picture has only black pixels.
Example:

```
Var p as Picture

// test white
p=New Picture(100,100,32)

MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test black
p.Graphics.ForeColor=&c000000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test red
p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)
```

See also:

- 91.5.89 isBlackMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean 14144

91.5.89 isBlackMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the picture has only black pixels in the given rectangle.
See also:

- 91.5.88 isBlackMBS as boolean 14144

91.5.90 isGrayMBS(tolerance as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a picture has only shades of gray in all pixels.
Example:

```
Var p as new Picture(100,100,32)

// 1. test white picture

if p.isGrayMBS then
MsgBox "white picture is gray."
end if

// 2. test gray picture
Var g as Graphics = p.Graphics
g.ForeColor = &c777777
g.FillRect 0, 0, 100, 100

if p.isGrayMBS then
MsgBox "gray picture is gray."
end if

// 3. test gray picture with tolerance
g.ForeColor = &c777778
g.FillRect 0, 0, 100, 100

if p.isGrayMBS(0) then
MsgBox "gray (not correct)"
else
MsgBox "not gray (correct)"
end if

if p.isGrayMBS(1) then
MsgBox "gray (correct)"
else
MsgBox "not gray (not correct)"
end if

// 4. test gray picture with over tolerance
g.ForeColor = &c777779
g.FillRect 0, 0, 100, 100

if p.isGrayMBS(0) then
MsgBox "gray (not correct)"
else
MsgBox "not gray (correct)"
end if

if p.isGrayMBS(1) then
MsgBox "gray (not correct)"
```

```
else
MsgBox "not gray (correct)"
end if
```

Notes: Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5. Pass 0 if you need exact gray scales.
Like the difference between &c000000 and &c000001 is not visible to most people, it can be ignored often.
See also:

- 91.5.91 isGrayMBS(tolerance as Integer, left as Integer,top as Integer,width as Integer,height as Integer) as boolean 14146

91.5.91 isGrayMBS(tolerance as Integer, left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a picture has only shades of gray in all pixels.
Notes: Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5. Pass 0 if you need exact gray scales.
Like the difference between &c000000 and &c000001 is not visible to most people, it can be ignored often.

91.5.95 MirrorMBS as picture

MBS Picture Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture vertically and horizontally.
Example:

```
canvas1.backdrop=pic.MirrorMBS
```

Notes: Same as rotation by 180 degree.
This method returns a copy of the picture mirrored.
Returns nil on low memory.

91.5.96 MirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture vertically and horizontally.
Example:

```
if pic.MirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.MirrorMBS // mirror a copy
end if
```

Notes: Same as rotation by 180 degree.
This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

91.5.98 ReplaceBlueChannelMBS(BlueChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the picture with the blue channel replaced with the blue channel of the given picture.
Notes: Returns nil on low memory.
Blog Entries

- MBS REALbasic plug-ins version 9.4

91.5.99 ReplaceColorMBS(SearchColor as color, ReplaceWithColor as color) as picture

MBS Picture Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the given color and replaces it with the second color.
Example:

```
Var p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 000,100,100,100

p.Graphics.ForeColor=&c00FF00
p.Graphics.FillRect 100,100,100,100

p.Graphics.ForeColor=&c0000FF
p.Graphics.FillRect 200,100,100,100

p.Graphics.ForeColor=&c777700
p.Graphics.FillRect 100,200,100,100

// shows a violet box on the left. Other pixels unchanged
backdrop=p.ReplaceColorMBS(&cFF0000,&cFF00FF)
```

Notes: All other pixels are copied to the new picture.
Returns nil on any error.

91.5.100 ReplaceGreenChannelMBS(GreenChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the picture with the green channel replaced with the green channel of the given picture.
Notes: Returns nil on low memory.
Blog Entries

- MBS REALbasic plug-ins version 9.4

91.5.101 ReplaceRedChannelMBS(RedChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the picture with the red channel replaced with the red channel of the given picture.
Notes: Returns nil on low memory.
Blog Entries

- MBS REALbasic plug-ins version 9.4

91.5.102 Rotate180MBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180¬∞ counter clockwise.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate180MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.
Blog Entries

- MBS REALbasic Plugins, version 11.1pr1

91.5.103 Rotate270MBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270¬∞ counter clockwise.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate270MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.
Blog Entries

91.5.104 Rotate90MBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90¬∞ counter clockwise.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate90MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

91.5.105 RotateImageAndMaskMBS(angle as Double, cut as boolean = False) as picture

MBS Picture Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by angle¬∞ counter clockwise.
Notes: Internally uses RotateMBS.
Works with masked and alpha channel pictures, but is faster with masked pictures.
Returns nil on any error.
if cut is true, the image is cut to the original size.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr5

91.5.106 RotateMBS(angle as Double, background as color = &cFFFFFFFF) as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by angle¬∞ counter clockwise.
Example:

```
Var p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.RotateMBS(42.3,rgb(255,255,255))
```

Notes: The area around the picture is filled using the backcolor.

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

Alpha channel support is half done. If it's working for you, please enjoy it. If not, please report.

91.5.107 RotateMemoryMBS(angle as Double) as Int64

MBS Picture Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the memory needed to roatet the picture with the given angle.
Notes: RotateMBS needs temporary buffers and fails if somewhere between memory is low.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr2

91.5.108 ScaleImageAndMaskMBS(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size including mask (in case one exists).
Notes: This is a self made algorithm which produces nice pictures on all platforms.
It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.
Returns nil on low memory or invalid width and height values.

AntiAlias is set to false if width<=self.width or height<=self.height.

If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good reponsibility of your application.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.
Blog Entries

- MBS Xojo Plugins, version 19.4pr7
- MBS Real Studio Plugins, version 12.0pr4

91.5.109 ScaleMBS(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size.
Example:

```
Var pic as new Picture(100,100,32)

pic.Graphics.ForeColor=&cFF0000
pic.Graphics.FillOval 0,0,100,100

Var scaledPic as picture = pic.ScaleMBS(200,200)

// show scaledPic
window1.backdrop = scaledPic
```

Notes: This is a self made algorithm which produces nice pictures on all platforms.
It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.
Returns nil on low memory or invalid width and height values.

AntiAlias is set to false if width<=self.width or height<=self.height.

If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good reponsibility of your application.

Scaling down does not use antialias. If you need full antialias, please use ScalingMBS function.

If input and output size is equal, you get your picture back unchanged.
This function does not handle masks. Please use pictures with mask and scale image and mask separately.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.

91.5.110 ScalingMBS(mode as Integer, width as Integer, height as Integer, yield as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the given size.
Example:

```
Var p as Picture

p=LogoMBS(1000)

p=p.ScalingMBS(2, 4000, 4000)
```

backdrop=p

Notes: On low memory this function can return nil or the image may look bad. (e.g. all black)
The memory used for the temporary storage is original height * new width * 12 bytes plus some extra.
For scaling with the same size as the picture already has, the scaling is still performed.

Returns nil ony error. (e.g. destwidth=0)

Modes:

1 triangle
2 box, nereast neighbor
3 lanczos 3
4 lanczos 8
5 mitchell
6 poly 3
7 cubic

This function does not handle mask. Please use pictures with mask and scale image and mask separately.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

91.5.111 ScrollHorizontalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Windows, Targets: All.

Function: Scrolls the image data horizontally.
Example:

```
Var p as Picture
```

```
p=LogoMBS(500) // any bitmap image

if p.ScrollHorizontalMBS(100,true,false) then
Title="ok"
end if

Backdrop=p
```

Notes: Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr1

91.5.112 ScrollMBS(deltaX as Integer, deltaY as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Windows, Targets: All.

Function: Combines calls to ScrollHorizontalMBS and ScrollVerticalMBS.
Notes: Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

91.5.113 ScrollVerticalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Windows, Targets: All.

Function: Scrolls the image data vertically.
Example:

```
Var p as Picture

p=LogoMBS(500) // any bitmap image

if p.ScrollVerticalMBS(100,true,false) then
Title="ok"
end if
```

Backdrop=p

Notes: Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

91.5.114 SetSteganographyMBS(flags as Integer, data as Memoryblock) as boolean

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds steganography to an existing picture.
Example:

```
Var p as Picture = LogoMBS(500)

// this example uses chr(0) as end marker
Var s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then

Var data as MemoryBlock = p.SteganographyMBS(1)
Var d as string = data.CString(0)

Backdrop = p
Break
end if
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).
Returns true on success or false on failure.
If memoryblock provided is nil, this function fails.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it's okay via checksum and than decrypt your data.
Please store image in a loss less format like PNG.
Function does not handle mask or alpha channel.

91.5.115 SetSteganographyPictureMBS(flags as Integer, data as Picture) as boolean

MBS Picture Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds steganography to an existing picture.
Example:

```
const AllChannels = &h111

Var p as new Picture(500, 500, 32)
Var l as Picture = LogoMBS(500)

Var w as new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
if p.SetSteganographyPictureMBS(AllChannels, l) then

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = p

// as we store in lowest bit, this picture will look strange
Var y as Picture = p.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
end if
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).
Returns true on success or false on failure.

Function does not handle mask or alpha channel.

- MBS Xojo / Real Studio Plugins, version 16.2pr2

91.5.116 SobelChannelsMBS(Red as boolean, Green as Boolean, Blue as boolean, direction1 as Integer = 1, direction2 as Integer = 3, swap as boolean = false) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sobel operator.
Example:

```
Var m as Picture = LogoMBS(500)

// only green
```

Backdrop = m.SobelChannelsMBS(false, true, false)

Notes: Useful for edge detection.
See also SobelMBS function which takes similar operators.
You can set Red/Blue/Green parameters to define which channel is modified and which channel is just copied.
Pictures look quite funny. The channel who got the edge detection has bigger areas black or white so other colors in other channels have much more visible effect.
Blog Entries

- MBS Plugins 11.1 Release notes

91.5.117 SobelMBS(direction1 as Integer = 1, direction2 as Integer = 3, swap as boolean = false, gray as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the sobel operator.
Example:

Var m as Picture = LogoMBS(500)

Backdrop = m.SobelMBS

Notes: Useful for edge detection.

direction1: The direction for first matrix.
direction2: The direction for first matrix.
swap: If false, you get white on black. If true you get black on white.
gray: whether to output gray image instead of RGB image.

Possible Matrix values:
-1: negative identity:
0: identity
1: west
2: east
3: north
4: south
5: south east
6: north west
7: north east
8: south west

You can add 10 to the 8 direction matrixes to get more weight.

91.5.118 SteganographyMBS(flags as Integer) as Memoryblock

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries steganography information inside the picture.
Example:

```
Var p as Picture = LogoMBS(500)

Var s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then

Var data as MemoryBlock = p.SteganographyMBS(1)
Var d as string = data.CString(0)

Backdrop = p
Break
end if
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).
Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1

91.5.119 SteganographyPictureMBS(flags as Integer) as Picture

MBS Picture Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries steganography information inside the picture.
Example:

```
const AllChannels = &h111

Var p as new Picture(500, 500, 32)

Var w as new window1
w.Title = "white"
w.Backdrop = p

Var l as Picture = LogoMBS(500)

w = new window1
w.Title = "Logo"
```

```
w.Backdrop = l

// adds picture. You will normally not see the modification
Var x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
Var y as Picture = x.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
```

Notes: Flags can be a combination of red (&h100), green (&h010) and blue (&h001).

- MBS Xojo / Real Studio Plugins, version 16.2pr2

91.5.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a transformation to the picture.
Example:

```
Var p as Picture = LogoMBS(500)

Var map(-1) as color

for r as Integer = 0 to 255
for g as Integer = 0 to 255
for b as Integer = 0 to 255
// index is r*65536+g*256+b

// we swap colors: r gives g, g gives b, b gives r
map.Append rgb(g,b,r)
next
next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

Notes: Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have 2^24 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 91.5.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture 14162
- 91.5.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture 14163
- 91.5.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14164

91.5.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a transformation to the picture.
Example:

```
Var p as Picture = LogoMBS(500)

Var map(-1) as Integer

for r as Integer = 0 to 255
for g as Integer = 0 to 255
for b as Integer = 0 to 255
// index is r*65536+g*256+b

// we swap colors: r gives g, g gives b, b gives r
map.Append g*65536+b*256+r
next
next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

Notes: Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have 2^24 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 91.5.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture 14161
- 91.5.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture 14163
- 91.5.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14164

91.5.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a transformation to the picture.
Example:

```
Var p as Picture = LogoMBS(500)

Var red as MemoryBlock = NewMemoryBlock(256)
Var green as MemoryBlock = NewMemoryBlock(256)
Var blue as MemoryBlock = NewMemoryBlock(256)

for i as Integer=0 to 255
red.Byte(i)=i/2
green.Byte(i)=i/2
blue.Byte(i)=i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

Notes: Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the memoryblocks to get the new color value.

The memoryblocks must have a size of 256 Bytes.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 91.5.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture 14161
- 91.5.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture 14162
- 91.5.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14164

91.5.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a transformation to the picture.
Example:

```
Var p as Picture = LogoMBS(500)

Var red(-1) as Integer
Var green(-1) as Integer
Var blue(-1) as Integer

for i as Integer=0 to 255
red.Append i/2
green.Append i/2
blue.Append i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

Notes: Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the arrays to get the new color value.

The arrays should have 256 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

91.5.124 ThresholdMBS(Threshold as integer) as picture

MBS Picture Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates black and white picture.
Notes: With threshold value you define threshold in range from 0 to 255.
Normally you use 127 for turning picture to black & white.

91.5.125 TransformColorsMBS(red as memoryblock, blue as memoryblock, green as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a transform table to the pixels.
Notes: Red, blue and green are 256 byte big memoryblocks with one byte for each value.

In RB the function does this:
color=rgb(red.byte [color.red] , green.byte [color.green] , blue.byte [color.blue])

If you pass a destination picture and it has right size, the plugin will recycle that instead of creating a new one to increase performance.

- MBS Real Studio Plugins, version 13.0pr1

91.5.126 TrimMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trims the picture to the given rectangle.
Example:

```
Var p as Picture = LogoMBS(500)

Backdrop = p.TrimMBS(100,100,300,300)
```

Notes: This method does not handle the mask.
So p.Trim(0,0,p.width,p.height) will give you a copy of the image pixels without mask.
left and top are zero based.

Use TrimWithMaskMBS if you need the mask to be trimmed.
Returns nil on low memory or bad parameters.

91.5.127 TrimWithMaskMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trims the picture to the given rectangle.
Example:

```
Var p as picture
Var someimage as Picture = LogoMBS(100)

p=someimage.TrimWithMaskMBS(100,200,300,400)
```

Notes: left and top are zero based.
Returns nil on low memory or bad parameters.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr2

91.5.128 VMirrorMBS as picture

MBS Picture Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture vertically.
Example:

```
canvas1.backdrop=pic.VMirrorMBS
```

Notes: This method returns a copy of the picture mirrored.
Returns nil on low memory.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr10

91.5.129 VMirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the picture vertically.
Example:

```
if pic.VMirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.VMirrorMBS // mirror a copy
end if
```

Notes: This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

- MBS Real Studio Plugins, version 11.4pr1

91.5.130 Properties

91.5.131 EmbeddedMaskMBS(swap as boolean) as picture

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Targets: All.

Function: Read or write a picture mask.
Example:

```
// Export a mask picture:

Var f as FolderItem
Var t as TiffPictureMBS
Var m,p as Picture
Var q as QTGraphicsExporterMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(100,100,100)
p.Graphics.fillrect 0,0,100,100
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.fillrect 20,20,80,30

m=New Picture(100,100,32)
m.Graphics.ForeColor=rgb(255,255,255)
m.Graphics.FillRect 0,0,30,100
m.Graphics.ForeColor=rgb(200,200,200)
m.Graphics.FillRect 30,0,30,100
m.Graphics.ForeColor=rgb(100,100,100)
m.Graphics.FillRect 60,0,30,100

p.EmbeddedMaskMBS(true)=m
p.Mask.Graphics.DrawPicture m,0,0 // just for showing as a backdrop

q=new QTGraphicsExporterMBS

q.OpenExporter("TIFF")
q.Depth=32
q.InputPicture=p
q.CompressionQuality=1024
q.OutputFile=SpecialFolder.Desktop.Child("Hello.tif")
title=str(q.Export)

Backdrop=p
```

Notes: Only useful on 32bit images.
Xojo takes white for transparent, so you may need to swap this to black using the swap parameter.

Windows support removed somewhere in version 10.4 with internal changes. If you need this, please tell us. (Read and Write computed property)

91.6 class PictureConvolutionMBS

91.6.1 class PictureConvolutionMBS

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a Picture Convolution.
Example:

```
// blur

Var l as Picture = LogoMBS(500)
Var p as new PictureConvolutionMBS

p.hor(0) = 0.2
p.hor(1) = 0.2
p.hor(2) = 0.2
p.hor(3) = 0.2
p.hor(4) = 0.2

p.ver(0) = 0.2
p.ver(1) = 0.2
p.ver(2) = 0.2
p.ver(3) = 0.2
p.ver(4) = 0.2

p.ValueCount=5

p.SourcePicture=l

Var t as Integer=ticks
call p.run(7)
t=ticks-t

Title=str(t)

Backdrop=p.DestinationPicture
```

- MBS Real Studio Plugins, version 13.0pr1

91.6.2 Methods

91.6.3 close

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

91.6.4 Run(channels as Integer) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

Channels is a combination of 1, 2 and 4. 1 for Red, 2 for Green and 4 for Blue.
The border (one pixel thick) is not filled in the destination picture.

This method does the following for each pixel:

```
// first horizontal fill the temporary picture
r=0
g=0
b=0

if RedChannel then
r = r + sourcepicture.pixel(x-1,y).red * Hor(0)
r = r + sourcepicture.pixel(x ,y).red * Hor(1)
r = r + sourcepicture.pixel(x+1,y).red * Hor(2)
else
r = sourcepicture.pixel(x,y)
end if

if GreenChannel then
g = g + sourcepicture.pixel(x-1,y).green * Hor(0)
g = g + sourcepicture.pixel(x ,y).green * Hor(1)
g = g + sourcepicture.pixel(x+1,y).green * Hor(2)
else
g = sourcepicture.pixel(x,y)
end if
```

```
if BlueChannel then
b = b + sourcepicture.pixel(x-1,y).blue * Hor(0)
b = b + sourcepicture.pixel(x ,y).blue * Hor(1)
b = b + sourcepicture.pixel(x+1,y).blue * Hor(2)
else
b = sourcepicture.pixel(x,y)
end if

temppicture.pixel(x,y)=rgb(r,g,b)

// now back from temporary picture to the destination picture

r=0
g=0
b=0

if RedChannel then
r = r + temppicture.pixel(x,y-1).red * Ver(0)
r = r + temppicture.pixel(x,y ).red * Ver(1)
r = r + temppicture.pixel(x,y+1).red * Ver(2)
else
r = temppicture.pixel(x,y)
end if

if GreenChannel then
g = g + temppicture.pixel(x,y-1).green * Ver(0)
g = g + temppicture.pixel(x,y ).green * Ver(1)
g = g + temppicture.pixel(x,y+1).green * Ver(2)
else
g = temppicture.pixel(x,y)
end if

if BlueChannel then
b = b + temppicture.pixel(x,y-1).blue * Ver(0)
b = b + temppicture.pixel(x,y ).blue * Ver(1)
b = b + temppicture.pixel(x,y+1).blue * Ver(2)
else
b = temppicture.pixel(x,y)
end if

destinationpicture.pixel(x,y)=rgb(r,g,b)
```

91.6.5 Properties

91.6.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination picture.
Notes: If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

91.6.7 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source picture.
Notes: Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

91.6.8 ValueCount as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of values set in the Hor and Ver array.
Example:

```
Var p as new PictureConvolutionMBS

p.Hor(0)=0.25
p.Hor(1)=0.5
p.Hor(2)=0.25
p.ValueCount=3
```

Notes: The index in the arrays goes from 0 to ValueCount-1.
Default is 3.
Use values like 1, 3, 5, 7, 9, 11, 13, 15, 17 or 19.
(Read and Write property)

91.6.9 Hor(index as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal factors.
Notes: Index from 0 to 19.
(Read and Write computed property)

91.6.10 Ver(index as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical factors.
Notes: Index from 0 to 19.
(Read and Write computed property)

91.7 class PictureEditorMBS

91.7.1 class PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: class to edit picture data as a memoryblock in place.
Notes: This is the same code the plugin uses to edit pictures.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr12
- MBS REALbasic plug-in 9.6

91.7.2 Methods

91.7.3 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the original image data of the given row.
Notes: Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.

91.7.4 Properties

91.7.5 AllData as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the original image data.
Notes: Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.

Returns nil for console pictures.
(Read only property)

91.7.6 AllDataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the data for the current picture into a new memoryblock.
Notes: Changes to this memoryblock will not be visible in the original picture.
(Read only property)

91.7.7 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the blue channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.7.8 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes per pixel.
Notes: Most times 4, but for some platforms 3.
(Read only property)

91.7.9 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memory address where the data is stored.
Notes: Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

91.7.10 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the green channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.7.11 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether an alpha channel exists.
Notes: (Read only property)

91.7.12 Height as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image in pixels.
Notes: (Read only property)

91.7.13 Picture as Picture

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original picture reference.
Notes: (Read only property)

91.7.14 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the red channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.7.15 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of an image row in bytes.
Notes: RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

91.7.16 Width as Integer

MBS Picture Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image in pixels.
Notes: (Read only property)

91.8 class PictureLut3DMBS

91.8.1 class PictureLut3DMBS

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for doing a LUT 3D on a picture.

91.8.2 Methods

91.8.3 close

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

91.8.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

91.8.5 Properties

91.8.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination picture.
Notes: If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

91.8.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal x coordinate to use.
Notes: If 0 the width of the source picture defines this value.
(Read and Write property)

91.8.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal y coordinate to use.
Notes: If 0 the height of the source picture defines this value.
(Read and Write property)

91.8.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal x coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.8.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal y coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.8.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source picture.
Notes: Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

91.8.12 Table(r as UInt32, g as UInt32, b as UInt32, x as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The lut table.
Notes: Indexes r, g and b go from 0 to 16 while x goes from 0 to 2.
(Read and Write computed property)

91.9 class PictureMatrix3DMBS

91.9.1 class PictureMatrix3DMBS

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for doing a 3D picture matrix.

91.9.2 Methods

91.9.3 close

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

91.9.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

91.9.5 Properties

91.9.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination picture.
Notes: If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

91.9.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal x coordinate to use.
Notes: If 0 the width of the source picture defines this value.
(Read and Write property)

91.9.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal y coordinate to use.
Notes: If 0 the height of the source picture defines this value.
(Read and Write property)

91.9.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal x coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.9.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal y coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.9.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source picture.
Notes: Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

91.9.12 Matrix(x as UInt32, y as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matrix to use.
Notes: The indexes x and y are 0 based.
(Read and Write computed property)

91.10 class PictureMatrixMBS

91.10.1 class PictureMatrixMBS

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for matrix operations on a picture.
Notes: Can be used e.g. to sharpen a picture.
Blog Entries

- Better OutOfBoundsException

91.10.2 Methods

91.10.3 close

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

91.10.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the process.
Notes: Returns true on success.

91.10.5 RunRGB(red as boolean, green as boolean, blue as boolean) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the process for the given channels.
Notes: Returns true on success.
A few combinations are optimized for faster processing.
Still more optimization is possible.

91.10.6 Properties

91.10.7 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination picture.
Notes: If this property is nil, a new picture will be placed here inside the Run method.
If you place a picture here, please use one created with New Picture with a 32bit depth.
(Read and Write property)

91.10.8 Displacement as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The displacement value.
Notes: See the example project for details.
(Read and Write property)

91.10.9 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum x coordinate to use.
Notes: Just for limiting the working area to a part of the picture.
(Read and Write property)

91.10.10 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum y coordinate to use.
Notes: Just for limiting the working area to a part of the picture.
(Read and Write property)

91.10.11 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum x coordinate to use.
Notes: Just for limiting the working area to a part of the picture.

(Read and Write property)

91.10.12 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum y coordinate to use.
Notes: Just for limiting the working area to a part of the picture.
(Read and Write property)

91.10.13 ScaleFactor as Double

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A scaling factor.
Notes: See the example project for details.
(Read and Write property)

91.10.14 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source picture.
Notes: The run method will fail if this picture is not a 32bit deep picture created with New Picture.
(Read and Write property)

91.10.15 Matrix(x as UInt32, y as UInt32) as Integer

MBS Picture Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matrix used.
Notes: X and Y are in range from 0 to 4.
Values >255 are used for empty cells.
(Read and Write computed property)

91.11 class PictureMinMaxMBS

91.11.1 class PictureMinMaxMBS

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to find the minimum/maximum pixel values.
Example:

```
Var pic as Picture = LogoMBS(500)
Var m as new PictureMinMaxMBS

if m.FindAll(pic) then
break // check values in debugger
end if
```

Notes: This class offers several Find functions.
Please choose carefully which one you use as it's faster to use e.g. FindRed instead of FindMinRed and FindMaxRed together.

91.11.2 Methods

91.11.3 FindAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum and maximum pixels.
Notes: Sets all fields.

91.11.4 FindBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum and maximum blue pixels.
Notes: Sets BlueMaxX, BlueMax, BlueMinX, BlueMinY, BlueMin and BlueMaxY.

91.11.5 FindGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum and maximum green pixels.
Notes: Sets GreenMaxX, GreenMax, GreenMinX, GreenMinY, GreenMin and GreenMaxY.

91.11.6 FindMaxAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the maximum pixels.
Notes: Sets RedMaxX, RedMax, RedMaxY, GreenMaxX, GreenMax, GreenMaxY, BlueMaxX, BlueMax and BlueMaxY.

91.11.7 FindMaxBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the maximum blue pixel.
Notes: Sets BlueMaxX, BlueMax and BlueMaxY.

91.11.8 FindMaxGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the maximum green pixel.
Notes: Sets GreenMaxX, GreenMax and GreenMaxY.

91.11.9 FindMaxRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the maximum red pixel.
Notes: Sets RedMaxX, RedMax and RedMaxY.

91.11.10 FindMaxSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the maximum sum pixel.
Notes: The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).
Sets SumMaxX, SumMax and SumMaxY.

91.11.11 FindMinAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum pixels.
Notes: Sets RedMinX, RedMin, RedMinY, GreenMinX, GreenMin, GreenMinY, BlueMinX, BlueMin and BlueMinY.

91.11.12 FindMinBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum blue pixel.
Notes: Sets BlueMinX, BlueMin and BlueMinY.

91.11.13 FindMinGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum green pixel.
Notes: Sets GreenMinX, GreenMin and GreenMinY.

91.11.14 FindMinRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum red pixel.
Notes: Sets RedMinX, RedMin and RedMinY.

91.11.15 FindMinSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum sum pixel.
Notes: The sum of a pixel is the sum of all color channels of this pixel (red+green+blue).
Sets SumMinX, SumMin and SumMinY.

91.11.16 FindRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum and maximum red pixels.
Notes: Sets RedMaxX, RedMax, RedMinX, RedMinY, RedMin and RedMaxY.

91.11.17 FindSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for the minimum and maximum sum pixels.
Notes: The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).
Sets SumMaxX, SumMax, SumMinX, SumMinY, SumMin and SumMaxY.

91.11.18 Properties

91.11.19 BlueMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum blue color value.
Notes: Range: 0 to 255.
(Read and Write property)

91.11.20 BlueMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum blue value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.21 BlueMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum blue value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.22 BlueMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum blue color value.
Notes: Range: 0 to 255.
(Read and Write property)

91.11.23 BlueMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum blue value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.24 BlueMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum blue value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.25 GreenMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum green color value.
Notes: Range: 0 to 255
(Read and Write property)

91.11.26 GreenMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum green value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.27 GreenMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum green value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.28 GreenMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum green color value.
Notes: Range: 0 to 255
(Read and Write property)

91.11.29 GreenMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum green value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.30 GreenMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum green value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.31 RedMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum red color value.
Notes: Range: 0 to 255
(Read and Write property)

91.11.32 RedMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum red value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.33 RedMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum red value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.34 RedMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum red color value.
Notes: Range: 0 to 255
(Read and Write property)

91.11.35 RedMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum red value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.36 RedMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum red value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.37 SumMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum sum color value.
Notes: sum=red+blue+green
Range: 0 to 765
(Read and Write property)

91.11.38 SumMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum sum value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.39 SumMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the maximum sum value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.11.40 SumMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum sum color value.
Notes: sum=red+blue+green
Range: 0 to 765
(Read and Write property)

91.11.41 SumMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum sum value.
Notes: Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

91.11.42 SumMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the pixel with the minimum sum value.
Notes: Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

91.12 class PictureReaderMBS

91.12.1 class PictureReaderMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to read picture data as a memoryblock.
Example:

```
Var pic as Picture = LogoMBS(500)
Var p as PictureReaderMBS
Var m as MemoryBlock
Var r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

Var sum as Double

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

sum = sum + m.UInt8Value(r)
sum = sum + m.UInt8Value(g)
sum = sum + m.UInt8Value(b)

r=r+bpp
g=g+bpp
b=b+bpp
next

next
```

```
// show the sum of all pixels:
MsgBox "Sum with plugin is: "+str(sum)

// now try same in RB code:

Var surface as RGBSurface = pic.RGBSurface
Var c as color

sum = 0.0

for y=0 to h1
for x=0 to w1
c = surface.Pixel(x,y)

sum = sum + c.red
sum = sum + c.Green
sum = sum + c.Blue

next

next

surface = nil

MsgBox "Sum with RB Code is: "+str(sum)
quit
```

Notes: This is the same code the plugin uses to read pictures.

91.12.2 Methods

91.12.3 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the original image data for this row.
Notes: Changes here will be visible in the picture. (except for platforms where a copy is made of the data)
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
See also:

- 91.12.7 Data as Memoryblock 14199

91.12.4 Properties

91.12.5 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the blue channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.12.6 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes per pixel.
Notes: Most times 4, but for some platforms 3.
(Read only property)

91.12.7 Data as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the original image data.
Notes: Changes here will be visible in the picture. (except for platforms where a copy is made of the data)
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
Returns nil for console pictures.
(Read only property)
See also:

• 91.12.3 Data(Row as Integer) as MemoryBlock 14199

91.12.8 DataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the data for the current picture into a new memoryblock.
Notes: (Read only property)

91.12.9 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memory address where the data is stored.
Notes: Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

91.12.10 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the green channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.12.11 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether an alpha channel exists.
Notes: (Read only property)

91.12.12 Height as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image in pixels.
Notes: (Read only property)

91.12.13 Picture as Picture

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original picture reference.
Notes: (Read only property)

91.12.14 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The platform dependend offset of the red channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.12.15 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of an image row in bytes.
Notes: RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

91.12.16 Width as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image in pixels.
Notes: (Read only property)

91.13 class PictureSepiaMBS

91.13.1 class PictureSepiaMBS

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for doing a sepia effect.

91.13.2 Methods

91.13.3 close

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

91.13.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

For each pixel this method does:

sourcepixel=sourcepicture.pixel(x,y)
r=sourcepixel.red
g=sourcepixel.green
b=sourcepixel.blue

sum = r * RedFactor + g * GreenFactor + b * BlueFactor

r = sum + SepiaColor.red
g = sum + SepiaColor.green
b = sum + SepiaColor.blue

destinationpicture.pixel(x,y) = rgb(r,g,b)

91.13.5 Properties

91.13.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination picture.
Notes: If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

91.13.7 FactorBlue as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue factor.
Notes: (Read and Write property)

91.13.8 FactorGreen as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green factor.
Notes: (Read and Write property)

91.13.9 FactorRed as Double

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red factor.
Notes: (Read and Write property)

91.13.10 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal x coordinate to use.
Notes: If 0 the width of the source picture defines this value.
(Read and Write property)

91.13.11 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximal y coordinate to use.
Notes: If 0 the height of the source picture defines this value.
(Read and Write property)

91.13.12 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal x coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.13.13 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimal y coordinate to use.
Notes: Default is 0.
(Read and Write property)

91.13.14 SepiaBlue as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sepia color to use.
Notes: Default is 0.
(Read and Write property)

91.13.15 SepiaGreen as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sepia color to use.
Notes: Default is 0.
(Read and Write property)

91.13.16 SepiaRed as Integer

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sepia color to use.
Notes: Default is 0.
(Read and Write property)

91.13.17 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source picture.
Notes: Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

91.14 class PictureWriterMBS

91.14.1 class PictureWriterMBS

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to build a picture by filling a memoryblock.
Example:

```
Var p as PictureWriterMBS
Var m as MemoryBlock
Var r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture writer
p=NewPictureWriterMBS(512,512)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

m.UInt8Value(r)=x\2
m.UInt8Value(g)=y\2
m.UInt8Value(b)=x*y\2

r=r+bpp
g=g+bpp
b=b+bpp
next

next

// Use Render to make a picture object
Var pic as Picture = p.Render
```

Backdrop = pic

Notes: This is the same code the plugin uses to create pictures.

91.14.2 Methods

91.14.3 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The memoryblock with the original image data for the given row.
Notes: Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
See also:

- 91.14.8 Data as Memoryblock 14208

91.14.4 Render as picture

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Creates and returns a picture for this writer.
Notes: The writer is destroyed with this call, so do not use it any more.
(one picture can be created with one writer currently)

91.14.5 Properties

91.14.6 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The platform dependend offset of the blue channel in the RGB data.
Notes: A value between 0 and 3.

(Read only property)

91.14.7 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Number of bytes per pixel.
Notes: Most times 4, but for some platforms 3.
(Read only property)

91.14.8 Data as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The memoryblock with the original image data.
Notes: Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
Returns nil for console pictures.
(Read only property)
See also:

- 91.14.3 Data(Row as Integer) as MemoryBlock 14207

91.14.9 DataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Copies the data for the current picture into a new memoryblock.
Notes: Changes to this memoryblock will not be visible in the rendered picture.
(Read only property)

91.14.10 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The memory address where the data is stored.
Notes: Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

91.14.11 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The platform dependend offset of the green channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.14.12 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether an alpha channel exists.
Example:

```
Var p as PictureWriterMBS = NewPictureWriterMBS(200, 200, true)

MsgBox "Alpha: "+str(p.HasAlphaChannel)

// get pointer to bytes
Var m as MemoryBlock = p.Data

// fill all with 127
m.FillBytesMBS 0, p.RowBytes * p.Height, 127

Var x as Picture = p.Render
Break
```

Notes: (Read only property)

91.14.13 Height as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The height of the image in pixels.
Notes: (Read only property)

91.14.14 Picture as Picture

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The buffer picture reference.
Notes: If the writer uses a RB picture as buffer it is available here.

(depends on the actual implementation for a given platform whether this property is used)
(Read only property)

91.14.15 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The platform dependend offset of the red channel in the RGB data.
Notes: A value between 0 and 3.
(Read only property)

91.14.16 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of an image row in bytes.
Notes: RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

91.14.17 Width as Integer

MBS Picture Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the image in pixels.
Notes: (Read only property)

Chapter 92

GraphicsMagick

92.1 class GM16BlobMBS

92.1.1 class GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for binary large objects.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GM16ImageMBS
Var blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

Notes: Blob provides the means to contain any opaque data. It is named after the term "Binary Large OBject" commonly used to describe unstructured data (such as encoded images) which is stored in a database. While the function of Blob is very simple (store a pointer and and size associated with allocated data), the Blob class provides some very useful capabilities. In particular, it is fully reference counted just like the Image class.

The Blob class supports value assignment while preserving any outstanding earlier versions of the object. Since assignment is via a pointer internally, Blob is efficient enough to be stored directly in an STL container or any other data structure which requires assignment. In particular, by storing a Blob in an associative container (such as STL's 'map') it is possible to create simple indexed in-memory "database" of Blobs.

Magick++ currently uses Blob to contain encoded images (e.g. JPEG) as well as ICC and IPTC profiles. Since Blob is a general-purpose class, it may be used for other purposes as well.

92.1.2 Methods

92.1.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default constructor creating an empty blob object.
See also:

- 92.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14212
- 92.1.5 Constructor(data as string) 14212
- 92.1.6 Constructor(other as GM16BlobMBS) 14213

92.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct object with data, making a copy of the supplied data.
See also:

- 92.1.3 Constructor 14212
- 92.1.5 Constructor(data as string) 14212
- 92.1.6 Constructor(other as GM16BlobMBS) 14213

92.1.5 Constructor(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct object with data, making a copy of the supplied data.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
```

```
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GM16ImageMBS
Var blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 92.1.3 Constructor 14212
- 92.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14212
- 92.1.6 Constructor(other as GM16BlobMBS) 14213

92.1.6 Constructor(other as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy constructor (reference counted).
See also:

- 92.1.3 Constructor 14212
- 92.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14212
- 92.1.5 Constructor(data as string) 14212

92.1.7 CopyMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the data as a memoryblock.
Notes: Returns nil on any error like low memory.

92.1.8 CopyString as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the data as a string.

92.1.9 Data as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data from this blob.
Example:

```
Var b as new GM16BlobMBS("Hello")

Var m as memoryblock = b.Data
MsgBox m.StringValue(0,5) // shows "Hello"
```

Notes: This is a memoryblock referencing the data of the blob. It has no size set. The memoryblock can only be used as long as the blob object exists. if you use it after you destroyed the blob object, you can crash you application.

92.1.10 Update(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the content of this blob with a copy of the bytes in the memoryblock.
See also:

- 92.1.11 Update(data as string) 14214

92.1.11 Update(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the content of this blob with a copy of the bytes in the string.
Notes: Offset is zero based.
See also:

- 92.1.10 Update(data as memoryblock, offset as Integer, size as Integer) 14214

92.1.12 Properties

92.1.13 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the blob object.
Notes: (Read and Write property)

92.1.14 length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain data length in bytes.
Example:

```
Var b as new GM16BlobMBS("Hello")

MsgBox str(B.length) // shows 5
```

Notes: (Read only property)

92.1.15 base64 as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blob content as a string in Base64 format.
Example:

```
Var b as new GM16BlobMBS("Hello")

MsgBox b.base64 // shows "SGVsbG8="
```

Notes: (Read and Write computed property)

92.2 class GM16CoderInfoMBS

92.2.1 class GM16CoderInfoMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used to get information about all registered coders.
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name
next

MsgBox Join(names,EndOfLine)
```

Notes: The CoderInfo class provides the means to provide information regarding GraphicsMagick support for an image format (designated by a magick string). It may be used to provide support for a specific named format (provided as an argument to the constructor), or as an element of a container when format support is queried using the coderInfoList() templated function.

92.2.2 Methods

92.2.3 CoderInfoList as GM16CoderInfoMBS()

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a list of all coders.
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
```

92.2.4 Properties

92.2.5 description as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format description (e.g. "CompuServe graphics interchange format").
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
```

```
Var names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+coder.description
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.2.6 isMultiFrame as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format supports multiple frames.
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isMultiFrame)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.2.7 isReadable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format is readable.
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isReadable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.2.8 isWritable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format is writeable.
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isWritable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.2.9 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of loadable module.
Notes: (Read and Write property)

92.2.10 name as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format name (e.g. "GIF").
Example:

```
Var coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
Var coder as GM16CoderInfoMBS = coders(0) // pick first one

MsgBox coder.name
```

Notes: (Read and Write property)

92.2.11 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Usage note for user.
Notes: (Read and Write property)

92.2.12 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Support library version.
Notes: (Read and Write property)

92.3 class GM16ColorGrayMBS

92.3.1 class GM16ColorGrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color subclass for a grayscale color.
Example:

```
Var g as new GM16ColorGrayMBS(0.5)
MsgBox str(g.shade)
```

Notes: Representation of grayscale RGB color.
Equal parts red, green, and blue specified as a ratio (0 to 1).
Subclass of the GM16ColorMBS class.

92.3.2 Methods

92.3.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorGrayMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.3.4 Constructor(other as GM16ColorMBS) 14220
- 92.3.5 Constructor(shade as Double) 14221

92.3.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GM16ColorGrayMBS(0.5)
Var o as new GM16ColorGrayMBS(g)
MsgBox str(o.shade)
```

See also:

- 92.3.3 Constructor 14220
- 92.3.5 Constructor(shade as Double) 14221

92.3.5 Constructor(shade as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given value.
Example:

```
Var g as new GM16ColorGrayMBS(1.0)
MsgBox str(g.colorValue)
```

Notes: Range is 0.0 to 1.0.
See also:

- 92.3.3 Constructor 14220
- 92.3.4 Constructor(other as GM16ColorMBS) 14220

92.3.6 Properties

92.3.7 shade as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray value for this color.
Example:

```
Var g as new GM16ColorGrayMBS(1.0)
MsgBox str(g.shade)
```

Notes: Range is 0.0 to 1.0
(Read and Write property)

92.4 class GM16ColorHSLMBS

92.4.1 class GM16ColorHSLMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a HSL color.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GM16ColorMBS class.

92.4.2 Methods

92.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorHSLMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14222
- 92.4.5 Constructor(other as GM16ColorMBS) 14223

92.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)+" "+str(g.saturation)+" "+str(g.luminosity)
```

See also:

- 92.4.3 Constructor 14222

• 92.4.5 Constructor(other as GM16ColorMBS) 14223

92.4.5 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
Var o as new GM16ColorHSLMBS(g)

MsgBox str(o.colorValue)
```

See also:

• 92.4.3 Constructor 14222

• 92.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14222

92.4.6 Properties

92.4.7 hue as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hue value.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)
```

Notes: (Read and Write property)

92.4.8 luminosity as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The luminosity value.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.luminosity)
```

Notes: (Read and Write property)

92.4.9 saturation as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The saturation value.
Example:

```
Var g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.saturation)
```

Notes: (Read and Write property)

92.5 class GM16ColorMBS

92.5.1 class GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color is the base color class.
Example:

```
Var c as new GM16ColorMBS(127,255,127) // light green
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: It is a simple container class for the pixel red, green, blue, and alpha values scaled to fit GraphicsMagick's Quantum size. Normally users will instantiate a class derived from Color which supports the color model that fits the needs of the application. The Color class may be constructed directly from an X11-style color string. As a perhaps odd design decision, the value transparent black is considered to represent an unset value (invalid color) in many cases. This choice was made since it avoided using more memory. The default Color constructor constructs an invalid color (i.e. transparent black) and may be used as a parameter in order to remove a color setting.

- MBS Xojo / Real Studio Plugins, version 16.0pr7

92.5.2 Methods

92.5.3 Black as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a black color.
Example:

```
Var black as GM16ColorMBS = GM16ColorMBS.Black

MsgBox str(black.colorValue)
```

92.5.4 Color(ColorValue as Color) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color from Xojo to GM16ColorMBS.
Example:

```
Var c as GM16ColorMBS = GM16ColorMBS.Color(&cFF0000)
```

MsgBox str(c.colorValue)

See also:

- 92.5.5 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14226
- 92.5.6 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14226
- 92.5.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14227

92.5.5 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color from Xojo to GM16ColorMBS with separate alpha value.
Example:

```
Var c as GM16ColorMBS = GM16ColorMBS.Color(&cFF0000, 128)

MsgBox str(c.colorValue)+" "+str(c.alpha)
```

Notes: Alpha in range from 0 to 255.
See also:

- 92.5.4 Color(ColorValue as Color) as GM16ColorMBS 14225
- 92.5.6 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14226
- 92.5.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14227

92.5.6 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates color with RGB values.
Example:

```
Var c as GM16ColorMBS = GM16ColorMBS.Color(127, 191, 255)

MsgBox str(c.colorValue)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 92.5.4 Color(ColorValue as Color) as GM16ColorMBS 14225
- 92.5.5 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14226
- 92.5.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14227

92.5.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates color with RGB values.
Example:

```
Var c as GM16ColorMBS = GM16ColorMBS.Color(127, 191, 255, 127)

MsgBox str(c.colorValue)+" "+str(c.alphaQuantum)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 92.5.4 Color(ColorValue as Color) as GM16ColorMBS 14225
- 92.5.5 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14226
- 92.5.6 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14226

92.5.8 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.5.9 Constructor(ColorName as string) 14228
- 92.5.10 Constructor(ColorValue as color) 14228
- 92.5.11 Constructor(ColorValue as color, alpha as Integer) 14229
- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.9 Constructor(ColorName as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color based on the X11 color name.
Example:

```
Var c as new GM16ColorMBS("red")

MsgBox str(c.redQuantum)+"-"+str(c.greenQuantum)+"-"+str(c.blueQuantum) // shows "255-0-0"

Var d as new GM16ColorMBS("#77FF00")

MsgBox str(d.redQuantum)+"-"+str(d.greenQuantum)+"-"+str(d.blueQuantum) // shows "119-255-0"
```

Notes: An alternate way to construct the class is via an X11-compatible color specification string (e.g. Color("red") or Color ("#FF0000")). Since the class may be constructed from a string, convenient strings may be passed in place of an explicit Color object in methods which accept a reference to Color. Color may also be converted to a std::string for convenience in user interfaces, and for saving settings to a text file.

- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.10 Constructor(ColorValue as color)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GM16ColorMBS(&cFF0000)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.5.8 Constructor 14227

- 92.5.11 Constructor(ColorValue as color, alpha as Integer) 14229
- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.11 Constructor(ColorValue as color, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GM16ColorMBS(&cFF0102, 127)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.12 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var r as new GM16ColorMBS(1,2,3)
Var c as new GM16ColorMBS(r)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.5.10 Constructor(ColorValue as color) 14228
- 92.5.11 Constructor(ColorValue as color, alpha as Integer) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.13 Constructor(red as Integer, green as Integer, blue as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GM16ColorMBS(1,2,3)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.

- 92.5.11 Constructor(ColorValue as color, alpha as Integer) 14229
- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14230

92.5.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GM16ColorMBS(1,2,3,4)

// display color, alpha is double...
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 92.5.8 Constructor 14227
- 92.5.9 Constructor(ColorName as string) 14228
- 92.5.10 Constructor(ColorValue as color) 14228
- 92.5.11 Constructor(ColorValue as color, alpha as Integer) 14229
- 92.5.12 Constructor(other as GM16ColorMBS) 14229
- 92.5.13 Constructor(red as Integer, green as Integer, blue as Integer) 14230

92.5.15 QuantumByteSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum byte size.
Example:

```
MsgBox str(GM16ColorMBS.QuantumByteSize)
```

Notes: As the plugin uses 8 bit this value should be 1.

92.5.16 scaleDoubleToQuantum(value as Double) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a double value to a value in the range of a quantum.
Example:

```
Var d as Double = 1.0
Var v as Integer = GM16ColorMBS.scaleDoubleToQuantum(d)
MsgBox str(v)
```

Notes: As the plugin uses 8 bit quantums, this is basicly a multiplication by 255.0

92.5.17 scaleQuantumToDouble(value as Integer) as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a quantum to a double value.
Example:

```
Var v as Integer = 255
Var d as Double = GM16ColorMBS.scaleQuantumToDouble(v)
```

```
MsgBox str(d)
```

Notes: The plugin uses 8bit quantums, so this is basicly the division of value by 255.0

92.5.18 White as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a white color.
Example:

```
Var White as GM16ColorMBS = GM16ColorMBS.White

MsgBox str(White.colorValue)
```

92.5.19 Properties

92.5.20 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha value of this color.
Example:

```
Var c as new GM16ColorMBS(1,2,3,1.0)
MsgBox str(c.alpha)
```

Notes: Range is 0.0 to 1.0. If you pass values higher, they are divided by 255.
(Read and Write property)

92.5.21 alphaQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha color value.
Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.5.22 blueQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color value.
Example:

```
Var c as new GM16ColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 3
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.5.23 colorValue as color

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo color for the GraphicsMagick color.
Example:

```
Var c as new GM16ColorMBS(&cFF0102)
MsgBox str(c.ColorValue)
```

Notes: (Read and Write property)

92.5.24 greenQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color value.
Example:

```
Var r as new GM16ColorMBS(1,2,3)
MsgBox str(r.greenQuantum) // shows 2
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.5.25 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal color reference.
Example:

```
Var r as new GM16ColorMBS(1,2,3)
MsgBox str(r.handle)
```

Notes: (Read and Write property)

92.5.26 intensity as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intensity of this color.
Example:

```
Var c as new GM16ColorMBS(1,2,3)
MsgBox str(c.intensity)
```

Notes: (Read only property)

92.5.27 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain valid color?
Example:

```
Var c as new GM16ColorMBS(1,2,3)
MsgBox str(c.isValid)
```

Notes: (Read and Write property)

92.5.28 redQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color value.
Example:

```
Var c as new GM16ColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 1
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.6 class GM16ColorMonoMBS

92.6.1 class GM16ColorMonoMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Representation of a black/white color (true/false)
Example:

```
Var g as new GM16ColorMonoMBS(false)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GM16ColorMBS class.

92.6.2 Methods

92.6.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorMonoMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.6.4 Constructor(mono as boolean) 14236
- 92.6.5 Constructor(other as GM16ColorMBS) 14237

92.6.4 Constructor(mono as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GM16ColorMonoMBS(false)
MsgBox str(g.mono)
```

See also:

- 92.6.3 Constructor 14236

• 92.6.5 Constructor(other as GM16ColorMBS) 14237

92.6.5 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GM16ColorMonoMBS(false)
Var o as new GM16ColorMonoMBS(g)
MsgBox str(o.mono)
```

See also:

• 92.6.3 Constructor 14236

• 92.6.4 Constructor(mono as boolean) 14236

92.6.6 Properties

92.6.7 mono as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color value.
Example:

```
Var g as new GM16ColorMonoMBS(true)
MsgBox str(g.mono)
```

Notes: (Read and Write property)

92.7 class GM16ColorRGBMBS

92.7.1 class GM16ColorRGBMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color class for RGB colors.
Example:

```
Var c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)+" "+str(c.green)+" "+str(c.blue)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: Representation of RGB color with red, green, and blue specified as ratios (0 to 1)
Subclass of the GM16ColorMBS class.

92.7.2 Methods

92.7.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorRGBMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.7.4 Constructor(other as GM16ColorMBS) 14238
- 92.7.5 Constructor(red as Double, green as Double, blue as Double) 14239

92.7.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GM16ColorRGBMBS(1,2,3)
Var o as new GM16ColorRGBMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 92.7.3 Constructor 14238
- 92.7.5 Constructor(red as Double, green as Double, blue as Double) 14239

92.7.5 Constructor(red as Double, green as Double, blue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GM16ColorRGBMBS(0.1,0.2,0.3)
```

Notes: Range is 0.0 to 1.0.
See also:

- 92.7.3 Constructor 14238
- 92.7.4 Constructor(other as GM16ColorMBS) 14238

92.7.6 Properties

92.7.7 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color component.
Example:

```
Var c as new GM16ColorRGBMBS(0.0,0.0,1.0)
MsgBox str(c.blue)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.7.8 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color component.
Example:

```
Var c as new GM16ColorRGBMBS(0.0,1.0,0.0)
MsgBox str(c.green)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.7.9 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color component.
Example:

```
Var c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.8 class GM16ColorYUVMBS

92.8.1 class GM16ColorYUVMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Representation of a color in the YUV colorspace
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)+" "+str(g.u)+" "+str(g.v)
```

Notes: Subclass of the GM16ColorMBS class.

92.8.2 Methods

92.8.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GM16ColorYUVMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.8.4 Constructor(other as GM16ColorMBS) 14241
- 92.8.5 Constructor(y as Double, u as Double, v as Double) 14242

92.8.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
Var o as new GM16ColorYUVMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 92.8.3 Constructor 14241
- 92.8.5 Constructor(y as Double, u as Double, v as Double) 14242

92.8.5 Constructor(y as Double, u as Double, v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
```

See also:

- 92.8.3 Constructor 14241
- 92.8.4 Constructor(other as GM16ColorMBS) 14241

92.8.6 Properties

92.8.7 u as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The u color component.
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.u)
```

Notes: Range is -0.5 to +0.5.
(Read and Write property)

92.8.8 v as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The v color component.
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.v)
```

Notes: Range is -0.5 to +0.5.
(Read and Write property)

92.8.9 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y color component.
Example:

```
Var g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.9 class GM16ConvertMBS

92.9.1 class GM16ConvertMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to convert images thread friendly.
Notes: This class is intended to process lots of images in several instances in several threads.
If you for example use 8 Xojo threads, to process thousands of images to scale them down for thumbnails, you can easily keep 8 CPU cores busy.

Please make a new instance, set options and call run method. When run is done, please read output properties.
Do not modify properties while thread is running.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr2

92.9.2 Methods

92.9.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.9.4 Run

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts converter.
Notes: The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

92.9.5 Properties

92.9.6 AutoOrient as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to call autoOrient method to change orientation of image data to 0¬∞.
Notes: (Read and Write property)

92.9.7 Enhance as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run enhance command.
Notes: If true, we call enhance on the image to minimize noise.
(Read and Write property)

92.9.8 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run equalize command.
Notes: If set to true, we call equalize command on image (histogram equalization).
(Read and Write property)

92.9.9 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image type.
Notes: If value is >0, the image type is change to the given type.
(Read and Write property)

92.9.10 InputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data string.
Notes: If set, we read image from this data.
(Read and Write property)

92.9.11 InputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input folderitem.
Notes: If set input file to read.
(Read and Write property)

92.9.12 InputGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input geometry.
Notes: Some formats can be loaded with different scales, so this geometry is passed to read method to define the format requested.
(Read and Write property)

92.9.13 InputImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input image.
Notes: (Read and Write property)

92.9.14 InputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image magick type.
Notes: If empty, the type of file is automatically determined.
(Read and Write property)

92.9.15 InputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data memoryblock.
Notes: If set, we read image from this data.
(Read and Write property)

92.9.16 InputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input file path.
Notes: If set input file to read.
(Read and Write property)

92.9.17 OutputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output data as string.
Notes: (Read and Write property)

92.9.18 OutputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem where to write file.
Notes: If set, the image will be written to this file.
(Read and Write property)

92.9.19 OutputImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output image object.
Notes: (Read and Write property)

92.9.20 OutputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output magick.
Notes: You can set this to a magick codec type to define output format, e.g. ”jpeg”.
(Read and Write property)

92.9.21 OutputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output data as memory block.
Notes: (Read and Write property)

92.9.22 OutputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native file path for output.
Notes: If set, the image will be written to this path.
(Read and Write property)

92.9.23 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quality of images in range 1 to 100.
Notes: If value is >0, we assign it to the image for setting image quality.
(Read and Write property)

92.9.24 Running as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this converter is running.
Notes: Set to true while Run method runs.
(Read only property)

92.9.25 ScaleGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry for call to scale method.
Notes: scale method is called with this geometry (if set) to reduce image size.
(Read and Write property)

92.9.26 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to remove all profiles and text attributes from the image.
Notes: (Read and Write property)

92.9.27 ThumbnailGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry for call to thumbnail method.
Notes: thumbnail method is called with this geometry (if set) to reduce image size.
(Read and Write property)

92.9.28 Trim as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether trim command is called on image to remove extra blank space around image.
Notes: (Read and Write property)

92.9.29 WantOutputData as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want image compressed and stored in OutputData property.
Notes: (Read and Write property)

92.9.30 WantOutputMemory as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want image compressed and stored in OutputMemory property.
Notes: (Read and Write property)

92.10 class GM16CoordinateMBS

92.10.1 class GM16CoordinateMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Graphics Magick class for a coordinate.
Example:

```
Var c as new GM16CoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

92.10.2 Methods

92.10.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new coordinate.
See also:

- 92.10.4 Constructor(x as Double, y as Double) 14250

92.10.4 Constructor(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new coordinate.
Example:

```
Var c as new GM16CoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

See also:

- 92.10.3 Constructor 14250

92.10.5 Properties

92.10.6 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Example:

```
Var c as new GM16CoordinateMBS
c.x = 5
MsgBox str(c.x)
```

Notes: (Read and Write property)

92.10.7 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Example:

```
Var c as new GM16CoordinateMBS
c.y = 5
MsgBox str(c.y)
```

Notes: (Read and Write property)

92.11 class GM16ErrorExceptionMBS

92.11.1 class GM16ErrorExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception to report errors in the GraphicMagick plugin.
Notes: Check the message property for details.
Subclass of the RuntimeException class.

92.12 class GM16GeometryMBS

92.12.1 class GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Geometry provides a convenient means to specify a geometry argument.
Example:

```
Var g as new GM16GeometryMBS(300,400)
MsgBox str(G.width)+" "+str(G.height)
```

Notes: The object may be initialized from a string containing a geometry specification. It may also be initialized by more efficient parameterized constructors.
Xojo Developer Magazine

- 20.2, page 83: Wifi QR Code, Embedding your Wifi password in a QR code by Stefanie Juchmes

92.12.2 Methods

92.12.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates empty geometry.
Example:

```
Var g as new GM16GeometryMBS
MsgBox str(G.width)+" "+str(G.height)
```

See also:

- 92.12.4 Constructor(geometry as string) 14253
- 92.12.5 Constructor(other as GM16GeometryMBS) 14254
- 92.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14254

92.12.4 Constructor(geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct geometry from string.
Example:

```
Var g as new GM16GeometryMBS("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes: See the GraphicsMagick website for details.
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 92.12.3 Constructor 14253
- 92.12.5 Constructor(other as GM16GeometryMBS) 14254
- 92.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14254

92.12.5 Constructor(other as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new geometry object by copying an existing one.
Example:

```
Var g as new GM16GeometryMBS(600,600)
Var h as new GM16GeometryMBS(g)
MsgBox str(h.width)
```

See also:

- 92.12.3 Constructor 14253
- 92.12.4 Constructor(geometry as string) 14253
- 92.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14254

92.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates geometry with the given values.
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.width)
```

See also:

- 92.12.3 Constructor 14253
- 92.12.4 Constructor(geometry as string) 14253
- 92.12.5 Constructor(other as GM16GeometryMBS) 14254

92.12.7 Make(geometry as string) as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct geometry from string.
Example:

```
Var g as GM16GeometryMBS = GM16GeometryMBS.Make("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes: See the GraphicsMagick website for more details:
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 92.12.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GM16GeometryMBS 14255

92.12.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates geometry with the given values.
Example:

```
Var g as GM16GeometryMBS = GM16GeometryMBS.Make(600,600)
MsgBox str(g.width)
```

See also:

- 92.12.7 Make(geometry as string) as GM16GeometryMBS 14255

92.12.9 Properties

92.12.10 aspect as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize without preserving aspect ratio (!).
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.aspect)
```

Notes: (Read and Write property)

92.12.11 fillArea as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image to fit total pixel area specified by dimensions.
Notes: Same as @ in the geometry specification.
(Read and Write property)

92.12.12 greater as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize if image is greater than size (>).
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.greater)
```

Notes: (Read and Write property)

92.12.13 height as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height value.
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.height)
```

Notes: (Read and Write property)

92.12.14 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain a valid geometry?
Example:

```
Var g as new GM16GeometryMBS(100,200)
MsgBox str(G.isValid)
```

Notes: May be set to false in order to invalidate an existing geometry object.
(Read and Write property)

92.12.15 less as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize if image is less than size (<).
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.less)
```

Notes: (Read and Write property)

92.12.16 limitPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dimensions are treated as minimum rather than maximum values.
Notes: Same as ^in the geometry specification.
(Read and Write property)

92.12.17 percent as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height are expressed as percentages.
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.percent)
```

Notes: (Read and Write property)

92.12.18 StringValue as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string representation of the geometry object.
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.StringValue)
```

Notes: (Read and Write property)

92.12.19 width as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width value.
Example:

```
Var g as new GM16GeometryMBS(600,600)
MsgBox str(g.width)
```

Notes: (Read and Write property)

92.12.20 xNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sign of X offset negative? (X origin at right)
Example:

```
Var g as new GM16GeometryMBS(100,200,30,40,true,false)
MsgBox str(G.xNegative)
```

Notes: (Read and Write property)

92.12.21 xOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X offset from origin.
Example:

```
Var g as new GM16GeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

92.12.22 yNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sign of Y offset negative? (Y origin at bottom)
Example:

```
Var g as new GM16GeometryMBS(100,200,30,40,false,true)
MsgBox str(G.yNegative)
```

Notes: (Read and Write property)

92.12.23 yOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y offset from origin
Example:

```
Var g as new GM16GeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

92.13 class GM16GraphicsMBS

92.13.1 class GM16GraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for drawing commands targeting a GM16ImageMBS.
Notes: Please remember that all commands are collected till you call the Draw method.

92.13.2 Methods

92.13.3 Arc(startX as Double, startY as Double, endX as Double, endY as Double, startDegrees as Double, endDegrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.arc(250, 250, 100, 100,50,300)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.4 Bezier(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a bezier curve using the stroke color and based on the coordinates specified by the coordinates array.

92.13.5 Circle(originX as Double, originY as Double, perimX as Double, perimY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.13.6 ClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Select a drawing clip path matching id.

92.13.7 ColorPixel(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color image according to paintMethod.
Notes: The point method recolors the target pixel. The replace method recolors any pixel that matches the color of the target pixel. Floodfill recolors any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder recolors any neighbor pixel that is not the border color. Finally, reset recolors all pixels.

Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.13.8 CompositeImage(x as Double, y as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 92.13.10 CompositeImage(x as Double, y as Double, path as string) 14263
- 92.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem) 14264
- 92.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer) 14264
- 92.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS) 14265
- 92.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer) 14266
- 92.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14266
- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.9 CompositeImage(x as Double, y as Double, image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.
See also:

- 92.13.8 CompositeImage(x as Double, y as Double, file as folderitem) 14262

- 92.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem) 14264
- 92.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer) 14264
- 92.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS) 14265
- 92.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer) 14266
- 92.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14266
- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.10 CompositeImage(x as Double, y as Double, path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.
See also:

- 92.13.8 CompositeImage(x as Double, y as Double, file as folderitem) 14262
- 92.13.9 CompositeImage(x as Double, y as Double, image as GM16ImageMBS) 14262
- 92.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem) 14264
- 92.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer) 14264
- 92.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS) 14265
- 92.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer) 14266
- 92.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14266
- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.
See also:

- 92.13.8 CompositeImage(x as Double, y as Double, file as folderitem) 14262

92.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

92.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14267

92.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 92.13.10 CompositeImage(x as Double, y as Double, path as string) 14263
- 92.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem) 14264
- 92.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer) 14264
- 92.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS) 14265
- 92.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer) 14266
- 92.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14266

92.13.17 Constructor(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object referencing the given image.

92.13.18 DashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the pattern of dashes and gaps used to stroke paths.
Notes: The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.13.19 DashOffset(offset as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the distance into the dash pattern to start the dash.
Notes: See documentation on SVG's stroke-dashoffset property for usage details.

92.13.20 Draw

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws all draw commands collected.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.21 DrawPath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw on image using vector path.
Example:

```
// new picture, 500x500 and filled with white
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

Var draw as GM16GraphicsMBS = image.Graphics

// Draw path

Var cr as new GM16ColorRGBMBS("red")
Var gr as new GM16ColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

92.13.22 Ellipse(originX as Double, originY as Double, perimX as Double, perimY as Double, arcStart as Double, arcEnd as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees.
Notes: If a fill color is specified, then the object is filled.

92.13.23 FillColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify drawing object fill color.

92.13.24 FillOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify opacity to use when drawing using fill color.

92.13.25 FillRule(fillRule as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the algorithm which is to be used to determine what parts of the canvas are included inside the shape.
Notes: See documentation on SVG's fill-rule property for usage details.

92.13.26 Font(fontname as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify font name to use when drawing text.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

Var draw as GM16GraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GM16ColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello", "")
draw.Draw

Backdrop=image.CopyPicture
```

See also:

- 92.13.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer) 14271

92.13.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font.
Notes: Specify font family, style, weight (one of the set { 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 } with 400 being the normal size), and stretch to be used to select the font used when drawing text. Wildcard matches may be applied to style via the AnyStyle enumeration, applied to weight if weight is zero, and applied to stretch via the AnyStretch enumeration.
See also:

- 92.13.26 Font(fontname as string) 14270

92.13.28 Gravity(GravityType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify text positioning gravity.

92.13.29 Line(startX as Double, startY as Double, endX as Double, endY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a line using stroke color and thickness using starting and ending coordinates
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a line
draw.Line(100,100,400,400)
draw.Draw

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

92.13.30 Matte(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change the pixel matte value to transparent.
Notes: The point method changes the matte value of the target pixel. The replace method changes the matte value of any pixel that matches the color of the target pixel. Floodfill changes the matte value of any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder changes the matte value of any neighbor pixel that is not the border color, Finally reset changes the matte value of all pixels.

Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.13.31 MiterLimit(miterlimit as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

92.13.32 PathArcAbs(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GM16PathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.

See also:

- 92.13.33 PathArcAbs(c() as GM16PathArgsMBS) 14273
- 92.13.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14273

92.13.33 PathArcAbs(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GM16PathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.
See also:

- 92.13.32 PathArcAbs(c as GM16PathArgsMBS) 14272
- 92.13.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14273

92.13.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics
```

```
// Draw an arc

draw.PathMovetoAbs 100,100
draw.PathArcAbs(100,100, 0, false, false, 200,200)
draw.DrawPath
draw.Draw

Backdrop=image.CopyPicture
```

Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

- 92.13.37 PathArcRel(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14275

92.13.36 PathArcRel(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GM16PathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.

- 92.13.35 PathArcRel(c as GM16PathArgsMBS) 14274
- 92.13.36 PathArcRel(c() as GM16PathArgsMBS) 14274

92.13.38 PathClosePath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the current subpath by drawing a straight line from the current point to current subpath's most recent starting point (usually, the most recent moveto point).

92.13.39 PathCurvetoAbs(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.13.40 PathCurvetoAbs(c() as GM16PathArgsMBS) 14276
- 92.13.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14276

92.13.40 PathCurvetoAbs(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.13.39 PathCurvetoAbs(c as GM16PathArgsMBS) 14276
- 92.13.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14276

92.13.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end

of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.13.39 PathCurvetoAbs(c as GM16PathArgsMBS) 14276
- 92.13.40 PathCurvetoAbs(c() as GM16PathArgsMBS) 14276

92.13.42 PathCurvetoRel(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.13.43 PathCurvetoRel(c() as GM16PathArgsMBS) 14277
- 92.13.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14278

92.13.43 PathCurvetoRel(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.13.42 PathCurvetoRel(c as GM16PathArgsMBS) 14277
- 92.13.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14278

92.13.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

- 92.13.42 PathCurvetoRel(c as GM16PathArgsMBS) 14277
- 92.13.43 PathCurvetoRel(c() as GM16PathArgsMBS) 14277

92.13.45 PathLinetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.13.46 PathLinetoAbs(c() as GM16CoordinateMBS) 14278
- 92.13.47 PathLinetoAbs(x as Double, y as Double) 14279

92.13.46 PathLinetoAbs(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.13.45 PathLinetoAbs(c as GM16CoordinateMBS) 14278
- 92.13.47 PathLinetoAbs(x as Double, y as Double) 14279

92.13.47 PathLinetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.13.45 PathLinetoAbs(c as GM16CoordinateMBS) 14278
- 92.13.46 PathLinetoAbs(c() as GM16CoordinateMBS) 14278

92.13.48 PathLinetoHorizontalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

92.13.49 PathLinetoHorizontalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

92.13.50 PathLinetoRel(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

• 92.13.52 PathLinetoRel(x as Double, y as Double) 14280

92.13.51 PathLinetoRel(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

• 92.13.50 PathLinetoRel(c as GM16CoordinateMBS) 14279

• 92.13.52 PathLinetoRel(x as Double, y as Double) 14280

92.13.52 PathLinetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Example:

```
// new picture, 500x500 and filled with white
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

Var draw as GM16GraphicsMBS = image.Graphics

// Draw path

Var cr as new GM16ColorRGBMBS("red")
Var gr as new GM16ColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
```

```
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.13.50 PathLinetoRel(c as GM16CoordinateMBS) 14279
- 92.13.51 PathLinetoRel(c() as GM16CoordinateMBS) 14280

92.13.53 PathLinetoVerticalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

92.13.54 PathLinetoVerticalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

92.13.55 PathMovetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by

multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.13.56 PathMovetoAbs(x as Double, y as Double) 14282

92.13.56 PathMovetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.

- 92.13.58 PathMovetoRel(x as Double, y as Double) 14282

92.13.58 PathMovetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must

begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.13.57 PathMovetoRel(c as GM16CoordinateMBS) 14282

92.13.59 PathQuadraticCurvetoAbs(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.

- 92.13.60 PathQuadraticCurvetoAbs(c() as GM16PathArgsMBS) 14283

92.13.62 PathQuadraticCurvetoRel(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.

- 92.13.63 PathQuadraticCurvetoRel(c() as GM16PathArgsMBS) 14284
- 92.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14285

92.13.63 PathQuadraticCurvetoRel(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.

- 92.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14285

92.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

- 92.13.63 PathQuadraticCurvetoRel(c() as GM16PathArgsMBS) 14284

92.13.65 PathSmoothCurvetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.13.66 PathSmoothCurvetoAbs(c() as GM16CoordinateMBS) 14286
- 92.13.67 PathSmoothCurvetoAbs(x as Double, y as Double) 14286

92.13.66 PathSmoothCurvetoAbs(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

- 92.13.66 PathSmoothCurvetoAbs(c() as GM16CoordinateMBS) 14286

92.13.68 PathSmoothCurvetoRel(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was

not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

- 92.13.69 PathSmoothCurvetoRel(c() as GM16CoordinateMBS) 14287

92.13.71 PathSmoothQuadraticCurvetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.13.72 PathSmoothQuadraticCurvetoAbs(c() as GM16CoordinateMBS) 14288
- 92.13.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14289

92.13.72 PathSmoothQuadraticCurvetoAbs(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.13.71 PathSmoothQuadraticCurvetoAbs(c as GM16CoordinateMBS) 14288
- 92.13.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14289

92.13.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.13.71 PathSmoothQuadraticCurvetoAbs(c as GM16CoordinateMBS) 14288
- 92.13.72 PathSmoothQuadraticCurvetoAbs(c() as GM16CoordinateMBS) 14288

92.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS) 14289
- 92.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14290

92.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not

a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS) 14289
- 92.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14290

92.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS) 14289
- 92.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS) 14289

92.13.77 Point(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a point using stroke color and thickness at coordinate.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color

Var draw as GM16GraphicsMBS = image.Graphics

// draw cross with pixels
```

```
for x as Integer = 240 to 260
draw.Point(x, 250)
next
for y as Integer = 240 to 260
draw.Point(250,y)
next
draw.Draw

Backdrop=image.CopyPicture
```

92.13.78 PointSize(pointSize as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set font point size.

92.13.79 Polygon(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arbitrary polygon using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color
image.strokeColor = new GM16ColorRGBMBS("green") // set color

Var draw as GM16GraphicsMBS = image.Graphics
Var coordinates(-1) as GM16CoordinateMBS

coordinates.Append new GM16CoordinateMBS(70,70)
coordinates.Append new GM16CoordinateMBS(100,340)
coordinates.Append new GM16CoordinateMBS(380,200)
coordinates.Append new GM16CoordinateMBS(70,70)

draw.Polygon coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.13.80 Polyline(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arbitrary polyline using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("green") // set color

Var draw as GM16GraphicsMBS = image.Graphics
Var coordinates(-1) as GM16CoordinateMBS

coordinates.Append new GM16CoordinateMBS(70,70)
coordinates.Append new GM16CoordinateMBS(100,340)
coordinates.Append new GM16CoordinateMBS(380,200)

draw.Polyline coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.13.81 PopClipPath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pop (terminate) clip path definition started by PushClipPath.

92.13.82 PopGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pop Graphic Context.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorMBS() // transparent fillcolor
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: Removing the current graphic context from the graphic context stack restores the options to the values they had prior to the preceding PushGraphicContext operation.

92.13.83 PopPattern

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate a pattern definition started via PushPattern.

92.13.84 PushClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Push (create) clip path definition with id.
Notes: Clip patch definition consists of subsequent drawing commands, terminated by PopClipPath.

92.13.85 PushGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Push Graphic Context.

Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorMBS() // transparent fillcolor
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: When a graphic context is pushed, options set after the context is pushed (such as coordinate transformations, color settings, etc.) are saved to a new graphic context. This allows related options to be saved on a graphic context "stack" in order to support heirarchical nesting of options. When PopGraphicContext is used to pop the current graphic context, the options in effect during the last PushGraphicContext operation are restored.

92.13.86 PushPattern(id as string, x as Integer, y as Integer, width as Integer, height as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start a pattern definition with arbitrary pattern name specified by id, pattern offset specified by x and y, and pattern size specified by width and height.
Notes: The pattern is defined within the coordinate system defined by the specified offset and size. Arbitrary drawing objects (including DrawableCompositeImage) may be specified between PushPattern and PopPattern in order to draw the pattern. Normally the pair PushGraphicContext & PopGraphicContext are used to enclose a pattern definition. Pattern definitions are terminated by a PopPattern object.

92.13.87 Rectangle(upperLeftX as Double, upperLeftY as Double, lowerRightX as Double, lowerRightY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a rectangle
draw.Rectangle(250, 250, 100, 100)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.13.88 Rotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set rotation to use when drawing (coordinate transformation).
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Rotation 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
```

```
draw.Draw

Backdrop=image.CopyPicture
```

92.13.89 RoundRectangle(centerX as Double, centerY as Double, width as Double, height as Double, cornerWidth as Double, cornerHeight as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a round rectangle
draw.RoundRectangle(250, 250, 100, 100,20,20)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.13.90 Scaling(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply scaling in x and y direction while drawing objects (coordinate transformation).
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5
```

```
Var draw as GM16GraphicsMBS = image.Graphics
draw.FillColor new GM16ColorRGBMBS("red")

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Scaling 1.2,1.1
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.91 SkewX(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Skew in X direction (coordinate transformation)
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewX 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.92 SkewY(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Skew in Y direction.
Example:

```
Var g as new GM16GeometryMBS(500,500)
```

```
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewY 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.93 StrokeAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Antialias while drawing lines or object outlines.

92.13.94 StrokeColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set color to use when drawing lines or object outlines.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.95 StrokeLineCap(LineCap as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the end of open subpaths when they are stroked.
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.

92.13.96 StrokeLineJoin(LineJoin as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked.
Notes: Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.

92.13.97 StrokeOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opacity to use when drawing lines or object outlines.

92.13.98 StrokeWidth(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set width to use when drawing lines or object outlines.

92.13.99 Text(x as Double, y as Double, text as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate image with text using stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

Var draw as GM16GraphicsMBS = image.Graphics

// draw red text
```

```
draw.strokeColor(new GM16ColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello")
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label).
See also:

- 92.13.100 Text(x as Double, y as Double, text as string, encoding as string) 14300

92.13.100 Text(x as Double, y as Double, text as string, encoding as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate image with text represented with text encoding, using current stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Notes: If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label()).

The text encoding specifies the code set to use for text annotations. The only character encoding which may be specified at this time is "UTF-8" for representing Unicode as a sequence of bytes. Specify an empty string to set text encoding to the system's default. Successful text annotation using Unicode may require fonts designed to support Unicode.

Seems like you need ghostscript or the DPS library for text handling, so it may no be available for you.
See also:

- 92.13.99 Text(x as Double, y as Double, text as string) 14299

92.13.101 TextAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Antialias while drawing text (default true).
Notes: The main reason to disable text antialiasing is to avoid adding new colors to the image.

92.13.102 TextDecoration(DecorationType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify decoration (e.g. UnderlineDecoration) to apply to text.

92.13.103 TextUnderColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a box under rendered text using the specified color.

92.13.104 Translation(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply coordinate translation (set new coordinate origin).
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Translation 5,5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.13.105 Viewbox(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dimensions of the output viewbox.
Notes: If the image is to be written to a vector format (e.g. MVG or SVG), then a PushGraphicContext() object should be pushed to the head of the list, followed by a Viewbox() statement to establish the output canvas size. A matching PopGraphicContext() object should be pushed to the tail of the list.

92.13.106 Properties

92.13.107 Image as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image this graphics object belongs to.
Notes: (Read only property)

92.14 class GM16ImageArrayMBS

92.14.1 class GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an array of images in GraphicsMagick.
Example:

```
// extract all layers of photoshop file
Var file as FolderItem = SpecialFolder.Desktop.Child("test.psd")
Var images as new GM16ImageArrayMBS

images.readImages(file.NativePath)

Var c as Integer = images.size
for i as Integer = 0 to c-1
Var image as GM16ImageMBS = images.Image(i)
file = SpecialFolder.Desktop.Child(image.FileName+"."+str(i)+".png")
image.write(file)
next
```

Notes: Can be used to assemble/disassemble gif images.

92.14.2 Methods

92.14.3 animateImages

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Animate a sequence of image frames.
Notes: Image frames are displayed in succession, creating an animated effect. The animation options are taken from the first image frame. This feature is only supported under X11 at the moment.

92.14.4 append(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the end of the array.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
```

```
g.readImages(file.NativePath)

// put copy of first image on the back
Var n as GM16ImageMBS = g.FirstImage
g.append n

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

Notes: Instead of gif, you can also use tif files.

92.14.5 appendImages(stack as boolean = false) as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Append a sequence of image frames, writing the result to new image.
Notes: All the input image frames must have the same width or height. Image frames of the same width are stacked top-to-bottom. Image frames of the same height are stacked left-to-right. If the stack parameter is false, rectangular image frames are stacked left-to-right otherwise top-to-bottom.

92.14.6 averageImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average a sequence of image frames, writing the result to averagedImage.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// averageImages
Var n as GM16ImageMBS = g.averageImages
Backdrop = n.CopyPicture
```

Notes: All the input image frames must be the same size in pixels.

92.14.7 coalesceImages as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a coalesced image sequence obtained by "playing" the image sequence (observing page offsets and disposal methods) to create a new image sequence in which all frames are full size and completely rendered.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// deconstruct
g = g.coalesceImages

// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: Note that if the original image sequence relied on page offsets and disposal methods that the resulting sequence will be larger (perhaps much larger) then the original. This is useful for GIF animation sequences that have page offsets and disposal methods. The resuting image sequence is returned.

92.14.8 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty image array.

92.14.9 deconstructImages as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Break down an image sequence into constituent parts.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// deconstruct
g = g.deconstructImages
```

```
// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: This is useful for creating GIF or MNG animation sequences.

92.14.10 displayImages

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Display a sequence of image frames.
Notes: Through use of a pop-up menu, image frames may be selected in succession. This feature is fully supported under X11 but may have only limited support in other environments.
Caution: if an image format is is not compatable with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

display methods are not supported currently.

92.14.11 FirstImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first image in array.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// show first image
Var img as GM16ImageMBS = g.FirstImage

// convert to true color for CopyPicture to work
const TrueColorType=6
img.type=TrueColorType

Backdrop = img.CopyPicture
```

92.14.12 flattenImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merge a sequence of image frames which represent image layers into a single composited representation.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// put copy of first image on the back
Var n as GM16ImageMBS = g.flattenImages

Backdrop = n.CopyPicture
```

Notes: Returns the flattened image. This function is useful for combining Photoshop layers into a single image.

92.14.13 Image(index as Integer) as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image with given index.

92.14.14 insert(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts an image on the front.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// put copy of first image on the front
Var n as GM16ImageMBS = g.FirstImage
g.insert n

// write to file
```

```
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

92.14.15 LastImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns last image in array.

92.14.16 mapImages(map as GM16ImageMBS, dither as boolean = true, measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace the colors of a sequence of images with the closest color from a reference image.
Notes: Set dither to true to enable dithering. Set measureError to true in order to evaluate quantization error.

92.14.17 montageImages(options as GM16MontageMBS) as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a composite image by combining several separate image frames.
Example:

```
// build montage
Var StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(&cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(&c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
Var logo as Picture = LogoMBS(500)
Var image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
```

```
Var StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
Var resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: Multiple frames may be generated in the output array depending on the tile setting and the number of image frames montaged. Montage options are provided via the parameter options. Options set in the first image frame (backgroundColor, borderColor, matteColor, fillColor, strokeColor, font and fontPointsize) are also used as options by montageImages().

92.14.18 morphImages(frames as Integer) as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Morph a seqence of image frames.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// coalesce to make sure we have full images
g = g.coalesceImages
// morph to 10 pictures
g = g.morphImages(10)

// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: This algorithm expands the number of image frames (output to the new image array) by adding the number of intervening frames specified by frames such that the original frames morph (blend) into each other when played as an animation.

92.14.19 mosaicImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inlay a number of images to form a single coherent picture.
Notes: The result image argument is updated with a mosaic constructed from the image sequence.

92.14.20 quantizeImages(measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quantize colors in images using current quantization settings.
Notes: Set measureError to true in order to measure quantization error.

92.14.21 readImages(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read a sequence of image frames into existing container (appending to array) from blob.
See also:

- 92.14.22 readImages(imageSpec as string) 14311

92.14.22 readImages(imageSpec as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read a sequence of image frames into existing container (appending to array) with image names specified in the string imageSpec.
See also:

- 92.14.21 readImages(blob as GM16BlobMBS) 14311

92.14.23 remove(index as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the image with the given index.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// remove first
g.remove 0

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
```

```
g.writeImages(output.NativePath)
```

Notes: Index should be between 0 and size-1.

92.14.24 reverse

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reverses the order of images in the array.

92.14.25 writeImages(blob as GM16BlobMBS, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes images to the given blob object.
Notes: Write images in container to in-memory BLOB specified by Blob blob. Set adjoin to false to write a set of image frames via a wildcard imageSpec (e.g. image%02d.miff).
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 92.14.26 writeImages(imageSpec as string, adjoin as boolean = true) 14312

92.14.26 writeImages(imageSpec as string, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes images to the given path.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

Notes: Write images in container to file specified by string imageSpec. Set adjoin_ to false to write a set

of image frames via a wildcard imageSpec (e.g. image%02d.miff).
The wildcard must be one of %0Nd, %0No, or %0Nx.
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 92.14.25 writeImages(blob as GM16BlobMBS, adjoin as boolean = true) 14312

92.14.27 Properties

92.14.28 empty as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether image array is empty.
Notes: Returns true if array is empty or false if not.
(Read only property)

92.14.29 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the image array.
Notes: Should always be non zero.
(Read and Write property)

92.14.30 size as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of images in this array.
Example:

```
// read gif
Var g as new GM16ImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// display number of images
MsgBox str(g.size)
```

Notes: (Read only property)

92.15 class GM16ImageChannelStatisticsMBS

92.15.1 class GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The statistics for image channel.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var stat as GM16ImageStatisticsMBS = g.statistics
Var gs as GM16ImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

92.15.2 Methods

92.15.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

92.15.4 Properties

92.15.5 maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value observed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var stat as GM16ImageStatisticsMBS = g.statistics
Var gs as GM16ImageChannelStatisticsMBS = stat.green

MsgBox "maximum green color: "+str(gs.maximum)
```

Notes: (Read only property)

92.15.6 mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average (mean) value observed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var stat as GM16ImageStatisticsMBS = g.statistics
Var r as GM16ImageChannelStatisticsMBS = stat.red

MsgBox "mean red color: "+str(R.mean)
```

Notes: (Read only property)

92.15.7 minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value observed.
Notes: (Read only property)

92.15.8 standardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Standard deviation, sqrt(variance).
Notes: (Read only property)

92.15.9 variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Variance.
Notes: (Read only property)

92.16 class GM16ImageMBS

92.16.1 class GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image is the primary object in Magick++ and represents a single image frame (see image design).
Example:

```
Var c as new GM16ColorMBS("white")
Var g as new GM16GeometryMBS(100,100)
Var image as new GM16ImageMBS(g, c)
```

Notes: With MBS Plugin 14.0 we offer this classes in 8bit (GM prefix) or 16bit (GM16 prefix).

The GM16ImageArrayMBS class must be used to operate on image sequences or images (e.g. of format GIF, TIFF, MIFF, Postscript, & MNG) which are comprized of multiple image frames. Individual frames of a multi-frame image may be requested by adding array-style notation to the end of the file name (e.g. "animation.gif [3] " retrieves the fourth frame of a GIF animation. Various image manipulation operations may be applied to the image. Attributes may be set on the image to influence the operation of the manipulation operations. The GM16PixelsMBS class provides low-level access to image pixels.

92.16.2 Methods

92.16.3 adaptiveThreshold(width as UInt32, height as UInt32, offset as double = 0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply adaptive thresholding to the image.
Notes: see:
http://www.dai.ed.ac.uk/HIPR2/adpthrsh.htm

Adaptive thresholding is useful if the ideal threshold level is not known in advance, or if the illumination gradient is not constant across the image. Adaptive thresholding works by evaulating the mean (average) of a pixel region (size specified by width and height) and using the mean as the thresholding value. In order to remove residual noise from the background, the threshold may be adjusted by subtracting a constant offset (default zero) from the mean to compute the threshold.

92.16.4 addNoise(noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add noise to image with the specified noise type.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.addNoise(image.GaussianNoise)

Backdrop=image.CopyPicture
```

Notes: Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

92.16.5 addNoiseChannel(channel as Integer, noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add noise to an image channel with the specified noise type. The channel parameter specifies the channel to add noise to.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

image.addNoiseChannel(image.BlueChannel, image.ImpulseNoise)

Backdrop=image.CopyPicture

Notes: The noiseType parameter specifies the type of noise.
Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

92.16.6 affineTransform(sx as Double, sy as Double, rx as Double, ry as Double, tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an affine transformation to the drawing matrix.
Notes: Specify a transformation matrix to adjust scaling, rotation, and translation (coordinate transformation) for subsequently drawn objects in the same or decendent drawing context. The sx & sy parameters represent the x & y scale factors, the rx & ry parameters represent the x & y rotation, and the tx & ty parameters represent the x & y translation.

92.16.7 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate using specified text, bounding area, and placement gravity.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information

about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 92.16.10 annotate(text as string, location as GM16GeometryMBS) 14321

92.16.8 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer, degrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate with text using specified text, bounding area, placement gravity, and rotation.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 92.16.10 annotate(text as string, location as GM16GeometryMBS) 14321

92.16.9 annotate(text as string, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate with text (bounding area is entire image) and placement gravity.
Example:

```
Var White as new GM16ColorGrayMBS(1)
Var Black as new GM16ColorGrayMBS(0)
Var geo as new GM16GeometryMBS("300x200")

Var g as new GM16ImageMBS(geo, White)

g.antiAlias = False
g.fillColor = Black
g.lineWidth = 1
g.strokeColor = Black
g.font = "@/Library/Fonts/Tahoma.ttf"
g.fontPointsize = 15

g.annotate("Hello World", g.SouthGravity)

Backdrop = g.CopyPicture
```

Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 92.16.10 annotate(text as string, location as GM16GeometryMBS) 14321

92.16.10 annotate(text as string, location as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate using specified text, and placement location.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center

- 92.16.7 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer) 14318
- 92.16.8 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer, degrees as Double) 14319
- 92.16.9 annotate(text as string, gravity as Integer) 14320

92.16.11 attributeValues as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A dictionary with all attributes.
Notes: As attributes are created on demand, this will only return all so far generated attributes.

92.16.12 autoOrient

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Orient image to be right-side up based on its current orientation attribute.
Notes: This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

92.16.13 blur(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur an image with the specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.blur(30,10)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.14 blurChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur an image channel with the specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.blurChannel(image.BlueChannel, 30,10)

Backdrop=image.CopyPicture
```

Notes: The channel parameter specifies the channel to modify. The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.15 border

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border image (add border to image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

image.border

Backdrop=image.CopyPicture

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 92.16.16 border(geometry as GM16GeometryMBS) 14324

92.16.16 border(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border image (add border to image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.border GM16GeometryMBS.Make(10,10)

Backdrop=image.CopyPicture
```

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 92.16.15 border 14323

92.16.17 borderGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for border.

92.16.18 cacheThreshold(threshold as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pixel cache threshold in megabytes.
Notes: Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

92.16.19 cdl(cdl as string)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bake in the ASC-CDL.
Notes: Bake in the ASC-CDL, which is a convention for the for the exchange of basic primary color grading information between for the exchange of basic primary color grading information between equipment and software from different manufacturers. It is a useful transform for other purposes as well.

92.16.20 channel(channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract channel from image.
Notes: Use this option to extract a particular channel from the image. MatteChannel for example, is useful for extracting the opacity values from an image.

92.16.21 charcoal(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Charcoal effect image (looks like charcoal sketch).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.charcoal

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.22 chop(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chop image (remove vertical or horizontal subregion of image).

92.16.23 colorHistogram as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates histogram.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var d as Dictionary = g.colorHistogram

MsgBox str(d.Count)+" color"

// check first color
Var c as GM16ColorMBS = d.key(0)

MsgBox "Color "+str(c.colorValue)+": "+str(d.Value(c))
```

Notes: The dictionary has a GM16ColorMBS/GMColor16MBS object as key for each color and an unsigned integer as value.

92.16.24 colorize(opacity as UInt32, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorize image with pen color, using specified percent opacity.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.colorize(10, new GM16ColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 92.16.25 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GM16ColorMBS) 14326

92.16.25 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorize image with pen color, using specified percent opacity for red, green, and blue quantums.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.colorize(10, 0, 5, new GM16ColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 92.16.24 colorize(opacity as UInt32, penColor as GM16ColorMBS) 14326

92.16.26 colorMap as GM16ColorMBS()

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with all colors in color map.
See also:

- 92.16.310 colorMap(index as UInt32) as GM16ColorMBS 14427

92.16.27 colorMatrix(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a color matrix to the image channels.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)

Var m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25
```

g.colorMatrix 3, m

Backdrop = g.CopyPicture

Notes: The user supplied matrix may be of order 1 to 5 (1x1 through 5x5).

92.16.28 CombinePictureWithMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image with mask.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

Var c as new GM16ColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

Notes: Internally this calls Width and Height, CopyPicture and CopyMask.

92.16.29 compare(image as GM16ImageMBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compare current image with another image.
Notes: Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical. An ErrorOption exception is thrown if the reference image columns, rows, colorspace, or matte differ from the current image:

92.16.30 composite(compositeImage as GM16ImageMBS, gravity as Integer, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.16.31 compositeAt(compositeImage as GM16ImageMBS, offset as GM16GeometryMBS, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.16.32 compositeXY(compositeImage as GM16ImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.16.33 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default constructor.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GM16ImageMBS
Var blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.34 Constructor(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct Image from in-memory Blob.
See also:

- 92.16.33 Constructor 14329
- 92.16.35 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14331

- 92.16.42 Constructor(pic as picture) 14335
- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct Image of specified size and depth from in-memory Blob.
See also:

- 92.16.34 Constructor(blob as GM16BlobMBS) 14330
- 92.16.35 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14331

- 92.16.42 Constructor(pic as picture) 14335
- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.37 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct Image of specified size, depth, and format from in-memory Blob.
See also:

- 92.16.33 Constructor 14329
- 92.16.34 Constructor(blob as GM16BlobMBS) 14330
- 92.16.35 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14331
- 92.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32) 14331
- 92.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14332
- 92.16.39 Constructor(file as folderitem) 14333
- 92.16.40 Constructor(other as GM16ImageMBS) 14334
- 92.16.41 Constructor(Path as string) 14335
- 92.16.42 Constructor(pic as picture) 14335
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct Image of specified size, depth, and format from in-memory Blob.
Example:

```
// first open file and read data in blob
SVG_File = FolderItem.ShowOpenFileDialog("")
If SVG_File = Nil Then Return
```

```
Var stream as BinaryStream = BinaryStream.Open(SVG_File)
Var data as string = stream.Read(stream.Length)
Var blob as new GM16BlobMBS(data)

// 400 width and 400 height
Var geo As New GM16GeometryMBS(400, 400, 0, 0)

// pass type here to have GraphicsMagick know it since there is no file name in blob:
Var g as New GM16ImageMBS(blob, geo, "svg")
```

- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.39 Constructor(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct from image file.
See also:

- 92.16.33 Constructor 14329
- 92.16.35 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14331

92.16.40 Constructor(other as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an image by making a copy of the existing one.

- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.41 Constructor(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct from image file or image specification.
See also:

- 92.16.33 Constructor 14329

- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.42 Constructor(pic as picture)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new GMImage with the given picture.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
Backdrop=image.CopyPicture
```

Notes: Pixels from both the picture and picture's mask.

- 92.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32) 14331
- 92.16.37 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string) 14332
- 92.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14332
- 92.16.39 Constructor(file as folderitem) 14333
- 92.16.40 Constructor(other as GM16ImageMBS) 14334
- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct a blank image canvas of specified size and color.
Example:

```
Var g as new GM16GeometryMBS(600,600)
Var c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
Var image as new GM16ImageMBS(g, c)

const TrueColorType=6

// Ensure that there are no other references to this image.
image.modifyImage
// Set the image type to TrueColor DirectClass representation.
image.type=TrueColorType

Backdrop=image.CopyPicture(0,0,600,600)
```

- 92.16.42 Constructor(pic as picture) 14335
- 92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14337

92.16.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Example:

```
Var data as new memoryblock(2048*2048) // your data
Var image as new GM16ImageMBS(2048, 2048, "I", GM16ImageMBS.StorageTypeCharPixel, data)
```

Notes: Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GM16ImageMBS(640, 480, "RGB", GM16ImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.

type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

- 92.16.43 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14336

92.16.45 contrast(sharpen as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contrast image (enhance intensity differences in image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.contrast(10)

Backdrop=image.CopyPicture
```

92.16.46 convolve(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convolve image.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)

Var m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.convolve 3, m

Backdrop = g.CopyPicture
```

Notes: Applies a user-specified convolution to the image.
order represents the number of columns and rows in the filter kernel.
kernel is an array of doubles representing the convolution kernel.

92.16.47 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image and returns it as a new picture.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Rectangle(250, 250, 100, 100)

Backdrop=image.CopyPicture
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 92.16.48 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14340

92.16.48 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image and returns it as a new picture.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture(0,0,250,250)
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 92.16.47 CopyPicture as picture 14339

92.16.49 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image's mask and returns it as a new picture.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var g As New GM16ImageMBS(f)

// get image with mask
Var p As picture = g.CopyPicture
p.mask = g.CopyPictureMask

window1.Backdrop = p
```

See also:

- 92.16.50 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14341

92.16.50 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image's mask and returns it as a new picture.
See also:

- 92.16.49 CopyPictureMask as picture 14340

92.16.51 CopyPixelsMemory as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the pixels as they are into a memoryblock.
Notes: Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GM16ImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 92.16.52 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock 14341

92.16.52 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the pixels as they are into a memoryblock.
Notes: Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GM16ImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 92.16.51 CopyPixelsMemory as Memoryblock 14341

92.16.53 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Creates a HBITMAP for the image for use with Windows Declares.
Example:

```
// get test image
Var logo as Picture = LogoMBS(500)

// create GraphicsMagick image
Var g as new GM16ImageMBS(logo)

// make a HBitmap
Var hBitmap as ptr = g.CreateHBITMAP

// convert back to Xojo picture
Var pic as Picture = WindowsBitmapMBS.HBitmapToPicture(hBitmap, true)

// show in window
Backdrop = pic

// and cleanup memory
WindowsBitmapMBS.DeleteBitmap(hBitmap)
```

Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

92.16.54 crop(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop image (return subregion of original image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.crop GM16GeometryMBS.Make(100,200)

Backdrop=image.CopyPicture
```

92.16.55 cycleColormap(amount as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cycle (rotate) image colormap.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.cycleColormap(5)

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

92.16.56 Describe(verbose as Integer = 1) as String

MBS GraphicsMagick Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describes an image by printing its attributes.
Example:

```
Var f As FolderItem = FindFile("test.jpg")

Var g As New GM16ImageMBS(f)
Var s As String = g.Describe(2)
Break
```

Notes: Attributes include the image width, height, size, and others.

verbose: Whether output should be verbose.
Default is 1. Pass 0 to get a shorted output.
Pass 2 to count the number of colors in the image.

92.16.57 despeckle

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Despeckle image (reduce speckle noise).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.despeckle

Backdrop=image.CopyPicture
```

92.16.58 display

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Display image on screen.
Notes: Caution: if an image format is is not compatible with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

The plugin is not compiled with X11 so this call may not be useful.

92.16.59 edge(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Edge image (hilight edges in image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.edge

Backdrop=image.CopyPicture
```

Notes: The radius is the radius of the pixel neighborhood. Specify a radius of zero for automatic radius selection.

92.16.60 emboss(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Emboss image (hilight edges with 3D effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.emboss

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.61 enhance

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhance image (minimize noise).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.enhance

Backdrop=image.CopyPicture
```

92.16.62 erase

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all image pixels to the current background color.

92.16.63 extent(geo as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// extend image to fit
Var geo as new GM16GeometryMBS(500,500)
image.extent geo

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS) 14346

- 92.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14346
- 92.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14347

92.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// extend image to fit
Var geo as new GM16GeometryMBS(500,500)
Var col as GM16ColorMBS = GM16ColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.16.63 extent(geo as GM16GeometryMBS) 14345
- 92.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14346
- 92.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14347

92.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)
```

```
// extend image to fit
Var geo as new GM16GeometryMBS(500,500)
Var col as GM16ColorMBS = GM16ColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.16.63 extent(geo as GM16GeometryMBS) 14345
- 92.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS) 14346
- 92.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14347

92.16.66 extent(geo as GM16GeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// resize proportionally to fit
Var geo as new GM16GeometryMBS(500,500)
image.extent geo, image.CenterGravity

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.16.63 extent(geo as GM16GeometryMBS) 14345
- 92.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS) 14346
- 92.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14346

92.16.67 Flatten

MBS GraphicsMagick Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flatten the alpha channel.
Notes: Please set background color to define what color goes into the transparent areas.

92.16.68 flip

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flip image (reflect each scanline in the vertical direction).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.flip

Backdrop=image.CopyPicture
```

92.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.70 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348
- 92.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14349
- 92.16.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14349

92.16.70 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 92.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14348
- 92.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14349
- 92.16.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14349

92.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14348
- 92.16.70 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348
- 92.16.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14349

92.16.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 92.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14348
- 92.16.70 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348
- 92.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14349

92.16.73 floodFillOpacity(x as UInt32, y as UInt32, opacity as UInt32, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill pixels matching color (within fuzz factor) of target pixel(x,y) with replacement opacity value using method.
Example:

```
Var image as new GM16ImageMBS(pic)
// fills opacity channel with 100
image.floodFillOpacity(250,250, 100, 2)
```

Notes: Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.75 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14350
- 92.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14351
- 92.16.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14351

92.16.75 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14350
- 92.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14351
- 92.16.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14351

92.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14350
- 92.16.75 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14350
- 92.16.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14351

92.16.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14350
- 92.16.75 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14350
- 92.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14351

92.16.78 flop

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flop image (reflect each scanline in the horizontal direction).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.flop

Backdrop=image.CopyPicture
```

92.16.79 FontMap as string

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current font map in use.
Notes: The MBS Plugin provides to GraphicsMagick the font map to use.
This is a XML defining which fonts are available.
Use this function to learn what fonts may be available or debug to see why a font doesn't load.

92.16.80 fontTypeMetrics(name as string) as GM16TypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain font metrics for text string given current font, pointsize, and density settings.

92.16.81 formatExpression(expression as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format the specified expression similar to command line '-format'.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: For example "%wx%h" is converted to a string containing image WIDTHxHEIGHT like "640x480".

92.16.82 frame

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.frame

Backdrop=image.CopyPicture
```

See also:

- 92.16.83 frame(geometry as GM16GeometryMBS) 14353
- 92.16.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14354

92.16.83 frame(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.frame(GM16GeometryMBS.Make("10x10"))

Backdrop=image.CopyPicture
```

See also:

- 92.16.82 frame 14353
- 92.16.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14354

92.16.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.frame(15,15)

Backdrop=image.CopyPicture
```

See also:

- 92.16.82 frame 14353
- 92.16.83 frame(geometry as GM16GeometryMBS) 14353

92.16.85 frameGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for frame.

92.16.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma correct the image or individual image channels.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.gamma(1,2,3)

Backdrop=image.CopyPicture
```

See also:

- 92.16.253 gamma as Double 14410

92.16.87 gaussianBlur(width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gaussian blur image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.gaussianBlur(30, 10)

Backdrop=image.CopyPicture
```

Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma

92.16.88 gaussianBlurChannel(channel as Integer, width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gaussian blur image channel.
Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma.

92.16.89 getChromaBluePrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity blue primary point.

92.16.90 getchromaGreenPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

92.16.91 getchromaRedPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

92.16.92 getchromaWhitePoint(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

92.16.93 getConstPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers read-only pixels from the image to the pixel cache as defined by the specified region

92.16.94 GetEXIFOrientation(byref orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries orientation from EXIF.
Notes: Orientation is set to number from 0 to 8 depending on rotation. -1 if unknown.
This function can only read orientation, if there is an EXIF block in image.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

92.16.95 getPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers pixels from the image to the pixel cache as defined by the specified region.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)

// get pointer to some pixels to write
Var x as ptr = g.getPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via syncPixels. This method is valid for DirectClass images.

92.16.96 Graphics as GM16GraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a graphics object for this image.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: Using the graphics object you can draw on the image.

92.16.97 haldClut(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a color lookup table (Hald CLUT) to the image.

92.16.98 Hash(Size as Integer = 8) as String

MBS GraphicsMagick Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a hash of the image.
Example:

```
Var p As Picture = LogoMBS(500)
Var g As New GM16ImageMBS(p)
msgbox g.Hash
```

Notes: Hash is returned as 64 characters being 1 or 0.
We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.
This hash is quite immune against resizing, compression artifacts and hue changes.
You can use LevenshteinDistanceMBS or JaroWinklerDistanceMBS to compare two hashes.

Added size parameter for version 22.4:
The size of the bitmap. Value from 8 to 1024. Default is 8.

92.16.99 implode(factor as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Implode image (special effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.implode(0.3)

Backdrop=image.CopyPicture
```

92.16.100 IsLoggingEnabled as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether logging is enabled.
Notes: Returns true if we log GraphicsMagick usage.

92.16.101 JasperLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for jasper library.

92.16.102 label(text as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assign a label to an image.
Notes: Use this option to assign a specific label to the image. Optionally you can include the image filename, type, width, height, or scene number in the label by embedding special format characters. If the first character of string is @, the image label is read from a file titled by the remaining characters in the string. When converting to Postscript, use this option to specify a header string to print above the image.
See also:

- 92.16.264 label as string 14413

92.16.103 level(black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Level image to increase image contrast, and/or adjust image gamma.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.level(0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten:

92.16.104 levelChannel(channel as Integer, black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Level image channel to increase image contrast, and/or adjust image gamma.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.levelChannel(image.BlueChannel, 0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image channel by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

92.16.105 LibVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the version string of the GraphicsMagick library.

92.16.106 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the iconv library.
Notes: The GraphicsMagick classes may use libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

92.16.107 MagickVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version text of the GraphicsMagick library.

92.16.108 magnify

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Magnify image by integral size (double the dimensions)
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.magnify

Backdrop=image.CopyPicture
```

92.16.109 map(mapImage as GM16ImageMBS, dither as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remap image colors with closest color from a reference image.
Example:

```
// some picture we want to map colors
Var pic as Picture = LogoMBS(500)

// build a picture with palette
Var backgroundColor as new GM16ColorMBS(255,255,255) // white
Var size as new GM16GeometryMBS(10,10)

Var i as new GM16ImageMBS(pic)
Var x as new GM16ImageMBS(size, backgroundColor)

x.pixelColor(0,0) = new GM16ColorMBS(0 ,0 ,0 ) // black
x.pixelColor(0,1) = new GM16ColorMBS(255,0 ,0 ) // red
x.pixelColor(0,2) = new GM16ColorMBS(0 ,255,0 ) // green
x.pixelColor(0,3) = new GM16ColorMBS(0 ,0 ,255) // blue
x.pixelColor(0,4) = new GM16ColorMBS(255,255,0 ) // yellow
x.pixelColor(0,5) = new GM16ColorMBS(0 ,255,255) // cyan
x.pixelColor(0,6) = new GM16ColorMBS(255,0 ,255) // magenta

// do the map
i.map(x, false)

// convert result from palette picture to bitmap picture
i.type = i.TrueColorType

// and copy picture to backdrop
Backdrop = i.CopyPicture
```

Notes: Set dither to true in to apply Floyd/Steinberg error diffusion to the image. By default, color reduction chooses an optimal set of colors that best represent the original image. Alternatively, you can choose a particular set of colors from an image file with this option.

92.16.110 matteFloodfill(target as GM16ColorMBS, opacity as UInt32, x as Integer, y as Integer, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Floodfill designated area with a replacement opacity value.
Notes: Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.16.111 medianFilter(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter image by replacing each pixel component with the median color in a circular neighborhood.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.medianFilter(10)

Backdrop=image.CopyPicture
```

92.16.112 minify

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce image by integral (half) size.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.minify

Backdrop=image.CopyPicture
```

92.16.113 modequalizeifyImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Not documented.

92.16.114 modifyImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepare to update image (copy if reference >1).
Notes: Normally Magick++'s implicit reference counting takes care of all instance management. In the rare case that the automatic instance management does not work, use this method to assure that there is only one reference to the image to be modified. It should be used in the cases where a GraphicsMagick C function is used directly on an image which may have multiple references:

92.16.115 modulate(brightness as Double, saturation as Double, hue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulate percent hue, saturation, and brightness of an image.
Example:

```
Var logo as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(logo)

image.type = image.TrueColorType

// brightness 150%
image.modulate(150,100,100)
backdrop = image.CopyPicture
```

Notes: Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

92.16.116 montageGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile size and offset within an image montage.
Notes: Only valid for montage images.

92.16.117 motionBlur(radius as Double, sigma as Double, angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Motion blur image with specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.motionBlur(30,10,90)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels. The angle parameter specifies the angle the object appears to be comming from (zero degrees is from the right).

92.16.118 negate(grayscale as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negate colors in image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.negate

Backdrop=image.CopyPicture
```

Notes: Set grayscale to only negate grayscale values in image.

92.16.119 normalize

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Normalize image (increase contrast by normalizing the pixel values to span the full range of color values).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.normalize

Backdrop=image.CopyPicture
```

92.16.120 oilPaint(radius as Double=3.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Oilpaint image (image looks like an oil painting).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.oilPaint

Backdrop=image.CopyPicture
```

92.16.121 opacity(opacity as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or attenuate the opacity channel in the image.
Notes: If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB. The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

92.16.122 opaque(opaqueColor as GM16ColorMBS, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change color of specified opaque pixel to specified pen color.

92.16.123 ping(data as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the blob.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.16.124 ping(file as folderitem) 14367
- 92.16.125 ping(Path as string) 14367

92.16.124 ping(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// try with Constructor (same as read)
Var t1 as Double = Microseconds
Var g1 as new GM16ImageMBS(f)

// now just ping
Var t2 as Double = Microseconds
Var g2 as new GM16ImageMBS
g2.ping(f)

// or read
Var t3 as Double = Microseconds
Var g3 as new GM16ImageMBS
g3.read(f)

Var t4 as Double = Microseconds

// show speeds
MsgBox str(T4-t3)+" ¬µs for read"+EndOfLine+_
str(T3-t2)+" ¬µs for ping"+EndOfLine+_
str(T2-t1)+" ¬µs for Constructor"
```

Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.16.123 ping(data as GM16BlobMBS) 14366
- 92.16.125 ping(Path as string) 14367

92.16.125 ping(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the image specification.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.16.123 ping(data as GM16BlobMBS) 14366
- 92.16.124 ping(file as folderitem) 14367

92.16.126 PNGLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries PNG library version string.

92.16.127 quantize(measureError as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quantize image (reduce number of colors).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Set measureError to true in order to calculate error attributes.

92.16.128 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the quantum depth.

92.16.129 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
```

```
const AddQuantumOp = 1
const ThresholdQuantumOp = 10

g.quantumOperator( g.AllChannels, AddQuantumOp, 100)

// show
me.Backdrop = g.CopyPicture
```

See also:

- 92.16.130 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double) 14369

92.16.130 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
See also:

- 92.16.129 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double) 14368

92.16.131 raiseGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for raise.

92.16.132 raiseImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.raiseImage

Backdrop=image.CopyPicture
```

See also:

- 92.16.133 raiseImage(geometry as GM16GeometryMBS, raisedFlag as boolean=false) 14370

92.16.133 raiseImage(geometry as GM16GeometryMBS, raisedFlag as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.raiseImage(GM16GeometryMBS.Make(5,8))

Backdrop=image.CopyPicture
```

See also:

- 92.16.132 raiseImage 14369

92.16.134 randomThreshold(thresholds as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Random threshold image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.randomThreshold(GM16GeometryMBS.make("50x200"))

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

92.16.135 randomThresholdChannel(thresholds as GM16GeometryMBS, channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Random threshold image channel.
Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

92.16.136 read(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame from in-memory Blob.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GM16ImageMBS
Var blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

- 92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14376

92.16.137 read(blob as GM16BlobMBS, size as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size from in-memory Blob.
See also:

- 92.16.136 read(blob as GM16BlobMBS) 14371
- 92.16.138 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer) 14372
- 92.16.139 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string) 14373
- 92.16.140 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14373
- 92.16.141 read(file as folderitem) 14374
- 92.16.142 read(path as string) 14374

- 92.16.144 read(size as GM16GeometryMBS, Path as string) 14375
- 92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14376

92.16.138 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size and depth from in-memory Blob.
See also:

- 92.16.136 read(blob as GM16BlobMBS) 14371
- 92.16.137 read(blob as GM16BlobMBS, size as GM16GeometryMBS) 14372
- 92.16.139 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string) 14373
- 92.16.140 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14373

- 92.16.141 read(file as folderitem) 14374
- 92.16.142 read(path as string) 14374
- 92.16.143 read(size as GM16GeometryMBS, file as folderitem) 14375
- 92.16.144 read(size as GM16GeometryMBS, Path as string) 14375
- 92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14376

92.16.139 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size, depth, and format from in-memory Blob.
See also:

- 92.16.136 read(blob as GM16BlobMBS) 14371
- 92.16.137 read(blob as GM16BlobMBS, size as GM16GeometryMBS) 14372
- 92.16.138 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer) 14372
- 92.16.140 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14373
- 92.16.141 read(file as folderitem) 14374
- 92.16.142 read(path as string) 14374

- 92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14376

92.16.144 read(size as GM16GeometryMBS, Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size into current object.
See also:

- 92.16.136 read(blob as GM16BlobMBS) 14371

- 92.16.137 read(blob as GM16BlobMBS, size as GM16GeometryMBS) 14372
- 92.16.138 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer) 14372
- 92.16.139 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string) 14373
- 92.16.140 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14373
- 92.16.141 read(file as folderitem) 14374
- 92.16.142 read(path as string) 14374
- 92.16.143 read(size as GM16GeometryMBS, file as folderitem) 14375
- 92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14376

92.16.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Notes: Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GM16ImageMBS(640, 480, "RGB", GM16ImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel,

StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

92.16.146 reduceNoise

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce noise in image using a noise peak elimination filter.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.reduceNoise

Backdrop=image.CopyPicture
```

See also:

- 92.16.147 reduceNoise(order as Double) 14377

92.16.147 reduceNoise(order as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce noise in image using a noise peak elimination filter.
See also:

- 92.16.146 reduceNoise 14377

92.16.148 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the release date of the used graphics magick library.
Notes: We update the library only when someone needs an update, so if you need, please contact us.

92.16.149 repage

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image page canvas and position.

92.16.150 resize(geo as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying only geometry, with filter and blur obtained from Image default.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// resize proportionally to fit
Var geo as new GM16GeometryMBS(500,500)
image.resize geo

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Same result as 'zoom' method.
See also:

- 92.16.151 resize(geo as GM16GeometryMBS, filterType as Integer) 14378
- 92.16.152 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double) 14379

92.16.151 resize(geo as GM16GeometryMBS, filterType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying geometry and filter, with blur using Image default.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// resize proportionally to fit
Var geo as new GM16GeometryMBS(500,500)
image.resize geo, image.CubicFilter

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

See also:

- 92.16.150 resize(geo as GM16GeometryMBS) 14378
- 92.16.152 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double) 14379

92.16.152 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying geometry, filter, and blur.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GM16ImageMBS(f)

// resize proportionally to fit
Var geo as new GM16GeometryMBS(500,500)
image.resize geo, image.CubicFilter, 3

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

See also:

- 92.16.150 resize(geo as GM16GeometryMBS) 14378
- 92.16.151 resize(geo as GM16GeometryMBS, filterType as Integer) 14378

92.16.153 roll(columns as UInt32, rows as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.roll(30,30)

Backdrop=image.CopyPicture
```

See also:

- 92.16.154 roll(roll as GM16GeometryMBS) 14380

92.16.154 roll(roll as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.roll(GM16GeometryMBS.Make(0,0,30,30))

Backdrop=image.CopyPicture
```

See also:

- 92.16.153 roll(columns as UInt32, rows as UInt32) 14379

92.16.155 rotate(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotate image counter-clockwise by specified number of degrees.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.rotate(30)

Backdrop=image.CopyPicture
```

92.16.156 sample(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image by using pixel sampling algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.sample GM16GeometryMBS.make(100,100)

Backdrop=image.CopyPicture
```

92.16.157 scale(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image by using simple ratio algorithm which provides good quality.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.scale new GM16GeometryMBS(100,100)

Backdrop=image.CopyPicture
```

92.16.158 segment(clusterThreshold as Double=1.0, smoothingThreshold as Double=1.5)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.segment

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

Notes: A histogram is built for the image. This histogram is filtered to reduce noise and a second derivative of the histogram plot is built and used to identify potential cluster colors (peaks in the histogram). The cluster colors are then validated by scanning through all of the pixels to see how many pixels fall within each cluster. Some candidate cluster colors may not match any of the image pixels at all and should be discarded. Specify clusterThreshold, as the number of pixels matching a cluster color in order for the cluster to be considered valid. SmoothingThreshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative. The default is 1.5.

92.16.159 setChromaBluePrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity blue primary point.
Notes: e.g. x=0.15, y=0.06

92.16.160 setchromaGreenPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

92.16.161 setchromaRedPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

92.16.162 setchromaWhitePoint(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

92.16.163 SetEXIFOrientation(orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets orientation for EXIF.
Notes: Changing orientation may need to set orientation via SetOrientation and SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

92.16.164 SetLogEventMask(events as String)

MBS GraphicsMagick Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set log event mask.
Example:

```
GM16ImageMBS.SetLogEventMask("coder,annotate")
```

Notes: Defines which events are logged.
By default logging goes to stderr, so on macOS you may need to run your app via Terminal to see logs there.

List of events includes: none, Configure, Annotate, Render, Transform, Locale, Coder, X11, Cache, Blob, Deprecate, User, Resource, TemporaryFile, Exception, Option, Information, Warning, Error, FatalError and All.

92.16.165 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture into the Image at the given position.

92.16.166 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture into the Image's mask at the given position.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))
```

```
g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

92.16.167 setPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates a pixel cache region to store image pixels as defined by the region rectangle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)

// get pointer to some pixels to write
Var x as ptr = g.setPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel cache to the image via syncPixels.

92.16.168 setStrokeDashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.16.169 shade(azimuth as Double=30.0, elevation as Double=30.0, colorShading as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shade image using distant light source.
Notes: Specify azimuth and elevation as the position of the light source. By default, the shading results as a grayscale image.. Set colorShading to true to shade the red, green, and blue components of the image.

92.16.170 sharpen(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpen pixels in image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.sharpen

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.171 sharpenChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpen pixels in image channel.
Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.16.172 shave(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shave pixels from image edges.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.shave(new GM16GeometryMBS(200,200))

Backdrop=image.CopyPicture
```

92.16.173 shear(xShearAngle as Double, yShearAngle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shear image (create parallelogram by sliding image by X or Y axis).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.shear(10,20)

Backdrop=image.CopyPicture
```

Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x degrees is measured relative to the Y axis, and similarly, for Y direction shears y degrees is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined as borderColor.

92.16.174 signature(force as boolean=false) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image textual signature.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

MsgBox image.signature
```

Backdrop=image.CopyPicture

Notes: Set force to true in order to re-calculate the signature regardless of whether the image data has been modified.

92.16.175 solarize(factor as Double=50.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Solarize image (similar to effect seen when exposing a photographic film to light during the development process)
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.solarize

Backdrop=image.CopyPicture
```

92.16.176 spread(amount as UInt32=3)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Spread pixels randomly within image by specified ammount
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.spread 5

Backdrop=image.CopyPicture
```

92.16.177 statistics as GM16ImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain image statistics.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
```

```
Var stat as GM16ImageStatisticsMBS = g.statistics
Var gs as GM16ImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: Statistics are normalized to the range of 0.0 to 1.0 and are output to the specified ImageStatistics structure.

92.16.178 stegano(watermark as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a digital watermark to the image (based on second image).
Example:

```
Var p as Picture = LogoMBS(500)
Var p1 as Picture = New Picture(550,500,32)
Var p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

Var image1 as new GM16ImageMBS(p1)
Var image2 as new GM16ImageMBS(p2)

image2.zoom(new GM16GeometryMBS(100,100)) // scale down

// add watermark
image1.stegano(image2)

// now make a threshold so you see the difference
image1.threshold 254

image1.type = image1.TrueColorType
Backdrop=image1.CopyPicture
```

92.16.179 stereo(rightImage as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image which appears in stereo when viewed with red-blue glasses (Red image on left, blue on right)
Example:

```
Var p as Picture = LogoMBS(500)
```

```
Var p1 as Picture = New Picture(550,500,32)
Var p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

Var image1 as new GM16ImageMBS(p1)
Var image2 as new GM16ImageMBS(p2)

image1.stereo(IMAGE2)

Backdrop=image1.CopyPicture
```

92.16.180 strip

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remove all profiles and text attributes from the image.

92.16.181 strokeDashArray as Double()

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.16.182 swirl(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swirl image (image pixels are rotated by degrees).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.swirl 200

Backdrop=image.CopyPicture
```

92.16.183 syncPixels

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers the image cache pixels to the image.

92.16.184 texture(texture as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Channel a texture on pixels matching image background color.

92.16.185 threshold(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Threshold image channels (below threshold becomes black, above threshold becomes white).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The range of the threshold parameter is 0 to MaxRGB.

92.16.186 thumbnail(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image using several algorithms to make smaller images very quickly.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
```

```
// make thumbnail
Var geo as new GM16GeometryMBS(100, 100)
g.thumbnail(geo)

// show
me.Backdrop = g.CopyPicture
```

92.16.187 TIFFLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for tiff library.

92.16.188 transform(imageGeometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 92.16.189 transform(imageGeometry as GM16GeometryMBS, cropGeometry as GM16GeometryMBS) 14391

92.16.189 transform(imageGeometry as GM16GeometryMBS, cropGeometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 92.16.188 transform(imageGeometry as GM16GeometryMBS) 14391

92.16.190 transformOrigin(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of coordinate system to use when annotating with text or drawing.

92.16.191 transformReset

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset transformation parameters to default.

92.16.192 transformRotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation to use when annotating with text or drawing.

92.16.193 transformScale(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scale to use when annotating with text or drawing.

92.16.194 transformSkewX(x as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Skew to use in X axis when annotating with text or drawing.

92.16.195 transformSkewY(y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Skew to use in Y axis when annotating with text or drawing.

92.16.196 transparent(color as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add matte channel to image, setting pixels matching color to transparent.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

```
Var c as new GM16ColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

92.16.197 trim

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim edges that are the background color from the image.
Example:

```
Var p as Picture = LogoMBS(500)
// make the logo picture bigger
Var q as Picture = New Picture(700,700,32)

q.Graphics.DrawPicture p,100,100

Var image as new GM16ImageMBS(q)

// now trim the white border away
image.trim

Backdrop=image.CopyPicture
```

Notes: See ColorFuzz property for how far the pixel value can differentiate.

92.16.198 unregisterId

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Not documented.

92.16.199 unsharpmask(radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace image with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

```
image.unsharpmask(10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes: radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
amount: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence amount.

92.16.200 unsharpmaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace image channel with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.unsharpmaskChannel(Image.RedChannel, 10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

channel:	image channel to modify.
radius:	the radius of the Gaussian, in pixels, not counting the center pixel.
sigma:	the standard deviation of the Gaussian, in pixels.
amount:	the percentage of the difference between the original and the blur image that is added back into the original.
threshold:	the threshold in pixels needed to apply the diffence amount.

92.16.201 wave(amplitude as Double=25.0, wavelength as Double=150.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Map image pixels to a sine wave.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.wave

Backdrop=image.CopyPicture
```

92.16.202 WebPVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of WebP library.
Notes: Should be a version string like "1.3.0".

92.16.203 write(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.16.204 write(blob as GM16BlobMBS, magick as string) 14396
- 92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14396
- 92.16.206 write(file as folderitem) 14397
- 92.16.207 write(Path as string) 14397
- 92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14398

92.16.204 write(blob as GM16BlobMBS, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.16.203 write(blob as GM16BlobMBS) 14396
- 92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14396
- 92.16.206 write(file as folderitem) 14397
- 92.16.207 write(Path as string) 14397
- 92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14398

92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.16.203 write(blob as GM16BlobMBS) 14396
- 92.16.204 write(blob as GM16BlobMBS, magick as string) 14396
- 92.16.206 write(file as folderitem) 14397
- 92.16.207 write(Path as string) 14397
- 92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14398

92.16.206 write(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to a file.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

See also:

- 92.16.203 write(blob as GM16BlobMBS) 14396
- 92.16.204 write(blob as GM16BlobMBS, magick as string) 14396
- 92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14396
- 92.16.207 write(Path as string) 14397
- 92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14398

92.16.207 write(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to a file.
Example:

```
// export a picture as PCL
Var l As Picture = LogoMBS(500)
Var p As New GM16ImageMBS(l)

p.type = p.BilevelType
```

p.write("/tmp/print.pcl")

See also:

- 92.16.203 write(blob as GM16BlobMBS) 14396
- 92.16.204 write(blob as GM16BlobMBS, magick as string) 14396
- 92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14396
- 92.16.206 write(file as folderitem) 14397
- 92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14398

92.16.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to an array of pixels with storage type specified by user (DispatchImage).
Notes: e.g. image.write(0, 0, 640, 1, "RGB", 0, pixels)
See also:

- 92.16.203 write(blob as GM16BlobMBS) 14396
- 92.16.204 write(blob as GM16BlobMBS, magick as string) 14396
- 92.16.205 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14396
- 92.16.206 write(file as folderitem) 14397
- 92.16.207 write(Path as string) 14397

92.16.209 ZLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for zlib library.

92.16.210 zoom(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Zoom (resize) image to specified size.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.zoom(new GM16GeometryMBS(200,200))

Backdrop=image.CopyPicture
```

92.16.211 ZPL(Header as boolean = true) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image as ZPL hex image.
Notes: This is for sending data to a receipt printer. The picture is taken as black & white image and we build the hex string, you can send to the printer.
Picture needs to have a width dividable by 8.

Set Header to false for skipping header and footer.

92.16.212 Properties

92.16.213 adjoin as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Join images into a single multi-image file.
Notes: (Read and Write property)

92.16.214 animationDelay as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence.
Notes: This option is useful for regulating the animation of a sequence of GIF images within Netscape.
(Read and Write property)

92.16.215 animationIterations as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of iterations to loop an animation (e.g. Netscape loop extension) for.
Notes: (Read and Write property)

92.16.216 antiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes: Enabled by default.
(Read and Write property)

92.16.217 backgroundColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Example:

```
// make a red and turn it to 100% transparent
Var red As New GM16ColorRGBMBS("red")
red.alpha = 1

// now make image and make it RGBA with the transparnet background
Var RastoredVectorImage as New GM16ImageMBS
RastoredVectorImage.type = GM16ImageMBS.TrueColorMatteType
RastoredVectorImage.backgroundColor = red

// now read SVG, so we get a transparent background
Var SVG_File as FolderItem = SpecialFolders.desktop.Child("test.svg")
RastoredVectorImage.read(SVG_File)
```

Notes: (Read and Write property)

92.16.218 backgroundTexture as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image file name to use as the background texture.
Notes: Does not modify image pixels.
(Read and Write property)

92.16.219 baseColumns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image width (before transformations)
Notes: (Read only property)

92.16.220 baseFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image filename (before transformations)
Notes: (Read only property)

92.16.221 baseRows as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image height (before transformations).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

Title = str(image.baseRows)+" x "+str(image.baseColumns)
```

Notes: (Read only property)

92.16.222 borderColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

92.16.223 boundingBox as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return smallest bounding box enclosing non-border pixels.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color
image.strokeColor = new GM16ColorRGBMBS("green") // set color

image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle

draw.Circle(250, 250, 120, 150)
draw.Draw

draw = nil
image.type = image.TrueColorType

Backdrop = image.CopyPicture

MsgBox image.boundingBox.StringValue
```

Notes: The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by crop(Geometry(0,0)).
(Read only property)

92.16.224 boxColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base color that annotation text is rendered on (default none).
Notes: (Read and Write property)

92.16.225 classType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image class (DirectClass or PseudoClass).
Notes: NOTE: setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built):
(Read and Write property)

92.16.226 clipMask as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Associate a clip mask image with the current image.
Notes: The clip mask image must have the same dimensions as the current image or an exception is thrown. Clipping occurs wherever pixels are transparent in the clip mask image. Clipping Pass an invalid image to unset an existing clip mask.
(Read and Write property)

92.16.227 colorFuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this option to match colors that are close to the target color in RGB space.

e.g. set to 50 for 8 bit class and 50 * 257 for the 16 bit class to allow 20% divagation in pixel values.
(Read and Write property)

92.16.228 colorMapSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of entries in the colormap.
Notes: Setting the colormap size may extend or truncate the colormap. The maximum number of supported entries is specified by the MaxColormapSize constant, and is dependent on the value of QuantumDepth when GraphicsMagick is compiled. An exception is thrown if more entries are requested than may be supported. Care should be taken when truncating the colormap to ensure that the image colormap indexes reference valid colormap entries.
(Read and Write property)

92.16.229 colorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The colorspace (e.g. CMYK) used to represent the image pixel colors.
Notes:

(Read and Write property)

UndefinedColorspace	= 0
RGBColorspace	= 1 (Plain old RGB colorspace)
GRAYColorspace	= 2 (Plain old full-range grayscale)
TransparentColorspace	= 3 (RGB but preserve matte channel during quantize)
OHTAColorspace	= 4
XYZColorspace	= 5 (CIE XYZ)
YCCColorspace	= 6 (Kodak PhotoCD PhotoYCC)
YIQColorspace	= 7
YPbPrColorspace	= 8
YUVColorspace	= 9
CMYKColorspace	= 10 (Cyan, magenta, yellow, black, alpha)
sRGBColorspace	= 11 (Kodak PhotoCD sRGB)
HSLColorspace	= 12 (Hue, saturation, luminosity)
HWBColorspace	= 13 (Hue, whiteness, blackness)
LABColorspace	= 14 (LAB colorspace not supported yet other than via lcms)
CineonLogRGBColorspace	= 15 (RGB data with Cineon Log scaling, 2.048 density range)
Rec601LumaColorspace	= 16 (Luma (Y) according to ITU-R 601)
Rec601YCbCrColorspace	= 17 (YCbCr according to ITU-R 601)
Rec709LumaColorspace	= 18 (Luma (Y) according to ITU-R 709)
Rec709YCbCrColorspace	= 19 (YCbCr according to ITU-R 709)

92.16.230 columns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

92.16.231 comment as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image comment.
Notes: When you set this property, you add comment string to image.
By default, each image is commented with its file name. Use this method to assign a specific comment to the image. Optionally you can include the image filename, type, width, height, or other image attributes by embedding special format characters:

(Read and Write property)

92.16.232 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composition operator to be used when composition is implicitly used (such as for image flattening).
Notes: (Read and Write property)

92.16.233 compressType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: The default is the compression type of the input image file.
(Read and Write property)

92.16.234 debug as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable printing of debug messages from GraphicsMagick as it executes.
Notes: (Read and Write property)

92.16.235 density as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical and horizontal resolution in pixels of the image.
Example:

```
Var p as new GM16ImageMBS

Var item as FolderItem = SpecialFolder.Desktop.Child("input.png")
p.read(item)
p.scale new GM16GeometryMBS(3750,3750)
p.quality = 95
p.resolutionUnits = p.PixelsPerInchResolution
p.density = new GM16GeometryMBS(300, 300)
Var out as FolderItem = SpecialFolder.Desktop.Child("output.png")
```

p.write out

Notes: This option specifies an image density when decoding a Postscript or Portable Document page. Often used with psPageSize.
(Read and Write property)

92.16.236 depth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (bits allocated to red/green/blue components).
Notes: Used to specify the bit depth when reading or writing raw images or when the output format supports multiple depths. Defaults to the quantum depth that GraphicsMagick is compiled with.
(Read and Write property)

92.16.237 directory as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile names from within an image montage.
Notes: (Read only property)

92.16.238 endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian mode.
Notes: Endianness (LSBEndian like Intel, MSBEndian like SPARC, or NativeEndian for what this computer uses) for image formats which support endian-specific options.
(Read and Write property)

92.16.239 ExifThumbnail as String

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Var g As New GM16ImageMBS

// not load, but just read header & metadata
```

```
g.ping("/Users/cs/Desktop/test.JPG")

// get thumbnail
Var Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)
```

Notes: Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

92.16.240 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image file name.
Notes: (Read and Write property)

92.16.241 fileSize as Int64

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes of the image on disk.
Notes: (Read only property)

92.16.242 fillColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color to use when filling drawn objects.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5
```

```
Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.16.243 fillPattern as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pattern to use while filling drawn objects.
Notes: (Read and Write property)

92.16.244 fillRule as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rule to use when filling drawn objects
Notes: (Read and Write property)

92.16.245 filterType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reduction filter employed has a sigificant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
Notes: Filter to use when resizing image.
(Read and Write property)

92.16.246 font as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font.
Notes: If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").

(Read and Write property)

92.16.247 FontFamily as String

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font family to use.
Notes: The plugin will look through the list to find best match for combination of family, style, stretch and weight.
You can use either FontFamily or Font property, but not both.
Setting font family clears font.
(Read and Write property)

92.16.248 fontPointsize as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font point size.
Notes: (Read and Write property)

92.16.249 FontStretch as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font stretch.
Notes: Can be Normal, UltraCondensed, ExtraCondensed, Condensed, SemiCondensed, SemiExpanded, Expanded, ExtraExpanded, UltraExpanded or Any.
See stretch constants.
(Read and Write property)

92.16.250 FontStyle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font style to use.
Notes: Can be Normal, Italic, Oblique or Any.
See font style constants.
(Read and Write property)

92.16.251 FontWeight as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font weight.
Notes: The font weight in range from 0 to 1000.
400 is normal and 800 bold.
(Read and Write property)

92.16.252 format as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Long image format description.
Notes: (Read only property)

92.16.253 gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma correct the image or individual image channels.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.gamma = 3.0

Backdrop=image.CopyPicture
```

Notes: If you get the value, it is the gamma level of the image. Gamma is a pow() function which converts between the linear light representation and the representation for the computer display. Most computer images are gamma corrected to 2.2 (1/0.4545) so that each step results in a visually linear step on a computer or video display:
(Read and Write property)
See also:

- 92.16.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double) 14354

92.16.254 geometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size of the image when encoding.
Notes: (Read only property)

92.16.255 getConstIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain immutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

92.16.256 getIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain mutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

92.16.257 gifDisposeMethod as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GIF disposal method.
Notes: This option (specific to the GIF file format) is used to control how successive frames are rendered (how the preceding frame is disposed of) when creating a GIF animation.

Constant	Disposal	Description
UndefinedDispose	0	No disposal specified.
NoneDispose	1	Do not dispose between frames.
BackgroundDispose	2	Overwrite frame with background color from header.
PreviousDispose	3	Overwrite with previous frame.

(Read and Write property)

92.16.258 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Example:

```
Var c as new GM16ColorMBS("white")
Var g as new GM16GeometryMBS(100,100)
Var image as new GM16ImageMBS(g, c)
MsgBox hex(Image.handle) // valid if not zero
```

Notes: (Read and Write property)

92.16.259 height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image.
Example:

```
Var c as new GM16ColorRGBMBS(1.0,0.0,0.0)
Var size as new GM16GeometryMBS(100,100)
Var g as new GM16ImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes: This is a convenience function for you which calls size.height.
(Read only property)

92.16.260 iccColorProfile as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ICC color profile.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("IMG_0793.tif")
Var Image as new GM16ImageMBS(f)
Var ProfileBlob as GM16BlobMBS = Image.iccColorProfile
Var ProfileData as string = ProfileBlob.CopyString
Var cm as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ProfileData)
Var name as string = cm.Name

Break // check data in debugger
```

Notes: Supplied via a Blob since Magick++/ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Color Consortium for the format of ICC color profiles.
(Read and Write property)

92.16.261 interlaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.
(Read and Write property)

92.16.262 iptcProfile as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: IPTC profile.
Notes: Supplied via a Blob since Magick++ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Press Telecommunications Council for IPTC profiles.
(Read and Write property)

92.16.263 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain valid image?
Notes: Set to false in order to invalidate the image. Images constructed via the default constructor are invalid images and isValid() will return false.
(Read and Write property)

92.16.264 label as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image label.
Notes: (Read only property)
See also:

- 92.16.102 label(text as string) 14359

92.16.265 lineWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stroke width for drawing vector objects (default one)
Notes: This method is now deprecated. Please use strokeWidth instead.
(Read and Write property)

92.16.266 magick as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the codec to use for compression.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

Notes: (Read and Write property)

92.16.267 matte as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image supports transparency (matte channel)
Notes: (Read and Write property)

92.16.268 matteColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (frame) color.
Notes: (Read and Write property)

92.16.269 meanErrorPerPixel as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mean error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.16.270 modulusDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image modulus depth (minimum number of bits required to support red/green/blue components without loss of accuracy).
Notes: The pixel modulus depth may be decreased by supplying a value which is less than the current value, updating the pixels (reducing accuracy) to the new depth. The pixel modulus depth can not be increased over the current value using this method.
(Read and Write property)

92.16.271 monochrome as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image to black and white while color reducing (quantizing).
Notes: (Read and Write property)

92.16.272 normalizedMaxError as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The normalized max error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.16.273 normalizedMeanError as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The normalized mean error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.16.274 orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image orientation. Supported by some file formats such as DPX and TIFF. Useful for turning the right way up.
Notes: (Read and Write property)

92.16.275 page as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size and location of an image canvas.
Notes: Use this option to specify the dimensions and position of the Postscript page in dots per inch or a TEXT page in pixels. This option is typically used in concert with density .

Page may also be used to position a GIF image (such as for a scene in an animation).
(Read and Write property)

92.16.276 penColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pen color.
Notes: (Read and Write property)

92.16.277 quality as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level (default 75).
Notes: (Read and Write property)

92.16.278 quantizeColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of colors to quantize to.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.quantizeColors = 10
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.16.279 quantizeColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorspace to quantize in (default RGB).
Example:

```
// load a picture
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Var Converter As New GM16ImageMBS(Pic)

// quantize with dither
Converter.type = GM16ImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GM16ImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

Notes: Empirical evidence suggests that distances in color spaces such as YUV or YIQ correspond to perceptual color differences more closely than do distances in RGB space. These color spaces may give better

results when color reducing an image.
(Read and Write property)

92.16.280 quantizeDither as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Floyd/Steinberg error diffusion to the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.quantizeColors = 10
image.quantizeDither = true
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The basic strategy of dithering is to trade intensity resolution for spatial resolution by averaging the intensities of several neighboring pixels. Images which suffer from severe contouring when reducing colors can be improved with this option. The quantizeColors or monochrome option must be set for this option to take effect.
(Read and Write property)

92.16.281 quantizeTreeDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Depth of the quantization color classification tree.
Notes: Values of 0 or 1 allow selection of the optimal tree depth for the color reduction algorithm. Values between 2 and 8 may be used to manually adjust the tree depth.
(Read and Write property)

92.16.282 Quiet as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suppress all warning messages.
Notes: Error messages are still reported.
(Read and Write property)

92.16.283 renderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of rendering intent (used when applying an ICC color profile).
Notes: (Read and Write property)

92.16.284 resolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Example:

```
Var item As FolderItem = SpecialFolder.Desktop.Child("test.jpeg")
Var p As New GM16ImageMBS(item)

// scale image
p.quality = 95
p.scale New GM16GeometryMBS(1000,1000)

// change resolution
p.density = New GM16GeometryMBS(300, 300)
p.resolutionUnits = p.PixelsPerInchResolution

// remove metadata
Var empty As New GM16BlobMBS
p.profile("EXIF") = empty
p.profile("IPTC") = empty
p.profile("XMP") = empty

Var out As FolderItem = SpecialFolder.Desktop.Child("output.jpeg")
p.write out
```

Notes: (Read and Write property)

92.16.285 rows as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of pixel rows in the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

```
Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

92.16.286 scene as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image scene number.
Notes: (Read and Write property)

92.16.287 size as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height of a raw image (an image which does not support width and height information).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

MsgBox image.size.StringValue

image.size = new GM16GeometryMBS(200,200)

Backdrop=image.CopyPicture
```

Notes: Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

92.16.288 strokeAntiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable stroke anti-aliasing.
Notes: (Read and Write property)

92.16.289 strokeColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color to use when drawing object outlines.
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.16.290 strokeDashOffset as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).
Notes: (Read and Write property)

92.16.291 strokeLineCap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the end of open subpaths when they are stroked. #
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.
(Read and Write property)

92.16.292 strokeLineJoin as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked. Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.
Notes: (Read and Write property)

92.16.293 strokeMiterLimit as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4. (Read and Write property)

92.16.294 strokePattern as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pattern image to use while stroking object outlines.
Notes: (Read and Write property)

92.16.295 strokeWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stroke width for drawing vector objects (default one).
Example:

```
Var g as new GM16GeometryMBS(500,500)
Var c as new GM16ColorRGBMBS("white") // white
Var image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.16.296 subImage as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subimage of an image sequence.
Notes: (Read and Write property)

92.16.297 subRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of images relative to the base image.
Notes: (Read and Write property)

92.16.298 textEncoding as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation text encoding (e.g. "UTF-16").
Notes: (Read and Write property)

92.16.299 tileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile name.
Notes: (Read and Write property)

92.16.300 totalColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of colors in the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
```

Title = str(image.totalColors) // shows 5284
Backdrop=image.CombinePictureWithMask

Notes: (Read only property)

92.16.301 type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this image.
Example:

Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)

image.type = image.GrayscaleType

Backdrop=image.CopyPicture

Notes: You can set this value to convert the image to the type.

Convert the image representation to the specified type or retrieve the current image type. If the image is reduced to an inferior type, then image information may be lost (e.g. color changed to grayscale).

Available enumerations for the type parameter:

BilevelType	1	black/white
GrayscaleType	2	grayscale
GrayscaleMatteType	3	grayscale with alpha (opacity) channel
PaletteType	4	colormapped
PaletteMatteType	5	colormapped with transparency
TrueColorType	6	true (full) color
TrueColorMatteType	7	true (full) color with alpha (opacity) channel
ColorSeparationType	8	Cyan, magenta, yellow, and black
ColorSeparationMatteType	9	Cyan, magenta, yellow, and black with alpha (opacity) channel
OptimizeType	10	Optimize the image type to best represent the existing pixels

(Read and Write property)

92.16.302 verbose as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print detailed information about the image.
Notes: (Read and Write property)

92.16.303 view as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlashPix viewing parameters.
Notes: (Read and Write property)

92.16.304 width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image.
Example:

```
Var c as new GM16ColorRGBMBS(1.0,0.0,0.0)
Var size as new GM16GeometryMBS(100,100)
Var g as new GM16ImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes: This is a convenience function for you which calls size.width.
(Read only property)

92.16.305 x11Display as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X11 display to display to, obtain fonts from, or to capture image from.
Notes: (Read and Write property)

92.16.306 XResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: x resolution of the image.
Notes: See also density functions.
Settable with version 19.0.
(Read and Write property)

92.16.307 YResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: y resolution of the image.
Notes: Settable with version 19.0.
(Read and Write property)

92.16.308 attributeValue(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Access an arbitrary named image attribute.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("IMG_4048.jpg")
Var g as new GM16ImageMBS(f)
Var a as string = g.attributeValue("EXIF:DateTime")
MsgBox a
```

Notes: Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":
(Read and Write computed property)

92.16.309 channelDepth(channel as Integer) as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain modulus channel depth.
Notes: (Read and Write computed property)

92.16.310 colorMap(index as UInt32) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color at colormap position index.
Notes: (Read and Write computed property)
See also:

- 92.16.26 colorMap as GM16ColorMBS() 14327

92.16.311 defineSet(magick as string, key as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain a definition flag to applied when encoding or decoding the specified format.
Notes: Similar to the defineValue() method except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.
(Read and Write computed property)

92.16.312 defineValue(magick as string, key as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain a definition string to applied when encoding or decoding the specified format.
Notes: The meanings of the definitions are format specific. The format is designated by the magick argument, the format-specific key is designated by key, and the associated value is specified by value. See the defineSet() method if the key must be removed entirely.
(Read and Write computed property)

92.16.313 pixelColor(x as UInt32, y as UInt32) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set pixel color at location x & y.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GM16ImageMBS(p)
Var c as new GM16ColorMBS("red")

for x as Integer = 240 to 260
image.pixelColor(x,250)=c
next

for y as Integer = 240 to 260
image.pixelColor(250,y)=c
next

Backdrop=image.CopyPicture
```

Notes: (Read and Write computed property)

92.16.314 profile(name as string) as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a named profile.
Example:

```
Var item As FolderItem = SpecialFolder.Desktop.Child("test.jpeg")
Var p As New GM16ImageMBS(item)

// scale image
p.quality = 95
```

```
p.scale New GM16GeometryMBS(1000,1000)

// change resolution
p.density = New GM16GeometryMBS(300, 300)
p.resolutionUnits = p.PixelsPerInchResolution

// remove metadata
Var empty As New GM16BlobMBS
p.profile("EXIF") = empty
p.profile("IPTC") = empty
p.profile("XMP") = empty

Var out As FolderItem = SpecialFolder.Desktop.Child("output.jpeg")
p.write out
```

Notes: Add or remove a named profile to/from the image. Remove the profile by passing an empty Blob (e.g. Blob()). Valid names are "*", "8BIM", "ICM", "IPTC", or a user/format-defined profile name.

Retrieve a named profile from the image. Valid names are: "8BIM", "8BIMTEXT", "APP1", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name
(Read and Write computed property)

92.16.315 Constants

Constants

Constant	Value	Description
AbsoluteIntent	3	One of the intent type constants.
AddCompositeOp	8	One of the composite type constants.
AllChannels	10	One of the possible channel constants.
AllCompliance	&hffff	One of the Compliance type constants.
AssociatedAlpha	1	One of the possible alpha type constants.
AtopCompositeOp	4	One of the composite type constants.
BackgroundDispose	2	One of the gif dispose type constants.
BesselFilter	14	One of the filter type constants.
BilevelType	1	One of the image type constants.
BlackChannel	8	One of the possible channel constants.
BlackmanFilter	7	One of the filter type constants.
BlueChannel	5	One of the possible channel constants.
BottomLeftOrientation	4	One of the orientation type constants. Line direction: Left to right Frame Direction: Bottom to top
BottomRightOrientation	3	One of the orientation type constants. Line direction: Right to left Frame Direction: Bottom to top
BoxFilter	2	One of the filter type constants.
BumpmapCompositeOp	12	One of the composite type constants.
BZipCompression	2	One of the compression type constants.
CatromFilter	11	One of the filter type constants.
CenterGravity	5	One of the possible gravity constants.
ClearCompositeOp	18	One of the composite type constants.
ColorizeCompositeOp	28	One of the composite type constants.
ColorSeparationMatteType	9	One of the image type constants.
ColorSeparationType	8	One of the image type constants.
ConcatenateMode	3	One of the image type constants.
CopyBlackCompositeOp	35	One of the composite type constants.
CopyBlueCompositeOp	16	One of the composite type constants.
CopyCompositeOp	13	One of the composite type constants.
CopyCyanCompositeOp	32	One of the composite type constants.
CopyGreenCompositeOp	15	One of the composite type constants.
CopyMagentaCompositeOp	33	One of the composite type constants.
CopyOpacityCompositeOp	17	One of the composite type constants.
CopyRedCompositeOp	14	One of the composite type constants.
CopyYellowCompositeOp	34	One of the composite type constants.
CubicFilter	10	One of the filter type constants.
CyanChannel	2	One of the possible channel constants.
DarkenCompositeOp	24	One of the composite type constants.
DifferenceCompositeOp	10	One of the composite type constants.
DirectClass	1	One of the class type constants.
DisplaceCompositeOp	20	One of the composite type constants.
DissolveCompositeOp	19	One of the composite type constants.
DivideCompositeOp	36	One of the composite type constants.
EastGravity	6	One of the possible gravity constants.
FaxCompression	3	One of the compression type constants.
ForgetGravity	0	One of the possible gravity constants.
FrameMode	1	One of the mode type constants.
GaussianFilter	8	One of the filter type constants.
GaussianNoise	1	One of the possible noise constants.
GrayChannel	11	One of the possible channel constants.
GrayscaleMatteType	3	One of the image type constants.
GrayscaleType	2	One of the image type constants.
GreenChannel	3	One of the possible channel constants.
Group4Compression	4	One of the compression type constants.
HammingFilter	6	One of the filter type constants.
HanningFilter	5	One of the filter type constants.

Font Stretch

Constant	Value	Description
AnyStretch	9	Don't care.
CondensedStretch	3	Condensed
ExpandedStretch	6	Expanded
ExtraCondensedStretch	2	Extra Condensed
ExtraExpandedStretch	7	Extra Expanded
NormalStretch	0	Normal (Default)
SemiCondensedStretch	4	Semi Condensed
SemiExpandedStretch	5	Semi Expanded
UltraCondensedStretch	1	Ultra Condensed
UltraExpandedStretch	8	Ultra Expanded

Font Style

Constant	Value	Description
AnyStyle	3	Don't care.
ItalicStyle	1	Italic font.
NormalStyle	0	Normal (Default)
ObliqueStyle	2	Oblique font.

Storage Types

Constant	Value	Description
StorageTypeCharPixel	0	8bit numbers.
StorageTypeDoublePixel	5	64bit floating numbers.
StorageTypeFloatPixel	4	32bit floating numbers.
StorageTypeIntegerPixel	2	32bit numbers.
StorageTypeLongPixel	3	64bit numbers.
StorageTypeShortPixel	1	16bit numbers.

92.17 class GM16ImageStatisticsMBS

92.17.1 class GM16ImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for image statistics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

92.17.2 Methods

92.17.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

92.17.4 Properties

92.17.5 blue as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel statistics.
Notes: (Read only property)

92.17.6 green as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel statistics.
Notes: (Read only property)

92.17.7 opacity as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity channel statistics.
Notes: (Read only property)

92.17.8 red as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel statistics.
Notes: (Read only property)

92.18 class GM16LockMBS

92.18.1 class GM16LockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for locking a certain resource.
Notes: The idea is to pass the constructor a mutexlock and keep the only reference to this new lock object on the stack. On the end of the method, the destructor is called by Xojo and releases the mutexlock automatically.

92.18.2 Methods

92.18.3 Constructor(mutexlock as GM16MutexLockMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lock based on the given mutexlock.

92.18.4 Properties

92.18.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.18.6 target as GM16MutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mutexlock this lock is referencing to.
Notes: (Read and Write property)

92.19 class GM16MontageFramedMBS

92.19.1 class GM16MontageFramedMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: MontageFramed provides the means to specify montage options when it is desired to have decorative frames around the image thumbnails.
Notes: MontageFramed inherits from Montage and therefore provides all the methods of Montage as well as those shown in the table "MontageFramed Methods".

Framed thumbnails consist of four components: the thumbnail image, the thumbnail frame, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.
Subclass of the GM16MontageMBS class.

92.19.2 Methods

92.19.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.19.4 Properties

92.19.5 borderColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the background color within the thumbnail frame.
Notes: (Read and Write computed property)

92.19.6 borderWidth as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the border (in pixels) to place between a thumbnail and its surrounding frame.
Notes: This option only takes effect if thumbnail frames are enabled (via frameGeometry) and the thumbnail geometry specification doesn't also specify the thumbnail border width.
(Read and Write computed property)

92.19.7 frameGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the geometry specification for frame to place around thumbnail.
Notes: If this parameter is not specified, then the montage is unframed.
(Read and Write computed property)

92.19.8 matteColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail frame color.
Notes: (Read and Write computed property)

92.20 class GM16MontageMBS

92.20.1 class GM16MontageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Montage is the base class to provide montage options and provides methods to set all options required to render simple (unframed) montages.
Example:

```
// build montage
Var StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(&cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(&c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
Var logo as Picture = LogoMBS(500)
Var image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Var StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
Var resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: See GM16MontageFramedMBS if you would like to create a framed montage.

Unframed thumbnails consist of four components: the thumbnail image, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.

92.20.2 Methods

92.20.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.20.4 Properties

92.20.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.20.6 backgroundColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the background color that thumbnails are imaged upon.
Notes: (Read and Write computed property)

92.20.7 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the image composition algorithm for thumbnails.
Notes: This controls the algorithm by which the thumbnail image is placed on the background. Use of OverCompositeOp is recommended for use with images that have transparency. This option may have negative side-effects for images without transparency.
(Read and Write computed property)

92.20.8 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the image filename to be used for the generated montage images.
Notes: To handle the case were multiple montage images are generated, a printf-style format may be embedded within the filename. For example, a filename specification of image%02d.miff names the montage images as image00.miff, image01.miff, etc.
(Read and Write computed property)

92.20.9 fillColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the fill color to use for the label text.
Notes: (Read and Write computed property)

92.20.10 font as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail label font.
Notes: (Read and Write computed property)

92.20.11 geometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the size of the generated thumbnail.
Notes: (Read and Write computed property)

92.20.12 gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail positioning within the specified geometry area.
Notes: If the thumbnail is smaller in any dimension than the geometry, then it is placed according to this specification.
See Gravity constants in GM16ImageMBS class.
(Read and Write computed property)

92.20.13 label as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the format used for the image label.
Notes: Special format characters may be embedded in the format string to include information about the image.
(Read and Write computed property)

92.20.14 penColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the pen color to use for the label text (same as fill).
Notes: (Read and Write computed property)

92.20.15 pointSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail label font size.
Notes: (Read and Write computed property)

92.20.16 shadow as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable drop-shadow on thumbnails.
Notes: (Read and Write computed property)

92.20.17 strokeColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the stroke color to use for the label text.
Notes: (Read and Write computed property)

92.20.18 texture as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies a texture image to use as montage background.
Notes: The built-in textures "granite:" and "plasma:" are available. A texture is the same as a background image.
(Read and Write computed property)

92.20.19 tile as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the maximum number of montage columns and rows in the montage.
Notes: The montage is built by filling out all cells in a row before advancing to the next row. Once the montage has reached the maximum number of columns and rows, a new montage image is started.
(Read and Write computed property)

92.20.20 title as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the montage title.
Notes: (Read and Write computed property)

92.20.21 transparentColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies a montage color to set transparent.
Notes: This option can be set the same as the background color in order for the thumbnails to appear without a background when rendered on an HTML page. For best effect, ensure that the transparent color selected does not occur in the rendered thumbnail colors.
(Read and Write computed property)

92.21 class GM16MutexLockMBS

92.21.1 class GM16MutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mutex class for GraphicsMagick.

92.21.2 Methods

92.21.3 lock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the lock.
Notes: Only one thread at a time can get the lock. The other threads will wait when lock is called.

92.21.4 unlock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks the lock.

92.21.5 Properties

92.21.6 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.22 class GM16NotInitializedExceptionMBS

92.22.1 class GM16NotInitializedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception raised if you access a method/property in an object and the object was not initialized propertly.
Notes: Check the message property for details.
Subclass of the GM16ErrorExceptionMBS class.

92.23 class GM16PathArgsMBS

92.23.1 class GM16PathArgsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a class for arguments to the path arc/curve methods in GM16GraphicsMBS.
Example:

```
Var g as new GM16PathArgsMBS(1,2,3,4) // for a QuadraticCurveto

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

Notes: Due we use this class for three different ways, we have three constructors to fill in the value you need for the calls.

92.23.2 Methods

92.23.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for creating an empty object.
See also:

- 92.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14444
- 92.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14445
- 92.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14445

92.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the PathArc methods in GM16GraphicsMBS.
See also:

- 92.23.3 Constructor 14444
- 92.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14445

- 92.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14445

92.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the QuadraticCurveto methods in GM16GraphicsMBS.
Example:

```
Var g as new GM16PathArgsMBS(1,2,3,4)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 92.23.3 Constructor 14444
- 92.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14444
- 92.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14445

92.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the Curveto methods in GM16GraphicsMBS.
Example:

```
Var g as new GM16PathArgsMBS(1,2,3,4,5,6)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x2)+EndOfLine+str(g.y2)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 92.23.3 Constructor 14444
- 92.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14444
- 92.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14445

92.23.7 Properties

92.23.8 largeArcFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The large arc flag.
Notes: Draw longer of the two matching arcs
(Read and Write property)

92.23.9 radiusX as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius x value.
Notes: (Read and Write property)

92.23.10 radiusY as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius y value.
Notes: (Read and Write property)

92.23.11 sweepFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sweep flag value.
Notes: Draw arc matching clock-wise rotation.
(Read and Write property)

92.23.12 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: For an arc: End-point X
(Read and Write property)

92.23.13 x1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value.
Notes: (Read and Write property)

92.23.14 x2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x2 value.
Notes: (Read and Write property)

92.23.15 xAxisRotation as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x Axis Rotation value.
Notes: Rotation relative to X axis.
(Read and Write property)

92.23.16 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: for an arc: End-point Y
(Read and Write property)

92.23.17 y1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y1 value.
Notes: (Read and Write property)

92.23.18 y2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y2 value.
Notes: (Read and Write property)

92.24 class GM16PixelsMBS

92.24.1 class GM16PixelsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty pixels object.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var p as new GM16PixelsMBS(g)

// get pointer to some pixels to read/write
Var x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

92.24.2 Methods

92.24.3 Constructor(Image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Pixels object with the pixels from an image.

92.24.4 get(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfer pixels from the image to the pixel view as defined by the specified region.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var p as new GM16PixelsMBS(g)

// get pointer to some pixels
Var x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via sync.

92.24.5 getConst(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfer read-only pixels from the image to the pixel view as defined by the specified region.

92.24.6 indexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return pixel colormap index array.

92.24.7 set(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocate a pixel view region to store image pixels as defined by the region rectangle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var p as new GM16PixelsMBS(g)

// get pointer to some pixels to write
Var x as ptr = p.set(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel view to the image via sync.

92.24.8 sync

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers the image cache pixels to the image.

92.24.9 Properties

92.24.10 columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of view.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GM16ImageMBS(f)
Var p as new GM16PixelsMBS(g)

// get pointer to some pixels
Var x as ptr = p.get(0, 0, 100, 100)
```

```
// and show size
MsgBox str(p.columns)+" x "+str(p.rows)
```

Notes: (Read only property)

92.24.11 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.24.12 rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height of view.
Notes: (Read only property)

92.24.13 x as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Left ordinate of view.
Notes: (Read only property)

92.24.14 y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Top ordinate of view.
Notes: (Read only property)

92.25 class GM16TypeMetricMBS

92.25.1 class GM16TypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TypeMetric class provides the means to pass data from the Image class's TypeMetric method to the user.
Notes: It provides information regarding font metrics such as ascent, descent, text width, text height, and maximum horizontal advance. The units of these font metrics are in pixels, and that the metrics are dependent on the current Image font (default Ghostscript's "Helvetica"), pointsize (default 12 points), and x/y resolution (default 72 DPI) settings.

The pixel units may be converted to points (the standard resolution-independent measure used by the typesetting industry) via the following equation:

size_points = (size_pixels * 72)/resolution
where resolution is in dots-per-inch (DPI). This means that at the default image resolution, there is one pixel per point.

Note that a font's pointsize is only a first-order approximation of the font height (ascender + descender) in points. The relationship between the specified pointsize and the rendered font height is determined by the font designer.

See FreeType Glyph Conventions for a detailed description of font metrics related issues.

92.25.2 Methods

92.25.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.25.4 Properties

92.25.5 ascent as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the distance in pixels from the text baseline to the highest/upper grid coordinate used

to place an outline point.
Notes: Always a positive value.
(Read only property)

92.25.6 descent as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point.
Notes: Always a negative value.
(Read only property)

92.25.7 maxHorizontalAdvance as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the maximum horizontal advance (advance from the beginning of a character to the beginning of the next character) in pixels.
Notes: (Read only property)

92.25.8 textHeight as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns text height in pixels.
Notes: (Read only property)

92.25.9 textWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns text width in pixels.
Notes: (Read only property)

92.26 class GM16UnsupportedExceptionMBS

92.26.1 class GM16UnsupportedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if you call the GM functions on an unsupported platform.
Notes: Check the message property for details.
This exception is currently only used on Windows.
(Windows support may come later)
Subclass of the GM16ErrorExceptionMBS class.

92.27 class GMBlobMBS

92.27.1 class GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for binary large objects.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GMImageMBS
Var blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

Notes: Blob provides the means to contain any opaque data. It is named after the term "Binary Large OBject" commonly used to describe unstructured data (such as encoded images) which is stored in a database. While the function of Blob is very simple (store a pointer and and size associated with allocated data), the Blob class provides some very useful capabilities. In particular, it is fully reference counted just like the Image class.

The Blob class supports value assignment while preserving any outstanding earlier versions of the object. Since assignment is via a pointer internally, Blob is efficient enough to be stored directly in an STL container or any other data structure which requires assignment. In particular, by storing a Blob in an associative container (such as STL's 'map') it is possible to create simple indexed in-memory "database" of Blobs.

Magick++ currently uses Blob to contain encoded images (e.g. JPEG) as well as ICC and IPTC profiles. Since Blob is a general-purpose class, it may be used for other purposes as well.

- Tip of the day: Render SVG with GraphicsMagick Plugin

92.27.2 Methods

92.27.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default constructor creating an empty blob object.
See also:

- 92.27.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14457
- 92.27.5 Constructor(data as string) 14457
- 92.27.6 Constructor(other as GMBlobMBS) 14458

92.27.4 Constructor(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct object with data, making a copy of the supplied data.
See also:

- 92.27.3 Constructor 14457
- 92.27.5 Constructor(data as string) 14457
- 92.27.6 Constructor(other as GMBlobMBS) 14458

92.27.5 Constructor(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct object with data, making a copy of the supplied data.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GMImageMBS
Var blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
```

Backdrop=mp.CombinePictureWithMask

See also:

- 92.27.3 Constructor 14457
- 92.27.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14457
- 92.27.6 Constructor(other as GMBlobMBS) 14458

92.27.6 Constructor(other as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy constructor (reference counted).
See also:

- 92.27.3 Constructor 14457
- 92.27.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14457
- 92.27.5 Constructor(data as string) 14457

92.27.7 CopyMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the data as a memoryblock.
Notes: Returns nil on any error like low memory.

92.27.8 CopyString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the data as a string.

92.27.9 Data as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data from this blob.
Example:

```
Var b as new GMBlobMBS("Hello")
```

```
Var m as memoryblock = b.Data
MsgBox m.StringValue(0,5) // shows "Hello"
```

Notes: This is a memoryblock referencing the data of the blob. It has no size set. The memoryblock can only be used as long as the blob object exists. if you use it after you destroyed the blob object, you can crash you application.

92.27.10 Update(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the content of this blob with a copy of the bytes in the memoryblock.
See also:

- 92.27.11 Update(data as string) 14459

92.27.11 Update(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the content of this blob with a copy of the bytes in the string.
Notes: Offset is zero based.
See also:

- 92.27.10 Update(data as memoryblock, offset as Integer, size as Integer) 14459

92.27.12 Properties

92.27.13 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the blob object.
Notes: (Read and Write property)

92.27.14 length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain data length in bytes.
Example:

```
Var b as new GMBlobMBS("Hello")

MsgBox str(B.length) // shows 5
```

Notes: (Read only property)

92.27.15 base64 as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blob content as a string in Base64 format.
Example:

```
Var b as new GMBlobMBS("Hello")

MsgBox b.base64 // shows "SGVsbG8="
```

Notes: (Read and Write computed property)

92.28 class GMCoderInfoMBS

92.28.1 class GMCoderInfoMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used to get information about all registered coders.
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name
next

MsgBox Join(names,EndOfLine)
```

Notes: The CoderInfo class provides the means to provide information regarding GraphicsMagick support for an image format (designated by a magick string). It may be used to provide support for a specific named format (provided as an argument to the constructor), or as an element of a container when format support is queried using the coderInfoList() templated function.
Blog Entries

- MBS Xojo Plugins, version 18.4pr1

92.28.2 Methods

92.28.3 CoderInfoList as GMCoderInfoMBS()

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a list of all coders.
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
```

92.28.4 Properties

92.28.5 description as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format description (e.g. "CompuServe graphics interchange format").
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+coder.description
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.28.6 isMultiFrame as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format supports multiple frames.
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isMultiFrame)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.28.7 isReadable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format is readable.
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isReadable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.28.8 isWritable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format is writeable.
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isWritable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

92.28.9 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of loadable module.
Notes: (Read and Write property)

92.28.10 name as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format name (e.g. "GIF").
Example:

```
Var coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
Var coder as GMCoderInfoMBS = coders(0) // pick first one

MsgBox coder.name
```

Notes: (Read and Write property)

92.28.11 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Usage note for user.
Notes: (Read and Write property)

92.28.12 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Support library version.
Notes: (Read and Write property)

92.29 class GMColorGrayMBS

92.29.1 class GMColorGrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color subclass for a grayscale color.
Example:

```
Var g as new GMColorGrayMBS(0.5)
MsgBox str(g.shade)
```

Notes: Representation of grayscale RGB color.
Equal parts red, green, and blue specified as a ratio (0 to 1).
Subclass of the GMColorMBS class.

92.29.2 Methods

92.29.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorGrayMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.29.4 Constructor(other as GMColorMBS) 14465
- 92.29.5 Constructor(shade as Double) 14466

92.29.4 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GMColorGrayMBS(0.5)
Var o as new GMColorGrayMBS(g)
MsgBox str(o.shade)
```

See also:

- 92.29.3 Constructor 14465
- 92.29.5 Constructor(shade as Double) 14466

92.29.5 Constructor(shade as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given value.
Example:

```
Var g as new GMColorGrayMBS(1.0)
MsgBox str(g.colorValue)
```

Notes: Range is 0.0 to 1.0.
See also:

- 92.29.3 Constructor 14465
- 92.29.4 Constructor(other as GMColorMBS) 14465

92.29.6 Properties

92.29.7 shade as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray value for this color.
Example:

```
Var g as new GMColorGrayMBS(1.0)
MsgBox str(g.shade)
```

Notes: Range is 0.0 to 1.0
(Read and Write property)

92.30 class GMColorHSLMBS

92.30.1 class GMColorHSLMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a HSL color.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GMColorMBS class.

92.30.2 Methods

92.30.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorHSLMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14467
- 92.30.5 Constructor(other as GMColorMBS) 14468

92.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)+" "+str(g.saturation)+" "+str(g.luminosity)
```

See also:

- 92.30.3 Constructor 14467
- 92.30.5 Constructor(other as GMColorMBS) 14468

92.30.5 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
Var o as new GMColorHSLMBS(g)

MsgBox str(o.colorValue)
```

See also:

- 92.30.3 Constructor 14467
- 92.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14467

92.30.6 Properties

92.30.7 hue as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hue value.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)
```

Notes: (Read and Write property)

92.30.8 luminosity as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The luminosity value.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.luminosity)
```

Notes: (Read and Write property)

92.30.9 saturation as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The saturation value.
Example:

```
Var g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.saturation)
```

Notes: (Read and Write property)

92.31 class GMColorMBS

92.31.1 class GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color is the base color class.
Example:

```
Var c as new GMColorMBS(127,255,127) // light green
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: It is a simple container class for the pixel red, green, blue, and alpha values scaled to fit GraphicsMagick's Quantum size. Normally users will instantiate a class derived from Color which supports the color model that fits the needs of the application. The Color class may be constructed directly from an X11-style color string. As a perhaps odd design decision, the value transparent black is considered to represent an unset value (invalid color) in many cases. This choice was made since it avoided using more memory. The default Color constructor constructs an invalid color (i.e. transparent black) and may be used as a parameter in order to remove a color setting.

- Gradients in GraphicsMagick

92.31.2 Methods

92.31.3 Black as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a black color.
Example:

```
Var black as GMColorMBS = GMColorMBS.Black

MsgBox str(black.colorValue)
```

92.31.4 Color(ColorValue as Color) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color from Xojo to GMColorMBS.
Example:

```
Var c as GMColorMBS = GMColorMBS.Color(&cFF0000)

MsgBox str(c.colorValue)
```

See also:

- 92.31.5 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14471
- 92.31.6 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14471
- 92.31.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14472

92.31.5 Color(ColorValue as Color, alpha as Integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color from Xojo to GMColorMBS with separate alpha value.
Example:

```
Var c as GMColorMBS = GMColorMBS.Color(&cFF0000, 128)

MsgBox str(c.colorValue)+" "+str(c.alpha)
```

Notes: Alpha in range from 0 to 255.
See also:

- 92.31.4 Color(ColorValue as Color) as GMColorMBS 14470
- 92.31.6 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14471
- 92.31.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14472

92.31.6 Color(red as integer, green as integer, blue as integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates color with RGB values.
Example:

```
Var c as GMColorMBS = GMColorMBS.Color(127, 191, 255)

MsgBox str(c.colorValue)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 92.31.4 Color(ColorValue as Color) as GMColorMBS 14470

- 92.31.5 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14471
- 92.31.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14472

92.31.7 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates color with RGB values.
Example:

```
Var c as GMColorMBS = GMColorMBS.Color(127, 191, 255, 127)

MsgBox str(c.colorValue)+" "+str(c.alphaQuantum)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 92.31.4 Color(ColorValue as Color) as GMColorMBS 14470
- 92.31.5 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14471
- 92.31.6 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14471

92.31.8 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.31.9 Constructor(ColorName as string) 14473
- 92.31.10 Constructor(ColorValue as color) 14473
- 92.31.11 Constructor(ColorValue as color, alpha as Integer) 14474
- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.9 Constructor(ColorName as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color based on the X11 color name.
Example:

```
Var c as new GMColorMBS("red")

MsgBox str(c.redQuantum)+"-"+str(c.greenQuantum)+"-"+str(c.blueQuantum) // shows "255-0-0"

Var d as new GMColorMBS("#77FF00")

MsgBox str(d.redQuantum)+"-"+str(d.greenQuantum)+"-"+str(d.blueQuantum) // shows "119-255-0"
```

Notes: An alternate way to construct the class is via an X11-compatible color specification string (e.g. Color("red") or Color ("#FF0000")). Since the class may be constructed from a string, convenient strings may be passed in place of an explicit Color object in methods which accept a reference to Color. Color may also be converted to a std::string for convenience in user interfaces, and for saving settings to a text file.

- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.10 Constructor(ColorValue as color)

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GMColorMBS(&cFF0000)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.11 Constructor(ColorValue as color, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GMColorMBS(&cFF0102, 127)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.12 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var r as new GMColorMBS(1,2,3)
Var c as new GMColorMBS(r)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.31.9 Constructor(ColorName as string) 14473

- 92.31.10 Constructor(ColorValue as color) 14473
- 92.31.11 Constructor(ColorValue as color, alpha as Integer) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.13 Constructor(red as Integer, green as Integer, blue as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GMColorMBS(1,2,3)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 92.31.8 Constructor 14472

- 92.31.10 Constructor(ColorValue as color) 14473
- 92.31.11 Constructor(ColorValue as color, alpha as Integer) 14474
- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14475

92.31.14 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var c as new GMColorMBS(1,2,3,4)

// display color, alpha is double...
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 92.31.8 Constructor 14472
- 92.31.9 Constructor(ColorName as string) 14473
- 92.31.10 Constructor(ColorValue as color) 14473
- 92.31.11 Constructor(ColorValue as color, alpha as Integer) 14474
- 92.31.12 Constructor(other as GMColorMBS) 14474
- 92.31.13 Constructor(red as Integer, green as Integer, blue as Integer) 14475

92.31.15 QuantumByteSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum byte size.
Example:

```
MsgBox str(GMColorMBS.QuantumByteSize)
```

Notes: As the plugin uses 8 bit this value should be 1.

92.31.16 scaleDoubleToQuantum(value as Double) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a double value to a value in the range of a quantum.
Example:

```
Var d as Double = 1.0
Var v as Integer = GMColorMBS.scaleDoubleToQuantum(d)
MsgBox str(v)
```

Notes: As the plugin uses 8 bit quantums, this is basicly a multiplication by 255.0

92.31.17 scaleQuantumToDouble(value as Integer) as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a quantum to a double value.
Example:

```
Var v as Integer = 255
Var d as Double = GMColorMBS.scaleQuantumToDouble(v)
```

MsgBox str(d)

Notes: The plugin uses 8bit quantums, so this is basicly the division of value by 255.0

92.31.18 White as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a white color.
Example:

Var White as GMColorMBS = GMColorMBS.White

MsgBox str(White.colorValue)

92.31.19 Properties

92.31.20 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha value of this color.
Example:

Var c as new GMColorMBS(1,2,3,1.0)
MsgBox str(c.alpha)

Notes: Range is 0.0 to 1.0. If you pass values higher, they are divided by 255.
(Read and Write property)

92.31.21 alphaQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha color value.
Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.31.22 blueQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color value.
Example:

```
Var c as new GMColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 3
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.31.23 colorValue as color

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo color for the GraphicsMagick color.
Example:

```
Var c as new GMColorMBS(&cFF0102)
MsgBox str(c.ColorValue)
```

Notes: (Read and Write property)

92.31.24 greenQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color value.
Example:

```
Var r as new GMColorMBS(1,2,3)
MsgBox str(r.greenQuantum) // shows 2
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.31.25 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal color reference.
Example:

```
Var r as new GMColorMBS(1,2,3)
MsgBox str(r.handle)
```

Notes: (Read and Write property)

92.31.26 intensity as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intensity of this color.
Example:

```
Var c as new GMColorMBS(1,2,3)
MsgBox str(c.intensity)
```

Notes: (Read only property)

92.31.27 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain valid color?
Example:

```
Var c as new GMColorMBS(1,2,3)
MsgBox str(c.isValid)
```

Notes: (Read and Write property)

92.31.28 redQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color value.
Example:

```
Var c as new GMColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 1
```

Notes: For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

92.32 class GMColorMonoMBS

92.32.1 class GMColorMonoMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Representation of a black/white color (true/false)
Example:

```
Var g as new GMColorMonoMBS(false)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GMColorMBS class.

92.32.2 Methods

92.32.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorMonoMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.32.4 Constructor(mono as boolean) 14481
- 92.32.5 Constructor(other as GMColorMBS) 14482

92.32.4 Constructor(mono as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GMColorMonoMBS(false)
MsgBox str(g.mono)
```

See also:

- 92.32.3 Constructor 14481

• 92.32.5 Constructor(other as GMColorMBS) 14482

92.32.5 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GMColorMonoMBS(false)
Var o as new GMColorMonoMBS(g)
MsgBox str(o.mono)
```

See also:

• 92.32.3 Constructor 14481

• 92.32.4 Constructor(mono as boolean) 14481

92.32.6 Properties

92.32.7 mono as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color value.
Example:

```
Var g as new GMColorMonoMBS(true)
MsgBox str(g.mono)
```

Notes: (Read and Write property)

92.33 class GMColorRGBMBS

92.33.1 class GMColorRGBMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color class for RGB colors.
Example:

```
Var c as new GMColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)+" "+str(c.green)+" "+str(c.blue)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: Representation of RGB color with red, green, and blue specified as ratios (0 to 1)
Subclass of the GMColorMBS class.

- Crop a two side page document to a single page document

92.33.2 Methods

92.33.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorRGBMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.33.4 Constructor(other as GMColorMBS) 14483
- 92.33.5 Constructor(red as Double, green as Double, blue as Double) 14484

92.33.4 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GMColorRGBMBS(1,2,3)
Var o as new GMColorRGBMBS(g)
```

MsgBox str(o.colorValue)

See also:

- 92.33.3 Constructor 14483
- 92.33.5 Constructor(red as Double, green as Double, blue as Double) 14484

92.33.5 Constructor(red as Double, green as Double, blue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

Var c as new GMColorRGBMBS(0.1,0.2,0.3)

Notes: Range is 0.0 to 1.0.
See also:

- 92.33.3 Constructor 14483
- 92.33.4 Constructor(other as GMColorMBS) 14483

92.33.6 Properties

92.33.7 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color component.
Example:

Var c as new GMColorRGBMBS(0.0,0.0,1.0)
MsgBox str(c.blue)

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.33.8 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color component.
Example:

```
Var c as new GMColorRGBMBS(0.0,1.0,0.0)
MsgBox str(c.green)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.33.9 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color component.
Example:

```
Var c as new GMColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.34 class GMColorYUVMBS

92.34.1 class GMColorYUVMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Representation of a color in the YUV colorspace
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)+" "+str(g.u)+" "+str(g.v)
```

Notes: Subclass of the GMColorMBS class.

92.34.2 Methods

92.34.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with transparent black.
Example:

```
Var c as new GMColorYUVMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 92.34.4 Constructor(other as GMColorMBS) 14486
- 92.34.5 Constructor(y as Double, u as Double, v as Double) 14487

92.34.4 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color copying the existing color.
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
Var o as new GMColorYUVMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 92.34.3 Constructor 14486
- 92.34.5 Constructor(y as Double, u as Double, v as Double) 14487

92.34.5 Constructor(y as Double, u as Double, v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color with the given values.
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
```

See also:

- 92.34.3 Constructor 14486
- 92.34.4 Constructor(other as GMColorMBS) 14486

92.34.6 Properties

92.34.7 u as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The u color component.
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.u)
```

Notes: Range is -0.5 to +0.5.
(Read and Write property)

92.34.8 v as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The v color component.
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.v)
```

Notes: Range is -0.5 to +0.5.
(Read and Write property)

92.34.9 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y color component.
Example:

```
Var g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)
```

Notes: Range is 0.0 to 1.0.
(Read and Write property)

92.35 class GMConvertMBS

92.35.1 class GMConvertMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to convert images thread friendly.
Notes: This class is intended to process lots of images in several instances in several threads.
If you for example use 8 Xojo threads, to process thousands of images to scale them down for thumbnails, you can easily keep 8 CPU cores busy.

Please make a new instance, set options and call run method. When run is done, please read output properties.
Do not modify properties while thread is running.

- 17.3, page 11: News

92.35.2 Methods

92.35.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.35.4 Run

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts converter.
Notes: The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

92.35.5 Properties

92.35.6 AutoOrient as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to call autoOrient method to change orientation of image data to 0¬∞.
Notes: (Read and Write property)

92.35.7 Enhance as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run enhance command.
Notes: If true, we call enhance on the image to minimize noise.
(Read and Write property)

92.35.8 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run equalize command.
Notes: If set to true, we call equalize command on image (histogram equalization).
(Read and Write property)

92.35.9 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image type.

Notes: If value is >0, the image type is change to the given type.
(Read and Write property)

92.35.10 InputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data string.
Notes: If set, we read image from this data.
(Read and Write property)

92.35.11 InputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input folderitem.
Notes: If set input file to read.
(Read and Write property)

92.35.12 InputGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input geometry.
Notes: Some formats can be loaded with different scales, so this geometry is passed to read method to define the format requested.
(Read and Write property)

92.35.13 InputImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input image.
Notes: (Read and Write property)

92.35.14 InputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image magick type.
Notes: If empty, the type of file is automatically determined.
(Read and Write property)

92.35.15 InputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data memoryblock.
Notes: If set, we read image from this data.
(Read and Write property)

92.35.16 InputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input file path.
Notes: If set input file to read.
(Read and Write property)

92.35.17 OutputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output data as string.
Notes: (Read and Write property)

92.35.18 OutputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem where to write file.
Notes: If set, the image will be written to this file.
(Read and Write property)

92.35.19 OutputImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output image object.
Notes: (Read and Write property)

92.35.20 OutputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output magick.
Notes: You can set this to a magick codec type to define output format, e.g. "jpeg".
(Read and Write property)

92.35.21 OutputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output data as memory block.
Notes: (Read and Write property)

92.35.22 OutputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native file path for output.
Notes: If set, the image will be written to this path.
(Read and Write property)

92.35.23 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quality of images in range 1 to 100.
Notes: If value is >0, we assign it to the image for setting image quality.
(Read and Write property)

92.35.24 Running as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this converter is running.
Notes: Set to true while Run method runs.

(Read only property)

92.35.25 ScaleGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry for call to scale method.
Notes: scale method is called with this geometry (if set) to reduce image size.
(Read and Write property)

92.35.26 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to remove all profiles and text attributes from the image.
Notes: (Read and Write property)

92.35.27 ThumbnailGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry for call to thumbnail method.
Notes: thumbnail method is called with this geometry (if set) to reduce image size.
(Read and Write property)

92.35.28 Trim as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether trim command is called on image to remove extra blank space around image.
Notes: (Read and Write property)

92.35.29 WantOutputData as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want image compressed and stored in OutputData property.
Notes: (Read and Write property)

92.35.30 WantOutputMemory as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want image compressed and stored in OutputMemory property.
Notes: (Read and Write property)

92.36 class GMCoordinateMBS

92.36.1 class GMCoordinateMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Graphics Magick class for a coordinate.
Example:

```
Var c as new GMCoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

92.36.2 Methods

92.36.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new coordinate.
See also:

- 92.36.4 Constructor(x as Double, y as Double) 14496

92.36.4 Constructor(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new coordinate.
Example:

```
Var c as new GMCoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

See also:

- 92.36.3 Constructor 14496

92.36.5 Properties

92.36.6 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Example:

```
Var c as new GMCoordinateMBS
c.x = 5
MsgBox str(c.x)
```

Notes: (Read and Write property)

92.36.7 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Example:

```
Var c as new GMCoordinateMBS
c.y = 5
MsgBox str(c.y)
```

Notes: (Read and Write property)

92.37 class GMErrorExceptionMBS

92.37.1 class GMErrorExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception to report errors in the GraphicMagick plugin.
Notes: Check the message property for details.
Subclass of the RuntimeException class.

92.38 class GMGeometryMBS

92.38.1 class GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Geometry provides a convenient means to specify a geometry argument.
Example:

```
Var g as new GMGeometryMBS(300,400)
MsgBox str(G.width)+" "+str(G.height)
```

Notes: The object may be initialized from a string containing a geometry specification. It may also be initialized by more efficient parameterized constructors.

- 19.6, page 74: Fun with GraphicsMagick, Cool methods from the GMImageMBS class by Stefanie Juchmes

92.38.2 Methods

92.38.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates empty geometry.
Example:

```
Var g as new GMGeometryMBS
MsgBox str(G.width)+" "+str(G.height)
```

See also:

- 92.38.4 Constructor(geometry as string) 14500

- 92.38.5 Constructor(other as GMGeometryMBS) 14500
- 92.38.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14501

92.38.4 Constructor(geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct geometry from string.
Example:

```
Var g as new GMGeometryMBS("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes: See the GraphicsMagick website for details.
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 92.38.3 Constructor 14499
- 92.38.5 Constructor(other as GMGeometryMBS) 14500
- 92.38.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14501

92.38.5 Constructor(other as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new geometry object by copying an existing one.
Example:

```
Var g as new GMGeometryMBS(600,600)
Var h as new GMGeometryMBS(g)
MsgBox str(h.width)
```

See also:

- 92.38.3 Constructor 14499
- 92.38.4 Constructor(geometry as string) 14500
- 92.38.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14501

92.38.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates geometry with the given values.
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.width)
```

See also:

- 92.38.3 Constructor 14499
- 92.38.4 Constructor(geometry as string) 14500
- 92.38.5 Constructor(other as GMGeometryMBS) 14500

92.38.7 Make(geometry as string) as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct geometry from string.
Example:

```
Var g as GMGeometryMBS = GMGeometryMBS.Make("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes: See the GraphicsMagick website for more details:
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 92.38.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GMGeometryMBS 14501

92.38.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates geometry with the given values.
Example:

```
Var g as GMGeometryMBS = GMGeometryMBS.Make(600,600)
MsgBox str(g.width)
```

See also:

- 92.38.7 Make(geometry as string) as GMGeometryMBS 14501

92.38.9 Properties

92.38.10 aspect as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize without preserving aspect ratio (!).
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.aspect)
```

Notes: (Read and Write property)

92.38.11 fillArea as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image to fit total pixel area specified by dimensions.
Notes: Same as @ in the geometry specification.
(Read and Write property)

92.38.12 greater as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize if image is greater than size (>).
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.greater)
```

Notes: (Read and Write property)

92.38.13 height as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height value.
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.height)
```

Notes: (Read and Write property)

92.38.14 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain a valid geometry?
Example:

```
Var g as new GMGeometryMBS(100,200)
MsgBox str(G.isValid)
```

Notes: May be set to false in order to invalidate an existing geometry object.
(Read and Write property)

92.38.15 less as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize if image is less than size (<).
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.less)
```

Notes: (Read and Write property)

92.38.16 limitPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dimensions are treated as minimum rather than maximum values.
Notes: Same as ^in the geometry specification.

(Read and Write property)

92.38.17 percent as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height are expressed as percentages.
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.percent)
```

Notes: (Read and Write property)

92.38.18 StringValue as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string representation of the geometry object.
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.StringValue)
```

Notes: (Read and Write property)

92.38.19 width as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width value.
Example:

```
Var g as new GMGeometryMBS(600,600)
MsgBox str(g.width)
```

Notes: (Read and Write property)

92.38.20 xNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sign of X offset negative? (X origin at right)
Example:

```
Var g as new GMGeometryMBS(100,200,30,40,true,false)
MsgBox str(G.xNegative)
```

Notes: (Read and Write property)

92.38.21 xOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X offset from origin.
Example:

```
Var g as new GMGeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

92.38.22 yNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sign of Y offset negative? (Y origin at bottom)
Example:

```
Var g as new GMGeometryMBS(100,200,30,40,false,true)
MsgBox str(G.yNegative)
```

Notes: (Read and Write property)

92.38.23 yOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y offset from origin
Example:

```
Var g as new GMGeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

92.39 class GMGraphicsMBS

92.39.1 class GMGraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for drawing commands targeting a GMImageMBS.
Notes: Please remember that all commands are collected till you call the Draw method.

92.39.2 Methods

92.39.3 Arc(startX as Double, startY as Double, endX as Double, endY as Double, startDegrees as Double, endDegrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.arc(250, 250, 100, 100,50,300)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.4 Bezier(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a bezier curve using the stroke color and based on the coordinates specified by the coordinates array.

92.39.5 Circle(originX as Double, originY as Double, perimX as Double, perimY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.39.6 ClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Select a drawing clip path matching id.

92.39.7 ColorPixel(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color image according to paintMethod.
Notes: The point method recolors the target pixel. The replace method recolors any pixel that matches the color of the target pixel. Floodfill recolors any pixel that matches the color of the target pixel and is a

neighbor, whereas filltoborder recolors any neighbor pixel that is not the border color. Finally, reset recolors all pixels.

Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.39.8 CompositeImage(x as Double, y as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 92.39.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14514

92.39.9 CompositeImage(x as Double, y as Double, image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 92.39.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS) 14512
- 92.39.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS, CompositeOperator as Integer) 14513
- 92.39.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14513
- 92.39.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14514

92.39.10 CompositeImage(x as Double, y as Double, path as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.
See also:

- 92.39.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14513

- 92.39.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14514

92.39.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

92.39.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

92.39.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 92.39.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS, CompositeOperator as Integer) 14513
- 92.39.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14513

92.39.17 Constructor(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object referencing the given image.

92.39.18 DashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the pattern of dashes and gaps used to stroke paths.
Notes: The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.39.19 DashOffset(offset as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the distance into the dash pattern to start the dash.
Notes: See documentation on SVG's stroke-dashoffset property for usage details.

92.39.20 Draw

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws all draw commands collected.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.21 DrawPath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw on image using vector path.
Example:

```
// new picture, 500x500 and filled with white
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

Var draw as GMGraphicsMBS = image.Graphics

// Draw path

Var cr as new GMColorRGBMBS("red")
Var gr as new GMColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

92.39.22 Ellipse(originX as Double, originY as Double, perimX as Double, perimY as Double, arcStart as Double, arcEnd as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees.
Notes: If a fill color is specified, then the object is filled.

92.39.23 FillColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify drawing object fill color.

92.39.24 FillOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify opacity to use when drawing using fill color.

92.39.25 FillRule(fillRule as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the algorithm which is to be used to determine what parts of the canvas are included inside the shape.
Notes: See documentation on SVG's fill-rule property for usage details.

92.39.26 Font(fontname as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify font name to use when drawing text.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

Var draw as GMGraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GMColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello", "")
draw.Draw

Backdrop=image.CopyPicture
```

See also:

- 92.39.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer) 14518

92.39.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the font.
Notes: Specify font family, style, weight (one of the set { 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 } with 400 being the normal size), and stretch to be used to select the font used when drawing text. Wildcard matches may be applied to style via the AnyStyle enumeration, applied to weight if weight is zero, and applied to stretch via the AnyStretch enumeration.
See also:

- 92.39.26 Font(fontname as string) 14517

92.39.28 Gravity(GravityType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify text positioning gravity.

92.39.29 Line(startX as Double, startY as Double, endX as Double, endY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a line using stroke color and thickness using starting and ending coordinates
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a line
draw.Line(100,100,400,400)
draw.Draw

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

92.39.30 Matte(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change the pixel matte value to transparent.
Notes: The point method changes the matte value of the target pixel. The replace method changes the matte value of any pixel that matches the color of the target pixel. Floodfill changes the matte value of any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder changes the matte value of any neighbor pixel that is not the border color, Finally reset changes the matte value of all pixels.

Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.39.31 MiterLimit(miterlimit as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

92.39.32 PathArcAbs(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GMPathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.

See also:

- 92.39.33 PathArcAbs(c() as GMPathArgsMBS) 14520
- 92.39.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14520

92.39.33 PathArcAbs(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GMPathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.
See also:

- 92.39.32 PathArcAbs(c as GMPathArgsMBS) 14519
- 92.39.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14520

92.39.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics
```

```
// Draw an arc

draw.PathMovetoAbs 100,100
draw.PathArcAbs(100,100, 0, false, false, 200,200)
draw.DrawPath
draw.Draw

Backdrop=image.CopyPicture
```

Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

- 92.39.36 PathArcRel(c() as GMPathArgsMBS) 14521
- 92.39.37 PathArcRel(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14522

92.39.36 PathArcRel(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GMPathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.
See also:

- 92.39.35 PathArcRel(c as GMPathArgsMBS) 14521
- 92.39.37 PathArcRel(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14522

92.39.37 PathArcRel(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws an elliptical arc from the current point to (x, y).
Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

92.39.38 PathClosePath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close the current subpath by drawing a straight line from the current point to current subpath's most recent starting point (usually, the most recent moveto point).

92.39.39 PathCurvetoAbs(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.39.40 PathCurvetoAbs(c() as GMPathArgsMBS) 14523
- 92.39.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14523

92.39.40 PathCurvetoAbs(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.39.39 PathCurvetoAbs(c as GMPathArgsMBS) 14523
- 92.39.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14523

92.39.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end

of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.39.39 PathCurvetoAbs(c as GMPathArgsMBS) 14523
- 92.39.40 PathCurvetoAbs(c() as GMPathArgsMBS) 14523

92.39.42 PathCurvetoRel(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.39.43 PathCurvetoRel(c() as GMPathArgsMBS) 14524
- 92.39.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14525

92.39.43 PathCurvetoRel(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.39.42 PathCurvetoRel(c as GMPathArgsMBS) 14524
- 92.39.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14525

92.39.44 PathCurvetoRel(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes: PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.39.43 PathCurvetoRel(c() as GMPathArgsMBS) 14524

92.39.45 PathLinetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.46 PathLinetoAbs(c() as GMCoordinateMBS) 14525
- 92.39.47 PathLinetoAbs(x as Double, y as Double) 14526

92.39.46 PathLinetoAbs(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.45 PathLinetoAbs(c as GMCoordinateMBS) 14525
- 92.39.47 PathLinetoAbs(x as Double, y as Double) 14526

92.39.47 PathLinetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.45 PathLinetoAbs(c as GMCoordinateMBS) 14525
- 92.39.46 PathLinetoAbs(c() as GMCoordinateMBS) 14525

92.39.48 PathLinetoHorizontalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

92.39.49 PathLinetoHorizontalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

92.39.50 PathLinetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.51 PathLinetoRel(c() as GMCoordinateMBS) 14527

- 92.39.52 PathLinetoRel(x as Double, y as Double) 14527

92.39.51 PathLinetoRel(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.50 PathLinetoRel(c as GMCoordinateMBS) 14526
- 92.39.52 PathLinetoRel(x as Double, y as Double) 14527

92.39.52 PathLinetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Example:

```
// new picture, 500x500 and filled with white
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

Var draw as GMGraphicsMBS = image.Graphics

// Draw path

Var cr as new GMColorRGBMBS("red")
Var gr as new GMColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
```

```
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 92.39.50 PathLinetoRel(c as GMCoordinateMBS) 14526
- 92.39.51 PathLinetoRel(c() as GMCoordinateMBS) 14527

92.39.53 PathLinetoVerticalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

92.39.54 PathLinetoVerticalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

92.39.55 PathMovetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by

multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.39.56 PathMovetoAbs(x as Double, y as Double) 14529

92.39.56 PathMovetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.39.55 PathMovetoAbs(c as GMCoordinateMBS) 14528

92.39.57 PathMovetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.39.58 PathMovetoRel(x as Double, y as Double) 14529

92.39.58 PathMovetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The "moveto" commands establish a new current point.
Notes: The effect is as if the "pen" were lifted and moved to a new location. A path data segment must

begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 92.39.57 PathMovetoRel(c as GMCoordinateMBS) 14529

92.39.59 PathQuadraticCurvetoAbs(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.60 PathQuadraticCurvetoAbs(c() as GMPathArgsMBS) 14530

- 92.39.63 PathQuadraticCurvetoRel(c() as GMPathArgsMBS) 14531
- 92.39.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14532

92.39.63 PathQuadraticCurvetoRel(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.62 PathQuadraticCurvetoRel(c as GMPathArgsMBS) 14531
- 92.39.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14532

92.39.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

- 92.39.63 PathQuadraticCurvetoRel(c() as GMPathArgsMBS) 14531

92.39.65 PathSmoothCurvetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 92.39.66 PathSmoothCurvetoAbs(c() as GMCoordinateMBS) 14533
- 92.39.67 PathSmoothCurvetoAbs(x as Double, y as Double) 14533

92.39.66 PathSmoothCurvetoAbs(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

92.39.68 PathSmoothCurvetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a cubic B√©zier curve from the current point to (x,y).
Notes: The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was

not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

92.39.71 PathSmoothQuadraticCurvetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.72 PathSmoothQuadraticCurvetoAbs(c() as GMCoordinateMBS) 14535
- 92.39.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14536

92.39.72 PathSmoothQuadraticCurvetoAbs(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.71 PathSmoothQuadraticCurvetoAbs(c as GMCoordinateMBS) 14535
- 92.39.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14536

92.39.73 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.39.71 PathSmoothQuadraticCurvetoAbs(c as GMCoordinateMBS) 14535
- 92.39.72 PathSmoothQuadraticCurvetoAbs(c() as GMCoordinateMBS) 14535

92.39.74 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.75 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS) 14536
- 92.39.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14537

92.39.75 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not

a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 92.39.74 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS) 14536
- 92.39.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14537

92.39.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a quadratic B√©zier curve from the current point to (x,y).
Notes: The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 92.39.74 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS) 14536
- 92.39.75 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS) 14536

92.39.77 Point(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a point using stroke color and thickness at coordinate.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color

Var draw as GMGraphicsMBS = image.Graphics

// draw cross with pixels
```

```
for x as Integer = 240 to 260
draw.Point(x, 250)
next
for y as Integer = 240 to 260
draw.Point(250,y)
next
draw.Draw

Backdrop=image.CopyPicture
```

92.39.78 PointSize(pointSize as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set font point size.

92.39.79 Polygon(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arbitrary polygon using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color
image.strokeColor = new GMColorRGBMBS("green") // set color

Var draw as GMGraphicsMBS = image.Graphics
Var coordinates(-1) as GMCoordinateMBS

coordinates.Append new GMCoordinateMBS(70,70)
coordinates.Append new GMCoordinateMBS(100,340)
coordinates.Append new GMCoordinateMBS(380,200)
coordinates.Append new GMCoordinateMBS(70,70)

draw.Polygon coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.39.80 Polyline(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw an arbitrary polyline using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("green") // set color

Var draw as GMGraphicsMBS = image.Graphics
Var coordinates(-1) as GMCoordinateMBS

coordinates.Append new GMCoordinateMBS(70,70)
coordinates.Append new GMCoordinateMBS(100,340)
coordinates.Append new GMCoordinateMBS(380,200)

draw.Polyline coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.39.81 PopClipPath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pop (terminate) clip path definition started by PushClipPath.

92.39.82 PopGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pop Graphic Context.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorMBS() // transparent fillcolor
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: Removing the current graphic context from the graphic context stack restores the options to the values they had prior to the preceding PushGraphicContext operation.

92.39.83 PopPattern

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate a pattern definition started via PushPattern.

92.39.84 PushClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Push (create) clip path definition with id.
Notes: Clip patch definition consists of subsequent drawing commands, terminated by PopClipPath.

92.39.85 PushGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Push Graphic Context.

Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorMBS() // transparent fillcolor
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: When a graphic context is pushed, options set after the context is pushed (such as coordinate transformations, color settings, etc.) are saved to a new graphic context. This allows related options to be saved on a graphic context "stack" in order to support heirarchical nesting of options. When PopGraphicContext is used to pop the current graphic context, the options in effect during the last PushGraphicContext operation are restored.

92.39.86 PushPattern(id as string, x as Integer, y as Integer, width as Integer, height as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Start a pattern definition with arbitrary pattern name specified by id, pattern offset specified by x and y, and pattern size specified by width and height.
Notes: The pattern is defined within the coordinate system defined by the specified offset and size. Arbitrary drawing objects (including DrawableCompositeImage) may be specified between PushPattern and PopPattern in order to draw the pattern. Normally the pair PushGraphicContext & PopGraphicContext are used to enclose a pattern definition. Pattern definitions are terminated by a PopPattern object.

92.39.87 Rectangle(upperLeftX as Double, upperLeftY as Double, lowerRightX as Double, lowerRightY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a rectangle
draw.Rectangle(250, 250, 100, 100)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.39.88 Rotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set rotation to use when drawing (coordinate transformation).
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Rotation 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
```

```
draw.Draw

Backdrop=image.CopyPicture
```

92.39.89 RoundRectangle(centerX as Double, centerY as Double, width as Double, height as Double, cornerWidth as Double, cornerHeight as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a round rectangle
draw.RoundRectangle(250, 250, 100, 100,20,20)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

92.39.90 Scaling(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply scaling in x and y direction while drawing objects (coordinate transformation).
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5
```

```
Var draw as GMGraphicsMBS = image.Graphics
draw.FillColor new GMColorRGBMBS("red")

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Scaling 1.2,1.1
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.91 SkewX(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Skew in X direction (coordinate transformation)
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewX 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.92 SkewY(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Skew in Y direction.
Example:

```
Var g as new GMGeometryMBS(500,500)
```

```
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewY 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.93 StrokeAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Antialias while drawing lines or object outlines.

92.39.94 StrokeColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set color to use when drawing lines or object outlines.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.95 StrokeLineCap(LineCap as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the end of open subpaths when they are stroked.
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.

92.39.96 StrokeLineJoin(LineJoin as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked.
Notes: Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.

92.39.97 StrokeOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opacity to use when drawing lines or object outlines.

92.39.98 StrokeWidth(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set width to use when drawing lines or object outlines.

92.39.99 Text(x as Double, y as Double, text as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate image with text using stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

Var draw as GMGraphicsMBS = image.Graphics

// draw red text
```

```
draw.strokeColor(new GMColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello")
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label).
See also:

- 92.39.100 Text(x as Double, y as Double, text as string, encoding as string) 14547

92.39.100 Text(x as Double, y as Double, text as string, encoding as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate image with text represented with text encoding, using current stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Notes: If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label()).

The text encoding specifies the code set to use for text annotations. The only character encoding which may be specified at this time is "UTF-8" for representing Unicode as a sequence of bytes. Specify an empty string to set text encoding to the system's default. Successful text annotation using Unicode may require fonts designed to support Unicode.

Seems like you need ghostscript or the DPS library for text handling, so it may no be available for you.
See also:

- 92.39.99 Text(x as Double, y as Double, text as string) 14546

92.39.101 TextAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Antialias while drawing text (default true).
Notes: The main reason to disable text antialiasing is to avoid adding new colors to the image.

92.39.102 TextDecoration(DecorationType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify decoration (e.g. UnderlineDecoration) to apply to text.

92.39.103 TextUnderColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a box under rendered text using the specified color.

92.39.104 Translation(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply coordinate translation (set new coordinate origin).
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Translation 5,5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

92.39.105 Viewbox(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dimensions of the output viewbox.
Notes: If the image is to be written to a vector format (e.g. MVG or SVG), then a PushGraphicContext() object should be pushed to the head of the list, followed by a Viewbox() statement to establish the output canvas size. A matching PopGraphicContext() object should be pushed to the tail of the list.

92.39.106 Properties

92.39.107 Image as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image this graphics object belongs to.
Notes: (Read only property)

92.40 class GMImageArrayMBS

92.40.1 class GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an array of images in GraphicsMagick.
Example:

```
// extract all layers of photoshop file
Var file as FolderItem = SpecialFolder.Desktop.Child("test.psd")
Var images as new GMImageArrayMBS

images.readImages(file.NativePath)

Var c as Integer = images.size
for i as Integer = 0 to c-1
Var image as GMImageMBS = images.Image(i)
file = SpecialFolder.Desktop.Child(image.FileName+"."+str(i)+".png")
image.write(file)
next
```

Notes: Can be used to assemble/disassemble gif images.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr4

92.40.2 Methods

92.40.3 animateImages

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Animate a sequence of image frames.
Notes: Image frames are displayed in succession, creating an animated effect. The animation options are taken from the first image frame. This feature is only supported under X11 at the moment.

92.40.4 append(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the end of the array.
Example:

```
// read gif
```

```
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// put copy of first image on the back
Var n as GMImageMBS = g.FirstImage
g.append n

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

Notes: Instead of gif, you can also use tif files.

92.40.5 appendImages(stack as boolean = false) as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Append a sequence of image frames, writing the result to new image.
Notes: All the input image frames must have the same width or height. Image frames of the same width are stacked top-to-bottom. Image frames of the same height are stacked left-to-right. If the stack parameter is false, rectangular image frames are stacked left-to-right otherwise top-to-bottom.

92.40.6 averageImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average a sequence of image frames, writing the result to averagedImage.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// averageImages
Var n as GMImageMBS = g.averageImages
Backdrop = n.CopyPicture
```

Notes: All the input image frames must be the same size in pixels.

92.40.7 coalesceImages as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a coalesced image sequence obtained by "playing" the image sequence (observing page offsets and disposal methods) to create a new image sequence in which all frames are full size and completely rendered.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// deconstruct
g = g.coalesceImages

// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: Note that if the original image sequence relied on page offsets and disposal methods that the resulting sequence will be larger (perhaps much larger) then the original. This is useful for GIF animation sequences that have page offsets and disposal methods. The resuting image sequence is returned.

92.40.8 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty image array.

92.40.9 deconstructImages as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Break down an image sequence into constituent parts.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// deconstruct
g = g.deconstructImages
```

```
// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: This is useful for creating GIF or MNG animation sequences.

92.40.10 displayImages

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Display a sequence of image frames.
Notes: Through use of a pop-up menu, image frames may be selected in succession. This feature is fully supported under X11 but may have only limited support in other environments.
Caution: if an image format is is not compatable with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

display methods are not supported currently.

92.40.11 FirstImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first image in array.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// show first image
Var img as GMImageMBS = g.FirstImage

// convert to true color for CopyPicture to work
const TrueColorType=6
img.type=TrueColorType

Backdrop = img.CopyPicture
```

92.40.12 flattenImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merge a sequence of image frames which represent image layers into a single composited representation.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// put copy of first image on the back
Var n as GMImageMBS = g.flattenImages

Backdrop = n.CopyPicture
```

Notes: Returns the flattened image. This function is useful for combining Photoshop layers into a single image.

92.40.13 Image(index as Integer) as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image with given index.

92.40.14 insert(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts an image on the front.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// put copy of first image on the front
Var n as GMImageMBS = g.FirstImage
g.insert n

// write to file
```

```
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

92.40.15 LastImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns last image in array.

92.40.16 mapImages(map as GMImageMBS, dither as boolean = true, measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace the colors of a sequence of images with the closest color from a reference image.
Notes: Set dither to true to enable dithering. Set measureError to true in order to evaluate quantization error.

92.40.17 montageImages(options as GMMontageMBS) as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a composite image by combining several separate image frames.
Example:

```
// build montage
Var StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(&cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(&c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
Var logo as Picture = LogoMBS(500)
Var image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
```

```
Var StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
Var resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: Multiple frames may be generated in the output array depending on the tile setting and the number of image frames montaged. Montage options are provided via the parameter options. Options set in the first image frame (backgroundColor, borderColor, matteColor, fillColor, strokeColor, font and fontPointsize) are also used as options by montageImages().

92.40.18 morphImages(frames as Integer) as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Morph a seqence of image frames.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// coalesce to make sure we have full images
g = g.coalesceImages
// morph to 10 pictures
g = g.morphImages(10)

// write gif
Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.NativePath
```

Notes: This algorithm expands the number of image frames (output to the new image array) by adding the number of intervening frames specified by frames such that the original frames morph (blend) into each other when played as an animation.

92.40.19 mosaicImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inlay a number of images to form a single coherent picture.
Notes: The result image argument is updated with a mosaic constructed from the image sequence.

92.40.20 quantizeImages(measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quantize colors in images using current quantization settings.
Notes: Set measureError to true in order to measure quantization error.

92.40.21 readImages(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read a sequence of image frames into existing container (appending to array) from blob.
See also:

- 92.40.22 readImages(imageSpec as string) 14558

92.40.22 readImages(imageSpec as string)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read a sequence of image frames into existing container (appending to array) with image names specified in the string imageSpec.
See also:

- 92.40.21 readImages(blob as GMBlobMBS) 14558

92.40.23 remove(index as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the image with the given index.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// remove first
g.remove 0

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
```

```
g.writeImages(output.NativePath)
```

Notes: Index should be between 0 and size-1.

92.40.24 reverse

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reverses the order of images in the array.

92.40.25 writeImages(blob as GMBlobMBS, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes images to the given blob object.
Notes: Write images in container to in-memory BLOB specified by Blob blob. Set adjoin to false to write a set of image frames via a wildcard imageSpec (e.g. image%02d.miff).
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 92.40.26 writeImages(imageSpec as string, adjoin as boolean = true) 14559

92.40.26 writeImages(imageSpec as string, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes images to the given path.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// write to file

Var output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.NativePath)
```

Notes: Write images in container to file specified by string imageSpec. Set adjoin_ to false to write a set

of image frames via a wildcard imageSpec (e.g. image%02d.miff).
The wildcard must be one of %0Nd, %0No, or %0Nx.
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 92.40.25 writeImages(blob as GMBlobMBS, adjoin as boolean = true) 14559

92.40.27 Properties

92.40.28 empty as boolean

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether image array is empty.
Notes: Returns true if array is empty or false if not.
(Read only property)

92.40.29 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the image array.
Notes: Should always be non zero.
(Read and Write property)

92.40.30 size as Integer

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of images in this array.
Example:

```
// read gif
Var g as new GMImageArrayMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.NativePath)

// display number of images
MsgBox str(g.size)
```

Notes: (Read only property)

92.41 class GMImageChannelStatisticsMBS

92.41.1 class GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The statistics for image channel.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var stat as GMImageStatisticsMBS = g.statistics
Var gs as GMImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

92.41.2 Methods

92.41.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

92.41.4 Properties

92.41.5 maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value observed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var stat as GMImageStatisticsMBS = g.statistics
Var gs as GMImageChannelStatisticsMBS = stat.green

MsgBox "maximum green color: "+str(gs.maximum)
```

Notes: (Read only property)

92.41.6 mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average (mean) value observed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var stat as GMImageStatisticsMBS = g.statistics
Var r as GMImageChannelStatisticsMBS = stat.red

MsgBox "mean red color: "+str(R.mean)
```

Notes: (Read only property)

92.41.7 minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value observed.
Notes: (Read only property)

92.41.8 standardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Standard deviation, sqrt(variance).
Notes: (Read only property)

92.41.9 variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Variance.
Notes: (Read only property)

92.42 class GMImageMBS

92.42.1 class GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image is the primary object in Magick++ and represents a single image frame (see image design).
Example:

```
Var c as new GMColorMBS("white")
Var g as new GMGeometryMBS(100,100)
Var image as new GMImageMBS(g, c)
```

Notes: With MBS Plugin 14.0 we offer this classes in 8bit (GM prefix) or 16bit (GM16 prefix).

The GMImageArrayMBS class must be used to operate on image sequences or images (e.g. of format GIF, TIFF, MIFF, Postscript, & MNG) which are comprized of multiple image frames. Individual frames of a multi-frame image may be requested by adding array-style notation to the end of the file name (e.g. "animation.gif [3] " retrieves the fourth frame of a GIF animation. Various image manipulation operations may be applied to the image. Attributes may be set on the image to influence the operation of the manipulation operations. The GMPixelsMBS class provides low-level access to image pixels.

92.42.2 Methods

92.42.3 adaptiveThreshold(width as UInt32, height as UInt32, offset as double = 0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply adaptive thresholding to the image.
Notes: see:
http://www.dai.ed.ac.uk/HIPR2/adpthrsh.htm

Adaptive thresholding is useful if the ideal threshold level is not known in advance, or if the illumination gradient is not constant across the image. Adaptive thresholding works by evaulating the mean (average) of a pixel region (size specified by width and height) and using the mean as the thresholding value. In order to remove residual noise from the background, the threshold may be adjusted by subtracting a constant offset (default zero) from the mean to compute the threshold.

92.42.4 addNoise(noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add noise to image with the specified noise type.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

image.addNoise(image.GaussianNoise)

Backdrop=image.CopyPicture

Notes: Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

92.42.5 addNoiseChannel(channel as Integer, noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add noise to an image channel with the specified noise type. The channel parameter specifies the channel to add noise to.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.addNoiseChannel(image.BlueChannel, image.ImpulseNoise)

Backdrop=image.CopyPicture
```

Notes: The noiseType parameter specifies the type of noise.
Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

92.42.6 affineTransform(sx as Double, sy as Double, rx as Double, ry as Double, tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an affine transformation to the drawing matrix.
Notes: Specify a transformation matrix to adjust scaling, rotation, and translation (coordinate transformation) for subsequently drawn objects in the same or decendent drawing context. The sx & sy parameters represent the x & y scale factors, the rx & ry parameters represent the x & y rotation, and the tx & ty parameters represent the x & y translation.

92.42.7 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate using specified text, bounding area, and placement gravity.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 92.42.10 annotate(text as string, location as GMGeometryMBS) 14569

92.42.8 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer, degrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate with text using specified text, bounding area, placement gravity, and rotation.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 92.42.10 annotate(text as string, location as GMGeometryMBS) 14569

92.42.9 annotate(text as string, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate with text (bounding area is entire image) and placement gravity.
Example:

```
Var White as new GMColorGrayMBS(1)
Var Black as new GMColorGrayMBS(0)
Var geo as new GMGeometryMBS("300x200")

Var g as new GMImageMBS(geo, White)
```

```
g.antiAlias = False
g.fillColor = Black
g.lineWidth = 1
g.strokeColor = Black
g.font = "@/Library/Fonts/Tahoma.ttf"
g.fontPointsize = 15

g.annotate("Hello World", g.SouthGravity)

Backdrop = g.CopyPicture
```

Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

• 92.42.10 annotate(text as string, location as GMGeometryMBS) 14569

92.42.10 annotate(text as string, location as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotate using specified text, and placement location.
Notes: Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

%b file size in bytes. %c comment. %d directory in which the image resides. %e extension of the image file. %f original filename of the image. %h height of image. %i filename of the image. %k number of unique colors. %l image label. %m image file format. %n number of images in a image sequence. %o output image filename. %p page number of the image. %q image depth (8 or 16). %p page number of the image. %q image depth (8 or 16). %s image scene number. %t image filename without any extension. %u a unique temporary filename. %w image width. %x x resolution of the image. %y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

• 92.42.8 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer, degrees as Double) 14566

• 92.42.9 annotate(text as string, gravity as Integer) 14567

92.42.11 attributeValues as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A dictionary with all attributes.
Notes: As attributes are created on demand, this will only return all so far generated attributes.

92.42.12 autoOrient

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Orient image to be right-side up based on its current orientation attribute.
Notes: This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

92.42.13 blur(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur an image with the specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.blur(30,10)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.14 blurChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur an image channel with the specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

image.blurChannel(image.BlueChannel, 30,10)

Backdrop=image.CopyPicture

Notes: The channel parameter specifies the channel to modify. The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.15 border

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border image (add border to image).
Example:

Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.border

Backdrop=image.CopyPicture

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 92.42.16 border(geometry as GMGeometryMBS) 14571

92.42.16 border(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border image (add border to image).
Example:

Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.border GMGeometryMBS.Make(10,10)

Backdrop=image.CopyPicture

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 92.42.15 border 14571

92.42.17 borderGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for border.

92.42.18 cacheThreshold(threshold as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pixel cache threshold in megabytes.
Notes: Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

92.42.19 cdl(cdl as string)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bake in the ASC-CDL.
Notes: Bake in the ASC-CDL, which is a convention for the for the exchange of basic primary color grading information between for the exchange of basic primary color grading information between equipment and software from different manufacturers. It is a useful transform for other purposes as well.

92.42.20 channel(channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract channel from image.
Notes: Use this option to extract a particular channel from the image. MatteChannel for example, is useful for extracting the opacity values from an image.

92.42.21 charcoal(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Charcoal effect image (looks like charcoal sketch).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.charcoal
```

Backdrop=image.CopyPicture

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.22 chop(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chop image (remove vertical or horizontal subregion of image).

92.42.23 colorHistogram as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates histogram.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var d as Dictionary = g.colorHistogram

MsgBox str(d.Count)+" color"

// check first color
Var c as GMColorMBS = d.key(0)

MsgBox "Color "+str(c.colorValue)+": "+str(d.Value(c))
```

Notes: The dictionary has a GMColorMBS/GMColor16MBS object as key for each color and an unsigned integer as value.

92.42.24 colorize(opacity as UInt32, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorize image with pen color, using specified percent opacity.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

```
image.colorize(10, new GMColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 92.42.25 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GMColorMBS) 14574

92.42.25 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorize image with pen color, using specified percent opacity for red, green, and blue quantums.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.colorize(10, 0, 5, new GMColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 92.42.24 colorize(opacity as UInt32, penColor as GMColorMBS) 14573

92.42.26 colorMap as GMColorMBS()

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with all colors in color map.
See also:

- 92.42.310 colorMap(index as UInt32) as GMColorMBS 14674

92.42.27 colorMatrix(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a color matrix to the image channels.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)

Var m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.colorMatrix 3, m

Backdrop = g.CopyPicture
```

Notes: The user supplied matrix may be of order 1 to 5 (1x1 through 5x5).

92.42.28 CombinePictureWithMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image with mask.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

Var c as new GMColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

Notes: Internally this calls Width and Height, CopyPicture and CopyMask.

92.42.29 compare(image as GMImageMBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compare current image with another image.
Notes: Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical. An ErrorOption exception is thrown if the reference image columns, rows, colorspace, or matte differ from the current image:

92.42.30 composite(compositeImage as GMImageMBS, gravity as Integer, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.42.31 compositeAt(compositeImage as GMImageMBS, offset as GMGeometryMBS, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.42.32 compositeXY(compositeImage as GMImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer = 2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose an image onto another at specified x and y offset and using a specified algorithm.

92.42.33 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default constructor.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GMImageMBS
Var blob as new GMBlobMBS(jpegData)
```

```
// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

92.42.38 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS, Magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct Image of specified size, depth, and format from in-memory Blob.
Example:

```
// first open file and read data in blob
SVG_File = FolderItem.ShowOpenFileDialog("")
```

```
If SVG_File = Nil Then Return

Var stream as BinaryStream = BinaryStream.Open(SVG_File)
Var data as string = stream.Read(stream.Length)
Var blob as new GMBlobMBS(data)

// 400 width and 400 height
Var geo As New GMGeometryMBS(400, 400, 0, 0)

// pass type here to have GraphicsMagick know it since there is no file name in blob:
Var g as New GMImageMBS(blob, geo, "svg")
```

- 92.42.43 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS) 14583
- 92.42.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14583

92.42.39 Constructor(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct from image file.
See also:

- 92.42.33 Constructor 14576
- 92.42.35 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS) 14578

92.42.41 Constructor(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct from image file or image specification.
See also:

- 92.42.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14583

92.42.42 Constructor(pic as picture)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new GMImage with the given picture.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
Backdrop=image.CopyPicture
```

Notes: Pixels from both the picture and picture's mask.

92.42.43 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Construct a blank image canvas of specified size and color.
Example:

```
Var g as new GMGeometryMBS(600,600)
Var c as new GMColorRGBMBS(1.0,0.0,0.0) // red
Var image as new GMImageMBS(g, c)

const TrueColorType=6

// Ensure that there are no other references to this image.
image.modifyImage
// Set the image type to TrueColor DirectClass representation.
image.type=TrueColorType

Backdrop=image.CopyPicture(0,0,600,600)
```

- 92.42.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14583

92.42.44 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Example:

```
Var data as new memoryblock(2048*2048) // your data
Var image as new GMImageMBS(2048, 2048, "I", GMImageMBS.StorageTypeCharPixel, data)
```

Notes: Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GMImageMBS(640, 480, "RGB", GMImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

- 92.42.43 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS) 14583

92.42.45 contrast(sharpen as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contrast image (enhance intensity differences in image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.contrast(10)

Backdrop=image.CopyPicture
```

92.42.46 convolve(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convolve image.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)

Var m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.convolve 3, m
```

```
Backdrop = g.CopyPicture
```

Notes: Applies a user-specified convolution to the image.
order represents the number of columns and rows in the filter kernel.
kernel is an array of doubles representing the convolution kernel.

92.42.47 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image and returns it as a new picture.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Rectangle(250, 250, 100, 100)

Backdrop=image.CopyPicture
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 92.42.48 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14586

92.42.48 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image and returns it as a new picture.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.threshold 127
```

```
// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture(0,0,250,250)
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 92.42.47 CopyPicture as picture 14586

92.42.49 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image's mask and returns it as a new picture.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var g As New GMImageMBS(f)

// get image with mask
Var p As picture = g.CopyPicture
p.mask = g.CopyPictureMask

window1.Backdrop = p
```

See also:

- 92.42.50 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14587

92.42.50 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the image's mask and returns it as a new picture.
See also:

- 92.42.49 CopyPictureMask as picture 14587

92.42.51 CopyPixelsMemory as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the pixels as they are into a memoryblock.
Notes: Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GMImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 92.42.52 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock 14588

92.42.52 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the pixels as they are into a memoryblock.
Notes: Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GMImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 92.42.51 CopyPixelsMemory as Memoryblock 14587

92.42.53 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Creates a HBITMAP for the image for use with Windows Declares.
Example:

```
// get test image
Var logo as Picture = LogoMBS(500)

// create GraphicsMagick image
Var g as new GMImageMBS(logo)

// make a HBitmap
Var hBitmap as ptr = g.CreateHBITMAP

// convert back to Xojo picture
Var pic as Picture = WindowsBitmapMBS.HBitmapToPicture(hBitmap, true)

// show in window
Backdrop = pic
```

```
// and cleanup memory
WindowsBitmapMBS.DeleteBitmap(hBitmap)
```

Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

92.42.54 crop(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop image (return subregion of original image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.crop GMGeometryMBS.Make(100,200)

Backdrop=image.CopyPicture
```

92.42.55 cycleColormap(amount as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cycle (rotate) image colormap.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.cycleColormap(5)

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

92.42.56 Describe(verbose as Integer = 1) as String

MBS GraphicsMagick Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Describes an image by printing its attributes.
Example:

```
Var f As FolderItem = FindFile("test.jpg")

Var g As New GMImageMBS(f)
Var s As String = g.Describe(2)
Break
```

Notes: Attributes include the image width, height, size, and others.

verbose: Whether output should be verbose.
Default is 1. Pass 0 to get a shorted output.
Pass 2 to count the number of colors in the image.

92.42.57 despeckle

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Despeckle image (reduce speckle noise).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.despeckle

Backdrop=image.CopyPicture
```

92.42.58 display

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Display image on screen.
Notes: Caution: if an image format is is not compatible with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

The plugin is not compiled with X11 so this call may not be useful.

92.42.59 edge(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Edge image (hilight edges in image).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.edge

Backdrop=image.CopyPicture
```

Notes: The radius is the radius of the pixel neighborhood. Specify a radius of zero for automatic radius selection.

92.42.60 emboss(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Emboss image (hilight edges with 3D effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.emboss

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.61 enhance

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhance image (minimize noise).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.enhance

Backdrop=image.CopyPicture
```

92.42.62 erase

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all image pixels to the current background color.

92.42.63 extent(geo as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// extend image to fit
Var geo as new GMGeometryMBS(500,500)
image.extent geo

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.42.64 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14592
- 92.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14593
- 92.42.66 extent(geo as GMGeometryMBS, gravity as Integer) 14594

92.42.64 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)
```

```
// extend image to fit
Var geo as new GMGeometryMBS(500,500)
Var col as GMColorMBS = GMColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.42.63 extent(geo as GMGeometryMBS) 14592
- 92.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14593
- 92.42.66 extent(geo as GMGeometryMBS, gravity as Integer) 14594

92.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// extend image to fit
Var geo as new GMGeometryMBS(500,500)
Var col as GMColorMBS = GMColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.42.63 extent(geo as GMGeometryMBS) 14592

- 92.42.64 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14592
- 92.42.66 extent(geo as GMGeometryMBS, gravity as Integer) 14594

92.42.66 extent(geo as GMGeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// resize proportionally to fit
Var geo as new GMGeometryMBS(500,500)
image.extent geo, image.CenterGravity

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 92.42.63 extent(geo as GMGeometryMBS) 14592
- 92.42.64 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14592
- 92.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14593

92.42.67 Flatten

MBS GraphicsMagick Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flatten the alpha channel.
Notes: Please set background color to define what color goes into the transparent areas.

92.42.68 flip

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flip image (reflect each scanline in the vertical direction).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.flip

Backdrop=image.CopyPicture
```

92.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14595
- 92.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14595
- 92.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14596

92.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 92.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS) 14595
- 92.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14595
- 92.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14596

92.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS) 14595
- 92.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14595
- 92.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14596

92.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 92.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS) 14595
- 92.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14595
- 92.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14595

92.42.73 floodFillOpacity(x as UInt32, y as UInt32, opacity as UInt32, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill pixels matching color (within fuzz factor) of target pixel(x,y) with replacement opacity value using method.
Example:

```
Var image as new GMImageMBS(pic)
// fills opacity channel with 100
image.floodFillOpacity(250,250, 100, 2)
```

Notes: Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14597
- 92.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14597
- 92.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14598

92.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14597
- 92.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14597
- 92.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14598

92.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14597
- 92.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14597
- 92.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14598

92.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 92.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14597
- 92.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14597
- 92.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14597

92.42.78 flop

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flop image (reflect each scanline in the horizontal direction).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.flop

Backdrop=image.CopyPicture
```

92.42.79 FontMap as string

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current font map in use.
Notes: The MBS Plugin provides to GraphicsMagick the font map to use.
This is a XML defining which fonts are available.
Use this function to learn what fonts may be available or debug to see why a font doesn't load.

92.42.80 fontTypeMetrics(name as string) as GMTypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain font metrics for text string given current font, pointsize, and density settings.

92.42.81 formatExpression(expression as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Format the specified expression similar to command line '-format'.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: For example "%wx%h" is converted to a string containing image WIDTHxHEIGHT like "640x480".

92.42.82 frame

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.frame

Backdrop=image.CopyPicture
```

See also:

- 92.42.83 frame(geometry as GMGeometryMBS) 14600

- 92.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14600

92.42.83 frame(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.frame(GMGeometryMBS.Make("10x10"))

Backdrop=image.CopyPicture
```

See also:

- 92.42.82 frame 14599
- 92.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14600

92.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draw a decorative frame around the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.frame(15,15)

Backdrop=image.CopyPicture
```

See also:

- 92.42.82 frame 14599
- 92.42.83 frame(geometry as GMGeometryMBS) 14600

92.42.85 frameGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for frame.

92.42.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma correct the image or individual image channels.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.gamma(1,2,3)

Backdrop=image.CopyPicture
```

See also:

- 92.42.253 gamma as Double 14657

92.42.87 gaussianBlur(width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gaussian blur image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.gaussianBlur(30, 10)

Backdrop=image.CopyPicture
```

Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma

92.42.88 gaussianBlurChannel(channel as Integer, width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gaussian blur image channel.
Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma.

92.42.89 getChromaBluePrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity blue primary point.

92.42.90 getchromaGreenPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

92.42.91 getchromaRedPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

92.42.92 getchromaWhitePoint(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

92.42.93 getConstPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers read-only pixels from the image to the pixel cache as defined by the specified region

92.42.94 GetEXIFOrientation(byref orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries orientation from EXIF.
Notes: Orientation is set to number from 0 to 8 depending on rotation. -1 if unknown.
This function can only read orientation, if there is an EXIF block in image.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

92.42.95 getPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers pixels from the image to the pixel cache as defined by the specified region.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)

// get pointer to some pixels to write
Var x as ptr = g.getPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via syncPixels. This method is valid for DirectClass images.

92.42.96 Graphics as GMGraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a graphics object for this image.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: Using the graphics object you can draw on the image.

92.42.97 haldClut(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply a color lookup table (Hald CLUT) to the image.

92.42.98 Hash(Size as Integer = 8) as String

MBS GraphicsMagick Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a hash of the image.
Example:

```
Var p As Picture = LogoMBS(500)
Var g As New GMImageMBS(p)
```

msgbox g.Hash

Notes: Hash is returned as 64 characters being 1 or 0.
We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.
This hash is quite immune against resizing, compression artifacts and hue changes.
You can use LevenshteinDistanceMBS or JaroWinklerDistanceMBS to compare two hashes.

Added size parameter for version 22.4:
The size of the bitmap. Value from 8 to 1024. Default is 8.

92.42.99 implode(factor as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Implode image (special effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.implode(0.3)

Backdrop=image.CopyPicture
```

92.42.100 IsLoggingEnabled as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether logging is enabled.
Notes: Returns true if we log GraphicsMagick usage.

92.42.101 JasperLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for jasper library.

92.42.102 label(text as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assign a label to an image.
Notes: Use this option to assign a specific label to the image. Optionally you can include the image filename, type, width, height, or scene number in the label by embedding special format characters. If the first character of string is @, the image label is read from a file titled by the remaining characters in the string. When converting to Postscript, use this option to specify a header string to print above the image.
See also:

- 92.42.264 label as string 14660

92.42.103 level(black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Level image to increase image contrast, and/or adjust image gamma.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.level(0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten:

92.42.104 levelChannel(channel as Integer, black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Level image channel to increase image contrast, and/or adjust image gamma.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.levelChannel(image.BlueChannel, 0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image channel by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

92.42.105 LibVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the version string of the GraphicsMagick library.

92.42.106 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the iconv library.
Notes: The GraphicsMagick classes may use libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

92.42.107 MagickVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version text of the GraphicsMagick library.

92.42.108 magnify

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Magnify image by integral size (double the dimensions)
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.magnify

Backdrop=image.CopyPicture
```

92.42.109 map(mapImage as GMImageMBS, dither as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remap image colors with closest color from a reference image.
Example:

```
// some picture we want to map colors
Var pic as Picture = LogoMBS(500)

// build a picture with palette
Var backgroundColor as new GMColorMBS(255,255,255) // white
Var size as new GMGeometryMBS(10,10)

Var i as new GMImageMBS(pic)
Var x as new GMImageMBS(size, backgroundColor)

x.pixelColor(0,0) = new GMColorMBS(0 ,0 ,0 ) // black
x.pixelColor(0,1) = new GMColorMBS(255,0 ,0 ) // red
x.pixelColor(0,2) = new GMColorMBS(0 ,255,0 ) // green
x.pixelColor(0,3) = new GMColorMBS(0 ,0 ,255) // blue
x.pixelColor(0,4) = new GMColorMBS(255,255,0 ) // yellow
x.pixelColor(0,5) = new GMColorMBS(0 ,255,255) // cyan
x.pixelColor(0,6) = new GMColorMBS(255,0 ,255) // magenta

// do the map
i.map(x, false)

// convert result from palette picture to bitmap picture
i.type = i.TrueColorType

// and copy picture to backdrop
Backdrop = i.CopyPicture
```

Notes: Set dither to true in to apply Floyd/Steinberg error diffusion to the image. By default, color reduction chooses an optimal set of colors that best represent the original image. Alternatively, you can choose a particular set of colors from an image file with this option.

92.42.110 matteFloodfill(target as GMColorMBS, opacity as UInt32, x as Integer, y as Integer, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Floodfill designated area with a replacement opacity value.
Notes: Paint methods:

PointMethod	0	Replace pixel color at point.
ReplaceMethod	1	Replace color for all image pixels matching color at point.
FloodfillMethod	2	Replace color for pixels surrounding point until encountering pixel that fails to match color at point.
FillToBorderMethod	3	Replace color for pixels surrounding point until encountering pixels matching border color.
ResetMethod	4	Replace colors for all pixels in image with pen color.

92.42.111 medianFilter(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter image by replacing each pixel component with the median color in a circular neighborhood.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.medianFilter(10)

Backdrop=image.CopyPicture
```

92.42.112 minify

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce image by integral (half) size.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.minify

Backdrop=image.CopyPicture
```

92.42.113 modequalizeifyImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Not documented.

92.42.114 modifyImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Prepare to update image (copy if reference >1).
Notes: Normally Magick++'s implicit reference counting takes care of all instance management. In the rare case that the automatic instance management does not work, use this method to assure that there is only one reference to the image to be modified. It should be used in the cases where a GraphicsMagick C function is used directly on an image which may have multiple references:

92.42.115 modulate(brightness as Double, saturation as Double, hue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulate percent hue, saturation, and brightness of an image.
Example:

```
Var logo as Picture = LogoMBS(500)
Var image as new GMImageMBS(logo)

image.type = image.TrueColorType

// brightness 150%
image.modulate(150,100,100)
backdrop = image.CopyPicture
```

Notes: Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

92.42.116 montageGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile size and offset within an image montage.
Notes: Only valid for montage images.

92.42.117 motionBlur(radius as Double, sigma as Double, angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Motion blur image with specified blur factor.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.motionBlur(30,10,90)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels. The angle parameter specifies the angle the object appears to be comming from (zero degrees is from the right).

92.42.118 negate(grayscale as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negate colors in image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.negate

Backdrop=image.CopyPicture
```

Notes: Set grayscale to only negate grayscale values in image.

92.42.119 normalize

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Normalize image (increase contrast by normalizing the pixel values to span the full range of color values).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.normalize

Backdrop=image.CopyPicture
```

92.42.120 oilPaint(radius as Double=3.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Oilpaint image (image looks like an oil painting).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.oilPaint

Backdrop=image.CopyPicture
```

92.42.121 opacity(opacity as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or attenuate the opacity channel in the image.
Notes: If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB. The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

92.42.122 opaque(opaqueColor as GMColorMBS, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change color of specified opaque pixel to specified pen color.

92.42.123 ping(data as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the blob.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.42.124 ping(file as folderitem) 14614
- 92.42.125 ping(Path as string) 14614

92.42.124 ping(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// try with Constructor (same as read)
Var t1 as Double = Microseconds
Var g1 as new GMImageMBS(f)

// now just ping
Var t2 as Double = Microseconds
Var g2 as new GMImageMBS
g2.ping(f)

// or read
Var t3 as Double = Microseconds
Var g3 as new GMImageMBS
g3.read(f)

Var t4 as Double = Microseconds

// show speeds
MsgBox str(T4-t3)+" ¬µs for read"+EndOfLine+_
str(T3-t2)+" ¬µs for ping"+EndOfLine+_
str(T2-t1)+" ¬µs for Constructor"
```

Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.42.123 ping(data as GMBlobMBS) 14613
- 92.42.125 ping(Path as string) 14614

92.42.125 ping(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads information for an image from the image specification.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 92.42.123 ping(data as GMBlobMBS) 14613
- 92.42.124 ping(file as folderitem) 14614

92.42.126 PNGLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries PNG library version string.

92.42.127 quantize(measureError as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Quantize image (reduce number of colors).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Set measureError to true in order to calculate error attributes.

92.42.128 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the quantum depth.

92.42.129 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
```

```
const AddQuantumOp = 1
const ThresholdQuantumOp = 10

g.quantumOperator( g.AllChannels, AddQuantumOp, 100)

// show
me.Backdrop = g.CopyPicture
```

See also:

- 92.42.130 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double) 14616

92.42.130 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
See also:

- 92.42.129 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double) 14615

92.42.131 raiseGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default geometry description for raise.

92.42.132 raiseImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.raiseImage

Backdrop=image.CopyPicture
```

See also:

- 92.42.133 raiseImage(geometry as GMGeometryMBS, raisedFlag as boolean=false) 14617

92.42.133 raiseImage(geometry as GMGeometryMBS, raisedFlag as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.raiseImage(GMGeometryMBS.Make(5,8))

Backdrop=image.CopyPicture
```

See also:

- 92.42.132 raiseImage 14616

92.42.134 randomThreshold(thresholds as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Random threshold image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.randomThreshold(GMGeometryMBS.make("50x200"))

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

92.42.135 randomThresholdChannel(thresholds as GMGeometryMBS, channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Random threshold image channel.
Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

92.42.136 read(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame from in-memory Blob.
Example:

```
// get some image data (e.g. from blob in database)
Var logo as Picture = LogoMBS(500)
Var jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Var mp as new GMImageMBS
Var blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

- 92.42.144 read(size as GMGeometryMBS, Path as string) 14622
- 92.42.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14623

92.42.137 read(blob as GMBlobMBS, size as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size from in-memory Blob.
See also:

- 92.42.136 read(blob as GMBlobMBS) 14618
- 92.42.138 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer) 14619
- 92.42.139 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer, magick as string) 14620

- 92.42.144 read(size as GMGeometryMBS, Path as string) 14622
- 92.42.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14623

92.42.144 read(size as GMGeometryMBS, Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame of specified size into current object.
See also:

- 92.42.136 read(blob as GMBlobMBS) 14618

- 92.42.137 read(blob as GMBlobMBS, size as GMGeometryMBS) 14619
- 92.42.138 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer) 14619
- 92.42.139 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer, magick as string) 14620
- 92.42.140 read(blob as GMBlobMBS, size as GMGeometryMBS, magick as string) 14620
- 92.42.141 read(file as folderitem) 14621
- 92.42.142 read(path as string) 14621
- 92.42.143 read(size as GMGeometryMBS, file as folderitem) 14622
- 92.42.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14623

92.42.145 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Notes: Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GMImageMBS(640, 480, "RGB", GMImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel,

StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

92.42.146 reduceNoise

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce noise in image using a noise peak elimination filter.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.reduceNoise

Backdrop=image.CopyPicture
```

See also:

- 92.42.147 reduceNoise(order as Double) 14624

92.42.147 reduceNoise(order as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduce noise in image using a noise peak elimination filter.
See also:

- 92.42.146 reduceNoise 14624

92.42.148 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the release date of the used graphics magick library.
Notes: We update the library only when someone needs an update, so if you need, please contact us.

92.42.149 repage

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image page canvas and position.

92.42.150 resize(geo as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying only geometry, with filter and blur obtained from Image default.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// resize proportionally to fit
Var geo as new GMGeometryMBS(500,500)
image.resize geo

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

Notes: Same result as 'zoom' method.
See also:

- 92.42.151 resize(geo as GMGeometryMBS, filterType as Integer) 14625
- 92.42.152 resize(geo as GMGeometryMBS, filterType as Integer, blur as double) 14626

92.42.151 resize(geo as GMGeometryMBS, filterType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying geometry and filter, with blur using Image default.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// resize proportionally to fit
Var geo as new GMGeometryMBS(500,500)
image.resize geo, image.CubicFilter

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

See also:

- 92.42.150 resize(geo as GMGeometryMBS) 14625
- 92.42.152 resize(geo as GMGeometryMBS, filterType as Integer, blur as double) 14626

92.42.152 resize(geo as GMGeometryMBS, filterType as Integer, blur as double)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image, specifying geometry, filter, and blur.
Example:

```
Var f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
Var image as new GMImageMBS(f)

// resize proportionally to fit
Var geo as new GMGeometryMBS(500,500)
image.resize geo, image.CubicFilter, 3

window1.Title = image.formatExpression("%wx%h")
window1.Backdrop = image.CopyPicture
```

See also:

- 92.42.150 resize(geo as GMGeometryMBS) 14625
- 92.42.151 resize(geo as GMGeometryMBS, filterType as Integer) 14625

92.42.153 roll(columns as UInt32, rows as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.roll(30,30)

Backdrop=image.CopyPicture
```

See also:

- 92.42.154 roll(roll as GMGeometryMBS) 14627

92.42.154 roll(roll as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.roll(GMGeometryMBS.Make(0,0,30,30))

Backdrop=image.CopyPicture
```

See also:

- 92.42.153 roll(columns as UInt32, rows as UInt32) 14626

92.42.155 rotate(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotate image counter-clockwise by specified number of degrees.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.rotate(30)

Backdrop=image.CopyPicture
```

92.42.156 sample(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image by using pixel sampling algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.sample GMGeometryMBS.make(100,100)

Backdrop=image.CopyPicture
```

92.42.157 scale(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image by using simple ratio algorithm which provides good quality.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.scale new GMGeometryMBS(100,100)

Backdrop=image.CopyPicture
```

92.42.158 segment(clusterThreshold as Double=1.0, smoothingThreshold as Double=1.5)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.segment

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

Notes: A histogram is built for the image. This histogram is filtered to reduce noise and a second derivative of the histogram plot is built and used to identify potential cluster colors (peaks in the histogram). The cluster colors are then validated by scanning through all of the pixels to see how many pixels fall within each cluster. Some candidate cluster colors may not match any of the image pixels at all and should be discarded. Specify clusterThreshold, as the number of pixels matching a cluster color in order for the cluster to be considered valid. SmoothingThreshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative. The default is 1.5.

92.42.159 setChromaBluePrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity blue primary point.
Notes: e.g. x=0.15, y=0.06

92.42.160 setchromaGreenPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

92.42.161 setchromaRedPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

92.42.162 setchromaWhitePoint(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

92.42.163 SetEXIFOrientation(orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets orientation for EXIF.
Notes: Changing orientation may need to set orientation via SetOrientation and SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

92.42.164 SetLogEventMask(events as String)

MBS GraphicsMagick Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set log event mask.
Example:

```
GMImageMBS.SetLogEventMask("coder,annotate")
```

Notes: Defines which events are logged.
By default logging goes to stderr, so on macOS you may need to run your app via Terminal to see logs there.

List of events includes: none, Configure, Annotate, Render, Transform, Locale, Coder, X11, Cache, Blob, Deprecate, User, Resource, TemporaryFile, Exception, Option, Information, Warning, Error, FatalError and All.

92.42.165 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture into the Image at the given position.

92.42.166 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture into the Image's mask at the given position.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))
```

```
g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

92.42.167 setPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates a pixel cache region to store image pixels as defined by the region rectangle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)

// get pointer to some pixels to write
Var x as ptr = g.setPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel cache to the image via syncPixels.

92.42.168 setStrokeDashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.42.169 shade(azimuth as Double=30.0, elevation as Double=30.0, colorShading as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shade image using distant light source.
Notes: Specify azimuth and elevation as the position of the light source. By default, the shading results as a grayscale image.. Set colorShading to true to shade the red, green, and blue components of the image.

92.42.170 sharpen(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpen pixels in image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.sharpen

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.171 sharpenChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpen pixels in image channel.
Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

92.42.172 shave(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shave pixels from image edges.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.shave(new GMGeometryMBS(200,200))

Backdrop=image.CopyPicture
```

92.42.173 shear(xShearAngle as Double, yShearAngle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shear image (create parallelogram by sliding image by X or Y axis).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.shear(10,20)

Backdrop=image.CopyPicture
```

Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x degrees is measured relative to the Y axis, and similarly, for Y direction shears y degrees is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined as borderColor.

92.42.174 signature(force as boolean=false) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image textual signature.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

MsgBox image.signature
```

Backdrop=image.CopyPicture

Notes: Set force to true in order to re-calculate the signature regardless of whether the image data has been modified.

92.42.175 solarize(factor as Double=50.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Solarize image (similar to effect seen when exposing a photographic film to light during the development process)
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.solarize

Backdrop=image.CopyPicture
```

92.42.176 spread(amount as UInt32=3)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Spread pixels randomly within image by specified ammount
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.spread 5

Backdrop=image.CopyPicture
```

92.42.177 statistics as GMImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain image statistics.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
```

```
Var stat as GMImageStatisticsMBS = g.statistics
Var gs as GMImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: Statistics are normalized to the range of 0.0 to 1.0 and are output to the specified ImageStatistics structure.

92.42.178 stegano(watermark as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a digital watermark to the image (based on second image).
Example:

```
Var p as Picture = LogoMBS(500)
Var p1 as Picture = New Picture(550,500,32)
Var p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

Var image1 as new GMImageMBS(p1)
Var image2 as new GMImageMBS(p2)

image2.zoom(new GMGeometryMBS(100,100)) // scale down

// add watermark
image1.stegano(image2)

// now make a threshold so you see the difference
image1.threshold 254

image1.type = image1.TrueColorType
Backdrop=image1.CopyPicture
```

92.42.179 stereo(rightImage as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an image which appears in stereo when viewed with red-blue glasses (Red image on left, blue on right)
Example:

```
Var p as Picture = LogoMBS(500)
```

```
Var p1 as Picture = New Picture(550,500,32)
Var p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

Var image1 as new GMImageMBS(p1)
Var image2 as new GMImageMBS(p2)

image1.stereo(IMAGE2)

Backdrop=image1.CopyPicture
```

92.42.180 strip

MBS GraphicsMagick Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remove all profiles and text attributes from the image.

92.42.181 strokeDashArray as Double()

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

92.42.182 swirl(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swirl image (image pixels are rotated by degrees).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.swirl 200

Backdrop=image.CopyPicture
```

92.42.183 syncPixels

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers the image cache pixels to the image.

92.42.184 texture(texture as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Channel a texture on pixels matching image background color.

92.42.185 threshold(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Threshold image channels (below threshold becomes black, above threshold becomes white).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The range of the threshold parameter is 0 to MaxRGB.

92.42.186 thumbnail(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image using several algorithms to make smaller images very quickly.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
```

```
// make thumbnail
Var geo as new GMGeometryMBS(100, 100)
g.thumbnail(geo)

// show
me.Backdrop = g.CopyPicture
```

92.42.187 TIFFLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for tiff library.

92.42.188 transform(imageGeometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 92.42.189 transform(imageGeometry as GMGeometryMBS, cropGeometry as GMGeometryMBS) 14638

92.42.189 transform(imageGeometry as GMGeometryMBS, cropGeometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 92.42.188 transform(imageGeometry as GMGeometryMBS) 14638

92.42.190 transformOrigin(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Origin of coordinate system to use when annotating with text or drawing.

92.42.191 transformReset

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset transformation parameters to default.

92.42.192 transformRotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation to use when annotating with text or drawing.

92.42.193 transformScale(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scale to use when annotating with text or drawing.

92.42.194 transformSkewX(x as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Skew to use in X axis when annotating with text or drawing.

92.42.195 transformSkewY(y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Skew to use in Y axis when annotating with text or drawing.

92.42.196 transparent(color as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add matte channel to image, setting pixels matching color to transparent.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

```
Var c as new GMColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

92.42.197 trim

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim edges that are the background color from the image.
Example:

```
Var p as Picture = LogoMBS(500)
// make the logo picture bigger
Var q as Picture = New Picture(700,700,32)

q.Graphics.DrawPicture p,100,100

Var image as new GMImageMBS(q)

// now trim the white border away
image.trim

Backdrop=image.CopyPicture
```

Notes: See ColorFuzz property for how far the pixel value can differentiate.

92.42.198 unregisterId

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Not documented.

92.42.199 unsharpmask(radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace image with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

```
image.unsharpmask(10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes: radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
amount: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence amount.

92.42.200 unsharpmaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replace image channel with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.unsharpmaskChannel(Image.RedChannel, 10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

channel:	image channel to modify.
radius:	the radius of the Gaussian, in pixels, not counting the center pixel.
sigma:	the standard deviation of the Gaussian, in pixels.
amount:	the percentage of the difference between the original and the blur image that is added back into the original.
threshold:	the threshold in pixels needed to apply the diffence amount.

92.42.201 wave(amplitude as Double=25.0, wavelength as Double=150.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Map image pixels to a sine wave.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.wave

Backdrop=image.CopyPicture
```

92.42.202 WebPVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version of WebP library.
Notes: Should be a version string like "1.3.0".

92.42.203 write(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.42.204 write(blob as GMBlobMBS, magick as string) 14643
- 92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14643
- 92.42.206 write(file as folderitem) 14644
- 92.42.207 write(Path as string) 14644
- 92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14645

92.42.204 write(blob as GMBlobMBS, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.42.203 write(blob as GMBlobMBS) 14643
- 92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14643
- 92.42.206 write(file as folderitem) 14644
- 92.42.207 write(Path as string) 14644
- 92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14645

92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 92.42.203 write(blob as GMBlobMBS) 14643
- 92.42.204 write(blob as GMBlobMBS, magick as string) 14643
- 92.42.206 write(file as folderitem) 14644
- 92.42.207 write(Path as string) 14644
- 92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14645

92.42.206 write(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to a file.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

See also:

- 92.42.203 write(blob as GMBlobMBS) 14643
- 92.42.204 write(blob as GMBlobMBS, magick as string) 14643
- 92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14643
- 92.42.207 write(Path as string) 14644
- 92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14645

92.42.207 write(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to a file.
Example:

```
// export a picture as PCL
Var l As Picture = LogoMBS(500)
Var p As New GMImageMBS(l)

p.type = p.BilevelType
```

p.write("/tmp/print.pcl")

See also:

- 92.42.203 write(blob as GMBlobMBS) 14643
- 92.42.204 write(blob as GMBlobMBS, magick as string) 14643
- 92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14643
- 92.42.206 write(file as folderitem) 14644
- 92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14645

92.42.208 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write single image frame to an array of pixels with storage type specified by user (DispatchImage).
Notes: e.g. image.write(0, 0, 640, 1, "RGB", 0, pixels)
See also:

- 92.42.203 write(blob as GMBlobMBS) 14643
- 92.42.204 write(blob as GMBlobMBS, magick as string) 14643
- 92.42.205 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14643
- 92.42.206 write(file as folderitem) 14644
- 92.42.207 write(Path as string) 14644

92.42.209 ZLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version string for zlib library.

92.42.210 zoom(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Zoom (resize) image to specified size.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.zoom(new GMGeometryMBS(200,200))

Backdrop=image.CopyPicture
```

92.42.211 ZPL(Header as boolean = true) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image as ZPL hex image.
Notes: This is for sending data to a receipt printer. The picture is taken as black & white image and we build the hex string, you can send to the printer.
Picture needs to have a width dividable by 8.

Set Header to false for skipping header and footer.

92.42.212 Properties

92.42.213 adjoin as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Join images into a single multi-image file.
Notes: (Read and Write property)

92.42.214 animationDelay as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence.
Notes: This option is useful for regulating the animation of a sequence of GIF images within Netscape.
(Read and Write property)

92.42.215 animationIterations as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of iterations to loop an animation (e.g. Netscape loop extension) for.
Notes: (Read and Write property)

92.42.216 antiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes: Enabled by default.
(Read and Write property)

92.42.217 backgroundColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Example:

```
// make a red and turn it to 100% transparent
Var red As New GMColorRGBMBS("red")
red.alpha = 1

// now make image and make it RGBA with the transparnet background
Var RastoredVectorImage as New GMImageMBS
RastoredVectorImage.type = GMImageMBS.TrueColorMatteType
RastoredVectorImage.backgroundColor = red

// now read SVG, so we get a transparent background
Var SVG_File as FolderItem = SpecialFolders.desktop.Child("test.svg")
RastoredVectorImage.read(SVG_File)
```

Notes: (Read and Write property)

92.42.218 backgroundTexture as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image file name to use as the background texture.
Notes: Does not modify image pixels.
(Read and Write property)

92.42.219 baseColumns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image width (before transformations)
Notes: (Read only property)

92.42.220 baseFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image filename (before transformations)
Notes: (Read only property)

92.42.221 baseRows as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base image height (before transformations).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

Title = str(image.baseRows)+" x "+str(image.baseColumns)
```

Notes: (Read only property)

92.42.222 borderColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

92.42.223 boundingBox as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return smallest bounding box enclosing non-border pixels.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color
image.strokeColor = new GMColorRGBMBS("green") // set color

image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle

draw.Circle(250, 250, 120, 150)
draw.Draw

draw = nil
image.type = image.TrueColorType

Backdrop = image.CopyPicture

MsgBox image.boundingBox.StringValue
```

Notes: The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by crop(Geometry(0,0)).
(Read only property)

92.42.224 boxColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Base color that annotation text is rendered on (default none).
Notes: (Read and Write property)

92.42.225 classType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image class (DirectClass or PseudoClass).
Notes: NOTE: setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built):
(Read and Write property)

92.42.226 clipMask as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Associate a clip mask image with the current image.
Notes: The clip mask image must have the same dimensions as the current image or an exception is thrown. Clipping occurs wherever pixels are transparent in the clip mask image. Clipping Pass an invalid image to unset an existing clip mask.
(Read and Write property)

92.42.227 colorFuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this option to match colors that are close to the target color in RGB space.

e.g. set to 50 for 8 bit class and 50 * 257 for the 16 bit class to allow 20% divagation in pixel values.
(Read and Write property)

92.42.228 colorMapSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of entries in the colormap.
Notes: Setting the colormap size may extend or truncate the colormap. The maximum number of supported entries is specified by the MaxColormapSize constant, and is dependent on the value of QuantumDepth when GraphicsMagick is compiled. An exception is thrown if more entries are requested than may be supported. Care should be taken when truncating the colormap to ensure that the image colormap indexes reference valid colormap entries.
(Read and Write property)

92.42.229 colorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The colorspace (e.g. CMYK) used to represent the image pixel colors.
Notes:

(Read and Write property)

UndefinedColorspace	= 0
RGBColorspace	= 1 (Plain old RGB colorspace)
GRAYColorspace	= 2 (Plain old full-range grayscale)
TransparentColorspace	= 3 (RGB but preserve matte channel during quantize)
OHTAColorspace	= 4
XYZColorspace	= 5 (CIE XYZ)
YCCColorspace	= 6 (Kodak PhotoCD PhotoYCC)
YIQColorspace	= 7
YPbPrColorspace	= 8
YUVColorspace	= 9
CMYKColorspace	= 10 (Cyan, magenta, yellow, black, alpha)
sRGBColorspace	= 11 (Kodak PhotoCD sRGB)
HSLColorspace	= 12 (Hue, saturation, luminosity)
HWBColorspace	= 13 (Hue, whiteness, blackness)
LABColorspace	= 14 (LAB colorspace not supported yet other than via lcms)
CineonLogRGBColorspace	= 15 (RGB data with Cineon Log scaling, 2.048 density range)
Rec601LumaColorspace	= 16 (Luma (Y) according to ITU-R 601)
Rec601YCbCrColorspace	= 17 (YCbCr according to ITU-R 601)
Rec709LumaColorspace	= 18 (Luma (Y) according to ITU-R 709)
Rec709YCbCrColorspace	= 19 (YCbCr according to ITU-R 709)

92.42.230 columns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

92.42.231 comment as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image comment.
Notes: When you set this property, you add comment string to image.
By default, each image is commented with its file name. Use this method to assign a specific comment to the image. Optionally you can include the image filename, type, width, height, or other image attributes by embedding special format characters:

(Read and Write property)

92.42.232 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composition operator to be used when composition is implicitly used (such as for image flattening).
Notes: (Read and Write property)

92.42.233 compressType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: The default is the compression type of the input image file.
(Read and Write property)

92.42.234 debug as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable printing of debug messages from GraphicsMagick as it executes.
Notes: (Read and Write property)

92.42.235 density as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical and horizontal resolution in pixels of the image.
Example:

```
Var p as new GMImageMBS

Var item as FolderItem = SpecialFolder.Desktop.Child("input.png")
p.read(item)
p.scale new GMGeometryMBS(3750,3750)
p.quality = 95
p.resolutionUnits = p.PixelsPerInchResolution
p.density = new GMGeometryMBS(300, 300)
Var out as FolderItem = SpecialFolder.Desktop.Child("output.png")
```

p.write out

Notes: This option specifies an image density when decoding a Postscript or Portable Document page. Often used with psPageSize.
(Read and Write property)

92.42.236 depth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (bits allocated to red/green/blue components).
Notes: Used to specify the bit depth when reading or writing raw images or when the output format supports multiple depths. Defaults to the quantum depth that GraphicsMagick is compiled with.
(Read and Write property)

92.42.237 directory as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile names from within an image montage.
Notes: (Read only property)

92.42.238 endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian mode.
Notes: Endianness (LSBEndian like Intel, MSBEndian like SPARC, or NativeEndian for what this computer uses) for image formats which support endian-specific options.
(Read and Write property)

92.42.239 ExifThumbnail as String

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Var g As New GMImageMBS

// not load, but just read header & metadata
```

```
g.ping("/Users/cs/Desktop/test.JPG")

// get thumbnail
Var Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)
```

Notes: Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

92.42.240 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image file name.
Notes: (Read and Write property)

92.42.241 fileSize as Int64

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes of the image on disk.
Notes: (Read only property)

92.42.242 fillColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color to use when filling drawn objects.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5
```

```
Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.42.243 fillPattern as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pattern to use while filling drawn objects.
Notes: (Read and Write property)

92.42.244 fillRule as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rule to use when filling drawn objects
Notes: (Read and Write property)

92.42.245 filterType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reduction filter employed has a sigificant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
Notes: Filter to use when resizing image.
(Read and Write property)

92.42.246 font as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font.
Notes: If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").

(Read and Write property)

92.42.247 FontFamily as String

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font family to use.
Notes: The plugin will look through the list to find best match for combination of family, style, stretch and weight.
You can use either FontFamily or Font property, but not both.
Setting font family clears font.
(Read and Write property)

92.42.248 fontPointsize as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font point size.
Notes: (Read and Write property)

92.42.249 FontStretch as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font stretch.
Notes: Can be Normal, UltraCondensed, ExtraCondensed, Condensed, SemiCondensed, SemiExpanded, Expanded, ExtraExpanded, UltraExpanded or Any.
See stretch constants.
(Read and Write property)

92.42.250 FontStyle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font style to use.
Notes: Can be Normal, Italic, Oblique or Any.
See font style constants.
(Read and Write property)

92.42.251 FontWeight as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font weight.
Notes: The font weight in range from 0 to 1000.
400 is normal and 800 bold.
(Read and Write property)

92.42.252 format as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Long image format description.
Notes: (Read only property)

92.42.253 gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma correct the image or individual image channels.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.gamma = 3.0

Backdrop=image.CopyPicture
```

Notes: If you get the value, it is the gamma level of the image. Gamma is a pow() function which converts between the linear light representation and the representation for the computer display. Most computer images are gamma corrected to 2.2 (1/0.4545) so that each step results in a visually linear step on a computer or video display:
(Read and Write property)
See also:

- 92.42.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double) 14601

92.42.254 geometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size of the image when encoding.
Notes: (Read only property)

92.42.255 getConstIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain immutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

92.42.256 getIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtain mutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

92.42.257 gifDisposeMethod as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: GIF disposal method.
Notes: This option (specific to the GIF file format) is used to control how successive frames are rendered (how the preceding frame is disposed of) when creating a GIF animation.

Constant	Disposal	Description
UndefinedDispose	0	No disposal specified.
NoneDispose	1	Do not dispose between frames.
BackgroundDispose	2	Overwrite frame with background color from header.
PreviousDispose	3	Overwrite with previous frame.

(Read and Write property)

92.42.258 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Example:

```
Var c as new GMColorMBS("white")
Var g as new GMGeometryMBS(100,100)
Var image as new GMImageMBS(g, c)
MsgBox hex(Image.handle) // valid if not zero
```

Notes: (Read and Write property)

92.42.259 height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image.
Example:

```
Var c as new GMColorRGBMBS(1.0,0.0,0.0)
Var size as new GMGeometryMBS(100,100)
Var g as new GMImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes: This is a convenience function for you which calls size.height.
(Read only property)

92.42.260 iccColorProfile as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ICC color profile.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("IMG_0793.tif")
Var Image as new GMImageMBS(f)
Var ProfileBlob as GMBlobMBS = Image.iccColorProfile
Var ProfileData as string = ProfileBlob.CopyString
Var cm as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ProfileData)
Var name as string = cm.Name

Break // check data in debugger
```

Notes: Supplied via a Blob since Magick++/ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Color Consortium for the format of ICC color profiles.
(Read and Write property)

92.42.261 interlaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.
(Read and Write property)

92.42.262 iptcProfile as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: IPTC profile.
Notes: Supplied via a Blob since Magick++ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Press Telecommunications Council for IPTC profiles.
(Read and Write property)

92.42.263 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does object contain valid image?
Notes: Set to false in order to invalidate the image. Images constructed via the default constructor are invalid images and isValid() will return false.
(Read and Write property)

92.42.264 label as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image label.
Notes: (Read only property)
See also:

- 92.42.102 label(text as string) 14605

92.42.265 lineWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stroke width for drawing vector objects (default one)
Notes: This method is now deprecated. Please use strokeWidth instead.
(Read and Write property)

92.42.266 magick as string

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the codec to use for compression.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p as Picture = Picture.Open(f)

Var g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

Notes: (Read and Write property)

92.42.267 matte as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image supports transparency (matte channel)
Notes: (Read and Write property)

92.42.268 matteColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (frame) color.
Notes: (Read and Write property)

92.42.269 meanErrorPerPixel as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mean error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.42.270 modulusDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image modulus depth (minimum number of bits required to support red/green/blue components without loss of accuracy).
Notes: The pixel modulus depth may be decreased by supplying a value which is less than the current value, updating the pixels (reducing accuracy) to the new depth. The pixel modulus depth can not be increased over the current value using this method.
(Read and Write property)

92.42.271 monochrome as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform image to black and white while color reducing (quantizing).
Notes: (Read and Write property)

92.42.272 normalizedMaxError as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The normalized max error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.42.273 normalizedMeanError as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The normalized mean error per pixel computed when an image is color reduced.
Notes: This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

92.42.274 orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image orientation. Supported by some file formats such as DPX and TIFF. Useful for turning the right way up.
Notes: (Read and Write property)

92.42.275 page as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size and location of an image canvas.
Notes: Use this option to specify the dimensions and position of the Postscript page in dots per inch or a TEXT page in pixels. This option is typically used in concert with density .

Page may also be used to position a GIF image (such as for a scene in an animation).
(Read and Write property)

92.42.276 penColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pen color.
Notes: (Read and Write property)

92.42.277 quality as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level (default 75).
Notes: (Read and Write property)

92.42.278 quantizeColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of colors to quantize to.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.quantizeColors = 10
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.42.279 quantizeColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorspace to quantize in (default RGB).
Example:

```
// load a picture
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")
Var pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Var Converter As New GMImageMBS(Pic)

// quantize with dither
Converter.type = GMImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GMImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

Notes: Empirical evidence suggests that distances in color spaces such as YUV or YIQ correspond to perceptual color differences more closely than do distances in RGB space. These color spaces may give better

results when color reducing an image.
(Read and Write property)

92.42.280 quantizeDither as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Apply Floyd/Steinberg error diffusion to the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.quantizeColors = 10
image.quantizeDither = true
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The basic strategy of dithering is to trade intensity resolution for spatial resolution by averaging the intensities of several neighboring pixels. Images which suffer from severe contouring when reducing colors can be improved with this option. The quantizeColors or monochrome option must be set for this option to take effect.
(Read and Write property)

92.42.281 quantizeTreeDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Depth of the quantization color classification tree.
Notes: Values of 0 or 1 allow selection of the optimal tree depth for the color reduction algorithm. Values between 2 and 8 may be used to manually adjust the tree depth.
(Read and Write property)

92.42.282 Quiet as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suppress all warning messages.
Notes: Error messages are still reported.
(Read and Write property)

92.42.283 renderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of rendering intent (used when applying an ICC color profile).
Notes: (Read and Write property)

92.42.284 resolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Example:

```
Var item As FolderItem = SpecialFolder.Desktop.Child("test.jpeg")
Var p As New GMImageMBS(item)

// scale image
p.quality = 95
p.scale New GMGeometryMBS(1000,1000)

// change resolution
p.density = New GMGeometryMBS(300, 300)
p.resolutionUnits = p.PixelsPerInchResolution

// remove metadata
Var empty As New GMBlobMBS
p.profile("EXIF") = empty
p.profile("IPTC") = empty
p.profile("XMP") = empty

Var out As FolderItem = SpecialFolder.Desktop.Child("output.jpeg")
p.write out
```

Notes: (Read and Write property)

92.42.285 rows as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of pixel rows in the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

```
Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

92.42.286 scene as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image scene number.
Notes: (Read and Write property)

92.42.287 size as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height of a raw image (an image which does not support width and height information).
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

MsgBox image.size.StringValue

image.size = new GMGeometryMBS(200,200)

Backdrop=image.CopyPicture
```

Notes: Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

92.42.288 strokeAntiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable stroke anti-aliasing.
Notes: (Read and Write property)

92.42.289 strokeColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color to use when drawing object outlines.
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.42.290 strokeDashOffset as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).
Notes: (Read and Write property)

92.42.291 strokeLineCap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the end of open subpaths when they are stroked. #
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.
(Read and Write property)

92.42.292 strokeLineJoin as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked. Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.
Notes: (Read and Write property)

92.42.293 strokeMiterLimit as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4. (Read and Write property)

92.42.294 strokePattern as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pattern image to use while stroking object outlines.
Notes: (Read and Write property)

92.42.295 strokeWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stroke width for drawing vector objects (default one).
Example:

```
Var g as new GMGeometryMBS(500,500)
Var c as new GMColorRGBMBS("white") // white
Var image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

Var draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

92.42.296 subImage as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subimage of an image sequence.
Notes: (Read and Write property)

92.42.297 subRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of images relative to the base image.
Notes: (Read and Write property)

92.42.298 textEncoding as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation text encoding (e.g. "UTF-16").
Notes: (Read and Write property)

92.42.299 tileName as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile name.
Notes: (Read and Write property)

92.42.300 totalColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of colors in the image.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
```

Title = str(image.totalColors) // shows 5284
Backdrop=image.CombinePictureWithMask

Notes: (Read only property)

92.42.301 type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this image.
Example:

Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)

image.type = image.GrayscaleType

Backdrop=image.CopyPicture

Notes: You can set this value to convert the image to the type.

Convert the image representation to the specified type or retrieve the current image type. If the image is reduced to an inferior type, then image information may be lost (e.g. color changed to grayscale).

Available enumerations for the type parameter:

BilevelType	1	black/white
GrayscaleType	2	grayscale
GrayscaleMatteType	3	grayscale with alpha (opacity) channel
PaletteType	4	colormapped
PaletteMatteType	5	colormapped with transparency
TrueColorType	6	true (full) color
TrueColorMatteType	7	true (full) color with alpha (opacity) channel
ColorSeparationType	8	Cyan, magenta, yellow, and black
ColorSeparationMatteType	9	Cyan, magenta, yellow, and black with alpha (opacity) channel
OptimizeType	10	Optimize the image type to best represent the existing pixels

(Read and Write property)

92.42.302 verbose as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print detailed information about the image.
Notes: (Read and Write property)

92.42.303 view as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlashPix viewing parameters.
Notes: (Read and Write property)

92.42.304 width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image.
Example:

```
Var c as new GMColorRGBMBS(1.0,0.0,0.0)
Var size as new GMGeometryMBS(100,100)
Var g as new GMImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes: This is a convenience function for you which calls size.width.
(Read only property)

92.42.305 x11Display as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X11 display to display to, obtain fonts from, or to capture image from.
Notes: (Read and Write property)

92.42.306 XResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: x resolution of the image.
Notes: See also density functions.
Settable with version 19.0.
(Read and Write property)

92.42.307 YResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: y resolution of the image.
Notes: Settable with version 19.0.
(Read and Write property)

92.42.308 attributeValue(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Access an arbitrary named image attribute.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("IMG_4048.jpg")
Var g as new GMImageMBS(f)
Var a as string = g.attributeValue("EXIF:DateTime")
MsgBox a
```

Notes: Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":
(Read and Write computed property)

92.42.309 channelDepth(channel as Integer) as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain modulus channel depth.
Notes: (Read and Write computed property)

92.42.310 colorMap(index as UInt32) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color at colormap position index.
Notes: (Read and Write computed property)
See also:

- 92.42.26 colorMap as GMColorMBS() 14574

92.42.311 defineSet(magick as string, key as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain a definition flag to applied when encoding or decoding the specified format.
Notes: Similar to the defineValue() method except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.
(Read and Write computed property)

92.42.312 defineValue(magick as string, key as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or obtain a definition string to applied when encoding or decoding the specified format.
Notes: The meanings of the definitions are format specific. The format is designated by the magick argument, the format-specific key is designated by key, and the associated value is specified by value. See the defineSet() method if the key must be removed entirely.
(Read and Write computed property)

92.42.313 pixelColor(x as UInt32, y as UInt32) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set pixel color at location x & y.
Example:

```
Var p as Picture = LogoMBS(500)
Var image as new GMImageMBS(p)
Var c as new GMColorMBS("red")

for x as Integer = 240 to 260
image.pixelColor(x,250)=c
next

for y as Integer = 240 to 260
image.pixelColor(250,y)=c
next

Backdrop=image.CopyPicture
```

Notes: (Read and Write computed property)

92.42.314 profile(name as string) as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a named profile.
Example:

```
Var item As FolderItem = SpecialFolder.Desktop.Child("test.jpeg")
Var p As New GMImageMBS(item)

// scale image
p.quality = 95
```

```
p.scale New GMGeometryMBS(1000,1000)

// change resolution
p.density = New GMGeometryMBS(300, 300)
p.resolutionUnits = p.PixelsPerInchResolution

// remove metadata
Var empty As New GMBlobMBS
p.profile("EXIF") = empty
p.profile("IPTC") = empty
p.profile("XMP") = empty

Var out As FolderItem = SpecialFolder.Desktop.Child("output.jpeg")
p.write out
```

Notes: Add or remove a named profile to/from the image. Remove the profile by passing an empty Blob (e.g. Blob()). Valid names are "*", "8BIM", "ICM", "IPTC", or a user/format-defined profile name.

Retrieve a named profile from the image. Valid names are: "8BIM", "8BIMTEXT", "APP1", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name
(Read and Write computed property)

92.42.315 Constants

Constants

Constant	Value	Description
AbsoluteIntent	3	One of the intent type constants.
AddCompositeOp	8	One of the composite type constants.
AllChannels	10	One of the possible channel constants.
AllCompliance	&hffff	One of the Compliance type constants.
AssociatedAlpha	1	One of the possible alpha type constants.
AtopCompositeOp	4	One of the composite type constants.
BackgroundDispose	2	One of the gif dispose type constants.
BesselFilter	14	One of the filter type constants.
BilevelType	1	One of the image type constants.
BlackChannel	8	One of the possible channel constants.
BlackmanFilter	7	One of the filter type constants.
BlueChannel	5	One of the possible channel constants.
BottomLeftOrientation	4	One of the orientation type constants. Line direction: Left to right Frame Direction: Bottom to top
BottomRightOrientation	3	One of the orientation type constants. Line direction: Right to left Frame Direction: Bottom to top
BoxFilter	2	One of the filter type constants.
BumpmapCompositeOp	12	One of the composite type constants.
BZipCompression	2	One of the compression type constants.
CatromFilter	11	One of the filter type constants.
CenterGravity	5	One of the possible gravity constants.
ClearCompositeOp	18	One of the composite type constants.
ColorizeCompositeOp	28	One of the composite type constants.
ColorSeparationMatteType	9	One of the image type constants.
ColorSeparationType	8	One of the image type constants.
ConcatenateMode	3	One of the image type constants.
CopyBlackCompositeOp	35	One of the composite type constants.
CopyBlueCompositeOp	16	One of the composite type constants.
CopyCompositeOp	13	One of the composite type constants.
CopyCyanCompositeOp	32	One of the composite type constants.
CopyGreenCompositeOp	15	One of the composite type constants.
CopyMagentaCompositeOp	33	One of the composite type constants.
CopyOpacityCompositeOp	17	One of the composite type constants.
CopyRedCompositeOp	14	One of the composite type constants.
CopyYellowCompositeOp	34	One of the composite type constants.
CubicFilter	10	One of the filter type constants.
CyanChannel	2	One of the possible channel constants.
DarkenCompositeOp	24	One of the composite type constants.
DifferenceCompositeOp	10	One of the composite type constants.
DirectClass	1	One of the class type constants.
DisplaceCompositeOp	20	One of the composite type constants.
DissolveCompositeOp	19	One of the composite type constants.
DivideCompositeOp	36	One of the composite type constants.
EastGravity	6	One of the possible gravity constants.
FaxCompression	3	One of the compression type constants.
ForgetGravity	0	One of the possible gravity constants.
FrameMode	1	One of the mode type constants.
GaussianFilter	8	One of the filter type constants.
GaussianNoise	1	One of the possible noise constants.
GrayChannel	11	One of the possible channel constants.
GrayscaleMatteType	3	One of the image type constants.
GrayscaleType	2	One of the image type constants.
GreenChannel	3	One of the possible channel constants.
Group4Compression	4	One of the compression type constants.
HammingFilter	6	One of the filter type constants.
HanningFilter	5	One of the filter type constants.

Font Stretch

Constant	Value	Description
AnyStretch	9	Don't care.
CondensedStretch	3	Condensed
ExpandedStretch	6	Expanded
ExtraCondensedStretch	2	Extra Condensed
ExtraExpandedStretch	7	Extra Expanded
NormalStretch	0	Normal (Default)
SemiCondensedStretch	4	Semi Condensed
SemiExpandedStretch	5	Semi Expanded
UltraCondensedStretch	1	Ultra Condensed
UltraExpandedStretch	8	Ultra Expanded

Font Style

Constant	Value	Description
AnyStyle	3	Don't care.
ItalicStyle	1	Italic font.
NormalStyle	0	Normal (Default)
ObliqueStyle	2	Oblique font.

Storage Types

Constant	Value	Description
StorageTypeCharPixel	0	8bit numbers.
StorageTypeDoublePixel	5	64bit floating numbers.
StorageTypeFloatPixel	4	32bit floating numbers.
StorageTypeIntegerPixel	2	32bit numbers.
StorageTypeLongPixel	3	64bit numbers.
StorageTypeShortPixel	1	16bit numbers.

92.43 class GMImageStatisticsMBS

92.43.1 class GMImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for image statistics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

92.43.2 Methods

92.43.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

92.43.4 Properties

92.43.5 blue as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel statistics.
Notes: (Read only property)

92.43.6 green as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel statistics.
Notes: (Read only property)

92.43.7 opacity as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity channel statistics.
Notes: (Read only property)

92.43.8 red as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel statistics.
Notes: (Read only property)

92.44 class GMLockMBS

92.44.1 class GMLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for locking a certain resource.
Notes: The idea is to pass the constructor a mutexlock and keep the only reference to this new lock object on the stack. On the end of the method, the destructor is called by Xojo and releases the mutexlock automatically.

92.44.2 Methods

92.44.3 Constructor(mutexlock as GMMutexLockMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lock based on the given mutexlock.

92.44.4 Properties

92.44.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.44.6 target as GMMutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mutexlock this lock is referencing to.
Notes: (Read and Write property)

92.45 class GMMontageFramedMBS

92.45.1 class GMMontageFramedMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: MontageFramed provides the means to specify montage options when it is desired to have decorative frames around the image thumbnails.
Notes: MontageFramed inherits from Montage and therefore provides all the methods of Montage as well as those shown in the table "MontageFramed Methods".

Framed thumbnails consist of four components: the thumbnail image, the thumbnail frame, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.
Subclass of the GMMontageMBS class.

92.45.2 Methods

92.45.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.45.4 Properties

92.45.5 borderColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the background color within the thumbnail frame.
Notes: (Read and Write computed property)

92.45.6 borderWidth as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the border (in pixels) to place between a thumbnail and its surrounding frame.
Notes: This option only takes effect if thumbnail frames are enabled (via frameGeometry) and the thumbnail geometry specification doesn't also specify the thumbnail border width.
(Read and Write computed property)

92.45.7 frameGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the geometry specification for frame to place around thumbnail.
Notes: If this parameter is not specified, then the montage is unframed.
(Read and Write computed property)

92.45.8 matteColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail frame color.
Notes: (Read and Write computed property)

92.46 class GMMontageMBS

92.46.1 class GMMontageMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Montage is the base class to provide montage options and provides methods to set all options required to render simple (unframed) montages.
Example:

```
// build montage
Var StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(&cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(&c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
Var logo as Picture = LogoMBS(500)
Var image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Var StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
Var resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: See GMMontageFramedMBS if you would like to create a framed montage.

Unframed thumbnails consist of four components: the thumbnail image, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.

92.46.2 Methods

92.46.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.46.4 Properties

92.46.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.46.6 backgroundColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the background color that thumbnails are imaged upon.
Notes: (Read and Write computed property)

92.46.7 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the image composition algorithm for thumbnails.
Notes: This controls the algorithm by which the thumbnail image is placed on the background. Use of OverCompositeOp is recommended for use with images that have transparency. This option may have negative side-effects for images without transparency.
(Read and Write computed property)

92.46.8 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the image filename to be used for the generated montage images.
Notes: To handle the case were multiple montage images are generated, a printf-style format may be embedded within the filename. For example, a filename specification of image%02d.miff names the montage images as image00.miff, image01.miff, etc.
(Read and Write computed property)

92.46.9 fillColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the fill color to use for the label text.
Notes: (Read and Write computed property)

92.46.10 font as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail label font.
Notes: (Read and Write computed property)

92.46.11 geometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the size of the generated thumbnail.
Notes: (Read and Write computed property)

92.46.12 gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail positioning within the specified geometry area.
Notes: If the thumbnail is smaller in any dimension than the geometry, then it is placed according to this specification.
See Gravity constants in GMImageMBS class.
(Read and Write computed property)

92.46.13 label as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the format used for the image label.
Notes: Special format characters may be embedded in the format string to include information about the image.
(Read and Write computed property)

92.46.14 penColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the pen color to use for the label text (same as fill).
Notes: (Read and Write computed property)

92.46.15 pointSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the thumbnail label font size.
Notes: (Read and Write computed property)

92.46.16 shadow as boolean

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable drop-shadow on thumbnails.
Notes: (Read and Write computed property)

92.46.17 strokeColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the stroke color to use for the label text.
Notes: (Read and Write computed property)

92.46.18 texture as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies a texture image to use as montage background.
Notes: The built-in textures "granite:" and "plasma:" are available. A texture is the same as a background image.
(Read and Write computed property)

92.46.19 tile as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the maximum number of montage columns and rows in the montage.
Notes: The montage is built by filling out all cells in a row before advancing to the next row. Once the montage has reached the maximum number of columns and rows, a new montage image is started.
(Read and Write computed property)

92.46.20 title as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies the montage title.
Notes: (Read and Write computed property)

92.46.21 transparentColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies a montage color to set transparent.
Notes: This option can be set the same as the background color in order for the thumbnails to appear without a background when rendered on an HTML page. For best effect, ensure that the transparent color selected does not occur in the rendered thumbnail colors.
(Read and Write computed property)

92.47 class GMMutexLockMBS

92.47.1 class GMMutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mutex class for GraphicsMagick.

92.47.2 Methods

92.47.3 lock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Locks the lock.
Notes: Only one thread at a time can get the lock. The other threads will wait when lock is called.

92.47.4 unlock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unlocks the lock.

92.47.5 Properties

92.47.6 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.48 class GMNotInitializedExceptionMBS

92.48.1 class GMNotInitializedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception raised if you access a method/property in an object and the object was not initialized propertly.
Notes: Check the message property for details.
Subclass of the GMErrorExceptionMBS class.

92.49 class GMPathArgsMBS

92.49.1 class GMPathArgsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a class for arguments to the path arc/curve methods in GMGraphicsMBS.
Example:

```
Var g as new GMPathArgsMBS(1,2,3,4) // for a QuadraticCurveto

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

Notes: Due we use this class for three different ways, we have three constructors to fill in the value you need for the calls.

92.49.2 Methods

92.49.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for creating an empty object.
See also:

- 92.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14691
- 92.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14692
- 92.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14692

92.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the PathArc methods in GMGraphicsMBS.
See also:

- 92.49.3 Constructor 14691
- 92.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14692

- 92.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14692

92.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the QuadraticCurveto methods in GMGraphicsMBS.
Example:

Var g as new GMPathArgsMBS(1,2,3,4)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)

See also:

- 92.49.3 Constructor 14691
- 92.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14691
- 92.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14692

92.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create the arguments object for the Curveto methods in GMGraphicsMBS.
Example:

Var g as new GMPathArgsMBS(1,2,3,4,5,6)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x2)+EndOfLine+str(g.y2)+EndOfLine+str(g.x)+EndOfLine+str(g.y)

See also:

- 92.49.3 Constructor 14691
- 92.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14691
- 92.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14692

92.49.7 Properties

92.49.8 largeArcFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The large arc flag.
Notes: Draw longer of the two matching arcs
(Read and Write property)

92.49.9 radiusX as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius x value.
Notes: (Read and Write property)

92.49.10 radiusY as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The radius y value.
Notes: (Read and Write property)

92.49.11 sweepFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sweep flag value.
Notes: Draw arc matching clock-wise rotation.
(Read and Write property)

92.49.12 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: For an arc: End-point X
(Read and Write property)

92.49.13 x1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value.
Notes: (Read and Write property)

92.49.14 x2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x2 value.
Notes: (Read and Write property)

92.49.15 xAxisRotation as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x Axis Rotation value.
Notes: Rotation relative to X axis.
(Read and Write property)

92.49.16 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: for an arc: End-point Y
(Read and Write property)

92.49.17 y1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y1 value.
Notes: (Read and Write property)

92.49.18 y2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y2 value.
Notes: (Read and Write property)

92.50 class GMPixelsMBS

92.50.1 class GMPixelsMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty pixels object.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var p as new GMPixelsMBS(g)

// get pointer to some pixels to read/write
Var x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

92.50.2 Methods

92.50.3 Constructor(Image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Pixels object with the pixels from an image.

92.50.4 get(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfer pixels from the image to the pixel view as defined by the specified region.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var p as new GMPixelsMBS(g)

// get pointer to some pixels
Var x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via sync.

92.50.5 getConst(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfer read-only pixels from the image to the pixel view as defined by the specified region.

92.50.6 indexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return pixel colormap index array.

92.50.7 set(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocate a pixel view region to store image pixels as defined by the region rectangle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var p as new GMPixelsMBS(g)

// get pointer to some pixels to write
Var x as ptr = p.set(0, 0, 100, 100)

// draw a red line to the pixel buffer
Var o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = &hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel view to the image via sync.

92.50.8 sync

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers the image cache pixels to the image.

92.50.9 Properties

92.50.10 columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of view.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var g as new GMImageMBS(f)
Var p as new GMPixelsMBS(g)

// get pointer to some pixels
Var x as ptr = p.get(0, 0, 100, 100)
```

```
// and show size
MsgBox str(p.columns)+" x "+str(p.rows)
```

Notes: (Read only property)

92.50.11 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

92.50.12 rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height of view.
Notes: (Read only property)

92.50.13 x as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Left ordinate of view.
Notes: (Read only property)

92.50.14 y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Top ordinate of view.
Notes: (Read only property)

92.51 class GMTypeMetricMBS

92.51.1 class GMTypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TypeMetric class provides the means to pass data from the Image class's TypeMetric method to the user.
Notes: It provides information regarding font metrics such as ascent, descent, text width, text height, and maximum horizontal advance. The units of these font metrics are in pixels, and that the metrics are dependent on the current Image font (default Ghostscript's "Helvetica"), pointsize (default 12 points), and x/y resolution (default 72 DPI) settings.

The pixel units may be converted to points (the standard resolution-independent measure used by the typesetting industry) via the following equation:

size_points = (size_pixels * 72)/resolution
where resolution is in dots-per-inch (DPI). This means that at the default image resolution, there is one pixel per point.

Note that a font's pointsize is only a first-order approximation of the font height (ascender + descender) in points. The relationship between the specified pointsize and the rendered font height is determined by the font designer.

See FreeType Glyph Conventions for a detailed description of font metrics related issues.

92.51.2 Methods

92.51.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

92.51.4 Properties

92.51.5 ascent as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the distance in pixels from the text baseline to the highest/upper grid coordinate used

to place an outline point.
Notes: Always a positive value.
(Read only property)

92.51.6 descent as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point.
Notes: Always a negative value.
(Read only property)

92.51.7 maxHorizontalAdvance as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the maximum horizontal advance (advance from the beginning of a character to the beginning of the next character) in pixels.
Notes: (Read only property)

92.51.8 textHeight as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns text height in pixels.
Notes: (Read only property)

92.51.9 textWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns text width in pixels.
Notes: (Read only property)

92.52 class GMUnsupportedExceptionMBS

92.52.1 class GMUnsupportedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if you call the GM functions on an unsupported platform.
Notes: Check the message property for details.
This exception is currently only used on Windows.
(Windows support may come later)
Subclass of the GMErrorExceptionMBS class.

Chapter 93

Handoff

93.1 class NSUserActivityEventsMBS

93.1.1 class NSUserActivityEventsMBS

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The class to catch various events for user activity.
Notes: The user activity delegate is responsible for updating the state of an activity and is also notified when an activity has been continued on another device. The user activity delegate is typically a top-level object in the app—such as a window, view controller, or the app delegate—that manages the activity,Äôs interaction with the app.

Please have one instance only to catch the events.
Blog Entries

- News from the MBS Xojo Plugins Version 24.4
- MBS Xojo Plugins, version 24.4pr1

93.1.2 Methods

93.1.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The constructor.

93.1.4 deleteAllSavedUserActivities

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Deletes all user activities created by your app.
Notes: Deletes all user activities stored by Core Spotlight or donated as Siri shortcuts.
Calls deletedAllSavedUserActivities event later.

93.1.5 deleteSavedUserActivities(PersistentIdentifiers() as String)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Deletes user activities created by your app that have the specified persistent identifiers.
Notes: persistentIdentifiers: The list of persistent identifiers that the system uses to determine which user activities to delete.

Calls deletedSavedUserActivities event later.

93.1.6 SetUserActivity(Item as Variant, activity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Sets user activity for the object.
Notes: Item can be a NSViewMBS, NSWindowMBS, NSApplicationMBS, NSPopoverMBS, Application, DesktopApplication, MobileControl, iOSControl, MobileScreen, iOSScreen, Window, DesktopWindow, RectControl or DesktopUIControl object.

By setting the userActivity property on a responder, the NSUserActivityMBS object becomes managed by AppKit. You should override updateUserActivityState evnet to write lazily any state data representing the user,Äôs activity to the userInfo dictionary. AppKit automatically saves user activities it manages at appropriate times. Multiple responders can share a single NSUserActivity instance, in which case they all get a callback, such as updateUserActivityState, when the system updates the user activity object.

Before the update callbacks are sent, the activity object,Äôs userInfo dictionary is cleared.
In macOS, NSUserActivity objects managed by NSResponder automatically becomeCurrent based on the main window and the responder chain.
A responder object can set its userActivity property to nil if it no longer wants to participate. Any NSUserActivity objects that AppKit manages but have no associated responders (or documents) are automatically invalidated.
You can use this property from any thread, and it,Äôs key-value observable (KVO).

93.1.7 UserActivity(Item as Variant) as NSUserActivityMBS

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Queries user activity for the object.
Notes: An object encapsulating a user activity supported by this responder.

Item can be a NSViewMBS, NSWindowMBS, NSApplicationMBS, NSPopoverMBS, Application, DesktopApplication, MobileControl, iOSControl, MobileScreen, iOSScreen, Window, DesktopWindow, RectControl or DesktopUIControl object.

93.1.8 Events

93.1.9 continueUserActivity(userActivity as NSUserActivityMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Tells the delegate that the data for continuing an activity is available.
Example:

```
Function continueUserActivity(userActivity as NSUserActivityMBS) Handles continueUserActivity as Boolean
// Tells the delegate that the data for continuing an activity is available.
Log CurrentMethodName

If userActivity.activityType = "de.monkeybreadsoftware.example.handoff" Then
// we like this type

return True
End If
End Function
```

Notes: userActivity: The activity object containing the data associated with the task the user was performing. Use the data to continue the user's activity in your app.

Return true to indicate that your app handled the activity or false to let iOS know that your app didn't handle the activity.

The app calls this method when it receives data associated with a user activity, for example, when the user transfers an activity from a different device using Handoff.

Implement this method to update your app so that the user can continue the activity from where they left off. If you don't implement this method or if your implementation returns false, iOS tries to create a document for your app to open using a URL.

If you return true, will trigger restoreUserActivityState event.

93.1.10 deletedAllSavedUserActivities

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The event that the system invokes after deleting the user activities.
Notes: Wait for the system to call this block to ensure that the system deletes the activities (or marks them for deletion).

93.1.11 deletedSavedUserActivities(persistentIdentifiers() as String)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The event that the system invokes after deleting the user activities.
Notes: Wait for the system to call this block to ensure that the system deletes the activities (or marks them for deletion).

93.1.12 didFailToContinueUserActivityWithType(userActivityType as String, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Tells the delegate that the activity couldn,Äôt be continued.
Notes: userActivityType: The activity type that was attempted.
error: An error object indicating the reason for the failure.

Use this method to let the user know that the specified activity could not be continued. If you do not implement this method, UIKit displays an error to the user with an appropriate message about the reason for the failure.

93.1.13 didUpdateUserActivity(userActivity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Tells the delegate that the activity was updated.
Notes: userActivity: The activity object containing the data associated with the task the user was performing.

This method is called on the main thread when a user activity managed by UIKit has been updated. You can implement this event as a final opportunity to add data to the user activity object.

93.1.14 gotContinuationStreams(userActivity as NSUserActivityMBS, inputStream as Variant, outputStream as Variant, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Received the streams.
Notes: inputStream: The stream from which the continuing app can read data written by the originating app. a NSInputStreamMBS object.
outputStream: The stream to which the continuing app writes data to be read by the originating app. a NSOutputStreamMBS object.
error: If successful, nil; if not successful, an NSErrorMBS object that encapsulates the reason why the streams could not be created.

When an app is launched for a continuation event, it can request streams back to the originating app. Streams can be successfully retrieved only from the NSUserActivityMBS object in this event called for a continuation event. The streams are provided by the completion handler in an unopened state, and the delegate should open them immediately to start communicating with the continuing side.

Continuation streams are an optional feature of Handoff, and most user activities do not need them for successful continuation. When streams are needed, a simple request from the continuing app accompanied by a response from the originating app is enough for most continuation events.

93.1.15 restoreUserActivityState(userActivity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Restores the state necessary to continue the specified user activity.
Notes: userActivity: The user activity to continue.

Implement this method to restore an object,Äôs state using the specified user activity. The system calls this event after continueUserActivity. Your implementation should use the state data contained in the specified user activity,Äôs userInfo dictionary to restore the object.

93.1.16 updateUserActivityState(responder as Variant, userActivity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Updates the state of the given user activity.
Notes: activity: The user activity to be updated.

We catch this and report who received it. So Responder may be an application, a window, control or screen.

93.1.17 userActivityDidReceiveStreams(userActivity as NSUserActivityMBS, inputStream as Variant, outputStream as Variant)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Notifies the user activity delegate that an input and output streams are available to open.
Notes: userActivity: The user activity that is continuing on another device. This user activity's supportsContinuationStreams property must be true.
inputStream: The stream from which the originating app can read data written from the continuing app. A NSInputStreamMBS object.
outputStream: The stream to which the originating app writes data to be read by the continuing app. A NSOutputStreamMBS object.

If supportsContinuationStreams is true, the continuing app can request streams back to the originating app. This delegate callback is received with the streams from the continuing side. The streams are provided in an unopened state, and the delegate should open them immediately to start communicating with the continuing side.
Continuation streams are an optional feature of Handoff, and most user activities do not need them for successful continuation. When streams are needed, a simple request from the continuing app accompanied by a response from the originating app is enough for most continuation events.

93.1.18 userActivityWasContinued(userActivity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Notifies the delegate that the user activity was continued on another device.
Notes: userActivity: The user activity that was continued.

93.1.19 userActivityWillSave(userActivity as NSUserActivityMBS)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Notifies the delegate that the user activity will be saved to be continued or persisted.
Notes: userActivity: The user activity to update.

You implement this event to update the activity with current state.

93.1.20 willContinueUserActivityWithType(userActivityType as String) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Tells the delegate if your app takes responsibility for notifying users when a continuation activity takes longer than expected.
Notes: userActivityType: The requested activity type.

Returns true if you want to notify the user that a continuation is in progress or false if you want iOS to notify the user.

Use this method to provide immediate feedback to the user that an activity is about to continue on this device. The app calls this method as soon as the user confirms that an activity should be continued but possibly before the data associated with that activity is available.

Your implementation of this method should prepare to initiate the activity. If you notify the user as part of your preparations, return true from this method so that iOS does not also notify the user. If you do not implement this method or your implementation returns false, iOS notifes the user.

93.2 class NSUserActivityMBS

93.2.1 class NSUserActivityMBS

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A representation of the state of your app at a moment in time.
Example:

```
userActivity = New NSUserActivityMBS("de.monkeybreadsoftware.example.handoff")
userActivity.title = "Example"
userActivity.EligibleForHandoff = True
```

Notes: An NSUserActivity object provides a lightweight way to capture the state of your app and put it to use later. Create this object to capture information about what a person was doing, such as viewing app content, editing a document, viewing a web page, or watching a video. When the system launches your app and an activity object is available, your app can use the information in that object to restore itself to an appropriate state. Spotlight also uses these objects to improve search results for people.

93.2.2 Methods

93.2.3 addUserInfoEntries(otherDictionary as Dictionary)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Adds the contents of the specified dictionary to the user info dictionary.
Notes: otherDictionary: The dictionary containing entries to be added.

Use this method to add the keys from otherDictionary into the dictionary in the userInfo property. If the same key is in both dictionaries, the value of the key is set to the value in the otherDictionary parameter. It,Äôs recommended that you keep the userInfo dictionary as small as possible. The larger the dictionary, the longer it takes to deliver that payload and resume the activity.

93.2.4 becomeCurrent

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Marks the activity as currently in use by the user.
Notes: Call this method to let the system know that the user is performing the associated activity. The system makes this object the current user activity object, which makes it available for Handoff and search indexing. If another user activity object was previously active, that object is made inactive.

Don,Äôt call this method when providing a user activity object for a Siri request. Siri holds on to user activity objects and passes them along to your app automatically in response to specific events.

If you previously called the invalidate method on the current object, calling this method has no effect.

93.2.5 Constructor(activityType as String)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Creates a user activity object with the specified type.
Notes: activityType: The type of the activity. The value is a developer-defined string in reverse-DNS format by convention, for example, com.myCompany.myEditor.editing.

93.2.6 getContinuationStreams

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Requests streams back to the originating app.
Notes: Calls later gotContinuationStreams event in NSUserActivityEventsMBS class.

When an app is launched for a continuation event, it can request streams back to the originating app. Streams can be successfully retrieved only from the NSUserActivityMBS object in the gotContinuationStreams event in NSUserActivityEventsMBS class called for a continuation event. The streams are provided by the completion handler in an unopened state, and the delegate should open them immediately to start communicating with the continuing side.

Continuation streams are an optional feature of Handoff, and most user activities do not need them for successful continuation. When streams are needed, a simple request from the continuing app accompanied by a response from the originating app is enough for most continuation events.

93.2.7 invalidate

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Invalidates an activity and marks it as no longer eligible for continuation.
Notes: Call this method when the user stops engaging in the associated activity and that activity is no longer available. For example, you might call this method when the user closes the window associated with the activity. After calling this method on a user activity object, calling the becomeCurrent method on that object has no effect.

93.2.8 keywords as String()

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A set of localized keywords that can help users find the activity in search results.
Notes: The default value of this property is nil. The system indexes the keywords you provide.

93.2.9 NSUserActivityTypeBrowsingWeb as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: An activity that continues from Handoff or a universal link.
Notes: An NSUserActivityMBS object with an activityType value of NSUserActivityTypeBrowsingWeb indicates either an activity continued from a web browser-to-native app Handoff or a universal link. For this activity type, the webpageURL property contains the http or https URL associated with the activity.

93.2.10 requiredUserInfoKeys as String()

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A set of keys that represent the minimal information about the activity that should be stored for later restoration.
Notes: The keys come from the userInfo property.

93.2.11 resignCurrent

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Marks this activity object as inactive without invalidating it.
Notes: Calling this method marks the user activity as no longer current, but doesn,Äôt invalidate it entirely. You can call this method when you want to stop advertising the activity for continuation and search indexing

only temporarily. You may call becomeCurrent later to restore this object as the current activity.

93.2.12 setKeywords(keywords() as String)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Sets the set of localized keywords that can help users find the activity in search results.
Notes: The default value of this property is nil. The system indexes the keywords you provide.

93.2.13 setRequiredUserInfoKeys(requiredUserInfoKeys() as String)

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Sets the set of keys that represent the minimal information about the activity that should be stored for later restoration.
Notes: The keys come from the userInfo property.

93.2.14 Properties

93.2.15 activityType as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The user activity object,Äôs activity type.
Notes: This property is set at initialization time and can,Äôt be changed later. Typically, you specify activity type strings using a reverse-DNS format that uniquely identifies the activity.
(Read only property)

93.2.16 EligibleForHandoff as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the activity can be continued on another device using Handoff.
Notes: The default value of this property is true.
(Read and Write property)

93.2.17 EligibleForPrediction as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether Siri can suggest the user activity as a shortcut to the user.
Notes: To donate a user activity to Siri Shortcuts, set eligibleForPrediction to true and make the user activity current. To make the user activity current, call the activity,Äôs becomeCurrent method, or assign it to the userActivity property on a UIViewController or UIResponder object. For more information, see Donating Shortcuts.
(Read and Write property)

93.2.18 EligibleForPublicIndexing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the activity can be publicly accessed by all iOS users.
Notes: The default value of this property is NO, which indicates that the activity object contains private or sensitive information or that the activity isn,Äôt useful to other users. When the value of this property is YES, the system identifies this activity as one that can be shared publicly. When you make an activity public, the system indexes the values in the requiredUserInfoKeys or webpageURL properties, and you must provide a value for one of those properties.

Identifying an activity as public confers an advantage when you also add web markup to the content on your related website. Specifically, when users engage with your app,Äôs public activities in search results, it indicates to Apple that public information on your website is popular, which can help increase your ranking and potentially lead to expanded indexing of your website,Äôs content.
(Read and Write property)

93.2.19 EligibleForSearch as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the activity should be added to the on-device index.
Notes: The default value of this property is false.
(Read and Write property)

93.2.20 expirationDate as Date

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platform: macOS, Targets: Desktop only.

Function: The date after which the activity is no longer eligible for Handoff or indexing.
Notes: If you don,Äôt set the value of this property, the system automatically expires the activity after a

period of time.
(Read and Write property)

93.2.21 expirationDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The date after which the activity is no longer eligible for Handoff or indexing.
Notes: If you don,Äôt set the value of this property, the system automatically expires the activity after a period of time.
(Read and Write property)

93.2.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

93.2.23 mapItem as Variant

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: Attaches the specified map item to a user activity object.
Notes: Use this property to share a map item,Äôs location information with other apps so that users can benefit from a more contextually integrated experience. For example, if a user views a location in an app that provides restaurant reviews, this property can make the same location available to the user when they switch to an app that helps them make travel plans.

Setting the mapItem property also populates the user activity object,Äôs contentAttributeSet property. After attaching a map item to a user activity object, you can easily adopt app search by setting the object,Äôs eligibleForSearch property to true. To learn more about participating in app search, see App Search Programming Guide.

Value is a MKMapItemMBS object.
(Read and Write property)

93.2.24 needsSave as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that indicates whether the state of the activity needs to be updated.
Notes: If true, the delegate for this user activity receives a userActivityWillSave event before the activity is sent for continuation on another device.
(Read and Write property)

93.2.25 persistentIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A value used to identify the user activity.
Notes: Set this property to a value that identifies the user activity so you can later delete it with deleteSavedUserActivities(). For example, if the user checks the weather for Cupertino each morning from home, the weather app sets the persistent identifier to the city name (Cupertino). When the user deletes Cupertino from the weather app, the app deletes the user activity associated with the identifier, ,ÄúCupertino,Äù.
(Read and Write property)

93.2.26 referrerURL as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The URL of the webpage that linked to the webpage URL.
Notes: (Read and Write property)

93.2.27 supportsContinuationStreams as Boolean

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A Boolean value that determines whether the continuing app can request streams to be opened back to the originating app.
Notes: If the value of this property is true, the continuing app can connect back to the originating app for more information using streams. The default value of this property is NO. It can dynamically be set to true to selectively support continuation streams based on the state of the user activity.
(Read and Write property)

93.2.28 targetContentIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A string that identifies the user activity,Äôs content.
Notes: A target content identifier is a string you define within your app. This string provides a unique identifier for specific content in your app, like a particular document or the location of a piece of data in a

database. This string isn,Äôt visible to the user.

If you set this property, when the system delivers an NSUserActivity object to an app with multiple scenes, it chooses the UIScene whose UISceneActivationConditions have the best match with the target content identifier. For more information, see UISceneActivationConditions. (not sure how this would apply in Xojo!)

This property is optional but is highly recommended to create a great multitasking experience for apps that run on iPad. Setting this property doesn,Äôt automatically set needsSave to true.
(Read and Write property)

93.2.29 title as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: An optional, user-visible title for this activity, such as a document name or web page title.
Notes: Always specify a title string for activity objects that are eligible for searches, and it,Äôs recommended that you include a title string for all user activity objects. For search-related user activity objects, this string is displayed in the search results.
(Read and Write property)

93.2.30 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: A dictionary containing app-specific state information needed to continue an activity on another device.
Notes: Each key and value must be of the following types: array, MemoryBlock, Date/DateTime, Dictionary, nil, Number, String, or NSURLMBS. The system may translate file scheme URLs that refer to iCloud documents to valid file URLs on a continuing device.
(Read and Write property)

93.2.31 webpageURL as String

MBS MacFrameworks Plugin, Plugin Version: 24.4, Platforms: macOS, iOS, Targets: All.

Function: The URL of the webpage to load in a browser to continue the activity.
Notes: When no suitable app is installed on a resuming device and the webpageURL property is set, the specified webpage is loaded and the user activity is continued in a web browser.
If your activity's content can be restored on the web or you support Safari universal links, be sure to set this property so that the system can resume the activity in Safari or your app. After setting the webpageURL property on an activity for which eligibleForSearch is true, also set the requiredUserInfoKeys property, using the keys of the userInfo dictionary that must be stored. If you don,Äôt also set the requiredUserInfoKeys

property, the userInfo dictionary will be empty when the activity is restored.

If eligibleForSearch is true for this activity and you,Äôre using both NSUserActivity and web markup to index the same item, set webpageURL to the relevant URL on your website to avoid showing duplicate results in Spotlight. The NSUserActivity API does not perform any modifications to the URL that you specify. URL components, such as the query string and the fragment identifier, are used for matching the item against pages that are indexed by Applebot.

The scheme of the webpageURL must be http or https. Any other scheme throws an exception.
(Read and Write property)

Chapter 94

Hotkey

94.1 class HotKeyMBS

94.1.1 class HotKeyMBS

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The class for registering hotkeys.
Notes: This is a crossplatform replacement for our CarbonHotKeyMBS class.

- 18.6, page 10: News
- 13.5, page 8: News

94.1.2 Methods

94.1.3 Close

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Closes hotkey.
Notes: Same as destructor, but to unregister hotkey now.

94.1.4 Constructor(KeyCode as Integer, Modifiers as Integer, Exclusive as Boolean = false)

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Registers a new keycode.
Notes: The plugin may not check if combination is allowed, makes sense or can be pressed.

94.1.5 KeyCodeForText(name as string) as Integer

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries a keycode for a character.
Example:

```
MsgBox "Return: "+str(HotKeyMBS.KeyCodeForText("return"))
```

Notes: Helper function to return platform specific key codes for various keys.
Plugin has a list based on the constants defined by Apple and Microsoft for keys.

94.1.6 Properties

94.1.7 Exclusive as Boolean

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Whether exclusive ownership of hotkey was requested.
Notes: (Read only property)

94.1.8 Handle as Integer

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: Only used on Mac OS X.
(Read only property)

94.1.9 ID as Integer

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The internal ID of the hotkey.
Notes: (Read only property)

94.1.10 KeyCode as Integer

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The keycode registered.
Notes: (Read only property)

94.1.11 Modifiers as Integer

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The modifiers used at registration.
Notes: (Read only property)

94.1.12 Events

94.1.13 KeyDown

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The key down event.

94.1.14 KeyUp

MBS Util Plugin, Plugin Version: 15.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The key up event.

94.1.15 Constants

Modifier Flags

Constant	Value	Description
AlphaKey	&h400	Alpha Lock
CommandKey	&h100	Command Key on Mac, Windows Key on Windows.
ControlKey	&h1000	Control Key
OptionKey	&h800	Option/Alt Key
ShiftKey	&h200	Shift Key

Chapter 95

HTMLViewer

95.1 class DesktopHTMLViewer

95.1.1 class DesktopHTMLViewer

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Class in Xojo for HTML rendering.
Notes: We have multiple methods for macOS, Windows and Linux, so please check each method.

95.1.2 Methods

95.1.3 ChromiumBrowserMBS as ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Queries browser object for htmlviewer.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox b.MainFrame.URL
```

Notes: Works only on Windows if Webkit is chosen as renderer.
Returns nil on any error.

Please call all chromium functions only on main thread.
Do not call in open event of HTMLViewer as browser control is not yet initialized there.

95.1.4 LinuxWebViewMBS as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 24.5, Platform: Linux, Targets: Desktop only.

Function: Queries the linux WebKit web view for the given htmlviewer.
Notes: Requires a recent Xojo version. And libwekit-1.0 must be installed, so Xojo uses it for browsing.
Check Also the Available shared method on LinuxWebViewMBS class.

95.1.5 WKWebViewMBS as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Queries WKWebViewMBS associated to HTMLViewer.
Notes: Returns WKWebView for Xojo when used in HTMLViewer.

Chapter 96

HTMLViewer Linux

96.1 class HTMLViewer

96.1.1 class HTMLViewer

Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Class in Xojo 2005 for HTML rendering.
Notes: We have multiple methods for macOS, Windows and Linux, so please check each method.

96.1.2 Methods

96.1.3 ChromiumBrowserMBS as ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Queries browser object for htmlviewer.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox b.MainFrame.URL
```

Notes: Works only on Windows if Webkit is chosen as renderer.
Returns nil on any error.

Please call all chromium functions only on main thread.
Do not call in open event of HTMLViewer as browser control is not yet initialized there.

May not work in Xojo 2021r3 due to changes inside the control.

96.1.4 IEContinueFindTextMBS(text as string, count as Integer, flags as Integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Continues a search started with IEFindTextMBS.
Notes: Parameters are the same as for IEFindTextMBS.

96.1.5 IEDocumentMBS as IEDocumentMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries web document object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.

Not available for DesktopHTMLViewer control since there is no support for Internet Explorer for that control.

96.1.6 IEDrawToHDCMBS(HDC as Ptr, PrinterName as string = "") as boolean

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Draws the content of the html document into the graphics context.
Notes: As of Windows Internet Explorer 9, this method is deprecated and should not be used.
Returns true on success and false on failure.

With some printers, running DrawToDC may cause problems. You can ensure that DrawToDC works properly on all printers by running SetDocumentPrinter method first, and then passing the modified device context to DrawToDC. The plugin calls SetDocumentPrinter for you when you provide a printer name.

96.1.7 IEFileCreationDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the date the file was created.

Notes: Example value: "09/13/2007"

96.1.8 IEFileModifiedDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the date the file was last modified.
Notes: Example value: "12/03/2007"

96.1.9 IEFileSizeMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the file size.
Notes: Example value: "12475"

96.1.10 IEFileUpdatedDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the date the file was last updated.
Notes: Example value: "01/01/1601"

96.1.11 IEFindTextMBS(text as string, count as Integer, flags as Integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Finds text on the current website.
Notes: text: the string that specifies the text to find.
count: long that specifies the number of characters to search from the starting point of the range. A positive integer indicates a forward search; a negative integer indicates a backward search.
Flags: integer that specifies one or more of the following flags to indicate the type of search:

Returns true: The search text was found.
Returns false: The search text was not found.

0	Default. Match partial words.
1	Match backwards.
2	Match whole words only.
4	Match case.
131072	Match bytes.
536870912	Match diacritical marks.
1073741824	Match Kashida character.
2147483648	Match AlefHamza character.

96.1.12 IEGetTextAreaMBS(FormName as String, FieldName as String) as String

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Queries text for a textarea.
Notes: FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns text from textarea.
Blog Entries

- HTMLViewer JavaScript communication for Xojo
- HTMLViewer JavaScript communication for Xojo

96.1.13 IEHandleMBS as Integer

MBS Win Plugin, Plugin Version: 8.0, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** The handle to the windows browser object.
Notes: If this value is zero, the plugin htmlviewer functions for Windows will not work.

96.1.14 IEHistoryBackMBS

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead. **Function:** Loads a previous URL from the History list.

96.1.15 IEHistoryForwardMBS

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead. **Function:** Loads the next URL from the History list.

96.1.16 IEHistoryLengthMBS as Integer

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead. **Function:** Retrieves the number of elements in the History list.
Notes: Example value: "0"

96.1.17 IEHTMLTextMBS as string

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Returns a copy of the html source code of the current webpage.
Example:

msgbox htmlviewer1.IEHTMLTextMBS

Notes: Improved in plugin version 12.2 to return better HTML text. This is the html generated from current web content and not the page we originally loaded. So this works with IEEditableMBS property.
Returns "" on any error.
Blog Entries

- MBS Xojo Plugins, version 20.2pr3
- MBS Real Studio Plugins, version 12.2pr1

96.1.18 IEImageMBS as picture

MBS Win Plugin, Plugin Version: 9.5, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Copies the picture from the htmlviewer.
Example:

```
Sub Action()
ClearFocus
```

```
Var picWeb As Picture

// Get image from IE
picWeb = HTMLViewer1.IEImageMBS

canvas1.backdrop = picWeb
End Sub
```

Notes: You may want to resize the htmlviewer to get a picture without scrollbars. (See example projects)
You may need to call ClearFocus as it seems like if the focus is on the htmlviewer it does not draw itself in our picture.

96.1.19 IELastModifiedMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Gets the date that the page was last modified, if the page supplies one.
Notes: Example value: "12/03/2007 20:08:17"

96.1.20 IELoadHTMLMBS(HTMLText as string) as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Loads the HTML text into the htmlviewer.
Example:

```
// in window open event, load blank page
HTMLViewer1.LoadURL "about:blank"

// later somewhere in app load HTML:
HTMLViewer1.IELoadHTMLMBS "<html><body>Hello World</body></html>"
```

Notes: Does not use a temp file like Xojo's built in method.
Returns true on success.
On Windows you may need to reset webviewer before or load "about:blank" to initialize the webviewer by

Xojo (or Xojo).
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr5

96.1.21 IEMimeTypeMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the MIME type for the file.
Notes: Example value: "HTM-Datei"
See also MimeTypeToFileExtensionMBS function.

96.1.22 IENamePropMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Gets the title of the document file.
Notes: Example value: "Apple"

96.1.23 IENavigatorAppMinorVersionMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves the application's minor version value.
Notes: Example value: ";SP2;"

96.1.24 IENavigatorAppNameMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves the name of the browser.
Notes: Example value: "Microsoft Internet Explorer"

96.1.25 IENavigatorAppVersionMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves the platform and version of the browser.
Notes: Example value: "4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

96.1.26 IENavigatorBrowserLanguageMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves the current browser language.
Notes: Example value: "de"

96.1.27 IENavigatorCookieEnabledMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves whether client-side persistent cookies are enabled in the browser.
Notes: Persistent cookies are those that are stored on the client-side computer.
Example value: "True"

96.1.28 IENavigatorJavaEnabledMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Returns whether Java is enabled.
Notes: Example value: "True"

96.1.29 IENavigatorOnLineMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves a value indicating whether the system is in global offline mode.
Notes: The user can modify the global offline state by choosing Work Offline from the File menu in Microsoft Internet Explorer version 4.0 or later. This property does not indicate whether the system is connected to

the network.

Example value: "True"

96.1.30 IENavigatorUserAgentMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves a string equivalent to the HTTP user-agent request header.
Notes: The HTTP user-agent request header contains information about compatibility, the browser, and the platform name. For more information about the browser, see the IENavigatorappNameMBS property. For more information about the platform, see the IENavigatorappVersionMBS property.

The IENavigatoruserAgentMBS property dynamically returns a different value depending on the browser and platform versions. For example, Microsoft Internet Explorer 6 returns the following string for Microsoft Windows XP.

Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)

Example value: "Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

Like other plugin function, this can only work if a page has been loaded. Xojo won't create the internal htmlviewer object before you load a page.

96.1.31 IENavigatorUserLanguageMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Function:** Retrieves the operating system's natural language setting.
Notes: Example value: "de"

96.1.32 IEPrintMBS as boolean

MBS Win Plugin, Plugin Version: 9.5, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWindowMBS class instead. **Function:** Opens the normal print dialog for the Internet Explorer.

Notes: Returns false on failure.
Blog Entries

- MBS REALbasic plug-ins version 9.5

96.1.33 IEPrintPreviewMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Commands Internet Explorer to show the print preview dialog for this htmlviewer.
Example:

call htmlviewer1.IEPrintPreviewMBS

Notes: Returns true on success. Returns false if function is not supported.
The function returns directly while the preview dialog is still running.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr6

96.1.34 IEProtocolMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or retrieves the protocol portion of a URL.
Notes: Example value: "HTTP (HyperText Transfer-Protokoll)"

96.1.35 IEReadyStateMBS as string

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves a value that indicates the current state of the htmlviewer.
Notes: uninitialized: Object is not initialized with data.
loading: Object is loading its data.
loaded: Object has finished loading its data.
interactive: User can interact with the object even though it is not fully loaded.
complete: Object is completely initialized.

An object's state is initially set to uninitialized, and then to loading. When data loading is complete, the state of the link object passes through the loaded and interactive states to reach the complete state.

The states through which an object passes are determined by that object; an object can skip certain states (for example, interactive) if the state does not apply to that object.

Data source objects and databound elements are normally populated asynchronously, and certain programmatic operations can only be performed reliably on databound objects when they are ready for use. Therefore, the appropriate code should be written to confirm the readyState of objects prior to performing certain operations on them. For example, walking the rows of a table should not be attempted until after the table has reached the complete state.

The readyState property enables the status of an object to be tested. The correct place to test the readyState property is in the event handler for onreadystatechange. Similarly, a data source object (DSO) fires the ondatasetcomplete event to notify the document that the dataset is ready for programmatic operation.

- MBS Real Studio Plugins, version 12.2pr1

96.1.36 IERefCountMBS as Integer

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Queries the reference count of the IE browser object.
Notes: Useful to check if references are leaked.

96.1.37 IEReferrerMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Gets the URL of the location that referred the user to the current page.
Notes: Example value: "http://www.apple.com/"

96.1.38 IEReloadMBS(Force as boolean = false) as boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Reloads the current page.
Notes: Boolean that specifies one of the following possible values:
False: Default. Reloads the document from the cache.

True: Reloads the document from the server.
Blog Entries

- MBS Real Studio Plugins, version 12.4pr7
- MBS Real Studio Plugins, version 12.0pr5

96.1.39 IERunJavaScriptMBS(JavaScript as string) as boolean

MBS Win Plugin, Plugin Version: 8.0, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWindowMBS class instead. **Function:** Runs a given javascript code.
Example:

```
// shows current user agent string which the control sends to website
call htmlviewer1.IERunJavaScriptMBS("document.title=navigator.userAgent;")
MsgBox htmlviewer1.IETitleMBS

// load a dummy page:
HTMLViewer1.LoadPage "<html><head></head><body></body></html>", nil

// shows an error message because of the navigator having a 6 inside:
call htmlviewer1.IERunJavaScriptMBS("document.title=navig6ator.userAgent;")

// uses try to avoid error message

Var script as string = "document.title=navig6ator.userAgent;"
Var s as string = "try { "+SCRIPT+" } catch(err) { document.title = err.description; } "

call htmlviewer1.IERunJavaScriptMBS(s)
MsgBox HTMLViewer1.IETitleMBS // shows "navig6ator is undefined"
```

Notes: Returns true if the javascript code was sent to the browser.
Returns false on any error.

The IE API does not allow to return values from Javascript. So you need to store your result in window.title and access it later using IETitleMBS.

IERunJavaScriptMBS fails if the htmlviewer is empty. You can load a dummy page like above.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

See IEDocumentMBS.Eval for newer version which can return result.

96.1.42 IESecurityMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves the security state.
Notes: Example value: "F√ºr diesen Dokumententyp gibt es kein Sicherheitszertifikat."

96.1.43 IESetTextAreaMBS(FormName as String, FieldName as String, Value as String) as Boolean

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets text for a textarea.
Notes: FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns true if text is set or false on failure.
Blog Entries

- HTMLViewer JavaScript communication for Xojo

96.1.45 IETextMBS as string

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Returns a copy of the text of the current webpage.
Example:

msgbox htmlviewer1.IETextMBS

Notes: Asks Internet Explorer for a selection of the whole document and asks selection about the text content.
Returns "" on any error.
Blog Entries

- MBS Xojo Plugins, version 20.2pr3

96.1.46 IEToStringMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Retrieves a string representation of the object.
Notes: Example value: " [object] "

96.1.47 IEWebBrowserMBS as IEWebBrowserMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries web browser object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.

Not available for DesktopHTMLViewer control since there is no support for Internet Explorer for that control.

96.1.48 IEWindowMBS as IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries web window object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.

Not available for DesktopHTMLViewer control since there is no support for Internet Explorer for that control.

96.1.49 IEZoomMBS(factor as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWebBrowserMBS class instead. **Function:** Zooms the web content.
Notes: Factor can be 50 for 50%.
Returns true on success.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

96.1.50 LinuxWebViewMBS as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Queries the linux WebKit web view for the given htmlviewer.
Notes: Requires a recent Xojo version. And libwekit-1.0 must be installed, so Xojo uses it for browsing.
Check Also the Available shared method on LinuxWebViewMBS class.

96.1.51 WKWebViewMBS as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Queries WKWebViewMBS associated to HTMLViewer.
Notes: Returns WKWebView for Xojo when used in HTMLViewer.

96.1.52 Properties

96.1.53 IECharSetMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or retrieves the character set used to encode the object.
Notes: Example value: "utf-8"
(Read and Write computed property)

96.1.54 IECookieMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or gets the string value of a cookie.
Notes: Example value: "s_vi= [CS] v1 | 427CA13500002D10-A000B5B00000001 [CE] ; s_cc=true; s_nr=1196708888562; s_sq=%5B%5BB%5D%5D"
(Read and Write computed property)

96.1.55 IEDefaultCharsetMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Gets the default character set from the current regional language settings.
Notes: Example value: "windows-1252"
(Read and Write computed property)

96.1.56 IEDomainMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or gets the security domain of the document.
Notes: Example value: "www.apple.com"
(Read and Write computed property)

96.1.57 IEEditableMBS as boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Makes the htmlviewer editable on Windows.
Notes: (Read and Write computed property)

96.1.58 IETitleMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or gets the title of the document.
Notes: Example value: "Apple"
(Read and Write computed property)

96.1.59 IEURLMBS as string

MBS Win Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Function:** Sets or gets the URL for the current document.
Notes: Example value: "http://www.apple.com/"
(Read and Write computed property)

96.2 class LinuxJavaScriptContextMBS

96.2.1 class LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The class for a javascript context.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

96.2.2 Methods

96.2.3 CheckScriptSyntax(script as string, sourceURL as string = """, StartLineNumber as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Checks for syntax errors in a string of JavaScript.
Notes: script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception: A string in which to store a syntax error exception, if any.
Returns true if the script is syntactically correct, otherwise false.
See also:

- 96.2.4 CheckScriptSyntax(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as boolean 14742

96.2.4 CheckScriptSyntax(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Checks for syntax errors in a string of JavaScript.
Notes: script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.

exception: A string in which to store a syntax error exception, if any.
Returns true if the script is syntactically correct, otherwise false.
See also:

- 96.2.3 CheckScriptSyntax(script as string, sourceURL as string = """, StartLineNumber as Integer = 0) as boolean 14742

96.2.5 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The private constructor.

96.2.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.2.7 EvaluateScript(script as string, sourceURL as string = """, StartLineNumber as Integer = 0) as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Evaluates a string of JavaScript.
Notes: script A string containing the script to evaluate.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception A string in which to store an exception, if any.
Returns the value as string that results from evaluating script, or "" if an exception is thrown.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.
See also:

- 96.2.8 EvaluateScript(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as string 14744

96.2.8 EvaluateScript(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Evaluates a string of JavaScript.
Notes: script A string containing the script to evaluate.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception A string in which to store an exception, if any.
Returns the value as string that results from evaluating script, or "" if an exception is thrown.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.
See also:

- 96.2.7 EvaluateScript(script as string, sourceURL as string = "", StartLineNumber as Integer = 0) as string 14743

96.2.9 GarbageCollect

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Performs a JavaScript garbage collection.
Notes: You should not need to call this.

96.2.10 Properties

96.2.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.2.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The reference to the parent HTMLViewer.
Notes: (Read and Write property)

96.3 class LinuxWebBackForwardListMBS

96.3.1 class LinuxWebBackForwardListMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The history of a WebView.

96.3.2 Methods

96.3.3 AddItem(item as LinuxWebHistoryItemMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Adds the item to the WebBackForwardList.

96.3.4 BackItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the item that precedes the current item.

96.3.5 BackLength as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the number of items that preced the current item.

96.3.6 Clear

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Clears the webBackForwardList by removing all its elements.
Notes: Note that not even the current page is kept in list when cleared so you would have to add it later. This method also clears the list of visited links which means that all links will appear unvisited.

96.3.7 Constructor(webview as LinuxWebViewMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates an instance of the back forward list with a controlling WebView.

96.3.8 ContainsItem(item as LinuxWebHistoryItemMBS) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Checks if item is in the back forward list.

96.3.9 CurrentItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The current item.
Notes: Returns a nil value if the back forward list is empty.

96.3.10 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.3.11 ForwardItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The next item forward in the list.
Notes: Returns a nil value if there nothing that succeeds the current item.

96.3.12 ForwardLength as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the number of items that succeed the current item.

96.3.13 GoBack

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Steps backward in the back forward list

96.3.14 GoForward

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Steps forward in the back forward list.

96.3.15 GoToItem(item as LinuxWebHistoryItemMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Go to the specified item in the back forward list.

96.3.16 Item(index as Integer) as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the item at a given index relative to the current item.

96.3.17 Properties

96.3.18 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.3.19 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent htmlviewer.
Notes: (Read and Write property)

96.3.20 Limit as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The maximum limit of the back forward list.
Notes: (Read and Write computed property)

96.4 class LinuxWebCookieMBS

96.4.1 class LinuxWebCookieMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The class for a cookie used with WebKit on Linux.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox c.Expires.ShortDate+" "+c.Expires.ShortTime
```

Notes: LinuxWebCookieMBS implements HTTP cookies, primarily as described by the original Netscape cookie specification, but with slight modifications based on RFC 2109, Microsoft's HttpOnly extension attribute, and observed real-world usage (and, in particular, based on what Firefox does).

An HTTP cookie.

name and value will be set for all cookies. If the cookie is generated from a string that appears to have no name, then name will be the empty string.

domain and path give the host or domain, and path within that host/domain, to restrict this cookie to. If domain starts with ".", that indicates a domain (which matches the string after the ".", or any hostname that has domain as a suffix). Otherwise, it is a hostname and must match exactly.

expires will be non-nil if the cookie uses either the original "expires" attribute, or the "max-age" attribute specified in RFC 2109. If expires is nil, it indicates that neither "expires" nor "max-age" was specified, and the cookie expires at the end of the session.

If http_only is set, the cookie should not be exposed to untrusted code (eg, javascript), so as to minimize the danger posed by cross-site scripting attacks.
Blog Entries

- Cookies in HTMLViewer

96.4.2 Methods

96.4.3 Constructor(name as string, value as string, domain as string, path as string, maxAge as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Creates a new cookie with the given attributes.
Example:

Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox str(c.Name)

Notes: Use Secure and HTTPOnly properties if you need to set those attributes on the returned cookie.

maxAge is used to set the "expires" attribute on the cookie; pass -1 to not include the attribute (indicating that the cookie expires with the current session), 0 for an already-expired cookie, or a lifetime in seconds. You can use the constants kMaxAgeHour, kMaxAgeDay, kMaxAgeWeek and kMaxAgeYear (or multiples thereof) to calculate this value. (If you really care about setting the exact time that the cookie will expire, use Expire property.)

name: cookie name
value: cookie value
domain: cookie domain or hostname
path: cookie path, or ""
maxage: max age of the cookie, or -1 for a session cookie

96.4.4 Copy as LinuxWebCookieMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Creates a copy.
Notes: If you want to edit an existing cookie, please make a copy first.

96.4.5 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.4.6 Equal(other as LinuxWebCookieMBS) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Compares two cookies.
Notes: Returns true if they are equal.

96.4.7 SetMaxAge(value as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Sets cookie's max age to value.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Hour)
c.SetMaxAge(c.kMaxAgeWeek)
MsgBox c.ToSetCookieHeader
```

Notes: If max_age is -1, the cookie is a session cookie, and will expire at the end of the client's session. Otherwise, it is the number of seconds until the cookie expires. You can use the constants kMaxAgeHour, kMaxAgeDay, kMaxAgeWeek and kMaxAgeYear (or multiples thereof) to calculate this value. (A value of 0 indicates that the cookie should be considered already-expired.)

(This sets the same property as Expire.)

96.4.8 ToCookieHeader as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Serializes cookie in the format used by the Cookie header (ie, for returning a cookie from to a server).
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox c.ToCookieHeader
```

96.4.9 ToSetCookieHeader as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Serializes cookie in the format used by the Set-Cookie header (ie, for sending a cookie from to a client).
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox c.ToSetCookieHeader
```

96.4.10 Properties

96.4.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.4.12 Owner as Variant

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The owner of this object.
Notes: (Read and Write property)

96.4.13 Domain as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The domain text.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Domain)
```

Notes: (Read and Write computed property)

96.4.14 Expires as date

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The expiration time.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox c.Expires.ShortDate+" "+c.Expires.ShortTime
```

Notes: If expires is nil, cookie will be a session cookie and will expire at the end of the client's session.
(Read and Write computed property)

96.4.15 ExpiresDateTime as DateTime

MBS Linux Plugin, Plugin Version: 20.5, Platform: Linux, Targets: Desktop only.

Function: The expiration time.
Notes: (Read and Write computed property)

96.4.16 HTTPOnly as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The httponly attribute.
Notes: If true, cookie will be marked as "http only", meaning it should not be exposed to web page scripts or other untrusted code.
(Read and Write computed property)

96.4.17 Name as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The name of the cookie.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Name)
```

Notes: (Read and Write computed property)

96.4.18 Path as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The path of the cookie.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "test", LinuxWebCookieMBS.kMax-
AgeWeek)
MsgBox str(c.Path)
```

Notes: (Read and Write computed property)

96.4.19 Secure as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The secure attribute.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox str(c.Secure)
c.Secure = true
MsgBox str(c.Secure)
```

Notes: Cookie will only be transmitted from the client to the server over secure (https) connections if secure is true.
(Read and Write computed property)

96.4.20 Value as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The value of the cookie.
Example:

```
Var c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox str(c.Value)
```

Notes: (Read and Write computed property)

96.4.21 Constants

Constants

Constant	Value	Description
kMaxAgeDay	86400	A constant for one day in seconds.
kMaxAgeHour	3600	A constant for one hour in seconds.
kMaxAgeWeek	604800	A constant for one week in seconds.
kMaxAgeYear	31556926	A constant for one year in seconds.

96.5 class LinuxWebCookieStoreMBS

96.5.1 class LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The store for cookies.
Example:

```
Var store as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
Var cookies() as LinuxWebCookieMBS = store.AllCookies
MsgBox str(UBound(cookies)+1)+" cookies"
```

Blog Entries

- Cookies in HTMLViewer

96.5.2 Methods

96.5.3 AddCookie(cookie as LinuxWebCookieMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Adds cookie to store.

96.5.4 AllCookies as LinuxWebCookieMBS()

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns an array with all cookies.
Example:

```
// show all cookies
Var store as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
Var cookies(-1) as LinuxWebCookieMBS = store.AllCookies
Var lines() as string

for each c as LinuxWebCookieMBS in cookies
lines.Append c.ToSetCookieHeader
next

MsgBox Join(lines,EndOfLine)
```

96.5.5 Available as Boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns true if the plugin found all functions for the web cookie store.

96.5.6 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Creates a new cookie store.
Notes: The base LinuxWebCookieStoreMBS class does not support persistent storage of cookies; use a subclass for that.

96.5.7 CookieStore as LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Queries the default cookie store.
Example:

```
Var w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore

MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
w.AcceptPolicy = w.kAcceptNoThirdParty
MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
```

96.5.8 DeleteAllCookies

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Deletes all cookies.
Example:

```
Var w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
w.DeleteAllCookies
```

96.5.9 DeleteCookie(cookie as LinuxWebCookieMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Deletes cookie.

96.5.10 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.5.11 SetCookieStore(newStore as LinuxWebCookieStoreMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Makes the given cookie store the default one.

96.5.12 Properties

96.5.13 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.5.14 Owner as Variant

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The owner of this object.
Notes: (Read and Write property)

96.5.15 AcceptPolicy as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Get/set the policy for accepting cookies.
Example:

```
Var w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore

MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
```

```
w.AcceptPolicy = w.kAcceptNoThirdParty
MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
```

Notes: (Read and Write computed property)

96.5.16 Constants

Cookie Accept Modes

Constant	Value	Description
kAcceptAlways	0	Accept all cookies unconditionally.
kAcceptNever	1	Reject all cookies unconditionally.
kAcceptNoThirdParty	2	No Third party cookies. Accept all cookies set by the main document loaded in the application using libsoup. An example of the most common case, web browsers, would be: If http://www.example.com is the page loaded, accept all cookies set by example.com, but if a resource from http://www.third-party.com is loaded from that page reject any cookie that it could try to set. For libsoup to be able to tell apart first party cookies from the rest, the application must call soup_message_set_first_party() on each outgoing SoupMessage, setting the SoupURI of the main document. If no first party is set in a message when this policy is in effect, cookies will be assumed to be third party by default. (this is done by webkit)

96.6 class LinuxWebDataSourceMBS

96.6.1 class LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Data source encapsulates the content of a WebFrame.
Notes: A WebFrame has a main resource and subresources and the data source provides access to these resources. When a request gets loaded initially, it is set to a provisional state. The application can request for the request that initiated the load by asking for the provisional data source and invoking the InitialRequest method of DataSource. This data source may not have enough data and some methods may return empty values. To get a "full" data source with the data and resources loaded, you need to get the non-provisional data source through WebFrame's DataSource method. This data source will have the data after everything was loaded. Make sure that the data source was finished loading before using any of its methods. You can do this via IsLoading.

96.6.2 Methods

96.6.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new WebKitWebDataSource instance.
Notes: The URL of the WebKitWebDataSource will be set to "about:blank".
See also:

- 96.6.4 Constructor(request as LinuxWebNetworkRequestMBS) 14760

96.6.4 Constructor(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new data source with the given network request.
See also:

- 96.6.3 Constructor 14760

96.6.5 Data as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the raw data that represents the the frame's content.
Notes: The data will be incomplete until the data has finished loading. Returns "" if the web frame hasn't loaded any data. Use isLoading to test if data source is in the process of loading.

96.6.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.6.7 Encoding as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the text encoding name as set in the WebView, or if not, the text encoding of the response.

96.6.8 InitialRequest as LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns a reference to the original request that was used to load the web content.
Notes: The NetworkRequest returned by this method is the request prior to the "committed" load state. See Request for getting the "committed" request.

96.6.9 IsLoading as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Determines whether the data source is in the process of loading its content.
Notes: Returns true if loading or false if not.

96.6.10 MainResource as LinuxWebResourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the main resource of the data source.

96.6.11 Request as LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns a NetworkRequest that was used to create this DataSource.
Notes: The NetworkRequest returned by this method is the request that was "committed", and hence,

different from the request you get from the InitialRequest method.

96.6.12 Subresources as LinuxWebResourceMBS()

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Gives you a list of WebKitWebResource objects that compose the WebView to which this DataSource is attached.

96.6.13 UnrechableURI as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Return the unreachable URI of data_source.
Notes: The data source will have an unreachable URL if it was created using WebFrame's LoadAlternateHtmlString method.

96.6.14 WebFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the WebFrame that represents this data source.
Notes: The WebFrame is owned by WebKit and should not be freed or destroyed.
This will return nil if the data_source is not attached to a frame.

96.6.15 Properties

96.6.16 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.6.17 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent HTMLViewer.
Notes: (Read and Write property)

96.7 class LinuxWebFrameMBS

96.7.1 class LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The class for a WebKit WebFrame on Linux.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.4
- MBS Real Studio Plugins, version 12.4pr3
- Linux WebKit Support for Real Studio's HTMLViewer control

96.7.2 Methods

96.7.3 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

96.7.4 DataSource as LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the committed data source.

96.7.5 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.7.6 FindFrame(name as string) as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Searches a frame by name.
Notes: For pre-defined names, returns frame if name is "_self" or "_current", returns frame's parent frame

if name is "_parent", and returns the main frame if name is "_top". Also returns frame if it is the main frame and name is either "_parent" or "_top". For other names, this function returns the first frame that matches name. This function searches frame and its descendents first, then frame's parent and its children moving up the hierarchy until a match is found. If no match is found in frame's hierarchy, this function will search for a matching frame in other main frame hierarchies. Returns nil if no match is found.

name: the name of the frame to be found
Returns the found WebKitWebFrame or nil in case none is found.

96.7.7 JSContext as LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Queries the javascript context for this webframe.

96.7.8 LoadAlternateString(content as string, BaseURL as string, unreachableURL as string)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Request loading of an alternate content for a URL that is unreachable.
Notes: Using this method will preserve the back-forward list. The URI passed in base url has to be an absolute URI.

96.7.9 LoadRequest(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Connects to a given URI by initiating an asynchronous client request.
Notes: Creates a provisional data source that will transition to a committed data source once any data has been received. Use StopLoading to stop the load. This function is typically invoked on the main frame.

96.7.10 LoadStatus as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the current load state.

96.7.11 LoadString(content as string, MimeType as String, Encoding as String, BaseURL as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Requests loading of the given content with the specified MimeType, encoding and BaseURL.
Notes: If mime_type is "", "text/html" is assumed.
If encoding is "", "UTF-8" is assumed.

Content: an URI string
MimeType: the MIME type, or "".
Encoding: the encoding, or "".
BaseURL: the base URI for relative locations.
See also FileExtensionToMimeTypeMBS function.

96.7.12 LoadURL(URL as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Requests loading of the specified URI string.

96.7.13 Name as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the frame's name

96.7.14 NetworkResponse as LinuxWebNetworkResponseMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the network response.
Notes: Returns a NetworkResponse object representing the response that was given to the request for the given frame, or nil if the frame was not created by a load. You must unref the object when you are done with it.

96.7.15 Parent as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the frame's parent frame, or nil if it has none.

96.7.16 Print

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Asks the control to print it's content.

96.7.17 ProvisionalDataSource as LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: You use the LoadRequest method to initiate a request that creates a provisional data source.
Notes: The provisional data source will transition to a committed data source once any data has been received. Use DataSource to get the committed data source.

Returns the provisional WebDataSource or nil if a load request is not in progress.

96.7.18 Reload

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Reloads the initial request.

96.7.19 StopLoading

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Stops any pending loads on frame's data source, and those of its children.

96.7.20 Title as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the frame's document title

96.7.21 URL as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the current URI of the contents displayed by the frame.

96.7.22 Properties

96.7.23 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.7.24 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The parent HTMLViewer.
Notes: (Read and Write property)

96.7.25 WebView as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The reference to the parent webview.
Notes: (Read and Write property)

96.7.26 Constants

Load State Constants

Constant	Value	Description
kLoadCommitted	1	The first data chunk has arrived, meaning that the necessary transport req ments are stabilished, and the load is being performed.
kLoadFailed	4	This state means that some error occurred during the page load that preve it from being completed. You can connect to the error event if you war know precisely what kind of error occurred.
kLoadFinished	2	This state means that everything that was required to display the page been loaded.
kLoadFirstVisuallyNonEmptyLayout	3	The first layout with actual visible content happened; one or more layouts have happened before that caused nothing to be visible on the screen, bec the data available at the time was not significant enough.
kLoadProvisional	0	No data has been received yet, empty structures have been allocated to perf the load; the load may still fail for transport issues such as not being ab resolve a name, or connect to a port.

96.8 class LinuxWebHistoryItemMBS

96.8.1 class LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: One item of the WebBackForwardList and or global history.
Notes: A history item consists out of a title and a uri. It can be part of the WebBackForwardList and the global history. The global history is used for coloring the links of visited sites. WebHistoryItem's constructed with Constructor() are automatically added to the global history.

96.8.2 Methods

96.8.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new WebHistoryItem instance.
See also:

- 96.8.4 Constructor(URI as string, Title as string) 14770

96.8.4 Constructor(URI as string, Title as string)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new WebHistoryItem with the given URI and title.
See also:

- 96.8.3 Constructor 14770

96.8.5 Copy as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Makes a copy of the item for use with other WebView objects.

96.8.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.8.7 LastVisitedTime as Double

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The last visited timestamp.

96.8.8 OriginalURI as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The original URL of this item.

96.8.9 Title as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The title of this item.

96.8.10 URI as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The URL of this item.

96.8.11 Properties

96.8.12 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.8.13 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent htmlviewer.
Notes: (Read and Write property)

96.8.14 AlternateTitle as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The alternate title.
Notes: (Read and Write computed property)

96.9 class LinuxWebInspectorMBS

96.9.1 class LinuxWebInspectorMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The WebKit Inspector is a graphical tool to inspect and change the content of a WebKitWebView.
Notes: It also includes an interactive JavaScriptDebugger. Using this class one can get a GtkWidget which can be embedded into an application to show the inspector.

The inspector is available when the WebKitWebSettings of the WebKitWebView has set the "enable-developer-extras" to true otherwise no inspector is available.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

96.9.2 Methods

96.9.3 Close

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Causes the Web Inspector to be closed.

96.9.4 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The private constructor.

96.9.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.9.6 InspectCoordinates(x as Double, y as Double)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Causes the Web Inspector to inspect the node that is located at the given coordinates of the widget.
Notes: The coordinates should be relative to the WebKitWebView widget, not to the scrollable content, and may be obtained from a GdkEvent directly. This means x, and y being zero doesn't guarantee you will hit the left-most top corner of the content, since the contents may have been scrolled.

x: the X coordinate of the node to be inspected
y: the Y coordinate of the node to be inspected

96.9.7 InspectedURI as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Obtains the URI that is currently being inspected.

96.9.8 Show

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Causes the Web Inspector to be shown.

96.9.9 WebView as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Obtains the WebKitWebView that is used to render the inspector.

96.9.10 Properties

96.9.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.9.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The reference to the parent HTMLViewer.
Notes: (Read and Write property)

96.10 class LinuxWebNetworkRequestMBS

96.10.1 class LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: This class represents the network related aspects of a navigation request.
Notes: It is used whenever WebKit wants to provide information about a request that will be sent, or has been sent. Inside it you can find the URI of the request, and, for valid URIs, a SoupMessage object, which provides access to further information such as headers.

96.10.2 Methods

96.10.3 Constructor(url as string)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new NetworkRequest initialized with an URI.

96.10.4 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.10.5 Properties

96.10.6 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.10.7 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent HTMLViewer.
Notes: (Read and Write property)

96.10.8 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Get or set the URL for this request.
Notes: (Read and Write computed property)

96.11 class LinuxWebNetworkResponseMBS

96.11.1 class LinuxWebNetworkResponseMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: This class represents the network related aspects of a navigation response.

96.11.2 Methods

96.11.3 Constructor(url as string)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new response object with the given URL.

96.11.4 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.11.5 Properties

96.11.6 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.11.7 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent HTMLViewer.
Notes: (Read and Write property)

96.11.8 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Get or set the URL for this request.
Notes: (Read and Write computed property)

96.12 class LinuxWebResourceMBS

96.12.1 class LinuxWebResourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: A web resource encapsulates the data of the download as well as the URI, MIME type and frame name of the resource.

96.12.2 Methods

96.12.3 Constructor(data as string, uri as string, mimeType as string, encoding as string = ””, FrameName as string = ””)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new WebKitWebResource.
Notes: The encoding can be ””. The FrameName argument can be used if the resource represents contents of an entire HTML frame, otherwise pass ””.
See also FileExtensionToMimeTypeMBS function.

96.12.4 Data as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the data of the webResource.

96.12.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.12.6 Encoding as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the encoding for this resource.

96.12.7 FrameName as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Queries the frame name.

96.12.8 MimeType as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The MIME Type for this resource.
Notes: See also MimeTypeToFileExtensionMBS function.

96.12.9 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The URL for this resource.

96.12.10 Properties

96.12.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.12.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent HTMLViewer.
Notes: (Read and Write property)

96.13 class LinuxWebSettingsMBS

96.13.1 class LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: WebSettings can be applied to a WebKitWebView to control text encoding, color, font sizes, printing mode, script support, loading of images and various other things.
Notes: After creation, a WebSettings object contains default settings.

96.13.2 Methods

96.13.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Creates a new WebSettings instance with default values.
Notes: It must be manually attached to a WebView.

96.13.4 Copy as LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Copies an existing WebSettings instance.

96.13.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.13.6 UserAgent as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns the User-Agent string currently used by the web view(s) associated with the web_settings.

96.13.7 Properties

96.13.8 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.13.9 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The parent htmlviewer.
Notes: (Read and Write property)

96.14 class LinuxWebViewMBS

96.14.1 class LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The class for a WebKit WebView on Linux.
Notes: With MBS Plugin 19.3 and Xojo 2018r2 and later, this plugin will try to load WebKit 2.0 (libwebkit2gtk-4.0.so.37) instead of WebKit 1.0 (libwebkitgtk-3.0.so).

Most functions still work for WebKit 1.x only. Let us know if you need something for WebKit 2.x.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

96.14.2 Methods

96.14.3 Available as Boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether the plugin found libwebkit on linux.
Notes: Returns true on linux if the class can work. Else it returns false.

For Xojo 2018.02 and later we try to load libwebkit2gtk-4.0.so.37 library.

96.14.4 BackForwardList as LinuxWebBackForwardListMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Obtains the BackForwardList associated with the given WebView.
Notes: The BackForwardList is owned by the WebView.

96.14.5 CanCopyClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether copy is possible.

96.14.6 CanCutClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether cut is possible.

96.14.7 CanGoBack as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Determines whether web_view has a previous history item.
Notes: Returns true if able to move back, false otherwise.

96.14.8 CanGoBackOrForward(steps as Integer) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Determines whether web_view has a history item of steps.
Notes: Negative values represent steps backward while positive values represent steps forward.
steps: the number of steps
Returns true if able to move back or forward the given number of steps, false otherwise.

96.14.9 CanGoForward as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Determines whether web_view has a next history item.
Notes: Returns true if able to move forward, false otherwise

96.14.10 CanPasteClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether paste is possible.

96.14.11 CanRedo as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether redo is possible.

96.14.12 CanShowMimeType(MimeType as string) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: This functions returns whether or not a MIME type can be displayed using this view.
Notes: MimeType: a MIME type

Return boolean indicating if the MIME type can be displayed.
See also FileExtensionToMimeTypeMBS function.

96.14.13 CanUndo as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether undo is possible.

96.14.14 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The private constructor.

96.14.15 CookieStore as LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Queries the default cookie store.

96.14.16 CopyClipboard

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Copies the current selection inside the web_view to the clipboard.

96.14.17 CutClipboard

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Cuts the current selection inside the web_view to the clipboard.

96.14.18 DeleteSelection

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Deletes the current selection inside the web_view.

96.14.19 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The destructor.

96.14.20 Encoding as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the default encoding of the WebKitWebView.

96.14.21 EvaluateScript(script as string) as string

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Evaluates a string of JavaScript.
Notes: script A string containing the script to evaluate.

Returns the value as string that results from evaluating script, or "" if an exception is thrown.

96.14.22 ExecuteScript(script as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Executes java script.

96.14.23 FocusedFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the frame that has focus or an active text selection.
Notes: Returns the focused frame or nil if no frame is focused

96.14.24 GoBack

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Loads the previous history item.

96.14.25 GoBackOrForward(steps as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Loads the history item that is the number of steps away from the current item.
Notes: Negative values represent steps backward while positive values represent steps forward.

96.14.26 GoForward

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Loads the next history item.

96.14.27 GoToItem(item as LinuxWebHistoryItemMBS) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Go to the specified history item.
Notes: Returns true if loading of item is successful, false if not.

96.14.28 HasSelection as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Determines whether text was selected.
Notes: Returns true if there is selected text, false if not

96.14.29 IconURL as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the favorite icon URL for the current website.

96.14.30 Inspector as LinuxWebInspectorMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Obtains the WebKitWebInspector associated with the WebKitWebView.
Notes: Every WebKitWebView object has a WebKitWebInspector object attached to it as soon as it is created, so this function will only return nil if the argument is not a valid WebKitWebView.

96.14.31 IsLoading as Boolean

MBS Linux Plugin, Plugin Version: 19.3, Platform: Linux, Targets: Desktop only.

Function: Returns true while web view is loading.
Notes: Works for WebKit 1.x and 2.x.

96.14.32 JSContext as LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Queries the javascript context for the main webframe.

96.14.33 LoadHTMLString(HTMLString as string, BaseURL as string = "")

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Loads a HTML string.

96.14.34 LoadRequest(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Requests loading of the specified asynchronous client request.
Notes: Creates a provisional data source that will transition to a committed data source once any data has been received. Use StopLoading to stop the load.

96.14.35 LoadStatus as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the current load state.
Notes: Works for WebKit 1.x and 2.x.

Name	Value	Description
WEBKIT_LOAD_PROVISIONAL	0	No data has been received yet, empty structures have been allocated to perform the load; the load may still fail for transport issues such as not being able to resolve a name, or connect to a port.
WEBKIT_LOAD_COMMITTED	1	The first data chunk has arrived, meaning that the necessary transport requirements are stabilished, and the load is being performed.
WEBKIT_LOAD_FINISHED	2	This state means that everything that was required to display the page has been loaded.
WEBKIT_LOAD_FIRST_VISUALLY_NON_EMPTY_LAYOUT	3	The first layout with actual visible content happened; one or more layouts may have happened before that caused nothing to be visible on the screen, because the data available at the time was not significant enough.
WEBKIT_LOAD_FAILED	4	This state means that some error occurred during the page load that prevented it from being completed. You can connect to the #WebKitWebView::load-error signal if you want to know precisely what kind of error occurred.

96.14.36 LoadString(content as string, MimeType as String, Encoding as String, BaseURL as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Requests loading of the given content with the specified MimeType, encoding and BaseURL.
Notes: If mime_type is "", "text/html" is assumed.
If encoding is "", "UTF-8" is assumed.

Content: an URI string

MimeType: the MIME type, or "".
Encoding: the encoding, or "".
BaseURL: the base URI for relative locations.

See also FileExtensionToMimeTypeMBS function.

96.14.37 LoadURL(URL as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Requests loading of the specified URI string.

96.14.38 MainFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the main frame of the document.

96.14.39 MajorVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns major version of webkit.

96.14.40 MarkTextMatches(text as string, caseSensitive as boolean = false, limit as Integer = 99) as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Attempts to highlight all occurances of string inside webview.
Notes: string: a string to look for
case_sensitive: whether to respect the case of text
limit: the maximum number of strings to look for or 0 for all
Returns the number of strings highlighted.

96.14.41 MicroVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns micro version of webkit.

96.14.42 MinorVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Returns minor version of webkit.

96.14.43 PasteClipboard

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Pastes the current contents of the clipboard to the webview.

96.14.44 Progress as Double

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The global locating progress in percent.
Notes: 1.0 is full progress.

96.14.45 Redo

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Redos last action if possible.

96.14.46 Reload

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Reloads the initial request.

96.14.47 ReloadIgnoreCache

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Reloads the webview without using any cached data.

96.14.48 SearchText(text as string, caseSensitive as boolean = false, forward as boolean = true, wrap as boolean = true) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Looks for a specified string inside webview.
Notes: text: a string to look for.
case_sensitive: whether to respect the case of text.
forward: whether to find forward or not.
wrap: whether to continue looking at the beginning after reaching the end.
Returns trueT on success or false on failure.

96.14.49 SelectAll

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Attempts to select everything inside the webview.

96.14.50 SetCookieStore(newStore as LinuxWebCookieStoreMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Makes the given cookie store the default one.

96.14.51 SetHighlightTextMatches(highlight as boolean)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Highlights text matches previously marked by MarkTextMatches.

96.14.52 SetMaintainsBackForwardList(flag as boolean)

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: Set the view to maintain a back or forward list of history items.

96.14.53 StopLoading

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Stops any pending loads on frame's data source, and those of its children.

96.14.54 Title as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The title of the website.

96.14.55 Undo

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Undos last action if possible.

96.14.56 UnmarkTextMatches

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Unmarks text matches from search.

96.14.57 URL as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the current URL.

96.14.58 ZoomIn

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Increases the zoom level of web_view.
Notes: The current zoom level is incremented by the value of the "zoom-step" property of the settings associated with webview.

96.14.59 ZoomOut

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Decreases the zoom level of webview.
Notes: The current zoom level is decremented by the value of the "zoom-step" property of the settings associated with webview.

96.14.60 Properties

96.14.61 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

96.14.62 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The reference to the parent HTMLViewer.
Notes: (Read and Write property)

96.14.63 CacheModel as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The cache model for the htmlviewer.
Notes: (Read and Write computed property)

96.14.64 CustomEncoding as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The current WebKitWebView encoding.
Notes: (Read and Write computed property)

96.14.65 Editable as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether the user is allowed to edit the document.
Notes: If flag is true, webview allows the user to edit the document. If flag is false, an element in webview's document can only be edited if the CONTENTEDITABLE attribute has been set on the element or one of its parent elements. You can change webview's document programmatically regardless of this setting. By default a WebKitWebView is not editable.

Normally, an HTML document is not editable unless the elements within the document are editable. This function provides a low-level way to make the contents of a WebKitWebView editable without altering the document or DOM structure.
(Read and Write computed property)

96.14.66 FullContentZoom as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether the zoom level affects only text or all elements.
Notes: False if only text should be scaled (the default), true if the full content of the view should be scaled.
(Read and Write computed property)

96.14.67 ProxyURL as String

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: The proxy URL setting.
Notes: (Read and Write computed property)

96.14.68 Settings as LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Platform: Linux, Targets: Desktop only.

Function: The settings for this webview.
Notes: (Read and Write computed property)

96.14.69 Transparent as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether the WebKitWebView has a transparent background.
Notes: False when the WebKitWebView draws a solid background (the default), otherwise true.
(Read and Write computed property)

96.14.70 ViewSourceMode as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Whether we are viewing the source code.
Notes: (Read and Write computed property)

96.14.71 ZoomLevel as Double

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop only.

Function: Returns the zoom level of web_view, i.e. the factor by which elements in the page are scaled with respect to their original size.
Notes: If the "full-content-zoom" property is set to false (the default) the zoom level changes the text size, or if true, scales all elements in the page.
(Read and Write computed property)

96.14.72 Constants

Cache Model Constants

Constant	Value	Description
kCacheModelDocumentViewer	1	Cache in Document Viewer.
kCacheModelWebBrowser	2	Cache in Web Browser.

Load State Constants

Constant	Value	Description
kLoadCommitted	1	The first data chunk has arrived, meaning that the necessary transport req ments are stabilished, and the load is being performed.
kLoadFailed	4	This state means that some error occurred during the page load that preve it from being completed. You can connect to the error event if you war know precisely what kind of error occurred.
kLoadFinished	2	This state means that everything that was required to display the page been loaded.
kLoadFirstVisuallyNonEmptyLayout	3	The first layout with actual visible content happened; one or more layouts have happened before that caused nothing to be visible on the screen, bec the data available at the time was not significant enough.
kLoadProvisional	0	No data has been received yet, empty structures have been allocated to perf the load; the load may still fail for transport issues such as not being ab resolve a name, or connect to a port.

Chapter 97

HTMLViewer Win

97.1 class ChromiumBrowserMBS

97.1.1 class ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The class for a WebKit browser on Windows.
Notes: Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.1.2 Methods

97.1.3 AddCrossOriginWhitelist(SourceOrigin as String, TargetProtocol as String, TargetDomain as String, AllowTargetSubdomains as Boolean) as Boolean

MBS Win Plugin, Plugin Version: 21.3, Platform: Windows, Targets: Desktop only.

Function: Add an entry to the cross-origin access whitelist.
Example:

Var r as Boolean = ChromiumBrowserMBS.AddCrossOriginWhitelist("http://side1.mydomain.com", "http", "side2.mydomain.com", false)

Notes: The same-origin policy restricts how scripts hosted from different origins (scheme + domain + port) can communicate. By default, scripts can only access resources with the same origin. Scripts hosted on the HTTP and HTTPS schemes (but no other schemes) can use the "Access-Control-Allow-Origin" header to allow cross-origin requests. For example, https://source.example.com can make XMLHttpRequest requests on http://target.example.com if the http://target.example.com request returns an "Access-Control-Allow-Origin: https://source.example.com" response header.

Scripts in separate frames or iframes and hosted from the same protocol and domain suffix can execute cross-origin JavaScript if both pages set the document.domain value to the same domain suffix. For example, scheme://foo.example.com and scheme://bar.example.com can communicate using JavaScript if both domains set document.domain="example.com".

This function is used to allow access to origins that would otherwise violate the same-origin policy. Scripts hosted underneath the fully qualified SourceOrigin URL (like http://www.example.com) will be allowed access to all resources hosted on the specified TargetProtocol and TargetDomain.
If TargetDomain is non-empty and AllowTargetSubdomains if false only exact domain matches will be allowed. If TargetDomain contains a top-level domain component (like "example.com") and AllowTargetSubdomains is true (1) sub-domain matches will be allowed. If TargetDomain is empty and AllowTargetSubdomains if true (1) all domains and IP addresses will be allowed.

This function cannot be used to bypass the restrictions on local or display isolated schemes. See the comments on CefRegisterCustomScheme for more information.

This function may be called on any thread. Returns true on success or false if SourceOrigin is invalid or the whitelist cannot be accessed.

97.1.4 CanGoBack as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if the browser can navigate backwards.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.CanGoBack)
```

97.1.5 CanGoForward as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if the browser can navigate forwards.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.CanGoForward)
```

97.1.6 ClearCrossOriginWhitelist as Boolean

MBS Win Plugin, Plugin Version: 21.3, Platform: Windows, Targets: Desktop only.

Function: Remove all entries from the cross-origin access whitelist.
Example:

```
Var r as Boolean = ChromiumBrowserMBS.ClearCrossOriginWhitelist
```

Notes: Returns true on success or false if the whitelist cannot be accessed.

97.1.7 ClearFocus

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Clears focus.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ClearFocus
```

97.1.8 ClearHistory

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Clear the back/forward

browsing history.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ClearHistory
```

Notes: Only supported for Chromium 2.x, but not 3.x.

97.1.9 CloseDevTools

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Explicitly close the developer tools window if one exists for this browser instance.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.CloseDevTools
```

97.1.10 Constructor

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

97.1.11 Destructor

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

97.1.12 ExecuteJavaScript(jsCode as string, scriptUrl as string = """, startLine as Integer = 0)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop only.

Function: Execute a string of JavaScript code in this frame.
Example:

```
// go back to last page via javascript
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
```

```
b.ExecuteJavaScript "window.history.back();"
```

Notes: The scriptUrl parameter is the URL where the script in question can be found, if any. The renderer may request this URL to show the developer the source of the error. The startLine parameter is the base line number to use for error reporting.

97.1.13 Find(identifier as Integer, searchText as string, forward as boolean, MatchCase as boolean, FindNext as boolean)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Search for searchText.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.Find 1, "Hello", true, false, false

// later
m.Find 1, "Hello", true, false, true
```

Notes: Identifier can be used to have multiple searches running simultaniously. forward indicates whether to search forward or backward within the page. matchCase indicates whether the search should be case-sensitive. findNext indicates whether this is the first request or a follow-up.

97.1.14 Frame(ID as Int64) as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Returns the frame with the specified identifier, or nil if not found.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
Var idn() as Int64= b.FrameIdentifiers
Var ids() as string
for each n as Int64 in idn
Var f as ChromiumFrameMBS = b.Frame(n)

ids.Append str(n)+" "+f.Name
next
MsgBox "FrameIdentifiers: "+EndOfLine+EndOfLine+Join(ids, EndOfLine)
end if
```

See also:

- 97.1.15 Frame(name as string) as ChromiumFrameMBS 14804

97.1.15 Frame(name as string) as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the frame with the specified name, or nil if not found.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.Frame("TopFrame")
Var s as string = f.Name
MsgBox s
```

See also:

- 97.1.14 Frame(ID as Int64) as ChromiumFrameMBS 14803

97.1.16 FrameIdentifiers as Int64()

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries list of frame identifiers.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
Var idn() as Int64= b.FrameIdentifiers
Var ids() as string
for each n as Int64 in idn
Var f as ChromiumFrameMBS = b.Frame(n)

ids.Append str(n)+" "+f.Name
next
MsgBox "FrameIdentifiers: "+EndOfLine+EndOfLine+Join(ids, EndOfLine)
end if
```

97.1.17 FrameNames as String()

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

Function: Queries list of frame names.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
Var Names() as string = b.FrameNames
MsgBox "FrameNames: "+EndOfLine+EndOfLine+Join(Names, EndOfLine)
end if
```

Notes: Often frames are unnamed, so named is generic.

97.1.18 GoBack

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Navigate backwards.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.GoBack
```

97.1.19 GoForward

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Navigate forwards.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.GoForward
```

97.1.20 HidePopup

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Hide the currently visible popup, if any.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.HidePopup
```

Notes: Only supported for Chromium 2.x, but not 3.x.

97.1.21 Image(width as Integer, height as Integer) as Picture

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Get the raw image data contained in the specified element without performing validation.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var p as picture = m.Image(600, 800)
window1.backdrop = p
```

Notes: The specified width and height dimensions must match the current element size.

Only supported for Chromium 2.x, but not 3.x.

97.1.22 invalidate(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Invalidate the rectangle region of the view.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.invalidate 0, 0, 600, 800
```

Notes: This function is only used when window rendering is disabled and will result in a call to HandlePaint().

97.1.23 IsLoading as boolean

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop only.

Function: Checks loading state.
Notes: Returns true while page is loading.
Only available for Xojo 2017 and newer.

97.1.24 LibVersion as Integer

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop only.

Function: Returns revision number of the Chromium library.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(b.LibVersion)
```

Notes: up to Xojo 2014r1 this is 607.
Xojo 2014r2 uses 1562.

97.1.25 RegisterExtension(ExtensionName as String, javascriptCode as String) as Boolean

MBS Win Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Register a new V8 extension with the specified JavaScript extension code.
Notes: Returns true on success.

97.1.26 Release

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop only.

Function: Releases the browser object.
Notes: You don't need this normally.
This method can be used for working around Feedback case 33565.

97.1.27 Reload

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.Reload
```

97.1.28 ReloadIgnoreCache

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Reload the current page ignoring any cached data.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ReloadIgnoreCache
```

97.1.29 RemoveCrossOriginWhitelist(SourceOrigin as String, TargetProtocol as String, TargetDomain as String, AllowTargetSubdomains as Boolean) as Boolean

MBS Win Plugin, Plugin Version: 21.3, Platform: Windows, Targets: Desktop only.

Function: Remove an entry from the cross-origin access whitelist.
Example:

```
Var r as Boolean = ChromiumBrowserMBS.AddCrossOriginWhitelist("http://side1.mydomain.com", "http",
"side2.mydomain.com", false)
```

Notes: Returns true on success or false if SourceOrigin is invalid or the whitelist cannot be accessed.

97.1.30 Retain

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop only.

Function: Retains the browser object.
Notes: You don't need this normally.

97.1.31 SetFocus(enableFocus as boolean = true)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Set focus for the browser window.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.SetFocus
```

Notes: If enable is true focus will be set to the window. Otherwise, focus will be removed.

97.1.32 setSize(width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Set the size of the specified element.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.setSize 600, 800
```

Notes: Only supported for Chromium 2.x, but not 3.x.

97.1.33 ShowDevTools

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Open developer tools in its own window.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ShowDevTools
```

97.1.34 StopFinding(clearSelection as boolean)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Cancel all searches that are currently going on.

97.1.35 StopLoad

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Stop loading the page.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.StopLoad
```

97.1.36 Properties

97.1.37 FocusedFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the focused frame for the browser window.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.FocusedFrame
Var s as string = f.URL
MsgBox s
```

Notes: (Read only property)

97.1.38 FrameCount as Integer

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop only.

Function: Queries frame count.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
MsgBox "FrameCount: "+str(b.FrameCount)
end if
```

Notes: Only available in Xojo 2017 and newer.
(Read only property)

97.1.39 Handle as Integer

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.1.40 HasDocument as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if a document has been loaded in the browser.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.HasDocument)
```

Notes: (Read only property)

97.1.41 Height as Integer

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries height of the browser.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.Width) + " x " + str(m.Height)
```

Notes: Only supported for Chromium 2.x, but not 3.x.
(Read only property)

97.1.42 Identifier as Integer

MBS Win Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Unique identifier.
Notes: (Read only property)

97.1.43 IsPopup as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if the window is a popup window.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.IsPopup)
```

Notes: (Read only property)

97.1.44 MainFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the main (top-level) frame for the browser window.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.MainFrame
Var s as string = f.URL
MsgBox s
```

Notes: (Read only property)

97.1.45 Parent as Variant

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The owner htmlviewer.
Notes: Can reference a Window or DesktopWindow object.
(Read only property)

97.1.46 PopupVisible as Boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if a popup is currently visible.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
msgbox str(m.PopupVisible)
```

Notes: Only supported for Chromium 2.x, but not 3.x.
(Read only property)

97.1.47 Width as Integer

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Queries width of the browser.
Example:

```
Var m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.Width) + " x " + str(m.Height)
```

Notes: Only supported for Chromium 2.x, but not 3.x.
(Read only property)

97.1.48 WindowRenderingDisabled as Boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if window rendering is disabled.
Notes: Only supported for Chromium 2.x, but not 3.x.
(Read only property)

97.1.49 ZoomLevel as Double

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Get/Set the zoom level.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.ZoomLevel = 2
```

Notes: Change the zoom level to the specified value.
(Read and Write property)

97.2 class ChromiumCookieManagerMBS

97.2.1 class ChromiumCookieManagerMBS

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The class to manage cookies for Chromium on Windows.
Notes: May need to have a HTMLViewer first being initialized by Xojo before the Chromium DLLs can work properly.

Supports Xojo 2019r3 with MBS Plugin 20.1.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr2
- Cookies for Chromium in HTMLViewer on Windows

97.2.2 Methods

97.2.3 AllCookies as ChromiumCookieMBS()

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Visit all cookies.
Example:

```
Var m as new ChromiumCookieManagerMBS
Var cookies() as ChromiumCookieMBS = m.AllCookies
MsgBox str(cookies.Ubound+1)+" cookies"
```

Notes: The returned cookies are ordered by longest path, then by earliest creation date. Returns false (0) if cookies cannot be accessed.

97.2.4 Constructor

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The constructor.
Notes: Can raise exception if no cookie manager is available, e.g. when calling on Linux or Mac OS X or Windows if you don't have the dlls.
May not work if the Chromium was not initialized before by Xojo.
See also:

- 97.2.5 Constructor(path as string, PersistSessionCookies as Boolean) 14815

97.2.5 Constructor(path as string, PersistSessionCookies as Boolean)

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop only.

Function: The constructor for a new cookie manager.
Notes: Can raise exception if no cookie manager is available, e.g. when calling on Linux or Mac OS X or Windows if you don't have the dlls.
May not work if the Chromium was not initialized before by Xojo.
See also:

- 97.2.4 Constructor 14815

97.2.6 DeleteAllCookies as Integer

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Deletes all cookies.
Notes: Returns number of deleted cookies.

97.2.7 DeleteCookie(URL as string, CookieName as string) as boolean

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Delete all cookies that match the specified parameters.
Notes: If both url and values cookieName are specified all host and domain cookies matching both will be deleted. If only | url | is specified all host cookies (but not domain cookies) irrespective of path will be deleted. If url is empty all cookies for all hosts and domains will be deleted. Returns false if a non-empty invalid URL is specified or if cookies cannot be accessed.
Returns true on success.

97.2.8 DeleteCookies(URLs() as string, CookieNames() as string) as Integer

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Deletes several cookies.
Notes: Same as DeleteCookie, but with arrays for parameters.
Returns number of successful delete attempts.

97.2.9 DeleteURLCookies(URL as String, HTTPOnly as boolean = false) as Integer

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Deletes all cookies for a given URL.
Notes: The cookies to delete are filtered by the given url scheme, host, domain and path. If includeHttpOnly is true HTTP-only cookies will also be included in the deletion.
Returns number of cookies deleted.

97.2.10 Destructor

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

97.2.11 SetCookie(URL as string, cookie as ChromiumCookieMBS) as boolean

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Sets a cookie given a valid URL and explicit user-provided cookie attributes.
Example:

```
Var d as new date
Var c as new ChromiumCookieMBS

c.Domain = "www.mbsplugins.de"
c.Path = "/"
c.CreationDate = d
c.LastAccessDate = d
c.ExpirationDate = nil
c.Value = "test "+d.SQLDateTime
c.Name = "test"
c.Secure = false
c.HTTPonly = false
```

```
if CookieManager.SetCookie(c.URL, c) then
msgbox "OK"
else
MsgBox "Failed to add cookie"
end if
```

Notes: This function expects each attribute to be well-formed. It will check for disallowed characters (e.g. the ';' character is disallowed within the cookie value attribute) and will return false without setting the cookie if such characters are found.

97.2.12 SetCookies(URL() as string, cookies() as ChromiumCookieMBS) as Integer

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Sets a lot of cookies.
Notes: Same as SetCookie, but with arrays of URLs and cookie objects.
Returns number of cookies created successfully.

97.2.13 SetStoragePath(Path as string) as boolean

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Sets the directory path that will be used for storing cookie data.
Example:

```
Var CookieManager as ChromiumCookieManagerMBS // property of window/app

Var f as FolderItem = SpecialFolder.Desktop.Child("cookies")
f.CreateAsFolder

CookieManager = new ChromiumCookieManagerMBS

if CookieManager.SetStoragePath(f.NativePath) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: If path is empty data will be stored in memory only.
Returns false if cookies cannot be accessed.

97.2.14 URLCookies(URL as String, HTTPOnly as boolean = false) as ChromiumCookieMBS()

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Queries a subset of cookies.
Notes: The results are filtered by the given url scheme, host, domain and path. If includeHttpOnly is true HTTP-only cookies will also be included in the results. The returned cookies are ordered by longest path, then by earliest creation date. Returns empty array if cookies cannot be accessed.
Returns nil on any error like low memory.

97.2.15 Properties

97.2.16 Handle as Integer

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The internal object refernce.
Notes: (Read only property)

97.3 class ChromiumCookieMBS

97.3.1 class ChromiumCookieMBS

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The class for a cookie with WebKit on Windows.
Notes: Supports Xojo 2019r3 with MBS Plugin 20.1.
Blog Entries

97.3.2 Methods

97.3.3 Constructor

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The constructor.

97.3.4 Destructor

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

97.3.5 Properties

97.3.6 CreationDate as Date

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The cookie creation date.
Notes: This is automatically populated by the system on cookie creation.
(Read and Write property)

97.3.7 Domain as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The domain for this cookie.
Notes: If domain is empty a host cookie will be created instead of a domain cookie. Domain cookies are stored with a leading "." and are visible to sub-domains whereas host cookies are not.
(Read and Write property)

97.3.8 ExpirationDate as Date

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The cookie expiration date.
Notes: Can be nil to have no expiration date.
(Read and Write property)

97.3.9 HTTPonly as Boolean

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The HTTP only state.
Notes: If httponly is true the cookie will only be sent for HTTP requests.
(Read and Write property)

97.3.10 LastAccessDate as Date

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The cookie last access date.
Notes: This is automatically populated by the system on access.
(Read and Write property)

97.3.11 Name as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The cookie name.
Notes: (Read and Write property)

97.3.12 Path as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The path.
Notes: If path is non-empty only URLs at or below the path will get the cookie value.
(Read and Write property)

97.3.13 Scheme as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The scheme.
Notes: Depends on secure setting only.
Can be "http://" or "https://".
(Read only property)

97.3.14 Secure as Boolean

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: Whether this is a HTTPS only cookie.
Notes: If secure is true the cookie will only be sent for HTTPS requests.
(Read and Write property)

97.3.15 URL as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The URL of the cookie.
Notes: Build from Secure, Path and Domain.
(Read only property)

97.3.16 Value as String

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop only.

Function: The cookie value.
Notes: (Read and Write property)

97.4 class ChromiumFrameMBS

97.4.1 class ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The class for a webframe with WebKit on Windows.
Notes: Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- HTMLViewer JavaScript communication for Xojo
- HTMLViewer JavaScript communication for Xojo
- MBS Xojo Plugins, version 17.1pr4
- MBS Xojo / Real Studio plug-ins in version 14.2
- MBS Xojo / Real Studio Plugins, version 14.2pr7

97.4.2 Methods

97.4.3 Constructor

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

97.4.4 copy

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute copy in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.copy
```

97.4.5 cut

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute cut in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.cut
```

97.4.6 delete

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute delete in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.delete
```

97.4.7 Destructor

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The destructor.

97.4.8 ExecuteJavaScript(jsCode as string, scriptUrl as string = """, startLine as Integer = 0)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute a string of JavaScript code in this frame.
Example:

```
// go back to last page via javascript
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
m.ExecuteJavaScript "window.history.back();"
```

Notes: The scriptUrl parameter is the URL where the script in question can be found, if any. The renderer may request this URL to show the developer the source of the error. The startLine parameter is the base line number to use for error reporting.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

97.4.9 LoadString(StringValue as string, URL as string)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Load the contents of StringValue with the optional dummy target URL.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
m.LoadString "<p>Hello</p>", "blank:about"
```

Notes: Since this was deprecated in Chromium and removed in newer function, it won't work for Xojo 2021r3 or newer. Please use data URL there or load html file URL.

97.4.10 LoadURL(URL as string)

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Load the specified url.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
m.LoadURL "http://www.macrumors.com"
```

97.4.11 paste

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute paste in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.paste
```

97.4.12 print

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Execute printing in the this frame. The user will be prompted with the print dialog appropriate to the operating system.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.print
```

Notes: Only supported for Chromium 2.x, but not 3.x.

97.4.13 redo

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute redo in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.redo
```

97.4.14 SelectAll

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute select all in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
m.SelectAll
```

97.4.15 undo

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Execute undo in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.undo
```

97.4.16 ViewSource

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Save this frame's HTML source to a temporary file and open it in the default text viewing application.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
m.ViewSource
```

97.4.17 Properties

97.4.18 Browser as ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the browser that this frame belongs to.
Notes: (Read only property)

97.4.19 Handle as Integer

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.4.20 identifier as Int64

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the globally unique identifier for this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
MsgBox str(m.identifier)
```

Notes: (Read only property)

97.4.21 IsFocused as Boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if this is the focused frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
MsgBox str(m.IsFocused)
```

Notes: (Read only property)

97.4.22 IsMain as Boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns true if this is the main (top-level) frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
MsgBox str(m.IsMain)
```

Notes: (Read only property)

97.4.23 Name as String

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the name for this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var m as ChromiumFrameMBS = b.mainFrame
MsgBox m.Name
```

Notes: If the frame has an assigned name (for example, set via the iframe "name" attribute) then that value will be returned. Otherwise a unique name will be constructed based on the frame parent hierarchy. The main (top-level) frame will always have an empty name value.
(Read only property)

97.4.24 Parent as Variant

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: The owner htmlviewer.
Notes: Can reference a Window or DesktopWindow object.
(Read only property)

97.4.25 ParentFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the parent of this frame or nil if this is the main (top-level) frame.
Notes: (Read only property)

97.4.26 Source as String

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns this frame's HTML source as a string.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.MainFrame
Var s as string = f.Source
Break // view in debugger
```

Notes: (Read only property)

97.4.27 Text as String

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns this frame's display text as a string.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.MainFrame
Var s as string = f.Text
Break // view in debugger
```

Notes: (Read only property)

97.4.28 URL as String

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop only.

Function: Returns the URL currently loaded in this frame.
Example:

```
Var b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
Var f as ChromiumFrameMBS = b.MainFrame
Var s as string = f.URL
MsgBox s
```

Notes: (Read only property)

97.5 class ChromiumWebPluginInfoMBS

97.5.1 class ChromiumWebPluginInfoMBS

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The class for details on installed plugins.
Notes: Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 16.0pr6

97.5.2 Methods

97.5.3 Constructor

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

97.5.4 Destructor

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The destructor.

97.5.5 Plugins as ChromiumWebPluginInfoMBS()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: Queries list of plugins.
Notes: Those are the plugins Chromium found on the Windows PC.
e.g. 5 different versions of QuickTime Plugin.

97.5.6 Properties

97.5.7 Description as String

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: A description of the plugin from the version information.
Notes: (Read only property)

97.5.8 Name as String

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The plugin name (i.e. Flash).
Notes: (Read only property)

97.5.9 Path as String

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The plugin file path (DLL/bundle/library).
Notes: (Read only property)

97.5.10 Version as String

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop only.

Function: The version of the plugin (may be OS-specific).
Notes: (Read only property)

97.6 class IEDocumentMBS

97.6.1 class IEDocumentMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The class for the web document.
Notes: For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IHTMLDocument2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa752574(v=vs.8

Xojo Developer Magazine

- 19.2, page 10: News
- 18.3, page 53: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

97.6.2 Methods

97.6.3 CallFunction(FunctionName as string, paramArray params as variant) as variant

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Calls a JavaScript function.
Example:

```
Var doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

Var v as variant = doc.CallFunctiom("test", 2, 3)
```

Notes: Returns result as variant.
You can pass as many parameters as needed.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

FunctionName should be the name of a global function defined in JavaScript.
See also:

- 97.6.4 CallFunction(FunctionName as string, params() as variant) as variant 14833

97.6.4 CallFunction(FunctionName as string, params() as variant) as variant

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Calls a JavaScript function.
Example:

```
Var doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

Var Params() as Variant
Params.append 2
Params.append 3

Var v as variant = doc.CallFunctiom("test", Params)
```

Notes: Returns result as variant.
You can pass parameters for the function as array.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

FunctionName should be the name of a global function defined in JavaScript.
See also:

- 97.6.3 CallFunction(FunctionName as string, paramArray params as variant) as variant 14832

97.6.5 ClearBrowserSession as boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Ends browser session.
Notes: For HTMLViewer using Internet Explorer engine. If you close one by closing the window with HTMLViewer control, this method should end session and a new window would start fresh again.

Flushes entries not in use from the password cache on the hard disk drive. Also resets the cache time used when the synchronization mode is once-per-session.
This should clear current session cookies.

97.6.6 Constructor(DesktopHTMLViewer as DesktopHTMLViewer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Creates new web document object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.
See also:

- 97.6.7 Constructor(HTMLViewer as HTMLViewer) 14834

97.6.7 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Creates new web document object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.
See also:

- 97.6.6 Constructor(DesktopHTMLViewer as DesktopHTMLViewer) 14834

97.6.8 ContinueFindText(text as string, count as integer, flags as integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Continues a search started with IEFindTextMBS.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

// find first
```

```
Var found as boolean = d.FindText("Xojo", 0, 0, true)

msgbox "Found Xojo: "+str(found)

if found then
// find next
found = d.ContinueFindText("Xojo", 0, 0, true)
end if
```

Notes: Parameters are the same as for IEFindTextMBS.

97.6.9 DrawToHDC(HDC as Ptr, PrinterName as string = "")

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Draws the content of the html document into the graphics context.
Notes: As of Windows Internet Explorer 9, this method is deprecated and should not be used.
Returns true on success and false on failure.

With some printers, running DrawToDC may cause problems. You can ensure that DrawToDC works properly on all printers by running SetDocumentPrinter method first, and then passing the modified device context to DrawToDC. The plugin calls SetDocumentPrinter for you when you provide a printer name.

97.6.10 Evaluate(expression as string) as variant

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Evaluates a JavaScript expression.
Example:

```
Var doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

Var v as variant = doc.Evaluate("1+2")
Msgbox v
```

Notes: In contrast to IEWindowMBS.RunJavaScript this function returns the result on Windows, but needs IE 9 or newer.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

97.6.11 FindText(text as string, count as integer, flags as integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Finds text on the current website.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

// find first
Var found as boolean = d.FindText("Xojo", 0, 0, true)

msgbox "Found Xojo: "+str(found)

if found then
// find next
found = d.ContinueFindText("Xojo", 0, 0, true)
end if
```

Notes: text: the string that specifies the text to find.
count: long that specifies the number of characters to search from the starting point of the range. A positive integer indicates a forward search; a negative integer indicates a backward search.
Flags: integer that specifies one or more of the following flags to indicate the type of search:

0	Default. Match partial words.
1	Match backwards.
2	Match whole words only.
4	Match case.
131072	Match bytes.
536870912	Match diacritical marks.
1073741824	Match Kashida character.
2147483648	Match AlefHamza character.

Returns true: The search text was found.
Returns false: The search text was not found.

97.6.12 Frames as IEWindowMBS()

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Queries the collection of frames.
Example:

```
Var hdoc As IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var frames() As IEWindowMBS = hdoc.Frames

For Each frame As IEWindowMBS In frames
Var doc As IEDocumentMBS = frame.Document

Var URL As String = doc.URL
Var Name As String = doc.NameProp
Var HTMLText As String = doc.HTMLText

Break // read in debugger
Next
```

Notes: MBS Plugin will return the window objects for each frame as an array.

97.6.13 GetTextArea(FormName as String, FieldName as String) as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries text for a textarea.
Notes: FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns text from textarea.

97.6.14 HTMLText as string

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Returns a copy of the html source code of the current webpage.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var htmlText as string = d.HTMLText
Var PlainText as string = d.text
Var toString as string = d.ToString

Break // see in debug
```

Notes: Improved in plugin version 12.2 to return better HTML text. This is the html generated from current web content and not the page we originally loaded. So this works with Editable property.
Returns "" on any error.

97.6.15 Image as picture

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Copies the picture from the document.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var p as Picture = d.Image
canvas1.Backdrop = p
```

Notes: You may want to resize the htmlviewer to get a picture without scrollbars. (See example projects)
You may need to call ClearFocus as it seems like if the focus is on the htmlviewer it does not draw itself in our picture.

97.6.16 LoadHTML(HTMLText as string)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Loads the HTML text into the htmlviewer.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

d.LoadHTML "<p>Hello World</p>"
```

Notes: Does not use a temp file like Xojo's built in method.
Returns true on success.
On Windows you may need to reset webviewer before or load "about:blank" to initialize the webviewer by Xojo (or Xojo).

97.6.17 PrintPreview as boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Commands Internet Explorer to show the print preview dialog for this htmlviewer.
Notes: Returns true on success. Returns false if function is not supported.
The function returns directly while the preview dialog is still running.

97.6.18 Reload(Force as boolean = false)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
d.Reload
```

Notes: Boolean that specifies one of the following possible values:
False: Default. Reloads the document from the cache.
True: Reloads the document from the server.

97.6.19 SetTextArea(FormName as String, FieldName as String, Value as String) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets text for a textarea.
Notes: FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns true if text is set or false on failure.

97.6.20 Text as string

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Returns a copy of the text of the current webpage.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var htmlText as string = d.HTMLText
Var PlainText as string = d.text
Var toString as string = d.ToString

Break // see in debug
```

Notes: Asks Internet Explorer for a selection of the whole document and asks selection about the text content.
Returns "" on any error.

97.6.21 Properties

97.6.22 CharSet as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or retrieves the character set used to encode the object.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.CharSet
```

Notes: Example value: "utf-8"
(Read and Write property)

97.6.23 Cookie as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets the string value of a cookie.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Cookie
```

Notes: Example value: "s_vi= [CS] v1 | 427CA13500002D10-A000B5B00000001 [CE] ; s_cc=true; s_nr=1196708888562; s_sq=%5B%5BB%5D%5D"
(Read and Write property)

97.6.24 DefaultCharset as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the default character set from the current regional language settings.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.DefaultCharset
```

Notes: Example value: "windows-1252"
(Read and Write property)

97.6.25 Domain as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets the security domain of the document.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Domain
```

Notes: Example value: "www.apple.com"
(Read and Write property)

97.6.26 Editable as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Whether the htmlviewer is editable on Windows.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
d.Editable = true
```

Notes: (Read and Write property)

97.6.27 FileCreationDate as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the date the file was created.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.FileCreationDate
```

Notes: Example value: "09/13/2007"
(Read only property)

97.6.28 FileModifiedDate as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the date the file was last modified.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.FileModifiedDate
```

Notes: Example value: "12/03/2007"
(Read only property)

97.6.29 FileSize as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the file size.
Notes: Example value: "12475"
(Read only property)

97.6.30 FileUpdatedDate as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the date the file was last updated.
Notes: Example value: "01/01/1601"
(Read only property)

97.6.31 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.6.32 History as IEHistoryMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries history object for web document.
Notes: (Read only property)

97.6.33 LastModified as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the date that the page was last modified, if the page supplies one.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.LastModified
```

Notes: Example value: "12/03/2007 20:08:17"
(Read only property)

97.6.34 MimeType as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the MIME type for the file.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.MimeType
```

Notes: Example value: "HTM-Datei"
See also MimeTypeToFileExtensionMBS function.
(Read only property)

97.6.35 NameProp as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the title of the document file.
Notes: Example value: "Apple"
(Read only property)

97.6.36 Navigator as IENavigatorMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries navigator object for web document.
Notes: (Read only property)

97.6.37 ParentWindow as IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries parent window for this document.
Notes: (Read only property)

97.6.38 Protocol as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or retrieves the protocol portion of a URL.
Notes: Example value: "HTTP (HyperText Transfer-Protokoll)"
(Read only property)

97.6.39 ReadyState as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves a value that indicates the current state of the htmlviewer.
Notes: uninitialized: Object is not initialized with data.
loading: Object is loading its data.
loaded: Object has finished loading its data.
interactive: User can interact with the object even though it is not fully loaded.
complete: Object is completely initialized.

An object's state is initially set to uninitialized, and then to loading. When data loading is complete, the state of the link object passes through the loaded and interactive states to reach the complete state.

The states through which an object passes are determined by that object; an object can skip certain states (for example, interactive) if the state does not apply to that object.

Data source objects and databound elements are normally populated asynchronously, and certain programmatic operations can only be performed reliably on databound objects when they are ready for use. Therefore, the appropriate code should be written to confirm the readyState of objects prior to performing certain operations on them. For example, walking the rows of a table should not be attempted until after the table has reached the complete state.

The readyState property enables the status of an object to be tested. The correct place to test the readyState property is in the event handler for onreadystatechange. Similarly, a data source object (DSO) fires the ondatasetcomplete event to notify the document that the dataset is ready for programmatic operation.
(Read only property)

97.6.40 Referrer as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the URL of the location that referred the user to the current page.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Referrer
```

Notes: Example value: "http://www.apple.com/"
(Read only property)

97.6.41 ScrollHeight as integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries the height of the html viewer content.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

msgbox str(d.ScrollWidth)+" "+str(d.ScrollHeight)
```

Notes: Returns 0 on any error.
(Read only property)

97.6.42 ScrollWidth as integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries the width of the html viewer content.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

msgbox str(d.ScrollWidth)+" "+str(d.ScrollHeight)
```

Notes: Returns 0 on any error.
(Read only property)

97.6.43 Security as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the security state.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Security
```

Notes: Example value: "F√ºr diesen Dokumententyp gibt es kein Sicherheitszertifikat."
(Read only property)

97.6.44 Title as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets the title of the document.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Title
```

Notes: Example value: "Apple"
(Read and Write property)

97.6.45 ToString as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves a string representation of the object.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var htmlText as string = d.HTMLText
Var PlainText as string = d.text
Var toString as string = d.ToString

Break // see in debug
```

Notes: Example value: " [object] "
(Read only property)

97.6.46 URL as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets the URL for the current document.
Example:

```
Var d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.URL
```

Notes: Example value: "http://www.apple.com/"
(Read and Write property)

97.7 class IEExceptionMBS

97.7.1 class IEExceptionMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an error in one of the IE classes.
Notes: See errorNumber and message properties.
Subclass of the RuntimeException class.
Blog Entries

- Upgrading our HTMLViewer functions for Internet Explorer

97.8 class IEHistoryMBS

97.8.1 class IEHistoryMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The class for the web history.
Notes: For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IOmHistory interface:
https://docs.microsoft.com/en-us/previous-versions/aa703740(v=vs.85)

97.8.2 Methods

97.8.3 Back

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Loads a previous URL from the History list.

97.8.4 Constructor(DesktopHTMLViewer as DesktopHTMLViewer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the history for a HTMLViewer easily.
See also:

- 97.8.5 Constructor(HTMLViewer as HTMLViewer) 14849

97.8.5 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the history for a HTMLViewer easily.
See also:

- 97.8.4 Constructor(DesktopHTMLViewer as DesktopHTMLViewer) 14849

97.8.6 Forward

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Loads the next URL from the History list.

97.8.7 Go(index as Integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Loads a URL from the History list.
Notes: index: An integer indicates the relative position of a URL in the History list.

An error does not occur if the user tries to go beyond the beginning or end of the history. Instead, the user remains at the current page.

97.8.8 Properties

97.8.9 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.8.10 Length as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the number of elements in the History list.
Notes: Example value: 0
(Read only property)

97.9 class IENavigatorMBS

97.9.1 class IENavigatorMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The class for a navigator object.
Notes: For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IOmNavigator interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/hh774262(v=vs.8

97.9.2 Methods

97.9.3 Constructor(DesktopHTMLViewer as DesktopHTMLViewer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the navigator for a HTMLViewer easily.
See also:

- 97.9.4 Constructor(HTMLViewer as HTMLViewer) 14851

97.9.4 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the navigator for a HTMLViewer easily.
See also:

- 97.9.3 Constructor(DesktopHTMLViewer as DesktopHTMLViewer) 14851

97.9.5 Properties

97.9.6 AppCodeName as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the code name.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.AppCodeName
```

Notes: Returns "Mozilla". Returned by Internet Explorer and Netscape Navigator.
(Read only property)

97.9.7 AppMinorVersion as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the application's minor version value.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.AppMinorVersion
```

Notes: Example value: ";SP2;"
e.g. "0"
(Read only property)

97.9.8 AppName as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the name of the browser.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.AppName
```

Notes: Example value: "Microsoft Internet Explorer"
(Read only property)

97.9.9 AppVersion as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the platform and version of the browser.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.AppVersion
```

Notes: Example value: "4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"
(Read only property)

97.9.10 BrowserLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the current browser language.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.BrowserLanguage
```

Notes: Example value: "de"
(Read only property)

97.9.11 CookieEnabled as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves whether client-side persistent cookies are enabled in the browser.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator
```

```
if a.CookieEnabled then
msgbox "Cookie enabled"
else
msgbox "Cookie disabled"
end if
```

Notes: Persistent cookies are those that are stored on the client-side computer.
Example value: True
(Read only property)

97.9.12 CPUClass as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves a string denoting the CPU class.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.CPUClass
```

Notes: Returns "x86" for Intel processor.
(Read only property)

97.9.13 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.9.14 JavaEnabled as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Returns whether Java is enabled.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator
```

```
if a.JavaEnabled then
msgbox "Java enabled"
else
msgbox "Java disabled"
end if
```

Notes: Example value: True
(Read only property)

97.9.15 OnLine as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves a value indicating whether the system is in global offline mode.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.OnLine
```

Notes: The user can modify the global offline state by choosing Work Offline from the File menu in Microsoft Internet Explorer version 4.0 or later. This property does not indicate whether the system is connected to the network.

Example value: True
(Read only property)

97.9.16 Platform as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the name of the user's operating system.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.Platform
```

Notes: Returns "Win64" for Windows 64-bit platform.
Returns "Win32" for Windows 32-bit platform.
(Read only property)

97.9.17 SystemLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the default language used by the operating system.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.SystemLanguage

msgbox a.AppCodeName
```

Notes: The systemLanguage property reflects the language edition of the installed operating system.
e.g. de-DE
(Read only property)

97.9.18 UserAgent as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves a string equivalent to the HTTP user-agent request header.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.UserAgent
```

Notes: The HTTP user-agent request header contains information about compatibility, the browser, and the platform name. For more information about the browser, see the IENavigatorappNameMBS property. For more information about the platform, see the IENavigatorappVersionMBS property.

The IENavigatoruserAgentMBS property dynamically returns a different value depending on the browser and platform versions. For example, Microsoft Internet Explorer 6 returns the following string for Microsoft Windows XP.

Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)

Example value: "Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

Like other plugin function, this can only work if a page has been loaded. Xojo won't create the internal htmlviewer object before you load a page.
(Read only property)

97.9.19 UserLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the operating system's natural language setting.
Example:

```
Var w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
Var a as IENavigatorMBS = w.Navigator

msgbox a.AppCodeName
```

Notes: Example value: "de-DE"
(Read only property)

97.10 class IEWebBrowserMBS

97.10.1 class IEWebBrowserMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The class for a web browser.
Notes: For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IWebBrowser2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa752127(v=vs.8

97.10.2 Methods

97.10.3 Constructor(DesktopHTMLViewer as DesktopHTMLViewer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the browser for a HTMLViewer easily.
See also:

- 97.10.4 Constructor(HTMLViewer as HTMLViewer) 14859

97.10.4 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Constructor to get the browser for a HTMLViewer easily.
See also:

- 97.10.3 Constructor(DesktopHTMLViewer as DesktopHTMLViewer) 14858

97.10.5 GetInternetExplorerHiDPI as Integer

MBS Win Plugin, Plugin Version: 20.2, Platform: Windows, Targets: Desktop only.

Function: Query whether HiDPI handling is enabled.
Notes: We can opt-in for your application to let HTMLviewer use proper resolution handling for web content.

97.10.6 GetInternetExplorerVersion as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries IE version used for this application.
Notes: Queries the Internet Explorer version to use for HTMLViewer.

97.10.7 GoBack

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Navigates backward one item in the history list.

97.10.8 GoForward

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Navigates forward one item in the history list.

97.10.9 GoHome

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Navigates to the current home or start page.
Notes: The user can indicate the URL to use for the home page from the Internet Options dialog box, which is accessible from the Tools menu of Windows Internet Explorer, or in the Control Panel.
Internet Explorer 7 and later. This method navigates to the first URL in the home tabs group.

97.10.10 GoSearch

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Navigates to the current search page.
Notes: The user can indicate the URL to use for the search page with the Internet Options dialog box, which is accessible from the Tools menu of Windows Internet Explorer, or in the Control Panel.
Internet Explorer 7 and later. GoSearch navigates to the default search provider. For more information, see Windows Search Guide.

97.10.11 Navigate(URL as string, Flags as Integer = 0, TargetFrameName as String = "", PostData as String = "", Headers as String = "")

MBS Win Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Navigates to a resource identified by a URL or to a file identified by a full path.
Notes: URL: The URL, full path, or Universal Naming Convention (UNC) location and name of the resource to display.
Flags: The combination of Navigate* constants.
TargetFrameName: Optional, the name of the frame in which to display the resource.
PostData: The post data that is sent to the server as part of a HTTP POST transaction. A POST transaction is typically used to send data gathered by an HTML form. If this parameter does not specify any post data, this method issues an HTTP GET transaction. This parameter is ignored if the URL is not an HTTP URL.
Headers: The text list that contains additional HTTP headers to send to the server. These headers are added to the default headers. For example, headers can specify the action required of the server, the type of data being passed to the server, or a status code. This parameter is ignored if the URL is not an HTTP URL.

The possible values for the TargetFrameName parameter are:

97.10.12 Refresh

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

_blank	Load the link into a new unnamed window.
_parent	Load the link into the immediate parent of the document the link is in.
_self	Load the link into the same window the link was clicked in.
_top	Load the link into the full body of the current window.
WindowName	A named HTML frame. If no frame or window exists that matches the specified target name, a new window is opened for the specified link.

Function: Reloads the file that is currently displayed in the object.
Notes: This method is the same as clicking the Refresh button or pressing F5 in Windows Internet Explorer. To save time and network bandwidth, the WebBrowser control and InternetExplorer application store pages from recently visited sites in cached memory on the user's hard disk. When you revisit a Web site, the page is reloaded from the local disk instead of being downloaded again from the server. To ensure that you are viewing the most current version of the page, you can force a fresh download by using the Refresh method. This method adds the "Pragma: No-cache" HTTP header to the request.
See also:

- 97.10.13 Refresh(Level as Integer) 14861

97.10.13 Refresh(Level as Integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Reloads the file that is currently displayed with the specified refresh level.
See also:

- 97.10.12 Refresh 14860

97.10.14 SetInternetExplorerHiDPI(Enable as Boolean) as Boolean

MBS Win Plugin, Plugin Version: 20.2, Platform: Windows, Targets: Desktop only.

Function: Sets whether HiDPI handling is enabled.
Notes: We can opt-in for your application to let HTMLviewer use proper resolution handling for web content.
You may just call this in your app.open event.

97.10.15 SetInternetExplorerVersion(version as Integer) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets IE version used for this application.
Example:

```
// make sure we don't end up with Internet Explorer in version 7, which is default.
Var v As Integer = IEWebBrowserMBS.GetInternetExplorerVersion

If v <11000 Then // below version 11.0

Var b As Boolean = IEWebBrowserMBS.SetInternetExplorerVersion(11000)
If b Then
MsgBox "Requested Internet Explorer version 11.0."
Else
MsgBox "Failed to set IE version?"
End If
End If
```

Notes: By default Xojo uses IE7 for the HTMLViewer, even if you have version 11 enabled.

In a test on Windows 10, we get by default this browser version:

Mozilla/4.0 (compatible; MSIE 7.0; Windows NT 6.2; Win64; x64; Trident/7.0; .NET4.0C; .NET4.0E; Tablet PC 2.0; .NET CLR 2.0.50727; .NET CLR 3.0.30729; .NET CLR 3.5.30729)

and with setting it to 11000, we get this:

Mozilla/5.0 (Windows NT 6.2; Win64; x64; Trident/7.0; rv:11.0) like Gecko

97.10.16 ShowDebugBar(NoScale as Boolean = false, x as Integer = 0, y as Integer = 0, width as Integer = 0, Height as Integer = 0, TopMost as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: Shows the DebugBar for the web viewer on Windows.
Notes: With DebugBar you can inspect HTML elements, see scripts and modify elements on the fly. There is a JavaScript console to quickly edit something if needed.

Please download and install DebugBar extension for Internet Explorer:
https://www.debugbar.com

You may need to buy a license for it to use all features.

Known issues:

- The toolbar has a gear button, where you can pick locations. Choosing a location there may crash the application.
- If application runs on a screen with >100% scaling, the picker may not work correctly unless you pass 1 for Flags parameter, but then icons may be smaller.
- HTTPs tab shows no data.
- You may need to click reload in the DebugBar (orange arrow in toolbar) when switching to another page.
- Running JavaScript works, but doesn't show errors or results.
- The inspect element in context menu command does not work.

Returns true on success or false on failure.

NoScale: disable scaling on >100% screen.
TopMost: Put the window always on top of other windows.
X, Y, width and height allow to position the window. Default is near center of screen with 600x400 in size.

97.10.17 Stop

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Stops loading.
Notes: Returns true on success and false on failure.

97.10.18 Zoom(factor as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Zooms the web content.
Notes: Factor can be 50 for 50%.
Returns true on success.

97.10.19 Properties

97.10.20 AddressBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the address bar of the object is visible or hidden.
Notes: (Read and Write property)

97.10.21 Busy as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets a value that indicates whether the object is engaged in a navigation or downloading operation.
Notes: If the control is busy, you can use the Stop method to cancel the navigation or download operation before it is completed.
(Read only property)

97.10.22 FullName as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the fully qualified path of the Windows Internet Explorer executable.
Notes: Internet Explorer 8 and later. Always returns an empty string.
This method also updates the window list.
(Read only property)

97.10.23 FullScreen as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether Windows Internet Explorer is in full-screen mode or normal window mode.
Notes: True: Internet Explorer is in full-screen mode.
False: Default. Internet Explorer is in normal window mode.

In full-screen mode, the Internet Explorer main window is maximized, and the status bar, toolbar, menu bar, and title bar are hidden.
Setting FullScreen (even to false) resets the values of the AddressBar and ToolBar properties to true. Disable the address bar and toolbars after you set the FullScreen property.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

97.10.24 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.10.25 LocationName as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the path or title of the resource that is currently displayed.
Notes: If the resource is an HTML webpage, the name is the title of the document. If the resource is a folder or file on the network or local computer, the name is the full file system path of the folder or file in Universal Naming Convention (UNC) format.
If this method is called before the first navigation is complete, InternetExplorer returns an empty string.
(Read only property)

97.10.26 LocationURL as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the URL of the resource that is currently displayed.
Example:

```
Var w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
msgbox w.LocationURL
```

Notes: If the resource is a folder or file on the network or local computer, the name is the full path of the folder or file in the Universal Naming Convention (UNC) format.
If this method is called before the first navigation is complete, InternetExplorer returns an empty string.
(Read only property)

97.10.27 MenuBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the Windows Internet Explorer menu bar is visible.
Notes: True: Default. Menu bar is visible.
False: Menu bar is hidden.
(Read and Write property)

97.10.28 Name as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The frame name or application name of the object.
Example:

```
Var w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
```

msgbox w.Name

Notes: (Read only property)

97.10.29 Offline as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the object is operating in offline mode.
Notes: In offline mode, the browser is forced to read HTML pages from the local cache instead of reading from the source document online.
The WebBrowser object delegates this method to the top-level frame. If no frame exists, it returns false.
(Read and Write property)

97.10.30 ReadyState as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the ready state of the object.
Notes: (Read only property)

97.10.31 RegisterAsBrowser as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the object is registered as a top-level browser window.
Notes: The architecture of Windows Internet Explorer allows for multiple instances of the IWebBrowser2 object. A "top-level" IWebBrowser2 object is the parent of all other IWebBrowser2 objects. Only top-level objects can register as a browser with this method.
By setting this property to True, Internet Explorer and Windows can locate other top-level IWebBrowser2 objects that can participate in frame name resolution. For example, if the user clicks on a hyperlink that specifies a target attribute that is not in the current window, Internet Explorer searches all registered IWebBrowser2 objects in an attempt to resolve the target name.
After the window is registered as a top-level browser, it cannot be unregistered.
(Read and Write property)

97.10.32 RegisterAsDropTarget as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the object is registered as a drop target for navigation.
Notes: A drop target is an object that has been registered to accept data from a drag-and-drop operation. The WebBrowser object delegates this method to the top-level frame. If no frame exists, it raises exception.
(Read and Write property)

97.10.33 Silent as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the object can display dialog boxes.
Notes: False: Default. Dialog boxes and messages can be displayed. Critical errors and security alerts are not suppressed.
True: Dialog boxes are not displayed.

The WebBrowser object delegates this method to the top-level frame. If no frame exists, it raises exception.
(Read and Write property)

97.10.34 StatusBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets a value that indicates whether the status bar for the object is visible.
Notes: The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

97.10.35 StatusText as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets the text in the status bar for the object.
Example:

```
Var w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
msgbox w.StatusText
```

Notes: Windows Internet Explorer 7 and later. The security settings that restrict access to the status bar from script do not apply to this method.
(Read and Write property)

97.10.36 TheaterMode as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets whether the object is in theater mode.
Notes: True: Object is in theater mode.
False: Default. Object is in normal mode.

In theater mode, the object's main window fills the entire screen and displays a toolbar that has a minimal set of navigational buttons. A status bar is also provided in the upper-right corner of the screen. Explorer bars, such as History and Favorites , are displayed as an autohide pane on the left edge of the screen in theater mode.

Setting TheaterMode (even to false) resets the values of the AddressBar and ToolBar properties to true. Disable the address bar and toolbars after you set the TheaterMode property.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

97.10.37 ToolBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or gets whether toolbars for the object are visible.
Notes: False: Toolbar is hidden.
True: Default. Toolbar is visible.

When the ToolBar property is set to falsde, it is not equivalent to the "toolbar=no" feature of window.open. Instead, it turns off all user interface elements that can be considered toolbars, leaving Windows Internet Explorer in a blank state.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

97.10.38 Type as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Gets the user type name of the contained document object.
Notes: For example, this method returns "HTML Document" if the document supports the IHTMLDocument2 interface.

The WebBrowser object delegates this method to the top-level frame. If no frame exists, it returns empty text.

(Read only property)

97.10.39 Constants

Constants

Constant	Value	Description
RefreshIfExpired	1	One of the Refresh levels. Not currently implemented.
RefreshNormal	0	One of the Refresh levels. Refresh without sending a "Pragma:no-cache" HTTP header to the server.

Navigation Flags

Constant	Value	Description
NavigateAllowAutosearch	&h10	If the navigation fails, the autosearch functionality attempts to navigate c mon root domains (.com, .edu, and so on). If this also fails, the URL is pa to a search engine.
NavigateBlockRedirectsXDomain	&h8000	Internet Explorer 8. Block cross-domain redirect requests.
NavigateBrowserBar	&h20	Causes the current Explorer Bar to navigate to the given item, if possible
NavigateEnforceRestricted	&h80	Internet Explorer 6 for Windows XP SP2 and later. Force the URL into restricted zone.
NavigateHyperlink	&h40	Internet Explorer 6 for Windows XP SP2 and later. If the navigation fails w a hyperlink is being followed, this constant specifies that the resource sh then be bound to the moniker using the BINDF_HYPERLINK flag.
NavigateKeepWordWheelText	&h2000	Internet Explorer 7. Maintain state for dynamic navigation based on the f string entered in the search band text box (wordwheel). Restore the wordw text when the navigation completes.
NavigateNewWindowsManaged	&h100	Internet Explorer 6 for Windows XP SP2 and later. Use the default Po Manager to block pop-up windows.
NavigateNoHistory	2	Do not add the resource or file to the history list. The new page replaces current page in the list.
NavigateNoReadFromCache	4	Not implemented.
NavigateNoWriteToCache	8	Not implemented.
NavigateOpenInBackgroundTab	&h1000	Internet Explorer 7. Open the resource or file in a new background tab; currently active window and/or tab remains open on top.
NavigateOpenInNewTab	&h800	Internet Explorer 7. Open the resource or file in a new tab. Allow the d nation window to come to the foreground, if necessary.
NavigateOpenNewForegroundTab	&h10000	Internet Explorer 8 and later. Open the resource in a new tab that beco the foreground tab.
NavigateTrustedForActiveX	&h400	Internet Explorer 6 for Windows XP SP2 and later. Prompt for the installa of ActiveX controls.
NavigateUntrustedForDownload	&h200	Internet Explorer 6 for Windows XP SP2 and later. Block files that norm trigger a file download dialog box.
NavigateVirtualTab	&h4000	Internet Explorer 8. Open the resource as a replacement for the curren target tab. The existing tab is closed while the new tab takes its place in the bar and replaces it in the tab group, if any. Browser history is copied forw to the new tab. On Windows Vista, this flag is implied if the navigation w cross integrity levels and navOpenInNewTab, navOpenInBackgroundTab navOpenInNewWindow is not specified.

Ready States

Constant	Value	Description
ReadyStateComplete	4	Object has received all of its data.
ReadyStateInteractive	3	Object is interactive, but not all of its data is available.
ReadyStateLoaded	2	Object has been initialized.
ReadyStateLoading	1	Object is currently loading its properties.
ReadyStateUninitialized	0	Default initialization state.

Refresh Levels

Constant	Value	Description
RefreshCompletely	2	Refresh without forced cache validation by sending a "Pragma:no-cache" header to the server (HTTP URLs only). Same as pressing Ctrl+F5 in Microsoft Internet Explorer.

Value	Description
11001	Internet Explorer 11. Webpages are displayed in IE11 edge mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
11000	IE11. Webpages containing standards-based !DOCTYPE directives are displayed in IE11 edge mode. Default value for IE11.
10001	Internet Explorer 10. Webpages are displayed in IE10 Standards mode, regardless of the !DOCTYPE directive.
10000	Internet Explorer 10. Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode. Default value for Internet Explorer 10.
9999	Windows Internet Explorer 9. Webpages are displayed in IE9 Standards mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
9000	Internet Explorer 9. Webpages containing standards-based !DOCTYPE directives are displayed in IE9 mode. Default value for Internet Explorer 9. In Internet Explorer 10, Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode.
8888	Webpages are displayed in IE8 Standards mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
8000	Webpages containing standards-based !DOCTYPE directives are displayed in IE8 mode. Default value for Internet Explorer 8. In Internet Explorer 10, Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode.
7000	Webpages containing standards-based !DOCTYPE directives are displayed in IE7 Standards mode. Default value for applications hosting the WebBrowser Control.

97.11 class IEWindowMBS

97.11.1 class IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The class for a web window.
Notes: For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IHTMLWindow2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa741505(v=vs.8

Let us know if you miss something.

Xojo Developer Magazine

- 19.2, page 10: News
- 18.3, page 53: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

97.11.2 Methods

97.11.3 Alert(Message as string)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box containing an application-defined message.
Example:

```
Var w as IEWindowMBS = HTMLViewer1.IEWindowMBS
w.Alert("Hello Alert!")
```

97.11.4 Blur

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Causes the element to lose focus and fires the onblur event.

97.11.5 Confirm(Message as string) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Displays a confirmation dialog box that contains an optional message as well as OK and Cancel buttons.
Example:

```
Var w as IEWindowMBS = HTMLViewer1.IEWindowMBS

Var b as Boolean = w.Confirm("Like Xojo?")
Break
```

Notes: Message: that specifies the message to display in the confirmation dialog box.
If no value is provided, the dialog box does not contain a message.

The title bar of the confirmation dialog box cannot be changed.

97.11.6 Constructor(DesktopHTMLViewer as DesktopHTMLViewer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Creates new web window object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.
See also:

- 97.11.7 Constructor(HTMLViewer as HTMLViewer) 14874

97.11.7 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Creates new web window object for this HTMLViewer.
Notes: For browser based on Internet Explorer on Windows.
Raises exception on failure.
See also:

• 97.11.6 Constructor(DesktopHTMLViewer as DesktopHTMLViewer) 14874

97.11.8 ExecScript(Code as string, language as String)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Executes the specified script in the provided language.
Example:

```
Var w as IEWindowMBS = HTMLViewer1.IEWindowMBS

w.ExecScript("alert('Hello');", "JavaScript")
```

Notes: code: specifies the code to be executed.
language: specifies the language in which the code is executed. The language defaults to JScript.

Script executed through the execScript method can access all global variables available to the calling script. This can be useful when you want the functionality of another scripting language that would not otherwise be available in JScript, such as the Microsoft Visual Basic Scripting Edition (VBScript) MsgBox function.

97.11.9 Frames as IEWindowMBS()

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Queries the collection of frames.
Example:

```
Var win As IEWindowMBS = HTMLViewer1.IEWindowMBS
Var frames() As IEWindowMBS = win.Frames

For Each frame As IEWindowMBS In frames
Var doc As IEDocumentMBS = frame.Document

Var URL As String = doc.URL
Var Name As String = doc.NameProp
Var HTMLText As String = doc.HTMLText

Break // read in debugger
Next
```

Notes: MBS Plugin will return the window objects for each frame as an array.

97.11.10 MoveBy(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Moves the screen position of the window by the specified x and y offset values.
Notes: x: long that specifies the horizontal scroll offset in pixels. The value can be either positive or negative.
y: long that specifies the vertical scroll offset in pixels. The value can be either positive or negative.

97.11.11 MoveTo(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Moves the screen position of the upper-left corner of the window to the specified x and y position.
Notes: x: long that specifies the horizontal scroll offset in pixels. The value can be either positive or negative.
y: long that specifies the vertical scroll offset in pixels. The value can be either positive or negative.

97.11.12 Navigate(URL as string)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Loads the specified URL to the current window.
Notes: URL: that specifies the URL to display.

97.11.13 Print

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Opens the normal print dialog for the Internet Explorer.
Notes: Raises exception on failure.

97.11.14 RunJavaScript(JavaScript as string)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Executes the specified script in the provided language.
Example:

```
Var w as IEWindowMBS = HTMLViewer1.IEWindowMBS
```

w.RunJavaScript("alert('Hello');")

Notes: Same as ExecScript with language JavaScript.
Raises exception on failure.

The IE API does not allow to return values from Javascript. So you need to store your result in window.title and access it later using IETitleMBS.

IERunJavaScriptMBS fails if the htmlviewer is empty. You can load a dummy page like above.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

See IEDocumentMBS.Evaluate for newer version which can return result.

97.11.15 Scroll(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Causes the window to scroll to the specified x- and y-offset at the upper-left corner of the window.
Notes: x: long that specifies the horizontal scroll offset, in pixels.
y: long that specifies the vertical scroll offset, in pixels.

This method is provided for backward compatibility only. The recommended way to scroll a window is to use the scrollTo method.

97.11.16 ScrollBy(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Causes the window to scroll relative to the current scrolled position by the specified x- and y-pixel offset.
Example:

```
Var w as IEWindowMBS = HTMLViewer1.IEWindowMBS

w.ScrollBy 0, 1000
```

Notes: x: long that specifies the horizontal scroll offset, in pixels. Positive values scroll the window right, and negative values scroll it left.
y: long that specifies the vertical scroll offset, in pixels. Positive values scroll the window down, and negative

values scroll it up.

97.11.17 ScrollTo(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Scrolls the window to the specified x- and y-offset.
Notes: x: long that specifies the horizontal scroll offset, in pixels.
y: long that specifies the vertical scroll offset, in pixels.

97.11.18 Properties

97.11.19 DefaultStatus as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or retrieves the default message displayed in the status bar at the bottom of the window.
Notes: (Read and Write property)

97.11.20 Document as IEDocumentMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Queries the document for this window.
Notes: May be nil if no document is loaded yet.
(Read only property)

97.11.21 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read only property)

97.11.22 Name as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or retrieves a value that indicates the window name.
Notes: (Read and Write property)

97.11.23 Status as String

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Sets or retrieves the message in the status bar at the bottom of the window.
Notes: (Read and Write property)

97.12 Globals

97.12.1 IEClearBrowserSessionMBS as boolean

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Ends browser session.
Notes: For HTMLViewer using Internet Explorer engine. If you close one by closing the window with HTMLViewer control, this method should end session and a new window would start fresh again.

Flushes entries not in use from the password cache on the hard disk drive. Also resets the cache time used when the synchronization mode is once-per-session.
This should clear current session cookies.

Chapter 98

iCloud

98.1 class NSComparisonPredicateMBS

98.1.1 class NSComparisonPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: NSComparisonPredicateMBS is a subclass of NSPredicateMBS that you use to compare expressions.
Example:

```
Var n1 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(4)
Var n2 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(9)

Var modifier as Integer = NSComparisonPredicateMBS.NSDirectPredicateModifier
Var type as Integer = NSComparisonPredicateMBS.NSGreaterThanPredicateOperatorType
Var options as Integer = 0

Var c as new NSComparisonPredicateMBS(n1, n2, Modifier, type, options)

MsgBox c.predicateFormat
```

Notes: You use comparison predicates to compare the results of two expressions. You create a comparison predicate with an operator, a left expression, and a right expression. You represent the expressions using instances of the NSExpressionMBS class. When you evaluate the predicate, it returns as a BOOL value the result of invoking the operator with the results of evaluating the expressions.
Subclass of the NSPredicateMBS class.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr10

98.1.2 Methods

98.1.3 comparisonPredicateModifier as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the comparison predicate modifier for the receiver.
Notes: Available in Mac OS X v10.4 and later.
The default value is NSDirectPredicateModifier.

98.1.4 Constructor(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS, modifier as UInt32, type as UInt32, options as UInt32)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes a predicate to a given type formed by combining given left and right expressions using a given modifier and options.
Example:

```
Var n1 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(4)
Var n2 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(9)

Var modifier as Integer = NSComparisonPredicateMBS.NSDirectPredicateModifier
Var type as Integer = NSComparisonPredicateMBS.NSGreaterThanPredicateOperatorType
Var options as Integer = 0

Var c as new NSComparisonPredicateMBS(n1, n2, Modifier, type, options)

MsgBox c.predicateFormat
```

Notes: LeftExpression: The left hand expression.
rightExpression: The right hand expression.
modifier: The modifier to apply.
type: The predicate operator type.
options: The options to apply (see constants). For no options, pass 0.

The receiver, initialized to a predicate of type type formed by combining the left and right expressions using the modifier and options.
Available in Mac OS X v10.4 and later.

98.1.5 leftExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the left expression for the receiver, or nil if there is none.

98.1.6 options as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the options that are set for the receiver.

98.1.7 predicate(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS, modifier as UInt32, type as UInt32, options as UInt32) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a predicate of a given type formed by combining given left and right expressions using a given modifier and options.
Notes: LeftExpression: The left hand expression.
rightExpression: The right hand expression.
modifier: The modifier to apply.
type: The predicate operator type.
options: The options to apply (see "NSComparisonPredicate Options"). For no options, pass 0.

Returns a new predicate of type type formed by combining the given left and right expressions using the modifier and options.
Available in Mac OS X v10.4 and later.

98.1.8 predicateOperatorType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the predicate type for the receiver.

98.1.9 rightExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the right expression for the receiver, or nil if there is none.

98.1.10 Constants

Modifier Type Constants

Constant	Value	Description
NSAllPredicateModifier	1	A predicate to compare all entries in the destination of a to-many relationship. The left hand side must be a collection. The corresponding predicate compares each value in the left hand side with the right hand side, and returns false when it finds the first mismatch—¬Ä¬îor true if all match. Available in Mac OS X v10.4 and later.
NSAnyPredicateModifier	2	A predicate to match with any entry in the destination of a to-many relationship. The left hand side must be a collection. The corresponding predicate compares each value in the left hand side against the right hand side and returns true when it finds the first match—or false if no match is found Available in Mac OS X v10.4 and later.
NSDirectPredicateModifier	0	A predicate to compare directly the left and right hand sides. Available in Mac OS X v10.4 and later.

Comparison Type Constants

Constant	Value	Description
NSBeginsWithPredicateOperatorType	8	A begins-with predicate. Available in Mac OS X v10.4 and later.
NSBetweenPredicateOperatorType	100	A predicate to determine if the right hand side lies at or specified by the left hand side. Returns true if [lhs between rhs] ; the right hand side mu which the first element sets the lower bound and the second e inclusive. Comparison is performed using compare: or the equivalent. Available in Mac OS X v10.5 and later.
NSContainsPredicateOperatorType	99	A predicate to determine if the left hand side contains the r Returns true if [lhs contains rhs] ; the left hand side must be object that evaluates to a collection Available in Mac OS X v10.5 and later.
NSCustomSelectorPredicateOperatorType	11	A predicate that uses a custom selector that takes a single arg a BOOL value. The selector is invoked on the left hand side with the right argument. Available in Mac OS X v10.4 and later.
NSEndsWithPredicateOperatorType	9	An ends-with predicate. Available in Mac OS X v10.4 and later.
NSEqualToPredicateOperatorType	4	An equal-to predicate. Available in Mac OS X v10.4 and later.
NSGreaterThanOrEqualToPredicateOperatorType	3	A greater-than-or-equal-to predicate. Available in Mac OS X v10.4 and later.
NSGreaterThanPredicateOperatorType	2	A greater-than predicate. Available in Mac OS X v10.4 and later.
NSInPredicateOperatorType	10	A predicate to determine if the left hand side is in the right For strings, returns true if the left hand side is a substring side . For collections, returns true if the left hand side is in t . Available in Mac OS X v10.4 and later.
NSLessThanOrEqualToPredicateOperatorType	1	A less-than-or-equal-to predicate. Available in Mac OS X v10.4 and later.
NSLessThanPredicateOperatorType	0	A less-than predicate. Available in Mac OS X v10.4 and later.
NSLikePredicateOperatorType	7	A simple subset of the MATCHES predicate, similar in behav Available in Mac OS X v10.4 and later.
NSMatchesPredicateOperatorType	6	A full regular expression matching predicate. Available in Mac OS X v10.4 and later.
NSNotEqualToPredicateOperatorType	5	A not-equal-to predicate. Available in Mac OS X v10.4 and later.

String Comparison Types

Constant	Value	Description
NSCaseInsensitivePredicateOption	1	A case-insensitive predicate. You represent this option in a predicate format string using a [c] follov string operation (for example, "NeXT" like [c] "next"). Available in Mac OS X v10.4 and later. These options are supported for LIKE as well as all of the equality/comp operators.
NSDiacriticInsensitivePredicateOption	2	A diacritic-insensitive predicate. You represent this option in a predicate format string using a [d] follov string operation (for example, "na√Øve" like [d] "naive"). Available in Mac OS X v10.4 and later. These options are supported for LIKE as well as all of the equality/comp operators.
NSNormalizedPredicateOption	4	Indicates that the strings to be compared have been preprocessed. This option supersedes NSCaseInsensitivePredicateOption and NSDiacr sensitivePredicateOption, and is intended as a performance optimizatio tion. You represent this option in a predicate format string using a [n] follov string operation (for example, "WXYZlan" matches [n] ".lan"). Available in Mac OS X v10.7 and later. These options are supported for LIKE as well as all of the equality/comp operators.

98.2 class NSCompoundPredicateMBS

98.2.1 class NSCompoundPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: NSCompoundPredicate is a subclass of NSPredicate used to represent logical "gate" operations (AND/OR/NOT) and comparison operations.
Example:

```
Var n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
Var n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

Var n as NSPredicateMBS = NSCompoundPredicateMBS.orPredicateWithSubpredicates(array(n1,n2))
MsgBox n.predicateFormat
```

Notes: Comparison operations are based on two expressions, as represented by instances of the NSExpression class. Expressions are created for constant values, key paths, and so on.

In Mac OS X v10.5 and later and in iOS, you can use NSCompoundPredicate to create an AND or OR compound predicate (but not a NOT compound predicate) using an array with 0, 1, or more elements:

- An AND predicate with no subpredicates evaluates to TRUE.
- An OR predicate with no subpredicates evaluates to FALSE.
- A compound predicate with one or more subpredicates evaluates to the truth of its subpredicates.

Subclass of the NSPredicateMBS class.
Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

98.2.2 Methods

98.2.3 andPredicateWithSubpredicates(predicates() as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new predicate formed by AND-ing the predicates in a given array.
Example:

```
Var n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
Var n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

Var n as NSPredicateMBS = NSCompoundPredicateMBS.andPredicateWithSubpredicates(array(n1,n2))

MsgBox n.predicateFormat
```

Notes: subpredicates: An array of NSPredicate objects.

Returns a new predicate formed by AND-ing the predicates specified by subpredicates.
An AND predicate with no subpredicates evaluates to TRUE.

98.2.4 compoundPredicateType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the predicate type for the receiver.

98.2.5 Constructor(type as Integer, predicates() as NSPredicateMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the receiver initialized to a given type using predicates from a given array.
Example:

```
Var n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
Var n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

Var n as NSPredicateMBS = new NSCompoundPredicateMBS(NSCompoundPredicateMBS.kAnd, array(n1,n2))
MsgBox n.predicateFormat
```

Notes: type: The type of the new predicate.
subpredicates: An array of NSPredicate objects.

98.2.6 notPredicateWithSubpredicate(predicate as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new predicate formed by NOT-ing a given predicate.
Notes: predicate: A predicate.

Returns a new predicate formed by NOT-ing the predicate specified by predicate.

98.2.7 orPredicateWithSubpredicates(predicates() as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new predicate formed by OR-ing the predicates in a given array.
Notes: subpredicates: An array of NSPredicate objects.

Returns a new predicate formed by OR-ing the predicates specified by subpredicates.

An OR predicate with no subpredicates evaluates to FALSE.

98.2.8 subpredicates as NSPredicateMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the array of the receiver's subpredicates.
Example:

```
Var n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
Var n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

Var n as new NSCompoundPredicateMBS(NSCompoundPredicateMBS.kAnd, array(n1,n2))

for each x as NSPredicateMBS in n.subpredicates
MsgBox x.predicateFormat
next
```

98.2.9 Constants

Compound Predicate Types

Constant	Value	Description
kAnd	1	A logical AND predicate.
kNot	0	A logical NOT predicate.
kOR	2	A logical OR predicate.

98.3 class NSExpressionMBS

98.3.1 class NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: NSExpression is used to represent expressions in a predicate.
Notes: Comparison operations in an NSPredicate are based on two expressions, as represented by instances of the NSExpression class. Expressions are created for constant values, key paths, and so on.

Generally, anywhere in the NSExpression class hierarchy where there is composite API and subtypes that may only reasonably respond to a subset of that API, invoking a method that does not make sense for that subtype will cause an exception to be thrown.

See NSException class documentation on apple.com.
Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

98.3.2 Methods

98.3.3 arguments as Variant()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the arguments for the receiver.
Example:

```
Var args() as Variant
args.Append 5.0
Var n as NSExpressionMBS = NSExpressionMBS.expressionForFunction("abs:", args)

// query arguments
Var theargs() as Variant = n.arguments
MsgBox theargs(0)
```

Notes: Returns the arguments for the receiver—that is, the array of expressions that will be passed as parameters during invocation of the selector on the operand of a function expression.

This method raises an exception if it is not applicable to the receiver.

98.3.4 constantValue as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the constant value of the receiver.
Example:

```
Var n as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(5)
Var v as Variant = n.constantValue
MsgBox v.StringValue // shows 5
```

Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

98.3.5 Constructor(Type as Integer)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the receiver with the specified expression type.
Notes: Available in Mac OS X v10.4 and later.

98.3.6 expressionForAggregate(subexpressions() as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new aggregate expression for a given collection.
Notes: collection: A collection object that contains further expressions.
Returns a new expression that contains the expressions in collection.

98.3.7 expressionForConstantValue(value as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new expression that represents a given constant value.
Example:

```
Var n as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(5)
Var v as Variant = n.constantValue
MsgBox v.StringValue // shows 5
```

Notes: obj: The constant value the new expression is to represent.

Returns a new expression that represents the constant value, obj.
Available in Mac OS X v10.4 and later.

98.3.8 expressionForEvaluatedObject as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new expression that represents the object being evaluated.
Notes: Available in Mac OS X v10.4 and later.

98.3.9 expressionForFunction(FunctionName as string, arguments() as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new expression that will invoke one of the predefined functions.
Notes: name: The name of the function to invoke.
parameters: An array containing NSExpression objects that will be used as parameters during the invocation of selector.
For a selector taking no parameters, the array should be empty. For a selector taking one or more parameters, the array should contain one NSExpression object which will evaluate to an instance of the appropriate type for each parameter.
If there is a mismatch between the number of parameters expected and the number you provide during evaluation, an exception may be raised or missing parameters may simply be replaced by nil (which occurs depends on how many parameters are provided, and whether you have over- or underflow).

Returns a new expression that invokes the function name using the parameters in parameters.
The name parameter can be one of the following predefined functions.

See NSExpression class documentation on apple.com for details.

98.3.10 expressionForIntersectSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new NSExpression object that represent the intersection of a given set and collection.
Notes: LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns a new NSExpression object that represents the intersection of left and right.
Available in Mac OS X v10.5 and later.

98.3.11 expressionForKeyPath(name as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new expression that invokes valueForKeyPath: with a given key path.
Notes: keyPath: The key path that the new expression should evaluate.

Returns a new expression that invokes valueForKeyPath: with keyPath.
Available in Mac OS X v10.4 and later.

98.3.12 expressionForMinusSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new NSExpression object that represent the subtraction of a given collection from a given set.
Notes: LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns a new NSExpression object that represents the subtraction of right from left.
Available in Mac OS X v10.5 and later.

98.3.13 expressionForUnionSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new NSExpression object that represent the union of a given set and collection.
Notes: LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns an new NSExpression object that represents the union of left and right.
Available in Mac OS X v10.5 and later.

98.3.14 expressionForVariable(name as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a new expression that extracts a value from the variable bindings dictionary for a given key.
Notes: name: The key for the variable to extract from the variable bindings dictionary.

Returns a new expression that extracts from the variable bindings dictionary the value for the key string. Available in Mac OS X v10.4 and later.

98.3.15 expressionType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the expression type for the receiver.
Example:

```
Var n as NSExpressionMBS = NSExpressionMBS.expressionForVariable("hello")
MsgBox str(n.expressionType) // = NSVariableExpressionType
```

Notes: This method raises an exception if it is not applicable to the receiver.

98.3.16 expressionWithFormat(format as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates an expression with the given format.
See also:

- 98.3.17 expressionWithFormat(format as string, arguments() as Variant) as NSExpressionMBS 14894

98.3.17 expressionWithFormat(format as string, arguments() as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates an expression with the given format.
See also:

- 98.3.16 expressionWithFormat(format as string) as NSExpressionMBS 14894

98.3.18 functionName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the function for the receiver.
Example:

```
Var args() as Variant
args.Append "World"
args.Append 5.0
Var n as NSExpressionMBS = NSExpressionMBS.expressionForFunction("Hello", args)

MsgBox n.functionName
```

Notes: This method raises an exception if it is not applicable to the receiver.

98.3.19 keyPath as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the key path for the receiver.
Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

98.3.20 leftExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the left expression of an aggregate expression.
Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

98.3.21 operand as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the operand for the receiver.
Notes: The operand for the receiver—that is, the object on which the selector will be invoked.
The object is the result of evaluating a key path or one of the defined functions. This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

98.3.22 predicate as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Return the predicate of a subquery expression.
Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

98.3.23 rightExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the right expression of an aggregate expression.
Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

98.3.24 variable as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the variable for the receiver.
Example:

```
Var n as NSExpressionMBS = NSExpressionMBS.expressionForVariable("hello")
MsgBox n.variable
```

Notes: This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

98.3.25 Properties

98.3.26 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal reference to the NSExpression object.
Notes: (Read and Write property)

98.3.27 Constants

Expression Type Constants

Constant	Value	Description
NSAggregateExpressionType	14	An expression that defines an aggregate of NSExpression objects. Available in Mac OS X v10.5 and later.
NSBlockExpressionType	19	An expression that uses an Block. Available in Mac OS X v10.6 and later.
NSConstantValueExpressionType	0	An expression that always returns the same value. Available in Mac OS X v10.4 and later.
NSEvaluatedObjectExpressionType	1	An expression that always returns the parameter object itself. Available in Mac OS X v10.4 and later.
NSFunctionExpressionType	4	An expression that returns the result of evaluating a function. Available in Mac OS X v10.4 and later.
NSIntersectSetExpressionType	6	An expression that creates an intersection of the results of two nested expr sions. Available in Mac OS X v10.5 and later.
NSKeyPathExpressionType	3	An expression that returns something that can be used as a key path. Available in Mac OS X v10.4 and later.
NSMinusSetExpressionType	7	An expression that combines two nested expression results by set subtracti Available in Mac OS X v10.5 and later.
NSSubqueryExpressionType	13	An expression that filters a collection using a subpredicate. Available in Mac OS X v10.5 and later.
NSUnionSetExpressionType	5	An expression that creates a union of the results of two nested expressions. Available in Mac OS X v10.5 and later.
NSVariableExpressionType	2	An expression that always returns whatever value is associated with the l specified by ‚Äòvariable' in the bindings dictionary. Available in Mac OS X v10.4 and later.

98.4 class NSFileCoordinatorMBS

98.4.1 class NSFileCoordinatorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The class for file coordinating.
Notes: Please also check the documentation from Apple for the NSFileCoordinator class.

98.4.2 Methods

98.4.3 addFilePresenter(filePresenter as NSFilePresenterMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Adds a new file presenter.
Notes: If you invoke addFilePresenter: you have to do a balancing invocation of removeFilePresenter before the file presenter is deallocated, even in a garbage-collected application.

If your application reads an item and then registers a file presenter for it there is a possible race condition in which between those two steps another process does coordinated reading or writing of the item, without any messages sent to your not-quite-registered file presenter. This can leave your file presenter ignorant of the fact that what it knows about the item it just read is already out of date, or under the misconception that just because it hasn't received a relinquish... method it owns the item. To avoid that race condition you can invoke addFilePresenter in the same block that you pass to coordinateReadingItemAtURL to read what the file presenter will present.

98.4.4 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Cancel all invocations of coordinate... and prepare... methods for the receiver.
Notes: Any current invocation of one of those methods will stop waiting and return immediately, unless it has already invoked the passed-in block, in which case it will return when the passed-in block returns. Subsequent invocations of those methods will not invoke the blocks passed into them at all. When an invocation

of coordinate... or prepare... returns without invoking the passed-in block because this method was invoked it instead returns an error whose domain is NSCocoaErrorDomain and whose code is NSUserCancelledError. Messages that have already been sent to NSFilePresenters will not be cancelled but the file coordination machinery will stop waiting for the replies.

This method this can be invoked from any thread. It always returns immediately, without waiting for anything. Cancellation is racy; you usually cannot assume that no block passed into a coordinate... or prepare... method is already being invoked, so the code inside those blocks typically still has to check for cancellation, whatever that means in your application.

98.4.5 Constructor(filePresenter as NSFilePresenterMBS = nil)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The constructor.
Notes: The designated initializer. If an NSFilePresenter is provided then the receiver is considered to have been created by that NSFilePresenter, or on its behalf.

NSFileCoordinator is meant to be instantiated on a per-file-operation basis, where a file operation is something like the opening or saving of a document, or the copying or moving of a batch of folders and files. There is no benefit to keeping an instance of it alive in your application for much more time than it takes to actually perform the file operation. Doing so can be harmful, or at least wasteful of memory, because NSFileCoordinators may retain NSFilePresenters.

You pass an NSFilePresenter to this initializer when the operation whose file access is to be coordinated is being performed by that NSFilePresenter. Associating an NSFileCoordinator with an NSFilePresenter accomplishes a few important things:
- It prevents the NSFileCoordinator from sending messages to that NSFilePresenter, so the NSFilePresenter does not have to somehow filter out messages about its own file operations. The exception to this rule is that messages about versions of the presented item being added, remove, or resolved during coordinated writing are sent to every relevant NSFilePresenter, even the one passed to Constructor.
- It allows the file coordination mechanism to determine when coordinated writing is being done in response to an NSFilePresenter receiving a savePresentedItemChangesWithCompletionHandler message, and not deadlock. Usually coordinated writing done by one NSFileCoordinator must wait for coordinated reading of the same file or directory done by another NSFileCoordinator. But, for example, when coordinated reading is begun with one NSFileCoordinator, and that causes an NSFilePresenter to do coordinated writing using another NSFileCoordinator, the writing done with the second NSFileCoordinator should not wait for the completion of the first NSFileCoordinator's reading, it should instead happen while the first NSFileCoordinator is waiting to read.
- It allows the file coordination mechanism to handle a race condition that can occur when it has sent an NSFilePresenter a presentedItemDidMoveToURL message in the NSFilePresenter's operation queue but before that message is dequeued the NSFilePresenter enqueues, on a different queue, an operation using the old URL. For this to be effective however the NSFileCoordinator must be initialized in the same operation queue in which NSFilePresenter messages are received.

- It allows the file coordination mechanism to gracefully handle your application's registration of an NSFilePresenter that at first returns nil when sent presentedItemURL but can later return non-nil at the end of doing a coordinated write that creates the presented item in the file system for the very first time. AppKit for example takes advantage of this by registering brand new untitled NSDocuments as NSFilePresenters immediately, instead of waiting until after the first time the user causes the document to be saved to a file, which would be more complicated.

For example, NSDocument creates a single NSFileCoordinator for all of the coordinated reading and writing it does during the saving of a document. It always creates the NSFileCoordinator in the main queue even when it is doing the actual coordinated reading and writing in a background queue to implement asynchronous saving.

98.4.6 coordinateReadingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a read operation on a single file or directory using the specified options.
Notes: file: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to reader parameter may be different than the one in this parameter. The plugin converts the folderitem to an URL for you.
options: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before your block executes.
Error: If a file presenter encounters an error while preparing for this read operation, that error is returned in this parameter and the block in the reader parameter is not executed. If you cancel this operation before the reader block is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURL event performs the file operations in a coordinated manner. This block receives an url and folderitem of the item and returns no value. Always use the URL/folderitem passed into the event instead of the value in the url parameter.

You use this method to perform read-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the reader event finishes executing. Before executing that event, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your read operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being read is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are writing to items in the package

directory.

- This method does not wait for other readers of the file.
- This method does not wait for writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other write operations are occurring on the exact same directory.
- This method does not wait if write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for other readers of the directory.
- This method does not wait for writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToReader method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When reading a file package directory, file presenter objects that are currently reading the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Do not nest calls to file coordinator methods inside the event. If you call this method or any of the other file coordination methods from inside your event, the file coordinator object throws an exception. If you want to perform a write operation from inside a read block, use the coordinateWritingItemAtURL method instead. If you want to perform a batch read operation on multiple files, use the prepareForReadingItemsAtURLs method.

Available in Mac OS X v10.7 and later.

- 98.4.22 coordinateReadingItemAtURL(url as string, file as folderitem, tag as Variant) 14912
- 98.4.7 coordinateReadingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 14901

98.4.7 coordinateReadingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a read operation on a single file or directory using the specified options.
Notes: url: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to reader parameter may be different than the one in this parameter.
options: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before your block executes.
Error: If a file presenter encounters an error while preparing for this read operation, that error is returned in this parameter and the block in the reader parameter is not executed. If you cancel this operation before the reader block is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURL event performs the file operations in a coordinated manner. This block receives an url and folderitem of the item and returns no value. Always use the URL/folderitem passed into the event instead of the value in the url parameter.

You use this method to perform read-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the reader event finishes executing. Before executing that event, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your read operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being read is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are writing to items in the package directory.
- This method does not wait for other readers of the file.
- This method does not wait for writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other write operations are occurring on the exact same directory.
- This method does not wait if write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for other readers of the directory.
- This method does not wait for writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToReader method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When reading a file package directory, file presenter objects that are currently reading the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Do not nest calls to file coordinator methods inside the event. If you call this method or any of the other file coordination methods from inside your event, the file coordinator object throws an exception. If you want to perform a write operation from inside a read block, use the coordinateWritingItemAtURL method instead. If you want to perform a batch read operation on multiple files, use the prepareForReadingItemsAtURLs method.

Available in Mac OS X v10.7 and later.
See also:

- 98.4.6 coordinateReadingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 14900
- 98.4.22 coordinateReadingItemAtURL(url as string, file as folderitem, tag as Variant) 14912

98.4.8 coordinateReadingItemAtURLwritingItemAtURL(readingFile as folderitem, readingOptions as Integer, writingItemAtFile as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a read operation that contains a follow-up write operation.
Notes: readingFile: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler: method of relevant file presenters is called before your block executes.
writingItemAtFile: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.
Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the event is not executed. If you cancel this operation before the readerWriter event is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURLwritingItemAtURL event performs the read and write operations in a coordinated manner. This event receives URLs of the items to read and write and returns no value. Always

use the URLs passed into the block instead of the values in the readingURL and writingURL parameters.

You use this method to perform a read operation that might also contain a write operation that needs to be coordinated. This method executes synchronously, blocking the current thread until the readerWriter event finishes executing. When performing the write operation, you may call the coordinateWritingItemAtURL method from your readerWriter block. This method does the canonical lock ordering that is required to prevent a potential deadlock of the file operations.

This method makes the same calls to file presenters, and has the same general wait behavior as the coordinateReadingItemAtURL method.

Available in Mac OS X v10.7 and later.

98.4.9 coordinateReadingItemAtURLwritingItemAtURL(readingURL as string, readingOptions as Integer, writingItemAtURL as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a read operation that contains a follow-up write operation.
Notes: readingURL: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler: method of relevant file presenters is called before your block executes.
writingItemAtURL: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.
Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the event is not executed. If you cancel this operation before the readerWriter event is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURLwritingItemAtURL event performs the read and write operations in a coordinated manner. This event receives URLs of the items to read and write and returns no value. Always

use the URLs passed into the block instead of the values in the readingURL and writingURL parameters.

You use this method to perform a read operation that might also contain a write operation that needs to be coordinated. This method executes synchronously, blocking the current thread until the readerWriter event finishes executing. When performing the write operation, you may call the coordinateWritingItemAtURL method from your readerWriter block. This method does the canonical lock ordering that is required to prevent a potential deadlock of the file operations.

This method makes the same calls to file presenters, and has the same general wait behavior as the coordinateReadingItemAtURL method.

Available in Mac OS X v10.7 and later.
See also:

- 98.4.8 coordinateReadingItemAtURLwritingItemAtURL(readingFile as folderitem, readingOptions as Integer, writingItemAtFile as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil) 14903
- 98.4.23 coordinateReadingItemAtURLwritingItemAtURL(readingURL as string, readingFile as folderitem, writingURL as string, writingFile as folderitem, tag as Variant) 14912

98.4.10 coordinateWritingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a write operation on a single file or directory using the specified options.
Notes: File: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to writer parameter may be different than the one in this parameter. (plugin converts from folderitem to URL for you)
options: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your coordinateWritingItemAtURL event.
error: If a file presenter encounters an error while preparing for this write operation, that error is returned in this parameter and the event in the writer parameter is not executed. If you cancel this operation before the writer event is executed, this parameter contains an error object on output.

The coordinateWritingItemAtURL event performs the file operations in a coordinated manner. This event receives the file reference containing the URL of the item and returns no value. Always use the UR passed into the block instead of the value in the url parameter.

You use this method to perform write-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the writer block finishes executing. Before executing the block, though, the file coordinator waits until other relevant file presenter objects finish

in-progress actions. Similarly, your write operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being written is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other readers and writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are reading or writing items in the package directory.
- This method does not wait for readers or writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other read or write operations are occurring on the exact same directory.
- This method does not wait if read or write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for readers or writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToWriter method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When writing a file package directory, file presenter objects that are currently reading or writing the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Note: When deleting an item inside a file package using the NSFileCoordinatorWritingForDeleting option, the file coordinator does not call the accommodatePresentedItemDeletionWithCompletionHandler method of any file presenters monitoring the file package directory itself. Instead, the delete operation is treated as a write operation on the file package.
With one exception, do not nest calls to file coordinator methods inside the block you pass to this method. You may call the coordinateReadingItemAtURL method to read the file if you discover through modification-date checking that the contents of the file have changed. However, if you call this method from inside your block, the file coordinator object throws an exception.

Available in Mac OS X v10.7 and later.

98.4.11 coordinateWritingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initiates a write operation on a single file or directory using the specified options.
Notes: url: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to writer parameter may be different than the one in this parameter.
options: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your coordinateWritingItemAtURL event.
error: If a file presenter encounters an error while preparing for this write operation, that error is returned in this parameter and the event in the writer parameter is not executed. If you cancel this operation before the writer event is executed, this parameter contains an error object on output.

The coordinateWritingItemAtURL event performs the file operations in a coordinated manner. This event receives the file reference containing the URL of the item and returns no value. Always use the UR passed into the block instead of the value in the url parameter.

You use this method to perform write-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the writer block finishes executing. Before executing the block, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your write operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being written is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other readers and writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are reading or writing items in the package directory.
- This method does not wait for readers or writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other read or write operations are occurring on the exact same directory.
- This method does not wait if read or write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for readers or writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToWriter method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When writing a file package directory, file presenter objects that are currently reading or writing the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Note: When deleting an item inside a file package using the NSFileCoordinatorWritingForDeleting option, the file coordinator does not call the accommodatePresentedItemDeletionWithCompletionHandler method of any file presenters monitoring the file package directory itself. Instead, the delete operation is treated as a write operation on the file package.
With one exception, do not nest calls to file coordinator methods inside the block you pass to this method. You may call the coordinateReadingItemAtURL method to read the file if you discover through modification-date checking that the contents of the file have changed. However, if you call this method from inside your block, the file coordinator object throws an exception.

Available in Mac OS X v10.7 and later.

- 98.4.10 coordinateWritingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 14905
- 98.4.24 coordinateWritingItemAtURL(url as string, file as folderitem, tag as Variant) 14913

98.4.12 filePresenters as NSFilePresenterMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The process' file presenters.

98.4.13 FileURL(file as folderitem) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Convenience method to give you an URL for a folderitem.

98.4.14 itemAtURLdidMoveToURL(oldURL as string, newURL as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Announce that the item located by a URL is now located by another URL.
Notes: This triggers the sending of messages to NSFilePresenters that implement the corresponding optional methods, even those in other processes, except the one specified when -initWithFilePresenter: was invoked:
- presentedItemDidMoveToURL: is sent to NSFilePresenters of the item.
- If the item is a directory then presentedItemDidMoveToURL is sent to NSFilePresenters of each item contained by it.
- presentedSubitemAtURL is sent to NSFilePresenters of each directory that contains the item, unless that method is not implemented but presentedItemDidChange is, and the directory is actually a file package, in which case presentedItemDidChange is sent instead.

Useless invocations of this method are harmless, so you don't have to write code that compares NSURLs for equality, which is not straightforward. This method must be invoked from within the block passed to an invocation of coordinateWritingItemAtURL.

98.4.15 itemAtURLwillMoveToURL(oldURL as string, newURL as string)

MBS MacCloud Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Announce that the item located by a URL is going to be located by another URL.
Notes: Support for App Sandbox on OS X. Some applications can rename files while saving them. For example, when a user adds attachments to a rich text document, TextEdit changes the document's extension from .rtf to .rtfd. A sandboxed application like TextEdit must ordinarily prompt the user for approval before renaming a document. You can invoke this method to make your process declare its intent to rename a document without user approval. After the renaming succeeds you must invoke itemAtURLdidMoveToURL, with the same arguments, for the process to keep access to the file with its new name and to give up access to any file that appears with the old name. If the renaming fails you should probably not invoke itemAtURLwillMoveToURL.

There is no reason to invoke this method from applications that do not use App Sandbox. Invoking it does nothing on iOS.

98.4.16 prepareForReadingItemsAtURLs(readingFiles() as folderitem, readingOptions as Integer, writingItemsAtFiles() as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Prepare to read or write from multiple files in a single batch operation.

Notes: readingFiles: An array of folderitems identifying the items you want to read.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before the prepareComplete event executes.
writingItemsAtFiles: An array of folderitems identifying the items you want to write.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.

Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the block in the writer parameter is not executed. If you cancel this operation before the batchAccessor block is executed, this parameter contains an error object on output.

The prepareComplete event is called and receives a completion handler that it must execute when it has finished its read and write calls.

You use this method to prepare the file coordinator for multiple read and write operations. This method executes synchronously, blocking the current thread until the prepareComplete event finishes executing. The event does not perform the actual operations itself but calls the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to perform them. The reason to call this method first is to improve performance when reading and writing large numbers of files or directories.

Because file coordination requires interprocess communication, it is much more efficient to batch changes to large numbers of files and directories than to change each item individually. The file coordinator uses the values in the readingURLs and writingURLs parameters together with reading and writing options to prepare any relevant file presenters for the upcoming operations. Specifically, it uses these parameters in the same way as the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to determine which file presenter methods to call.

Available in Mac OS X v10.7 and later.

98.4.17 prepareForReadingItemsAtURLs(readingURLs() as string, readingOptions as Integer, writingItemsAtURLs() as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Prepare to read or write from multiple files in a single batch operation.
Notes: readingURLs: An array of url strings identifying the items you want to read.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePre-

sentedItemChangesWithCompletionHandler method of relevant file presenters is called before the prepareComplete event executes.
writingItemsAtURLs: An array of url strings identifying the items you want to write.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.

Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the block in the writer parameter is not executed. If you cancel this operation before the batchAccessor block is executed, this parameter contains an error object on output.

The prepareComplete event is called and receives a completion handler that it must execute when it has finished its read and write calls.

You use this method to prepare the file coordinator for multiple read and write operations. This method executes synchronously, blocking the current thread until the prepareComplete event finishes executing. The event does not perform the actual operations itself but calls the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to perform them. The reason to call this method first is to improve performance when reading and writing large numbers of files or directories.

Because file coordination requires interprocess communication, it is much more efficient to batch changes to large numbers of files and directories than to change each item individually. The file coordinator uses the values in the readingURLs and writingURLs parameters together with reading and writing options to prepare any relevant file presenters for the upcoming operations. Specifically, it uses these parameters in the same way as the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to determine which file presenter methods to call.

Available in Mac OS X v10.7 and later.

98.4.18 removeFilePresenter(filePresenter as NSFilePresenterMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Removes the file presenter.

98.4.19 Properties

98.4.20 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference to the NSFileCoordinator object.
Notes: (Read and Write property)

98.4.21 Events

98.4.22 coordinateReadingItemAtURL(url as string, file as folderitem, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The event called from coordinateReadingItemAtURL method.
Notes: The plugin provides the URL and for your convenience a folderitem.
See also:

- 98.4.6 coordinateReadingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 14900

98.4.25 prepareComplete(Complete as NSFilePresenterHandlerMBS, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: This event is called by prepareForReadingItemsAtURLs.
Notes: You must call the complete handler when you are done.

98.4.26 Constants

Reading flag constants.

Constant	Value	Description
NSFileCoordinatorReadingResolvesSymbolicLink	2	Whether reading of an item that might be a symbolic link fil olution of the link if it is. This affects the URL passed to the an invocation of one of the coordinateReadingItemAtURL... not a valid option to use with prepareForReadingItemsAtURI
NSFileCoordinatorReadingWithoutChanges	1	Whether reading does _not_ trigger sending of sav ChangesWithCompletionHandler to certain NSFilePresenter and waiting for those NSFilePresenters to respond. The defau ing coordinated reading is to send savePresentedItemChangesV Handler to NSFilePresenters.

Writing flag constants.

Constant	Value	Description
NSFileCoordinatorWritingForDeleting	1	Whether the writing to be done is actually the deletion of the item. T fects how the writing waits for previously scheduled coordinated readi writing, how the writing causes subsequently scheduled reading and to wait, and what NSFilePresenter messaging is done. See the comm the Single File Coordination section below. This option is how you sending of accommodatePresentedItemDeletionWithCompletionHandle commodatePresentedSubitemDeletionAtURL messages to NSFilePrese For example, Finder uses this when it's emptying the trash to give N resenters a chance to close documents before their files disappear, or disappear if the files weren't still open.
NSFileCoordinatorWritingForMerging	4	Whether coordinated writing triggers sending of savePresente ChangesWithCompletionHandler to certain NSFilePresenters in the and waiting for those NSFilePresenters to respond.
NSFileCoordinatorWritingForMoving	2	Whether the writing to be done is actually the moving or renaming of th This affects how the writing waits for previously scheduled coordinated and writing, how the writing causes subsequently scheduled reading and to wait, and what NSFilePresenter messaging is done. See the comment Single File Coordination section below. This option has no effect when being moved is a plain file so you can use it in code that moves file items without checking whether the items are files or directories. A check would invite a race condition anyway. For example, Finder uses this when it's moving items that the user has and dropped so as not to yank files contained by moved folders out fr derneath applications that are reading or writing those files.
NSFileCoordinatorWritingForReplacing	8	Whether the writing to be done is actually the replacement of the ite a different item. It causes the same behavior as NSFileCoordinatorW ForDeleting except that when the item being written to is renamed or while the writer is being made to wait the item is considered to have different item, so the writer is not passed an updated URL to reflect the ing or moving. Use this when the moving or creation of an item will any item that gets in its way. To avoid a race condition use it regar whether there is actually an item in the way before the writing begins. use this when simply updating the contents of a file, even if the way that is writing the contents to another file and renaming it into place. not a valid option to use with prepareForReadingItemsAtURLs. For example, NSDocument uses this for NSSaveAsOperation and NSS Operation to announce that it is possibly overwriting an item with a new file or file package. This gives any NSFilePresenter of the over item, including perhaps a different instance of NSDocument, perhaps same application, a chance to close itself before the item is overwritten For another example, the most accurate and safe way to coordinate a to invoke coordinateWritingItemAtURL using the NSFileCoordinatorW ForMoving option with the source URL and NSFileCoordinatorWriting placing with the destination URL.

98.5 class NSFileManagerMBS

98.5.1 class NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The NSFileManager class enables you to perform many generic file-system operations and insulates an application from the underlying file system.
Notes: In Xojo you can do the same with folderitem. But for some iCloud related tasks you need to use this class.

In Cocoa applications, a file manager object is usually your first interaction with the file system. You use this object to locate, create, copy, and move files and directories. You also use this object to get information about files and directories, such as its size, modification date, and BSD permissions. You can also use a file manager object to change the values of many file and directory attributes.

The NSFileManagerMBS class supports both the folderitem and path string as ways to specify the location of a file or directory. The use of the folderitem is generally preferred for specifying file-system items because they can convert path information to a more efficient representation internally. You can also obtain a bookmark from an folderitem, which is similar to an alias and offers a more sure way of locating the file or directory later.

In iOS 5.0 and later and in Mac OS X v10.7 and later, NSFileManager includes methods for managing items stored in the cloud. Files and directories tagged for cloud storage are synced to the user's MobileMe account so that they can be made available to the user's iOS devices and Macintosh computers. Changes to an item in one location are propagated to all other locations to ensure the items stay in sync.

98.5.2 Methods

98.5.3 attributesOfFileSystemForPath(item as folderitem, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a dictionary that describes the attributes of the mounted file system on which a given path resides.
Notes: path: A folderitem pointing to the mounted file system.
error: On input, a pointer to an error object. If an error occurs, this pointer is set to an actual error object containing the error information. You may specify nil for this parameter if you do not want the error information.

Returns an Dictionary object that describes the attributes of the mounted file system on which path resides, or nil if an error occurs. See File-System Attribute Keys for a description of the keys available in the dictionary.
See also:

- 98.5.4 attributesOfFileSystemForPath(path as string, byref error as NSErrorMBS) as Dictionary 14916

98.5.4 attributesOfFileSystemForPath(path as string, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a dictionary that describes the attributes of the mounted file system on which a given path resides.
Notes: path: Any pathname within the mounted file system.
error: On input, a pointer to an error object. If an error occurs, this pointer is set to an actual error object containing the error information. You may specify nil for this parameter if you do not want the error information.

Returns an Dictionary object that describes the attributes of the mounted file system on which path resides, or nil if an error occurs. See File-System Attribute Keys for a description of the keys available in the dictionary.
See also:

- 98.5.3 attributesOfFileSystemForPath(item as folderitem, byref error as NSErrorMBS) as Dictionary 14916

98.5.5 attributesOfItemAtPath(item as folderitem, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the attributes of the item at a given path.
Example:

```
Var n as new NSFileManagerMBS
Var e as NSErrorMBS
Var d as Dictionary = n.attributesOfItemAtPath(SpecialFolder.Desktop, e)

break // check dictionary in debugger
```

Notes: item: The folderitem of a file or directory.
Error: If an error occurs, this is set to an actual error object containing the error information.

Return a Dictionary object that describes the attributes (file, directory, symlink, and so on) of the file specified by path. The keys in the dictionary are described in File Attribute Keys. (see NSFile* methods)

Special Considerations
This method does not traverse symbolic links. If the item at the path is a symbolic link—that is, the value of the NSFileType key in the attributes dictionary is NSFileTypeSymbolicLink—you can use the destinationOfSymbolicLinkAtPath method to retrieve the path of the item pointed to by the link. You can also use the stringByResolvingSymlinksInPath method of NSString to resolve links in the path before retrieving the item's attributes.

Available in Mac OS X v10.5 and later.
See also:

- 98.5.6 attributesOfItemAtPath(path as string, byref error as NSErrorMBS) as Dictionary 14917

98.5.6 attributesOfItemAtPath(path as string, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the attributes of the item at a given path.
Notes: path: The path of a file or directory.
Error: If an error occurs, this is set to an actual error object containing the error information.

Return a Dictionary object that describes the attributes (file, directory, symlink, and so on) of the file specified by path. The keys in the dictionary are described in File Attribute Keys. (see NSFile* methods)

Special Considerations
This method does not traverse symbolic links. If the item at the path is a symbolic link—that is, the value of the NSFileType key in the attributes dictionary is NSFileTypeSymbolicLink—you can use the destinationOfSymbolicLinkAtPath method to retrieve the path of the item pointed to by the link. You can also use the stringByResolvingSymlinksInPath method of NSString to resolve links in the path before retrieving the

item's attributes.

Available in Mac OS X v10.5 and later.
See also:

- 98.5.5 attributesOfItemAtPath(item as folderitem, byref error as NSErrorMBS) as Dictionary 14916

98.5.7 changeCurrentDirectory(folder as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Changes the path of the current working directory to the specified path.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Applications
if m.changeCurrentDirectory(f) then
MsgBox m.currentDirectory.NativePath
end if
```

Notes: folder: The path of the directory to which to change.

Returns true if successful, otherwise false.

All relative pathnames refer implicitly to the current working directory. Changing the current working directory affects only paths created in the current process.
See also:

- 98.5.8 changeCurrentDirectory(path as string) as boolean 14918

98.5.8 changeCurrentDirectory(path as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Changes the path of the current working directory to the specified path.
Example:

```
Var m as new NSFileManagerMBS
if m.changeCurrentDirectory("/Users") then
MsgBox m.currentDirectoryPath
end if
```

Notes: path: The path of the directory to which to change.

Returns true if successful, otherwise false.

All relative pathnames refer implicitly to the current working directory. Changing the current working directory affects only paths created in the current process.
See also:

- 98.5.7 changeCurrentDirectory(folder as folderitem) as boolean 14918

98.5.9 Constructor

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The constructor.

98.5.10 containerFolderForSecurityApplicationGroupIdentifier(groupIdentifier as string) as folderItem

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the container directory associated with the specified security application group ID.
Notes: As explained in App Sandbox Design Guide, groups of sandboxed apps that need to share files and other information can request a container directory as part of their entitlements. These directories are stored in
textasciitilde /Library/Group Containers/.

When called with a valid group identifier, this method returns the location of that directory as an folderitem. This method also creates the directory if it does not yet exist.

Important: Your app must have a com.apple.security.application-groups entitlement for the specified application group.

Available in OS X v10.8 and later.

98.5.11 containerURLForSecurityApplicationGroupIdentifier(groupIdentifier as string) as string

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the container directory associated with the specified security application group ID.
Notes: As explained in App Sandbox Design Guide, groups of sandboxed apps that need to share files and other information can request a container directory as part of their entitlements. These directories are stored

in
textasciitilde /Library/Group Containers/.

When called with a valid group identifier, this method returns the location of that directory as an URL. This method also creates the directory if it does not yet exist.

Important: Your app must have a com.apple.security.application-groups entitlement for the specified application group.

Available in OS X v10.8 and later.

98.5.12 contentsEqual(path1 as folderitem, path2 as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the files or directories in specified paths have the same contents.
Notes: path1: The path of a file or directory to compare with the contents of path2.
path2: The path of a file or directory to compare with the contents of path1.

Returns true if file or directory specified in path1 has the same contents as that specified in path2, otherwise false.

If path1 and path2 are directories, the contents are the list of files and subdirectories each contains—contents of subdirectories are also compared. For files, this method checks to see if they,Äôre the same file, then compares their size, and finally compares their contents. This method does not traverse symbolic links, but compares the links themselves.

98.5.13 copyItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Copies the item at the specified path to a new location synchronously.
Notes: Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.
See also:

- 98.5.14 copyItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 14921

98.5.14 copyItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Platform: macOS, Targets: All.

Function: Copies the item at the specified path to a new location synchronously.
Notes: Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.
See also:

- 98.5.13 copyItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 14920

98.5.15 copyItemMT(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Copies the item at the specified path to a new location synchronously.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var d as FolderItem = SpecialFolder.Desktop.Child("output.rtf")
Var e as NSErrorMBS

if not NSFileManagerMBS.defaultManager.copyItemMT(f,d,e) then
MsgBox e.LocalizedDescription
else
MsgBox "OK"
end if
```

Notes: Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

- 98.5.16 copyItemMT(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 14922

98.5.16 copyItemMT(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Platform: macOS, Targets: All.

Function: Copies the item at the specified path to a new location synchronously.
Notes: Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or

directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

- 98.5.15 copyItemMT(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 14921

98.5.17 createDirectory(Path as folderItem, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a directory with given attributes at the specified path.
Notes: path: A folderitme identifying the directory to create. You may specify a full path or a path that is relative to the current working directory. This parameter must not be nil.
createIntermediates: If true, this method creates any non-existent parent directories as part of creating the directory in path. If NO, this method fails if any of the intermediate parent directories does not exist. This method also fails if any of the intermediate path elements corresponds to a file and not a directory.
attributes: The file attributes for the new directory and any newly created intermediate directories. You can set the owner and group numbers, file permissions, and modification date. If you specify nil for this parameter or omit a particular value, one or more default values are used as described in the discussion. For a list of keys you can include in this dictionary, see Constants. Some of the keys, such as NSFileHFSCreatorCode and NSFileHFSTypeCode, do not apply to directories.
error: If an error occurs, this variable is set to an actual error object containing the error information.

Returns true if the directory was created, true if createIntermediates is set and the directory already exists, or false if an error occurred.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group,

and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created directories are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

- 98.5.18 createDirectory(Path as String, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean 14924

98.5.18 createDirectory(Path as String, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a directory with given attributes at the specified path.
Notes: path: A path string identifying the directory to create. You may specify a full path or a path that is relative to the current working directory. This parameter must not be nil.
createIntermediates: If true, this method creates any non-existent parent directories as part of creating the directory in path. If NO, this method fails if any of the intermediate parent directories does not exist. This method also fails if any of the intermediate path elements corresponds to a file and not a directory.
attributes: The file attributes for the new directory and any newly created intermediate directories. You can set the owner and group numbers, file permissions, and modification date. If you specify nil for this parameter or omit a particular value, one or more default values are used as described in the discussion. For a list of keys you can include in this dictionary, see Constants. Some of the keys, such as NSFileHFSCreatorCode and NSFileHFSTypeCode, do not apply to directories.
error: If an error occurs, this variable is set to an actual error object containing the error information.

Returns true if the directory was created, true if createIntermediates is set and the directory already exists, or false if an error occurred.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created directories are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

See also:

- 98.5.17 createDirectory(Path as folderItem, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean 14923

98.5.19 createFile(Path as folderItem, contents as MemoryBlock, attrs as Dictionary = nil) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a file with the specified content and attributes at the given location.
Notes: path: The folderitem for the new file.
contents: A data object containing the contents of the new file.
attributes: A dictionary containing the attributes to associate with the new file. You can use these attributes to set the owner and group numbers, file permissions, and modification date. For a list of keys, see NSFileAttributeKey. If you specify nil for attributes, the file is created with a set of default attributes.

Returns true if the operation was successful or if the item already exists, otherwise false.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created files are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

If a file already exists at path, this method overwrites the contents of that file if the current process has the appropriate privileges to do so.
See also:

- 98.5.20 createFile(Path as String, contents as MemoryBlock, attrs as Dictionary = nil) as boolean 14925

98.5.20 createFile(Path as String, contents as MemoryBlock, attrs as Dictionary = nil) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates a file with the specified content and attributes at the given location.
Notes: path: The path for the new file.
contents: A data object containing the contents of the new file.

attributes: A dictionary containing the attributes to associate with the new file. You can use these attributes to set the owner and group numbers, file permissions, and modification date. For a list of keys, see NSFileAttributeKey. If you specify nil for attributes, the file is created with a set of default attributes.

Returns true if the operation was successful or if the item already exists, otherwise false.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created files are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

If a file already exists at path, this method overwrites the contents of that file if the current process has the appropriate privileges to do so.

- 98.5.19 createFile(Path as folderItem, contents as MemoryBlock, attrs as Dictionary = nil) as boolean 14925

98.5.21 createSymbolicLink(file as folderitem, destFile as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a symbolic link at the specified URL that points to an item at the given URL.
Example:

```
Var m as new NSFileManagerMBS
Var file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var destfile as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var error as NSErrorMBS

if m.createSymbolicLink(file, destfile, error) then
MsgBox "OK"
else
MsgBox "Error: "+error.localizedDescription
end if
```

Notes: file: The path at which to create the new symbolic link. The last path component is used as the name of the link.
destFile: The path that contains the item to be pointed to by the link. In other words, this is the destination

of the link.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns true if the symbolic link was created or false if an error occurred. This method also returns false if a file, directory, or link already exists at path.

This method does not traverse symbolic links contained in either path or destPath.

Available in Mac OS X v10.5 and later.
As of Mac OS X 10.7 tests here, it seems like an alias file is created, not a symbolic link.
See also:

- 98.5.22 createSymbolicLink(path as string, destPath as string, byref error as NSErrorMBS) as boolean 14927

98.5.22 createSymbolicLink(path as string, destPath as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a symbolic link that points to the specified destination.
Notes: path: The path at which to create the new symbolic link. The last path component is used as the name of the link.
destPath: The path that contains the item to be pointed to by the link. In other words, this is the destination of the link.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns true if the symbolic link was created or false if an error occurred. This method also returns false if a file, directory, or link already exists at path.

This method does not traverse symbolic links contained in either path or destPath.

Available in Mac OS X v10.5 and later.
As of Mac OS X 10.7 tests here, it seems like an alias file is created, not a symbolic link.
See also:

- 98.5.21 createSymbolicLink(file as folderitem, destFile as folderitem, byref error as NSErrorMBS) as boolean 14926

98.5.23 destinationOfSymbolicLinkAtPath(file as folderitem, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 16.5, Platform: macOS, Targets: All.

Function: Returns the path of the item pointed to by a symbolic link.
Notes: file: The folderitem of a file or directory. Be aware that Xojo may already have resolved the symlink!
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns a string containing the path of the directory or file to which the symbolic link path refers, or "" upon failure. If the symbolic link is specified as a relative path, that relative path is returned.
See also:

- 98.5.24 destinationOfSymbolicLinkAtPath(path as string, byref error as NSErrorMBS) as string 14928

98.5.24 destinationOfSymbolicLinkAtPath(path as string, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 16.5, Platform: macOS, Targets: All.

Function: Returns the path of the item pointed to by a symbolic link.
Example:

```
Var f as new NSFileManagerMBS
Var e as NSErrorMBS

Var p as string = f.destinationOfSymbolicLinkAtPath("/tmp", e)

if e = nil then
MsgBox p
else
MsgBox e.LocalizedDescription
end if
```

Notes: path: The path of a file or directory.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns a string containing the path of the directory or file to which the symbolic link path refers, or "" upon failure. If the symbolic link is specified as a relative path, that relative path is returned.
See also:

- 98.5.23 destinationOfSymbolicLinkAtPath(file as folderitem, byref error as NSErrorMBS) as string 14928

98.5.25 displayName(path as folderitem) as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the display name of the file or directory at a specified path.
Notes: path: The path of a file or directory.

The name of the file or directory at path in a localized form appropriate for presentation to the user. If there is no file or directory at path, or if an error occurs, returns path as is.

Display names are user-friendly names for files. They are typically used to localize standard file and directory names according to the user's language settings. They may also reflect other modifications, such as the removal of filename extensions. Such modifications are used only when displaying the file or directory to the user and do not reflect the actual path to the item in the file system. For example, if the current user's preferred language is French, the following code fragment logs the name Biblioth√®que and not the name Library, which is the actual name of the directory.

98.5.26 evictUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Removes the local copy of the specified cloud-based item.
Notes: item: Specify the file or directory in iCloud storage.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns true if the local item was removed successfully or false if it was not. If false is returned, an NSError object describing the error is returned in the error parameter.

This method does not remove the item from the cloud. It removes only the local version. You can use this method to force iCloud to download a new version of the file or directory from the server.

To delete a file permanently from the user's iCloud storage, use the regular NSFileManager routines for deleting files and directories. Remember that deleting items from iCloud cannot be undone. Once deleted, the item is gone forever.

Available in Mac OS X v10.7 and later.

98.5.27 fileExists(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether a file or directory exists at a specified path.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "File exists: "+str(m.fileExists(f))
```

Notes: path: The path of the file or directory. I

Returns true if a file at the specified path exists or false if the file's does not exist or its existence could not be determined.

If the file at path is inaccessible to your application, perhaps because one or more parent directories are inaccessible, this method returns false. If the final element in path specifies a symbolic link, this method traverses the link and returns true or false based on the existence of the file at the link destination.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585
See also:

- 98.5.28 fileExists(path as folderitem, byref isDirectory as boolean) as boolean 14930

98.5.28 fileExists(path as folderitem, byref isDirectory as boolean) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether a file or directory exists at a specified path.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop

Var directory as Boolean
MsgBox "File exists: "+str(m.fileExists(f, directory))+" and is Directory: "+str(Directory)
```

Notes: path: The path of a file or directory.
isDirectory: Upon return, contains true if path is a directory or if the final path element is a symbolic link that points to a directory, otherwise contains false. If path doesn't exist, the return value is undefined.

Returns true if a file at the specified path exists or false if the file's does not exist or its existence could not be determined.

If the file at path is inaccessible to your application, perhaps because one or more parent directories are inaccessible, this method returns false. If the final element in path specifies a symbolic link, this method traverses the link and returns true or false based on the existence of the file at the link destination.

If you need to further determine if path is a package, use the isFilePackageAtPath method of NSWorkspaceMBS.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585
See also:

- 98.5.27 fileExists(path as folderitem) as boolean 14929

98.5.29 FileForUbiquityContainerIdentifier(containerIdentifier as string) as folderitem

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns the iCloud directory associated with the specified container ID.
Notes: containerID: Specify the container ID of the cloud-based storage container. The string you specify must not contain wildcards and must be of the form <TEAMID>.<CONTAINER>, where <TEAMID>is your development team ID and <CONTAINER>describes the bundle identifier of the container you want to access. The container identifiers for your application must be declared in the com.apple.developer.ubiquity-container-identifiers entitlement.
If you specify "", this method returns the first container listed in the com.apple.developer.ubiquity-container-identifiers entitlement.

Returns a folderitem pointing to the specified container directory or nil if the container could not be located or if iCloud storage is unavailable for the current user or device.

You can use the folderitem returned by this method to build paths to files and directories in the user's iCloud storage. Each application that syncs documents to the cloud must have at least one associated container directory in which to put those files. This container directory can be unique to the application or shared by multiple applications. You use this method to retrieve the folderitem for that container directory.

In addition to writing to its own container directory, an application can write to any container directory for which it has the appropriate permission. Each additional container directory should be listed as an additional value in the com.apple.developer.ubiquity-container-identifiers entitlement.

Note: The development team ID that precedes each container ID string is the unique identifier associated with your development team. You can find this string in the Member Center of the Apple Developer website (http://developer.apple.com/membercenter). From the Member Center home page, select the Your Account tab and then select Organization Profile from the column on the left of that tab. Your team's identifier is in the Company/Organization ID field.
The first time you call this method for a given container directory, iOS extends your application sandbox to include that container directory. Thus, it is important that you call this method at least once before trying to search for files in iCloud. And if your application accesses multiple container directories, you should call the method once for each directory.

Available in Mac OS X v10.7 and later.
FileForUbiquityContainerIdentifier returns folderitem while URLForUbiquityContainerIdentifier returns URL string.

98.5.30 fileManagerWithAuthorization(authorization as NSWorkspaceAuthorizationMBS) as NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a file manager object that is authorized to perform privileged file system operations.
Notes: Returns nil in case of errors.

This method returns an NSFileManagerMBS instance that can perform file system operations previously allowed by the user via NSWorkspaceMBS.requestAuthorization. Each NSWorkspaceAuthorizationMBS you receive requires creating a new NSFileManagerMBS instance using this method.

Only the following NSFileManagerMBS methods currently take advantage of an authorization:

- createSymbolicLink (NSWorkspaceAuthorizationTypeCreateSymbolicLink)
- setAttributes (NSWorkspaceAuthorizationTypeSetAttributes)
- replaceItem (NSWorkspaceAuthorizationTypeReplaceFile)

Note that an NSWorkspaceAuthorizationTypeSetAttributes authorization only enables setAttributes to modify the following attributes:

- NSFileOwnerAccountID

- NSFileGroupOwnerAccountID
- NSFilePosixPermissions

Also note that for replaceItem, the backupItemName and options parameters will be ignored.

These methods may also fail with any of the following errors:

- NSWorkspaceAuthorizationInvalidError: The provided NSWorkspaceAuthorization expired or is invalid.
- NSFileWriteUnknownError: The application failed to communicate with a helper process, or a file system error occurred.
- NSFileWriteNoPermissionError: The operation failed for any other reason, including the user denying access to the resource, or access to a resource is denied by system policy.

All other NSFileManager methods invoked on this instance will behave normally.
The app using this may need code signature with com.apple.developer.security.privileged-file-operations entitlement for the sandboxed application and may need to be in applications folder.

98.5.31 homeDirectoryForUser(Name as string) as FolderItem

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the home directory for the specified user.
Notes: userName: The username of the owner of the desired home directory.

Returns the folderitem containing the location of the specified user,Äôs home directory, or nil if no such user exists or the user,Äôs home directory is not available.

98.5.32 isDeletableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the invoking object appears able to delete a specified file.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can delete: "+str(m.isDeletableFile(f))
```

Notes: path: A file path.

Returns true if the current process has delete privileges for the file at path; otherwise false if the process does not have delete privileges or the existence of the file could not be determined.

For a directory or file to be deletable, the current process must either be able to write to the parent directory of path or it must have the same owner as the item at path. If path is a directory, every item contained in path must be deletable by the current process.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method does not traverse symbolic links in the path.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585

98.5.33 isExecutableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the operating system appears able to execute a specified file.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can execute: "+str(m.isExecutableFile(f))
```

Notes: path: A file path.

Returns true if the current process has execute privileges for the file at path; otherwise false if the process does not have execute privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path.

This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is executable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide:
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585

98.5.34 isReadableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the invoking object appears able to read a specified file.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can read: "+str(m.isReadableFile(f))
```

Notes: path: A file path.

Returns true if the current process has read privileges for the file at path; otherwise false if the process does not have read privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path. This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is readable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585

98.5.35 isUbiquitousItem(item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the item is targeted for storage in iCloud.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Is in iCloud: "+str(m.isUbiquitousItem(f))
```

Notes: item: Specify the folderitem for the file or directory whose status you want to check.

Returns true if the item is targeted for iCloud storage or false if it is not. This method also returns false if no item exists at url.

This method reflects only whether the item should be stored in iCloud because a call was made to the setUbiquitous method with a value of true for its flag parameter. This method does not reflect whether the file has actually been uploaded to any iCloud servers. To determine a file's upload status, check the IsUploadedMBS function in the folderitem class.

Available in Mac OS X v10.7 and later.
See also:

- 98.5.36 isUbiquitousItem(URL as string) as boolean 14936

98.5.36 isUbiquitousItem(URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether the item is targeted for storage in iCloud.
Notes: item: Specify the URL for the file or directory whose status you want to check.

Returns true if the item is targeted for iCloud storage or false if it is not. This method also returns false if no item exists at url.

This method reflects only whether the item should be stored in iCloud because a call was made to the setUbiquitous method with a value of true for its flag parameter. This method does not reflect whether the file has actually been uploaded to any iCloud servers. To determine a file's upload status, check the IsUploadedMBS function in the folderitem class.

Available in Mac OS X v10.7 and later.
See also:

• 98.5.35 isUbiquitousItem(item as folderitem) as boolean 14936

98.5.37 isWritableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the invoking object appears able to write to a specified file.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can write: "+str(m.isWritableFile(f))
```

Notes: path: A file path.

Returns true if the current process has write privileges for the file at path; otherwise false if the process does not have write privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path. This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is writable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide:
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html#//apple_ref/doc/uid/TP40002585

98.5.38 lastPathComponent(pathOrURL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns the last path component of a file URL or file path.
Notes: Available in Mac OS X v10.6 and later.

98.5.39 linkItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a hard link between the items at the specified paths.
Notes: Source: The path that specifies the item you wish to link to. The value in this parameter must not be nil.
Dest: The path that identifies the location where the link will be created. The value in this parameter must not be nil.
error: If an error occurs, this pointer is set to an actual error object containing the error information.

Returns true if the hard link was created or NO if an error occurred. This method also returns false if a file, directory, or link already exists at dstPath.

Use this method to create hard links between files in the current file system. If Source is a directory, this method creates a new directory at Dest and then creates hard links for the items in that directory. If Source is (or contains) a symbolic link, the symbolic link is copied to the new location and not converted to a hard link.

Available in OS X v10.5 and later.
See also:

- 98.5.40 linkItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 14938

98.5.40 linkItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Platform: macOS, Targets: All.

Function: Creates a hard link between the items at the specified paths.
Notes: Source: The path that specifies the item you wish to link to. The value in this parameter must not be nil.
Dest: The path that identifies the location where the link will be created. The value in this parameter must not be nil.
error: If an error occurs, this pointer is set to an actual error object containing the error information.

Returns true if the hard link was created or NO if an error occurred. This method also returns false if a file, directory, or link already exists at dstPath.

Use this method to create hard links between files in the current file system. If Source is a directory, this method creates a new directory at Dest and then creates hard links for the items in that directory. If Source is (or contains) a symbolic link, the symbolic link is copied to the new location and not converted to a hard link.

Available in OS X v10.5 and later.
See also:

- 98.5.39 linkItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 14938

98.5.41 moveItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Moves the file or directory at the specified path to a new location synchronously.
Notes: source: The path to the file or directory you want to move. This parameter must not be nil.
dest: The new path for the item in Source. This path must include the name of the file or directory in its new location. This parameter must not be nil.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was moved successfully or the file manager's delegate aborted the operation deliberately. Returns NO if an error occurred.

When moving items, the current process must have permission to read the item at Source and write the parent directory of Dest. If the item at Source is a directory, this method moves the directory and all of its contents, including any hidden files. If an item with the same name already exists at Dest, this method aborts the move attempt and returns an appropriate error. If the last component of Source is a symbolic link, only the link is moved to the new path; the item pointed to by the link remains at its current location.

If the source and destination of the move operation are not on the same volume, this method copies the item first and then removes it from its current location. This behavior may trigger additional delegate notifications related to copying and removing individual items.

Available in OS X v10.5 and later.
See also:

- 98.5.42 moveItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 14939

98.5.42 moveItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Platform: macOS, Targets: All.

Function: Moves the file or directory at the specified path to a new location synchronously.
Notes: source: The path to the file or directory you want to move. This parameter must not be nil.
dest: The new path for the item in Source. This path must include the name of the file or directory in its new location. This parameter must not be nil.

error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was moved successfully or the file manager's delegate aborted the operation deliberately. Returns NO if an error occurred.

When moving items, the current process must have permission to read the item at Source and write the parent directory of Dest. If the item at Source is a directory, this method moves the directory and all of its contents, including any hidden files. If an item with the same name already exists at Dest, this method aborts the move attempt and returns an appropriate error. If the last component of Source is a symbolic link, only the link is moved to the new path; the item pointed to by the link remains at its current location.

If the source and destination of the move operation are not on the same volume, this method copies the item first and then removes it from its current location. This behavior may trigger additional delegate notifications related to copying and removing individual items.

Available in OS X v10.5 and later.
See also:

- 98.5.41 moveItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 14939

98.5.43 NSFileAppendOnly as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates whether the file is read-only.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.2 and later.

98.5.44 NSFileBusy as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates whether the file is busy.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.4 and later.

98.5.45 NSFileCreationDate as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's creation date.
The corresponding value is a date.
Available in Mac OS X v10.2 and later.

98.5.46 NSFileDeviceIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the identifier for the device on which the file resides.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.0 and later.

98.5.47 NSFileExtensionHidden as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates whether the file's extension is hidden.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.1 and later.

98.5.48 NSFileGroupOwnerAccountID as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var fileManager As New NSFileManagerMBS

Var error as NSErrorMBS
Var Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
```

```
Var Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Group: "+_
values.Value(fileManager.NSFileGroupOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileGroupOwnerAccountName)
```

Notes: The key in a file attribute dictionary whose value indicates the file's group ID.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.2 and later.

98.5.49 NSFileGroupOwnerAccountName as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var fileManager As New NSFileManagerMBS

Var error as NSErrorMBS
Var Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Var Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Group: "+_
values.Value(fileManager.NSFileGroupOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileGroupOwnerAccountName)
```

Notes: The key in a file attribute dictionary whose value indicates the group name of the file's owner.
The corresponding value is a string.
Available in Mac OS X v10.0 and later.

98.5.50 NSFileHFSCreatorCode as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's HFS creator code.
The corresponding value is a number containing an Int32. See "HFS File Types" for possible values.
Available in Mac OS X v10.1 and later.

98.5.51 NSFileHFSTypeCode as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's HFS type code.
The corresponding value is a number containing an Int32. See "HFS File Types" for possible values.
Available in Mac OS X v10.1 and later.

98.5.52 NSFileImmutable as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var n As New NSFileManagerMBS
Var e as NSErrorMBS
Var d As Dictionary = n.attributesOfItemAtPath("/Users/cs/Desktop/test.rtf", e)
Var locked as Boolean = d.Lookup(n.NSFileImmutable, false)

Break // inspect in debugger
```

Notes: The key in a file attribute dictionary whose value indicates whether the file is mutable.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.2 and later.

98.5.53 NSFileManagerUnmountDissentingProcessIdentifierErrorKey as string

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The key for the error dictionary containing process ID of the process blocking the unmount.

98.5.54 NSFileModificationDate as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes,

attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's last modified date.
The corresponding value is a date.
Available in Mac OS X v10.0 and later.

98.5.55 NSFileOwnerAccountID as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var fileManager As New NSFileManagerMBS

Var error as NSErrorMBS
Var Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Var Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Owner: "+_
values.Value(fileManager.NSFileOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileOwnerAccountName)
```

Notes: The key in a file attribute dictionary whose value indicates the file's owner's account ID.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.2 and later.

98.5.56 NSFileOwnerAccountName as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var fileManager As New NSFileManagerMBS

Var error as NSErrorMBS
Var Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Var Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

'MsgBox "POSIX Permissions: "+Oct(Permissions)
```

```
MsgBox "Owner: "+_
values.Value(fileManager.NSFileOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileOwnerAccountName)
```

Notes: The key in a file attribute dictionary whose value indicates the name of the file's owner.
The corresponding value is a string.
Available in Mac OS X v10.0 and later.

98.5.57 NSFilePosixPermissions as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var fileManager As New NSFileManagerMBS

Var error as NSErrorMBS
Var Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Var Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "POSIX Permissions: "+oct(Permissions)
```

Notes: The key in a file attribute dictionary whose value indicates the file's Posix permissions.
The corresponding value is a number.
Available in Mac OS X v10.0 and later.

98.5.58 NSFileReferenceCount as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's reference count.
The corresponding value is a number containing an Int32.
The number specifies the number of hard links to a file.
Available in Mac OS X v10.0 and later.

98.5.59 NSFileSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's size in bytes.
The corresponding value is a number containing an Int64.
Important If the file has a resource fork, the returned value does not include the size of the resource fork.

98.5.60 NSFileSystemFileNumber as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's filesystem file number.
The corresponding value is a number containing an Int32. The value corresponds to the value of st_ino, as returned by stat(2).
Available in Mac OS X v10.0 and later.

98.5.61 NSFileSystemFreeNodes as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes: The key in a file system attribute dictionary dictionary whose value indicates the number of free nodes in the file system.
The corresponding value is a number that specifies the number of free nodes in the file system.
Available in Mac OS X v10.0 and later.

98.5.62 NSFileSystemFreeSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes: The key in a file system attribute dictionary whose value indicates the amount of free space on the file system.
The corresponding value is a number that specifies the amount of free space on the file system in bytes. The value is determined by statfs().

Available in Mac OS X v10.0 and later.

98.5.63 NSFileSystemNodes as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes: The key in a file system attribute dictionary whose value indicates the number of nodes in the file system.
The corresponding value is a number that specifies the number of nodes in the file system.
Available in Mac OS X v10.0 and later.

98.5.64 NSFileSystemNumber as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes: The key in a file system attribute dictionary dictionary whose value indicates the filesystem number of the file system.
The corresponding value is a number that specifies the filesystem number of the file system. The value corresponds to the value of st_dev, as returned by stat(2).
Available in Mac OS X v10.0 and later.

98.5.65 NSFileSystemSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes: The key in a file system attribute dictionary whose value indicates the size of the file system.
The corresponding value is a number that specifies the size of the file system in bytes. The value is determined by statfs().
Available in Mac OS X v10.0 and later.

98.5.66 NSFileType as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the keys to access file attribute values contained in dictionary used by setAttributes,

attributesOfItemAtPath, createDirectory, and createFile.
Notes: The key in a file attribute dictionary whose value indicates the file's type.
The corresponding value is a string (see NSFileType* shared methods for possible values).
Available in Mac OS X v10.0 and later.

98.5.67 NSFileTypeBlockSpecial as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Example:

```
// check first hard disc
Var e as NSErrorMBS
Var n as new NSFileManagerMBS
Var d as Dictionary = n.attributesOfItemAtPath("/dev/disk0", e)
MsgBox d.Value(n.NSFileType)
```

Notes: Block special file (e.g. hard disk)

98.5.68 NSFileTypeCharacterSpecial as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Notes: Character special file

98.5.69 NSFileTypeDirectory as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Example:

```
Var e as NSErrorMBS
Var n as new NSFileManagerMBS
Var d as Dictionary = n.attributesOfItemAtPath("/System", e)
MsgBox d.Value(n.NSFileType)
```

Notes: Directory

98.5.70 NSFileTypeRegular as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Notes: Regular file

98.5.71 NSFileTypeSocket as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Notes: Socket (a socket visible in file system as a file)

98.5.72 NSFileTypeSymbolicLink as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Notes: Symbolic link

98.5.73 NSFileTypeUnknown as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: One of the possible NSFileType values.
Notes: Unknown

98.5.74 NSUbiquityIdentityDidChangeNotification as string

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Sent after the iCloud (‚Äúubiquity‚Äù) identity has changed.
Notes: The system generates this notification when the user logs into or out of an iCloud account or enables or disables the syncing of documents and data. This notification is your cue to update caches and any interface elements displaying iCloud–related content. For example, hide all references to iCloud files when the user logs out of iCloud.
When your app receives this notification, get the new token from the NSURLRelationship property. The value of that token is nil if the user disabled iCloud or logged out. There is no userInfo dictionary.

98.5.75 pathExtension(pathOrURL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns the path extension of a file URL or file path.
Notes: Available in Mac OS X v10.6 and later.

98.5.76 removeItem(file as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Removes the file or directory at the specified path.
Notes: path: A path string indicating the file or directory to remove. If the path specifies a directory, the contents of that directory are recursively removed.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was removed successfully or if path was nil. Returns false if an error occurred. If the delegate aborts the operation for a file, this method returns true. However, if the delegate aborts the operation for a directory, this method returns false.

Available in OS X v10.5 and later.
See also:

- 98.5.77 removeItem(path as string, byref error as NSErrorMBS) as boolean 14950

98.5.77 removeItem(path as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Removes the file or directory at the specified path.
Notes: path: A path string indicating the file or directory to remove. If the path specifies a directory, the contents of that directory are recursively removed.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was removed successfully or if path was nil. Returns false if an error occurred. If the delegate aborts the operation for a file, this method returns true. However, if the delegate aborts the operation for a directory, this method returns false.

Available in OS X v10.5 and later.
See also:

- 98.5.76 removeItem(file as folderitem, byref error as NSErrorMBS) as boolean 14950

98.5.78 replaceItem(originalItem as FolderItem, newItem as FolderItem, backupItemName as String, options as integer, byref resultingItem as FolderItem, byref error as NSErrorMBS) as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.3, Platform: macOS, Targets: All.

Function: Replaces the contents of the item at the specified URL in a manner that ensures no data loss occurs.
Example:

```
Var fileManager As New NSFileManagerMBS

Var source As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Var dest As FolderItem = SpecialFolder.Desktop.Child("dest.rtf")

Var result As Boolean
Var output As FolderItem
Var error As NSErrorMBS

result = fileManager.replaceItemAtURL(dest, source, "", 0, output, error)

If result Then
MsgBox output.NativePath
Else
MsgBox error.LocalizedDescription
End If
```

Notes: originalItem: The item containing the content you want to replace.
newItem: The item containing the new content for originalItem. It is recommended that you put this item in a temporary directory as provided by the OS. If a temporary directory is not available, put this item in a uniquely named directory that is in the same directory as the original item.
backupItemName: If provided, the name used to create a backup of the original item.
The backup is automatically placed in the same directory as the original item. If an error occurs during the creation of the backup item, the operation fails. If there is already an item with the same name as the backup item, that item will be removed.
The backup item will be removed in the event of success unless the NSFileManagerItemReplacementWithoutDeletingBackupItem option is provided in options.
options: The options to use during the replacement. Typically, you pass NSFileManagerItemReplacementUsingNewMetadataOnly for this parameter, which uses only the metadata from the new item. You can also combine the options described in NSFileManagerItemReplacementOptions using the C-bitwise OR operator.
resultingItem: On input, a variale for a folderitem variable. When the item is replaced, this variable is set to the folderitem of the new item. If no new file system object is required, the folderitem in this parameter may be the same passed to the originalItem parameter. However, if a new file system object is required, the folderitem may be different. For example, replacing an RTF document with an RTFD document requires the creation of a new file.
error: On input, a variable for an error object. If an error occurs, this variable is set to an error object containing the error information.

Returns true if the replacement was successful or false if an error occurred.

By default, the creation date, permissions, Finder label and color, and Spotlight comments of the original item are preserved on the new item. You can configure which metadata is preserved using the options parameter.
This method works only when the originalItem and newItem parameters are located on the same volume. Attempting to call this method by passing originalItem and newItem parameters that have locations on different volumes results in an error. Instead, you can call the URLForDirectory method, passing NSItemReplacementDirectory as the search path directory, to get a temporary URL on the destination's volume that is suitable for use with this method.
If an error occurs and the original item is not in the original location or a temporary location, the resulting error object contains a user info dictionary with the key "NSFileOriginalItemLocationKey". The value assigned to that key is an URL with the location of the item. The error code is one of the file-related errors described in NSError Codes.

98.5.79 replaceItemAtURL(originalItemURL as string, newItemURL as String, backupItemName as String, options as integer, byref resultingURL as String, byref error as NSErrorMBS) as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.3, Platform: macOS, Targets: All.

Function: Replaces the contents of the item at the specified URL in a manner that ensures no data loss occurs.
Notes: originalItemURL: The item containing the content you want to replace.
newItemURL: The item containing the new content for originalItemURL. It is recommended that you put this item in a temporary directory as provided by the OS. If a temporary directory is not available, put this item in a uniquely named directory that is in the same directory as the original item.
backupItemName: If provided, the name used to create a backup of the original item.
The backup is automatically placed in the same directory as the original item. If an error occurs during the creation of the backup item, the operation fails. If there is already an item with the same name as the backup item, that item will be removed.
The backup item will be removed in the event of success unless the NSFileManagerItemReplacementWithoutDeletingBackupItem option is provided in options.
options: The options to use during the replacement. Typically, you pass NSFileManagerItemReplacementUsingNewMetadataOnly for this parameter, which uses only the metadata from the new item. You can also combine the options described in NSFileManagerItemReplacementOptions using the C-bitwise OR operator.
resultingURL: On input, a variale for an URL variable. When the item is replaced, this variable is set to the URL of the new item. If no new file system object is required, the URL object in this parameter may be the same passed to the originalItemURL parameter. However, if a new file system object is required, the URL object may be different. For example, replacing an RTF document with an RTFD document requires the creation of a new file.
error: On input, a variable for an error object. If an error occurs, this variable is set to an error object containing the error information.

Returns true if the replacement was successful or false if an error occurred.

By default, the creation date, permissions, Finder label and color, and Spotlight comments of the original item are preserved on the new item. You can configure which metadata is preserved using the options parameter.
This method works only when the originalItemURL and newItemURL parameters are located on the same volume. Attempting to call this method by passing originalItemURL and newItemURL parameters that have locations on different volumes results in an error. Instead, you can call the URLForDirectory method, passing NSItemReplacementDirectory as the search path directory, to get a temporary URL on the destination's volume that is suitable for use with this method.
If an error occurs and the original item is not in the original location or a temporary location, the resulting error object contains a user info dictionary with the key "NSFileOriginalItemLocationKey". The value assigned to that key is an URL with the location of the item. The error code is one of the file-related errors described in NSError Codes.

98.5.80 setAttributes(attributesDic as dictionary, item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Sets the attributes of the specified file or directory.
Notes: attributes: A dictionary containing as keys the attributes to set for path and as values the corresponding value for the attribute. You can set the following attributes: NSFileBusy, NSFileCreationDate, NSFileExtensionHidden, NSFileGroupOwnerAccountID, NSFileGroupOwnerAccountName, NSFileHFSCreatorCode, NSFileHFSTypeCode, NSFileImmutable, NSFileModificationDate, NSFileOwnerAccountID, NSFileOwnerAccountName, NSFilePosixPermissions. You can change single attributes or any combination of attributes; you need not specify keys for all attributes.
item: The folderitem of a file or directory.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if all changes succeed. If any change fails, returns false, but it is undefined whether any changes actually occurred.

Discussion
As in the POSIX standard, the application either must own the file or directory or must be running as superuser for attribute changes to take effect. The method attempts to make all changes specified in attributes and ignores any rejection of an attempted modification. If the last component of the path is a symbolic link it is traversed.

The NSFilePosixPermissions value must be initialized with the code representing the POSIX file-permissions bit pattern. NSFileHFSCreatorCode and NSFileHFSTypeCode will only be heeded when path specifies a file.

Available in Mac OS X v10.5 and later.

- 98.5.81 setAttributes(attributesDic as dictionary, path as string, byref error as NSErrorMBS) as boolean 14954

98.5.81 setAttributes(attributesDic as dictionary, path as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Sets the attributes of the specified file or directory.
Notes: attributes: A dictionary containing as keys the attributes to set for path and as values the corresponding value for the attribute. You can set the following attributes: NSFileBusy, NSFileCreationDate, NSFileExtensionHidden, NSFileGroupOwnerAccountID, NSFileGroupOwnerAccountName, NSFileHFSCreatorCode, NSFileHFSTypeCode, NSFileImmutable, NSFileModificationDate, NSFileOwnerAccountID, NSFileOwnerAccountName, NSFilePosixPermissions. You can change single attributes or any combination of attributes; you need not specify keys for all attributes.
path: The path of a file or directory.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if all changes succeed. If any change fails, returns false, but it is undefined whether any changes actually occurred.

Discussion
As in the POSIX standard, the application either must own the file or directory or must be running as superuser for attribute changes to take effect. The method attempts to make all changes specified in attributes and ignores any rejection of an attempted modification. If the last component of the path is a symbolic link it is traversed.

The NSFilePosixPermissions value must be initialized with the code representing the POSIX file-permissions bit pattern. NSFileHFSCreatorCode and NSFileHFSTypeCode will only be heeded when path specifies a file.

Available in Mac OS X v10.5 and later.
See also:

- 98.5.80 setAttributes(attributesDic as dictionary, item as folderitem, byref error as NSErrorMBS) as boolean 14953

98.5.82 setUbiquitous(flag as boolean, item as folderitem, destitem as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Sets whether the item at the specified URL should be stored in the cloud.
Notes: flag: Specify true to move the item to iCloud or false to remove it from iCloud (if it is there currently).

item: Specify the folderitem of the item (file or directory) that you want to store in iCloud.
destitem: Specify the location in iCloud at which to store the file or directory. This folderitem must be constructed from a folderitem returned by the URLForUbiquityContainerIdentifier method, which you use to retrieve the desired iCloud container directory. The folderitem you specify may contain additional subdirectories so that you can organize your files hierarchically in iCloud. However, you are responsible for creating those intermediate subdirectories (using the NSFileManagerMBS or folderitem class) in your iCloud container directory.
error: If an error occurs, this pointer is set to an NSError object containing information about the error. You may specify nil for this parameter if you do not want the error information.

Returns yes if the item's status was updated successfully or false if an error occurred. If this method returns false and you specified a value for the error parameter, this method returns an error object.

Use this method to move a file from its current location to iCloud. For files located in an application's sandbox, this involves physically removing the file from the sandbox directory. (The system extends your application's sandbox privileges to give it access to files it moves to iCloud.) You can also use this method to move files out of iCloud and back into a local directory.

Your application must have an active file presenter object configured to monitor the specified file or directory before calling this method. When you specify true for the flag parameter, this method attempts to move the file or directory to the cloud and returns true if it is successful. This method also notifies your file presenter of the new location of the file so that your application can continue to operate on it.

Important: Do not call this method from your application's main thread. This method performs a coordinated write operation on the file you specify, and calling this method from the main thread can trigger a deadlock with the file presenter you have monitoring the file. Instead, use a dispatch queue (other than the main thread queue) to perform the method call on a secondary thread. You can always message your main thread after the call finishes to update the rest of your application's data structures.

Available in Mac OS X v10.7 and later.

- 98.5.83 setUbiquitous(flag as boolean, item as folderitem, destURL as string, byref error as NSErrorMBS) as boolean 14955

98.5.83 setUbiquitous(flag as boolean, item as folderitem, destURL as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Sets whether the item at the specified URL should be stored in the cloud.
Notes: flag: Specify true to move the item to iCloud or false to remove it from iCloud (if it is there currently).
item: Specify the folderitem of the item (file or directory) that you want to store in iCloud.

destitem: Specify the location in iCloud at which to store the file or directory. This folderitem must be constructed from a folderitem returned by the URLForUbiquityContainerIdentifier method, which you use to retrieve the desired iCloud container directory. The folderitem you specify may contain additional subdirectories so that you can organize your files hierarchically in iCloud. However, you are responsible for creating those intermediate subdirectories (using the NSFileManagerMBS or folderitem class) in your iCloud container directory.
error: If an error occurs, this pointer is set to an NSError object containing information about the error. You may specify nil for this parameter if you do not want the error information.

Returns yes if the item's status was updated successfully or false if an error occurred. If this method returns false and you specified a value for the error parameter, this method returns an error object.

Use this method to move a file from its current location to iCloud. For files located in an application's sandbox, this involves physically removing the file from the sandbox directory. (The system extends your application's sandbox privileges to give it access to files it moves to iCloud.) You can also use this method to move files out of iCloud and back into a local directory.

Your application must have an active file presenter object configured to monitor the specified file or directory before calling this method. When you specify true for the flag parameter, this method attempts to move the file or directory to the cloud and returns true if it is successful. This method also notifies your file presenter of the new location of the file so that your application can continue to operate on it.

Important: Do not call this method from your application's main thread. This method performs a coordinated write operation on the file you specify, and calling this method from the main thread can trigger a deadlock with the file presenter you have monitoring the file. Instead, use a dispatch queue (other than the main thread queue) to perform the method call on a secondary thread. You can always message your main thread after the call finishes to update the rest of your application's data structures.

Available in Mac OS X v10.7 and later.

- 98.5.82 setUbiquitous(flag as boolean, item as folderitem, destitem as folderitem, byref error as NSErrorMBS) as boolean 14954

98.5.84 startDownloadingUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Starts downloading (if necessary) the specified item to the local system.
Notes: item: Specify the folderitem for the file or directory in the cloud that you want to download.
error: On input, a pointer to variable for an NSError object. If an error occurs, this pointer is set to an NSError object containing information about the error. Y

Returns true if the download started successfully or was not necessary, otherwise false. If false is returned and error is not nil, an NSError object describing the error is returned in that parameter.

If a cloud-based file or directory has not been downloaded yet, calling this method starts the download process. If the item exists locally, calling this method synchronizes the local copy with the version in the cloud.

For a given folderitem, you can determine if a file is downloaded by getting the value of the IsDownloaded method. You can also use related methods to determine the current progress in downloading the file.

Available in Mac OS X v10.7 and later.
See also:

- 98.5.85 startDownloadingUbiquitousItem(URL as string, byref error as NSErrorMBS) as boolean 14957

98.5.85 startDownloadingUbiquitousItem(URL as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Starts downloading (if necessary) the specified item to the local system.
Notes: item: Specify the URL for the file or directory in the cloud that you want to download.
error: On input, a pointer to variable for an NSError object. If an error occurs, this pointer is set to an NSError object containing information about the error. Y

Returns true if the download started successfully or was not necessary, otherwise false. If false is returned and error is not nil, an NSError object describing the error is returned in that parameter.

If a cloud-based file or directory has not been downloaded yet, calling this method starts the download process. If the item exists locally, calling this method synchronizes the local copy with the version in the cloud.

For a given folderitem, you can determine if a file is downloaded by getting the value of the IsDownloaded method. You can also use related methods to determine the current progress in downloading the file.

Available in Mac OS X v10.7 and later.
See also:

- 98.5.84 startDownloadingUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean 14956

98.5.86 stringByAbbreviatingWithTildeInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string that replaces the current home directory portion of the current path with a tilde (
textasciitilde) character.
Notes: A new string based on the current string object. If the new string specifies a file in the current home directory, the home directory portion of the path is replaced with a tilde (
textasciitilde) character. If the string does not specify a file in the current home directory, this method returns a new string object whose path is unchanged from the path in the current string.

Note that this method only works with file paths. It does not work for string representations of URLs.

For sandboxed apps in OS X, the current home directory is not the same as the user,Äôs home directory. For a sandboxed app, the home directory is the app,Äôs home directory. So if you specified a path of /Users/<current_user>/file.txt for a sandboxed app, the returned path would be unchanged from the original. However, if you specified the same path for an app not in a sandbox, this method would replace the /Users/<current_user>portion of the path with a tilde.

98.5.87 stringByAppendingPathComponent(path as string, Component as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by appending to the receiver a given string.
Notes: The following table illustrates the effect of this method on a variety of different paths, assuming that aString is supplied as ,Äúscratch.tiff,Äù:

Receiver,Äôs String Value	Resulting String
,Äú/tmp,Äù	,Äú/tmp/scratch.tiff,Äù
,Äú/tmp/,Äù	,Äú/tmp/scratch.tiff,Äù
,Äú/,Äù	,Äú/scratch.tiff,Äù
,Äú,Äù (an empty string)	,Äúscratch.tiff,Äù

Note that this method only works with file paths (not, for example, string representations of URLs).

98.5.88 stringByAppendingPathExtension(path as string, Extension as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by appending to the receiver an extension separator followed by a given extension.
Notes: The following table illustrates the effect of this method on a variety of different paths, assuming that ext is supplied as "tiff":

Receiver,Äôs String Value	Resulting String
,Äú/tmp/scratch.old,Äù	,Äú/tmp/scratch.old.tiff,Äù
,Äú/tmp/scratch.,Äù	,Äú/tmp/scratch..tiff,Äù
,Äú/tmp/,Äù	,Äú/tmp.tiff,Äù
,Äúscratch,Äù	,Äúscratch.tiff,Äù

Note that adding an extension to "/tmp/" causes the result to be "/tmp.tiff" instead of "/tmp/.tiff". This difference is because a file named ".tiff" is not considered to have an extension, so the string is appended to the last nonempty path component.

Note that this method only works with file paths (not, for example, string representations of URLs).

Special Considerations
Prior to OS X v10.9 this method did not allow you to append file extensions to filenames starting with the tilde character (
textasciitilde).

98.5.89 stringByDeletingLastPathComponent(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by deleting the last path component from the receiver, along with any final path separator.
Notes: A new string made by deleting the last path component from the receiver, along with any final path separator. If the receiver represents the root path it is returned unaltered.

The following table illustrates the effect of this method on a variety of different paths:

Receiver,Äôs String Value	Resulting String
,Äú/tmp/scratch.tiff,Äù	,Äú/tmp,Äù
,Äú/tmp/lock/,Äù	,Äú/tmp,Äù
,Äú/tmp/,Äù	,Äú/,Äù
,Äú/tmp,Äù	,Äú/,Äù
,Äú/,Äù	,Äú/,Äù
,Äúscratch.tiff,Äù	,Äú,Äù (an empty string)

Note that this method only works with file paths (not, for example, string representations of URLs).

98.5.90 stringByDeletingPathExtension(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by deleting the extension (if any, and only the last) from the receiver.
Notes: A new string made by deleting the extension (if any, and only the last) from the receiver. Strips any trailing path separator before checking for an extension. If the receiver represents the root path, it is returned unaltered.

The following table illustrates the effect of this method on a variety of different paths:

Receiver,Äôs String Value	Resulting String
,Äú/tmp/scratch.tiff,Äù	,Äú/tmp/scratch,Äù
,Äú/tmp/,Äù	,Äú/tmp,Äù
,Äúscratch.bundle/,Äù	,Äúscratch,Äù
,Äúscratch..tiff,Äù	,Äúscratch.,Äù
,Äú.tiff,Äù	,Äú.tiff,Äù
,Äú/,Äù	,Äú/,Äù

Note that attempting to delete an extension from ".tiff" causes the result to be @".tiff" instead of an empty string. This difference is because a file named ".tiff" is not considered to have an extension, so nothing is deleted. Note also that this method only works with file paths (not, for example, string representations of URLs).

98.5.91 stringByExpandingTildeInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by expanding the initial component of the receiver to its full path value.
Notes: A new string made by expanding the initial component of the receiver, if it begins with ,Äú
textasciitilde ,Äù or ,Äú
textasciitilde user,Äù, to its full path value. Returns a new string matching the receiver if the receiver,Äôs initial component can,Äôt be expanded.

Note that this method only works with file paths (not, for example, string representations of URLs).

98.5.92 stringByResolvingSymlinksInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made from the receiver by resolving all symbolic links and standardizing path.
Notes: A new string made by resolving all symbolic links, then removing extraneous path components. For absolute paths, all symbolic links are guaranteed to be removed. For relative paths, symbolic links that can,Äôt be resolved are left unresolved in the returned string.

Returns self if an error occurs.

Note that this method only works with file paths (not, for example, string representations of URLs).

98.5.93 stringByStandardizingPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Platform: macOS, Targets: All.

Function: Returns a new string made by removing extraneous path components from the receiver.
Notes: A new string made by performing the following operations:

- Expanding an initial tilde expression using stringByExpandingTildeInPath.
- Removing an initial component of ,Äú/private/var/automount,Äù, ,Äú/var/automount,Äù, or ,Äú/private,Äù from the path, if the result still indicates an existing file or directory (checked by consulting the file system).
- Reducing empty components and references to the current directory (that is, the sequences ,Äú//,Äù and ,Äú/./,Äù) to single path separators.
- Removing a trailing slash from the last component.
- For absolute paths only, resolving references to the parent directory (that is, the component ,Äú..,Äù) to the real parent directory if possible using stringByResolvingSymlinksInPath. For relative paths, references to the parent directory are left in place.
- Returns self if an error occurs.

Note that the path returned by this method may still have symbolic link components in it. Note also that this method only works with file paths (not, for example, string representations of URLs).

98.5.94 trashItem(file as folderItem, byref Resulting as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Moves an item to the trash.
Notes: Returns true if the item at url was successfully moved to the trash. Since the operation may require renaming the item to avoid a file name collision, this method returns, by reference, the resulting folderitem that the item was moved to.

If this method returns false, the item was not moved to the trash; the error parameter then contains information about the error.

Available in OS X v10.8 and later.
See also:

- 98.5.95 trashItem(Path as String, byref Resulting as FolderItem, byref error as NSErrorMBS) as boolean 14962

98.5.95 trashItem(Path as String, byref Resulting as FolderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Platform: macOS, Targets: All.

Function: Moves an item to the trash.
Notes: Returns true if the item at url was successfully moved to the trash. Since the operation may require renaming the item to avoid a file name collision, this method returns, by reference, the resulting folderitem that the item was moved to.

If this method returns false, the item was not moved to the trash; the error parameter then contains information about the error.

Available in OS X v10.8 and later.
See also:

- 98.5.94 trashItem(file as folderItem, byref Resulting as folderItem, byref error as NSErrorMBS) as boolean 14961

98.5.96 URLByAppendingPathComponent(URL as string, pathComponent as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL made by appending a path component to the original URL.
Notes: pathComponent: The path component to add to the URL.

Returns a new URL with pathComponent appended.

If the original URL does not end with a forward slash and pathComponent does not begin with a forward slash, a forward slash is inserted between the two parts of the returned URL, unless the original URL is the empty string.

Available in Mac OS X v10.6 and later.
See also:

- 98.5.97 URLByAppendingPathComponent(URL as string, pathComponent as string, isDirectory as boolean) as string 14963

98.5.97 URLByAppendingPathComponent(URL as string, pathComponent as string, isDirectory as boolean) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL made by appending a path component to the original URL, along with a trailing slash if the component is designated a directory.
Notes: pathComponent: The path component to add to the URL.
isDirectory: If true, a trailing slash is appended after pathComponent.
Returns a new URL with pathComponent appended.

If the original URL does not end with a forward slash and pathComponent does not begin with a forward slash, a forward slash is inserted between the two parts of the returned URL, unless the original URL is the empty string.

Available in Mac OS X v10.7 and later.
See also:

- 98.5.96 URLByAppendingPathComponent(URL as string, pathComponent as string) as string 14962

98.5.98 URLByAppendingPathExtension(URL as string, pathExtension as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL made by appending a path extension to the original URL.
Notes: pathExtension: The path extension to add to the URL.

Returns a new URL with pathExtension appended.

If the original URL ends with one or more forward slashes, these are removed from the returned URL. A period is inserted between the two parts of the new URL.

Available in Mac OS X v10.6 and later.

98.5.99 URLByDeletingLastPathComponent(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL made by deleting the last path component from the original URL.
Notes: If the original URL represents the root path, the returned URL is identical. Otherwise, if the original URL has only one path component, the new URL is the empty string.
Available in Mac OS X v10.6 and later.

98.5.100 URLByDeletingPathExtension(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL made by deleting the path extension, if any, from the original URL.
Notes: If the original URL represents the root path, the returned URL is identical. If the URL has multiple path extensions, only the last one is removed.
Available in Mac OS X v10.6 and later.

98.5.101 URLByResolvingSymlinksInPath(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL that points to the same resource as the original URL and includes no symbolic links.
Notes: If the original URL has no symbolic links, the returned URL is identical to the original URL.

This method only works on URLs with the file: path scheme. This method will return an identical URL for all other URLs.

Available in Mac OS X v10.6 and later.

98.5.102 URLByStandardizingPath(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns a new URL that points to the same resource as the original URL and is an absolute path.
Notes: This method only works on URLs with the file: path scheme. This method will return an identical

URL for all other URLs.

Available in Mac OS X v10.6 and later.

98.5.103 URLForPublishingUbiquitousItem(item as folderitem, byref expirationDate as date, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a URL that can be emailed to users to allow them to download a copy of a cloud-based item.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")

Var error as NSErrorMBS
Var exdate as date
Var url as string = m.URLForPublishingUbiquitousItem(f, exdate, error)

// always fails as desktop folder is not in cloud
if error<>nil then
MsgBox error.localizedDescription
end if
```

Notes: url: Specify the URL of the item in the cloud that you want to share. The URL must be prefixed with the base URL returned from the URLForUbiquityContainerIdentifier method that corresponds to the item's location.
expirationDate: On output, this parameter contains the date after which the item is no longer available at the returned URL.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns an URL with which users can download a copy of the item at url. Returns nil if the URL could not be created for any reason.

Discussion
This method creates a snapshot of the specified file and places that copy in a temporary iCloud location where it can be accessed by other users using the returned URL. The snapshot reflects the contents of the file at the time the URL was generated and is not updated when subsequent changes are made to the original file in the user's iCloud storage. The snapshot file remains available at the specified URL until the date specified in the outDate parameter, after which it is automatically deleted.

Your application must have access to the network for this call to succeed.
Available in Mac OS X v10.7 and later.
See also:

- 98.5.104 URLForPublishingUbiquitousItem(URL as string, byref expirationDate as date, byref error as NSErrorMBS) as string

98.5.104 URLForPublishingUbiquitousItem(URL as string, byref expirationDate as date, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a URL that can be emailed to users to allow them to download a copy of a cloud-based item.
Notes: url: Specify the URL of the item in the cloud that you want to share. The URL must be prefixed with the base URL returned from the URLForUbiquityContainerIdentifier method that corresponds to the item's location.
expirationDate: On output, this parameter contains the date after which the item is no longer available at the returned URL.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns an URL with which users can download a copy of the item at url. Returns nil if the URL could not be created for any reason.

Discussion
This method creates a snapshot of the specified file and places that copy in a temporary iCloud location where it can be accessed by other users using the returned URL. The snapshot reflects the contents of the file at the time the URL was generated and is not updated when subsequent changes are made to the original file in the user's iCloud storage. The snapshot file remains available at the specified URL until the date specified in the outDate parameter, after which it is automatically deleted.

Your application must have access to the network for this call to succeed.
Available in Mac OS X v10.7 and later.
See also:

- 98.5.103 URLForPublishingUbiquitousItem(item as folderitem, byref expirationDate as date, byref error as NSErrorMBS) as string 14966

98.5.105 URLForUbiquityContainerIdentifier(containerIdentifier as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Returns the iCloud directory associated with the specified container ID.
Notes: containerID: Specify the container ID of the cloud-based storage container. The string you specify must not contain wildcards and must be of the form <TEAMID>.<CONTAINER>, where <TEAMID>is your development team ID and <CONTAINER>describes the bundle identifier of the container you want to access. The container identifiers for your application must be declared in the com.apple.developer.ubiquity-container-identifiers entitlement.
If you specify "", this method returns the first container listed in the com.apple.developer.ubiquity-container-identifiers entitlement.

Returns a folderitem pointing to the specified container directory or nil if the container could not be located or if iCloud storage is unavailable for the current user or device.

You can use the folderitem returned by this method to build paths to files and directories in the user's iCloud storage. Each application that syncs documents to the cloud must have at least one associated container directory in which to put those files. This container directory can be unique to the application or shared by multiple applications. You use this method to retrieve the folderitem for that container directory.

In addition to writing to its own container directory, an application can write to any container directory for which it has the appropriate permission. Each additional container directory should be listed as an additional value in the com.apple.developer.ubiquity-container-identifiers entitlement.

Note: The development team ID that precedes each container ID string is the unique identifier associated with your development team. You can find this string in the Member Center of the Apple Developer website (http://developer.apple.com/membercenter). From the Member Center home page, select the Your Account tab and then select Organization Profile from the column on the left of that tab. Your team's identifier is in the Company/Organization ID field.
The first time you call this method for a given container directory, iOS extends your application sandbox to include that container directory. Thus, it is important that you call this method at least once before trying to search for files in iCloud. And if your application accesses multiple container directories, you should call the method once for each directory.

Available in Mac OS X v10.7 and later.
FileForUbiquityContainerIdentifier returns folderitem while URLForUbiquityContainerIdentifier returns URL string.

98.5.106 Properties

98.5.107 currentDirectory as folderitem

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the path of the program's current directory.
Example:

```
Var m as new NSFileManagerMBS
Var f as FolderItem = SpecialFolder.Applications
if m.changeCurrentDirectory(f) then
MsgBox m.currentDirectory.NativePath
end if
```

Notes: Returns the path of the program's current directory. If the program's current working directory isn't accessible, returns nil.

The string returned by this method is initialized to the current working directory; you can change the working directory by invoking changeCurrentDirectoryPath.

Relative pathnames refer implicitly to the current directory. For example, if the current directory is /tmp, and the relative pathname reports/info.txt is specified, the resulting full pathname is /tmp/reports/info.txt.
(Read only property)

98.5.108 currentDirectoryPath as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the path of the program's current directory as string.
Example:

```
Var m as new NSFileManagerMBS
MsgBox m.currentDirectoryPath
```

Notes: Returns the path of the program's current directory. If the program's current working directory isn't accessible, returns "".

The string returned by this method is initialized to the current working directory; you can change the working directory by invoking changeCurrentDirectoryPath.

Relative pathnames refer implicitly to the current directory. For example, if the current directory is /tmp, and the relative pathname reports/info.txt is specified, the resulting full pathname is /tmp/reports/info.txt.
(Read only property)

98.5.109 defaultManager as NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The default manager.
Notes: This is just one global property, so we only create instance on first call and than return the same instance again.
(Read only property)

98.5.110 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

98.5.111 homeDirectoryForCurrentUser as FolderITem

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the home directory for the current user.
Notes: (Read only property)

98.5.112 temporaryDirectory as FolderITem

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Returns the temporary directory for the current user.
Notes: (Read only property)

98.5.113 Constants

Constants

Constant	Value	Description
NSDirectoryEnumerationSkipsHiddenFiles	4	One of the option constants for enumerating the the contentsOfDirectoryAtURL method. Do not enumerate hidden files. Available in Mac OS X v10.6 and later.
NSDirectoryEnumerationSkipsPackageDescendants	2	One of the option constants for enumerating the the contentsOfDirectoryAtURL method. Do not descend into packages. Available in Mac OS X v10.6 and later.
NSDirectoryEnumerationSkipsSubdirectoryDescendants	1	One of the option constants for enumerating the the contentsOfDirectoryAtURL method. Perform a shallow enumeration; do not descend i Available in Mac OS X v10.6 and later.
NSFileManagerItemReplacementUsingNewMetadataOnly	1	One of the options constants to specify the repla anagerItemReplacementWithoutDeletingBackupI Causes NSFileManagerItemReplacementWithou metadata from the new item only and not to a from the original item. Available in Mac OS X v10.6 and later.
NSFileManagerItemReplacementWithoutDeletingBackupItem	2	One of the options constants to specify the repla anagerItemReplacementWithoutDeletingBackupI Causes NSFileManagerItemReplacementWithout the backup item in place after a successful replac is to remove the item. Available in Mac OS X v10.6 and later.
NSVolumeEnumerationProduceFileReferenceURLs	4	One of the option constants for enumerating mou edVolumeURLsIncludingResourceValuesForKeys The enumeration produces file reference URLs ra Available in Mac OS X v10.6 and later.
NSVolumeEnumerationSkipHiddenVolumes	2	One of the option constants for enumerating mou edVolumeURLsIncludingResourceValuesForKeys The enumeration skips hidden volumes. Available in Mac OS X v10.6 and later.

Unmount options

Constant	Value	Description
NSFileManagerUnmountAllPartitionsAndEjectDisk	1	Unmount all partitions of this disk and eject it.
NSFileManagerUnmountWithoutUI	2	Unmount without user interface.

Relationships

Constant	Value	Description
NSURLRelationshipContains	0	The directory contains the specified item.
NSURLRelationshipOther	2	The directory does not contain the item and is not the same as the item.
NSURLRelationshipSame	1	The directory and the item are the same. This relationship occurs when the value of the NSURLFileResourceIdentifierKey is the same for the directory and item.

98.6 class NSFilePresenterHandlerMBS

98.6.1 class NSFilePresenterHandlerMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The class for a callback.
Notes: Some iCloud related functions in NSFileCoordinatorMBS or NSFilePresenterMBS require that you call a function to notify the caller that you are finished doing some work.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

98.6.2 Methods

98.6.3 Destructor

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Cleans up.

98.6.4 Run(errorOrNil as NSErrorMBS = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Calls the callback.
Notes: As some callbacks ask for an error object in case of an error, you can pass one.
Other callbacks don't take a parameter.

98.7 class NSFilePresenterMBS

98.7.1 class NSFilePresenterMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The plugin class to implement the NSFilePresenter protocol.
Notes: A protocol to be implemented by objects that present the contents of files or directories to the user for viewing or editing. The objects can take an active role in operations that access those files or directories, even operations performed by other processes in the system. For an NSFilePresenter to be aware of such file access it must be "coordinated" file access. Starting in version 10.7 many components of Mac OS X use NSFileCoordinatorMBS, including AppKit, Finder, and various applications. NSDocument conforms to the NSFilePresenter protocol and has useful implementations of all of its methods. You are unlikely to have to implement NSFilePresenter yourself in an NSDocument-based application.

See the comments for NSFileCoordinator.Constructor for information about how an NSFilePresenter can avoid receiving messages about its own reading and writing.

You can consider "item" in method names in this header file to be an abbreviation of "fileOrDirectory." As always, a directory might actually be a file package.

Please also check the documentation from Apple for the NSFilePresenter protocol.

- MBS Real Studio Plugins, version 11.3pr9

98.7.2 Methods

98.7.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The constructor.

98.7.4 Destructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The destructor.

98.7.5 Properties

98.7.6 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference to the NSFilePresenter object.
Notes: (Read and Write property)

98.7.7 Events

98.7.8 accommodatePresentedItemDeletionWithCompletionHandler(Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells your object that its presented item is about to be deleted.
Notes: Complete: The complete handler object to call after updating your data structures. Pass nil to the run method's errorOrNil parameter if you were able to successfully prepare for the deletion of the item. Pass an error object if your object could not prepare itself properly.

A file coordinator calls this method when your object's presented item is about to be deleted. You can use this method to perform any actions that are needed to prepare for the deletion. For example, document objects typically use this method to close the document.

Important: If you implement this method, you must execute the run method in the complete parameter at the end of your implementation. The system waits for you to execute that method before allowing the other object to delete the file or directory. Therefore, failure to execute the method could stall threads in your application or other processes.

Available in Mac OS X v10.7 and later.

98.7.9 accommodatePresentedSubitemDeletionAtURL(URL as string, file as FolderItem, Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that some entity wants to delete an item that is inside of a presented directory. (required)
Notes: url: The URL of the item being deleted from the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.

complete: The complete handler object to call after updating your data structures. Pass nil to the run method's errorOrNil parameter if you were able to successfully prepare for the deletion of the item. Pass an error object if your object could not prepare itself properly.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. When called, your implementation of this method should take whatever actions needed to update your application to handle the deletion of the specified file.

Important: If you implement this method, you must execute the run method in the Complete parameter at the end of your implementation. The system waits for you to execute that method before allowing the other object to delete the item at the specified URL. Therefore, failure to execute the method could stall threads in your application or in other processes.

Available in Mac OS X v10.7 and later.

98.7.10 presentedItemDidChange

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: This event is called when the item changed.
Notes: Be notified that the file or file package's contents or attributes have been been written to. Because this method may be be invoked when the attributes have changed but the contents have not, implementations that read the contents must use modification date checking to avoid needless rereading. They should check that the modification date has changed since the receiver most recently read from or wrote to the item. To avoid race conditions, getting the modification date should typically be done within invocations of one of the NSFileCoordinatorMBS.coordinate... methods.

For example, NSDocument implements this method to react to both contents changes (like the user overwriting the document file with another application) and attribute changes (like the user toggling the "Hide extension" checkbox in a Finder info panel). It uses modification date checking as described above.

Not all programs use file coordination. Your NSFileProvider may be sent this message without being sent relinquishPresentedItemToWriter first. Make your application do the best it can in that case.

98.7.11 presentedItemDidGainVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Be notified that something in the system has added a version of the file or file package.

98.7.12 presentedItemDidLoseVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Be notified that something in the system has removed a version of the file or file package.

98.7.13 presentedItemDidMoveToURL(url as string, file as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Be notified that the file or directory has been moved or renamed, or a directory containing it has been moved or renamed.
Notes: A typical implementation of this method will cause subsequent invocations of presentedItemURL to return the new URL.

The new URL may have a different file name extension than the current value of the presentedItemURL property.

For example, NSDocument implements this method to handle document file moving and renaming. A shoebox application would only implement this method to be robust against surprising things like the user moving its data directory while the application is running.

Not all programs use file coordination. Your NSFileProvider may be sent this message without being sent relinquishPresentedItemToWriter first. Make your application do the best it can in that case.

98.7.14 presentedItemDidResolveConflictVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Be notified that something in the system has resolved a version of the file or file package.

98.7.15 presentedItemURL as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The URL that locates the file or directory that the receiver is presenting to the user.
Notes: Implementations of this method must be prepared to be invoked by Cocoa in any queue, at any time, including from within invocations of NSFileCoordinator methods. A nil value is valid and means that the presented item does not exist yet. An NSFilePresenter with a nil presentedItemURL will be asked for its presentedItemURL again when coordinated file access on behalf of that NSFilePresenter completes, in case the presented item was just created.

For example, NSDocument has a -presentedItemURL method that usually returns self.fileURL. In a shoebox application that stores the user's data in files somewhere on the user's computer you can implement this method to specify the directory that contains those files.

98.7.16 presentedSubitemAtURLdidGainVersion(URL as string, file as FolderItem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that the item inside the presented directory gained a new version. (required)
Notes: url: The URL of the item inside the presented directory that gained a new version. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: url as folderitem.
version: The file version object containing information about the new file version.

Your delegate can use this method to determine how to incorporate data from the new version of the item. This might involve incorporating the version silently or asking the user about how to proceed.

Available in Mac OS X v10.7 and later.

98.7.17 presentedSubitemAtURLdidLoseVersion(URL as string, file as FolderItem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that the item inside the presented directory lost an existing version. (required)
Notes: url: The URL of the item inside the presented directory that lost a version. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.
version: The file version object containing information about the version that was removed.

Your delegate can use this method to determine how to handle the loss of the specified file version. For an old version, you might not have to do anything. However, if your application is currently using the lost version, you would need to update your application's user interface or prompt the user about how to proceed.

Available in Mac OS X v10.7 and later.

98.7.18 presentedSubitemAtURLdidMoveToURL(oldURL as string, newURL as string, oldFile as folderitem, newFile as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that an item in the presented directory moved to a new location. (required)
Notes: oldURL: The original URL of the item inside the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
newURL: The new URL for the item. This URL may or may not be located inside the presented directory.
oldFile: oldURL as folderitem.
newFile: newURL as folderitem.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to handle the change in location of the specified item. For example, you might update references to the item in your application's data structures and refresh your user interface.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

98.7.19 presentedSubitemAtURLdidResolveConflictVersion(URL as string, file as FolderItem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that the item inside the presented directory had a version conflict resolved by an outside entity. (required)
Notes: url: The URL of the item inside the presented directory that was in conflict. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.
version: The version object containing the conflicting change.

Your delegate can use this method to respond to the resolution of a version conflict by a different file presenter. This might occur if a version of your application running on another device resolves the conflict first. You might then use this method to update your user interface to indicate that there is no longer a conflict.

Available in Mac OS X v10.7 and later.

98.7.20 presentedSubitemDidAppearAtURL(URL as string, file as FolderItem)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that an item was added to the presented directory. (required)
Notes: url: The URL of the item being added to the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as a folderitem.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to incorporate the new file or directory into the presented content. For example, you might add the new item to your application's data structures and refresh your user interface.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

98.7.21 presentedSubitemDidChangeAtURL(URL as string, file as FolderItem)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells the delegate that the contents or attributes of the specified item changed. (required)
Notes: url: The URL of the item in the presented directory that changed. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to handle the change in content or attributes of the specified item.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

98.7.22 primaryPresentedItemURL as string

MBS MacCloud Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The URL of a secondary item's primary presented file or directory. (read-only)
Notes: This property supports App Sandbox in OS X.

Some apps require access to secondary files or directories with names that are related to the primary, user-selected file. For example, a subtitle file, by convention, has the same name as its corresponding movie file, but with a different filename extension. If a movie player is sandboxed, an NSOpenPanel object will grant access only to the user-selected movie file (the primary item) and not its associated subtitle file (the secondary item).

To gain access to a secondary item, first register an NSFilePresenter object for it. At any point in its existence, a secondary item must be able to return an NSURL object to its primary item. This is done by using this property. When done accessing the secondary item, unregister the file presenter object.

Available in OS X v10.8 and later.

98.7.23 reacquirer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The reacquirer event.
Notes: Called when you can reacquire an object.
e.g. called by relinquishPresentedItemToReader method.

98.7.24 relinquishPresentedItemToReader(reader as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Notifies your object that another object or process wants to read the presented file or directory.
Notes: reader: A handler object. The reacquirer event is called to notify when the reader is done. If your object does not need to be notified, it can pass nil for the reacquirer block.

You use this method to provide an appropriate response when another object wants to read from your presented URL. For example, when this method is called, you might temporarily stop making changes to the file or directory. After taking any appropriate steps, you must execute the block in the reader parameter to let the waiting object know that it may now proceed with its task. If you want to be notified when the reader has completed its task, pass your own block to the reader and use that block to reacquire the file or URL for your own uses.

Important: If you implement this method, you must execute the run method in the reader parameter as part of your implementation. The system waits for you to execute that method before allowing the reader to operate on the file. Therefore, failure to execute the method could stall threads in your application or

other processes until the user takes corrective actions.

Your implementation of this method is executed using the queue in the presentedItemOperationQueue property. Your reacquirer event is executed on the queue associated with the reader.

Available in Mac OS X v10.7 and later.

98.7.25 relinquishPresentedItemToWriter(writer as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Notifies your object that another object or process wants to write to the presented file or directory.
Notes: writer: A complete handler object. The reacquirer event is called so that your object can be notified when the writer is done.

You use this method to provide an appropriate response when another object wants to write to your presented URL. For example, when this method is called, you would likely stop making changes to the file or directory. After taking any appropriate steps, you must execute the run method in the writer parameter to let the waiting object know that it may now proceed with its task.

Important: If you implement this method, you must execute the run method in the writer parameter at the end of your implementation. The system waits for you to execute that block before allowing the writer to operate on the file. Therefore, failure to execute the run method could stall threads in your application or other processes.
If the writer changes the file or directory, you do not need to incorporate those changes in your reacquirer block. Instead, implement the presentedItemDidChange method and use it to detect when a writer actually wrote its changes to disk.

Your implementation of this method is executed using the queue in the presentedItemOperationQueue property. Your reacquirer event is executed on the queue associated with the writer.

Available in Mac OS X v10.7 and later.

98.7.26 savePresentedItemChangesWithCompletionHandler(Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Tells your object to save any unsaved changes for the presented item.
Notes: Complete: The handler object to call after you save your changes. If you saved your changes suc-

cessfully, pass nil for the run's errorOrNil parameter; otherwise, pass an error object indicating why the changes could not be saved.

The file coordinator calls this method to ensure that all objects trying to access the file or directory see the same contents. Implement this method if your object can change the presented item in a way that requires you to write those changes back to disk. If your presenter object does not make changes that need to be saved, you do not need to implement this method.

Important: If you implement this method, you must execute the run method in the Complete parameter at the end of your implementation. The system waits for you to execute that block before allowing other objects to operate on the file. Therefore, failure to execute the run method could stall threads in your application or other processes.

Available in Mac OS X v10.7 and later.

98.8 class NSFileVersionMBS

98.8.1 class NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The class for different file versions on Mac OS X 10.7.
Notes: Instances of NSFileVersionMBS for the same version of the same file are equal, and instances of NSFileVersionMBS for different versions of the same file are not equal, but the equality of NSFileVersionMBSs for different files is undefined. Repeated invocations of the methods that return NSFileVersionMBSs do not necessarily return the exact same instance of NSFileVersionMBS.

An NSFileVersion object represents a snapshot of a file at a specific point in time. You use the NSFileVersion class to access and create and manage file revisions in your application. Each instance of this class contains meta information about a single revision, such as the location of the file containing the revision data, the modification date of the revision, and whether the revision is discardable.

In Mac OS X applications, you can use file version objects to track changes to a local file over time and to prevent the loss of data during editing. When managing local versions, the document architecture creates versions at specific points in the lifetime of your application. Your application can also create versions explicitly at times that your application designates as appropriate.

In addition to managing local files, the system also uses this class to manage cloud-based files. For files in the cloud, there is usually only one version of the file at any given time. However, additional file versions may be created in cases where two different computers attempt to save the file to the cloud at the same time. In that case, one file is chosen as the current version and any other versions are tagged as being in conflict with the original. Conflict versions are reported to the appropriate file presenter objects and should be resolved as soon as possible so that the corresponding files can be removed from the cloud.

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the NSFileVersion class.

Works also well with files in backup (Time Machine) to find older versions.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Lion features for Real Studio

98.8.2 Methods

98.8.3 addVersionOfItemAtURL(url as string, withContentsOfURL as string, options as Integer, byref error as NSErrorMBS) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Add a new version of the file located by a URL, with the contents coming from a file located by either the same or a different URL, and return a new instance that represents the version if successful.
Notes: If not successful, return false after setting Error to an NSErrorMBS that encapsulates why not.

You can add versions only on Mac OS X.

When adding or removing versions of a file you should do it as part of a "coordinated" write to the file. see NSFileCoordinatorMBS class. Using it properly ensures that NSFilePresenters of the file, or directories that contain the file, receive accurate notifications about versions being added or removed. For example, use NSFileCoordinatorMBS.coordinateWritingItemAtURL when the file URL and the contents url are the same. (NSFileVersion doesn't simply use NSFileCoordinator itself because that would be insufficient when the adding or removing of versions is part of a larger operation that should be treated as one coordinated file access.)

98.8.4 Conflict as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Whether the version was created as a result of the discovery of a conflict between two writers of the versioned file.
Notes: When two or more versions of a file are written at the same time, perhaps because the file is saved in the cloud and one or more of the writers were offline when they were writing, the system attempts to resolve the conflict automatically. It does this by picking one of the file versions to be the current file and setting this property to true for the other file version that are in conflict.

98.8.5 Constructor

MBS MacCloud Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

98.8.6 currentVersionOfItemAtURL(file as folderitem) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Convenience variant of currentVersionOfItemAtURL which takes folderitem.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

MsgBox n.localizedName
```

See also:

- 98.8.7 currentVersionOfItemAtURL(url as string) as NSFileVersionMBS 14986

98.8.7 currentVersionOfItemAtURL(url as string) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return an NSFileVersionMBS that represents the contents of the file located by a URL, or nil if there is no such file.
See also:

- 98.8.6 currentVersionOfItemAtURL(file as folderitem) as NSFileVersionMBS 14985

98.8.8 File as folderitem

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The location of the receiver's storage.
Notes: Or possibly nil if the receiver's storage has been deleted. The storage is read-only. The URL will have an arcane path. You must not derive user-presentable text from it.
If the URL does not represent a folderitem, this function gives nil.

98.8.9 FileURL(file as folderitem) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns URL for a folderitem.
Notes: Call is method in case you need to provide an URL for a folderitem.

98.8.10 localizedName as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The user-presentable name of the version, or possibly "" if the receiver's storage has been deleted.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)
MsgBox n.localizedName
```

Notes: This will be different from the user-presentable name of the versioned file if, for example, the file has been renamed since the version was added.

98.8.11 localizedNameOfSavingComputer as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The user-presentable name of the computer on which the version was saved, or possibly "" if the receiver's storage has been deleted, or "" if no computer name was recorded.
Notes: The computer name is guaranteed to have been recorded only if the version is a conflict version. This will be different from that computer's current name if the computer's name has been changed since the version was retrieved from that computer.

98.8.12 modificationDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The modification date of the version, or possibly nil if the receiver's storage has been deleted.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

MsgBox n.modificationDate.SQLDateTime
```

98.8.13 modificationDateTime as dateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The modification date of the version, or possibly nil if the receiver's storage has been deleted.

98.8.14 otherVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Convenience variant of otherVersionsOfItemAtURL taking a folderitem.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var n() as NSFileVersionMBS = NSFileVersionMBS.otherVersionsOfItemAtURL(f)

// shows all time stamps of this file.
Var lines() as string
for each x as NSFileVersionMBS in n
lines.Append x.modificationDate.SQLDateTime
next
MsgBox Join(lines,EndOfLine)
```

See also:

- 98.8.15 otherVersionsOfItemAtURL(url as string) as NSFileVersionMBS() 14988

98.8.15 otherVersionsOfItemAtURL(url as string) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return an array of NSFileVersionMBS objects associated with the file located by a URL, or an empty array if there is no such file.
Notes: The array never contains an NSFileVersionMBS equal to what currentVersionOfItemAtURL would return.
See also:

- 98.8.14 otherVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS() 14987

98.8.16 persistentIdentifier as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The identifier for this version of the file. (read-only)
Example:

```
// get a file version
Var f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
Var n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

// get persistent identifier
Var m as MemoryBlock = n.persistentIdentifier

// later find version again
Var x as NSFileVersionMBS = NSFileVersionMBS.versionOfItemAtURLforPersistentIdentifier(f, m)

// and show something
```

MsgBox x.localizedName

Notes: You can save the value of this property persistently and use it to recreate the version object later. When recreating the version object using the versionOfItemAtURLforPersistentIdentifier method, the version object returned is equivalent to the current object.

The plugin encodes the identifier for you into a memoryblock, so you can store it somewhere in your preferences.

98.8.17 removeAndReturnError(byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Delete the receiver's storage, and return true if successful.
Notes: If not successful, return false after setting Error to an NSErrorMBS that encapsulates why not. Subsequent invocations of versionsOfItemAtURL won't include an NSFileVersion for a successfully removed version.

You cannot use this method to delete the versioned file itself. This method always throws an exception when sent to the result of invoking currentVersionOfItemAtURL. Use NSFileManagerMBS.removeItemAtURL for that instead.

When removing versions of a file you should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too.

98.8.18 removeOtherVersionsOfItemAtURL(file as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Convenience variant of removeOtherVersionsOfItemAtURL which takes folderitem.
See also:

- 98.8.19 removeOtherVersionsOfItemAtURL(url as string, byref error as NSErrorMBS) as boolean 14989

98.8.19 removeOtherVersionsOfItemAtURL(url as string, byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Delete all of the versions associated with the file located by a URL, except for the current one,

and return true if successful.
Notes: If not successful, return false after setting error to an NSErrorMBS that encapsulates why not.

When removing versions of a file you should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too.
See also:

- 98.8.18 removeOtherVersionsOfItemAtURL(file as folderitem, byref error as NSErrorMBS) as boolean 14989

98.8.20 replaceItemAtURL(file as folderitem, options as Integer, byref error as NSErrorMBS) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Convenience variant of replaceItemAtURL which takes a folderitem.
See also:

- 98.8.21 replaceItemAtURL(url as string, options as Integer, byref error as NSErrorMBS) as string 14990

98.8.21 replaceItemAtURL(url as string, options as Integer, byref error as NSErrorMBS) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: If the passed-in URL locates a file, replace the file with a file whose contents are taken from the version but whose display name is taken from the file.
Notes: If the passed-in URL does not locate a file then simply write one. If successful, return a URL that locates the resulting file; it may be different from the passed-in URL. The one exception to taking the display name from an existing file is if the version is of a different type than the overwritten file. In that case the file name extension will be taken from the version. (When file name extensions are being hidden in a user-friendly way this is not actually an exception.) If not successful, return false after setting *outError to an NSError that encapsulates why not.

When you use NSFileVersionReplacingByMoving you remove a version of the file, and should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too. When you use it to promote a version to a separate file you actually write to two files, and should do it as part of a coordinated write to two files, using NSFileCoordinatorMBS.coordinateWritingItemAtURL, most likely using NSFileCoordinatorWritingForReplacing for the file you're promoting the version to.
See also:

- 98.8.20 replaceItemAtURL(file as folderitem, options as Integer, byref error as NSErrorMBS) as string 14990

98.8.22 temporaryDirectoryURLForNewVersionOfItemAtURL(url as string) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a URL, create a new directory that is suitable for using as the container of a new temporary file that you will create and use with NSFileVersionAddingByMoving.
Notes: This is useful when you want to create a new version of a file out of something other than the file's current contents, for example, the contents in memory of a document that has not yet been saved to its file. You must remove this directory when you are done with it, using NSFileManagerMBS.removeItemAtURL for example.

98.8.23 unresolvedConflictVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return an array of NSFileVersions that represent unresolved conflicts for the file located by a URL, or nil if there is no such file.
See also:

- 98.8.24 unresolvedConflictVersionsOfItemAtURL(url as string) as NSFileVersionMBS() 14991

98.8.24 unresolvedConflictVersionsOfItemAtURL(url as string) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return an array of NSFileVersions that represent unresolved conflicts for the file located by a URL, or nil if there is no such file.
See also:

- 98.8.23 unresolvedConflictVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS() 14991

98.8.25 URL as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The location of the receiver's storage.
Notes: Or possibly "" if the receiver's storage has been deleted. The storage is read-only. The URL will have an arcane path. You must not derive user-presentable text from it.

98.8.26 versionOfItemAtURLforPersistentIdentifier(file as folderitem, PersistentIdentifier as Memoryblock) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the version of the file that has the specified persistent ID.
Notes: url: The URL of the file whose version you want.
persistentIdentifier: The persistent ID of the NSFileVersion object you want. The plugin decodes it for you from the memoryblock.

Returns the file version object with the specified ID or nil if no such version object exists.
See also:

- 98.8.27 versionOfItemAtURLforPersistentIdentifier(URL as string, PersistentIdentifier as Memoryblock) as NSFileVersionMBS 14992

98.8.27 versionOfItemAtURLforPersistentIdentifier(URL as string, PersistentIdentifier as Memoryblock) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the version of the file that has the specified persistent ID.
Notes: url: The URL of the file whose version you want.
persistentIdentifier: The persistent ID of the NSFileVersion object you want. The plugin decodes it for you from the memoryblock.

Returns the file version object with the specified ID or nil if no such version object exists.
See also:

- 98.8.26 versionOfItemAtURLforPersistentIdentifier(file as folderitem, PersistentIdentifier as Memoryblock) as NSFileVersionMBS 14992

98.8.28 Properties

98.8.29 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference to the NSFileVersion object.
Notes: (Read and Write property)

98.8.30 Discardable as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the system is allowed to automatically delete the receiver's storage in the future, at an unpredictable time.
Notes: Setting this to true can fail so you must not depend on discarding for correct operation.

Once you have indicated that a version is discardable you cannot make it undiscardable again. Setting this to false causes an exception to be thrown.

You cannot make the versioned file itself discardable. Setting the value of this property always throws an exception when sent to the result of invoking currentVersionOfItemAtURL.

Versions can be discardable only on Mac OS X.
(Read and Write computed property)

98.8.31 Resolved as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: If the version is a conflict version, whether the conflict has been resolved.
Notes: If the version is not a conflict version, simply true.

The operating system's reaction to your setting this to true is complicated and subject to change in future releases. One result however is that the version won't appear in arrays returned by unresolvedConflictVersionsOfItemAtURL anymore, unless setting fails.

Once you have indicated that a conflict has been resolved you cannot make it unresolved again. Setting this to false causes an exception to be thrown.
(Read and Write computed property)

98.8.32 Constants

Constants

Constant	Value	Description
NSFileVersionAddingByMoving	1	One of the constants for addVersionOfItemAtURL. Whether addVersionOfItemAtURL can move the new version contents file int the version store instead of copying it. Moving is much faster. See the com ment for temporaryDirectoryURLForNewVersionOfItemAtURL for an exampl of when this useful.
NSFileVersionReplacingByMoving	1	One of the constants for replaceItemAtURL. Whether replaceItemAtURL must move the version's contents out of the ve sion store instead of copying it. This is useful when you want to promote version's contents to a separate file. You wouldn't use this to restore a versio of a file.

98.9 class NSMetadataItemMBS

98.9.1 class NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The NSMetadataItem class represents the metadata associated with a file, providing a simple interface to retrieve the available attribute names and values.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr9

98.9.2 Methods

98.9.3 attributeKeys as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the attribute names of the receiver's values.

98.9.4 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Private constructor.

98.9.5 DisplayName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The display name of the item, which may be different then the file system name.
Notes: Available in Mac OS X v10.7 and later.

98.9.6 File as folderitem

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The file reference.
Notes: Available in Mac OS X v10.7 and later.

98.9.7 FileContentChangeDate as date

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time that the file contents last changed.
Notes: Available in Mac OS X v10.7 and later.

98.9.8 FileContentChangeDateTime as dateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time that the file contents last changed.
Notes: Available in Mac OS X v10.7 and later.

98.9.9 FileCreationDate as date

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time that the file was created.
Notes: Available in Mac OS X v10.7 and later.

98.9.10 FileCreationDateTime as dateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time that the file was created.
Notes: Available in Mac OS X v10.7 and later.

98.9.11 FileName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The name of the item as seen in the file system.
Notes: Available in Mac OS X v10.7 and later.

98.9.12 FileSize as UInt64

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The size (in bytes) of the file on disk.
Notes: Available in Mac OS X v10.7 and later.

98.9.13 IsUbiquitous as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the item is stored in the cloud.
Notes: Available in Mac OS X v10.7 and later.

98.9.14 NSMetadataItemDisplayNameKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a string with the display name of the item, which may be different then the file system name.
Available in Mac OS X v10.7 and later.

98.9.15 NSMetadataItemFSContentChangeDateKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a date object that contains the date and time that the file contents last changed.
Available in Mac OS X v10.7 and later.

98.9.16 NSMetadataItemFSCreationDateKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a date object that contains the date and time that the file was created.
Available in Mac OS X v10.7 and later.

98.9.17 NSMetadataItemFSNameKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a string with the name of the item as seen in the file system.
Available in Mac OS X v10.7 and later.

98.9.18 NSMetadataItemFSSizeKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a number that indicates the size (in bytes) of the file on disk.
Available in Mac OS X v10.7 and later.

98.9.19 NSMetadataItemIsUbiquitousKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a boolean indicating whether the item is stored in the cloud.
Available in Mac OS X v10.7 and later.

98.9.20 NSMetadataItemPathKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is a string object that contains the full path to the file
Available in Mac OS X v10.7 and later.

98.9.21 NSMetadataItemURLKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that may be associated with an item.
Notes: The value is an URL string that you can use to open the file.
Available in Mac OS X v10.7 and later.

98.9.22 NSMetadataUbiquitousItemHasUnresolvedConflictsKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a Boolean indicating whether the item is currently in conflict with another version of the file somewhere else.
Available in Mac OS X v10.7 and later.

98.9.23 NSMetadataUbiquitousItemIsDownloadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a Boolean indicating whether the current version of the item has been downloaded and is available locally.
Available in Mac OS X v10.7 and later.

98.9.24 NSMetadataUbiquitousItemIsDownloadingKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a Boolean indicating whether the item is currently being downloaded to the local device.
Available in Mac OS X v10.7 and later.

98.9.25 NSMetadataUbiquitousItemIsUploadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a Boolean indicating whether the item has been uploaded to the cloud.
Available in Mac OS X v10.7 and later.

98.9.26 NSMetadataUbiquitousItemIsUploadingKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a Boolean indicating whether the current version of the item is currently being uploaded to the cloud.

Available in Mac OS X v10.7 and later.

98.9.27 NSMetadataUbiquitousItemPercentDownloadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a number that contains the percentage of the file that has already been downloaded from the cloud. The value is a double in the range 0.0 to 100.0.
Available in Mac OS X v10.7 and later.

98.9.28 NSMetadataUbiquitousItemPercentUploadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes: The value is a number that contains the percentage of the file that has already been uploaded to the cloud. The value is a double in the range 0.0 to 100.0.
Available in Mac OS X v10.7 and later.

98.9.29 Path as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The file path.
Notes: Available in Mac OS X v10.7 and later.

98.9.30 UbiquitousItemHasUnresolvedConflicts as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the item is currently in conflict with another version of the file somewhere else.
Notes: Available in Mac OS X v10.7 and later.

98.9.31 UbiquitousItemIsDownloaded as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the current version of the item has been downloaded and is available locally.
Notes: Available in Mac OS X v10.7 and later.

98.9.32 UbiquitousItemIsDownloading as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the item is currently being downloaded to the local device.
Notes: Available in Mac OS X v10.7 and later.

98.9.33 UbiquitousItemIsUploaded as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the item has been uploaded to the cloud.
Notes: Available in Mac OS X v10.7 and later.

98.9.34 UbiquitousItemIsUploading as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Whether the current version of the item is currently being uploaded to the cloud.
Notes: Available in Mac OS X v10.7 and later.

98.9.35 UbiquitousItemPercentDownloaded as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The percentage of the file that has already been downloaded from the cloud. The value is a double in the range 0.0 to 100.0.
Notes: Available in Mac OS X v10.7 and later.

98.9.36 UbiquitousItemPercentUploaded as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The percentage of the file that has already been uploaded to the cloud. The value is a double in the range 0.0 to 100.0.
Notes: Available in Mac OS X v10.7 and later.

98.9.37 URL as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The file URL.
Notes: Available in Mac OS X v10.7 and later.

98.9.38 valueForAttribute(key as string) as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the receiver's metadata attribute name specified by a given key.
Notes: key: The name of a metadata attribute.
Returns value as Variant.

98.9.39 valuesForAttributes(keys() as string) as dictionary

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a dictionary containing the key-value pairs for the attribute names specified by a given array of keys.
Notes: keys: An array containing strings that specify the names of a metadata attributes.

A dictionary containing the key-value pairs for the attribute names specified by keys.

98.9.40 Properties

98.9.41 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal reference to the metadata item.
Notes: Available in Mac OS X v10.7 and later.
(Read and Write property)

98.10 class NSMetadataQueryMBS

98.10.1 class NSMetadataQueryMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The NSMetadataQuery class encapsulates the functionality provided by the MDQuery opaque type for querying the Spotlight metadata.
Notes: You may prefer MDQueryMBS class from our plugins. NSMetadataQueryMBS exists as it supports iCloud search.

NSMetadataQuery objects provide metadata query results in several ways:

- As individual attribute values for requested attributes.
- As value lists that contain the distinct values for given attributes in the query results.
- A result array proxy, containing all the query results. This is suitable for use with Cocoa bindings.
- As a hierarchical collection of results, grouping together items with the same values for specified grouping attributes. This is also suitable for use with Cocoa bindings.

Queries have two phases: the initial gathering phase that collects all currently matching results and a second live-update phase.
By default the receiver has no limitation on its search scope. Use setSearchScopes to customize.
By default, notification of updated results occurs at 1.0 seconds. Use setNotificationBatchingInterval to customize.
You must set a predicate with the setPredicate method before starting a query.

- More notes
- MBS Real Studio Plugins, version 11.3pr9

98.10.2 Methods

98.10.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes the NSMetadataQuery object.

98.10.4 Destructor

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The destructor.

98.10.5 disableUpdates

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Disables updates to the query results.
Notes: You should invoke this method before iterating over query results that could change due to live updates.

98.10.6 enableUpdates

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Enables updates to the query results.
Notes: You should invoke this method after you're done iterating over the query results.

98.10.7 groupedResults as NSMetadataQueryResultGroupMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing hierarchical groups of query results based on the receiver's grouping attributes.

98.10.8 groupingAttributes as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the receiver's grouping attributes.

98.10.9 indexOfResult(item as NSMetadataItemMBS) as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the index of a query result object in the receiver's results array.

98.10.10 isGathering as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the receiver is in the initial gathering phase of the query.
Notes: Returns true when the query is in the initial gathering phase; false otherwise.

98.10.11 isStarted as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the receiver has started the query.
Notes: Returns true when the receiver has executed the startQuery method; false otherwise.

98.10.12 isStopped as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the receiver has stopped the query.
Notes: Returns true when the receiver has stopped the query, false otherwise.

98.10.13 NSMetadataQueryDidFinishGatheringNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the query notification names.
Notes: Posted when the receiver has finished with the initial result-gathering phase of the query.

98.10.14 NSMetadataQueryDidStartGatheringNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the query notification names.
Notes: Posted when the receiver begins with the initial result-gathering phase of the query.

98.10.15 NSMetadataQueryDidUpdateNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the query notification names.
Notes: Posted when the receiver's results have changed during the live-update phase of the query.

98.10.16 NSMetadataQueryGatheringProgressNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the query notification names.
Notes: Posted as the receiver's is collecting results during the initial result-gathering phase of the query.

98.10.17 NSMetadataQueryLocalComputerScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the scope constants you can use with setSearchScopes.

98.10.18 NSMetadataQueryNetworkScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the scope constants you can use with setSearchScopes.
Notes: Search all user-mounted remote volumes.

98.10.19 NSMetadataQueryResultContentRelevanceAttribute as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: In addition to the requested metadata attributes, a query result also includes content relevance, accessed with this key.
Notes: Key used to retrieve a number with a floating point value between 0.0 and 1.0 inclusive. The relevance value indicates the relevance of the content of a result object. The relevance is computed based on the value of the result itself, not on its relevance to the other results returned by the query. If the value is not computed, it is treated as an attribute on the item that does not exist.
Available in Mac OS X v10.4 and later.

98.10.20 NSMetadataQueryUbiquitousDataScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the scope constants you can use with setSearchScopes.
Notes: Search all files not in the Documents directories of the application's iCloud container directories.
vailable in Mac OS X v10.7 and later.

98.10.21 NSMetadataQueryUbiquitousDocumentsScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: One of the scope constants you can use with setSearchScopes.
Notes: Search all files in the Documents directories of the application's iCloud container directories.
vailable in Mac OS X v10.7 and later.

98.10.22 NSMetadataQueryUserHomeScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the scope constants you can use with setSearchScopes.
Notes: Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.

98.10.23 resultAtIndex(index as Integer) as NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the query result at a specific index.
Notes: index: Index of the desired result in the query result array.
Returns query result at the position specified by index.

For performance reasons, you should use this method when retrieving a specific result, rather than they array returned by results.

98.10.24 resultCount as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the number of results returned by the receiver.
Notes: For performance reasons, you should use this method, rather than invoking count on results array.

98.10.25 results as NSMetadataItemMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the result objects for the receiver.
Notes: The results array is a proxy object that is primarily intended for use with Cocoa bindings. While it is possible to copy the proxy array and receive a "snapshot" of the complete current query results, it is generally not recommended due to performance and memory issues. To access individual result array elements you should instead use the resultCount and resultAtIndex methods.

98.10.26 searchScopes as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the receiver's search scopes.
Notes: The array can contain strings that represent file system directories or the search scopes specified in Constants. An empty array indicates that there is no limitation on where the receiver searches.

98.10.27 setGroupingAttributes(attributeNames() as string)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Sets the receiver's grouping attributes to specific attribute names.
Notes: Invoking this method on a receiver while it's running a query, stops the query and discards current results, and immediately starts a new query.
Available in Mac OS X v10.4 and later.

98.10.28 setSearchScopes(folders() as folderitem)

MBS MacCloud Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Restrict the search scope of the receiver.
Notes: You can pass paths as folderitem.
See also:

- 98.10.29 setSearchScopes(paths() as string) 15008
- 98.10.30 setSearchScopes(paths() as string, folders() as folderitem) 15009

98.10.29 setSearchScopes(paths() as string)

MBS MacCloud Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Restrict the search scope of the receiver.
Notes: You can pass paths as strings and with the string array also the special scope strings from this class.
See also:

- 98.10.28 setSearchScopes(folders() as folderitem) 15008
- 98.10.30 setSearchScopes(paths() as string, folders() as folderitem) 15009

98.10.30 setSearchScopes(paths() as string, folders() as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Restrict the search scope of the receiver.
Example:

```
Var m as new NSMetadataQueryMBS
Var paths() as string
Var folders() as FolderItem

// you can specify where to search either by path or by FolderItem
'paths.Append "/Applications"
folders.Append SpecialFolder.Applications

m.setSearchScopes paths, folders
```

Notes: You can pass paths as strings, paths as folderitem and with the string array also the special scope strings from this class.
See also:

- 98.10.28 setSearchScopes(folders() as folderitem) 15008
- 98.10.29 setSearchScopes(paths() as string) 15008

98.10.31 setSortDescriptor(sortDescriptor as NSSortDescriptorMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Sets the sort descriptors to be used by the receiver.
Example:

```
Var m as new NSMetadataQueryMBS
m.setSortDescriptor NSSortDescriptorMBS.sortDescriptorWithKey(NSMetadataItemMBS.NSMetadataItemDisplayNameKey, true)
```

Notes: Invoking this method on the receiver running a query causes the existing query to stop, all current results are discarded, and a new query is started immediately.

98.10.32 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Sets the sort descriptors to be used by the receiver.
Notes: Invoking this method on the receiver running a query causes the existing query to stop, all current results are discarded, and a new query is started immediately.

98.10.33 sortDescriptors as NSSortDescriptorMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the receiver's sort descriptors.
Notes: Available in Mac OS X v10.4 and later.

98.10.34 startQuery as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Attempts to start the query.
Notes: Returns true when successful; false otherwise.

A query can't be started if the receiver is already running a query or no predicate has been specified.

98.10.35 stopQuery

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Stops the receiver's current query from gathering any further results.
Notes: The receiver first completes gathering any unprocessed results. If a query is stopped before the gathering phase finishes, it will not post an NSMetadataQueryDidStartGatheringNotification notification.

You would call this function to stop a query that is generating too many results to be useful but still want to access the available results. If the receiver is sent a startQuery message after performing this method, the existing results are discarded.

98.10.36 Properties

98.10.37 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal reference to the NSMetadataQuery object.
Notes: (Read and Write property)

98.10.38 notificationBatchingInterval as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The interval that the receiver provides notification of updated query results.
Notes: in seconds.
(Read and Write computed property)

98.10.39 predicate as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The predicate used by the receiver to filter the query results.
Example:

```
Var m as new NSMetadataQueryMBS
m.predicate = NSPredicateMBS.predicateWithFormat("kMDItemContentType=""com.apple.application-bundle""")
```

Notes: Setting the predicate on a receiver running a query causes the existing query to stop, all current results are discarded, and a new query is started immediately.
(Read and Write computed property)

98.10.40 Events

98.10.41 DidFinishGathering(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Called as the query has finished with the initial result-gathering phase of the query.

98.10.42 DidStartGathering(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Called as the query begins with the initial result-gathering phase of the query.

98.10.43 DidUpdate(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Called as the query's results have changed during the live-update phase of the query.

98.10.44 GatheringProgress(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Called as the query is collecting results during the initial result-gathering phase of the query.

98.11 class NSMetadataQueryResultGroupMBS

98.11.1 class NSMetadataQueryResultGroupMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The NSMetadataQueryResultGroupMBS class represents a collection of grouped attribute results returned by an NSMetadataQueryMBS object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 11.3pr10

98.11.2 Methods

98.11.3 attributeName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the attribute name for the receiver's result group.

98.11.4 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The private constructor.

98.11.5 resultAtIndex(index as Integer) as NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the query result at a specific index.
Notes: index: The index of the desired result.

For performance reasons, you should use this method when retrieving a specific result, rather than they array returned by results.

98.11.6 resultCount as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the number of results returned by the receiver.
Notes: For performance reasons, you should use this method, rather than invoking count on results.

98.11.7 results as NSMetadataItemMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the result objects for the receiver.
Notes: The results array is a proxy object that is primarily intended for use with Cocoa bindings. While it is possible to copy the proxy array to get a "snapshot" of the complete current query results, it is generally not recommended due to performance and memory issues. To access individual result array elements you should instead use the resultCount and resultAtIndex methods.

98.11.8 subgroups as NSMetadataQueryResultGroupMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns an array containing the subgroups of the receiver.

98.11.9 value as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the value of the attribute name for the receiver.

98.11.10 Properties

98.11.11 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle to the NSMetadataQueryResultGroup object.
Notes: (Read and Write property)

98.12 class NSPredicateMBS

98.12.1 class NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The NSPredicate class is used to define logical conditions used to constrain a search either for a fetch or for in-memory filtering.
Notes: You use predicates to represent logical conditions, used for describing objects in persistent stores and in-memory filtering of objects. Although it is common to create predicates directly from instances of NSComparisonPredicate, NSCompoundPredicate, and NSExpression, you often create predicates from a format string which is parsed by the class methods on NSPredicate. Examples of predicate format strings include:

- Simple comparisons, such as grade == "7" or firstName like "Shaffiq"
- Case and diacritic insensitive lookups, such as name contains [cd] "itroen"
- Logical operations, such as (firstName like "Mark") OR (lastName like "Adderley")
- In Mac OS X v10.5 and later, you can create ¬Ä¬úbetween¬Ä¬ù predicates such as date between { $ YESTERDAY, $ TOMORROW } .

You can create predicates for relationships, such as:

- group.name like "work*"
- ALL children.age >12
- ANY children.age >12

You can create predicates for operations, such as @sum.items.price <1000. For a complete syntax reference, refer to the Predicate Programming Guide:
http://developer.apple.com/library/mac/#documentation/Cocoa/Conceptual/Predicates/predicates.html#//apple_ref/doc/uid/TP40001789

98.12.2 Methods

98.12.3 Constructor(predicateFormat as string)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
Var n as new NSPredicateMBS("kMDItemContentType=""com.apple.application-bundle""")
MsgBox n.predicateFormat
```

Notes: predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

You get a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 98.12.4 Constructor(predicateFormat as string, arguments() as Variant) 15016
- 98.12.5 Constructor(value as boolean) 15017

98.12.4 Constructor(predicateFormat as string, arguments() as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
// we use one parameter here
Var s() as Variant
s.Append "com.apple.application-bundle"

Var n as new NSPredicateMBS("kMDItemContentType=%@", s)

// shows final string
```

MsgBox n.predicateFormat

Notes: predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

You get a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 98.12.3 Constructor(predicateFormat as string) 15016
- 98.12.5 Constructor(value as boolean) 15017

98.12.5 Constructor(value as boolean)

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a predicate that always evaluates to a given value.
Example:

```
Var n as new NSPredicateMBS(true)
MsgBox n.predicateFormat
```

See also:

- 98.12.3 Constructor(predicateFormat as string) 15016
- 98.12.4 Constructor(predicateFormat as string, arguments() as Variant) 15016

98.12.6 description as string

MBS MacCloud Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The descriptor for this event.
Example:

```
Var args() as Variant
args.Append NSMetadataItemMBS.NSMetadataItemFSNameKey
```

```
Var pred as NSPredicateMBS = NSPredicateMBS.predicateWithFormat("%K LIKE '*'", args)
MsgBox pred.description
```

Notes: This is a text representation for debugging.

98.12.7 predicateFormat as string

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the receiver's format string.
Notes: The string returned by this method is not guaranteed to be the same as a string used to create the predicate.

98.12.8 predicateWithFormat(predicateFormat as string) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
Var n as NSPredicateMBS
n = NSPredicateMBS.predicateWithFormat("kMDItemContentType=""com.apple.application-bundle""")
MsgBox n.predicateFormat
```

Notes: predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

Returns a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 98.12.9 predicateWithFormat(predicateFormat as string, arguments() as Variant) as NSPredicateMBS

98.12.9 predicateWithFormat(predicateFormat as string, arguments() as Variant) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
Var args() as Variant
args.Append NSMetadataItemMBS.NSMetadataItemFSNameKey
Var pred as NSPredicateMBS = NSPredicateMBS.predicateWithFormat("%K LIKE '*'", args)
MsgBox pred.description
```

Notes: predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

Returns a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 98.12.8 predicateWithFormat(predicateFormat as string) as NSPredicateMBS 15018

98.12.10 predicateWithValue(value as boolean) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns a predicate that always evaluates to a given value.
Example:

```
Var p as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
MsgBox p.predicateFormat
```

98.12.11 Print

MBS MacCloud Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Writes description for this event descriptor to the console.

Notes: You can see result in Console.app.

98.12.12 Properties

98.12.13 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle to the NSPredicate object.
Notes: (Read and Write property)

98.13 class NSSortDescriptorMBS

98.13.1 class NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The cocoa class for sort descriptions.
Example:

```
Var n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes: An instance of NSSortDescriptor describes a basis for ordering objects by specifying the property to use to compare the objects, the method to use to compare the properties, and whether the comparison should be ascending or descending. Instances of NSSortDescriptor are immutable.

You construct an instance of NSSortDescriptor by specifying the key path of the property to be compared, the order of the sort (ascending or descending), and (optionally) a selector to use to perform the comparison. The three-argument constructor allows you to specify other comparison selectors such as caseInsensitiveCompare: and localizedCompare:. Sorting raises an exception if the objects to be sorted do not respond to the sort descriptor's comparison selector.

Note: Many of the descriptions of NSSortDescriptor methods refer to "property key". This, briefly, is a string (key) that identifies a property (an attribute or relationship) of an object. You can find a discussion of this terminology in "Object Modeling" in Cocoa Fundamentals Guide and in Key-Value Coding Programming Guide.
There are a number of situations in which you can use sort descriptors, for example:

- To sort an array (an instance of NSArray or NSMutableArray—see sortedArrayUsingDescriptors and sortUsingDescriptors)
- To directly compare two objects (see compareObject method)
- To specify how the elements in a table view should be arranged (see sortDescriptors)
- To specify how the elements managed by an array controller should be arranged (see sortDescriptors)
- If you are using Core Data, to specify the ordering of objects returned from a fetch request (see sortDescriptors)

98.13.2 Methods

98.13.3 compareObject(obj1 as variant, obj2 as variant) as Integer

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Compares two objects.
Notes: Returns 1, -1 or 0 (zero for equal).

98.13.4 Constructor(key as string, ascending as boolean)

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Initializes an NSSortDescriptor object initialized with a given property key path and sort order, and with the default comparison selector.
Example:

```
Var n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

On success the handle property is not zero.
Available in Mac OS X v10.3 and later.
If you implement the Compare event, we use it on OS X 10.6 and newer.
See also:

- 98.13.5 Constructor(key as string, ascending as boolean, SelectorName as String) 15022

98.13.5 Constructor(key as string, ascending as boolean, SelectorName as String)

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Initializes an NSSortDescriptor object initialized with a given property key path and sort order, and with the default comparison selector.
Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

On success the handle property is not zero.
Please pass valid name of a selector for the objects. Wrong selector causes trouble, e.g. "localizedCompare:".

Available in Mac OS X v10.3 and later.
See also:

- 98.13.4 Constructor(key as string, ascending as boolean) 15022

98.13.6 reversedSortDescriptor as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a copy of the receiver with the sort order reversed.
Example:

```
Var n as NSSortDescriptorMBS
n = NSSortDescriptorMBS.sortDescriptorWithKey("Hello", true)

Var x as NSSortDescriptorMBS = n.reversedSortDescriptor
MsgBox x.key+" "+str(x.ascending)
```

98.13.7 sortDescriptorWithKey(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKey("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering.
Available in Mac OS X 10.3 and newer.

98.13.8 sortDescriptorWithKeyComparator(key as string, ascending as boolean, Comparator as NSComparatorDelegateMBS, tag as Variant = nil) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor object initialized to do with the given ordering and comparator delegate.
Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding (see Key-Value Coding Programming Guide).
ascending: true if the receiver specifies sorting in ascending order, otherwise false.
Comparator: the comparator to use with delegate declaration "NSComparatorDelegateMBS(obj1 as Variant, obj2 as Variant, tag as Variant) as Integer".

98.13.9 sortDescriptorWithKeyWithCaseInsensitiveCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCaseInsensitiveCompare("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With case insensitive string comparison.
Available in Mac OS X 10.3 and newer.

98.13.10 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCompare("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is

accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. Uses selector "compare:".
Available in Mac OS X 10.3 and newer.
See also:

- 98.13.11 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean, Options as Integer) as NSSortDescriptorMBS 15025

98.13.11 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean, Options as Integer) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCompare("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. Uses selector "compare:options:".
Please pass options for NSString comparison. e.g. NSNumericSearch
Available in Mac OS X 10.3 and newer.
See also:

- 98.13.10 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean) as NSSortDescriptorMBS 15024

98.13.12 sortDescriptorWithKeyWithLocalizedCaseInsensitiveCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithLocalizedCaseInsensitiveCompare("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With localized string comparison. With case insensitive string comparison.
Available in Mac OS X 10.3 and newer.

98.13.13 sortDescriptorWithKeyWithLocalizedCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
Var n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithLocalizedCompare("Hello", true)
MsgBox n.key
```

Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With localized string comparison.
Available in Mac OS X 10.3 and newer.

98.13.14 sortDescriptorWithKeyWithSelector(key as string, ascending as boolean, SelectorName as String) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: Creates and returns an NSSortDescriptor with the specified selector, key and ordering.
Notes: key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.

ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering.
Please pass valid name of a selector for the objects. Wrong selector causes trouble, e.g. "localizedCompare:".
Available in Mac OS X 10.3 and newer.

98.13.15 Properties

98.13.16 ascending as boolean

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a Boolean value that indicates whether the receiver specifies sorting in ascending order.
Example:

```
Var n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.ascending)
```

Notes: (Read only property)

98.13.17 Handle as Integer

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: The internal handle to the NSSortDescriptor object.
Notes: (Read and Write property)

98.13.18 key as string

MBS Main Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns the receiver's property key path.
Example:

```
Var n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes: This key path specifies the property that is compared during sorting.
(Read only property)

98.13.19 selector as String

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: The selector used to sort.
Notes: (Read only property)

98.13.20 Events

98.13.21 Comparator(obj1 as Variant, obj2 as Variant) as Integer

MBS Main Plugin, Plugin Version: 17.1, Platform: macOS, Targets: All.

Function: The compare event.

98.13.22 Delegates

98.13.23 NSComparatorDelegateMBS(obj1 as Variant, obj2 as Variant, tag as variant) as Integer

MBS Main Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate for use with sortDescriptorWithKeyComparator method.

98.14 class NSUbiquitousKeyValueStoreMBS

98.14.1 class NSUbiquitousKeyValueStoreMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The iCloud class to store key value data.
Notes: Size of data is limited to 64 KB per application and 4 KB per value.
Do not store data here. Better store some configuration data, bookmarks or highscores.

Please also check the documentation from Apple for the NSUbiquitousKeyValueStore class. Seems like you need your app to be signed with iCloud Storage Entitlements.

98.14.2 Methods

98.14.3 ArrayValue(key as string) as Variant()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get the value for this key as a variant.
Example:

```
Var values() as Variant

values.Append "Hello"
values.Append "World"

Var u as new NSUbiquitousKeyValueStoreMBS

u.ArrayValue("key")=values

// later read back
Var nvalues() as Variant = u.ArrayValue("key")
```

See also:

- 98.14.4 ArrayValue(key as string, assigns values() as Variant) 15030

98.14.4 ArrayValue(key as string, assigns values() as Variant)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Set the value for this key as a variant.
Example:

```
Var u as new NSUbiquitousKeyValueStoreMBS
Var nvalues() as Variant = u.ArrayValue("key")
```

See also:

- 98.14.3 ArrayValue(key as string) as Variant() 15029

98.14.5 available as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Example:

```
msgbox "iCloud Key Value Store available: "+str(NSUbiquitousKeyValueStoreMBS.available)
```

Notes: This does not tell you whether Apple switched on their servers.

98.14.6 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The constructor.

98.14.7 defaultStore as NSUbiquitousKeyValueStoreMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a reference to the default key store.

98.14.8 Destructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The destructor.

98.14.9 dictionaryRepresentation as dictionary

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The key value store as a dictionary.

98.14.10 NSUbiquitousKeyValueStoreChangedKeysKey as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A key name for the userinfo dictionary when you receive the NSUbiquitousKeyValueStoreDidChangeExternallyNotification notification.
Notes: Value for this key in the dictionary in an array of strings.

98.14.11 NSUbiquitousKeyValueStoreChangeReasonKey as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A key name for the userinfo dictionary when you receive the NSUbiquitousKeyValueStoreDidChangeExternallyNotification notification.
Notes: Value for this key in the dictionary in an integer.

98.14.12 NSUbiquitousKeyValueStoreDidChangeExternallyNotification as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The notification name for the notification sent when the .
Notes: You can observe this notification with the NSNotificationObserverMBS class or simply subclass NSUbiquitousKeyValueStoreMBS and use the DidChangeExternally event.

98.14.13 removeObjectForKey(key as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Removes the value for the key.

98.14.14 synchronize as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Synchronizes the key value store.
Example:

```
Var u as NSUbiquitousKeyValueStoreMBS = NSUbiquitousKeyValueStoreMBS.defaultStore

// safe something
u.StringValue("Font") = "Times"

if u.synchronize then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success.

98.14.15 Properties

98.14.16 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for this object.
Notes: (Read and Write property)

98.14.17 BooleanValue(key as string) as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as a boolean.
Notes: (Read and Write computed property)

98.14.18 DataValue(key as string) as memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as a memoryblock.
Notes: (Read and Write computed property)

98.14.19 DictionaryValue(key as string) as Dictionary

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as a dictionary.
Notes: (Read and Write computed property)

98.14.20 DoubleValue(key as string) as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as a double.
Example:

```
Var u as new NSUbiquitousKeyValueStoreMBS

u.DoubleValue("HighScore") = 3456
```

Notes: (Read and Write computed property)

98.14.21 IntegerValue(key as string) as Int64

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as an integer.
Example:

```
Var u as new NSUbiquitousKeyValueStoreMBS

// query highscore value
MsgBox str(u.IntegerValue("HighScore"))
```

Notes: (Read and Write computed property)

98.14.22 StringValue(key as string) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the string value for the given key.
Example:

```
Var u as NSUbiquitousKeyValueStoreMBS = NSUbiquitousKeyValueStoreMBS.defaultStore
```

```
// safe something
u.StringValue("Font") = "Times"
```

Notes: (Read and Write computed property)

98.14.23 VariantValue(key as string) as Variant

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set the value for this key as a variant.
Notes: (Read and Write computed property)

98.14.24 Events

98.14.25 DidChangeExternally(ChangeReason as Integer, ChangedKeys() as string, notification as Variant)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: This event is called when the ubiquitious key value store changed.
Notes: ChangeReason gives the reason.
Can be NSUbiquitousKeyValueStoreServerChange, NSUbiquitousKeyValueStoreInitialSyncChange or NSUbiquitousKeyValueStoreQuotaViolationChange.

98.14.26 Constants

Change Reason Constants

Constant	Value	Description
NSUbiquitousKeyValueStoreInitialSyncChange	1	
NSUbiquitousKeyValueStoreQuotaViolationChange	2	
NSUbiquitousKeyValueStoreServerChange	0	

Chapter 99

Icon Service

99.1 Globals

99.1.1 CompositeIconsMBS(ForeGround as IconMBS, BackGround as IconMBS) as IconMBS

MBS Picture Plugin, Plugin Version: 5.1, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Combines two icons.
Example:

```
Var i as IconMBS // global

Sub Open()
Var a,b as IconMBS

b=new IconMBS(SpecialFolder.Desktop)
a=new IconMBS(app.ApplicationFileMBS)

i=CompositeIconsMBS(a,b)

End Sub

Sub Paint(g As Graphics)
i.DrawIcon(g,0,0,128,128)
End Sub
```

Notes: Returns nil on any error (e.g. one of the two icons is invalid or nil).

99.2.2 Methods

99.2.3 Constructor(f as folderitem, NoBadge as boolean = false)

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the icon for this file/folder/volume.
Example:

```
// in a paint event:

Var i as new IconMBS(SpecialFolder.Desktop)

i.DrawIcon(g, 0, 0, 128, 128)
```

Notes: The example "GetIcon.rb" shows how to get the file icons.
A custom icon is preferred (ID -16455).

NoBadge can be set to true to have no badges on the icon.
See also:

- 99.2.4 Constructor(type as string, creator as string) 15037
- 99.2.5 Constructor(type as string, creator as string, extension as string, mime as string) 15037

99.2.4 Constructor(type as string, creator as string)

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the icon for this type and creator code combination.
Example:

```
// in a paint event:

Var i as new IconMBS("FNDR", "MACS")

i.DrawIcon(g, 0, 0, 128, 128)
```

Notes: The example "GetIcon.rb" shows how to get the predefined icons from the system.
See also:

- 99.2.3 Constructor(f as folderitem, NoBadge as boolean = false) 15036
- 99.2.5 Constructor(type as string, creator as string, extension as string, mime as string) 15037

99.2.5 Constructor(type as string, creator as string, extension as string, mime as string)

MBS Picture Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Loads the icon base on the given information.
Example:

```
Sub Paint(g As Graphics)
// in a window paint event:

Var i as IconMBS
Var type, creator, extension, mime as string

type=""
creator=""
extension="jpg"
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws jpeg icon
i.DrawIcon(g,0,0,128,128)
```

```
type=""
creator=""
extension=""
mime="video/quicktime"

i=new iconmbs(type, creator, extension, mime)
// draws quicktime movie icon
i.DrawIcon(g,128,0,128,128)

type="TEXT"
creator="MSWD"
extension=""
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws microsoft word text file icon
i.DrawIcon(g,0,128,128,128)

type=""
creator="GKON"
extension="jpg"
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws graphic converter jpeg file icon
i.DrawIcon(g,128,128,128,128)

End Sub
```

Notes: All parameters can be empty strings if you don't know this information.
Requires Mac OS X 10.3 to work properly.
See also:

- 99.2.3 Constructor(f as folderitem, NoBadge as boolean = false) 15036
- 99.2.4 Constructor(type as string, creator as string) 15037

99.2.6 DrawIconCGContext(CGContextHandle as Integer,x as Integer,y as Integer,width as Integer,height as Integer, align as Integer, transform as Integer, flags as Integer, labelColor as color)

MBS Picture Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the icon in a CoreGraphics Context.
Example:

```
Function GetIconImage(i as iconmbs, w as Integer, h as Integer) As picture
```

```
Var c as new CGPictureContextMBS(w,h)

const DrawNormal=0
const DrawNoImage=2
const DrawNoMask=4
const DrawSelected=&h8000

i.DrawIconCGContext(c.Handle, 0,0,w,h,0,0,DrawNoMask,&c000000)

c.Flush

Return c.CopyPicture
End Function
```

Notes: You must make sure that the CGContext handle you pass in is valid. You can use CGContextMBS class for this and use GetCurrentCGContextMBS or Window.CGContextMBS to get a context. Please note that coordinates have the origin typically on the lower left.

Flags:

DrawNormal	0
DrawNoImage	2
DrawNoMask	4
DrawSelected	32768

Align constants:

Transform constants:

99.2.7 GetBackground as IconMBS

MBS Picture Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: If the icon is a composited one, this function returns the icon used for the background.
Notes: Returns nil on any error.
Lasterror ist set.

99.2.8 GetForeground as IconMBS

MBS Picture Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

None	0
VerticalCenter	1
Top	2
Bottom	3
HorizontalCenter	4
AbsoluteCenter	5
CenterTop	6
CenterBottom	7
Left	8
CenterLeft	9
TopLeft	10
BottomLeft	11
Right	12
CenterRight	13
TopRight	14
BottomRight	15

Function: If the icon is a composited one, this function returns the icon used for the foreground.
Notes: Returns nil on any error.
Lasterror ist set.

99.2.9 IsIconRefMaskEmpty as boolean

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the mask of the icon is empty.
Example:

```
Var i as new IconMBS("FNDR", "MACS")

MsgBox str(i.IsIconRefMaskEmpty)
```

Notes: Lasterror is set.

99.2.10 PointInIcon(pointx as Integer,pointy as Integer,x as Integer,y as Integer,width as Integer,height as Integer,align as Integer) as boolean

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tests whether a point is inside the icon's picture.
Notes: The coordinates for pointx/pointy and x/y must be in the same system.

BottomRight	15

99.2.11 RectInIcon(rectx as Integer,recty as Integer,rectwidth as Integer,rectheight as Integer,x as Integer,y as Integer,width as Integer,height as Integer,align as Integer) as boolean

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Tests whether a rectangle is inside the icon's picture.
Notes: The coordinates for both rectangles must be in the same coordinate system.

Align constants:

None	0
VerticalCenter	1
Top	2
Bottom	3
HorizontalCenter	4
AbsoluteCenter	5
CenterTop	6
CenterBottom	7
Left	8
CenterLeft	9
TopLeft	10
BottomLeft	11

CenterRight	13
TopRight	14
BottomRight	15

This call may fail in some RB versions because of the count of parameters.

99.2.12 RetainCount as Integer

MBS Picture Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: How many references to this icon are hold on this Mac.
Example:

```
Var i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.RetainCount)
```

99.2.13 Properties

99.2.14 handle as Integer

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle of this icon in memory.
Example:

```
Var i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.handle)
```

Notes: (Read and Write property)

99.2.15 LastError as Integer

MBS Picture Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Example:

```
Var i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.LastError)
```

Notes: The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

99.2.16 Release as boolean

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: whether the destructor will release the handle.
Example:

```
Var i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.Release)
```

Notes: (Read and Write property)

99.2.17 valid as boolean

MBS Picture Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Were the constructors successfull?
Example:

```
Var i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.valid)
```

Notes: (Read and Write property)

Chapter 100

Image Capture

100.1 control DesktopIKCameraDeviceViewControlMBS

100.1.1 control DesktopIKCameraDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Camera Device View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.1.2 Properties

100.1.3 View as IKCameraDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The camera device view used in this control.
Notes: (Read only property)

100.1.4 Events

100.1.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.1.6 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.1.7 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.1.8 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.1.9 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.1.10 DidDownloadFile(CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.1.11 DidEncounterError(Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the camera device reports an error.

100.1.12 FocusLost

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.1.13 FocusReceived

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.1.14 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.1.15 MenuBarSelected

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.1.16 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.1.17 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.1.18 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.1.19 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.1.20 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.1.21 SelectionDidChange

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.

100.1.22 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.2 control DesktopIKDeviceBrowserViewControlMBS

100.2.1 control DesktopIKDeviceBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Device Browser View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.2.2 Properties

100.2.3 View as IKDeviceBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The device browser view used in this control.
Notes: (Read only property)

100.2.4 Events

100.2.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.2.6 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.2.7 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.2.8 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.2.9 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.2.10 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the device browser reports an error.

100.2.11 FocusLost

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.2.12 FocusReceived

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.2.13 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.2.14 MenuBarSelected

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.2.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.2.16 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.2.17 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.2.18 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.2.19 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.2.20 SelectionDidChange(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.
Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

100.2.21 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.3 control DesktopIKScannerDeviceViewControlMBS

100.3.1 control DesktopIKScannerDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Scanner Device View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.3.2 Properties

100.3.3 View as IKScannerDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The scanner view used in this control.
Notes: For Xojo with Cocoa target.
(Read only property)

100.3.4 Events

100.3.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.3.6 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.3.7 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.3.8 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.3.9 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.3.10 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the scanner device reports an error.

100.3.11 DidScanToBandData(data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

100.3.12 DidScanToURL(url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.3.13 FocusLost

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.3.14 FocusReceived

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.3.15 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.3.16 MenuBarSelected

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.3.17 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.3.18 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.3.19 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.3.20 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.3.21 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.3.22 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.4 class ICCameraDeviceMBS

100.4.1 class ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICCameraDeviceMBS is a concrete subclass of ICDeviceMBS class.
Notes: ICDeviceBrowserMBS creates instances of this class.
Subclass of the ICDeviceMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.4.2 Methods

100.4.3 cancelDelete

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Cancels the current delete operation started by sending a requestDeleteFiles.

100.4.4 cancelDownload

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Cancels the current download operation.

100.4.5 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.4.6 contents as ICCameraItemMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Contents of the camera.
Notes: The structure of the elements in this array will reflect the folder structure of the storage reported by the camera. Each item in this array will correspond to a storage on the camera.

100.4.7 filesOfType(fileUTType as string) as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method returns an array of files on the camera of type fileType.
Notes: The fileType string is one of the following Uniform Type Identifier strings: kUTTypeImage, kUTTypeMovie, kUTTypeAudio, or kUTTypeData.
See UTTypeMBS module.

100.4.8 ICCameraDeviceCanAcceptPTPCommands as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can accept PTP commands.

100.4.9 ICCameraDeviceCanDeleteAllFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can delete all files in a single operation while it is connected.

100.4.10 ICCameraDeviceCanDeleteOneFile as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can delete a file at a time while it is connected.

100.4.11 ICCameraDeviceCanReceiveFile as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the host can upload files to the camera.

100.4.12 ICCameraDeviceCanSyncClock as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can synchronize its date and time with that of the host computer.

100.4.13 ICCameraDeviceCanTakePicture as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can capture a picture while it is connected, if the client sends a requestTakePicture message to it.

100.4.14 ICCameraDeviceCanTakePictureUsingShutterReleaseOnCamera as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can capture a picture while it is connected, if the user presses the shutter release on the camera.

100.4.15 ICDeleteAfterSuccessfulDownload as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, the file will be deleted from the device after it is succcessfully downloaded.

100.4.16 ICDownloadsDirectoryURL as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key should be an CFURLMBS referencing a writable directory.
The downloaded files will be saved in that directory.

100.4.17 ICDownloadSidecarFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, all sidecar files will be downloaded along with the media file.

100.4.18 ICOverwrite as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, the downloaded file will overwrite an existing file with the same name and extension.

100.4.19 ICSaveAsFilename as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key should be a string containing the name to be used for the downloaded file.

100.4.20 ICSavedAncillaryFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key will be an array containing names of files associated with the primary file that is downloaded. The options dictionary returned in didDownloadFile may have this key.

100.4.21 ICSavedFilename as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the keys for options dictionary.
Notes: The value for this key will be a string containing the actual name of the saved file. The options dictionary returned in didDownloadFile will have this key.

100.4.22 mediaFiles as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The property mediaFiles represents all image, movie and audio files on the camera.
Notes: These files are returned as a single array without regard to the folder hierarchy used to store these files on the camera.

If no files show up, try again a second later as the framework may not yet have the list loaded.

100.4.23 requestDeleteFiles(files() as ICCameraFileMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Deletes files.

100.4.24 requestDisableTethering

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Send this message to disable tethered capture on the camera device if the camera has the 'ICCameraDeviceCanTakePicture' capability and if your process has already sent a 'requestEnableTethering' to it.

100.4.25 requestDownloadFile(file as ICCameraFileMBS, options as dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Download a file from the camera. Please refer to the top of this header for information about the options.
Notes: Calls cameraDeviceDidDownloadFile event later.
The content of error returned should be examined to determine if the request completed successfully.

100.4.26 requestEnableTethering

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Send this message to enable tethered capture on the camera device if the camera has the 'ICCameraDeviceCanTakePicture' capability.

100.4.27 requestReadDataFromFile(file as ICCameraFileMBS, offset as UInt64, Length as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method asynchronously reads data of a specified length from a specified offset.
Notes: Calls later ImageCaptureEventsMBS.cameraDeviceDidReadData event.
The content of error returned should be examined to determine if the request completed successfully.

100.4.28 requestSendPTPCommand(command as MemoryBlock, dataOut as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method asynchronously sends a PTP command to a camera.
Notes: The content of error returned should be examined to determine if the request completed successfully.

100.4.29 requestSyncClock

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Synchronize camera's clock with the computer's clock.
Notes: You should send this request only if the camera has the 'ICCameraDeviceCanSyncClock' capability.

100.4.30 requestTakePicture

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Capture a new image using the camera, the camera capabilities include 'ICCameraDeviceCanTakePicture'.
Notes: You MUST send 'requestEnableTethering' message to the camera before sending 'requestTakePicture' message.

100.4.31 requestUploadFile(file as folderitem, options as dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Upload a file at fileURL to the camera.
Notes: The options dictionary is not used in this version.
Calls later ImageCaptureEventsMBS.cameraDeviceDidUploadFile event.

The content of error returned should be examined to determine if the request completed successfully.

100.4.32 Properties

100.4.33 batteryLevel as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates the battery charge level.
Notes: Its value ranges from 0 to 100.
(Read only property)

100.4.34 batteryLevelAvailable as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the device has reported battery charge levelÔøº.
Notes: (Read only property)

100.4.35 contentCatalogPercentCompleted as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates the percentage of content cataloging completed on the device.
Notes: Its value ranges from 0 to 100.
(Read only property)

100.4.36 isAccessRestrictedAppleDevice as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Set to true if the device is made by Apple and is pass-coded locked and connected to an untrusted host.
Notes: (Read only property)

100.4.37 mountPoint as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Filesystem mount point for a device with transportType of ICTransportTypeMassStorage.
Notes: This will be "" for all other devices.
(Read only property)

100.4.38 tetheredCaptureEnabled as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This property is set to YES when tethered capture is enabled on the device.
Notes: Use 'requestEnableTethering' and 'requestDisableTethering' to enable or disable tethered capture on the device.
(Read only property)

100.4.39 timeOffset as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates the time offset, in seconds, between the camera's clock and the computer's clock.
Notes: This value is positive if the camera's clock is ahead of the computer's clock. This property should be ignored if the camera's capabilities property does not contain ICCameraDeviceCanSyncClock.
(Read only property)

100.5 class ICCameraFileMBS

100.5.1 class ICCameraFileMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This class represents a file on an ICCameraDevice object.
Notes: Subclass of the ICCameraItemMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.5.2 Methods

100.5.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.5.4 sidecarFiles as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Returns array of sidecar files.
Notes: This property is an empty array if there are no sidecar files associated with this file. Otherwise it is an array of ICCameraFile instances of sidecar files associated with this file. An example of a sidecar file is a file with the same base name as this file and having an extension XMP.

100.5.5 Properties

100.5.6 Duration as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Duration of audio/video file in seconds.
Notes: (Read only property)

100.5.7 FileSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Size of file in bytes.
Notes: (Read only property)

100.5.8 Orientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Desired orientation of image to use when it is downloaded.
Notes: This property is set to ICEXIFOrientation1 initially. If the format of this file supports EXIF orientation tag, then this property will be updated to match the value of that tag, when the thumbnail or metadata for this file is received.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180¬∞
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90¬∞ CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90¬∞ CCW
ICEXIFOrientation7	7	Rotated 90¬∞ CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90¬∞ CW

(Read and Write property)

100.6 class ICCameraFolderMBS

100.6.1 class ICCameraFolderMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This class represents a folder on an ICCameraDevice object.
Notes: Subclass of the ICCameraItemMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.6.2 Methods

100.6.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.6.4 contents as ICCameraItemMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A list of items contained by this folder.

100.7 class ICCameraItemMBS

100.7.1 class ICCameraItemMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICCameraItem is an abstract class that represents an item in an ICCameraDevice object.
Notes: ICCameraDevice object creates instances of two concrete subclasses of ICCameraItem: ICCameraFolder and ICCameraFile.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.7.2 Methods

100.7.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.7.4 Properties

100.7.5 addedAfterContentCatalogCompleted as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This property is set if the file is captured on the device after the device's content is fully enumerated.
Notes: This does not apply to files added as a result of adding a new store to the device.
(Read only property)

100.7.6 CreationDate as Date

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creation date of this file.
Notes: This information is usually the same as the EXIF creation date.
(Read only property)

100.7.7 CreationDateTime as DateTime

MBS AVFoundation Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Creation date of this file.
Notes: This information is usually the same as the EXIF creation date.
(Read only property)

100.7.8 Device as ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Parent device of this folder.
Notes: (Read only property)

100.7.9 FileSystemPath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The file system path of the item for items on a device with transportType of ICTransportTypeMassStorage.
Notes: (Read only property)

100.7.10 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.7.11 InTemporaryStore as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if this folder is in a temporary store.
Notes: A temporary store may be used by the device when images are captures on the device when it is tethered to the computer.
(Read only property)

100.7.12 largeThumbnailIfAvailable as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Large thumbnail for the item if one is readily available.
Notes: Value is a CGImageMBS. We use variant to reduce dependency to other plugins.

If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveThumbnailForItem.
(Read only property)

100.7.13 Locked as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates the protection state of this item.
Notes: It is locked if the storage card in the camera is locked.
(Read only property)

100.7.14 MetadataIfAvailable as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Metadata for the file if one is readily available.
Notes: If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveMetadataForItem.
(Read only property)

100.7.15 ModificationDate as Date

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Modification date of this file.
Notes: This information is usually the same as the EXIF modification date.
(Read only property)

100.7.16 ModificationDateTime as DateTime

MBS AVFoundation Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Modification date of this file.
Notes: This information is usually the same as the EXIF modification date.
(Read only property)

100.7.17 Name as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Name of this file or folder.
Notes: (Read only property)

100.7.18 ParentFolder as ICCameraFolderMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Parent folder of this folder. The root folder's parentFolder is nil.
Notes: (Read only property)

100.7.19 ptpObjectHandle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: PTP object handle value if the item is on a camera that uses PTP protocol.
Notes: The value of this property is set to 0 if the camera does not use PTP protocol.
(Read only property)

100.7.20 Raw as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the file is a raw image file.
Notes: (Read only property)

100.7.21 thumbnailIfAvailable as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Thumbnail for the item if one is readily available.
Notes: Value is a CGImageMBS. We use variant to reduce dependency to other plugins.

If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveThumbnailForItem.
(Read only property)

100.7.22 UserData as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A mutable dictionary to store arbitrary key-value pairs associated with a camera item object.
Notes: This can be used by view objects that bind to this object to store "house-keeping" information.
In Xojo, please query dictionary, modify it and assign back to this property.
(Read and Write property)

100.7.23 UTI as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Item UTI.
Notes: This is an Uniform Type Identifier string. It is one of: kUTTypeFolder, kUTTypeImage, kUTTypeMovie, kUTTypeAudio, or kUTTypeData.
See UTTypeMBS module.
(Read only property)

100.8 class ICDeviceBrowserMBS

100.8.1 class ICDeviceBrowserMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The ICDeviceBrowser object is used to find devices such as digital cameras and scanners that are supported by Image Capture.
Notes: These device may be directly attached to the USB or FireWire bus on the host computer, shared by other computers, or available over a TCP/IP network. This object communicates with an Image Capture agent process asynchronously to accomplish this.

- MBS Xojo Plugins, version 19.0pr8
- MBS Xojo / Real Studio Plugins, version 16.4pr1
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.8.2 Methods

100.8.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

100.8.4 Destructor

MBS AVFoundation Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The destructor.

100.8.5 devices as ICDeviceMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: All devices found by the browser.
Notes: This property will change as devices appear and disappear. This array is empty before the first invocation of the deviceBrowserDidAddDevice event.

100.8.6 Start

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This message tells the receiver to start looking for devices.
Notes: Please use ImageCaptureEventsMBS class to receive events.

100.8.7 Stop

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method tells the receiver to stop looking for devices.
Notes: This will free all device instances that are not in use.

100.8.8 Properties

100.8.9 browsedDeviceTypeMask as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The device type mask.
Notes: A mask whose set bits indicate the type of device(s) being browsed after the receiver receives the start message. This property can be changed while the browser is browsing for devices. This property can be constructed by OR'd values of ICDeviceTypeMask with values of ICDeviceLocationTypeMask.
(Read and Write property)

100.8.10 Browsing as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the device browser is browsing for devices.
Notes: (Read only property)

100.8.11 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.8.12 preferredDevice as ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method returns a device object that should be selected by the client application when it is launched.
Notes: If the client application that calls this method is the auto-launch application associated with a device and that device is the last device attached (through USB, FireWire or network), then that device will be the preferred device. The best place to call this method is in the event deviceBrowserDidAddDevice, if the "moreComing" parameter passed to the delegate is false; or in the event deviceBrowserDidEnumerateLocalDevices.
(Read only property)

100.8.13 Events

100.8.14 DeviceDidChangeName(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

100.8.15 DeviceDidChangeSharingState(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

100.8.16 DidAddDevice(device as ICDeviceMBS, moreComing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to inform that a device has been added.
Notes: If several devices are found during the initial search, then this event is sent once for each device with the value of 'moreComing' set to true in each event except the last one.

100.8.17 DidEnumerateLocalDevices

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent after the device browser completes sending deviceBrowser:didAddDevice event for all local devices.
Notes: Detecting locally connected devices (USB and FireWire devices) is faster than detecting devices connected using a network protocol. An Image Capture client application may use this event to update its user interface to let the user know that it has completed looking for locally connected devices and then start looking for network devices.

100.8.18 DidRemoveDevice(device as ICDeviceMBS, moreGoing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to inform that a device has been removed.
Notes: If several devices are removed at the same time, then this event is sent once for each device with the value of 'moreGoing' set to true in each event except the last one.

100.8.19 RequestsSelectDevice(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an event that occurred on the device may be of interest to the client application.
Notes: In Mac OS X 10.6, this event is sent when a button is pressed on a device and the current application is the target for that button press. In the case of the button-press event, if a session is open on the device, this event will not be sent, instead the deviceDidReceiveButtonPress event is sent.

100.9 class ICDeviceMBS

100.9.1 class ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICDevice is an abstract class that represents a device supported by Image Capture.
Notes: ImageCaptureCore defines two concrete subclasses of ICDeviceMBS, ICCameraDeviceMBS and ICScannerDeviceMBS. ICDeviceBrowserMBS creates instances of these two subclasses to represent cameras and scanners it finds.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 20.5pr10

100.9.2 Methods

100.9.3 capabilities as Variant()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The capabilities of the device as reported by the device module.

100.9.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.9.5 ICButtonTypeCopy as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Copy" button on the device was pressed.

100.9.6 ICButtonTypeMail as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Mail" button on the device was pressed.

100.9.7 ICButtonTypePrint as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Print" button on the device was pressed.

100.9.8 ICButtonTypeScan as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Scan" button on the device was pressed.

100.9.9 ICButtonTypeTransfer as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Transfer" button on the device was pressed.

100.9.10 ICButtonTypeWeb as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Web" button on the device was pressed.

100.9.11 ICDeviceCanEjectOrDisconnect as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used to describe capabilities of a device.
Notes: Indicates either the device is mounted as a mass-storage volume and can be ejected or the it is a remote device with an active connection that can be disconnected.

100.9.12 ICDeviceLocationDescriptionBluetooth as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This description is returned for locationDescription property of a device connected via Bluetooth.

100.9.13 ICDeviceLocationDescriptionFireWire as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This description is returned for locationDescription property of a device connected to a FireWire port.

100.9.14 ICDeviceLocationDescriptionMassStorage as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This description is returned for locationDescription property of a device that is mounted as a mass-storage volume.

100.9.15 ICDeviceLocationDescriptionUSB as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This description is returned for locationDescription property of a device connected to a USB port.

100.9.16 ICLocalizedStatusNotificationKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used for device status notifications.
Notes: Key for a localized notification string.

100.9.17 ICStatusCodeKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used for device status notifications.
Notes: One of values defined in ICReturnCode.

100.9.18 ICStatusNotificationKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the constants used for device status notifications.
Notes: Key for a non-localized notification string.

100.9.19 ICTransportTypeBluetooth as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates that the device uses Bluetooth transport.

100.9.20 ICTransportTypeFireWire as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates that the device uses FireWire transport.

100.9.21 ICTransportTypeMassStorage as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates that the device use mounts as a mass-storage volume.

100.9.22 ICTransportTypeTCPIP as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates that the device uses TCP/IP transport.
Notes: These devices are discovered using Bonjour.

100.9.23 ICTransportTypeUSB as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates that the device uses USB transport.

100.9.24 requestCloseSession

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This message requests to close a previously opened session on this device.
Notes: This request is completed when the ImageCaptureEventsMBS subclass receives a deviceDidCloseSessionWithError event.

100.9.25 requestEjectOrDisconnect

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Eject the media if permitted by the device, or disconnect from a remote device.

100.9.26 requestOpenSession

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This message requests to open a session on the device.
Notes: A client MUST open a session on a device in order to use the device.
This request is completed when the ImageCaptureEventsMBS subclass receives a deviceDidOpenSessionWithError event. No more events will be sent to the delegate if this request fails.

100.9.27 requestSendMessage(messageCode as UInt32, data as MemoryBlock, maxReturnedDataSize as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This method asynchronously sends an arbitrary message with optional data to a device.
Notes: This method allows developers to send a private message from a client application to a device module. This method is the functional equivalent of calling ICAObjectSendMessage() found in ImageCapture.framework, which has been deprecated in Mac OS X 10.6. The response to this command will be delivered using deviceDidSendMessage event.
The content of error returned should be examined to determine if the request completed successfully.
NOTE: This method SHOULD NOT BE USED to send PTP pass-through commands to a PTP camera. Please refer to requestSendPTPCommand defined in ICCameraDeviceMBS for sending PTP pass-through commands.

100.9.28 requestYield

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This message requests the device module in control of this device to yield control.
Notes: This message should be used only if the client is planning on communiting with the device directly. The device module may not yield control of the device if it has an open session.

100.9.29 Properties

100.9.30 AutolaunchApplicationPath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Filesystem path of an application that is to be automatically launched when this device is added.
Notes: (Read and Write property)

100.9.31 BonjourServiceType as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Service type if device was found via Bonjour..
Notes: (Read only property)

100.9.32 BskonjourServiceName as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Service name if device was found via Bonjour..
Notes: (Read only property)

100.9.33 ButtonPressed as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A string object with one of the ICButtonType* values defined above.
Notes: (Read only property)

100.9.34 canDeleteAllFiles as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: If all files can be deleted.
Notes: (Read only property)

100.9.35 canDeleteOneFile as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether a file can be deleted.
Notes: (Read only property)

100.9.36 canEject as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this device can be ejected.
Notes: (Read only property)

100.9.37 canReceiveFile as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this device can receive a file.
Notes: (Read only property)

100.9.38 canSyncClock as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this device can sync clock.
Notes: (Read only property)

100.9.39 canTakePicture as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this device can take pictures.
Notes: (Read only property)

100.9.40 fwGUID as Int64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The FireWire GUID of a FireWire device in the IOKit registry.
Notes: This will be 0 for non-FireWire devices.
(Read only property)

100.9.41 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.9.42 HasConfigurableWiFiInterface as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the device can be configured for use on a WiFi network.
Notes: (Read only property)

100.9.43 HasOpenSession as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the device has an open session.
Notes: (Read only property)

100.9.44 Icon as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Icon image for the device.
Notes: Value is a CGImageMBS. We use variant to reduce dependency to other plugins.
(Read only property)

100.9.45 IconPath as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Path to icon file.
Notes: (Read only property)

100.9.46 IPAddress as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: IP Address.
Notes: (Read only property)

100.9.47 IsRemote as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the device is a remote device published by Image Capture device sharing facility.
Notes: (Read only property)

100.9.48 IsShared as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the device is shared using the Image Capture device sharing facility.
Notes: This value will change when sharing of this device is enabled or disabled.
(Read only property)

100.9.49 LocationDescription as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A non-localized location description string for the device.
Notes: The value returned in one of the location description strings defined above, or location obtained from the Bonjour TXT record of a network device.
(Read only property)

100.9.50 ModuleExecutableArchitecture as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Executable Architecture of the device module in control of this device.
Notes: Possible values:

I386	&h00000007
PPC	&h00000012
X86_64	&h01000007
PPC64	&h01000012

(Read only property)

100.9.51 ModulePath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Filesystem path of the device module that is associated with this device.
Notes: Camera-specific capabilities are defined in ICCameraDeviceMBS class and scanner-specific capabilities are defined in ICScannerDeviceMBS class.
(Read only property)

100.9.52 ModuleVersion as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The bundle version of the device module associated with this device.
Notes: This may change if an existing device module associated with this device is updated or a new device module for this device is installed.
(Read only property)

100.9.53 Name as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Name of the device as reported by the device module or by the device transport when a device module is not in control of this device.
Notes: This name may change if the device module overrides the default name of the device reported by the device's transport, or if the name of the filesystem volume mounted by the device is changed by the user.
(Read only property)

100.9.54 PersistentIDString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A string representation of the persistent ID of the device.
Notes: (Read only property)

100.9.55 ProductKind as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Platform: macOS, Targets: Desktop only.

Function: Product kind.
Notes: (Read only property)

100.9.56 SerialNumberString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The serial number of the device.
Notes: This will be "" if the device does not provide a serial number.
(Read only property)

100.9.57 SystemSymbolName as String

MBS AVFoundation Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: systemSymbolName allows to query standard system symbol used to represent the device class.
Notes: New for macOS 11.0.
Using the symbol to render an appropriate device icon will ensure proper scaling for high resolution devices.
(Read only property)

100.9.58 TransportType as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The transport type used by the device.
Notes: The possible values are: ICTransportTypeUSB, ICTransportTypeFireWire, ICTransportTypeBluetooth, ICTransportTypeTCPIP, or ICTransportTypeMassStorage.
(Read only property)

100.9.59 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The type of the device as defined by ICDeviceType OR'd with its ICDeviceLocationType.
Notes: The type of this device can be obtained by AND'ing the value retuned by this property with an appropriate ICDeviceTypeMask. The location type of this device can be obtained by AND'ing the value retuned by this property with an appropriate ICDeviceLocationTypeMask.
(Read only property)

100.9.60 usbLocationID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The USB location ID of a USB device in the IOKit registry.
Notes: This will be 0 for non-USB devices.
(Read only property)

100.9.61 usbProductID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The USB product ID of a USB device in the IOKit registry.
Notes: This will be 0 for non-USB devices.
(Read only property)

100.9.62 usbVendorID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The USB vendor ID of a USB device in the IOKit registry.
Notes: This will be 0 for non-USB devices.
(Read only property)

100.9.63 UserData as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A mutable dictionary to store arbitrary key-value pairs associated with a device object.
Notes: This can be used by view objects that bind to this object to store "house-keeping" information. In Xojo, please query dictionary, modify it and assign back to this property.

(Read and Write property)

100.9.64 UUIDString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A string representation of the Universally Unique ID of the device.
Notes: (Read only property)

100.9.65 Constants

Device Types

Constant	Value	Description
ICDeviceLocationTypeBluetooth	&h00000800	Device found as a paired Bluetooth device.
ICDeviceLocationTypeBonjour	&h00000400	Device found over the network by searching for Bonjour services suppor Image Capture.
ICDeviceLocationTypeLocal	&h00000100	Device found directly attached to the Macintosh via its USB or FireWir
ICDeviceLocationTypeShared	&h00000200	Device found over the network by searching for devices shared by othe intosh hosts.

Image Capture Device Location Type Mask

Constant	Value	Description
ICDeviceLocationTypeMaskBluetooth	&h00000800	Mask to detect paired Bluetooth device.
ICDeviceLocationTypeMaskBonjour	&h00000400	Mask to detect a network device that publishes a Bonjour service
ICDeviceLocationTypeMaskLocal	&h00000100	Mask to detect a local (e.g., USB or FireWire) device.
ICDeviceLocationTypeMaskRemote	&h0000FE00	Mask to detect a remote (shared, Bonjour, Bluetooth) device.
ICDeviceLocationTypeMaskShared	&h00000200	Mask to detect a device by another Macintosh host.

Image Capture Device Types

Constant	Value	Description
ICDeviceTypeCamera	&h00000001	Camera device.
ICDeviceTypeScanner	&h00000002	Scanner device.

Image Capture Device Type Mask

Constant	Value	Description
ICDeviceTypeMaskCamera	&h00000001	Mask to detect a camera device.
ICDeviceTypeMaskScanner	&h00000002	Mask to detect a scanner device.

100.10 class ICScannerBandDataMBS

100.10.1 class ICScannerBandDataMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The class for band data from scanner.
Notes: If image is too big to be transferred in one big block, it's sent in little chunks using this class.

Only uses when transfermode is ICScannerTransferModeMemoryBased.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.4
- MBS Xojo Plugins, version 19.4pr7

100.10.2 Methods

100.10.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.10.4 Properties

100.10.5 bigEndian as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes if the banded image data is reported in big endian.
Notes: (Read only property)

100.10.6 bitsPerComponent as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the number of bits per component for the banded image.
Notes: (Read only property)

100.10.7 bitsPerPixel as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the number of bits per pixel for banded the image.
Notes: (Read only property)

100.10.8 bytesPerRow as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Descries how many bytes are in each image band row.
Notes: (Read only property)

100.10.9 CGImage as CGImageMBS

MBS AVFoundation Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Builds CGImageMBS object with the data of this band.
Notes: Returns nil if data can't be represented easily as CGImage.
This function is designed for RGB or Grayscale.
(Read only property)

100.10.10 colorSyncProfilePath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Returns the path to the color profile matching the banded data.
Notes: (Read only property)

100.10.11 dataBuffer as Memoryblock

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The pointer to the data buffer object.
Notes: Plugin returns a copy of the data when you query this property.
(Read only property)

100.10.12 dataNumRows as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the number of rows contained in the image band.
Notes: (Read only property)

100.10.13 dataSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the actual data size of the image band buffer.
Notes: (Read only property)

100.10.14 dataStartRow as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the start row of the image band.
Notes: (Read only property)

100.10.15 fullImageHeight as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the full image height of the banded image.
Notes: (Read only property)

100.10.16 fullImageWidth as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes the full image width of the banded image.
Notes: (Read only property)

100.10.17 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.10.18 numComponents as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Describes how many components are contained within the banded image.
Notes: (Read only property)

100.10.19 Picture as Picture

MBS AVFoundation Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Builds Picture object with the data of this band.
Notes: Returns nil if data can't be represented easily as CGImage.
This function is designed for RGB or Grayscale.
(Read only property)

100.10.20 pixelDataType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Type of pixel data that is contained in the band.
Notes: See ICScannerFunctionalUnitMBS.ICScannerPixelDataType* constants.
(Read only property)

100.11 class ICScannerDeviceMBS

100.11.1 class ICScannerDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The class for a scanner device.
Notes: ICScannerDeviceMBS is a concrete subclass of ICDeviceMBS class. ICDeviceBrowserMBS creates instances of this class. In this release, an instance of ICScannerDeviceMBS class is intended to be used by the IKScannerDeviceViewMBS object. The IKScannerDeviceView class encapsulates the complexities of setting scan parameters, performing scans and saving the result. The developer should consider using IKScannerDeviceViewMBS instead of building their own views using the ICScannerDeviceMBS object.
Subclass of the ICDeviceMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.11.2 Methods

100.11.3 availableFunctionalUnitTypes as Integer()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An array of functional unit types available on this scanner device.
Notes: This is an array of numbers whose values are of type ICScannerFunctionalUnitType.

100.11.4 cancelScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Cancels the current scan operation started by sending a 'requestOverviewScan' or 'requestScan'.

100.11.5 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.11.6 ICScannerStatusRequestsOverviewScan as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner is requesting an overview scan to be performed.

100.11.7 ICScannerStatusWarmingUp as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner is warming up.

100.11.8 ICScannerStatusWarmUpDone as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner has warmed up.

100.11.9 requestOverviewScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Starts an overview scan on selectedFunctionalUnit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidCompleteOverviewScanWithError event. The content of error returned should be examined to determine if the request completed successfully.

100.11.10 requestScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Starts a scan on selectedFunctionalUnit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidCompleteScanWithError event. The content of error returned should be examined to determine if the request completed successfully.

100.11.11 requestSelectFunctionalUnit(type as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Requests the scanner device to select a functional unit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidSelectFunctionalUnit.

100.11.12 Properties

100.11.13 documentName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The document name.
Notes: (Read and Write property)

100.11.14 documentUTI as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The document UTI.
Notes: Currently supported UTIs are: kUTTypeJPEG, kUTTypeJPEG2000, kUTTypeTIFF, kUTTypePNG etc.
see UTTypeMBS module.
(Read and Write property)

100.11.15 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.11.16 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.11.17 maxMemoryBandSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The total maximum band size requested when performing a ICScannerTransferModeMemory-Based.
Notes: (Read and Write property)

100.11.18 selectedFunctionalUnit as ICScannerFunctionalUnitMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The currently selected functional unit on the scanner device.
Notes: (Read only property)

100.11.19 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The transfer mode for scanned document.
Notes: (Read and Write property)

100.11.20 Constants

Transfer Modes

Constant	Value	Description
ICScannerTransferModeFileBased	0	Save the scan as a file.
ICScannerTransferModeMemoryBased	1	Transfer the scan as data.

100.12 class ICScannerFeatureBooleanMBS

100.12.1 class ICScannerFeatureBooleanMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFeatureBoolean object is used to represent a property of a scanner functional unit whose value can be true or false.
Notes: Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.12.2 Methods

100.12.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.12.4 Properties

100.12.5 value as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The value of this feature.
Notes: (Read and Write property)

100.13 class ICScannerFeatureEnumerationMBS

100.13.1 class ICScannerFeatureEnumerationMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFeatureEnumeration object is used to represent a feature of a scanner functional unit that can have one of several discrete values.
Notes: Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.13.2 Methods

100.13.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.13.4 menuItemLabels as String()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The human readable menu item labels to be used in a menu to allow the user to select the current value from an array of possible values.

100.13.5 menuItemLabelsTooltips as String()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Tooltip text associated with the menu items.

100.13.6 values as Variant()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An array of possible values. All items in this array must be of same type.

100.13.7 Properties

100.13.8 currentValue as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The current value.
Notes: The current value can be set to one of the possible values in the "values" property below.
(Read and Write property)

100.13.9 defaultValue as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The default value.
Notes: The default value can be set to one of the possible values in the "values" property below.
(Read only property)

100.14 class ICScannerFeatureMBS

100.14.1 class ICScannerFeatureMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFeature class is an abstract base class used to describe a scanner feature.
Notes: ImageCaptureCore defines three concrete subclasses of ICScannerFeatureMBS: ICScannerFeatureEnumerationMBS, ICScannerFeatureRangeMBS and ICScannerFeatureBooleanMBS.
The scanner functional units may have one or more instances of these classes to allow users to choose scanner-specific settings or operations before performing a scan.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.14.2 Methods

100.14.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.14.4 Properties

100.14.5 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.14.6 humanReadableName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The human readable name of this feature.
Notes: (Read only property)

100.14.7 internalName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal name of this feature.
Notes: (Read only property)

100.14.8 tooltip as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Tooltip text describing the feature.
Notes: (Read only property)

100.14.9 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Scanner feature type.
Notes: See ICScannerFeatureType* constants.
(Read only property)

100.14.10 Constants

Feature Types

Constant	Value	Description
ICScannerFeatureTypeBoolean	2	The value of this feature can be true or false.
ICScannerFeatureTypeEnumeration	0	This feature can have one of several discrete values, strings or numbers.
ICScannerFeatureTypeRange	1	This value of this feature lies within a range.
ICScannerFeatureTypeTemplate	3	A group of features.

100.15 class ICScannerFeatureRangeMBS

100.15.1 class ICScannerFeatureRangeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFeatureRange object is used to represent a property of a scanner functional unit whose value lies within a range.
Notes: Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.15.2 Methods

100.15.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.15.4 Properties

100.15.5 currentValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The current value.
Notes: Attempting to set the current value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the current value.
(Read only property)

100.15.6 defaultValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The default value.
Notes: Attempting to set the default value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the default value.
(Read only property)

100.15.7 maxValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The maximum value.
Notes: (Read only property)

100.15.8 minValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The minimum value.
Notes: (Read only property)

100.15.9 stepSize as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The step size.
Notes: (Read only property)

100.16 class ICScannerFeatureTemplateMBS

100.16.1 class ICScannerFeatureTemplateMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFeatureTemplate object is used to define a group of one or more rectangular scan areas that can be used with a scanner functional unit.
Notes: Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.16.2 Methods

100.16.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.16.4 targets as ICScannerFeatureMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The target features.

100.17 class ICScannerFunctionalUnitDocumentFeederMBS

100.17.1 class ICScannerFunctionalUnitDocumentFeederMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFunctionalUnitDocumentFeeder is a concrete subclass of ICScannerFunctionalUnit class.
Notes: ICScannerDevice creates instances of this class.
This represents the document feeder unit on the scanner.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.17.2 Methods

100.17.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.17.4 Properties

100.17.5 documentLoaded as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the feeder has documents to scan.
Notes: This value will change when the document is loaded or removed from the feeder, if the scanner module has the capability to detect this state.
(Read only property)

100.17.6 duplexScanningEnabled as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether duplex scanning is enabled.
Notes: (Read and Write property)

100.17.7 evenPageOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Desired orientation of the even pages of the scanned document.
Notes: This property is set to ICEXIFOrientation1 initially.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180¬∞
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90¬∞ CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90¬∞ CCW
ICEXIFOrientation7	7	Rotated 90¬∞ CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90¬∞ CW

(Read and Write property)

100.17.8 oddPageOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Desired orientation of the odd pages of the scanned document.
Notes: This property is set to ICEXIFOrientation1 initially.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180¬∞
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90¬∞ CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90¬∞ CCW
ICEXIFOrientation7	7	Rotated 90¬∞ CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90¬∞ CW

(Read and Write property)

100.17.9 reverseFeederPageOrder as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the document feeder reads pages from back to front.
Notes: (Read only property)

100.17.10 supportsDuplexScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates whether duplex scanning is supported.
Notes: (Read only property)

100.18 class ICScannerFunctionalUnitFlatbedMBS

100.18.1 class ICScannerFunctionalUnitFlatbedMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFunctionalUnitFlatbedMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes: ICScannerDevice creates instances of this class.
This represents the flatbed unit on the scanner.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.18.2 Methods

100.18.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.19 class ICScannerFunctionalUnitMBS

100.19.1 class ICScannerFunctionalUnitMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFunctionalUnit is an abstract class that represents a scanner functiona unit.
Notes: ImageCaptureCore defines three concrete subclasses of ICScannerFunctionalUnit: ICScannerFunctionalUnitFlatbed, ICScannerFunctionalUnitPositiveTransparency, ICScannerFunctionalUnitNegativeTransparency and ICScannerFunctionalUnitDocumentFeeder. ICScannerDevice creates instances of these concrete subclasses.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.19.2 Methods

100.19.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.19.4 templates as ICScannerFeatureTemplateMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An array of objects of type ICScannerFeatureTemplate.

100.19.5 vendorFeatures as ICScannerFeatureMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An array of objects of type ICScannerFeature.

100.19.6 Properties

100.19.7 acceptsThresholdForBlackAndWhiteScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if this functional unit accepts threshold value to be used when performing a scan in black & white.
Notes: (Read only property)

100.19.8 bitDepth as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The bit depth to use when performing the final scan.
Notes: This will always be one of the supported bit depths.
(Read and Write property)

100.19.9 canPerformOverviewScan as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if this functional unit can perfrom an overview scan.
Notes: Not all functional units can perform an overview scan. For example, a document feeder or a sheet feeder unit cannot perform an overview scan.
(Read only property)

100.19.10 defaultThresholdForBlackAndWhiteScanning as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Default threshold value used when performing a scan in black & white.
Notes: This value is from 0 to 255.
(Read only property)

100.19.11 documentSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Document size of the current document type expressed in current measurement unit.
Notes: (Read only property)

100.19.12 documentType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current document type.
Notes: This will always be one of the supported document types.
(Read and Write property)

100.19.13 measurementUnit as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current measurement unit. This will always be one of the supported measurement units.
Notes: (Read and Write property)

100.19.14 nativeXResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Optical resolution along the X axis.
Notes: (Read only property)

100.19.15 nativeYResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Optical resolution along the Y axis.
Notes: (Read only property)

100.19.16 overviewImage as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Overview scan image.
Notes: This property will be nil for functional units that do not support overview scans.

Value is a CGImageMBS. We use variant to reduce dependency to other plugins.
(Read only property)

100.19.17 overviewResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Overview image resolution.
Notes: Value assigned to this will be contrained by resolutions allowed by the device.
(Read and Write property)

100.19.18 overviewScanInProgress as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if an overview scan is in progress.
Notes: (Read only property)

100.19.19 physicalSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Physical size of the scan area in current measurement unit.
Notes: (Read only property)

100.19.20 pixelDataType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The pixel data type.
Notes: See ICScannerPixelDataType* constants.
(Read and Write property)

100.19.21 preferredResolutions as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current scan resolution.
Notes: This will always be one of the supported resolution values.
(Read only property)

100.19.22 preferredScaleFactors as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Preferred scale factors in percentage.
Notes: (Read only property)

100.19.23 resolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current scan resolution.
Notes: This will always be one of the supported resolution values.
(Read and Write property)

100.19.24 scaleFactor as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current scale factor.
Notes: This will always be one of the supported scale factor values.
(Read only property)

100.19.25 scanArea as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This property along with scanAreaOrientation describes the area to be scanned.
Notes: (Read and Write property)

100.19.26 scanAreaOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Desired orientation of the scan area.
Notes: This property along with scanArea describes the area to be scanned.
This property is set to ICEXIFOrientation1 initially. This property is not used by the ICScannerFunctionalUnitDocumentFeeder subclass.

Possible values:

(Read and Write property)

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180¬∞
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90¬∞ CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90¬∞ CCW
ICEXIFOrientation7	7	Rotated 90¬∞ CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90¬∞ CW

100.19.27 scanInProgress as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if a scan is in progress.
Notes: (Read only property)

100.19.28 scanProgressPercentDone as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates percentage of scan completed.
Notes: (Read only property)

100.19.29 state as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates the current state of the functional unit.
Notes: See ICScannerFunctionalUnitState* constants.
(Read only property)

100.19.30 supportedBitDepths as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Supported bit depths.
Notes: The values in this set are valid values defined by ICScannerBitDepth.
(Read only property)

100.19.31 supportedDocumentTypes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Supported document types.
Notes: The values in this set are valid values defined by ICScannerDocumentType.
(Read only property)

100.19.32 supportedMeasurementUnits as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Supported measurement units. The values in this set are valid values defined by ICScannerMeasurementUnit.
Notes: (Read only property)

100.19.33 supportedResolutions as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Supported scan resolutions in DPI.
Notes: (Read only property)

100.19.34 supportedScaleFactors as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Supported scale factors in percentage.
Notes: (Read only property)

100.19.35 thresholdForBlackAndWhiteScanning as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Threshold value to be used when performing a scan in black & white.
Notes: This value should be from 0 to 255.
(Read and Write property)

100.19.36 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Functional unit type.
Notes: See ICScannerFunctionalUnitType* constants.
(Read only property)

100.19.37 usesThresholdForBlackAndWhiteScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if this functional unit uses threshold value to be used when performing a scan in black & white.
Notes: (Read only property)

100.19.38 Constants

Bit Depths

Constant	Value	Description
ICScannerBitDepth16Bits	16	Image with 16 bits per channel.
ICScannerBitDepth1Bit	1	1-bit image.
ICScannerBitDepth8Bits	8	Image with 8 bits per channel.

Color Data Formats

Constant	Value	Description
ICScannerColorDataFormatTypeChunky	0	For multi-channel data (e.g., RGB) data from all channels are interlea Identifies color data formats. Only relevant for multi-channel data. sponds to "ICAP_PLANARCHUNKY" of the TWAIN Specification.
ICScannerColorDataFormatTypePlanar	1	For multi-channel data (e.g., RGB) each channel is transferred sequen Identifies color data formats. Only relevant for multi-channel data. sponds to "ICAP_PLANARCHUNKY" of the TWAIN Specification.

Document Types

Constant	Value	Description
ICScannerDocumentType10	25	A10, 26.00 mm x 37.00 mm
ICScannerDocumentType10R	67	10R, 10” x 12” 254.00 mm x 304.80 mm 5:6
ICScannerDocumentType110	72	Instamatic 110, 13.00 mm x 17.00 mm
ICScannerDocumentType11R	69	11R, 11” x 14” 279.40 mm x 355.60 mm 11:14
ICScannerDocumentType12R	70	12R, 12” x 15” 304.80 mm x 381.00 mm 4:5
ICScannerDocumentType135	76	Standard 35 mm, 36.00 mm x 24.00 mm
ICScannerDocumentType2A0	18	2A0, 1189.00 mm x 1682.00 mm
ICScannerDocumentType3R	61	3R, 3.5” x 5” 88.90 mm x 127.00 mm 7:10
ICScannerDocumentType4A0	17	4A0, 1682.00 mm x 2378.00 mm
ICScannerDocumentType4R	62	4R, 4” x 6” 101.60 mm x 152.40 mm 2:3
ICScannerDocumentType5R	63	5R, 5” x 7” 127.00 mm x 177.80 mm 5:7
ICScannerDocumentType6R	64	6R, 6” x 8” 152.40 mm x 203.20 mm 3:4
ICScannerDocumentType8R	65	8R, 8” x 10” 203.20 mm x 254.00 mm 4:5
ICScannerDocumentTypeA0	19	A0, 841.00 mm x 1189.00 mm
ICScannerDocumentTypeA1	20	A1, 594.00 mm x 841.00 mm
ICScannerDocumentTypeA2	21	A2, 420.00 mm x 594.00 mm
ICScannerDocumentTypeA3	11	A3, 297.00 mm x 420.00 mm
ICScannerDocumentTypeA4	1	A4, 210.00 mm x 297.00 mm
ICScannerDocumentTypeA5	5	A5, 148.00 mm x 210.00 mm
ICScannerDocumentTypeA6	13	A6, 105.00 mm x 148.00 mm
ICScannerDocumentTypeA7	22	A7, 74.00 mm x 105.00 mm
ICScannerDocumentTypeA8	23	A8, 52.00 mm x 74.00 mm
ICScannerDocumentTypeA9	24	A9, 37.00 mm x 52.00 mm
ICScannerDocumentTypeAPSC	74	APS Classic, 25.10 mm x 16.70 mm
ICScannerDocumentTypeAPSH	73	APS High Definition, 30.20 mm x 16.70 mm
ICScannerDocumentTypeAPSP	75	APS Panoramic, 30.20 mm x 9.50 mm
ICScannerDocumentTypeB5	2	B5/JIS B5, 182.00 mm x 257.00 mm
ICScannerDocumentTypeBusinessCard	53	Business Card, 90.00 mm x 55.00 mm
ICScannerDocumentTypeC0	44	C0, 917.00 mm x 1297.00 mm
ICScannerDocumentTypeC1	45	C1, 648.00 mm x 917.00 mm
ICScannerDocumentTypeC10	51	C10, 28.00 mm x 40.00 mm
ICScannerDocumentTypeC2	46	C2, 458.00 mm x 648.00 mm
ICScannerDocumentTypeC3	47	C3, 324.00 mm x 458.00 mm
ICScannerDocumentTypeC4	14	C4, 229.00 mm x 324.00 mm
ICScannerDocumentTypeC5	15	C5, 162.00 mm x 229.00 mm
ICScannerDocumentTypeC6	16	C6, 114.00 mm x 162.00 mm
ICScannerDocumentTypeC7	48	C7, 81.00 mm x 114.00 mm
ICScannerDocumentTypeC8	49	C8, 57.00 mm x 81.00 mm
ICScannerDocumentTypeC9	50	C9, 40.00 mm x 57.00 mm
ICScannerDocumentTypeDefault	0	This is the platten size. Not valid for scanners without a platten.
ICScannerDocumentTypeE	60	Japanese E, 3.25” x 4.75” 82.55 mm x 120.65 mm 11:16
ICScannerDocumentTypeISOB0	26	ISO B0, 1000.00 mm x 1414.00 mm
ICScannerDocumentTypeISOB1	27	ISO B1, 707.00 mm x 1000.00 mm
ICScannerDocumentTypeISOB10	33	ISO B10, 31.00 mm x 44.00 mm
ICScannerDocumentTypeISOB2	28	ISO B2, 500.00 mm x 707.00 mm
ICScannerDocumentTypeISOB3	12	B3/ISO B3, 353.00 mm x 500.00 mm
ICScannerDocumentTypeISOB4	6	B4/ISO B4, 250.00 mm x 353.00 mm
ICScannerDocumentTypeISOB5	29	ISO B5, 176.00 mm x 250.00 mm
ICScannerDocumentTypeISOB6	7	B6/ISO B6, 125.00 mm x 176.00 mm
ICScannerDocumentTypeISOB7	30	ISO B7, 88.00 mm x 125.00 mm
ICScannerDocumentTypeISOB8	31	ISO B8, 62.00 mm x 88.00 mm
ICScannerDocumentTypeISOB9	32	ISO B9, 44.00 mm x 62.00 mm
ICScannerDocumentTypeJISB0	34	JIS B0, 1030.00 mm x 1456.00 mm
ICScannerDocumentTypeJISB1	35	JIS B1, 728.00 mm x 1030.00 mm
ICScannerDocumentTypeJISB10	43	JIS B10, 32.00 mm x 45.00 mm
ICScannerDocumentTypeJISB2	36	JIS B2, 515.00 mm x 728.00 mm
ICScannerDocumentTypeJISB3	37	JIS B3, 364.00 mm x 515.00 mm
ICScannerDocumentTypeJISB4	38	JIS B4, 257.00 mm x 364.00 mm

Scanner States

Constant	Value	Description
ICScannerFunctionalUnitStateOverviewScanInProgress	4	The scanner functional unit is performing an overview s
ICScannerFunctionalUnitStateReady	1	The scanner functional unit is ready for operation.
ICScannerFunctionalUnitStateScanInProgress	2	The scanner functional unit is performing a scan.

Scanner Functional Unit Types

Constant	Value	Description
ICScannerFunctionalUnitTypeDocumentFeeder	3	Document feeder functional unit.
ICScannerFunctionalUnitTypeFlatbed	0	Flatbed functional unit.
ICScannerFunctionalUnitTypeNegativeTransparency	2	Transparency functional unit for scanning negatives.
ICScannerFunctionalUnitTypePositiveTransparency	1	Transparency functional unit for scanning positives.

Measurement Units

Constant	Value	Description
ICScannerMeasurementUnitCentimeters	1	1 cm = 1.00 cm or 1/2.54 inches
ICScannerMeasurementUnitInches	0	1 inch = 2.54 cm
ICScannerMeasurementUnitPicas	2	1 pica = .42333333 cm or 1/6 inches
ICScannerMeasurementUnitPixels	5	
ICScannerMeasurementUnitPoints	3	1 point = .0352777775 cm or 1/72 inches
ICScannerMeasurementUnitTwips	4	1 twip = .0001763888 cm or 1/1440 inches

Pixel data types

Constant	Value	Description
ICScannerPixelDataTypeBW	0	Monochrome 1 bit pixel image.
ICScannerPixelDataTypeCIEXYZ	8	Color image in CIEXYZ color space.
ICScannerPixelDataTypeCMY	4	Color image in CMY color space.
ICScannerPixelDataTypeCMYK	5	Color image in CMYK color space.
ICScannerPixelDataTypeGray	1	8 bit pixel Gray color space.
ICScannerPixelDataTypePalette	3	Indexed Color image.
ICScannerPixelDataTypeRGB	2	Color image RGB color space.
ICScannerPixelDataTypeYUV	6	Color image in YUV color space.
ICScannerPixelDataTypeYUVK	7	Color image in YUVK color space.

100.20 class ICScannerFunctionalUnitNegativeTransparencyMBS

100.20.1 class ICScannerFunctionalUnitNegativeTransparencyMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFunctionalUnitNegativeTransparencyMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes: ICScannerDeviceMBS creates instances of this class.
This represents the transparency unit on the scanner for scanning negatives.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.20.2 Methods

100.20.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.21 class ICScannerFunctionalUnitPositiveTransparencyMBS

100.21.1 class ICScannerFunctionalUnitPositiveTransparencyMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: ICScannerFunctionalUnitPositiveTransparencyMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes: ICScannerDeviceMBS creates instances of this class.
This represents the transparency unit on the scanner for scanning postives.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.21.2 Methods

100.21.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

100.22 control IKCameraDeviceViewControlMBS

100.22.1 control IKCameraDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Camera Device View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.22.2 Properties

100.22.3 View as IKCameraDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The camera device view used in this control.
Notes: (Read only property)

100.22.4 Events

100.22.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.22.6 Close

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

100.22.7 Closing

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.22.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.22.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.22.10 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.22.11 DidDownloadFile(CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.22.12 DidEncounterError(Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the camera device reports an error.

100.22.13 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

100.22.14 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.22.15 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.22.16 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.22.17 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

100.22.18 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.22.19 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.22.20 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click

relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.22.21 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.22.22 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.22.23 Open

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

100.22.24 Opening

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.22.25 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.22.26 SelectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.

100.22.27 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.23 class IKCameraDeviceViewMBS

100.23.1 class IKCameraDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Displays content of a Image Capture supported camera.
Notes: Subclass of the NSViewMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.23.2 Methods

100.23.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new IKCameraDeviceViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 100.23.4 Constructor(Handle as Integer) 15131
- 100.23.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15132

100.23.4 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new IKCameraDeviceViewMBS(0, 0, 100, 100)
Var v as new IKCameraDeviceViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKCameraDeviceView and the plugin retains this handle.
See also:

- 100.23.3 Constructor 15131

• 100.23.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15132

100.23.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new IKCameraDeviceViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

• 100.23.3 Constructor 15131
• 100.23.4 Constructor(Handle as Integer) 15131

100.23.6 deleteSelectedItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Delete selected items.

100.23.7 downloadAllItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Download all items.

100.23.8 downloadSelectedItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Download selected items.

100.23.9 rotateLeft

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Rotate selected items left.

100.23.10 rotateRight

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Rotate selected items right.

100.23.11 selectIndexes(indexes as NSIndexSetMBS, extend as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Setting current user selection.

100.23.12 Properties

100.23.13 cameraDevice as ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The camera device.
Notes: (Read and Write property)

100.23.14 canDeleteSelectedItems as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the user selected items can be deleted.
Notes: (Read only property)

100.23.15 canDownloadSelectedItems as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the user selected items can be downloaded.
Notes: (Read only property)

100.23.16 canRotateSelectedItemsLeft as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the user selected items can be rotated left.
Notes: (Read only property)

100.23.17 canRotateSelectedItemsRight as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Indicates if the user selected items can be rotated right.
Notes: (Read only property)

100.23.18 displaysDownloadsDirectoryControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Show a downloads directory control.
Notes: (Read and Write property)

100.23.19 displaysPostProcessApplicationControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Show a postprocessing application control.
Notes: (Read and Write property)

100.23.20 downloadAllControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Label for the 'Download All' control - allows for example renaming to 'Import All'.
Notes: (Read and Write property)

100.23.21 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.23.22 downloadSelectedControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Label for the 'Download Selected' control.
Notes: (Read and Write property)

100.23.23 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.23.24 hasDisplayModeIcon as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Support icon view display mode.
Notes: (Read and Write property)

100.23.25 hasDisplayModeTable as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Support table view display mode.
Notes: (Read and Write property)

100.23.26 iconSize as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: in icon mode: size of the image thumbnails.
Notes: (Read and Write property)

100.23.27 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current display mode.
Notes: see IKCameraDeviceViewDisplayMode constants.
(Read and Write property)

100.23.28 postProcessApplication as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Postprocessing application.
Notes: A file URL to application.
(Read and Write property)

100.23.29 selectedIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current user selection.
Notes: (Read only property)

100.23.30 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Transfer mode either file based - or - in memory.
Notes: See IKCameraDeviceViewTransferMode constants.
(Read and Write property)

100.23.31 Events

100.23.32 DidDownloadFile(CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.23.33 DidEncounterError(Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the camera device reports an error.

100.23.34 SelectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.

100.23.35 Constants

Display Modes

Constant	Value	Description
IKCameraDeviceViewDisplayModeIcon	1	Show Icons
IKCameraDeviceViewDisplayModeTable	0	Show Table

Transfer Modes

Constant	Value	Description
IKCameraDeviceViewTransferModeFileBased	0	File based download.
IKCameraDeviceViewTransferModeMemoryBased	1	Memory based download.

100.24 control IKDeviceBrowserViewControlMBS

100.24.1 control IKDeviceBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Device Browser View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.24.2 Properties

100.24.3 View as IKDeviceBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The device browser view used in this control.
Notes: (Read only property)

100.24.4 Events

100.24.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.24.6 Close

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

100.24.7 Closing

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.24.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.24.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.24.10 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.24.11 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the device browser reports an error.

100.24.12 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

100.24.13 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.24.14 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.24.15 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.24.16 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

100.24.17 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.24.18 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.24.19 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.24.20 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.24.21 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.24.22 Open

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

100.24.23 Opening

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.24.24 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.24.25 SelectionDidChange(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.
Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

100.24.26 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.25 class IKDeviceBrowserViewMBS

100.25.1 class IKDeviceBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Displays Image Capture cameras and scanners.
Notes: Subclass of the NSViewMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.25.2 Methods

100.25.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new IKDeviceBrowserViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 100.25.4 Constructor(Handle as Integer) 15144
- 100.25.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15145

100.25.4 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new IKDeviceBrowserViewMBS(0, 0, 100, 100)
Var v as new IKDeviceBrowserViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKDeviceBrowserView and the plugin retains this handle.
See also:

- 100.25.3 Constructor 15144

• 100.25.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15145

100.25.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new IKDeviceBrowserViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

• 100.25.3 Constructor 15144

• 100.25.4 Constructor(Handle as Integer) 15144

100.25.6 Properties

100.25.7 displaysLocalCameras as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For device filtering - indicates that the IKDeviceBrowserView should include local cameras.
Notes: (Read and Write property)

100.25.8 displaysLocalScanners as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: for device filtering - indicates that the IKDeviceBrowserView should include local scanners.
Notes: (Read and Write property)

100.25.9 displaysNetworkCameras as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: for device filtering - indicates that the IKDeviceBrowserView should include network/shared cameras.

Notes: (Read and Write property)

100.25.10 displaysNetworkScanners as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: for device filtering - indicates that the IKDeviceBrowserView should include network/shared scanners.
Notes: (Read and Write property)

100.25.11 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: One of the supported display modes (table, outline, or icon mode).
Notes: (Read and Write property)

100.25.12 selectedDevice as ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: User selected device (ICCameraDevice or ICScannerDevice).
Notes: (Read only property)

100.25.13 Events

100.25.14 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the device browser reports an error.

100.25.15 SelectionDidChange(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.
Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

100.25.16 Constants

Display Modes

Constant	Value	Description
IKDeviceBrowserViewDisplayModeIcon	2	Icon
IKDeviceBrowserViewDisplayModeOutline	1	Outline
IKDeviceBrowserViewDisplayModeTable	0	Table

100.26 control IKScannerDeviceViewControlMBS

100.26.1 control IKScannerDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a Scanner Device View.
Notes: For Xojo with Cocoa target.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.26.2 Properties

100.26.3 View as IKScannerDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The scanner view used in this control.
Notes: For Xojo with Cocoa target.
(Read only property)

100.26.4 Events

100.26.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

100.26.6 Close

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

100.26.7 Closing

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

100.26.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

100.26.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

100.26.10 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

100.26.11 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the scanner device reports an error.

100.26.12 DidScanToBandData(data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

100.26.13 DidScanToURL(url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.26.14 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

100.26.15 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.26.16 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

100.26.17 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

100.26.18 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

100.26.19 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

100.26.20 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

100.26.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

100.26.22 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

100.26.23 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

100.26.24 Open

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

100.26.25 Opening

Plugin Version: 14.3, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

100.26.26 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

100.26.27 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

100.27 class IKScannerDeviceViewMBS

100.27.1 class IKScannerDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: IKScannerDeviceView displays a UI to work with Image Capture supported scanners.
Notes: Subclass of the NSViewMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

100.27.2 Methods

100.27.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new IKScannerDeviceViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 100.27.4 Constructor(Handle as Integer) 15154
- 100.27.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15155

100.27.4 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new IKScannerDeviceViewMBS(0, 0, 100, 100)
Var v as new IKScannerDeviceViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKScannerDeviceView and the plugin retains this handle.
See also:

- 100.27.3 Constructor 15154

• 100.27.5 Constructor(left as Double, top as Double, width as Double, height as Double) 15155

100.27.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new IKScannerDeviceViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

• 100.27.3 Constructor 15154

100.27.6 Properties

100.27.7 displaysDownloadsDirectoryControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Show a downloads directory control.
Notes: (Read and Write property)

100.27.8 displaysPostProcessApplicationControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Show a postprocessing application control.
Notes: (Read and Write property)

100.27.9 documentName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Document name.
Notes: (Read and Write property)

100.27.10 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.27.11 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Downloads directory.
Notes: Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

100.27.12 hasDisplayModeAdvanced as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Support advanced scanning UI.
Notes: (Read and Write property)

100.27.13 hasDisplayModeSimple as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Support a simple scanning UI.
Notes: (Read and Write property)

100.27.14 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Current display mode.
Notes: See IKScannerDeviceViewDisplayMode constants.
(Read and Write property)

100.27.15 overviewControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Label for the 'Overview' control.
Notes: (Read and Write property)

100.27.16 postProcessApplication as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Postprocessing application.
Notes: (Read and Write property)

100.27.17 scanControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: label for the 'Scan' control.
Notes: (Read and Write property)

100.27.18 scannerDevice as ICScannerDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The scanner device.
Notes: (Read and Write property)

100.27.19 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: transfer mode either file based - or - in memory.
Notes: See IKScannerDeviceViewTransferMode constants.
(Read and Write property)

100.27.20 Events

100.27.21 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the scanner device reports an error.

100.27.22 DidScanToBandData(data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

100.27.23 DidScanToURL(url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.27.24 Constants

Display Modes

Constant	Value	Description
IKScannerDeviceViewDisplayModeAdvanced	1	Advanced
IKScannerDeviceViewDisplayModeSimple	0	Simple

Transfer Modes

Constant	Value	Description
IKScannerDeviceViewTransferModeFileBased	0	File based scan.
IKScannerDeviceViewTransferModeMemoryBased	1	Memory based scan.

100.28 class ImageCaptureEventsMBS

100.28.1 class ImageCaptureEventsMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Central class for Image Capture events.
Notes: Whenever you have an ICA object, the plugin will register a delegate for it and dispatch all events here.
For some view classes, events are in addition dispatched to the controls.

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

100.28.4 Events

100.28.5 cameraDeviceDidAddItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an object is added to the device.
Notes: The object may be an instance of ICCameraFolder or ICCameraFile class.

100.28.6 cameraDeviceDidAddItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an object or objects are added to the device.
Notes: Instead of receive one event per object, an array of objects is sent.
The objects may be instances of ICCameraFolder or ICCameraFile class.

100.28.7 cameraDeviceDidBecomeReadyWithCompleteContentCatalog(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the camera device is done enumerating its content and is ready to receive requests.
Notes: A session must be opened on the device in order to enumerate its content and make it ready to receive requests.

100.28.8 cameraDeviceDidChangeCapability(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the capability of a device changes.
Notes: This usually happens when the device module takes control or yields control of the device.

100.28.9 cameraDeviceDidCompleteDeleteFilesWithError(camera as ICCameraDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Files have been deleted.
Notes: This event is sent after the camera device completes a delete operation initiated by sending a requestDeleteFiles event to that device.

100.28.10 cameraDeviceDidDownloadFile(file as ICCameraFileMBS, error as NSErrorMBS, options as Dictionary, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Download of file finished.

100.28.11 cameraDeviceDidEnableAccessRestriction(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop only.

Function: Tells the client when an Apple device has been locked, and media is unavailable until the restriction has been removed.
Notes: For macOS 10.15 or newer.

100.28.12 cameraDeviceDidReadData(data as Memoryblock, file as ICCameraFileMBS, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Reading file data finished.

100.28.13 cameraDeviceDidReceiveDownloadProgressForFile(file as ICCameraFileMBS, downloadedBytes as UInt64, maxBytes as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to provide status of the download operation.

100.28.14 cameraDeviceDidReceiveMetadataForItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the metadata requested for an item on a device is available.

100.28.15 cameraDeviceDidReceivePTPEvent(camera as ICCameraDeviceMBS, eventData as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to convey a PTP event.

100.28.16 cameraDeviceDidReceiveThumbnailForItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the thumbnail requested for an item on a device is available.

100.28.17 cameraDeviceDidRemoveAccessRestriction(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop only.

Function: Tells the client when an Apple device has been unlocked, paired to the host, and media is available.
Notes: For macOS 10.15 or newer.

100.28.18 cameraDeviceDidRemoveItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an object is removed from the device.
Notes: The object may be an instance of ICCameraFolder or ICCameraFile class.

100.28.19 cameraDeviceDidRemoveItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an object or objects are removed from the device.
Notes: The objects may be instances of ICCameraFolder or ICCameraFile class. This method supercedes cameraDeviceDidRemoveItem method described above.

100.28.20 cameraDeviceDidRenameItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an object or objects are renamed on the device.
Notes: The objects may be instances of ICCameraFolder or ICCameraFile class.

100.28.21 cameraDeviceDidSendPTPCommand(command as Memoryblock, data as Memoryblock, response as MemoryBlock, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Called when a requestSendPTPCommand event got a response or error.

100.28.22 cameraDeviceDidUploadFile(fileURL as string, file as FolderItem, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: A file upload was completed.

100.28.23 cameraDeviceViewDidDownloadFile(cameraDeviceView as IKCameraDeviceViewMBS, CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.28.24 cameraDeviceViewDidEncounterError(cameraDeviceView as IKCameraDeviceViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the camera device reports an error.

100.28.25 cameraDeviceViewSelectionDidChange(cameraDeviceView as IKCameraDeviceViewMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.

100.28.26 deviceBrowserDeviceDidChangeName(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

100.28.27 deviceBrowserDeviceDidChangeSharingState(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

100.28.28 deviceBrowserDidAddDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS, moreComing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to inform that a device has been added.
Notes: If several devices are found during the initial search, then this event is sent once for each device with the value of 'moreComing' set to true in each event except the last one.

100.28.29 deviceBrowserDidEnumerateLocalDevices(browser as ICDeviceBrowserMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent after the device browser completes sending deviceBrowserDidAddDevice event for all local devices.
Notes: Detecting locally connected devices (USB and FireWire devices) is faster than detecting devices connected using a network protocol. An Image Capture client application may use this event to update its user interface to let the user know that it has completed looking for locally connected devices and then start looking for network devices.

100.28.30 deviceBrowserDidRemoveDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS, moreGoing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to inform that a device has been removed.
Notes: If several devices are removed at the same time, then this event is sent once for each device with the value of 'moreGoing' set to true in each event except the last one.

100.28.31 deviceBrowserRequestsSelectDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when an event that occurred on the device may be of interest to the client application.
Notes: In Mac OS X 10.6, this event is sent when a button is pressed on a device and the current application is the target for that button press. In the case of the button-press event, if a session is open on the device, this event will not be sent, instead the deviceDidReceiveButtonPress event is sent.

100.28.32 deviceBrowserViewDidEncounterError(deviceBrowserView as IKDeviceBrowserViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the device browser reports an error.

100.28.33 deviceBrowserViewSelectionDidChange(deviceBrowserView as IKDeviceBrowserViewMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the user selection did change.
Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

100.28.34 deviceDidBecomeReady(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the device is ready to receive requests.
Notes: A camera device is ready, when it is ready to receive requests. A scanner device is ready when its

functional units are found and the default functional unit is selected for use and is ready to receive requests. The device will become ready to receive requests only after a session is opened.

100.28.35 deviceDidChangeName(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

100.28.36 deviceDidChangeSharingState(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

100.28.37 deviceDidCloseSessionWithError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when a session is closed on a device.
Notes: This event completes the process initiated by the message "requestCloseSession" sent to the device object. This event is also sent if the device module in control of the device ceases to control the device.

100.28.38 deviceDidEncounterError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the device delegate when a camera or scanner device encounters an error.

100.28.39 deviceDidOpenSessionWithError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when a session is opened on a device.
Notes: This event completes the process initiated by the requestOpenSession sent to the device object.

100.28.40 deviceDidReceiveButtonPress(device as ICDeviceMBS, buttonType as String)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the device delegate if a button is pressed on the device.
Notes: This event is sent only if a session is open on the device. The value of 'buttonType' argument is one of the ICButtonType* values defined above.

100.28.41 deviceDidReceiveCustomNotification(device as ICDeviceMBS, notification as Dictionary, data as Memoryblock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the device delegate the device sends a custom notification 'notification' with an arbitrary byte buffer 'data'.
Notes: This event is sent only if a session is open on the device.

100.28.42 deviceDidReceiveStatusInformation(device as ICDeviceMBS, status as Dictionary)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when status information is received from a camera or a scanner.
Notes: In Mac OS X 10.6 this event is not called for camera devices. This may change in the future releases of Mac OS X.
The 'status' dictionary contains two keys, ICStatusNotificationKey and ICLocalizedStatusNotificationKey, which are defined above. If type of 'device' is ICDeviceTypeScanner, the value of ICStatusNotificationKey will be one of the values defined in ICScannerDevice.h (e.g., ICScannerStatusWarmingUp, ICScannerStatusWarmUpDone, or ICScannerStatusRequestsOverviewScan); the value of ICLocalizedStatusNotificationKey will be a localized status information string suitable for displaying to the user.

100.28.43 deviceDidRemove(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent to the delegate to inform that a device has been removed.

100.28.44 deviceDidSendMessage(messageCode as UInt32, data as Memoryblock, error as NSErrorMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The call to requestSendMessage was successful.

100.28.45 scannerDeviceDidBecomeAvailable(scanner as ICScannerDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when another client closes an open session on the scanner.
Notes: Scanners require exclusive access, only one client can open a session on a scanner. The scanner is available if it does not have a session opened by another client. Attempting to open a session on a scanner that already has an open session for another client will result in an error. A client that wants to open a session on a scanner as soon as it is available should implement this method and send "requestOpenSession" message to scanner object from that method.

100.28.46 scannerDeviceDidCompleteOverviewScanWithError(scanner as ICScannerDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent after the scanner device completes an overview scan.

100.28.47 scannerDeviceDidCompleteScanWithError(scanner as ICScannerDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent after the scanner device completes a scan.

100.28.48 scannerDeviceDidScanToBandData(scanner as ICScannerDeviceMBS, Data as ICScannerBandDataMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the scanner device receives the requested scan progress notification and a band of data is sent for each notification received.
Notes: In memory transfer mode, this will send a band of size that has been selected by the client via the

maxMemoryBandSize property.

100.28.49 scannerDeviceDidScanToURL(scanner as ICScannerDeviceMBS, URL as string, file as folderitem, data as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when the scanner device receives the requested scan.
Notes: If selectedFunctionalUnit is a document feeder, then this event will be sent once for each scanned page.
This event is sent when the scanner device receives the requested scan. If selectedFunctionalUnit is a document feeder, then this event will be sent once for each scanned page.

100.28.50 scannerDeviceDidSelectFunctionalUnit(scanner as ICScannerDeviceMBS, functionalUnit as Variant, Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent when a functional unit is selected on the scanner device.
Notes: A functional unit is selected immediately after the scanner device is instantiated and in response to requestSelectFunctionalUnit method.

100.28.51 scannerDeviceViewDidEncounterError(scannerDeviceView as IKScannerDeviceViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: This event is sent every time the scanner device reports an error.

100.28.52 scannerDeviceViewDidScanToBandData(scannerDeviceView as IKScannerDeviceViewMBS, data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

Only called if transfermode is ICScannerTransferModeMemoryBased.

100.28.53 scannerDeviceViewDidScanToURL(scannerDeviceView as IKScannerDeviceViewMBS, url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

100.28.54 Constants

Error Constants

Constant	Value	Description
ICReturnCommunicationTimedOut	-9923	Communication between different components of Image Cap
ICReturnDeleteFilesCanceled	-9942	A request to delete files was canceled.
ICReturnDeleteFilesFailed	-9941	A request to delete files failed.
ICReturnDeviceFailedToCloseSession	-9928	Failed to close a session on a specified device.
ICReturnDeviceFailedToOpenSession	-9927	Failed to open a session on a specified device.
ICReturnDeviceFailedToTakePicture	-9944	Failed to take a tethered-capture picture on a camera devic
ICReturnDeviceIsPasscodeLocked	-9943	The device is locked with a passcode. Its contents cannot b unlocked.
ICReturnDeviceSoftwareInstallationCanceled	-9948	Software installation for the device has been canceled.
ICReturnDeviceSoftwareInstallationCompleted	-9947	Software installation for the device has completed successfu
ICReturnDeviceSoftwareInstallationFailed	-9949	Software installation for the device failed.
ICReturnDeviceSoftwareIsBeingInstalled	-9946	Failed to open session because software to communicate with installed.
ICReturnDeviceSoftwareNotAvailable	-9950	Software for the device is not available from Apple.
ICReturnDeviceSoftwareNotInstalled	-9945	Failed to open session because software to communicate wit installed.
ICReturnDownloadCanceled	-9937	A download operation was canceled.
ICReturnDownloadFailed	-9934	A non-specific error occurred while downloading a file.
ICReturnFailedToCompletePassThroughCommand	-9936	Failed to complete a pass-through (e.g., PTP pass-through)
ICReturnFailedToCompleteSendMessageRequest	-9940	A request to send a event to a device failed.
ICReturnFailedToDisabeTethering	-9939	Failed to disable tethered-capture on a camera device.
ICReturnFailedToEnabeTethering	-9938	Failed to enable tethered-capture on a camera device.
ICReturnInvalidParam	-9922	An invalid parameter was found.
ICReturnReceivedUnsolicitedScannerErrorInfo	-9933	An unsolicited error information was received from a scanne
ICReturnReceivedUnsolicitedScannerStatusInfo	-9932	An unsolicited status information was received from a scann
ICReturnScannerFailedToCompleteOverviewScan	-9930	Overview scan operation failed to complete on the specified
ICReturnScannerFailedToCompleteScan	-9931	Scan operation failed to complete on the specified scanner.
ICReturnScannerFailedToSelectFunctionalUnit	-9929	Failed to select a functional unit on the specified scanner.
ICReturnScannerInUseByLocalUser	-9925	Scanner is being used by a remote user.
ICReturnScannerInUseByRemoteUser	-9926	Scanner is being used by a local user.
ICReturnScanOperationCanceled	-9924	The scan operation is canceled.
ICReturnSuccess	0	Operation successful.
ICReturnUploadFailed	-9935	A non-specific error occurred while updownloading a file.

100.29 class ImageCaptureMBS

100.29.1 class ImageCaptureMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use ICDeviceMBS instead.
Function: The base class to start with image capture.
Example:

```
Var m as new ImageCaptureMBS
Var list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
Var dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
Var a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Notes: Deprecated. Please stop using this class soon.
On Mac OS X 10.8 some functions stop working as Apple does no longer provide 32 bit libraries.

- MBS Xojo Plugins, version 19.3pr2
- MBS Xojo / Real Studio Plugins, version 15.4pr5

100.29.2 Methods

100.29.3 DeviceList as ImageCaptureObjectMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns the object with the device list.
Example:

```
Var m as new ImageCaptureMBS
Var list as ImageCaptureObjectMBS = m.DeviceList
```

```
if List<>Nil then
// look into properties
Var dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
Var a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Notes: Returns nil on any error.
Lasterror is set.

100.29.4 ImportImage(flags as Integer) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Example:

```
Var m as new ImageCaptureMBS
Var flags as Integer = ImageCaptureObjectMBS.kICAAllowMultipleImages + ImageCaptureObjectMBS.kI-
CADownloadAndReturnPathArray

// do the import and allow all file types
Var files(-1) as string = m.ImportImage(flags)

for each path as string in files
// show path
MsgBox path

// open that picture file in preview
Var f as FolderItem = GetFolderItem(path, FolderItem.PathTypeShell)
f.Launch
next
```

Notes: Use this method to allow the user to work a camera or a scanner.

The behavior:
(a) if no device is connected, a panel saying that there's no device connected is displayed,
(b) if a single device is connected, an appropriate user interface to access that device will be displayed,
(c) if several devices are connected, a device selector panel will be displayed.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.

- 100.29.5 ImportImage(flags as Integer, filetypes() as string) as string() 15174

100.29.5 ImportImage(flags as Integer, filetypes() as string) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Example:

```
Var m as new ImageCaptureMBS
Var flags as Integer = ImageCaptureObjectMBS.kICAAllowMultipleImages + ImageCaptureObjectMBS.kI-
CADownloadAndReturnPathArray

// the file types we accept:
Var types(-1) as string

types.Append "tif"
types.Append "tiff"
types.Append "jpg"
types.Append "png"

Var files(-1) as string = m.ImportImage(flags, types)

for each path as string in files
// show path
```

MsgBox path

```
// open that picture file in preview
Var f as FolderItem = GetFolderItem(path, FolderItem.PathTypeShell)
f.Launch
next
```

Notes: Use this method to allow the user to work a camera or a scanner.

The behavior:
(a) if no device is connected, a panel saying that there's no device connected is displayed,
(b) if a single device is connected, an appropriate user interface to access that device will be displayed,
(c) if several devices are connected, a device selector panel will be displayed.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.

100.29.6 kICABluetoothAddressKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.7 kICABluetoothTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.8 kICADeviceBrowserDeviceRefKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.9 kICADeviceIconPathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.10 kICADeviceModulePathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.11 kICAErrorKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.12 kICAFireWireGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.13 kICAFireWireTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.14 kICAIOServicePathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.15 kICAIPAddressKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.16 kICAIPGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.17 kICAIPNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.18 kICANotificationClassKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.19 kICANotificationClassProprietary as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

100.29.20 kICANotificationClassPTPStandard as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

100.29.21 kICANotificationClassPTPVendor as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

100.29.22 kICANotificationDataCookieKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.23 kICANotificationDataKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.24 kICANotificationDataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.25 kICANotificationDeviceICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.26 kICANotificationDeviceListICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.27 kICANotificationICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.28 kICANotificationImageBytesPerRowKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.29 kICANotificationImageDataKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.30 kICANotificationImageDataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.31 kICANotificationImageHeightKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.32 kICANotificationImageKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.33 kICANotificationImageNumberOfRowsKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.34 kICANotificationImageStartRowKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.35 kICANotificationImageWidthKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.36 kICANotificationNumerOfImagesRemainingKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.37 kICANotificationPercentDownloadedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.38 kICANotificationRawEventKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.39 kICANotificationScannerButtonTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.40 kICANotificationScannerDocumentNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.41 kICANotificationSubTypeDocumentLoaded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.42 kICANotificationSubTypeDocumentNotLoaded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.43 kICANotificationSubTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.44 kICANotificationSubTypePerformOverviewScan as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.45 kICANotificationSubTypeWarmUpDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.46 kICANotificationSubTypeWarmUpStarted as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.47 kICANotificationTypeCaptureComplete as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.48 kICANotificationTypeDeviceAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.49 kICANotificationTypeDeviceConnectionProgress as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.50 kICANotificationTypeDeviceInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.51 kICANotificationTypeDevicePropertyChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.52 kICANotificationTypeDeviceRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.53 kICANotificationTypeDeviceStatusError as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.54 kICANotificationTypeDeviceStatusInfo as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.55 kICANotificationTypeDeviceWasReset as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.56 kICANotificationTypeDownloadProgressStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.57 kICANotificationTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.
Notes: The type of notification. See kICANotificationType* constants.

100.29.58 kICANotificationTypeObjectAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.59 kICANotificationTypeObjectInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.60 kICANotificationTypeObjectRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.61 kICANotificationTypeProprietary as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.62 kICANotificationTypeRequestObjectTransfer as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.63 kICANotificationTypeScannerButtonPressed as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.64 kICANotificationTypeScannerOverviewOverlayAvailable as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.65 kICANotificationTypeScannerPageDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.66 kICANotificationTypeScannerScanDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.67 kICANotificationTypeScannerSessionClosed as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.68 kICANotificationTypeScanProgressStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.69 kICANotificationTypeStoreAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.70 kICANotificationTypeStoreFull as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.71 kICANotificationTypeStoreInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.72 kICANotificationTypeStoreRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.73 kICANotificationTypeTransactionCanceled as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.74 kICANotificationTypeUnreportedStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the notification types for the notification event.

100.29.75 kICANotificationVendorErrorCodeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.76 kICARefconKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the notification dictionary.

100.29.77 kICASCSITransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.78 kICATCPIPTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.79 kICATransportTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.80 kICATWAINDSPathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.81 kICATWAINTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.82 kICAUSBLocationIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the parameter dictionary for LoadDeviceModule.

100.29.83 kICAUSBTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the transport type constants.

100.29.84 kICAUserAssignedDeviceNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the device properties keys.
Notes: This key may be present in the property dictionary of a device if the device has a user-assigned name.

100.29.85 LoadDeviceModule(params as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Loads a device module.
Notes: Typically, connecting a FireWire or an USB device will automatically load an appropriate device module. This API is needed only for loading a device module manually for devices that do not use a hot-plug interface, such as Bluetooth, SCSI, or TCP/IP.

Legal Key-Value pairs for populating paramDictionary:

Key	Value	Comment
kICADeviceModulePathKey	String	Path to the device module bundle that needs to be launched.
kICATransportTypeKey	String	Should be one of the six predifined transport types.
kICABluetoothAddressKey	String	Bluetooth device address string formatted as "00-11-22-33-44-55".
kICAUSBLocationIDKey	Number (integer)	32 bit USB location ID.
kICAFireWireGUIDKey	Number (Int64)	64 bit FireWire GUID.
kICAIOServicePathKey	String	IO service path to the device obtained from the IO registry.
kICAIPAddressKey	String	IP address of the device. This can be a host address ("camera.apple.com"), ipv4 address ('192.168.123.10") or ipv6 address ("3ff3:0000:0000:0000:0123:4567:89ab:cdef")
kICAIPPortKey	Number (integer)	IP port number of the device.
kICAIPNameKey	String	Human readable device name.
kICAIPGUIDKey	String	16 byte GUID string of the device formatted as "01234567-89ab-cdef-0123-456789abcdef".
kICATWAINDSPathKey	String	Path to TWAIN DS bundle.

Lasterror is set.

100.29.86 RegisterForEventNotification(objectOfInterest as ImageCaptureObjectMBS, eventsOfInterest() as string, options as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Register with Image Capture framework to receive notification about events of interest.

100.29.87 SendNotification(notificationDictionary as dictionary) as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Sends notification.
Notes: Returns the reply code.
Lasterror is set.

100.29.88 SendNotificationAndWaitForReply(notificationDictionary as dictionary) as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Sends notification and wait for reply.
Notes: Returns the reply code.
Lasterror is set.

100.29.89 ShowDeviceBrowser

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Displays a device browser user interface from any Image Capture client application.
Notes: The device browser user interface allows the user to do the following:

- enable and disable sharing of locally connected cameras and scanners.
- connect to or disconnect from cameras and scanners shared by other computers.
- configure WiFi capable cameras for use over the WiFi network.

Lasterror is set.

100.29.90 UnloadDeviceModule(deviceObject as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Unloads a device module.
Notes: The device module providing this object will be unloaded, if this is the last device object provided by the device module.
Lasterror is set.

100.29.91 Properties

100.29.92 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The error code from the last function used.
Notes: Value is 0 if the function was successfull, -1 if the function is not available, one of the following values or a Mac OS error code:

Possible values:

kICACommunicationErr = -9900
kICADeviceNotFoundErr = -9901
kICADeviceNotOpenErr = -9902
kICAFileCorruptedErr = -9903
kICAIOPendingErr = -9904
kICAInvalidObjectErr = -9905
kICAInvalidPropertyErr = -9906

kICAIndexOutOfRangeErr = -9907
kICAPropertyTypeNotFoundErr = -9908
kICACannotYieldDevice = -9909
kICADataTypeNotFoundErr = -9910
kICADeviceMemoryAllocationErr = -9911
kICADeviceInternalErr = -9912
kICADeviceInvalidParamErr = -9913
kICADeviceAlreadyOpenErr = -9914
kICADeviceLocationIDNotFoundErr = -9915
kICADeviceGUIDNotFoundErr = -9916
kICADeviceIOServicePathNotFoundErr = -9917
kICADeviceUnsupportedErr = -9918
kICAFrameworkInternalErr = -9919
kICAExtensionInternalErr = -9920
kICAInvalidSessionErr = -9921
(Read and Write property)

100.29.93 Events

100.29.94 Notification(notificationType as string, notificationDictionary as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The event called for all events coming from Image Capture.
Notes: Use RegisterForEventNotification to register for events.

The Image Capture notification event will be called with a notificationDictionary that may contain one or more key-value pairs as defined below:

Key	Value Type	Comments
kICANotificationICAObjectKey	Number	An object associated with the notification.
kICANotificationDeviceICAObjectKey	Number	A device object associated with the notification.
kICANotificationClassKey	String	See below.
kICANotificationTypeKey	String	See below.
kICANotificationRawEventKey	Number	The unprocesssed event code sent by a device.
kICANotificationDataKey	Data String	Data associated with the event.
kICANotificationDataSizeKey	Number	Size of data associated with the event. This is used if the data is not sent with the notification. [Needed for backward compatiblity with pre-Leopard device modules] .
kICANotificationDataCookieKey	Number	A token identifying the data associated with this event. This data can be retrieved by calling SendMessage with messageType set to kICAMessageGetEventData, dataType set to value of kICANotificationDataCookieKeyand dataSize set to value of kICANotificationDataSizeKey.

The following keys are present if the value of kICANotificationDataKey represents image data. The values of these keys are Numbers representing the width, height, bytes per row, start row, and number of rows of

the image:

kICANotificationImageKey	Dictionary	A dictionary that describes an Image associated with the notification.
kICANotificationImageDataKey	Data String	Image data
kICANotificationImageWidthKey	Number	Image width in pixels
kICANotificationImageHeightKey	Number	Image height in pixels
kICANotificationImageBytesPerRowKey	Number	Bytes per row in image
kICANotificationImageStartRowKey	Number	Starting row number of the image.
kICANotificationImageNumberOfRowsKey	Number	Number of rows of image data sent in this notification.

100.30 class ImageCaptureObjectMBS

100.30.1 class ImageCaptureObjectMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use ICDeviceMBS instead.
Function: An image capture object.
Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo Plugins, version 19.3pr2

100.30.2 Methods

100.30.3 CloseSession

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Close a session on a camera device.
Notes: Lasterror is set.
For a scanner device use the ScannerCloseSession.

100.30.4 Constructor

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new image capture object.
See also:

- 100.30.5 Constructor(handle as Integer) 15193

100.30.5 Constructor(handle as Integer)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new image capture object with the given handle.
See also:

- 100.30.4 Constructor 15193

100.30.6 CopyData(startByte as int64, requestedSize as int64) as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Get a copy of data associated with a file object.
Example:

```
Var o as ImageCaptureObjectMBS // your object pointing to an image file.

Var d2 as Dictionary = o.PropertyDictionary
Var size as Integer = d2.Value(o.kICAPropertyImageSize)

Var data as string = o.CopyData(0, size)

if lenb(data)>0 then
// you got the data, now process it.
end if
```

Notes: startByte: Starting byte offset of the data in the file object.
requestedSize: Requested data size in bytes.

If you want to get all bytes of an object, pass startByte = 0 and requestedSize = filesize.
Lasterror is set.

100.30.7 CopyThumbnail(format as string) as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Get a thumbnail associated with an object.
Notes: This is the recommended way to get the thumbnail of an object.

Use the constants for the format: kICAThumbnailFormatJPEG, kICAThumbnailFormatTIFF or kICAThumbnailFormatPNG
Lasterror is set.

100.30.8 DownloadFile(dir as folderitem, flags as Integer, MacType as string, MacCreator as string, angle as Double) as folderitem

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Downloads a file to disk.
Notes: This API is a convenient way to download a file to disk. To receive the image data in memory use CopyObjectData.

Constants for flags:

kDeleteAfterDownload	= 1	Delete file after a successful download.
kCreateCustomIcon	= 2	Create a custom icon for Finder.
kAddMetaDataToFinderComment	= 4	Add basic metadata to finder comment field.
kAdjustCreationDate	= 8	Set creation date of the downloaded file same as the creation date for the file as reported by the device.
kSetFileTypeAndCreator	= &h10	Set 4-char file type and creator code.
kEmbedColorSyncProfile	= &h20	Embed ColorSync profile to the image if one was not already embedded.
kRotateImage	= &h40	Rotate the image.
kDontEmbedColorSyncProfile	= &h80	Do not embed ColorSync profile to the image.

Lasterror is set.

100.30.9 ImportImage(flags as Integer) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Notes: Use this method to allow the user to work a camera or a scanner.
The ImageCaptureObjectMBS object you use for this call, should point to a camera or scanner device.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.
See also:

- 100.30.10 ImportImage(flags as Integer, filetypes() as string) as string() 15195

100.30.10 ImportImage(flags as Integer, filetypes() as string) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Notes: Use this method to allow the user to work a camera or a scanner.
The ImageCaptureObjectMBS object you use for this call, should point to a camera or scanner device.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.
See also:

- 100.30.9 ImportImage(flags as Integer) as string() 15195

100.30.11 kICABonjourServiceNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.12 kICABonjourServiceTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.13 kICABonjourTXTRecordKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.14 kICACreationDateStringKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.15 kICADataPropertyKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.16 kICADataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.17 kICADataTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.18 kICADeviceCapabilitiesKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.19 kICADevicePropArtist as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.20 kICADevicePropBatteryLevel as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.21 kICADevicePropBurstInterval as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.22 kICADevicePropBurstNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.23 kICADevicePropCaptureDelay as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.24 kICADevicePropCompressionSetting as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.25 kICADevicePropContrast as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.26 kICADevicePropCopyrightInfo as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.27 kICADevicePropDateTime as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.28 kICADevicePropDigitalZoom as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.29 kICADevicePropEffectMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.30 kICADevicePropExposureBiasCompensation as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.31 kICADevicePropExposureIndex as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.32 kICADevicePropExposureMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.33 kICADevicePropExposureProgramMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.34 kICADevicePropExposureTime as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.35 kICADevicePropFlashMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.36 kICADevicePropFNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.37 kICADevicePropFocalLength as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.38 kICADevicePropFocusDistance as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.39 kICADevicePropFocusMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.40 kICADevicePropFocusMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.41 kICADevicePropFunctionalMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.42 kICADevicePropImageSize as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.43 kICADevicePropRGBGain as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.44 kICADevicePropSharpness as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.45 kICADevicePropStillCaptureMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.46 kICADevicePropTimelapseInterval as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.47 kICADevicePropTimelapseNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.48 kICADevicePropUndefined as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.49 kICADevicePropUploadURL as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.50 kICADevicePropWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the device properties.

100.30.51 kICADevicesArrayKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.
Example:

```
Var m as new ImageCaptureMBS
Var list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
Var dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
Var a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

100.30.52 kICADeviceSharedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.53 kICADeviceTypeCamera as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the device type constants.

100.30.54 kICADeviceTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.55 kICADeviceTypeScanner as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the device type constants.

100.30.56 kICADeviceUsedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.57 kICADeviceWebSharedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.58 kICAExecutableArchitectureKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.59 kICALockStatusKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.60 kICAMediaDurationInSecondsKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.61 kICAMediaHeightKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.
Notes: Value for this key in the dictionary is a number.

100.30.62 kICAMediaWidthKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.
Notes: Value for this key in the dictionary is a number.

100.30.63 kICAModificationDateStringKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.64 kICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.

100.30.65 kICAObjectNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.

100.30.66 kICARawKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.67 kICARemoteDeviceKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.68 kICAThumbnailPropertyKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.69 kICAThumbnailSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.70 kICAUSBProductIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.

100.30.71 kICAUSBVendorIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys for a device.

100.30.72 kMetaDataDictionaryKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the keys in the dictionaries.

100.30.73 OpenSession(device as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Opens a session on a camera device.
Notes: Lasterror is set.
For a scanner device use the ScannerOpenSession method.

100.30.74 PropertyDictionary as dictionary

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Get a dictionary containing all the properties for an object specified.
Example:

```
Var m as new ImageCaptureMBS
Var list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
Var dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
Var a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Notes: Lasterror is set.

100.30.75 PropertyDictionaryText as string

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Get a dictionary containing all the properties for an object specified.
Example:

```
Var m as new ImageCaptureMBS
Var list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
MsgBox List.PropertyDictionaryText
end if
```

Notes: Lasterror is set.
This is for debugging and may be removed soon.
The format of the text is the plist file format.

100.30.76 ScannerCloseSession

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Closes a session on a scanner device.
Notes: Lasterror is set.
For a camera device use the CloseSession method.

100.30.77 ScannerGetParameters as dictionary

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Query scanner parameters.
Notes: Use this method to get information about the scanner such as resolution, scanning area, etc.
Lasterror is set.

100.30.78 ScannerInitialize

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a scanner device.
Notes: Lasterror is set.

100.30.79 ScannerOpenSession(device as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Opens a session on a scanner device.
Notes: Lasterror is set.
For a camera device use the OpenSession method.

100.30.80 ScannerSetParameters(dic as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Configures a scanner.
Notes: Use this method to specify scan parameters that will be used when a scan is initiated via ScannerStart.
Lasterror is set.

100.30.81 ScannerStart

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Starts scanning.
Notes: Use this method to start a scan based on the parameters that were specified in a previous ScannerSetParameters call.
Lasterror is set.

100.30.82 ScannerStatus as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Returns the scanner status.
Notes: Lasterror is set.

100.30.83 SendMessageMemory(messageType as string, startByte as UInt32, data as memoryblock, dataType as string) as UInt32

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Sends a message to a device object.
Notes: Use this API to send a message to a device object. All devices do not respond to all the messages

defined above.

messageType: A message type. e.g., kICAMessageCameraCaptureNewImage.
startByte: Offset in dataPtr from where data access for read/write should occur.
data: The data to send.
dataType: Data type.

Lasterror is set.
Retruns the result from this message.

100.30.84 SendMessageString(messageType as string, startByte as UInt32, data as string, dataType as string) as UInt32

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Sends a message to a device object.
Notes: Use this API to send a message to a device object. All devices do not respond to all the messages defined above.

messageType: A message type. e.g., kICAMessageCameraCaptureNewImage.
startByte: Offset in dataPtr from where data access for read/write should occur.
data: The data to send.
dataType: Data type.

Lasterror is set.
Retruns the result from this message.

100.30.85 UploadFile(file as folderitem, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: Uploads a file to a device that supports this capability.
Notes: The device choses an appropriate destination location for the uploaded image and sends a kICANotificationTypeObjectAdded notification.
Lasterror is set.

Flag values that can be used in UploadFile:

kICAUploadFileAsIs	Use this constant to upload a file as is.
kICAUploadFileScaleToFit	Use this constant to upload a file after scaling to fit a specified bounding rect.

100.30.86 Properties

100.30.87 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

100.30.88 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The error code from the last function used.
Notes: Value is 0 if the function was successfull, -1 if the function is not available, one of the following values or a Mac OS error code:

Possible values:

kICACommunicationErr = -9900
kICADeviceNotFoundErr = -9901
kICADeviceNotOpenErr = -9902
kICAFileCorruptedErr = -9903
kICAIOPendingErr = -9904
kICAInvalidObjectErr = -9905
kICAInvalidPropertyErr = -9906
kICAIndexOutOfRangeErr = -9907
kICAPropertyTypeNotFoundErr = -9908
kICACannotYieldDevice = -9909
kICADataTypeNotFoundErr = -9910
kICADeviceMemoryAllocationErr = -9911
kICADeviceInternalErr = -9912
kICADeviceInvalidParamErr = -9913
kICADeviceAlreadyOpenErr = -9914
kICADeviceLocationIDNotFoundErr = -9915
kICADeviceGUIDNotFoundErr = -9916
kICADeviceIOServicePathNotFoundErr = -9917
kICADeviceUnsupportedErr = -9918
kICAFrameworkInternalErr = -9919
kICAExtensionInternalErr = -9920

kICAInvalidSessionErr = -9921
(Read and Write property)

100.30.89 ScannerSessionHandle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The internal handle for a scanner session.
Notes: Lasterror is set.
(Read and Write property)

100.30.90 SessionHandle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

Function: The handle for the session.
Notes: (Read and Write property)

100.30.91 Constants

Constants

Constant	Value	Description
kAddMetaDataToFinderComment	4	One of the flag constants for DownloadFile. Add basic metadata to finder comment field.
kAdjustCreationDate	8	One of the flag constants for DownloadFile. Set creation date of the downloaded file same as the crea as reported by the device.
kCreateCustomIcon	2	One of the flag constants for DownloadFile. Create a custom icon for Finder.
kDeleteAfterDownload	1	One of the flag constants for DownloadFile. Delete file after a successful download.
kDontEmbedColorSyncProfile	&h80	One of the flag constants for DownloadFile. Do not embed ColorSync profile to the image.
kEmbedColorSyncProfile	&h20	One of the flag constants for DownloadFile. Embed ColorSync profile to the image if one was not alre
kICAAccessReadOnly	1	One of the constant values for kICAPropertyCameraAcce Read-only without object deletion.
kICAAccessReadOnlyWithObjectDeletion	2	One of the constant values for kICAPropertyCameraAcce Read-only with object deletion.
kICAAccessReadWrite	0	One of the constant values for kICAPropertyCameraAcce Read-write.
kICAAllowMultipleImages	1	One of the flag constants for ImportImage. Use this constant to allow users to select multiple images dialog. Seems like Image Capture in Mac OS X 10.6 ignores this fla images always.
kICAButtonCopy	"copy"	One of the constants for scanner buttons. Copy button.
kICAButtonEMail	"mail"	One of the constants for scanner buttons. Email button.
kICAButtonScan	"scan"	One of the constants for scanner buttons. Scan button.
kICAButtonWeb	"web "	One of the constants for scanner buttons. Web button.
kICACameraPassThruNotUsed	2	One of the flag constants associated with Image Capture F Use this constant when using a pass-through command sending or receiving data.
kICACameraPassThruReceive	1	One of the flag constants associated with Image Capture F Use this constant when receiving data from a device using mand.
kICACameraPassThruSend	0	One of the flag constants associated with Image Capture F Use this constant when sending data to a device using a pas
kICACannotYieldDevice	-9909	One of the image capture specific error constants. The device module cannot yield the specified device to th
kICACapabilityCanCameraCaptureNewImage	"ccni"	One of the Camera capabilities constants. Can capture a new image using the camera.
kICACapabilityCanCameraDeleteAll	"dela"	One of the Camera capabilities constants. Can delete all images stored in the camera.
kICACapabilityCanCameraDeleteOne	"del1"	One of the Camera capabilities constants. Can delete one image stored in the camera.
kICACapabilityCanCameraSyncClock	"sclk"	One of the Camera capabilities constants. Can synchronize camera's clock with the computer's cloc
kICACapabilityCanCameraUploadData	"load"	One of the Camera capabilities constants. Can upload data to the camera.
kICACapabilityMayStoreNewImagesInTempStore	"temp"	One of the Camera capabilities constants.
kICACommunicationErr	-9900	One of the image capture specific error constants. An error occurred in communication between different c Capture framework.
kICADataTypeNotFoundErr	-9910	One of the image capture specific error constants. Data with the specified data type is not found.

100.31 class WIADataCallbackMBS

100.31.1 class WIADataCallbackMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides an application callback mechanism during data transfers from Windows Image Acquisition (WIA) hardware devices to applications.
Notes: Works on Windows 2000 Professional, Windows XP and Windows Server 2003.

100.31.2 Properties

100.31.3 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.31.4 Events

100.31.5 BandedDataCallback(message as Integer, Status as Integer, PercentComplete as Integer, Offset as Integer, Length as Integer, Buffer as memoryblock) as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides data transfer status notifications.
Notes: Windows Image Acquisition (WIA) data transfer methods of the WiaDataTransfer interface periodically call this method.

Message: Specifies a constant that indicates the reason for the callback. Can be one of the kMessage* constants.
Status: Specifies a constant that indicates the status of the WIA device. Can be set to a combination of the kStatus* constants.
PercentComplete: Specifies the percentage of the total data that has been transferred so far.
Offset: Specifies an offset, in bytes, from the beginning of the buffer where the current band of data begins.
Length: Specifies the length, in bytes, of the current band of data.
Buffer: The data buffer.

Lasterror is set.

Your application must provide the BandedDataCallback event. This event is periodically invoked by the data transfer methods of the WiaDataTransferMBS interface. It provides status messages to the application during the data transfer. By returning false, your program can also use this method to prematurely terminate the data transfer.

When this method is invoked, the Message parameter will contain the reason for the call. Not all parameters will contain data on all calls. For example, when BandedDataCallback is invoked with a message of kMessageTermination, it should not attempt to use the values in the Buffer, Offset, and Length parameters.

If the value of Message is kMessageData, the buffer contains a band of image data. The Offset parameter contains an offset in bytes from the beginning of the buffer where the current band of data begins. The Length parameter specified the length in bytes of the current band of data.

During calls where Message is set to kMessageData or kMessageStatus, the Status parameter contains a valid value. Its contents should not be used when Message contains other values.

If Message is kMessageDataHeader, the Buffer parameter points to a WIA_DATA_CALLBACK_HEADER structure.

When an error has occurred during an image data transfer, the driver sets Message to IT_MSG_DEVICE_STATUS. The proxy callback object calls ReportStatus, which handles the error and displays messages to the user.

100.31.6 Constants

Constants

Constant	Value	Description
kMessageData	2	One of the constants for the message parameter in the BandedDataCallback callback. The WIA system is transferring data to the application.
kMessageDataHeader	1	One of the constants for the message parameter in the BandedDataCallback callback. The application is receiving a header prior to receiving the actual data.
kMessageFilePreviewData	6	One of the constants for the message parameter in the BandedDataCallback callback. The WIA system is transferring preview data to the application.
kMessageFilePreviewDataHeader	7	One of the constants for the message parameter in the BandedDataCallback callback. The application is receiving a header prior to receiving the actual preview data
kMessageNewPage	5	One of the constants for the message parameter in the BandedDataCallback callback. The data transfer is beginning a new page.
kMessageStatus	3	One of the constants for the message parameter in the BandedDataCallback callback. This invocation of the callback is sending only status information.
kMessageTermination	4	One of the constants for the message parameter in the BandedDataCallback callback. The data transfer is complete.
kStatusProcessingData	2	One of the constants for the status parameter in the BandedDataCallback callback. Data is currently being processed.
kStatusTransferFromDevice	1	One of the constants for the status parameter in the BandedDataCallback callback. Data is currently being transferred from the WIA device.
kStatusTransferToClient	4	One of the constants for the status parameter in the BandedDataCallback callback. Data is currently being transferred to the client's data buffer.

100.32 class WIADataTransferInfoMBS

100.32.1 class WIADataTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADataTransferInfoMBS class is used by applications to describe the buffer used to retrieve bands of data from Windows Image Acquisition (WIA) devices.
Notes: It is primarily used in conjunction with the methods of the IWiaDataTransfer interface.

100.32.2 Properties

100.32.3 BufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size in bytes of the buffer that is used for the data transfer.
Notes: (Read and Write property)

100.32.4 DoubleBuffer as Boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains true if the device is double buffered, false if the device is not double buffered.
Notes: (Read and Write property)

100.32.5 Section as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies an optional handle to a shared section of memory allocated by the application. If this member is set to nil, GetBandedData allocates the shared memory itself.
Notes: (Read and Write property)

100.32.6 Size as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains the size of this structure.
Notes: (Read and Write property)

100.33 class WIADataTransferMBS

100.33.1 class WIADataTransferMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADataTransferMBS interface is a high performance data transfer interface.
Notes: This interface supports a shared memory window to transfer data from the device object to the application, and eliminates unnecessary data copies during marshalling. A callback mechanism is provided in the form of the WiaDataCallbackMBS interface. It enables applications to obtain data transfer status notification, transfer data from the Windows Image Acquisition (WIA) device to the application, and cancel pending data transfers.

For Windows Vista applications, use IWiaTransfer instead of IWiaDataTransfer.

100.33.2 Methods

100.33.3 EnumerateFormatInfo as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an enumerator for the format information.
Notes: Lasterror is set.

100.33.4 GetBandedData(DataTransInfo as WIADataTransferInfoMBS, DataCallback as WIADataCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetBandedData method transfers a band of data from a hardware device to an application.
Notes: For efficiency, applications retrieve data from Windows Image Acquisition (WIA) hardware devices in successive bands.
Lasterror is set.

100.33.5 GetDataFile(DataCallback as WIADataCallbackMBS) as folderitem

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetData method retrieves complete files from a Windows Image Acquisition (WIA) device.
Notes: Lasterror is set.
Returns the folderitem for the new file. Copy or load the file as this temporary file is deleted as soon as the

object is destroyed.

100.33.6 GetDataPath(DataCallback as WIADataCallbackMBS) as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetData method retrieves complete files from a Windows Image Acquisition (WIA) device.
Notes: Lasterror is set.
Returns the folderitem for the new file. Copy or load the file as this temporary file is deleted as soon as the object is destroyed.

100.33.7 GetExtendedTransferInfo as WIAExtendedTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetExtendedTransferInfo retrieves extended information relating to data transfer buffers in the case of banded data transfers.
Notes: Applications typically use this method to retrieve driver recommended settings for minimum buffer size, maximum buffer size, and optimal buffer size for banded data transfers.

Lasterror is set.

100.33.8 QueryGetData as WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryGetData method is used by applications to query a Windows Image Acquisition (WIA) device to determine what types of data formats it supports.
Notes: Lasterror is set.

100.33.9 Properties

100.33.10 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.33.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.34 class WIADeviceCapabilitiesEnumeratorMBS

100.34.1 class WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADeviceCapabilitiesEnumeratorMBS class enumerates the currently available Windows Image Acquisition (WIA) hardware device capabilities.
Notes: Device capabilities include commands and events that the device supports.

100.34.2 Methods

100.34.3 Clone as WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the WIADeviceCapabilitiesEnumeratorMBS object.
Notes: Lasterror is set.

100.34.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the number of items in the enumeration.
Notes: Lasterror is set.

100.34.5 NextItem as WIADeviceCapabilitiesMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next item in the enumeration.
Notes: Lasterror is set.

100.34.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration.
Notes: Lasterror is set.

100.34.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips the given number of entries in the enumeration.
Notes: Lasterror is set.

100.34.8 Properties

100.34.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.34.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.35 class WIADeviceCapabilitiesMBS

100.35.1 class WIADeviceCapabilitiesMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for device capabilities.

100.35.2 Properties

100.35.3 Commandline as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a string that represents command line arguments.
Notes: (Read and Write property)

100.35.4 Description as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a string that contains a description of the capability that is displayed to the user.
Notes: (Read and Write property)

100.35.5 Flags as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for this capability
Notes: (Read and Write property)

100.35.6 GUID as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a GUID that identifies the device capability.
Notes: This member can be set to any of the values specified in WIAItemMBS constants for Device Commands (kCommand*) or WIA Event Identifiers (kEvent*).
(Read and Write property)

100.35.7 Icon as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a string that represents the location and resource ID of the icon that represents this capability or handler.
Notes: The string must be of the following form: drive:\path\module,n, where n is the icon's negated resource ID (that is, if the resource ID of the icon is 100, then n is -100).
(Read and Write property)

100.35.8 Name as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a string that contains a short version of the capability name.
Notes: (Read and Write property)

100.36 class WIADeviceInfoEnumeratorMBS

100.36.1 class WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADeviceInfoEnumeratorMBS class enumerates the currently available Windows Image Acquisition (WIA) hardware devices and their properties.
Notes: Device information properties describe the installation and configuration of WIA hardware devices.

100.36.2 Methods

100.36.3 Clone as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the enumerator.
Notes: Lasterror is set.

100.36.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the number of items in the enumeration.
Notes: Lasterror is set.

100.36.5 NextItem as WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next item in the enumeration.
Notes: Lasterror is set.

100.36.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration.
Notes: Lasterror is set.

100.36.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips the given number of entries in the enumeration.
Notes: Lasterror is set.

100.36.8 Properties

100.36.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.36.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.37 class WIADeviceManager1MBS

100.37.1 class WIADeviceManager1MBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADeviceManager1MBS interface is used to create and manage image acquisition devices and to register to receive device events.
Notes: WIA 1.x is available on Windows 2000 and newer

100.37.2 Methods

100.37.3 Constructor

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WIA 1.0 manager object.
Example:

```
Var DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
MsgBox "OK"
end if
```

100.37.4 CreateDevice(DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a hierarchical tree of WiaItem objects for a Windows Image Acquisition device.
Notes: DeviceID: Specifies the unique identifier of the WIA device.

Lasterror is set.

Applications use the CreateDevice method to create a device object for the WIA devices specified by the DeviceID parameter.

Returns the WIAItemMBS object for the root item. Applications can use this tree of objects to control and retrieve data from the WIA device.

100.37.5 EnumDeviceInfo(flags as Integer = &h10) as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator of property information for each available Windows Image Acquisition device.
Example:

```
Var DeviceManager1 as new WIADeviceManager1MBS

// Enumerate all local devices
Var e as WIADeviceInfoEnumeratorMBS = DeviceManager1.EnumDeviceInfo(DeviceManager1.kEnumLocal)
if e<>Nil then

Var p as WIAPropertyStorageMBS = e.NextItem
while p<>Nil

// display the name of the device in a listbox
Listbox1.AddFolder p.Read(p.kDevicePropertyDevNameString)

p = e.NextItem
wend
end if
```

Notes: Flags: Specifies the types of WIA devices to enumerate. Should be set to kEnumLocal.
Lasterror is set.

100.37.6 GetImageDialog(parentWindow as DesktopWindow, DeviceType as integer, Flags as integer, Intent as integer, file as folderitem, rootitem as WIAItemMBS=nil)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) device and write the image to a specified file.

Notes: Lasterror is set.

This method combines the functionality of SelectDeviceDialog to completely encapsulate image acquisition within a single API call.

parentWindowHandle: Handle of the window that owns the Get Image dialog box.
DeviceType: Specifies which type of WIA device to use. Is set to kDeviceTypeDefault, kDeviceTypeScanner, or kDeviceTypeDigitalCamera.
Flags: Specifies dialog box behavior. Can be set to the following constants: kSelectDeviceNoDefault, kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. Use kIntent* constants.
rootitem: Returns the interface of the hierarchical tree of WiaItem objects returned by CreateDevice.
file: Specifies the name of the file to which the image data is written.

Invoking this method displays a dialog box that enables users to acquire images. It can also display the Select Device dialog box created by the SelectDeviceDlg method.

If the application passes nil for the value of the rootitem parameter, GetImageDlg displays the Select Device dialog box that lets the user select the WIA input device. If the application specifies a WIA input device by passing a pointer to the device's item tree through the pItemRoot parameter, GetImageDlg does not display the Select Device dialog box. Instead, it will use the specified input device to acquire the image.

When using the Select Device dialog box, applications can specify types of WIA input devices. To do so, they must set the rootitem parameter to NULL and pass the appropriate constants through the DeviceType parameter. If more than one device of the specified type is present, the GetImageDlg displays the Select Device dialog box to let the user select which device will be used.

If GetImageDlg finds only one matching device, it will not display the Select Device dialog box. Instead, it will select the matching device. You can override this behavior and force GetImageDlg to display the Select Device dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.

The dialog must have sufficient rights to the folder for file that it can save the file with a unique file name. The folder should also be protected with an access control list (ACL) because it contains user data.

100.37.7 GetImageDialog(parentWindow as window, DeviceType as Integer, Flags as Integer, Intent as Integer, file as folderitem, rootitem as WIAItemMBS=nil)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) device and write the image to a specified file.
Notes: Lasterror is set.

This method combines the functionality of SelectDeviceDialog to completely encapsulate image acquisition within a single API call.

parentWindowHandle: Handle of the window that owns the Get Image dialog box.
DeviceType: Specifies which type of WIA device to use. Is set to kDeviceTypeDefault, kDeviceTypeScanner, or kDeviceTypeDigitalCamera.
Flags: Specifies dialog box behavior. Can be set to the following constants: kSelectDeviceNoDefault, kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. Use kIntent* constants.
rootitem: Returns the interface of the hierarchical tree of WiaItem objects returned by CreateDevice.
file: Specifies the name of the file to which the image data is written.

Invoking this method displays a dialog box that enables users to acquire images. It can also display the Select Device dialog box created by the SelectDeviceDlg method.

If the application passes nil for the value of the rootitem parameter, GetImageDlg displays the Select Device dialog box that lets the user select the WIA input device. If the application specifies a WIA input device by passing a pointer to the device's item tree through the pItemRoot parameter, GetImageDlg does not display the Select Device dialog box. Instead, it will use the specified input device to acquire the image.

When using the Select Device dialog box, applications can specify types of WIA input devices. To do so, they must set the rootitem parameter to NULL and pass the appropriate constants through the DeviceType parameter. If more than one device of the specified type is present, the GetImageDlg displays the Select Device dialog box to let the user select which device will be used.

If GetImageDlg finds only one matching device, it will not display the Select Device dialog box. Instead, it will select the matching device. You can override this behavior and force GetImageDlg to display the Select Device dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.

The dialog must have sufficient rights to the folder for file that it can save the file with a unique file name.

The folder should also be protected with an access control list (ACL) because it contains user data.

100.37.9 SelectDeviceDialog(parentWindow as DesktopWindow, DeviceType as integer, Flags as integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.37.11 SelectDeviceDialog(parentWindow as window, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Example:

```
Var DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
Var it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
Var p as WIAPropertyStorageMBS = it.PropertyStorage
Var name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass

the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. 100.37.13 SelectDeviceDialog(parentWindowHandle as Integer, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.

Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.37.14 SelectDeviceDialog(parentWindowHandle as Integer, DeviceType as Integer, Flags as Integer, byref DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of

possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.37.15 SelectDeviceDialogID(parentWindow as DesktopWindow, DeviceType as integer, Flags as integer) as string

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: Lasterror is set.

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA device to use. See kDeviceType* constants.
Flags: Specifies the behavior of the dialog box. You can pass the following constant: kSelectDeviceNoDefault

Returns the selected DeviceID.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialogID method retruns its identifier string to the application.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialogID does not display the Select Device dialog box. Instead it passes the device's identifier string to the application without displaying the dialog box. You can override this behavior and force SelectDeviceDialogID to display the dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the SelectDevice dialog box so the user may choose one.

Note It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.37.16 SelectDeviceDialogID(parentWindow as window, DeviceType as Integer, Flags as Integer) as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: Lasterror is set.

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA device to use. See kDeviceType* constants.
Flags: Specifies the behavior of the dialog box. You can pass the following constant: kSelectDeviceNoDefault

Returns the selected DeviceID.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image

acquisition. If a device is successfully selected, the SelectDeviceDialogID method retruns its identifier string to the application.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialogID does not display the Select Device dialog box. Instead it passes the device's identifier string to the application without displaying the dialog box. You can override this behavior and force SelectDeviceDialogID to display the dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the SelectDevice dialog box so the user may choose one.

Note It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.37.18 Properties

100.37.19 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 1.x.
(Read and Write property)

100.37.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.37.21 Constants

Constants

Constant	Value	Description
kDeviceDialogSingleImage	2	One of the constants for the GetImageDialog method. Restrict image selection to a single image in the device image acquisition dialog box. Only for WIA 2.x.
kDeviceDialogUseCommonUI	4	One of the constants for the GetImageDialog method. Use the system UI, if available, rather than the vendor-supplied UI. If the system UI is not available, the vendor UI is used. If neither UI is available, the function returns E_NOTIMPL.
kDeviceTypeDefault	0	One of the device type constants.
kDeviceTypeDigitalCamera	2	One of the device type constants.
kDeviceTypeScanner	1	One of the device type constants.
kDeviceTypeStreamingVideo	3	One of the device type constants.
kEnumAll	15	One of the constants for EnumDeviceInfo flags parameter. All devices are enumerated, both locally and remote, including inactive (disconnected) devices and legacy STI-only devices.
kEnumLocal	16	One of the constants for EnumDeviceInfo flags parameter. Only locally connected active scanner devices are enumerated.
kIntentBestPreview	&h40000	One of the intent constants for GetImageDialog. Specifies the best quality preview.
kIntentImageTypeColor	1	One of the intent constants for GetImageDialog. Preset properties for color content.
kIntentImageTypeGrayscale	2	One of the intent constants for GetImageDialog. Preset properties for grayscale content.
kIntentImageTypeMask	&hF	One of the intent constants for GetImageDialog. Mask for all of the image type flags.
kIntentImageTypeText	4	One of the intent constants for GetImageDialog. Preset properties for text content.
kIntentMaximizeQuality	&h20000	One of the intent constants for GetImageDialog. Preset properties to maximize image quality.
kIntentMinimizeSize	&h10000	One of the intent constants for GetImageDialog. Preset properties to minimize image size.
kIntentNone	0	One of the intent constants for GetImageDialog. Default value. Do not preset any properties.
kIntentSizeMask	&hF0000	One of the intent constants for GetImageDialog. Mask for all of the size/quality flags.
kSelectDeviceNoDefault	1	One of the constants for the GetImageDialog method. Force this method to display the Select Device dialog box. Only for WIA 2.x.

100.38 class WIADeviceManager2MBS

100.38.1 class WIADeviceManager2MBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIADeviceManager2MBS interface is used to create and manage image acquisition devices and to register to receive device events.
Notes: WIA 2.x is available on Windows Vista and newer.

100.38.2 Methods

100.38.3 Constructor

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WIA 2.0 manager object.
Example:

```
Var DeviceManager as new WIADeviceManager2MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
MsgBox "OK"
end if
```

100.38.4 CreateDevice(DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a hierarchical tree of WiaItem objects for a Windows Image Acquisition device.
Notes: DeviceID: Specifies the unique identifier of the WIA device.

Lasterror is set.

Applications use the CreateDevice method to create a device object for the WIA devices specified by the DeviceID parameter.

Returns the WIAItemMBS object for the root item. Applications can use this tree of objects to control and retrieve data from the WIA device.

100.38.5 EnumDeviceInfo(flags as Integer = &h10) as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator of property information for each available Windows Image Acquisition device.
Example:

```
Var DeviceManager2 as new WIADeviceManager2MBS

// Enumerate all local devices
Var e as WIADeviceInfoEnumeratorMBS = DeviceManager2.EnumDeviceInfo(DeviceManager2.kEnumLocal)
if e<>Nil then

Var p as WIAPropertyStorageMBS = e.NextItem
while p<>Nil

// display the name of the device in a listbox
Listbox1.AddFolder p.Read(p.kDevicePropertyDevNameString)

p = e.NextItem
wend
end if
```

Notes: Flags: Specifies the types of WIA devices to enumerate. Should be set to kEnumLocal or kEnumAll. Lasterror is set.

100.38.6 GetImageDialog(Flags as integer, DeviceID as string, parentWindow as DesktopWindow, FolderName as String, Filename as String, byref item as WIAItemMBS) as string()

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) 2.0 device and write the image to a specified file. This

method extends the functionality of SelectDeviceDlg to encapsulate image acquisition within a single API call.
Notes: Lasterror is set.

Flags: Specifies dialog box behavior. Can be set to the following values: kDeviceDialogUseCommonUI
DeviceID: Specifies the scanner to use.
parentWindowHandle: A handle of the window that owns the Get Image dialog box.
FolderName: Specifies the name of the folder ito store the scanned files in.
Filename: Specifies the name of the file to write the image data to.
item: The variable to return the WiaItem that the images were scanned from.

Returns an array with paths to the files that have been scanned.

If the application passes an emapty string for the value of the DeviceID parameter, GetImageDialog displays the Select Device dialog box so that the user can select the WIA 2.0 input device.

Use a menu item named From scanner on the File menu so that device and image selections are available in your application.

The dialog box must have sufficient rights to FolderName so that it can save the files with unique file names. Protect the folder with an access control list (ACL) because it contains user data.

100.38.7 GetImageDialog(Flags as Integer, DeviceID as string, parentWindow as window, FolderName as String, Filename as String, byref item as WIAItemMBS) as string()

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) 2.0 device and write the image to a specified file. This method extends the functionality of SelectDeviceDlg to encapsulate image acquisition within a single API call.
Notes: Lasterror is set.

Flags: Specifies dialog box behavior. Can be set to the following values: kDeviceDialogUseCommonUI
DeviceID: Specifies the scanner to use.
parentWindowHandle: A handle of the window that owns the Get Image dialog box.

FolderName: Specifies the name of the folder ito store the scanned files in.
Filename: Specifies the name of the file to write the image data to.
item: The variable to return the WiaItem that the images were scanned from.

Returns an array with paths to the files that have been scanned.

If the application passes an emapty string for the value of the DeviceID parameter, GetImageDialog displays the Select Device dialog box so that the user can select the WIA 2.0 input device.

Use a menu item named From scanner on the File menu so that device and image selections are available in your application.

The dialog box must have sufficient rights to FolderName so that it can save the files with unique file names. Protect the folder with an access control list (ACL) because it contains user data.

100.38.8 GetImageDialog(Flags as Integer, DeviceID as string, parentWindowHandle as Integer, FolderName as String, Filename as String, byref item as WIAItemMBS) as string()

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) 2.0 device and write the image to a specified file. This method extends the functionality of SelectDeviceDlg to encapsulate image acquisition within a single API call.
Notes: Lasterror is set.

Flags: Specifies dialog box behavior. Can be set to the following values: kDeviceDialogUseCommonUI
DeviceID: Specifies the scanner to use.
parentWindowHandle: A handle of the window that owns the Get Image dialog box.
FolderName: Specifies the name of the folder ito store the scanned files in.
Filename: Specifies the name of the file to write the image data to.
item: The variable to return the WiaItem that the images were scanned from.

Returns an array with paths to the files that have been scanned.

If the application passes an empty string for the value of the DeviceID parameter, GetImageDialog displays the Select Device dialog box so that the user can select the WIA 2.0 input device.

Use a menu item named From scanner on the File menu so that device and image selections are available in your application.

The dialog box must have sufficient rights to FolderName so that it can save the files with unique file names. Protect the folder with an access control list (ACL) because it contains user data.

100.38.9 SelectDeviceDialog(parentWindow as DesktopWindow, DeviceType as integer, Flags as integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.38.11 SelectDeviceDialog(parentWindow as window, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Example:

```
Var DeviceManager as new WIADeviceManager2MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
Var it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
Var p as WIAPropertyStorageMBS = it.PropertyStorage
Var name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass

the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.38.13 SelectDeviceDialog(parentWindowHandle as Integer, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.

Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.38.14 SelectDeviceDialog(parentWindowHandle as Integer, DeviceType as Integer, Flags as Integer, byref DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of

possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. 100.38.15 SelectDeviceDialogID(parentWindow as DesktopWindow, DeviceType as integer, Flags as integer) as string

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: Lasterror is set.

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA device to use. See kDeviceType* constants.
Flags: Specifies the behavior of the dialog box. You can pass the following constant: kSelectDeviceNoDefault

Returns the selected DeviceID.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialogID method retruns its identifier string to the application.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialogID does not display the Select Device dialog box. Instead it passes the device's identifier string to the application without displaying the dialog box. You can override this behavior and force SelectDeviceDialogID to display the dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the SelectDevice dialog box so the user may choose one.

Note It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.38.16 SelectDeviceDialogID(parentWindow as window, DeviceType as Integer, Flags as Integer) as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes: Lasterror is set.

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA device to use. See kDeviceType* constants.
Flags: Specifies the behavior of the dialog box. You can pass the following constant: kSelectDeviceNoDefault

Returns the selected DeviceID.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image

acquisition. If a device is successfully selected, the SelectDeviceDialogID method retruns its identifier string to the application.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialogID does not display the Select Device dialog box. Instead it passes the device's identifier string to the application without displaying the dialog box. You can override this behavior and force SelectDeviceDialogID to display the dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the SelectDevice dialog box so the user may choose one.

Note It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

100.38.18 Properties

100.38.19 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 2.x.
(Read and Write property)

100.38.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.38.21 Constants

Constants

Constant	Value	Description
kDeviceDialogSingleImage	2	One of the constants for the GetImageDialog method. Restrict image selection to a single image in the device image acquisition dialog box. Only for WIA 2.x.
kDeviceDialogUseCommonUI	4	One of the constants for the GetImageDialog method. Use the system UI, if available, rather than the vendor-supplied UI. If the system UI is not available, the vendor UI is used. If neither UI is available, the function returns E_NOTIMPL.
kDeviceTypeDefault	0	One of the device type constants.
kDeviceTypeDigitalCamera	2	One of the device type constants.
kDeviceTypeScanner	1	One of the device type constants.
kDeviceTypeStreamingVideo	3	One of the device type constants.
kEnumAll	15	One of the constants for EnumDeviceInfo flags parameter. All devices are enumerated, both locally and remote, including inactive (disconnected) devices and legacy STI-only devices.
kEnumLocal	16	One of the constants for EnumDeviceInfo flags parameter. Only locally connected active scanner devices are enumerated.
kIntentBestPreview	&h40000	One of the intent constants for GetImageDialog. Specifies the best quality preview.
kIntentImageTypeColor	1	One of the intent constants for GetImageDialog. Preset properties for color content.
kIntentImageTypeGrayscale	2	One of the intent constants for GetImageDialog. Preset properties for grayscale content.
kIntentImageTypeMask	&hF	One of the intent constants for GetImageDialog. Mask for all of the image type flags.
kIntentImageTypeText	4	One of the intent constants for GetImageDialog. Preset properties for text content.
kIntentMaximizeQuality	&h20000	One of the intent constants for GetImageDialog. Preset properties to maximize image quality.
kIntentMinimizeSize	&h10000	One of the intent constants for GetImageDialog. Preset properties to minimize image size.
kIntentNone	0	One of the intent constants for GetImageDialog. Default value. Do not preset any properties.
kIntentSizeMask	&hF0000	One of the intent constants for GetImageDialog. Mask for all of the size/quality flags.
kSelectDeviceNoDefault	1	One of the constants for the GetImageDialog method. Force this method to display the Select Device dialog box.

100.39 class WIAExtendedTransferInfoMBS

100.39.1 class WIAExtendedTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAExtendedTransferInfoMBS class specifies extended transfer information for the GetExtendedTransferInfo method.
Notes: Requires Windows 2000 Professional, Windows XP or Windows Server 2003.

100.39.2 Properties

100.39.3 MaxBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Driver-recommended maximum buffer size the application could request in a call to GetBandedData.
Notes: Going over this limit is not detrimental, however, the driver can simply not use the whole buffer and limit each band of data to this maximum size.
(Read and Write property)

100.39.4 MinBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum buffer size the application should request in a call to GetBandedData.
Notes: (Read and Write property)

100.39.5 NumBuffers as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value is not used and should be ignored.
Notes: (Read and Write property)

100.39.6 OptimalBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Driver-recommended buffer size the application should request in a call to GetBandedData.
Notes: (Read and Write property)

100.39.7 Size as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size of this structure.
Notes: (Read and Write property)

100.40 class WIAFormatInfoEnumeratorMBS

100.40.1 class WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Use the WIAFormatInfoEnumeratorMBS class to enumerate the format and media type information for a device.

100.40.2 Methods

100.40.3 Clone as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clones this enumerator.
Notes: Lasterror is set.

100.40.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the number of elements stored by this enumerator.
Notes: Lasterror is set.

100.40.5 NextItem as WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next item in the enumeration.

100.40.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumerator.
Notes: Lasterror is set.

100.40.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips the specified number of structures in the enumeration.
Notes: Lasterror is set.

100.40.8 Properties

100.40.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.40.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.41 class WIAFormatInfoMBS

100.41.1 class WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAFormatInfoMBS class specifies valid format and media type pairs for a device.
Notes: Requires Windows 2000 Professional, Windows XP or Windows Server 2003.

100.41.2 Properties

100.41.3 FormatID as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that identifies the format.
Notes: (Read and Write property)

100.41.4 Tymed as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media type that corresponds to the guidFormatID member.
Notes: (Read and Write property)

100.42 class WIAGUIDMBS

100.42.1 class WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windows unique ID.
Example:

```
Var w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

MsgBox w.DisplayString
```

Notes: If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.
Blog Entries

100.42.2 Methods

100.42.3 Constructor

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a GUID with only zeros.
Example:

```
Var g as new WIAGUIDMBS

MsgBox g.DisplayString
```

See also:

- 100.42.4 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

100.42.4 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new GUID with the given byte values.
Example:

```
Var g as new WIAGUIDMBS(&h14, &h3e, &h4e, &h83, &h64, &h97, &h11, &hd2, &ha2, &h31, &h00, &hc0, &h4f, &ha3, &h18, &h09)

MsgBox g.DisplayString
```

See also:

- 100.42.3 Constructor 15263

100.42.5 DisplayString as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID well formatted.
Example:

```
Var w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

MsgBox w.DisplayString
```

100.42.6 Equal(other as WIAGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether two GUIDs are equal.
Example:

```
Var w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF
Var v as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

if w.Equal(v) then
MsgBox "Equal, right."
else
MsgBox "not equal, a bug."
end if
```

```
v = WIAPropertyStorageMBS.kImageFormatBMP

if w.Equal(v) then
MsgBox "Equal, a bug."
else
MsgBox "not equal, right."
end if
```

Notes: Returns true if both items are equals.

100.42.7 Parse(GUID as String) as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parses GUID string into a GUID object.

100.42.8 Properties

100.42.9 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Read or write the byte value.
Example:

```
Var g as new WIAGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

Notes: (Read and Write computed property)

100.42.10 Data as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UID as binary string.
Example:

```
Var w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF
```

MsgBox EncodeBase64(w.Data)

Notes: (Read and Write computed property)

100.43 class WIAItemEnumeratorMBS

100.43.1 class WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAItemEnumeratorMBS class is used by applications to enumerate WiaItemMBS objects in the tree's current folder.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
Var e as WIAItemEnumeratorMBS = Root.EnumerateChildItems

if e<>Nil then
Var it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes: The Windows Image Acquisition (WIA) run-time system represents every WIA hardware device to applications as a hierarchical tree of WiaItemMBS objects.

100.43.2 Methods

100.43.3 Clone as WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an additional instance of the WIAItemEnumeratorMBS object.
Notes: Lasterror is set.

100.43.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the number of elements stored by this enumerator.
Notes: Lasterror is set.

100.43.5 NextItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next item in the enumeration.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
Var e as WIAItemEnumeratorMBS = Root.EnumerateChildItems

if e<>Nil then
Var it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes: Lasterror is set.

100.43.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration.
Notes: Lasterror is set.

100.43.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips the specified number of items during an enumeration of available WiaItemMBS objects.
Notes: Lasterror is set.

100.43.8 Properties

100.43.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 1.x or 2.x.
(Read and Write property)

100.43.10 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 1.x.
(Read and Write property)

100.43.11 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 2.x.
(Read and Write property)

100.43.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.44 class WIAItemMBS

100.44.1 class WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an item.
Notes: Each Windows Image Acquisition (WIA) hardware device is represented to an application as a hierarchical tree of WiaItem objects. The WiaItem interface provides applications with the ability to query devices to discover their capabilities. It also provides access to data transfer interfaces and item properties. In addition, the WiaItem interface provides methods to enable applications to control the device.

This class encapsulates transparently the system classes for WIA 1.x and 2.x.
Blog Entries

- MBS Plugins 10.3 Release Notes

- MBS REALbasic Plugins, version 10.3pr4

100.44.2 Methods

100.44.3 AnalyzeItem

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AnalyzeItem method causes the Windows Image Acquisition (WIA) hardware device to acquire and try to detect what data types are present.
Notes: This method is used with scanners to detect what type of data is on a page. When an application calls this method, the WIA hardware device driver scans and analyzes the current page. For each data type it detects, it creates an WiaItem object to represent the region on the page the data occupies.

Image processing and OCR software can use this capability to detect graphics and text on a page. This method adds the regions it creates into the WIA device's WiaItem tree. The application can select the individual regions and use the standard data transfer methods to acquire data from them.

If necessary, applications can override the regions created by this method.

Works only on WIA 1.x.
Lasterror is set.

100.44.4 CreateChildItem(ItemFlags as Integer, CreationFlags as Integer, ItemName as string, FullItemName as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateChildItem method is used by applications to add WiaItem objects to the WiaItem tree of a device.
Notes: ItemFlags: Specifies the WIA item type.
CreationFlags: Specifies how to create the new item. Only for WIA 2.x. Can be 0 to set the default values for the properties of the child. Can be &H40000000 to copy the values of all Read/Write properties from the parent.
ItemName: Specifies the WIA item name, such as "Top". You can think of this parameter as being equivalent to a file name.
FullItemName: Specifies the full WIA item name. You can think of this parameter as equivalent to a full path to a file, such as "003\Root\Top". Only for WIA 1.x.

Lasterror is set.
Returns nil on any error and the new item object on success.

Some WIA hardware devices allow applications to create new items in the WiaItem tree that represents the device. Applications must test the devices to see if they support this capability. Use the EnumerateDeviceCapabilities function to enumerate the current device's capabilities.

If the device allows the creation of new items in the WiaItem tree, invoking CreateChildItem creates a new WiaItem that is a child of the current node.

100.44.5 DataTransfer as WIADataTransferMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a Data transfer object.
Notes: Lasterror is set.
Only for WIA 1.x.
Returns nil on any error.

100.44.6 DeleteItem

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes the current IWiaItem object from the object tree of the device.
Notes: Lasterror is set.
Available on both WIA 1.x and 2.x.

The Windows Image Acquisition (WIA) run-time system represents each WIA hardware device connected to the user's computer as a hierarchical tree of IWiaItem objects. A given WIA device may or may not allow applications to delete IWiaItem objects from its tree. Use the EnumerateDeviceCapabilities function to query the device for item deletion capability.

If the device supports item deletion in its WiaItem tree, invoke the DeleteItem method to remove the WiaItem object. Note that this method will only delete an object after all references to the object have been released.

100.44.7 DeviceCommand(command as WIAGUIDMBS) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Issues a command to a Windows Image Acquisition (WIA) hardware device.
Example:

```
Var targetItem as WIAItemMBS // your item
Var resultItem as WIAItemMBS
resultItem = targetItem.DeviceCommand(targetItem.kCommandTakePicture)
```

Notes: Command: Specifies the command to send to the WIA 2.0 device. See kCommand* constants.
Works with WIA 1.x and 2.x.

Applications use this method to send WIA commands to hardware devices.

When the application sends the kCommandTakePicture command to the device, the WIA run-time system creates the WiaItem object to represent the image. The DeviceCommand method returns this new WIAItemMBS object.

100.44.8 DeviceDialog(Flags as integer, Win as DesktopWindow, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box to the user to prepare for image acquisition.
Notes: Lasterror is set.
Only for WIA 2.x.

Flags: Specifies a set of flags that control the dialog box's operation. The value can be either 0 to represent the default behavior or any of the following flags: kDeviceDialogSingleImage, kDeviceDialogUseCommonUI and kSelectDeviceNoDefault
Win: A handle to the parent window.
FolderName: Specifies the folder name where the files are to be transferred.

Filename: Specifies the template file name.
paths: An array to be filled with the file paths.
items: An array to be filled with the wia item objects.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. It is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaTransferMBS class to acquire the image.

- 100.44.13 DeviceDialog(WindowHandle as Integer, Flags as Integer, Intent as Integer) as WIAItemMBS() 15276

100.44.9 DeviceDialog(Flags as Integer, Win as window, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box to the user to prepare for image acquisition.
Notes: Lasterror is set.
Only for WIA 2.x.

Flags: Specifies a set of flags that control the dialog box's operation. The value can be either 0 to represent the default behavior or any of the following flags: kDeviceDialogSingleImage, kDeviceDialogUseCommonUI and kSelectDeviceNoDefault
Win: A handle to the parent window.
FolderName: Specifies the folder name where the files are to be transferred.
Filename: Specifies the template file name.
paths: An array to be filled with the file paths.
items: An array to be filled with the wia item objects.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. It is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaTransferMBS class to acquire the image.

100.44.10 DeviceDialog(Flags as Integer, WindowHandle as Integer, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays a dialog box to the user to prepare for image acquisition.
Notes: Lasterror is set.
Only for WIA 2.x.

Flags: Specifies a set of flags that control the dialog box's operation. The value can be either 0 to represent the default behavior or any of the following flags: kDeviceDialogSingleImage, kDeviceDialogUseCommonUI and kSelectDeviceNoDefault
WindowHandle: A handle to the parent window.
FolderName: Specifies the folder name where the files are to be transferred.
Filename: Specifies the template file name.
paths: An array to be filled with the file paths.
items: An array to be filled with the wia item objects.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. It is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaTransferMBS class to acquire the image.

100.44.11 DeviceDialog(Win as DesktopWindow, Flags as integer, Intent as integer) as WIAItemMBS()

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The DeviceDialog method is used by applications to display a dialog box to the user to prepare for image acquisition.
Notes: win: Handle of the parent window of the dialog box.
Flags: Specifies a set of flags that control the dialog box's operation. Can be set to any of the following values: kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. For a list of image intent values, kIntent* constants.

Lasterror is set.
Only for WIA 1.x.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. For instance, this dialog box enables the user to select images to download from a camera. When using a scanner, it is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaDataTransferMBS interface to acquire the image.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.

100.44.12 DeviceDialog(Win as window, Flags as Integer, Intent as Integer) as WIAItemMBS()

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The DeviceDialog method is used by applications to display a dialog box to the user to prepare for image acquisition.
Notes: win: Handle of the parent window of the dialog box.
Flags: Specifies a set of flags that control the dialog box's operation. Can be set to any of the following values: kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. For a list of image intent values, kIntent* constants.

Lasterror is set.
Only for WIA 1.x.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. For instance, this dialog box enables the user to select images to download from a camera. When using a scanner, it is also used to specify image scan properties such as brightness and contrast.

100.44.13 DeviceDialog(WindowHandle as Integer, Flags as Integer, Intent as Integer) as WIAItemMBS()

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DeviceDialog method is used by applications to display a dialog box to the user to prepare for image acquisition.
Notes: WindowHandle: Handle of the parent window of the dialog box.
Flags: Specifies a set of flags that control the dialog box's operation. Can be set to any of the following values: kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. For a list of image intent values, kIntent* constants.

Lasterror is set.
Only for WIA 1.x.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. For instance, this dialog box enables the user to select images to download from a camera. When using a scanner, it is also used to specify image scan properties such as brightness and contrast.

100.44.14 EnumerateChildItems(CategoryGUID as WIAGUIDMBS=nil) as WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates and returns an enumerator object for non-empty folders in a WiaItem tree of a Windows Image Acquisition (WIA) device.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
Var e as WIAItemEnumeratorMBS = Root.EnumerateChildItems
```

```
if e<>Nil then
Var it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes: Lasterror is set.
Works for WIA 1.x and WIA 2.x.

CategoryGUID: Specifies a category for which child nodes are enumerated. If nil, then all child nodes are enumerated. This parameter is only used on WIA 2.x.

The WIA run-time system represents each WIA hardware device as a hierarchical tree of WiaItem objects. The EnumerateChildItems method enables applications to enumerate child items in the current item. However, it can only be applied to items that are folders.

If the folder is not empty, it contains a subtree of WiaItem objects. The EnumerateChildItems method enumerates all of the items contained in the folder.

100.44.15 EnumerateDeviceCapabilities(Flags as Integer) as WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator that is used to ascertain the commands and events a Windows Image Acquisition (WIA) device supports.
Notes: Flags: Specifies a flag that selects the type of capabilities to enumerate. Can be a combination of kDeviceCommands and kDeviceEvents.

Works for both WIA 1.x and 2.x
Lasterror is set.

Use this method to create an enumerator object to obtain the set of commands and events that a WIA device supports. You can use the Flags parameter to specify which kinds of device capabilities to enumerate.

100.44.16 FindItemByName(name as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Searches an item's tree of subitems using the name as the search key.
Notes: name: Specifies the name fo the item to search for.

Lasterror is set.
Works with WIA 1.x and 2.x.

This method searches the current item's tree of sub-items using the name as the search key. If FindItemBy-Name finds the item specified by name, it retruns the WiaItem object.

100.44.17 ItemCategory as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets an item's category information.
Notes: Lasterror is set. Only for WIA 2.x.

Every WiaItemMBS object in the hierarchical tree of objects associated with a Windows Image Acquisition (WIA) 2.0 hardware device has a specific category. This method enables applications to identify the category of any item in a hierarchical tree of item objects in a device.

Requires Windows Vista or Windows Server 2008.

100.44.18 ItemType as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets an item's type information.
Example:

```
Var it as WIAItemMBS // your item
if BitwiseAnd(it.ItemType,it.kTypeFolder)=it.kTypeFolder or BitwiseAnd(it.ItemType, it.kTypeHasAttachments)=it.kTypeHasAttachments then
msgbox "may have children."
else
msgbox "no children."
```

end if

Notes: Works with WIA 1.x and 2.x.
Lasterror is set.

Every WiaItemMBS object in the hierarchical tree of objects associated with a Windows Image Acquisition (WIA) 2.0 hardware device has a specific data type. Item objects represent folders and files. Folders contain file objects. File objects contain data acquired by the device such as images and sounds. This method enables applications to identify the type of any item in a hierarchical tree of item objects in a device.

An item may have more than one type. For example, an item that represents an audio file will have the type attributes WiaItemTypeAudio bitwiseor WiaItemTypeFile.

100.44.19 kCategoryFeeder as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFeeder.DisplayString

100.44.20 kCategoryFeederBack as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFeederBack.DisplayString

100.44.21 kCategoryFeederFront as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFeederFront.DisplayString

100.44.22 kCategoryFilm as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFilm.DisplayString

100.44.23 kCategoryFinishedFile as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFinishedFile.DisplayString

100.44.24 kCategoryFlatbed as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFlatbed.DisplayString

100.44.25 kCategoryFolder as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFolder.DisplayString

100.44.26 kCategoryRoot as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryRoot.DisplayString

100.44.27 kCommandChangeDocument as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandChangeDocument.DisplayString

100.44.28 kCommandDeleteAllItems as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandDeleteAllItems.DisplayString

100.44.29 kCommandDiagnostic as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandDiagnostic.DisplayString

100.44.30 kCommandSynchronize as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandSynchronize.DisplayString

100.44.31 kCommandTakePicture as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.

100.44.32 kCommandUnloadDocument as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandUnloadDocument.DisplayString

100.44.33 ParentItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the parent item in the tree that represents a Windows Image Acquisition (WIA) 2.0 hardware device.
Notes: Works only in WIA 2.x. Lasterror is set.
Given any WiaItem object in the object tree of a WIA 2.0 hardware device, the application retrieves a pointer to the parent item by calling this function.

100.44.34 PropertyStorage as WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries properties for this item.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
Var p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
Var e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
Var ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
```

```
Var v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
Var g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend

end if
end if
End Sub
```

Notes: Lasterror is set.
Returns nil on any error.

100.44.35 RootItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the root item of a tree of item objects used to represent a Windows Image Acquisition (WIA) hardware device.
Notes: Lasterror is set.
Works with WIA 1.x and 2.x.

Given any WiaItem object in the object tree of a WIA hardware device, the application retrieves a pointer to the root item by calling this function.

100.44.36 Transfer as WIATransferMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a transfer object for this item.
Notes: Only available on WIA 2.x.
Lasterror is set.
Returns nil on any error.

100.44.37 Properties

100.44.38 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 1.x or 2.x.
(Read and Write property)

100.44.39 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 1.x.
(Read and Write property)

100.44.40 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: The handle for WIA 2.x.
(Read and Write property)

100.44.41 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.44.42 Constants

Constants

Constant	Value	Description
kDeviceCommands	1	One of the flag constants for the EnumerateDeviceCapabilities function. Enumerate device commands.
kDeviceDialogSingleImage	2	One of the DeviceDialog and ImageDialog flag constants. Only allow one image to be selected
kDeviceDialogUseCommonUI	4	One of the DeviceDialog and ImageDialog flag constants. Give preference to the system-provided UI, if available.
kDeviceEvents	2	One of the flag constants for the EnumerateDeviceCapabilities function. Enumerate device events.
kIntentBestPreview	&h40000	One of the intent constants for GetImageDialog. Specifies the best quality preview.
kIntentImageTypeColor	1	One of the intent constants for GetImageDialog. Preset properties for color content.
kIntentImageTypeGrayscale	2	One of the intent constants for GetImageDialog. Preset properties for grayscale content.
kIntentImageTypeMask	&hF	One of the intent constants for GetImageDialog. Mask for all of the image type flags.
kIntentImageTypeText	4	One of the intent constants for GetImageDialog. Preset properties for text content.
kIntentMaximizeQuality	&h20000	One of the intent constants for GetImageDialog. Preset properties to maximize image quality.
kIntentMinimizeSize	&h10000	One of the intent constants for GetImageDialog. Preset properties to minimize image size.
kIntentNone	0	One of the intent constants for GetImageDialog. Default value. Do not preset any properties.
kIntentSizeMask	&hF0000	One of the intent constants for GetImageDialog. Mask for all of the size/quality flags.
kSelectDeviceNoDefault	1	One of the Select Device Dialog and Image Dialog flag constants.
kTypeAnalyze	&h00000010	One of the WIA item type constants.
kTypeAudio	&h00000020	One of the WIA item type constants.
kTypeBurst	&h00000800	One of the WIA item type constants.
kTypeDeleted	&h00000080	One of the WIA item type constants.
kTypeDevice	&h00000040	One of the WIA item type constants.
kTypeDisconnected	&h00000100	One of the WIA item type constants.
kTypeFile	&h00000002	One of the WIA item type constants.
kTypeFolder	&h00000004	One of the WIA item type constants.
kTypeFree	&h00000000	One of the WIA item type constants.
kTypeGenerated	&h00004000	One of the WIA item type constants.
kTypeHasAttachments	&h00008000	One of the WIA item type constants.
kTypeHPanorama	&h00000200	One of the WIA item type constants.
kTypeImage	&h00000001	One of the WIA item type constants.
kTypeRoot	&h00000008	One of the WIA item type constants.
kTypeStorage	&h00001000	One of the WIA item type constants.
kTypeTransfer	&h00002000	One of the WIA item type constants.
kTypeVideo	&h00010000	One of the WIA item type constants.
kTypeVPanorama	&h00000400	One of the WIA item type constants.

100.45 class WIAPropertyEnumeratorMBS

100.45.1 class WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a property enumerator.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
Var p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
Var e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
Var ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
Var v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
Var g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend
```

```
end if
end if
End Sub
```

100.45.2 Methods

100.45.3 Clone as WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the enumerator.
Notes: Lasterror is set.

100.45.4 NextItem as WIAPropertyMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the next item.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
Var p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
Var e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
Var ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
Var v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if
```

```
PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
Var g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend

end if
end if
End Sub
```

Notes: Lasterror is set.

100.45.5 Reset

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumerator.
Notes: Lasterror is set.

100.45.6 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips the next items.
Notes: Lasterror is set.

100.45.7 Properties

100.45.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.45.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.46 class WIAPropertyMBS

100.46.1 class WIAPropertyMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAPropertyMBS class contains data about a single property in a property set. This data is the property ID and type tag, and the optional string name that may be associated with the property.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
Var p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
Var e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
Var ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
Var v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
Var g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
```

```
wend

end if
end if
End Sub
```

100.46.2 Properties

100.46.3 ID as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A 32-bit identifier that uniquely identifies the property within the property set.
Example:

```
Var ps as WIAPropertyMBS // your property

Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

MsgBox k
```

Notes: All properties within property sets must have unique property identifiers.
(Read and Write property)

100.46.4 Name as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the optional string name associated with the property
Example:

```
Var ps as WIAPropertyMBS // your property

Var k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

MsgBox k
```

Notes: (Read and Write property)

100.46.5 Type as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The property type.
Notes: (Read and Write property)

100.47 class WIAPropertyStorageMBS

100.47.1 class WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAPropertyStorageMBS class manages the persistent properties of a single property set.
Example:

```
Var DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
Var it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
Var p as WIAPropertyStorageMBS = it.PropertyStorage
Var name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes: Persistent properties consist of information that can be stored persistently in a property set, such as the summary information associated with a file. This contrasts with run-time properties associated with Controls and Automation, which can be used to affect system behavior. Use the methods of the WIAPropertyStorageMBS interface to create or open a persistent property set. An instance of the WIAPropertyStorageMBS interface can manage zero or more WIAPropertyStorageMBS instances.

Each property within a property set is identified by a property identifier (ID), a integer value unique to that set. You can also assign a string name to a property through the WIAPropertyStorageMBS interface.

The automatic conversion to variant supports:
nil, integer, uint32, int64, uint64, single, double, boolean, string and WIAGUIDMBS.

The automatic conversion from variant supports:
integer, boolean, single, double, Int64, string and WIAGUIDMBS.

100.47.2 Methods

100.47.3 Commit(flags as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Saves changes made to a property storage object to the parent storage object.
Notes: See kCommit* flags for the flags parameter.
Lasterror is set.

100.47.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the number of properties stored in the property storage.
Notes: Lasterror is set.

100.47.5 Delete(id as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes an item by ID.
Notes: Lasterror is set.
See also:

- 100.47.6 Delete(name as string) 15296

100.47.6 Delete(name as string)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes an item by name.
Notes: Lasterror is set.
See also:

- 100.47.5 Delete(id as Integer) 15296

100.47.7 DeletePropertyName(id as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes specified string names from the current property set.
Notes: Lasterror is set.

id: Property identifier for which string name are to be deleted.

For each property identifier in rgpropid, DeletePropertyName removes any corresponding name-to-property ID mapping. An attempt is silently ignored to delete the name of a property that either does not exist or does not currently have a string name associated with it. This method has no effect on the properties themselves.

100.47.8 Enumerate as WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the properties on this property storage.
Notes: Returns nil on any error. Lasterror is set.

100.47.9 kAudioFormatAIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatAIFF.DisplayString

100.47.10 kAudioFormatMP3 as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatMP3.DisplayString

100.47.11 kAudioFormatWAV as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatWAV.DisplayString

100.47.12 kAudioFormatWMA as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatWMA.DisplayString

100.47.13 kImageFormatASF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatASF.DisplayString

100.47.14 kImageFormatAVI as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatAVI.DisplayString

100.47.15 kImageFormatBMP as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatBMP.DisplayString

100.47.16 kImageFormatCIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatCIFF.DisplayString

100.47.17 kImageFormatDPOF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatDPOF.DisplayString

100.47.18 kImageFormatEMF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatEMF.DisplayString

100.47.19 kImageFormatExec as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatExec.DisplayString

100.47.20 kImageFormatEXIF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatEXIF.DisplayString

100.47.21 kImageFormatFlashPix as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatFlashPix.DisplayString

100.47.22 kImageFormatGIF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatGIF.DisplayString

100.47.23 kImageFormatHTML as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatHTML.DisplayString

100.47.24 kImageFormatICO as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatICO.DisplayString

100.47.25 kImageFormatJPEG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG.DisplayString

100.47.26 kImageFormatJPEG2K as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG2K.DisplayString

100.47.27 kImageFormatJPEG2KX as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG2KX.DisplayString

100.47.28 kImageFormatMemoryBMP as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatMemoryBMP.DisplayString

100.47.29 kImageFormatMPG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatMPG.DisplayString

100.47.30 kImageFormatPhotoCD as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPhotoCD.DisplayString

100.47.31 kImageFormatPICT as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPICT.DisplayString

100.47.32 kImageFormatPNG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPNG.DisplayString

100.47.33 kImageFormatRawRGB as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatRawRGB.DisplayString

100.47.34 kImageFormatRTF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatRTF.DisplayString

100.47.35 kImageFormatScript as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatScript.DisplayString

100.47.36 kImageFormatTIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatTIFF.DisplayString

100.47.37 kImageFormatTXT as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatTXT.DisplayString

100.47.38 kImageFormatUndefined as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatUndefined.DisplayString

100.47.39 kImageFormatUnicode16 as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatUnicode16.DisplayString

100.47.40 kImageFormatWMF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatWMF.DisplayString

100.47.41 kImageFormatXML as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatXML.DisplayString

100.47.42 Read(id as Integer) as Variant

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a property by id.
Notes: Lasterror is set.
See also:

- 100.47.43 Read(name as string) as Variant 15304
- 100.47.44 Read(p as WIAPropertyMBS) as Variant 15305

100.47.43 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a property by name.
Example:

```
Var DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
```

```
Var it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
Var p as WIAPropertyStorageMBS = it.PropertyStorage
Var name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes: Lasterror is set.
See also:

- 100.47.42 Read(id as Integer) as Variant 15304
- 100.47.44 Read(p as WIAPropertyMBS) as Variant 15305

100.47.44 Read(p as WIAPropertyMBS) as Variant

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a property by a property specification.
Notes: Lasterror is set.
See also:

- 100.47.42 Read(id as Integer) as Variant 15304
- 100.47.43 Read(name as string) as Variant 15304

100.47.45 ReadPropertyName(id as Integer) as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves any existing string name for the specified property ID.
Notes: Lasterror is set.

100.47.46 Revert

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Revert method discards all changes to the named property set since it was last opened or discards changes that were last committed to the property set.
Notes: This method has no effect on a direct-mode property set.
Lasterror is set.

100.47.47 Write(id as Integer, value as Variant)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a property by id.
Notes: Lasterror is set.
See also:

- 100.47.48 Write(name as string, value as Variant, id as Integer = 0) 15306
- 100.47.49 Write(p as WIAPropertyMBS, value as Variant) 15306

100.47.48 Write(name as string, value as Variant, id as Integer = 0)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a property by name with optional id.
Example:

```
Var it As WIAItemMBS // points to Flatbed scanner
Var p as WIAPropertyStorageMBS = it.PropertyStorage

p.Write(p.kScannerItemPropertyXresString, 300)
p.Write(p.kScannerItemPropertyYresString, 300)
```

Notes: Lasterror is set.
See also:

- 100.47.47 Write(id as Integer, value as Variant) 15306
- 100.47.49 Write(p as WIAPropertyMBS, value as Variant) 15306

100.47.49 Write(p as WIAPropertyMBS, value as Variant)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a property by property specification.
Notes: Lasterror is set.
See also:

- 100.47.47 Write(id as Integer, value as Variant) 15306
- 100.47.48 Write(name as string, value as Variant, id as Integer = 0) 15306

100.47.50 WritePropertyName(id as Integer, name as string)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Assigns string names to a specified array of property IDs in the current property set.
Notes: id: the property ID for which name is to be set.
name: The new name to be assigned to the corresponding property ID in the id parameter. This name may not exceed 255 characters.

Lasterror is set.

100.47.51 Properties

100.47.52 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.47.53 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

kCameraDevicePropertyPictWidthString	”Picture Width”	One of the WI

100.48 class WIAStreamMBS

100.48.1 class WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIAStreamMBS interface lets you read and write data to stream objects.
Example:

```
Var ItemName as string = "Hello.jpg"
Var f as FolderItem = SpecialFolder.Desktop.Child(ItemName)
Var s as new WIAStreamMBS(WIAStreamMBS.kModeWrite + WIAStreamMBS.kModeCreate, f)
```

Notes: Stream objects contain the data in a structured storage object, where storages provide the structure. Simple data can be written directly to a stream but, most frequently, streams are elements nested within a storage object. They are similar to standard files.

100.48.2 Methods

100.48.3 Clone as WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Clone method creates a new stream object with its own seek pointer that references the same bytes as the original stream.
Notes: The Clone method creates a new stream object for accessing the same bytes but using a separate seek pointer. The new stream object sees the same data as the source-stream object. Changes written to one object are immediately visible in the other. Range locking is shared between the stream objects.

The initial setting of the seek pointer in the cloned stream instance is the same as the current setting of the seek pointer in the original stream at the time of the clone operation.

Lasterror is set.

100.48.4 Commit(flags as Integer)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Commit method ensures that any changes made to a stream object open in transacted mode are reflected in the parent storage.
Notes: If the stream object is open in direct mode, Commit has no effect other than flushing all memory buffers to the next-level storage object. The COM compound file implementation of streams does not support opening streams in transacted mode.

Lasterror is set.

Possible flags: kCommitConsolidate, kCommitDangerouslyCommitMerelyToDiskCache, kCommitDefault, kCommitOnlyIfCurrent and kCommitOverwrite.

100.48.5 Constructor(mode as Integer, file as folderitem)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens or creates a file and retrieves a stream to read or write to that file.
Example:

```
Var ItemName as string = "Hello.jpg"
Var f as FolderItem = SpecialFolder.Desktop.Child(ItemName)
Var s as new WIAStreamMBS(WIAStreamMBS.kModeWrite + WIAStreamMBS.kModeCreate, f)
```

Notes: mode: the flags. Use the kMode* constants.
path: the file path.

Lasterror is set.

- 100.48.5 Constructor(mode as Integer, file as folderitem) 15310

100.48.7 CopyTo(other as WIAStreamMBS, length as UInt64)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CopyTo method copies a specified number of bytes from the current seek pointer in the stream to the current seek pointer in another stream.

Notes: other: The destination stream. The stream pointed to by pstm can be a new stream or a clone of the source stream.
length: The number of bytes to copy from the source stream.
ReadSize: Optional, a variable where the actual number of bytes read from the source.
WriteSize: Optional, a variable where the actual number of bytes written to the destination.

Lasterror is set.

The CopyTo method copies the specified bytes from one stream to another. It can also be used to copy a stream to itself. The seek pointer in each stream instance is adjusted for the number of bytes read or written. This method is equivalent to reading cb bytes into memory using Read and then immediately writing them to the destination stream using Write, although CopyTo will be more efficient.

The destination stream can be a clone of the source stream created by calling the Clone method.

If CopyTo returns an error, you cannot assume that the seek pointers are valid for either the source or destination. Additionally, the values of pcbRead and pcbWritten are not meaningful even though they are returned.

If CopyTo returns successfully, the actual number of bytes read and written are the same.

To copy the remainder of the source from the current seek pointer, specify the maximum large integer value for the cb parameter. If the seek pointer is the beginning of the stream, this operation copies the entire stream.

100.48.9 Revert

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Revert method discards all changes that have been made to a transacted stream since the last Commit call.
Notes: On streams open in direct mode and streams using the COM compound file implementation of Revert, this method has no effect.
Lasterror is set.

100.48.10 Seek(value as Int64, Origin as Integer) as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Seek method changes the seek pointer to a new location.
Notes: The new location is relative to either the beginning of the stream, the end of the stream, or the current seek pointer.
