value: The displacement to be added to the location indicated by the dwOrigin parameter. If dwOrigin is kSeekSet, this is interpreted as an unsigned value rather than a signed value.

Origin: The origin for the displacement specified in value. The origin can be the beginning of the file (kSeekSet), the current seek pointer (kSeekCur), or the end of the file (kSeekEnd). For more information about

values, see the kSeek* constants.

Retruns the new seek pointer from the beginning of the stream.

Seek changes the seek pointer so that subsequent read and write operations can be performed at a different location in the stream object. It is an error to seek before the beginning of the stream. It is not, however, an error to seek past the end of the stream. Seeking past the end of the stream is useful for subsequent write operations, as the stream byte range will be extended to the new seek position immediately before the write is complete.

You can also use this method to obtain the current value of the seek pointer by calling this method with the Origin parameter set to kSeekCur and the value parameter set to 0 so that the seek pointer is not changed. The current seek pointer is returned.

Lasterror is set.

100.48.11 SetSize(size as UInt64)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetSize method changes the size of the stream object.
Notes: SetSize changes the size of the stream object. Call this method to preallocate space for the stream. If the size parameter is larger than the current stream size, the stream is extended to the indicated size by filling the intervening space with bytes of undefined value. This operation is similar to the Write method if the seek pointer is past the current end of stream.

If the size parameter is smaller than the current stream, the stream is truncated to the indicated size.

The seek pointer is not affected by the change in stream size.

Calling SetSize can be an effective way to obtain a large chunk of contiguous space.

Lasterror is set.

100.48.12 Properties

100.48.13 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.48.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.48.15 Constants

Constants

Constant	Value	Description
kCommitConsolidate	8	One of the flags for commit. Windows 2000 and Windows XP: Indicates that a stor dated after it is committed, resulting in a smaller file on only on the outermost storage object that has been open It is not valid for streams. The kCommitConsolidate flag any other kCommit* flags.
kCommitDangerouslyCommitMerelyToDiskCache	4	One of the flags for commit. Commits the changes to a write-behind disk cache, but d to the disk. In a write-behind disk cache, the operati actually writes to a disk cache, thus increasing perfor eventually written to the disk, but usually not until aft has already returned. The performance increase comes increased risk of losing data if a problem occurs before the data in the cache is lost. If you do not specify this value, then committing chang objects is robust even if a disk cache is used. The two- ensures that data is stored on the disk and not just to t
kCommitDefault	0	One of the flags for commit. You can specify this condition with kCommitConsolidate of the other three flags in this list of elements. Use thi readability of code.
kCommitOnlyIfCurrent	2	One of the flags for commit. Prevents multiple users of a storage object from ove changes. The commit operation occurs only if there to the saved storage object because the user most rece the saved version of the storage object is the same ver been editing. If other users have changed the storage o eration fails and returns the STG_E_NOTCURRENT behavior, call the Commit method again using the kCo
kCommitOverwrite	1	One of the flags for commit. The commit operation can overwrite existing data to r quirements. This value is not recommended for typic not as robust as the default value. In this case, it is p operation to fail after the old data is overwritten, but completely committed. Then, neither the old version n the storage object will be intact. You can use this value in the following cases: * The user is willing to risk losing the data. * The low-memory save sequence will be used to safely s to a smaller file. * A previous commit returned STG_E_MEDIUMFULL existing data would provide enough space to commit o object. Be aware that the commit operation verifies that adequ any overwriting occurs. Thus, even with this value sp operation fails due to space requirements, the old data however, for data loss to occur with the kCommitOver the commit operation fails for any reason other than la
kModeConvert	&h20000	One of the mode constants for the file stream. Creates the new object while preserving existing data in tents". In the case of a storage object or a byte array, th into a stream regardless of whether the existing file or by tains a layered storage object. This flag can only be use storage object. It cannot be used within a storage objec ateStream. It is also not valid to use this flag and the k flag simultaneously.
kModeCreate	&h1000	One of the mode constants for the file stream. Undicates that an existing storage object or stream sho

100.49 class WIATransferCallbackMBS

100.49.1 class WIATransferCallbackMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for transfering data from the device into your application.
Notes: This class is only used for WIA 2.x.

100.49.2 Properties

100.49.3 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.49.4 Events

100.49.5 GetNextStream(ItemName as string, FullItemName as string) as WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a new stream for the specified item.
Notes: ItemName: Specifies the name of the item to create stream for.
FullItemName: Specifies the full name of the item to create stream for.

Returns a new WIAStreamMBS object or nil for an error.

When this method is implemented by an image processing filter, the Windows Image Acquisition (WIA) 2.0 minidriver calls it during image acquisition to get the destination stream from the client.

A filter's WIATransferCallbackMBS.GetNextStream must delegate to the application's callback method. The filter uses the stream returned by the application callback's WIATransferCallbackMBS.GetNextStream implementation to create its own stream that it passes back to the WIA 2.0 service. The filtering is done when the filter's stream calls the IStream::Write method.

The filter's stream cannot make any assumptions on the number of bytes that are written to it on each write, since the unfiltered image data may come from the WIA 2.0 Preview Component rather than the driver.

The WIA 2.0 Preview Component always writes the whole unfiltered image data into the filter's stream only once, which means that the filter's stream has one source writing into it. If both the driver and the preview component write into the filter's stream, the filter's stream cannot assume, for example, that it will receive the full header the first time IStream::Write is called although its corresponding driver always writes the header data first in one write. Nor can it assume that a subsequent write contains exactly one scan line. So the filtering stream may have to count the number of bytes written to it to determine, for example, where the image data starts.

The image processing filter's WIATransferCallbackMBS.GetNextStream implementation should read the properties needed for its image processing from the item for which the image is being acquired. The filter does not read the properties directly from the pWiaItem2 passed into InitializeFilter. Instead the filter must call FindItemByName on this WIA 2.0 item to obtain the actual WIA 2.0 item. The reason for this is that the image being acquired may actually be a child item of pWiaItem2. For example, during a folder acquisition the filter uses pWiaItem2 to obtain pWiaItem2's child items in WIATransferCallbackMBS.GetNextStream (during a folder acquisition the driver returns the images represented by the child items of WiaItemMBS). The same is true when the WIA 2.0 Preview Component calls into the image processing filter passing a child WIA 2.0 item.

100.49.6 TransferCallback(w as WIATransferParamsMBS) as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides progress and other notifications during a transfer.
Notes: Returns an error value or zero on success.

100.50 class WIATransferMBS

100.50.1 class WIATransferMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WIATransferMBS class provides stream-based transfer of data.
Notes: This class is for WIA 2.x.

100.50.2 Methods

100.50.3 Cancel

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cancels the current transfer operation.
Notes: Lasterror is set.

100.50.4 Download(TransferCallback as WIATransferCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initiates a data download to the caller.
Notes: TransferCallback: The WIATransferCallbackMBS object to receive progress details and specify the destination.

If a folder is downloaded, then all the child items of that folder are also transferred. Each item is transferred in a separate stream.

Lasterror is set.

100.50.5 EnumerateFormatInfo as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator for the transfer formats that the Windows Image Acquisition (WIA) 2.0 device supports.
Notes: Lasterror is set.

100.50.6 Upload(Source as WIAStreamMBS, TransferCallback as WIATransferCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initiates a data upload of a single item from the caller.
Notes: Source: Specifies a pointer to the Stream data.
TransferCallback: Specifies a pointer to the caller's WIATransferCallbackMBS interface.

Lasterror is set.

100.50.7 Properties

100.50.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.50.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.51 class WIATransferParamsMBS

100.51.1 class WIATransferParamsMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class you subclass to get progress of the image transfer.
Notes: The WiaTransferParams is transmitted to an application during a data transfer by the Windows Image Acquisition (WIA) run-time system to the WiaTransferCallbackMBS.TransferCallback method.

100.51.2 Properties

100.51.3 ErrorStatus as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The status, or error state, of the device set by the driver; for example, "warming up".
Notes: (Read and Write property)

100.51.4 Message as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the status of the data transfer.
Notes: See the kMessage* constants
(Read and Write property)

100.51.5 PercentComplete as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the progress of the data transfer as a percentage.
Example:

```
Var w as WIATransferParamsMBS // your parameters
Progressbar1.maximum = 100
Progressbar1.value = w.PercentComplete
```

Notes: (Read and Write property)

100.51.6 TransferredBytes as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates the amount of data transferred.
Notes: (Read and Write property)

100.51.7 Constants

Constants

Constant	Value	Description
kMessageDeviceStatus	4	One of the message constants.
kMessageEndOfStream	2	One of the message constants.
kMessageEndOfTransfer	3	One of the message constants.
kMessageNewPage	5	One of the message constants.
kMessageStatus	1	One of the message constants.

100.52 class WIAVideoMBS

100.52.1 class WIAVideoMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IWiaVideo interface provides methods that allow an application that uses Windows Image Acquisition (WIA) services to acquire still images from a streaming video device.
Notes: Note WIA does not support video devices in Windows Server 2003, Windows Vista, and later. For those versions of the Windows, use DirectShow to acquire images from video.

100.52.2 Methods

100.52.3 Constructor

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Requires Windows XP or Windows Server 2003.

100.52.4 CreateVideoByDevNum(DeviceNumber as integer, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByDevNum method creates a connection to a streaming video device with the device number obtained from a Directshow enumeration.
Notes: DeviceNumber: Specifies the video device's Directshow device number.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

- 100.52.5 CreateVideoByDevNum(DeviceNumber as Integer, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

- 100.52.6 CreateVideoByDevNum(DeviceNumber as Integer, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15323

100.52.5 CreateVideoByDevNum(DeviceNumber as Integer, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByDevNum method creates a connection to a streaming video device with the device number obtained from a Directshow enumeration.
Notes: DeviceNumber: Specifies the video device's Directshow device number.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

- 100.52.4 CreateVideoByDevNum(DeviceNumber as integer, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15322
- 100.52.6 CreateVideoByDevNum(DeviceNumber as Integer, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15323

100.52.6 CreateVideoByDevNum(DeviceNumber as Integer, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateVideoByDevNum method creates a connection to a streaming video device with the device number obtained from a Directshow enumeration.
Notes: DeviceNumber: Specifies the video device's Directshow device number.
WindowHandle: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to

TRUE, the video display fills the window.
See also:

- 100.52.4 CreateVideoByDevNum(DeviceNumber as integer, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15322

100.52.7 CreateVideoByName(FriendlyName as string, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByName method creates a connection to a streaming video device with the friendly device name obtained from a Directshow enumeration.
Notes: FriendlyName: Specifies the video device's friendly name obtained from a Directshow device enumeration.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

- 100.52.8 CreateVideoByName(FriendlyName as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15324

100.52.8 CreateVideoByName(FriendlyName as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByName method creates a connection to a streaming video device with the friendly device name obtained from a Directshow enumeration.
Notes: FriendlyName: Specifies the video device's friendly name obtained from a Directshow device enumeration.
win: Specifies the window in which to display the streaming video.

StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

100.52.9 CreateVideoByName(FriendlyName as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateVideoByName method creates a connection to a streaming video device with the friendly device name obtained from a Directshow enumeration.
Notes: FriendlyName: Specifies the video device's friendly name obtained from a Directshow device enumeration.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

100.52.10 CreateVideoByWiaDevID(WiaDeviceID as string, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByWiaDevID method creates a connection to a streaming video device from its DeviceID.
Notes: WiaDeviceID: Specifies the value of the video device's DeviceID property.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to true to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

In order for the function to succeed, the ImagesDirectory property must be specified first.
See also:

- 100.52.11 CreateVideoByWiaDevID(WiaDeviceID as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15326

100.52.11 CreateVideoByWiaDevID(WiaDeviceID as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop only.

Function: The CreateVideoByWiaDevID method creates a connection to a streaming video device from its DeviceID.
Notes: WiaDeviceID: Specifies the value of the video device's DeviceID property.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to true to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to

TRUE, the video display fills the window.

In order for the function to succeed, the ImagesDirectory property must be specified first.
See also:

- 100.52.10 CreateVideoByWiaDevID(WiaDeviceID as string, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15326
- 100.52.12 CreateVideoByWiaDevID(WiaDeviceID as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15327

100.52.12 CreateVideoByWiaDevID(WiaDeviceID as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CreateVideoByWiaDevID method creates a connection to a streaming video device from its DeviceID.
Notes: WiaDeviceID: Specifies the value of the video device's DeviceID property.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to true to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

In order for the function to succeed, the ImagesDirectory property must be specified first.
See also:

- 100.52.10 CreateVideoByWiaDevID(WiaDeviceID as string, win as DesktopWindow, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15326
- 100.52.11 CreateVideoByWiaDevID(WiaDeviceID as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15326

100.52.13 CurrentState as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the state of the video stream.
Notes: See the kState* constants.

100.52.14 DestroyVideo

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DestroyVideo method shuts down the streaming video.
Notes: To restart video playback, the application must call one of the CreateVideo methods again.
Lasterror is set.

Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.

100.52.15 Pause

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Pause method pauses video playback.
Notes: Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.
Lasterror is set.

100.52.16 Play

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Begins playback of streaming video.
Notes: Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.
Lasterror is set.

100.52.17 ResizeVideo(StretchToFitParent as boolean)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ResizeVideo method resizes the video playback to the largest supported resolution that fits inside the parent window.
Notes: Call this method whenever the parent window is moved or resized.

By default, the video is displayed in a supported resolution smaller than the parent window. If bStretchToFitParent is set to true, the video display fills the window.

Lasterror is set.

100.52.18 TakePicture as folderitem

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The TakePicture method extracts a still image from the video stream, and saves the image as a JPEG file.
Notes: Returns the full path and filename of the JPEG file that this method creates.
Lasterror is set.

The path and directory where the image file is saved are specified by the ImagesDirectory or ImageFolder property.
See also:

- 100.52.19 TakePicture as string 15329

100.52.19 TakePicture as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The TakePicture method extracts a still image from the video stream, and saves the image as a JPEG file.
Notes: Returns the full path and filename of the JPEG file that this method creates.
Lasterror is set.

The path and directory where the image file is saved are specified by the ImagesDirectory or ImageFolder property.
See also:

- 100.52.18 TakePicture as folderitem 15329

100.52.20 Properties

100.52.21 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read and Write property)

100.52.22 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

100.52.23 ImagesDirectory as string

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the full path and directory where images are stored when calling the TakePicture method.
Notes: Lasterror is set.
(Read and Write computed property)

100.52.24 ImagesFolder as folderitem

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the folder where TakePicture stores the images.
Notes: Lasterror is set.
(Read and Write computed property)

100.52.25 PreviewVisible as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The PreviewVisible property specifies whether the video playback is visible in its parent window.
Notes: This does not affect the state of the video.
Lasterror is set.
(Read and Write computed property)

100.52.26 Constants

Constants

Constant	Value	Description
kStateCreatingVideo	2	One of the constants for the video state. One of the WiaVideoMBS CreateVideo methods was called and WIA is in the process of creating the video stream.
kStateDestroyingVideo	6	One of the constants for the video state. The application called DestroyVideo method, and WIA is in the process of destroying the video stream.
kStateNoVideo	1	One of the constants for the video state. No video stream exists. Call CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName to create a video.
kStateVideoCreated	3	One of the constants for the video state. A video stream has been successfully created, but playback has not yet started.
kStateVideoPaused	5	One of the constants for the video state. A video stream has been successfully created, and the video is paused. The application can now call the TakePicture method.
kStateVideoPlaying	4	One of the constants for the video state. A video stream has been successfully created, and the video is playing. The application can now call the TakePicture method.

Chapter 101

Image Magick

101.1 class ImageMagickQ16MBS

101.1.1 class ImageMagickQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for global functions from the Image Magick library
Notes: Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

101.1.2 Methods

101.1.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice for this format.

Notes: For more details please check the ImageMagick documentation.

101.1.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

101.1.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the home url of the library.
Notes: For more details please check the ImageMagick documentation.

101.1.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the ImageMagick environment.
Example:

```
Var i as new ImageMagickQ16MBS
i.InitializeMagick("")
```

Notes: Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

101.1.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the ImageMagick environment is currently instantiated.
Notes: In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

101.1.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from loading the image magick library.

101.1.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ16MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.1.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ16MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.1.11 MagickInfoList as IMMagickInfoListQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the list of known image formats.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.1.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes: If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

101.1.13 NewImageInfo as IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ImageInfo object.
Notes: Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.1.14 NewImageList as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty image list.
Notes: For more details please check the ImageMagick documentation.

101.1.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

101.1.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Quantum Depth of the library.
Notes: For more details please check the ImageMagick documentation.

101.1.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

101.1.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

101.1.19 ReadImage(info as IMImageInfoQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a file.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.1.20 ReadImageFromString(info as IMImageInfoQ16MBS, data as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a string.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.1.21 ReadImageHeaderFromString(info as IMImageInfoQ16MBS, data as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image header.
Notes: Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

101.1.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

101.1.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

101.1.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

101.1.25 Properties

101.1.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.1.27 LastException as IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.2 class ImageMagickQ32MBS

101.2.1 class ImageMagickQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for global functions from the Image Magick library
Notes: Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

101.2.2 Methods

101.2.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice for this format.
Notes: For more details please check the ImageMagick documentation.

101.2.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

101.2.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the home url of the library.

Notes: For more details please check the ImageMagick documentation.

101.2.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the ImageMagick environment.
Example:

```
Var i as new ImageMagickQ32MBS
i.InitializeMagick("")
```

Notes: Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

101.2.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the ImageMagick environment is currently instantiated.
Notes: In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

101.2.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from loading the image magick library.

101.2.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ32MBS
```

```
if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.2.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ32MBS
```

```
if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.2.11 MagickInfoList as IMMagickInfoListQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the list of known image formats.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.2.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes: If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

101.2.13 NewImageInfo as IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ImageInfo object.
Notes: Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.2.14 NewImageList as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty image list.
Notes: For more details please check the ImageMagick documentation.

101.2.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

101.2.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Quantum Depth of the library.
Notes: For more details please check the ImageMagick documentation.

101.2.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

101.2.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

101.2.19 ReadImage(info as IMImageInfoQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a file.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.2.20 ReadImageFromString(info as IMImageInfoQ32MBS, data as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a string.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.2.21 ReadImageHeaderFromString(info as IMImageInfoQ32MBS, data as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image header.
Notes: Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

101.2.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

101.2.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

101.2.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

101.2.25 Properties

101.2.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.2.27 LastException as IMExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.3 class ImageMagickQ8MBS

101.3.1 class ImageMagickQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for global functions from the Image Magick library
Notes: Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

101.3.2 Methods

101.3.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice for this format.
Notes: For more details please check the ImageMagick documentation.

101.3.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

101.3.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the home url of the library.

Notes: For more details please check the ImageMagick documentation.

101.3.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the ImageMagick environment.
Example:

```
Var i as new ImageMagickQ8MBS
i.InitializeMagick("")
```

Notes: Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

101.3.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the ImageMagick environment is currently instantiated.
Notes: In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

101.3.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message from loading the image magick library.

101.3.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ8MBS
```

```
if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.3.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the dll/bundle on the give path.
Example:

```
Var i as new ImageMagickQ8MBS
```

```
if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes: In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

101.3.11 MagickInfoList as IMMagickInfoListQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the list of known image formats.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.3.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes: If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

101.3.13 NewImageInfo as IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ImageInfo object.
Notes: Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.3.14 NewImageList as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty image list.
Notes: For more details please check the ImageMagick documentation.

101.3.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

101.3.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Quantum Depth of the library.
Notes: For more details please check the ImageMagick documentation.

101.3.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

101.3.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

101.3.19 ReadImage(info as IMImageInfoQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a file.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.3.20 ReadImageFromString(info as IMImageInfoQ8MBS, data as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image from a string.
Notes: Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

101.3.21 ReadImageHeaderFromString(info as IMImageInfoQ8MBS, data as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image header.
Notes: Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

101.3.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

101.3.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

101.3.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

101.3.25 Properties

101.3.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.3.27 LastException as IMExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.4 class IMColorQ16MBS

101.4.1 class IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image Magick class to represent a color.
Example:

```
Var i as IMImageInfoQ16MBS
Var c as IMColorQ16MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes: As you see above the IMColorQ16MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

101.4.2 Methods

101.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color object where all four properties are zero.
See also:

- 101.4.4 Constructor(c as color) 15357
- 101.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15358

101.4.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 101.4.3 Constructor 15357
- 101.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15358

101.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color object with the given values.
See also:

- 101.4.3 Constructor 15357
- 101.4.4 Constructor(c as color) 15357

101.4.6 Properties

101.4.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.4.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color as a Xojo color.
Notes: Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down. This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

101.4.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.4.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color.
Notes: Value from 0 to 65535.
(Read and Write property)

101.4.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.5 class IMColorQ32MBS

101.5.1 class IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image Magick class to represent a color.
Example:

```
Var i as IMImageInfoQ32MBS
Var c as IMColorQ32MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes: As you see above the IMColorQ32MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

101.5.2 Methods

101.5.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color object where all four properties are zero.
See also:

- 101.5.4 Constructor(c as color) 15360
- 101.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15361

101.5.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 101.5.3 Constructor 15360
- 101.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15361

101.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color object with the given values.
See also:

- 101.5.3 Constructor 15360
- 101.5.4 Constructor(c as color) 15360

101.5.6 Properties

101.5.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.5.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color as a Xojo color.
Notes: Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down. This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

101.5.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.5.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color.
Notes: Value from 0 to 65535.
(Read and Write property)

101.5.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.6 class IMColorQ8MBS

101.6.1 class IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image Magick class to represent a color.
Example:

```
Var i as IMImageInfoQ8MBS
Var c as IMColorQ8MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes: As you see above the IMColorQ8MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

101.6.2 Methods

101.6.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color object where all four properties are zero.
See also:

- 101.6.4 Constructor(c as color) 15363
- 101.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15364

101.6.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 101.6.3 Constructor 15363
- 101.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15364

101.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new color object with the given values.
See also:

- 101.6.3 Constructor 15363
- 101.6.4 Constructor(c as color) 15363

101.6.6 Properties

101.6.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.6.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color as a Xojo color.
Notes: Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down. This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

101.6.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.6.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color.
Notes: Value from 0 to 65535.
(Read and Write property)

101.6.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red component.
Notes: Value from 0 to 65535.
(Read and Write property)

101.7 class IMExceptionQ16MBS

101.7.1 class IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for information about an Image Magick Exception.
Notes: Some functions can throw an exception and you find this exception object after calling the function inside the class. For Example after calling IMImageQ16MBS.resize, the IMImageQ16MBS.LastException property will be nil for no exception or just contain the exception from the resize operation.

For more details please check the ImageMagick documentation.
Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr10

101.7.2 Methods

101.7.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.7.4 Properties

101.7.5 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description of the exception.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.7.6 Reason as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reason of the exception.
Notes: For more details please check the ImageMagick documentation.

(Read and Write property)

101.7.7 Severity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception type.
Notes: some usefull constants:

For more details please check the ImageMagick documentation.
(Read and Write property)

101.7.8 Signature as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature of the exception.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

```

101.10 class IMImageAffineMatrixQ16MBS

101.10.1 class IMImageAffineMatrixQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an Image Magick affine transformation matrix.

101.10.2 Methods

101.10.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an identity matrix.

101.10.4 Properties

101.10.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate x value.
Notes: (Read and Write property)

101.10.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate y value.
Notes: (Read and Write property)

101.10.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale x value.
Notes: (Read and Write property)

101.10.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale y value.
Notes: (Read and Write property)

101.10.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.10.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.11 class IMImageAffineMatrixQ32MBS

101.11.1 class IMImageAffineMatrixQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an Image Magick affine transformation matrix.

101.11.2 Methods

101.11.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an identity matrix.

101.11.4 Properties

101.11.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate x value.
Notes: (Read and Write property)

101.11.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate y value.
Notes: (Read and Write property)

101.11.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale x value.
Notes: (Read and Write property)

101.11.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale y value.
Notes: (Read and Write property)

101.11.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.11.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.12 class IMImageAffineMatrixQ8MBS

101.12.1 class IMImageAffineMatrixQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an Image Magick affine transformation matrix.

101.12.2 Methods

101.12.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an identity matrix.

101.12.4 Properties

101.12.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate x value.
Notes: (Read and Write property)

101.12.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotate y value.
Notes: (Read and Write property)

101.12.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale x value.
Notes: (Read and Write property)

101.12.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale y value.
Notes: (Read and Write property)

101.12.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.12.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate y value.
Notes: (Read and Write property)

101.13 class IMImageAttributeQ16MBS

101.13.1 class IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an image attribute.
Notes: Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

101.13.2 Properties

101.13.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether compression is used.
Notes: (Read only property)

101.13.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.13.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.14 class IMImageAttributeQ32MBS

101.14.1 class IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an image attribute.
Notes: Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

101.14.2 Properties

101.14.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether compression is used.
Notes: (Read only property)

101.14.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.14.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.15 class IMImageAttributeQ8MBS

101.15.1 class IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an image attribute.
Notes: Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

101.15.2 Properties

101.15.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether compression is used.
Notes: (Read only property)

101.15.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The key of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.15.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this attribute.
Notes: String is in binary text encoding.
(Read only property)

101.16 class IMImageInfoQ16MBS

101.16.1 class IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

101.16.2 Methods

101.16.3 Clone as IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

101.16.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.16.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image info and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.16.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.16.7 Properties

101.16.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Join images into a single multi-image file.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes: Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.12 BackgroundColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.16.13 BorderColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.16.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel to use.
Notes: Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

(Read and Write property)

101.16.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Example:

```
Var im as ImageMagickQ16MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ16MBS
Var imageinfo as IMImageInfoQ16MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ16MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
```

```
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

101.16.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

```
const UndefinedCompression        = 0
const NoCompression               = 1
const BZipCompression             = 2
const FaxCompression              = 3
const Group4Compression           = 4
const JPEGCompression             = 5
const LosslessJPEGCompression     = 6
const LZWCompression              = 7
const RLECompression              = 8
const ZipCompression              = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical and horizontal resolution in pixels of the image.
Notes: This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

101.16.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.16.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.16.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font.
Notes: If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

101.16.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if only the header was read from the image data.
Notes: (Read and Write property)

101.16.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

(Read and Write property)

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

101.16.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Example:

```
Var imageinfo as IMImageInfoQ16MBS
Var blob as string
Var image as IMImageQ16MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.30 MatteColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.16.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform the image to black and white.
Notes: (Read and Write property)

101.16.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

101.16.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font point size.
Notes: (Read and Write property)

101.16.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image manipulation preview option.
Notes: Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12
ReduceNoisePreview	13
AddNoisePreview	14
SharpenPreview	15
BlurPreview	16
ThresholdPreview	17
EdgeDetectPreview	18
SpreadPreview	19
SolarizePreview	20
ShadePreview	21
RaisePreview	22
SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

101.16.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Notes: Default value is 75.
(Read and Write property)

101.16.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.16.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

101.16.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.16.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: X11 display to display to.
Notes: obtain fonts from, or to capture image from.
(Read and Write property)

101.16.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height of a raw image (an image which does not support width and height information).
Notes: Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

101.16.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.16.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image filename to use as background texture.
Notes: (Read and Write property)

101.16.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image type.
Notes: constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

101.16.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print detailed information about the image if True.
Notes: (Read and Write property)

101.16.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlashPix viewing parameters.
Notes: (Read and Write property)

101.17 class IMImageInfoQ32MBS

101.17.1 class IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

101.17.2 Methods

101.17.3 Clone as IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

101.17.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.17.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image info and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.17.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.17.7 Properties

101.17.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Join images into a single multi-image file.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes: Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.12 BackgroundColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.17.13 BorderColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.17.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel to use.
Notes: Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

(Read and Write property)

101.17.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Example:

```
Var im as ImageMagickQ32MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ32MBS
Var imageinfo as IMImageInfoQ32MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ32MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
```

```
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

101.17.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

```
const UndefinedCompression        = 0
const NoCompression               = 1
const BZipCompression             = 2
const FaxCompression              = 3
const Group4Compression           = 4
const JPEGCompression             = 5
const LosslessJPEGCompression     = 6
const LZWCompression              = 7
const RLECompression              = 8
const ZipCompression              = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical and horizontal resolution in pixels of the image.
Notes: This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

101.17.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.17.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.17.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font.
Notes: If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

101.17.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if only the header was read from the image data.
Notes: (Read and Write property)

101.17.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

(Read and Write property)

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

101.17.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Example:

```
Var imageinfo as IMImageInfoQ32MBS
Var blob as string
Var image as IMImageQ32MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.30 MatteColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.17.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform the image to black and white.
Notes: (Read and Write property)

101.17.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

101.17.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font point size.
Notes: (Read and Write property)

101.17.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image manipulation preview option.
Notes: Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12
ReduceNoisePreview	13
AddNoisePreview	14
SharpenPreview	15
BlurPreview	16
ThresholdPreview	17
EdgeDetectPreview	18
SpreadPreview	19
SolarizePreview	20
ShadePreview	21
RaisePreview	22
SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

101.17.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Notes: Default value is 75.
(Read and Write property)

101.17.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.17.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

101.17.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.17.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: X11 display to display to.
Notes: obtain fonts from, or to capture image from.
(Read and Write property)

101.17.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height of a raw image (an image which does not support width and height information).
Notes: Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

101.17.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.17.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image filename to use as background texture.
Notes: (Read and Write property)

101.17.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image type.
Notes: constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

101.17.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print detailed information about the image if True.
Notes: (Read and Write property)

101.17.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlashPix viewing parameters.
Notes: (Read and Write property)

101.18 class IMImageInfoQ8MBS

101.18.1 class IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

101.18.2 Methods

101.18.3 Clone as IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

101.18.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.18.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image info and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.18.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.18.7 Properties

101.18.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Join images into a single multi-image file.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes: Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.12 BackgroundColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.18.13 BorderColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.18.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel to use.
Notes: Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

(Read and Write property)

101.18.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Example:

```
Var im as ImageMagickQ8MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ8MBS
Var imageinfo as IMImageInfoQ8MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ8MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
```

```
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8

HWBColorspace	16

(Read and Write property)

101.18.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

```
const UndefinedCompression        = 0
const NoCompression               = 1
const BZipCompression             = 2
const FaxCompression              = 3
const Group4Compression           = 4
const JPEGCompression             = 5
const LosslessJPEGCompression     = 6
const LZWCompression              = 7
const RLECompression              = 8
const ZipCompression              = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical and horizontal resolution in pixels of the image.
Notes: This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

101.18.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.18.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.18.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font.
Notes: If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

101.18.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if only the header was read from the image data.
Notes: (Read and Write property)

101.18.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

(Read and Write property)

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

101.18.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Example:

```
Var imageinfo as IMImageInfoQ8MBS
Var blob as string
Var image as IMImageQ8MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.30 MatteColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.18.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transform the image to black and white.
Notes: (Read and Write property)

101.18.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

101.18.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text rendering font point size.
Notes: (Read and Write property)

101.18.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image manipulation preview option.
Notes: Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12
ReduceNoisePreview	13
AddNoisePreview	14
SharpenPreview	15
BlurPreview	16
ThresholdPreview	17
EdgeDetectPreview	18
SpreadPreview	19
SolarizePreview	20
ShadePreview	21
RaisePreview	22
SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

101.18.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Notes: Default value is 75.
(Read and Write property)

101.18.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.18.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

101.18.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.18.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: X11 display to display to.
Notes: obtain fonts from, or to capture image from.
(Read and Write property)

101.18.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width and height of a raw image (an image which does not support width and height information).
Notes: Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

101.18.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.18.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image filename to use as background texture.
Notes: (Read and Write property)

101.18.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Image type.
Notes: constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

101.18.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print detailed information about the image if True.
Notes: (Read and Write property)

101.18.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlashPix viewing parameters.
Notes: (Read and Write property)

101.19 class IMImageQ16MBS

101.19.1 class IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an Image Magick Image in memory.
Notes: Can exist with or without pixel data.

For more details please check the ImageMagick documentation.
Blog Entries

- ImageMagick 7 for Xojo
- MBS Xojo / Real Studio Plugins, version 15.1pr4

101.19.2 Methods

101.19.3 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes: This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks.
Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

101.19.4 AddNoise(NoiseType as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds random noise to the image.
Notes: Constants

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

For more details please check the ImageMagick documentation.
Sets the last exception property.

101.19.5 AffineTransformImage(matrix as IMImageAffineMatrixQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms an image as dictated by the affine matrix.

101.19.6 AppendImageToList(img as IMImageQ16MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

101.19.7 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

101.19.8 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.

Notes: Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.19.9 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

101.19.10 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.19.11 Average as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Average() method takes a set of images and averages them together.
Notes: Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.12 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes: The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

For more details please check the ImageMagick documentation.

```
const UndefinedChannel = 0
const RedChannel = &h0001
const GrayChannel = &h0001
const CyanChannel = &h0001
const GreenChannel = &h0002
const MagentaChannel = &h0002
const BlueChannel = &h0004
const YellowChannel = &h0004
const AlphaChannel = &h0008
const OpacityChannel = &h0008
const BlackChannel = &h0020
const IndexChannel = &h0020
const AllChannels = &h7fffffff
```

101.19.13 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.19.14 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

101.19.15 Blur(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

101.19.16 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.19.17 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

101.19.18 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

101.19.19 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

101.19.20 Charcoal(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.
Notes: radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

```
const UndefinedChannel = 0
const RedChannel = &h0001
const GrayChannel = &h0001
const CyanChannel = &h0001
const GreenChannel = &h0002
const MagentaChannel = &h0002
const BlueChannel = &h0004
const YellowChannel = &h0004
const AlphaChannel = &h0008
const OpacityChannel = &h0008
const BlackChannel = &h0020
const IndexChannel = &h0020
const AllChannels = &h7fffffff
```

101.19.21 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.22 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

pathname:	name of clipping path resource. If name is preceded by #, use clipping path numbered by name.
inside:	if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

Returns true on success and false on any error.

101.19.23 Clone as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

101.19.24 CloneImageAttributes(image as IMImageAttributeQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

101.19.25 CloneImageProfiles(SourceImage as IMImageQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

101.19.26 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.19.27 ClutImage(clutImage as IMImageQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either

for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

101.19.28 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

101.19.29 CoalesceImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CoalesceImages composites a set of images while respecting any page offsets and disposal meth-

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

ods.
Notes: GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

101.19.30 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes: The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

101.19.31 Combine(channel as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines one or more images into a single image.
Notes: The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

101.19.32 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes: Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

101.19.33 Composite(ComposeOperator as Integer, Image as IMImageQ16MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second image composited onto the first at the specified offsets.
Notes: compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

101.19.34 ConsolidateCMYKImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Consolidates a sequence of CMYK images.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.35 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes: Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

101.19.36 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.19.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15438

101.19.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.19.36 CopyPicture as picture 15438

101.19.38 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.19.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15439

101.19.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.19.38 CopyPictureMask as picture 15439

101.19.40 CopyPixel(x as Integer, y as Integer) as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a pixel.
Notes: Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

101.19.41 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

101.19.42 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.43 CropImageToTiles(CropGeometry as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

101.19.44 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Displaces an image's colormap by a given number of positions.
Notes: If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.

displace: displace the colormap this amount.

101.19.45 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts cipher pixels to plain pixels.
Notes: Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

101.19.46 DeconstructImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum bounding region of all differences from the first image.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.47 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

101.19.48 Despeckle() as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.49 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases the memory used for this image and sets handle to 0.
Notes: For more details please check the ImageMagick documentation.

The destructor will call this for you if release=true.

101.19.50 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deallocates memory associated with the image attribute list.

101.19.51 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image list and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.19.52 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases memory associated with an image profile map.

101.19.53 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes: If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the

destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

- 101.19.53 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ16MBS 15442

101.19.55 Edge(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds edges in an image.
Notes: Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.56 Emboss(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a grayscale image with a three-dimensional effect.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.57 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts pixels to cipher-pixels.
Notes: passkey: encipher pixels with this passphrase.
Returns true on success.

101.19.58 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

101.19.59 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

```
const UndefinedChannel  = 0
const RedChannel        = &h0001
const GrayChannel       = &h0001
const CyanChannel       = &h0001
const GreenChannel      = &h0002
const MagentaChannel    = &h0002
const BlueChannel       = &h0004
const YellowChannel     = &h0004
const AlphaChannel      = &h0008
const OpacityChannel    = &h0008
const BlackChannel      = &h0020
const IndexChannel      = &h0020
const AllChannels       = &h7fffffff
```

101.19.60 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

101.19.61 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes: Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

101.19.62 FlattenImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flatten composites all images from the current image pointer to the end of the image list and returns a single flattened image.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.63 Flip as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.64 Flop as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.65 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

101.19.66 FxImage(expression as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

101.19.67 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.19.68 GetImageAttribute(key as string) as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

101.19.69 GetImageClippingPathAttribute as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

101.19.70 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

101.19.71 GetNextImageAttribute as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

101.19.72 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

101.19.73 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

101.19.74 ImagesToBlob(info as IMImageInfoQ16MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

101.19.75 ImageToBlob(info as IMImageInfoQ16MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Example:

```
Var im as ImageMagickQ16MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ16MBS
Var imageinfo as IMImageInfoQ16MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ16MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
```

```
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

101.19.76 Implode(factor as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes: factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

101.19.77 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

101.19.78 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

101.19.79 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

101.19.80 Magnify as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to twice its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.81 MedianFilter(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a digital filter that improves the quality of a noisy image.
Notes: Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.82 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes: The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

101.19.83 Minify as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to half its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.84 MosaicImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes: It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

101.19.85 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simulates motion blur.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.86 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

101.19.87 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.19.88 NewImage(info as IMImageInfoQ16MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image.
Example:

```
Var im as ImageMagickQ16MBS // global
Var p as picture
Var imageinfo as IMImageInfoQ16MBS
Var image as IMImageQ16MBS
Var b as new IMMagickPixelPacketQ16MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1
```

```
//this should read any image IM understands
image = new IMImageQ16MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

101.19.89 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

101.19.90 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

101.19.91 OilPaint(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.
Notes: radius parameter: radius of the circular neighborhood.

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Returns nil on any error.
Sets the last exception property.

101.19.92 OptimizeImageLayers as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes: From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

101.19.93 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes: Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

101.19.94 OptimizePlusImageLayers as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

101.19.95 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes: If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

101.19.96 RadialBlur(angle as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: RadialBlur applies a radial blur to the image.
Notes: angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.97 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes: Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

101.19.98 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes: The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.19.99 ReduceNoise(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smooths the contours of an image while still preserving edge information.
Notes: The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

101.19.100 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that is exactly the same as the next image in the given image list.
Notes: Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

101.19.101 RemoveFirstImageFromList as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the first image from the image list and returns the image.
Notes: Returns nil on any error.
For more details please check the ImageMagick documentation.

101.19.102 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a profile from the image-map by its name.

101.19.103 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that as a zero delay time.
Notes: Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

101.19.104 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

101.19.105 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

101.19.106 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions.

Notes: Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.
Sets the last exception property.

101.19.107 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

101.19.108 Roll(x as Integer, y as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll offsets an image as defined by x and y.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Notes: Returns nil on any error.
Sets the last exception property.

101.19.109 Rotate(degrees as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation of an image.
Notes: Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.19.110 Sample(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions with pixel sampling.
Notes: Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

101.19.111 Scale(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Example:

```
Var image as IMImageQ16MBS // your image
image=Image.Scale(100,80)
```

Notes: This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.112 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

101.19.113 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

101.19.114 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a named profile to the image.
Notes: If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

101.19.115 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
Var image as IMImageQ16MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

101.19.116 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
Var i as IMImageQ16MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

101.19.117 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ16MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a pixel value.
Example:

```
Var image as IMImageQ16MBS // your image
Var co as IMColorQ16MBS

co=new IMColorQ16MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes: The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

101.19.118 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shines a distant light on an image to create a three-dimensional effect.
Notes: You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees

off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.119 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.120 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shave shaves pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.
Sets the last exception property.

101.19.121 Shear(Xshear as Double, Yshear as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.122 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes: factor: An double value that defines the extent of the solarization.
Returns nil on any error.
Sets the last exception property.

101.19.123 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splice splices a solid color into the image as defined by the geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.124 Spread(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes: radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.19.125 Stegano(watermarkImage as IMImageQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SteganoImage hides a digital watermark within the image.
Notes: Returns nil on any error.
Sets the last exception property.

101.19.126 Stereo(otherImage as IMImageQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes: The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

101.19.127 Swirl(degrees as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes: degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

101.19.128 Thumbnail(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Notes: Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

101.19.129 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes: This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.19.130 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.19.131 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

101.19.132 TransposeImage as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

101.19.133 TransverseImage as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

101.19.134 Trim as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trims pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

101.19.135 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = &h0001
const GrayChannel = &h0001
const CyanChannel = &h0001
const GreenChannel = &h0002
const MagentaChannel = &h0002
const BlueChannel = &h0004
const YellowChannel = &h0004
const AlphaChannel = &h0008
const OpacityChannel = &h0008
const BlackChannel = &h0020
const IndexChannel = &h0020
const AllChannels = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.19.136 Wave(amplitude as Double, wavelength as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes: Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

101.19.137 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.19.138 WriteImage(info as IMImageInfoQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes: You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

101.19.139 Properties

101.19.140 BackgroundColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.19.141 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.19.142 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)

101.19.143 BorderColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.19.144 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The desired number of colors.
Notes: Used by Quantize().
(Read and Write property)

101.19.145 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

101.19.146 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

```
const UndefinedCompression      = 0
const NoCompression             = 1
const BZipCompression           = 2
const FaxCompression            = 3
const Group4Compression         = 4
const JPEGCompression           = 5
const LosslessJPEGCompression   = 6
const LZWCompression            = 7
const RLECompression            = 8
const ZipCompression            = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.147 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.19.148 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile names from within an image montage.
Notes: Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

101.19.149 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.19.150 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.151 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter to use when resizing image.
Notes: Constants:

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

101.19.152 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

101.19.153 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma level of the image.
Notes: The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

101.19.154 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

101.19.155 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.19.156 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.157 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.158 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

101.19.159 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.19.160 LastException as IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.161 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

101.19.162 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.19.163 MatteColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.19.164 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

101.19.165 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

101.19.166 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.167 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Example:

```
Var im as ImageMagickQ16MBS // global
```

```
Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ16MBS ready initialized

Var image as IMImageQ16MBS
Var imageinfo as IMImageInfoQ16MBS
Var s,blob as string
Var p as Picture
Var i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo
```

```
Return p
Exception
Return nil
End Function
```

Notes: Default value is 75.
(Read and Write property)

101.19.168 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.19.169 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent to use.
Notes: constants:

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

(Read and Write property)

101.19.170 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

(Read and Write property)

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

101.19.171 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.172 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.173 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.19.174 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image storage class.
Notes: If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

101.19.175 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

101.19.176 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.19.177 Constants

Constants

Constant	Value	Description
kBackgroundDispose	2	One of the Image layer Dispose Types.
kCoalesceLayer	1	One of the Image layer method constants.
kCompareAnyLayer	2	One of the Image layer method constants.
kCompareClearLayer	3	One of the Image layer method constants.
kCompareOverlayLayer	4	One of the Image layer method constants.
kCompositeLayer	12	One of the Image layer method constants.
kDisposeLayer	5	One of the Image layer method constants.
kFlattenLayer	14	One of the Image layer method constants.
kMergeLayer	13	One of the Image layer method constants.
kMosaicLayer	15	One of the Image layer method constants.
kNoneDispose	1	One of the Image layer Dispose Types.
kOptimizeImageLayer	7	One of the Image layer method constants.
kOptimizeLayer	6	One of the Image layer method constants.
kOptimizePlusLayer	8	One of the Image layer method constants.
kOptimizeTransLayer	9	One of the Image layer method constants.
kPreviousDispose	3	One of the Image layer Dispose Types.
kRemoveDupsLayer	10	One of the Image layer method constants.
kRemoveZeroLayer	11	One of the Image layer method constants.
kUndefinedDispose	0	One of the Image layer Dispose Types.
kUndefinedLayer	0	One of the Image layer method constants.
kUnrecognizedDispose	0	One of the Image layer Dispose Types.

Distortion Effects

Constant	Value	Description
kAffineDistortion	1	
kAffineDistortion	1	
kAffineProjectionDistortion	2	
kAffineProjectionDistortion	2	
kArcDistortion	9	
kArcDistortion	9	
kBarrelDistortion	14	
kBarrelDistortion	14	
kBarrelInverseDistortion	15	
kBarrelInverseDistortion	15	
kBilinearDistortion	6	
kBilinearDistortion	6	
kBilinearForwardDistortion	6	
kBilinearForwardDistortion	6	
kBilinearReverseDistortion	7	
kBilinearReverseDistortion	7	
kCylinder2PlaneDistortion	12	
kCylinder2PlaneDistortion	12	
kDePolarDistortion	11	
kDePolarDistortion	11	
kPerspectiveDistortion	4	
kPerspectiveDistortion	4	
kPerspectiveProjectionDistortion	5	
kPerspectiveProjectionDistortion	5	
kPlane2CylinderDistortion	13	
kPlane2CylinderDistortion	13	
kPolarDistortion	10	
kPolarDistortion	10	
kPolynomialDistortion	8	
kPolynomialDistortion	8	
kResizeDistortion	17	
kResizeDistortion	17	
kScaleRotateTranslateDistortion	3	
kScaleRotateTranslateDistortion	3	
kSentinelDistortion	18	
kSentinelDistortion	18	
kShepardsDistortion	16	
kShepardsDistortion	16	
kUndefinedDistortion	0	
kUndefinedDistortion	0	

Interpolate Modes

Constant	Value	Description
kBarycentricColorInterpolate	1	
kBarycentricColorInterpolate	1	
kBilinearColorInterpolate	7	
kBilinearColorInterpolate	7	
kInverseColorInterpolate	19	
kInverseColorInterpolate	19	
kPolynomialColorInterpolate	8	
kPolynomialColorInterpolate	8	
kShepardsColorInterpolate	16	
kShepardsColorInterpolate	16	
kUndefinedColorInterpolate	0	
kUndefinedColorInterpolate	0	
kVoronoiColorInterpolate	18	
kVoronoiColorInterpolate	18	

101.20 class IMImageQ32MBS

101.20.1 class IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an Image Magick Image in memory.
Notes: Can exist with or without pixel data.

For more details please check the ImageMagick documentation.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr4

101.20.2 Methods

101.20.3 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes: This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks.
Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

101.20.4 AddNoise(NoiseType as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds random noise to the image.
Notes: Constants

For more details please check the ImageMagick documentation.
Sets the last exception property.

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

101.20.5 AffineTransformImage(matrix as IMImageAffineMatrixQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms an image as dictated by the affine matrix.

101.20.6 AppendImageToList(img as IMImageQ32MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

101.20.7 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

101.20.8 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.9 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

101.20.10 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.11 Average as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Average() method takes a set of images and averages them together.
Notes: Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.12 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes: The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

For more details please check the ImageMagick documentation.

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.13 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.20.14 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

101.20.15 Blur(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

101.20.16 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.20.17 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

101.20.18 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

101.20.19 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

101.20.20 Charcoal(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.
Notes: radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.21 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.22 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

pathname:	name of clipping path resource. If name is preceded by #, use clipping path numbered by name.
inside:	if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

Returns true on success and false on any error.

101.20.23 Clone as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

101.20.24 CloneImageAttributes(image as IMImageAttributeQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

101.20.25 CloneImageProfiles(SourceImage as IMImageQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

101.20.26 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.20.27 ClutImage(clutImage as IMImageQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either

for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

101.20.28 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

101.20.29 CoalesceImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CoalesceImages composites a set of images while respecting any page offsets and disposal meth-

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

ods.
Notes: GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

101.20.30 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes: The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

101.20.31 Combine(channel as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines one or more images into a single image.
Notes: The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

101.20.32 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes: Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

101.20.33 Composite(ComposeOperator as Integer, Image as IMImageQ32MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second image composited onto the first at the specified offsets.
Notes: compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

101.20.34 ConsolidateCMYKImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Consolidates a sequence of CMYK images.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.35 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes: Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

101.20.36 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.20.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15501

101.20.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.20.36 CopyPicture as picture 15501

101.20.38 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.20.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15502

101.20.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.20.38 CopyPictureMask as picture 15502

101.20.40 CopyPixel(x as Integer, y as Integer) as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a pixel.
Notes: Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

101.20.41 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

101.20.42 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.43 CropImageToTiles(CropGeometry as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

101.20.44 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Displaces an image's colormap by a given number of positions.
Notes: If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.

displace: displace the colormap this amount.

101.20.45 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts cipher pixels to plain pixels.
Notes: Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

101.20.46 DeconstructImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum bounding region of all differences from the first image.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.47 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

101.20.48 Despeckle() as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.49 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases the memory used for this image and sets handle to 0.
Notes: For more details please check the ImageMagick documentation.

The destructor will call this for you if release=true.

101.20.50 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deallocates memory associated with the image attribute list.

101.20.51 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image list and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.20.52 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases memory associated with an image profile map.

101.20.53 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes: If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the

destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

See also:

- 101.20.53 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ32MBS 15505

101.20.55 Edge(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds edges in an image.
Notes: Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.56 Emboss(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a grayscale image with a three-dimensional effect.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.57 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts pixels to cipher-pixels.
Notes: passkey: encipher pixels with this passphrase.
Returns true on success.

101.20.58 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

101.20.59 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.60 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

101.20.61 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes: Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

101.20.62 FlattenImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flatten composites all images from the current image pointer to the end of the image list and returns a single flattened image.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.63 Flip as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.64 Flop as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.65 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

101.20.66 FxImage(expression as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

101.20.67 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.20.68 GetImageAttribute(key as string) as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

101.20.69 GetImageClippingPathAttribute as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

101.20.70 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

101.20.71 GetNextImageAttribute as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

101.20.72 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

101.20.73 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

101.20.74 ImagesToBlob(info as IMImageInfoQ32MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

101.20.75 ImageToBlob(info as IMImageInfoQ32MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Example:

```
Var im as ImageMagickQ32MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ32MBS
Var imageinfo as IMImageInfoQ32MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ32MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
```

```
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

101.20.76 Implode(factor as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes: factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

101.20.77 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

101.20.78 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

101.20.79 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

101.20.80 Magnify as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to twice its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.81 MedianFilter(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a digital filter that improves the quality of a noisy image.
Notes: Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.82 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes: The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

101.20.83 Minify as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to half its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.84 MosaicImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes: It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

101.20.85 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simulates motion blur.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.86 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

101.20.87 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.20.88 NewImage(info as IMImageInfoQ32MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image.
Example:

```
Var im as ImageMagickQ32MBS // global
Var p as picture
Var imageinfo as IMImageInfoQ32MBS
Var image as IMImageQ32MBS
Var b as new IMMagickPixelPacketQ32MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1
```

```
//this should read any image IM understands
image = new IMImageQ32MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

101.20.89 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

101.20.90 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

101.20.91 OilPaint(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.
Notes: radius parameter: radius of the circular neighborhood.

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Returns nil on any error.
Sets the last exception property.

101.20.92 OptimizeImageLayers as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes: From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

101.20.93 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes: Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

101.20.94 OptimizePlusImageLayers as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

101.20.95 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes: If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

101.20.96 RadialBlur(angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: RadialBlur applies a radial blur to the image.
Notes: angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.97 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes: Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

101.20.98 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes: The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.20.99 ReduceNoise(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smooths the contours of an image while still preserving edge information.
Notes: The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

101.20.100 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that is exactly the same as the next image in the given image list.
Notes: Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

101.20.101 RemoveFirstImageFromList as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the first image from the image list and returns the image.
Notes: Returns nil on any error.
For more details please check the ImageMagick documentation.

101.20.102 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a profile from the image-map by its name.

101.20.103 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that as a zero delay time.
Notes: Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

101.20.104 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

101.20.105 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

101.20.106 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions.

Notes: Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.
Sets the last exception property.

101.20.107 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

101.20.108 Roll(x as Integer, y as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll offsets an image as defined by x and y.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Notes: Returns nil on any error.
Sets the last exception property.

101.20.109 Rotate(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation of an image.
Notes: Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.20.110 Sample(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions with pixel sampling.
Notes: Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

101.20.111 Scale(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Example:

```
Var image as IMImageQ32MBS // your image
image=Image.Scale(100,80)
```

Notes: This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.112 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

101.20.113 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

101.20.114 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a named profile to the image.
Notes: If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

101.20.115 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
Var image as IMImageQ32MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

101.20.116 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
Var i as IMImageQ32MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

101.20.117 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ32MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a pixel value.
Example:

```
Var image as IMImageQ32MBS // your image
Var co as IMColorQ32MBS

co=new IMColorQ32MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes: The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

101.20.118 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shines a distant light on an image to create a three-dimensional effect.
Notes: You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees

off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.119 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.120 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shave shaves pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.
Sets the last exception property.

101.20.121 Shear(Xshear as Double, Yshear as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.122 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes: factor: An double value that defines the extent of the solarization.
Returns nil on any error.
Sets the last exception property.

101.20.123 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splice splices a solid color into the image as defined by the geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.124 Spread(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes: radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.20.125 Stegano(watermarkImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SteganoImage hides a digital watermark within the image.
Notes: Returns nil on any error.
Sets the last exception property.

101.20.126 Stereo(otherImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes: The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

101.20.127 Swirl(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes: degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

101.20.128 Thumbnail(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Notes: Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

101.20.129 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes: This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.20.130 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.20.131 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

101.20.132 TransposeImage as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

101.20.133 TransverseImage as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

101.20.134 Trim as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trims pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

101.20.135 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.20.136 Wave(amplitude as Double, wavelength as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes: Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

101.20.137 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.20.138 WriteImage(info as IMImageInfoQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes: You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

101.20.139 Properties

101.20.140 BackgroundColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.20.141 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.20.142 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)

101.20.143 BorderColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.20.144 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The desired number of colors.
Notes: Used by Quantize().
(Read and Write property)

101.20.145 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

101.20.146 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

```
const UndefinedCompression      = 0
const NoCompression             = 1
const BZipCompression           = 2
const FaxCompression            = 3
const Group4Compression         = 4
const JPEGCompression           = 5
const LosslessJPEGCompression   = 6
const LZWCompression            = 7
const RLECompression            = 8
const ZipCompression            = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.147 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.20.148 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile names from within an image montage.
Notes: Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

101.20.149 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.20.150 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.151 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter to use when resizing image.
Notes: Constants:

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

101.20.152 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

const PointFilter	=1
const BoxFilter	=2
const TriangleFilter	=3
const HermiteFilter	=4
const HanningFilter	=5
const HammingFilter	=6
const BlackmanFilter	=7
const GaussianFilter	=8
const QuadraticFilter	=9
const CubicFilter	=10
const CatromFilter	=11
const MitchellFilter	=12
const LanczosFilter	=13
const BesselFilter	=14
const SincFilter	=15

101.20.153 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma level of the image.
Notes: The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

101.20.154 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

101.20.155 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.20.156 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.157 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.158 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

101.20.159 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.20.160 LastException as IMExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.161 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

101.20.162 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.20.163 MatteColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.20.164 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

101.20.165 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

101.20.166 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.167 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Example:

```
Var im as ImageMagickQ32MBS // global
```

```
Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ32MBS ready initialized

Var image as IMImageQ32MBS
Var imageinfo as IMImageInfoQ32MBS
Var s,blob as string
Var p as Picture
Var i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo
```

```
Return p
Exception
Return nil
End Function
```

Notes: Default value is 75.
(Read and Write property)

101.20.168 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.20.169 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent to use.
Notes: constants:

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

(Read and Write property)

101.20.170 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

(Read and Write property)

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

101.20.171 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.172 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.173 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.20.174 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image storage class.
Notes: If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

101.20.175 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

101.20.176 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.20.177 Constants

Constants

Constant	Value	Description
kBackgroundDispose	2	One of the Image layer Dispose Types.
kCoalesceLayer	1	One of the Image layer method constants.
kCompareAnyLayer	2	One of the Image layer method constants.
kCompareClearLayer	3	One of the Image layer method constants.
kCompareOverlayLayer	4	One of the Image layer method constants.
kCompositeLayer	12	One of the Image layer method constants.
kDisposeLayer	5	One of the Image layer method constants.
kFlattenLayer	14	One of the Image layer method constants.
kMergeLayer	13	One of the Image layer method constants.
kMosaicLayer	15	One of the Image layer method constants.
kNoneDispose	1	One of the Image layer Dispose Types.
kOptimizeImageLayer	7	One of the Image layer method constants.
kOptimizeLayer	6	One of the Image layer method constants.
kOptimizePlusLayer	8	One of the Image layer method constants.
kOptimizeTransLayer	9	One of the Image layer method constants.
kPreviousDispose	3	One of the Image layer Dispose Types.
kRemoveDupsLayer	10	One of the Image layer method constants.
kRemoveZeroLayer	11	One of the Image layer method constants.
kUndefinedDispose	0	One of the Image layer Dispose Types.
kUndefinedLayer	0	One of the Image layer method constants.
kUnrecognizedDispose	0	One of the Image layer Dispose Types.

Distortion Effects

Constant	Value	Description
kAffineDistortion	1	
kAffineDistortion	1	
kAffineProjectionDistortion	2	
kAffineProjectionDistortion	2	
kArcDistortion	9	
kArcDistortion	9	
kBarrelDistortion	14	
kBarrelDistortion	14	
kBarrelInverseDistortion	15	
kBarrelInverseDistortion	15	
kBilinearDistortion	6	
kBilinearDistortion	6	
kBilinearForwardDistortion	6	
kBilinearForwardDistortion	6	
kBilinearReverseDistortion	7	
kBilinearReverseDistortion	7	
kCylinder2PlaneDistortion	12	
kCylinder2PlaneDistortion	12	
kDePolarDistortion	11	
kDePolarDistortion	11	
kPerspectiveDistortion	4	
kPerspectiveDistortion	4	
kPerspectiveProjectionDistortion	5	
kPerspectiveProjectionDistortion	5	
kPlane2CylinderDistortion	13	
kPlane2CylinderDistortion	13	
kPolarDistortion	10	
kPolarDistortion	10	
kPolynomialDistortion	8	
kPolynomialDistortion	8	
kResizeDistortion	17	
kResizeDistortion	17	
kScaleRotateTranslateDistortion	3	
kScaleRotateTranslateDistortion	3	
kSentinelDistortion	18	
kSentinelDistortion	18	
kShepardsDistortion	16	
kShepardsDistortion	16	
kUndefinedDistortion	0	
kUndefinedDistortion	0	

Interpolate Modes

Constant	Value	Description
kBarycentricColorInterpolate	1	
kBarycentricColorInterpolate	1	
kBilinearColorInterpolate	7	
kBilinearColorInterpolate	7	
kInverseColorInterpolate	19	
kInverseColorInterpolate	19	
kPolynomialColorInterpolate	8	
kPolynomialColorInterpolate	8	
kShepardsColorInterpolate	16	
kShepardsColorInterpolate	16	
kUndefinedColorInterpolate	0	
kUndefinedColorInterpolate	0	
kVoronoiColorInterpolate	18	
kVoronoiColorInterpolate	18	

101.21 class IMImageQ8MBS

101.21.1 class IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for an Image Magick Image in memory.
Notes: Can exist with or without pixel data.

For more details please check the ImageMagick documentation.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr4

101.21.2 Methods

101.21.3 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes: This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks.
Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

101.21.4 AddNoise(NoiseType as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds random noise to the image.
Notes: Constants

For more details please check the ImageMagick documentation.
Sets the last exception property.

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

101.21.5 AffineTransformImage(matrix as IMImageAffineMatrixQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms an image as dictated by the affine matrix.

101.21.6 AppendImageToList(img as IMImageQ8MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

101.21.7 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

101.21.8 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.21.9 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

101.21.10 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.21.11 Average as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Average() method takes a set of images and averages them together.
Notes: Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.12 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes: The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

For more details please check the ImageMagick documentation.

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.21.13 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.21.14 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

101.21.15 Blur(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

101.21.16 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.21.17 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

101.21.18 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

101.21.19 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes: Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

101.21.20 Charcoal(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.
Notes: radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

```
const UndefinedChannel = 0
const RedChannel = &h0001
const GrayChannel = &h0001
const CyanChannel = &h0001
const GreenChannel = &h0002
const MagentaChannel = &h0002
const BlueChannel = &h0004
const YellowChannel = &h0004
const AlphaChannel = &h0008
const OpacityChannel = &h0008
const BlackChannel = &h0020
const IndexChannel = &h0020
const AllChannels = &h7fffffff
```

101.21.21 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.22 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

pathname:	name of clipping path resource. If name is preceded by #, use clipping path numbered by name.
inside:	if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

Returns true on success and false on any error.

101.21.23 Clone as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

101.21.24 CloneImageAttributes(image as IMImageAttributeQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

101.21.25 CloneImageProfiles(SourceImage as IMImageQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

101.21.26 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.21.27 ClutImage(clutImage as IMImageQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either

for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

101.21.28 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

101.21.29 CoalesceImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: CoalesceImages composites a set of images while respecting any page offsets and disposal meth-

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

ods.
Notes: GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

101.21.30 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes: The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

101.21.31 Combine(channel as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines one or more images into a single image.
Notes: The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

101.21.32 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes: Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

101.21.33 Composite(ComposeOperator as Integer, Image as IMImageQ8MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second image composited onto the first at the specified offsets.
Notes: compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

101.21.34 ConsolidateCMYKImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Consolidates a sequence of CMYK images.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.35 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes: Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

101.21.36 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.21.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15564

101.21.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.21.36 CopyPicture as picture 15564

101.21.38 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 101.21.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15565

101.21.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
Var image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes: Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 101.21.38 CopyPictureMask as picture 15565

101.21.40 CopyPixel(x as Integer, y as Integer) as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a pixel.
Notes: Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

101.21.41 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

101.21.42 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.43 CropImageToTiles(CropGeometry as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

101.21.44 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Displaces an image's colormap by a given number of positions.
Notes: If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.

displace: displace the colormap this amount.

101.21.45 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts cipher pixels to plain pixels.
Notes: Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

101.21.46 DeconstructImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum bounding region of all differences from the first image.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.47 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

101.21.48 Despeckle() as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.49 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases the memory used for this image and sets handle to 0.
Notes: For more details please check the ImageMagick documentation.

The destructor will call this for you if release=true.

101.21.50 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deallocates memory associated with the image attribute list.

101.21.51 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys the image list and sets the handle to 0.
Notes: For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

101.21.52 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases memory associated with an image profile map.

101.21.53 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes: If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the

destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

101.21.54 Edge(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds edges in an image.
Notes: Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.55 Emboss(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a grayscale image with a three-dimensional effect.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.56 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts pixels to cipher-pixels.
Notes: passkey: encipher pixels with this passphrase.
Returns true on success.

101.21.57 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

101.21.58 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.21.59 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

101.21.60 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes: Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

101.21.61 FlattenImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flatten composites all images from the current image pointer to the end of the image list and returns a single flattened image.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.62 Flip as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.63 Flop as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.64 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

101.21.65 FxImage(expression as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

101.21.66 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma)

. For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.21.67 GetImageAttribute(key as string) as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

101.21.68 GetImageClippingPathAttribute as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

101.21.69 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

101.21.70 GetNextImageAttribute as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

101.21.71 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

101.21.72 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

101.21.73 ImagesToBlob(info as IMImageInfoQ8MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.

For more details please check the ImageMagick documentation.

101.21.74 ImageToBlob(info as IMImageInfoQ8MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImagesToBlob implements direct to memory image formats.
Example:

```
Var im as ImageMagickQ8MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
Var image as new IMImageQ8MBS
Var imageinfo as IMImageInfoQ8MBS
Var s,data as string
Var impp as new IMMagickPixelPacketQ8MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
```

```
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes: It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

101.21.75 Implode(factor as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes: factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

101.21.76 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

101.21.77 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

101.21.78 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

101.21.79 Magnify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to twice its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.80 MedianFilter(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a digital filter that improves the quality of a noisy image.
Notes: Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.81 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes: The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

101.21.82 Minify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A convenience method that scales an image proportionally to half its size.
Notes: Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.83 MosaicImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes: It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

101.21.84 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simulates motion blur.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.85 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

101.21.86 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = &h0001
const GrayChannel = &h0001
const CyanChannel = &h0001
const GreenChannel = &h0002
const MagentaChannel = &h0002
const BlueChannel = &h0004
const YellowChannel = &h0004
const AlphaChannel = &h0008
const OpacityChannel = &h0008
const BlackChannel = &h0020
const IndexChannel = &h0020
const AllChannels = &h7fffffff
```

101.21.87 NewImage(info as IMImageInfoQ8MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image.
Example:

```
Var im as ImageMagickQ8MBS // global
Var p as picture
Var imageinfo as IMImageInfoQ8MBS
Var image as IMImageQ8MBS
Var b as new IMMagickPixelPacketQ8MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1

//this should read any image IM understands
image = new IMImageQ8MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

101.21.88 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

101.21.89 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

101.21.90 OilPaint(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.
Notes: radius parameter: radius of the circular neighborhood.
Returns nil on any error.
Sets the last exception property.

101.21.91 OptimizeImageLayers as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes: From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

101.21.92 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes: Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

101.21.93 OptimizePlusImageLayers as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

101.21.94 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes: If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

101.21.95 RadialBlur(angle as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: RadialBlur applies a radial blur to the image.
Notes: angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.96 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes: Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

101.21.97 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes: The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an

ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

For more details please check the ImageMagick documentation.

101.21.98 ReduceNoise(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smooths the contours of an image while still preserving edge information.
Notes: The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

101.21.99 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that is exactly the same as the next image in the given image list.
Notes: Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still

produce the same result, though with duplicte frames merged into a single frame.

101.21.100 RemoveFirstImageFromList as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the first image from the image list and returns the image.
Notes: Returns nil on any error.
For more details please check the ImageMagick documentation.

101.21.101 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a profile from the image-map by its name.

101.21.102 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that as a zero delay time.
Notes: Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

101.21.103 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

101.21.104 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

101.21.105 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions.
Notes: Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.

Sets the last exception property.

101.21.106 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

101.21.107 Roll(x as Integer, y as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Roll offsets an image as defined by x and y.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.108 Rotate(degrees as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation of an image.
Notes: Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

101.21.109 Sample(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions with pixel sampling.
Notes: Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

101.21.110 Scale(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Example:

```
Var image as IMImageQ8MBS // your image
image=Image.Scale(100,80)
```

Notes: This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.111 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

101.21.112 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

101.21.113 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a named profile to the image.
Notes: If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

101.21.114 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
Var image as IMImageQ8MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

101.21.115 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
Var i as IMImageQ8MBS // your image
Var p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes: Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

101.21.116 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ8MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a pixel value.
Example:

```
Var image as IMImageQ8MBS // your image
Var co as IMColorQ8MBS

co=new IMColorQ8MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes: The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

101.21.117 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shines a distant light on an image to create a three-dimensional effect.
Notes: You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.118 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = &h0001
const GrayChannel        = &h0001
const CyanChannel        = &h0001
const GreenChannel       = &h0002
const MagentaChannel     = &h0002
const BlueChannel        = &h0004
const YellowChannel      = &h0004
const AlphaChannel       = &h0008
const OpacityChannel     = &h0008
const BlackChannel       = &h0020
const IndexChannel       = &h0020
const AllChannels        = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.119 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shave shaves pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.
Sets the last exception property.

101.21.120 Shear(Xshear as Double, Yshear as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.121 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes: factor: An double value that defines the extent of the solarization.
Returns nil on any error.
Sets the last exception property.

101.21.122 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splice splices a solid color into the image as defined by the geometry.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.123 Spread(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes: radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

101.21.124 Stegano(watermarkImage as IMImageQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SteganoImage hides a digital watermark within the image.
Notes: Returns nil on any error.
Sets the last exception property.

101.21.125 Stereo(otherImage as IMImageQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes: The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

101.21.126 Swirl(degrees as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes: degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

101.21.127 Thumbnail(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Notes: Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

101.21.128 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes: This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.21.129 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

101.21.130 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes: The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

101.21.131 TransposeImage as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

101.21.132 TransverseImage as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

101.21.133 Trim as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trims pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

101.21.134 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel       = &h0001
const GrayChannel      = &h0001
const CyanChannel      = &h0001
const GreenChannel     = &h0002
const MagentaChannel   = &h0002
const BlueChannel      = &h0004
const YellowChannel    = &h0004
const AlphaChannel     = &h0008
const OpacityChannel   = &h0008
const BlackChannel     = &h0020
const IndexChannel     = &h0020
const AllChannels      = &h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

101.21.135 Wave(amplitude as Double, wavelength as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes: Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

101.21.136 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes: No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

101.21.137 WriteImage(info as IMImageInfoQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes: You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

101.21.138 Properties

101.21.139 BackgroundColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image background color.
Notes: (Read and Write property)

101.21.140 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.21.141 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).

Notes: (Read and Write property)

101.21.142 BorderColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image border color.
Notes: (Read and Write property)

101.21.143 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The desired number of colors.
Notes: Used by Quantize().
(Read and Write property)

101.21.144 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

101.21.145 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image compresion type.
Notes: useful constants:

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

const UndefinedCompression	= 0
const NoCompression	= 1
const BZipCompression	= 2
const FaxCompression	= 3
const Group4Compression	= 4
const JPEGCompression	= 5
const LosslessJPEGCompression	= 6
const LZWCompression	= 7
const RLECompression	= 8
const ZipCompression	= 9

101.21.146 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

101.21.147 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile names from within an image montage.
Notes: Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

101.21.148 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The endian setting to use.
Notes: constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

101.21.149 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path/name.
Notes: The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.150 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filter to use when resizing image.
Notes: Constants:

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

101.21.151 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

match colors that are close to the target color in RGB space.
(Read and Write property)

101.21.152 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma level of the image.
Notes: The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

101.21.153 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

101.21.154 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.21.155 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.156 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.157 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of interlacing scheme (default NoInterlace).
Notes: This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

101.21.158 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

101.21.159 LastException as IMExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception thrown by the Image Magick library.
Notes: You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.160 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

101.21.161 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.21.162 MatteColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image matte (transparent) color.
Notes: (Read and Write property)

101.21.163 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

101.21.164 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

101.21.165 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image orientation.
Notes: constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.166 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG/MIFF/PNG compression level.
Example:

```
Var im as ImageMagickQ8MBS // global
```

```
Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ8MBS ready initialized

Var image as IMImageQ8MBS
Var imageinfo as IMImageInfoQ8MBS
Var s,blob as string
Var p as Picture
Var i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo
```

```
Return p
Exception
Return nil
End Function
```

Notes: Default value is 75.
(Read and Write property)

101.21.167 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

101.21.168 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent to use.
Notes: constants:

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

(Read and Write property)

101.21.169 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units of image resolution.
Notes: constants:

(Read and Write property)

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

101.21.170 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.171 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution of the image.
Notes: The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.172 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An undocumented property.
Notes: (Read and Write property)

101.21.173 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image storage class.
Notes: If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

101.21.174 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

101.21.175 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image in pixels.
Notes: For more details please check the ImageMagick documentation.
(Read and Write property)

101.21.176 Constants

Constants

Constant	Value	Description
kBackgroundDispose	2	One of the Image layer Dispose Types.
kCoalesceLayer	1	One of the Image layer method constants.
kCompareAnyLayer	2	One of the Image layer method constants.
kCompareClearLayer	3	One of the Image layer method constants.
kCompareOverlayLayer	4	One of the Image layer method constants.
kCompositeLayer	12	One of the Image layer method constants.
kDisposeLayer	5	One of the Image layer method constants.
kFlattenLayer	14	One of the Image layer method constants.
kMergeLayer	13	One of the Image layer method constants.
kMosaicLayer	15	One of the Image layer method constants.
kNoneDispose	1	One of the Image layer Dispose Types.
kOptimizeImageLayer	7	One of the Image layer method constants.
kOptimizeLayer	6	One of the Image layer method constants.
kOptimizePlusLayer	8	One of the Image layer method constants.
kOptimizeTransLayer	9	One of the Image layer method constants.
kPreviousDispose	3	One of the Image layer Dispose Types.
kRemoveDupsLayer	10	One of the Image layer method constants.
kRemoveZeroLayer	11	One of the Image layer method constants.
kUndefinedDispose	0	One of the Image layer Dispose Types.
kUndefinedLayer	0	One of the Image layer method constants.
kUnrecognizedDispose	0	One of the Image layer Dispose Types.

Distortion Effects

Constant	Value	Description
kAffineDistortion	1	
kAffineProjectionDistortion	2	
kArcDistortion	9	
kBarrelDistortion	14	
kBarrelInverseDistortion	15	
kBilinearDistortion	6	
kBilinearForwardDistortion	6	
kBilinearReverseDistortion	7	
kCylinder2PlaneDistortion	12	
kDePolarDistortion	11	
kPerspectiveDistortion	4	
kPerspectiveProjectionDistortion	5	
kPlane2CylinderDistortion	13	
kPolarDistortion	10	
kPolynomialDistortion	8	
kResizeDistortion	17	
kScaleRotateTranslateDistortion	3	
kSentinelDistortion	18	
kShepardsDistortion	16	
kUndefinedDistortion	0	

Interpolate Modes

Constant	Value	Description
kBarycentricColorInterpolate	1	
kBilinearColorInterpolate	7	
kInverseColorInterpolate	19	
kPolynomialColorInterpolate	8	
kShepardsColorInterpolate	16	
kUndefinedColorInterpolate	0	
kVoronoiColorInterpolate	18	

101.22 class IMMagickInfoListQ16MBS

101.22.1 class IMMagickInfoListQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

101.22.2 Methods

101.22.3 Item(index as Integer) as IMMagickInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The items inside this list.
Notes: Index goes from 0 to count-1.
Returns nil on invalid index.

101.22.4 Properties

101.22.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items.
Notes: Index goes from 0 to count-1.
(Read only property)

101.22.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

101.23 class IMMagickInfoListQ32MBS

101.23.1 class IMMagickInfoListQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

101.23.2 Methods

101.23.3 Item(index as Integer) as IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The items inside this list.
Notes: Index goes from 0 to count-1.
Returns nil on invalid index.

101.23.4 Properties

101.23.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items.
Notes: Index goes from 0 to count-1.
(Read only property)

101.23.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

101.24 class IMMagickInfoListQ8MBS

101.24.1 class IMMagickInfoListQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

101.24.2 Methods

101.24.3 Item(index as Integer) as IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The items inside this list.
Notes: Index goes from 0 to count-1.
Returns nil on invalid index.

101.24.4 Properties

101.24.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items.
Notes: Index goes from 0 to count-1.
(Read only property)

101.24.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

101.25 class IMMagickInfoQ16MBS

101.25.1 class IMMagickInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

101.25.2 Methods

101.25.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.25.4 Properties

101.25.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if this file format supports multi-frame images.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.25.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes: As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.

(Read only property)

101.25.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.25.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether endian support is available.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.25.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.25.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of module (e.g. "GIF") which registered this format.
Notes: Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.25.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Magick string (e.g. "GIF") which identifies this format.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.25.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional notes for this format.
Notes: e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

101.25.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes: Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

101.25.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if the magick supports a seekable stream.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.25.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.25.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if threading is supported.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.25.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version string.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.26 class IMMagickInfoQ32MBS

101.26.1 class IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

101.26.2 Methods

101.26.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.26.4 Properties

101.26.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if this file format supports multi-frame images.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.26.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes: As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.

(Read only property)

101.26.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.26.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether endian support is available.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.26.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.26.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of module (e.g. "GIF") which registered this format.
Notes: Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.26.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Magick string (e.g. "GIF") which identifies this format.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.26.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional notes for this format.
Notes: e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

101.26.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes: Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

101.26.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if the magick supports a seekable stream.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.26.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.26.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if threading is supported.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.26.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version string.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.27 class IMMagickInfoQ8MBS

101.27.1 class IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

101.27.2 Methods

101.27.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

101.27.4 Properties

101.27.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if this file format supports multi-frame images.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.27.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes: As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.

(Read only property)

101.27.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.27.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether endian support is available.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.27.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.27.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of module (e.g. "GIF") which registered this format.
Notes: Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.27.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Magick string (e.g. "GIF") which identifies this format.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.27.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional notes for this format.
Notes: e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

101.27.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes: Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

101.27.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if the magick supports a seekable stream.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.27.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unknown.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.27.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if threading is supported.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

101.27.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version string.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

101.28 class IMMagickPixelPacketQ16MBS

101.28.1 class IMMagickPixelPacketQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to describe a picture background.
Notes: Needed for IMImageQ16MBS.NewImage function.

101.28.2 Methods

101.28.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.28.4 Properties

101.28.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color value.
Notes: (Read and Write property)

101.28.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5

sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

101.28.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: (Read and Write property)

101.28.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

101.28.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color value.
Notes: (Read and Write property)

101.28.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.28.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index color value.
Notes: Only for indexed color spaces.
(Read and Write property)

101.28.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.28.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color value.
Notes: (Read and Write property)

101.28.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color value.
Notes: (Read and Write property)

101.29 class IMMagickPixelPacketQ32MBS

101.29.1 class IMMagickPixelPacketQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to describe a picture background.
Notes: Needed for IMImageQ32MBS.NewImage function.

101.29.2 Methods

101.29.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.29.4 Properties

101.29.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color value.
Notes: (Read and Write property)

101.29.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

101.29.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: (Read and Write property)

101.29.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

101.29.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color value.
Notes: (Read and Write property)

101.29.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.29.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index color value.
Notes: Only for indexed color spaces.
(Read and Write property)

101.29.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.29.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color value.
Notes: (Read and Write property)

101.29.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color value.
Notes: (Read and Write property)

101.30 class IMMagickPixelPacketQ8MBS

101.30.1 class IMMagickPixelPacketQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to describe a picture background.
Notes: Needed for IMImageQ8MBS.NewImage function.

101.30.2 Methods

101.30.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

101.30.4 Properties

101.30.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color value.
Notes: (Read and Write property)

101.30.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

101.30.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image depth (8 or 16).
Notes: (Read and Write property)

101.30.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colors within this distance are considered equal.
Notes: A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

101.30.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color value.
Notes: (Read and Write property)

101.30.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle used internally by the plugin.
Notes: A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

101.30.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index color value.
Notes: Only for indexed color spaces.
(Read and Write property)

101.30.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether an alpha channel is used/present.
Notes: Set to true to enable masks.
(Read and Write property)

101.30.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The opacity part of the color value.
Notes: (Read and Write property)

101.30.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color value.
Notes: (Read and Write property)

101.31 class IMMissingFunctionExceptionQ16MBS

101.31.1 class IMMissingFunctionExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for an exception in Image Magick.
Notes: This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

101.32 class IMMissingFunctionExceptionQ32MBS

101.32.1 class IMMissingFunctionExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for an exception in Image Magick.
Notes: This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

101.33 class IMMissingFunctionExceptionQ8MBS

101.33.1 class IMMissingFunctionExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for an exception in Image Magick.
Notes: This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

Chapter 102

ImageKit

102.1 control DesktopIKImageBrowserViewControlMBS

102.1.1 control DesktopIKImageBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The control to wrap a IKImageBrowserViewMBS.
Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Xojo / Real Studio Plugins, version 14.2pr3

102.1.2 Properties

102.1.3 Scrollview as NSScrollViewMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The scrollview we embed the image browser view inside.
Notes: (Read only property)

102.1.4 View as IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The image browser view.
Notes: (Read only property)

102.1.5 Events

102.1.6 backgroundWasRightClickedWithEvent(e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes: event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.1.7 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

102.1.8 cellWasDoubleClickedAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes: index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.1.9 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes: index: The index of the cell.

event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time. Available in OS X v10.5 and later.

102.1.10 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

102.1.11 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

102.1.12 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

102.1.13 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

102.1.14 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

102.1.15 draggingEnded(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes: sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

102.1.16 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

102.1.17 draggingExited(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

102.1.18 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

102.1.19 FocusLost

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.1.20 FocusReceived

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

102.1.21 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

102.1.22 groupAtIndex(index as Integer) as Dictionary

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the group at the specified index.
Notes: index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.
Available in OS X v10.5 and later.

102.1.23 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes: index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

102.1.24 MenuBarSelected

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

102.1.25 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.

- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

102.1.26 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

102.1.27 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

102.1.28 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Signals that the specified items should be moved to the specified destination.
Notes: indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

102.1.29 numberOfGroups as Integer

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the number of groups in an image browser view.
Notes: Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

102.1.30 numberOfItems as Integer

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the number of records managed by the data source object.
Notes: Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display.
Available in OS X v10.5 and later.

102.1.31 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

102.1.32 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

102.1.33 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this event.

102.1.34 removeItemsAtIndexes(indexes as NSIndexSetMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Signals that a remove operation should be applied to the specified items.
Notes: indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

102.1.35 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

102.1.36 selectionDidChange

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the selection changes.
Notes: This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.1.37 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging images should be changed.
Notes: sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

102.1.38 wantsPeriodicDraggingUpdates as boolean

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes: Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even if nothing changes.

102.1.39 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

102.1.40 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Signals that a drag should begin.
Notes: itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.

Returns the number of items written to the pasteboard.

This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

102.2 control DesktopIKImageViewControlMBS

102.2.1 control DesktopIKImageViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The Xojo control to host a IKImageView.

102.2.2 Properties

102.2.3 View as IKImageViewMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The image view used in this control.
Notes: (Read only property)

102.2.4 Events

102.2.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

102.2.6 Closing

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

102.2.7 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

102.2.8 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

102.2.9 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

102.2.10 FocusLost

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.2.11 FocusReceived

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

102.2.12 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

102.2.13 MenuBarSelected

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

102.2.14 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

102.2.15 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

102.2.16 MouseUp(x As Integer, y As Integer)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

102.2.17 Opening

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

102.2.18 ScaleFactorChanged(NewFactor as double)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

102.2.19 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

102.3 class IKImageBrowserCellMBS

102.3.1 class IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The class for an image browser cell.
Notes: The IKImageBrowserCellMBS class is used to display a cell conforming to the IKImageBrowserItemMBS protocol in an IKImageBrowserViewMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

102.3.2 Methods

102.3.3 cellState as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current cell state of the receiver.
Notes: The IKImageBrowserView creates thumbnails asynchronously. This method returns the current state.
Available in OS X v10.6 and later.

102.3.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

102.3.5 frame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's frame rectangle, which defines its position in its IKImageBrowserView.
Notes: Available in OS X v10.6 and later.

102.3.6 IKImageBrowserCellBackgroundLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed in the background.
Available in OS X v10.6 and later.

102.3.7 IKImageBrowserCellForegroundLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed in the foreground.
Available in OS X v10.6 and later.

102.3.8 IKImageBrowserCellPlaceHolderLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed as a placeholder when an image is not yet available.
Available in OS X v10.6 and later.

102.3.9 IKImageBrowserCellSelectionLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed as the selection.
Available in OS X v10.6 and later.

102.3.10 imageAlignment as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the position of the cell's image in the frame.

102.3.11 imageBrowserView as IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the view the receiver uses to display the cell.
Notes: Available in OS X v10.6 and later.

102.3.12 imageContainerFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's image container frame rectangle, which defines the position of the container of the thumbnail.
Notes: The coordinates of image container frame, in the IKImageBrowserView coordinate space.
The image frame is computed automatically from the image container frame by taking in account the image alignment and the image aspect ratio.
Subclasses can override this method to customize the position of the thumbnail container.
Available in OS X v10.6 and later.

102.3.13 imageFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's image frame rectangle, which defines the position of the thumbnail in its IKImageBrowserView.
Notes: Returns the coordinates of the frame, in the IKImageBrowserView coordinate space.
It is the developer's responsibility to compute the imageFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the thumbnail.
Available in OS X v10.6 and later.

102.3.14 indexOfRepresentedItem as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the index of the receiver's represented object in the datasource.
Notes: Available in OS X v10.6 and later.

102.3.15 isSelected as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns whether the cell is selected.
Notes: Returns true if the cell is selected, otherwise false.
Subclasses should not override this method.
Available in OS X v10.6 and later.

102.3.16 layerForType(type as string) as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a layer for the specified position.
Notes: type: A string representing the layer location. See Cell Layer Positions for possible values.
Return the CALayer to display in the specified position.
Subclasses can override this method to add a Core Animation layer to the cell
Available in OS X v10.6 and later.

102.3.17 opacity as Double

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the opacity of the receiver.
Notes: Possible values are between 0.0 (transparent) and 1.0 (opaque).
Subclasses can override this method to customize the opacity of the cell.
Available in OS X v10.6 and later.

102.3.18 representedItem as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's represented object.
Notes: Subclasses should not override this method.
Available in OS X v10.6 and later.

102.3.19 selectionFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's selection frame rectangle, which defines the position of the selection rectangle in its IKImageBrowserView.
Notes: Subclasses can override this method to customize the position of the selection frame.
Available in OS X v10.6 and later.

102.3.20 subtitleFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's subtitle frame rectangle.
Notes: The coordinates of the subtitle frame, in the IKImageBrowserView coordinate space.

It is the developer's responsibility to compute the subtitleFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the subtitle.

Available in OS X v10.6 and later.

102.3.21 titleFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the receiver's title frame rectangle.
Notes: The coordinates of the title frame, in the IKImageBrowserView coordinate space.

It is the developer's responsibility to compute the titleFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the title.

Available in OS X v10.6 and later.

102.3.22 Properties

102.3.23 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

102.3.24 Constants

Cell States

Constant	Value	Description
IKImageStateInvalid	1	The thumbnail is invalid. For example, an unsupported image is provided. Available in OS X v10.6 and later.
IKImageStateNoImage	0	Returned until a thumbnail has been created from the represented object. Available in OS X v10.6 and later.
IKImageStateReady	2	The receiver's represented object has been set and the cell is ready to display. Available in OS X v10.6 and later.

102.4 class IKImageBrowserItemMBS

102.4.1 class IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The class for items in image browser.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

102.4.2 Methods

102.4.3 Constructor(imageUID as string, imageRepresentationType as string, imageRepresentation as Variant, imageVersion as Integer = 1, imageTitle as string = """, imageSubtitle as string = """, isSelectable as boolean = true)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given values.

102.4.4 ItemWithCGImage(imageUID as string, Image as Variant, imageVersion as Integer = 1, imageTitle as string = """, imageSubtitle as string = """, isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given image.

102.4.5 ItemWithData(imageUID as string, Data as Memoryblock, imageVersion as Integer = 1, imageTitle as string = """, imageSubtitle as string = """, isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given data.

102.4.6 ItemWithFile(imageUID as string, file as folderitem, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given file.

102.4.7 ItemWithNSImage(imageUID as string, Image as NSImageMBS, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given image.

102.4.8 ItemWithPath(imageUID as string, path as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given path.

102.4.9 ItemWithURL(imageUID as string, URL as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new item with given URL.

102.4.10 Properties

102.4.11 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

102.4.12 imageRepresentation as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image to display.
Notes: (Read and Write computed property)

102.4.13 imageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the representation type of the image to display.
Notes: (Read and Write computed property)

102.4.14 imageSubtitle as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the display subtitle of the image.
Notes: (Read and Write computed property)

102.4.15 imageTitle as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the display title of the image.
Notes: (Read and Write computed property)

102.4.16 imageUID as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a unique string that identifies the data source item.
Notes: The image browser view uses this identifier to associate the data source item and its cache.
(Read and Write computed property)

102.4.17 imageVersion as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the version of the item.
Notes: The receiver can return a new version to let the image browser know that it should not use its cache for the item.
(Read and Write computed property)

102.4.18 isSelectable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns whether this item is selectable.
Notes: True if the item is selectable; false otherwise.
(Read and Write computed property)

102.5 control IKImageBrowserViewControlMBS

102.5.1 control IKImageBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The control to wrap a IKImageBrowserViewMBS.
Blog Entries

102.5.2 Properties

102.5.3 Scrollview as NSScrollViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The scrollview we embed the image browser view inside.
Notes: (Read only property)

102.5.4 View as IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: The image browser view.
Notes: (Read only property)

102.5.5 Events

102.5.6 backgroundWasRightClickedWithEvent(e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes: event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.

Available in OS X v10.5 and later.

102.5.7 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

102.5.8 cellWasDoubleClickedAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes: index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.5.9 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes: index: The index of the cell.
event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.5.10 Close

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

102.5.11 Closing

Plugin Version: 14.2, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

102.5.12 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

102.5.13 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

102.5.14 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or

false to give others a chance.

102.5.15 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

102.5.16 draggingEnded(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes: sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

102.5.17 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

102.5.18 draggingExited(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

102.5.19 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

102.5.20 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

102.5.21 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.5.22 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

102.5.23 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

102.5.24 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

102.5.25 groupAtIndex(index as Integer) as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the group at the specified index.
Notes: index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.
Available in OS X v10.5 and later.

102.5.26 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes: index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

102.5.27 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.5.28 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

102.5.29 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

102.5.30 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

102.5.31 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

102.5.32 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Signals that the specified items should be moved to the specified destination.
Notes: indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

102.5.33 numberOfGroups as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the number of groups in an image browser view.
Notes: Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

102.5.34 numberOfItems as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the number of records managed by the data source object.
Notes: Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how

many cells it should create and display.
Available in OS X v10.5 and later.

102.5.35 Open

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

102.5.36 Opening

Plugin Version: 14.2, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

102.5.37 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

102.5.38 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this event.

102.5.39 removeItemsAtIndexes(indexes as NSIndexSetMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Signals that a remove operation should be applied to the specified items.
Notes: indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

102.5.40 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

102.5.41 selectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the selection changes.
Notes: This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.

Available in OS X v10.5 and later.

102.5.42 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging images should be changed.
Notes: sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

102.5.43 wantsPeriodicDraggingUpdates as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes: Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even if nothing changes.

102.5.44 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

102.5.45 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Signals that a drag should begin.
Notes: itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.

Returns the number of items written to the pasteboard.

This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

102.6 class IKImageBrowserViewMBS

102.6.1 class IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The IKImageBrowserView class is a view for displaying and browsing a large amount of images and movies efficiently.
Notes: Available in OS X v10.5 and later.
Subclass of the NSViewMBS class.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr14
- MBS Real Studio Plugins, version 13.1pr9

102.6.2 Methods

102.6.3 cellForItemAtIndex(index as Integer) as IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the browser cell for the item at the specified index.
Notes: Subclasses must not override this method.
Available in OS X v10.6 and later.

102.6.4 collapseGroupAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Collapses a group at the specified index.
Notes: index: The index of the group you want to collapse.

102.6.5 columnIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the column indexes in the specified rectangle.
Notes: rect: The rectangle in the view's coordinate system.
Returns an index set containing the cell indexes.
Available in OS X v10.6 and later.

102.6.6 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with size 100/100 and position 0/0
Example:

```
Var t as new IKImageBrowserViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 102.6.7 Constructor(Handle as Integer) 15678
- 102.6.8 Constructor(left as Double, top as Double, width as Double, height as Double) 15678

102.6.7 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given IKImageBrowserView handle.
Example:

```
Var t as new IKImageBrowserViewMBS(0, 0, 100, 100)
Var v as new IKImageBrowserViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKImageBrowserView and the plugin retains this handle.
See also:

- 102.6.6 Constructor 15678
- 102.6.8 Constructor(left as Double, top as Double, width as Double, height as Double) 15678

102.6.8 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with the given size and position.
Example:

```
Var x as new IKImageBrowserViewMBS(0, 0, 100, 20)
```

Notes: On success the handle property is not zero.
See also:

- 102.6.6 Constructor 15678
- 102.6.7 Constructor(Handle as Integer) 15678

102.6.9 Destructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The destructor.

102.6.10 dropOperation as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current drop operation.
Notes: Returns IKImageBrowserDropOn if the drop occurs on an item, otherwise IKImageBrowserDropBefore.
The returned value is valid when a drop occurred and until next drop.
For example, given a browser with N cells , a cell of N-1 and operation of IKImageBrowserDropOn would specify a drop on the last cell. To specify a drop after the last cell, one would use an index of N and IKImageBrowserDropBefore for the operation.
Available in OS X v10.6 and later.

102.6.11 expandGroupAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Expands a group at the specified index.
Notes: index: The index of the group you want to expand.
Available in OS X v10.5 and later.

102.6.12 getValue(name as String) as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Queries a value for a given key.

102.6.13 IKImageBrowserBackgroundColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Notes: A key for the background color of the image browser view. The associated value is a NSColorMBS object.
Available in OS X v10.5 and later.

102.6.14 IKImageBrowserCellsHighlightedTitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Notes: A key for the highlighted title attribute for an item in the image browser view. The associated value is a Dictionary.
Available in OS X v10.5 and later.

102.6.15 IKImageBrowserCellsOutlineColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Notes: A key for the outline color for an item in the image browser view. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

102.6.16 IKImageBrowserCellsSubtitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Notes: A key for a subtitle attribute for an item in the image browser view. The associated value is a dictionary.
Available in OS X v10.5 and later.

102.6.17 IKImageBrowserCellsTitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Example:

```
Var Imagebrowser as IKImageBrowserViewMBS // your control
Var d as new Dictionary
d.Value(NSAttributedStringMBS.NSForegroundColorAttributeName) = NSColorMBS.redColor
```

Imagebrowser.setValue Imagebrowser.IKImageBrowserCellsTitleAttributesKey, d

Notes: A key for title attribute of an item in the image browser view. The associated value is a dDictionary.
Available in OS X v10.5 and later.

102.6.18 IKImageBrowserCGImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A CGImageRef object.

102.6.19 IKImageBrowserCGImageSourceRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A CGImageSourceRef object.

102.6.20 IKImageBrowserGroupBackgroundColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the background color of a group. The associated value is an NSColor object. This color is used only for the bezel style.
Available in OS X v10.5 and later.

102.6.21 IKImageBrowserGroupFooterLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

102.6.22 IKImageBrowserGroupHeaderLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

102.6.23 IKImageBrowserGroupRangeKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the range of a group. The associated value is a NSRangeMBS. This is required if the view uses grouping
Available in OS X v10.5 and later.

102.6.24 IKImageBrowserGroupStyleKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the style of a group. The associated value is one of the constants defined in "Group Style Attributes".
Available in OS X v10.5 and later.

102.6.25 IKImageBrowserGroupTitleKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the group attribute keys.
Notes: A key for the title of a group. The associated value is a string. This string is used for the disclosure style only.
Available in OS X v10.5 and later.

102.6.26 IKImageBrowserIconRefPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A path to an icon.

102.6.27 IKImageBrowserIconRefRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: An icon.

102.6.28 IKImageBrowserNSBitmapImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: An NSBitmapImageRep object.

102.6.29 IKImageBrowserNSDataRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: Value for this key is a memoryblock.

102.6.30 IKImageBrowserNSImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: An NSImage object.

102.6.31 IKImageBrowserNSURLRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: An NSURL object.

102.6.32 IKImageBrowserPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A path representation (string).

102.6.33 IKImageBrowserPDFPageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A PDFPage instance or a CGPDFPageRef.

102.6.34 IKImageBrowserQCCompositionPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A path (String) or URL (NSURL) to a Quartz Composer composition.

102.6.35 IKImageBrowserQCCompositionRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A QCComposition object.

102.6.36 IKImageBrowserQTMoviePathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A path (string) or URL to a QuickTime movie.

102.6.37 IKImageBrowserQTMovieRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A QTMovie object.

102.6.38 IKImageBrowserQuickLookPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the image representation types.
Notes: A path (string) or URL (NSURL) to load data using QuickLook.

102.6.39 IKImageBrowserSelectionColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for image browser view options.
Notes: A key for the color that indicates a selection. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

102.6.40 indexAtLocationOfDroppedItem as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the index of the cell where the drop operation occurred.
Notes: Returns the index of the cell where the drop operation occurred.
The returned index is valid until the next drop occurs.
Available in OS X v10.5 and later.

102.6.41 indexOfItemAtPoint(point as NSPointMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the index of the item at the specified location.
Notes: Returns the index of the item or NSNotFound (-1) if no item at this location.

102.6.42 isGroupExpandedAtIndex(index as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns whether the group at the provided index is expanded.
Notes: Return true if the group is expanded; false otherwise.

102.6.43 itemFrameAtIndex(index as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the frame rectangle for the item located at the specified index.
Notes: index: The index of the item whose frame rectangle you want to obtain.
Return the frame rectangle of the item.

102.6.44 newCellForRepresentedItem(item as IKImageBrowserItemMBS) as IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the cell to use for the specified item.
Notes: Subclasses can override this method to customize the appearance of the cell that will represent anItem.
Available in OS X v10.6 and later.

102.6.45 numberOfColumns as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current number of columns.
Notes: Available in OS X v10.6 and later.

102.6.46 numberOfRows as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current number of rows.
Notes: Available in OS X v10.6 and later.

102.6.47 rectOfColumn(columnIndex as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the rectangle containing the specified column.
Notes: Return a rectangle containing the column. Specified in the view's coordinate system.
Available in OS X v10.6 and later.

102.6.48 rectOfRow(rowIndex as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the rectangle containing the specified row.
Notes: Returns a rectangle containing the column. Specified in the view's coordinate system.
Available in OS X v10.6 and later.

102.6.49 reloadData

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Marks the receiver as needing its data reloaded.

102.6.50 rowIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the row indexes in the specified rectangle.
Notes: rect: A rectangle in the view's coordinate system.
Returns an index set containing the item indexes.
Available in OS X v10.6 and later.

102.6.51 scrollIndexToVisible(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Scrolls the receiver to the item at the specified index.

102.6.52 selectionIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the indexes of the selected cells.

102.6.53 setDropIndex(index as Integer, operation as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Allows the class to retarget the drop action.
Notes: index: The requested drop index.
operation: The requested drop operation. The possible values are described in IKImageBrowserDropOperation.

For example, To specify a drop on the second item, one would specify index as 1, and operation as IKImageBrowserDropOn. To specify a drop after the last item, one would specify index as the number of items and operation as IKImageBrowserDropBefore.

Passing a value of –1 for index, and IKImageBrowserDropOn as the operation causes the entire browser view to be highlighted rather than a specific item. This is useful if the data displayed by the receiver does not allow the user to drop items at a specific item location.

102.6.54 setSelectionIndexes(indexes as NSIndexSetMBS, extendSelection as boolean = false)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Selects cells at the specified indexes.
Notes: indexes: The indexes of the cells you want to select.
extendSelection: A boolean value that specifies whether to extend the current selection. Pass true to extends the selection; false replaces the current selection.
Available in OS X v10.5 and later.

102.6.55 setValue(name as String, value as Variant)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Sets a value for a given key.

102.6.56 visibleItemIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the indexes of the view's currently visible items.
Notes: Available in OS X v10.6 and later.

102.6.57 Properties

102.6.58 allowsDroppingOnItems as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the user can drop on items.
Notes: True if the user is able to drop on items, otherwise false.
Available in OS X v10.6 and later.
(Read and Write computed property)

102.6.59 allowsEmptySelection as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether an empty selection is allowed.
Notes: (Read and Write computed property)

102.6.60 allowsMultipleSelection as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the user can select more than one cell at a time.
Notes: (Read and Write computed property)

102.6.61 allowsReordering as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the user can reorder items.
Notes: (Read and Write computed property)

102.6.62 animates as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver animates reordering and changes of the data source.
Notes: (Read and Write computed property)

102.6.63 backgroundLayer as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The Core Animation layer used as the view's background.
Notes: The background layer can have sublayers. Additionally, the layers can also contain animations. The layer is optional.
Available in OS X v10.6 and later.
(Read and Write computed property)

102.6.64 canControlQuickLookPanel as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the view can automatically take control of the QuickLook panel.
Notes: When the browser view displays the QuickLook panel it sets itself as the QuickLook datasource. If the browser cells returned by the datasource return items that are URLs or paths, then the QuickLook panel will display the image at that location. Otherwise, the browser cell must implement the QLPreviewItem protocol and return the requested URL for the custom cell.
Available in OS X v10.6 and later.
(Read and Write computed property)

102.6.65 cellSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The cell size.
Notes: You must use CellSize or ZoomValue, but not both. Setting the zoom value changes the cell size, and vice versa.
Available in OS X v10.5 and later.
(Read and Write computed property)

102.6.66 cellsStyleMask as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The appearance style of the cells.
Notes: (Read and Write computed property)

102.6.67 constrainsToOriginalSize as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver constrains the cell's image to its original size.
Notes: The default value is false.
(Read and Write computed property)

102.6.68 contentResizingMask as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The content resizing mask, which determines how its content is resized while zooming.
Notes: You specify a mask by combining any of the following options using the bitwise OR operator: NSViewWidthSizable (2), NSViewHeightSizable (16). Other values are ignored.
(Read and Write computed property)

102.6.69 foregroundLayer as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the foreground Core Animation layer
Notes: Returns a CALayer instance.
Available in OS X v10.6 and later.
(Read and Write computed property)

102.6.70 intercellSpacing as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the spacing between cells in the view.
Notes: Returns the vertical and horizontal spacing between cells.
Available in OS X v10.6 and later.
(Read and Write computed property)

102.6.71 zoomValue as Double

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The zoom value.
Notes: The zoom value. This value should be greater or equal to zero and less or equal than one. A zoom value of zero corresponds to the minimum size (40x40 pixels). A zoom value of one means images fits the

browser bounds. Other values are interpolated.
Discussion
You must use ZoomValue or CellSize, but not both. Setting the zoom value changes the cell size, and vice versa.
Available in OS X v10.5 and later.
(Read and Write computed property)

102.6.72 Events

102.6.73 backgroundWasRightClickedWithEvent(e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes: event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.6.74 cellWasDoubleClickedAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes: index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.6.75 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes: index: The index of the cell.
event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.

Available in OS X v10.5 and later.

102.6.76 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

102.6.77 draggingEnded(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes: sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

102.6.78 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

102.6.79 draggingExited(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

102.6.80 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the

time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

102.6.81 groupAtIndex(index as Integer) as Dictionary

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the group at the specified index.
Notes: index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.
Available in OS X v10.5 and later.

102.6.82 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes: index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

102.6.83 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Signals that the specified items should be moved to the specified destination.
Notes: indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

102.6.84 numberOfGroups as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the number of groups in an image browser view.
Notes: Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

102.6.85 numberOfItems as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the number of records managed by the data source object.
Notes: Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display.
Available in OS X v10.5 and later.

102.6.86 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked after the released image has been removed from the screen, signaling the receiver to

import the pasteboard data.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

102.6.87 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this event.

102.6.88 removeItemsAtIndexes(indexes as NSIndexSetMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Signals that a remove operation should be applied to the specified items.
Notes: indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

102.6.89 selectionDidChange

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Performs custom tasks when the selection changes.
Notes: This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

102.6.90 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging images should be changed.
Notes: sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

102.6.91 wantsPeriodicDraggingUpdates as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes: Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even

if nothing changes.

102.6.92 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Signals that a drag should begin.
Notes: itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.

Returns the number of items written to the pasteboard.

This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

102.6.93 Constants

Constants

Constant	Value	Description
IKImageBrowserDropBefore	1	One of the constants to specify the locations for dropping items onto the browser view. Drop the item before the cell. Available in OS X v10.6 and later. Used by the method setDropIndex.
IKImageBrowserDropOn	0	One of the constants to specify the locations for dropping items onto the browser view. Drop the item on the cell. Available in OS X v10.6 and later. Used by the method setDropIndex.

Cell Styles

Constant	Value	Description
IKCellsStyleNone	0	No style.
IKCellsStyleOutlined	2	Cells are outlined.
IKCellsStyleShadowed	1	Cells use shadows.
IKCellsStyleSubtitled	8	Cells display a subtitle.
IKCellsStyleTitled	4	Cells display a title.

Bevel Styles

Constant	Value	Description
IKGroupBezelStyle	0	A bezel style. Available in OS X v10.5 and later.
IKGroupDisclosureStyle	1	A disclosure triangle. Available in OS X v10.5 and later.

102.7 class IKImageEditPanelMBS

102.7.1 class IKImageEditPanelMBS

MBS AVFoundation Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The class for the image edit panel from Mac OS X 10.5.
Notes: Subclass of the NSPanelMBS class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr8
- MonkeyBread Software Releases the MBS Plugins 8.1

102.7.2 Methods

102.7.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new image edit panel.

102.7.4 reloadData

MBS AVFoundation Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Requests the panel to reload the image.
Notes: Do call this if you have a new image to return in the image event.

102.7.5 Properties

102.7.6 LastImage as Picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The last image passed to you or requested from you.
Notes: This property is set with the picture you return with the image event and is set with the image sent to you useing the Changed event.
(Read and Write property)

102.7.7 Events

102.7.8 Changed(pic as picture, CGImageHandle as Integer, metaData as dictionary)

MBS AVFoundation Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The image changed and you should update your GUI.
Notes: pic: The image as a picture.
CGImageHandle: The internal handle to the original CGImage which is used to make the picture.
metaData: additional image data.

102.7.9 hasAdjustMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns whether the adjust mode view tab should be displayed.
Notes: Return true if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

102.7.10 hasDetailsMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns whether the details mode view tab should be displayed.
Notes: True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

102.7.11 hasEffectsMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns whether the effects mode view tab should be displayed.
Notes: True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

102.7.12 Image as picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The panel needs an image to start with.
Notes: Return your image in this event whenever the panel needs it.

102.7.13 imageProperties as Dictionary

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of the image properties associated with the image in the image edit panel.
Notes: Available on Mac OS X 10.5 or newer.

102.7.14 thumbnailWithMaximumSize(Width as Double, Height as Double) as picture

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns a thumbnail image whose size is no larger than the specified size.
Notes: Available in OS X v 10.5 and later.

102.8 control IKImageViewControlMBS

102.8.1 control IKImageViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The Xojo control to host a IKImageView.

102.8.2 Properties

102.8.3 View as IKImageViewMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The image view used in this control.
Notes: (Read only property)

102.8.4 Events

102.8.5 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

102.8.6 Close

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

102.8.7 Closing

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

102.8.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

102.8.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

102.8.10 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

102.8.11 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

102.8.12 FocusLost

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.8.13 FocusReceived

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

102.8.14 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

102.8.15 GotFocus

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

102.8.16 LostFocus

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

102.8.17 MenuBarSelected

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

102.8.18 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

102.8.19 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

102.8.20 MouseUp(x As Integer, y As Integer)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

102.8.21 Open

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

102.8.22 Opening

Plugin Version: 22.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

102.8.23 ScaleFactorChanged(NewFactor as double)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

102.8.24 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

102.9 class IKImageViewMBS

102.9.1 class IKImageViewMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: An advanced image view in ImageKit.
Notes: The IKImageViewMBS class provides an efficient way to display images in a view while at the same time supporting a number of image editing operations such as rotating, zooming, and cropping. It supports drag and drop for the NSFilenamesPboardType flavor so that the user can drag an image to the view. If possible, image rendering uses hardware acceleration to achieve optimal performance. The IKImageViewMBS class is implemented as a subclass of NSView. Similar to NSImageViewMBS, the IKImageViewMBS class is used to display a single image.
Subclass of the NSViewMBS class.

102.9.2 Methods

102.9.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
Var x as new IKImageViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 102.9.4 Constructor(Handle as Integer) 15709
- 102.9.5 Constructor(left as double, top as double, width as double, height as double) 15710

102.9.4 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given NSView handle.
Example:

```
Var t as new IKImageViewMBS(0, 0, 100, 100)
Var v as new IKImageViewMBS(t.handle)
```

```
MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKImageView and the plugin retains this handle.
See also:

- 102.9.3 Constructor 15709
- 102.9.5 Constructor(left as double, top as double, width as double, height as double) 15710

102.9.5 Constructor(left as double, top as double, width as double, height as double)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Creates a new control with the given size and position.
Example:

```
Var left,top,width,height as Integer
// define rectangle
Var x as new IKImageViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 102.9.3 Constructor 15709
- 102.9.4 Constructor(Handle as Integer) 15709

102.9.6 convertImagePointToViewPoint(imagePoint as NSPointMBS) as NSPointMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Converts an image coordinate to an image view coordinate.
Notes: imagePoint: A point specified in coordinates relative to the image.

Returns a point specified in coordinates relative to the image view.

102.9.7 convertImageRectToViewRect(ImageRect as NSRectMBS) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Converts an image rectangle to an image view rectangle.
Notes: ImageRect: An rectangle specified in coordinates relative to the image.

Returns an rectangle specified in coordinates relative to the image view.

102.9.8 convertViewPointToImagePoint(viewPoint as NSPointMBS) as NSPointMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Converts an image view coordinate to an image coordinate.
Notes: viewPoint: A point specified in coordinates relative to the image view.

Returns the point specified in coordinates relative to the image.

102.9.9 convertViewRectToImageRect(viewRect as NSRectMBS) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Converts an image view rectangle to an image rectangle.
Notes: viewRect: An rectangle specified in coordinates relative to the image view.

The rectangle specified in coordinates relative to the image.

102.9.10 crop

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Crops the image using the current selection.

102.9.11 flipImageHorizontal

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Flips an image along the horizontal axis.

102.9.12 flipImageVertical

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Flips an image along the vertical axis.

102.9.13 IKOverlayTypeBackground as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: A layer level.
Notes: A background.

102.9.14 IKOverlayTypeImage as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: A layer level.
Notes: An image.

102.9.15 IKToolModeAnnotate as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The annotation tool.

102.9.16 IKToolModeCrop as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The crop tool.

102.9.17 IKToolModeMove as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The move tool.

102.9.18 IKToolModeNone as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: No tool is set.

102.9.19 IKToolModeRotate as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The rotation tool.

102.9.20 IKToolModeSelect as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The selection tool.

102.9.21 IKToolModeSelectEllipse as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The selection ellipse.

102.9.22 IKToolModeSelectLasso as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: The selection lasso.

102.9.23 IKToolModeSelectRect as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: One of the tool modes.
Notes: Same as IKToolModeSelect.

102.9.24 rotateImageLeft

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Rotates the image left (counter-clockwise).

102.9.25 rotateImageRight

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Rotates the image right (clockwise).

102.9.26 scrollToPoint(point as NSPointMBS)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Scrolls the view to the specified point.
Notes: point: The point to scroll to.

102.9.27 scrollToRect(rect as NSRectMBS)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Scrolls the view so that it includes the provided rectangular area.
Notes: Rect: The rectangular area to include in the view.

102.9.28 SetImage(image as CGImageMBS, metaData as Dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Sets the image to display in an image view.
Notes: image: The image to set.
metaData: A dictionary that contains metadata that describes the image.

102.9.29 SetImageFile(File as FolderItem)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Initializes an image view with the image specified by a folderitem.
Notes: File: The file that specifies the location of the image.

This method is the preferred initializer for RAW images. If you use this method for a TIFF file that contains multiple images, only the first image is displayed.

102.9.30 SetImageURL(URL as String)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Initializes an image view with the image specified by a URL.
Notes: url: The URL that specifies the location of the image.

This method is the preferred initializer for RAW images. If you use this method for a TIFF file that contains multiple images, only the first image is displayed.

102.9.31 setImageZoomFactor(zoomFactor as Double, centerPoint as NSPointMBS)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Sets the zoom factor at the provided origin.
Notes: zoomFactor: The zoom factor to apply to the image.
centerPoint: The point that specifies the origin of the zoom factor.

102.9.32 SetPicture(picture as Picture, metaData as Dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Sets the picture to display in an image view.
Notes: picture: The picture to set.
metaData: A dictionary that contains metadata that describes the image.

102.9.33 setRotationAngle(rotationAngle as Double, centerPoint as NSPointMBS)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Sets the rotation angle at the provided origin.
Notes: rotationAngle: The rotation angle to apply to the image.
centerPoint: The point that specifies the origin of the rotation angle.

102.9.34 zoomImageToActualSize

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Zooms the image so that it is displayed using its true size.

102.9.35 zoomImageToFit

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Zooms the image so that it fits in the image view.

102.9.36 zoomImageToRect(rect as NSRectMBS)

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Zooms the image so that it fits in the specified rectangle.
Notes: rect: The rectangle to fit the image in.

102.9.37 zoomIn

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Zooms the image in.

102.9.38 zoomOut

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Zooms the image out.

102.9.39 Properties

102.9.40 autohidesScrollers as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the automatic-hiding scroll bar state for the image view.
Notes: (Read and Write property)

102.9.41 autoresizes as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the automatic resizing state for the image view.
Notes: (Read and Write property)

102.9.42 backgroundColor as NSColorMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the background color for the image view.
Notes: (Read and Write property)

102.9.43 currentToolMode as String

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the current tool mode for the image view.
Notes: (Read and Write property)

102.9.44 doubleClickOpensImageEditPanel as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the image-opening state of the editing pane in the image view.
Notes: (Read and Write property)

102.9.45 editable as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the editable state for the image view.
Notes: (Read and Write property)

102.9.46 hasHorizontalScroller as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the horizontal scroll bar state for the image view.
Notes: (Read and Write property)

102.9.47 hasVerticalScroller as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the vertical scroll bar state for the image view.
Notes: (Read and Write property)

102.9.48 Image as CGImageMBS

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image associated with the view, after any image corrections.
Notes: (Read only property)

102.9.49 imageCorrection as Variant

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies a Core Image filter for image correction.
Notes: (Read and Write property)

102.9.50 imageHeight as Integer

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Returns the height of the image in the image view.
Notes: The image size changes whenever an image is rotates or cropped.
(Read only property)

102.9.51 imageProperties as Dictionary

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Returns the metadata for the image in the view.
Notes: A dictionary of metadata that specifies the image properties.
(Read only property)

102.9.52 imageWidth as Integer

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Returns the width of the image in the image view.
Notes: The image size changes whenever an image is rotates or cropped.
(Read only property)

102.9.53 Picture as Picture

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image associated with the view, after any image corrections.
Notes: Converted to picture for your convenience.
(Read only property)

102.9.54 rotationAngle as Double

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the rotation angle for the image view.
Notes: (Read and Write property)

102.9.55 supportsDragAndDrop as Boolean

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the drag-and-drop support state for the image view.
Notes: (Read and Write property)

102.9.56 zoomFactor as Double

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the zoom factor for the image view.
Notes: (Read and Write property)

102.9.57 Overlay(layerType as string) as Variant

MBS AVFoundation Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: Get or set the overlay layer.
Notes: The Core Animation layer associated with a layer type.
Value is a CALayerMBS object.
(Read and Write computed property)

102.10 class IKPictureTakerMBS

102.10.1 class IKPictureTakerMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: An IKPictureTaker object is a panel that allows users to choose and crop an image.
Notes: It supports browsing of the file system and includes a recents popup-menu. The IKPictureTaker lets the user to crop a choosen image or to take snapshot from a camera like the built-in iSight.

Requires Mac OS X 10.5.
Subclass of the NSPanelMBS class.

102.10.2 Methods

102.10.3 Available as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether the picture taker is available on that platform or not.
Example:

```
Var n as Integer

Var p as new IKPictureTakerMBS

if not p.Available then
MsgBox "This application requires Mac OS X 10.5 and a Macho Target"
Return
end if
```

Notes: True on Mac OS X 10.5.

102.10.4 beginPictureTaker as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Launch the PictureTaker.
Example:

```
Var p as IKPictureTakerMBS // your picture taker

if not p.beginPictureTaker then
```

```
MsgBox "Can't show picture taker!?"
end if
```

Notes: You will later receive an event for the case the user clicks on OK or Cancel buttons.
Returns true on success and false on failure.

102.10.5 beginPictureTakerSheet(parent as DesktopWindow) as boolean

MBS AVFoundation Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes: parent: The parent window of the picture taker sheet.

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.
See also:

- 102.10.6 beginPictureTakerSheet(parent as NSWindowMBS) as boolean 15722
- 102.10.7 beginPictureTakerSheet(parent as window) as boolean 15722

102.10.6 beginPictureTakerSheet(parent as NSWindowMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes: parent: The parent window of the picture taker sheet.

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.
See also:

- 102.10.5 beginPictureTakerSheet(parent as DesktopWindow) as boolean 15722
- 102.10.7 beginPictureTakerSheet(parent as window) as boolean 15722

102.10.7 beginPictureTakerSheet(parent as window) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes: parent: The parent window of the picture taker sheet.

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.
See also:

- 102.10.5 beginPictureTakerSheet(parent as DesktopWindow) as boolean 15722
- 102.10.6 beginPictureTakerSheet(parent as NSWindowMBS) as boolean 15722

102.10.8 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new picture taker panel.

102.10.9 CropAreaSizeHeight as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The height of the crop area.

102.10.10 CropAreaSizeWidth as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The width of the crop area.

102.10.11 outputImage as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Return the edited image.

102.10.12 OutputImageMaxSizeKeyHeight as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The maximum height of the output image.

102.10.13 OutputImageMaxSizeKeyWidth as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The maximum width of the output image.

102.10.14 popUpRecentsMenuForView(parent as NSViewMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Displays the Open Recent popup menu associated with the picture taker.
Notes: You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.

102.10.15 runModal as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Launches a modal PictureTaker session.
Example:

```
Var p as IKPictureTakerMBS // global property
Var n as Integer

p=new IKPictureTakerMBS

if not p.Available then
MsgBox "This application requires Mac OS X 10.5 and a Macho Target"
Return
end if

p.AllowsFileChoosing=true
p.AllowsEditing=true
p.AllowsVideoCapture=true
p.ShowEffects=FALSE // disable if you run modal!
p.ShowRecentPicture=true
p.UpdateRecentPicture=true
p.InformationalText="Please take a picture"

n=p.runModal
```

```
if n=1 then // ok
Backdrop=p.outputImage.CopyPictureWithMask
else
Title=Str(n)
end if
```

Notes: Returns NSOKButton (1) if the user edits or chooses an image and confirm panel, NSCancelButton (0) if the user canceled or didn't change the image.

You may want to disable effects as they won't work in Xojo in a modal picture taker dialog.

102.10.16 SetCropAreaSize(width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Sets the crop area.

102.10.17 SetOutputImageMaxSize(width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Sets the maximum output image size.

102.10.18 Properties

102.10.19 AllowsEditing as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether editing is allowed or not.
Notes: (Read and Write computed property)

102.10.20 AllowsFileChoosing as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether choosing a file is allowed or not.
Notes: (Read and Write computed property)

102.10.21 AllowsVideoCapture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether video capture is allowed or not.
Notes: (Read and Write computed property)

102.10.22 InformationalText as NSAttributedStringMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The information text as a plain string.
Notes: On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a plain text, it will return the plain text as a NSAttributedStringMBS.
(Read and Write computed property)
See also:

- 102.10.23 InformationalText as string 15726

102.10.23 InformationalText as string

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The information text as a plain string.
Example:

```
Var p as IKPictureTakerMBS // your picture taker
p.InformationalText="Please take a picture"
```

Notes: On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a formatted text, it will return the formatted text as plain text.
(Read and Write computed property)
See also:

- 102.10.22 InformationalText as NSAttributedStringMBS 15726

102.10.24 inputImage as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The input image.
Notes: The input image is never modified by the PictureTaker.
(Read and Write computed property)

102.10.25 mirroring as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: True if video mirroring is enabled, false otherwise.
Notes: Controls whether the receiver enable/disable video mirroring durring snapshots (default is true).
(Read and Write computed property)

102.10.26 RemainOpenAfterValidate as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether the picture taker reamins open.
Notes: Requires Mac OS X 10.6.
(Read and Write computed property)

102.10.27 ShowAddressBookPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether the addressbook picture is shown or not.
Notes: (Read and Write computed property)

102.10.28 ShowEffects as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether effects are shown or not.
Notes: (Read and Write computed property)

102.10.29 ShowEmptyPicture as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The image to use for an empty image.
Notes: (Read and Write computed property)

102.10.30 ShowRecentPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether recent pictures should be shown.
Notes: (Read and Write computed property)

102.10.31 UpdateRecentPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether recent pictures should be updated.
Notes: (Read and Write computed property)

102.10.32 Events

102.10.33 Finished(returnCode as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: beginPictureTaker has finished work.
Notes: ReturnCode is 1 if the user clicked OK and 0 if the user clicked false.

102.10.34 Screenshots

102.10.35 PictureTaker1.jpg

Function: The picture taker with an image choosed.

102.10.36 PictureTaker2.jpg

Function: The picture taker doing effects on a photo taken with the iSight.

102.10.37 QuartzFilterPanel.jpg

Function: The Quartz filter manager panel.

102.11 class IKSlideshowMBS

102.11.1 class IKSlideshowMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The ImageKit class for a slideshow.
Notes: Requires Mac OS X 10.5.
Slideshows can be only with pictures, with PDF pages or with file references.
Those files can be picture files, pdf files or anything you want.

- MBS REALbasic plug-in 9.6

102.11.2 Methods

102.11.3 addFile(file as folderitem, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the items list.

102.11.4 addImage(image as NSImageMBS, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Adds an image to the items list.
Example:

```
Var p as picture
Var n as NSImageMBS
Var s as new IKSlideshowMBS

// get picture to p
n=new NSImageMBS(p)
s.addImage n
```

102.11.5 addPage(page as Variant, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Adds a PDF page to the items list.
Notes: Page must be a PDFPageMBS object.

102.11.6 Available as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether the slide show functions are available.
Example:

```
if IKSlideshowMBS.Available=False then
MsgBox "You need Mac OS X 10.5 for this and a MachO application."
quit
end if
```

Notes: Value is true for Mac OS X 10.5.

102.11.7 canExportToApplication(applicationBundleIdentifier as string) as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: is exporting to a given application possible?
Notes: (application installed?, right version?, ...)

102.11.8 exportSlideshowItems(applicationBundleIdentifier as string)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Export items to the given application.
Example:

```
Var i,c as Integer
Var s as new IKSlideshowMBS

// add items here

if false=IKSlideshowMBS.canExportToApplication(IKSlideshowMBS.iPhotoBundleIdentifier) then
MsgBox "Can't export to iPhoto."
else

if s.itemcount>0 then

s.exportSlideshowItems IKSlideshowMBS.iPhotoBundleIdentifier

else
MsgBox "no slides?"
end if
end if
```

102.11.9 indexOfCurrentSlideshowItem as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The index of the current slide.
Notes: Index is from 0 to count-1.

102.11.10 ItemCount as Integer

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Returns the number of items.

102.11.11 reloadData

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Reloads all slides.

102.11.12 reloadSlideshowItemAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Reloads the slide show with the given index.

102.11.13 removeItem(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Removes an item from the item list.

102.11.14 removeItems

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Removes all items from the item list.

102.11.15 runSlideshow

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Start the slideshow.
Example:

```
Var s as new IKSlideshowMBS
// add items
s.runSlideshow
```

Notes: You may want to set all the properties before.

102.11.16 setFile(index as Integer, file as folderitem, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Sets the file in the items list with the given index.

102.11.17 setImage(index as Integer, image as NSImageMBS, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Sets the image in the items list with the given index.

102.11.18 setPage(index as Integer, page as Variant, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Sets a PDF page in the items list with the given index.
Notes: Page must be a PDFPageMBS object.

102.11.19 stopSlideshow

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Stops the slideshow.

102.11.20 Properties

102.11.21 AudioFile as FolderItem

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Optional audio file to play while running slide show.
Notes: Only used for Mac OS X 10.6.
(Read and Write property)

102.11.22 PDFDisplayBox as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The PDF display box mode to use.
Notes: Default value is -1 which means that we use the framework default mode.
(Read and Write property)

102.11.23 PDFDisplayMode as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The PDF display mode you want.
Notes: Default value is -1 which means that we use the framework default mode.
(Read and Write property)

102.11.24 PDFDisplaysAsBook as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether PDF should display as book.
Notes: Default value is false.
(Read and Write property)

102.11.25 ScreenIndex as Integer

MBS AVFoundation Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The screen to use.
Notes: Default is main screen.
Only used for Mac OS X 10.6.

(Read and Write property)

102.11.26 StartIndex as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The index of the first slide to show.
Notes: Index is from 0 to count-1.
Default value is -1 which means that we use the framework default mode.
(Read and Write property)

102.11.27 StartPaused as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether to start paused.
Notes: Default is false.
(Read and Write property)

102.11.28 WrapAround as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Whether to wrap around when the slideshow runs.
Notes: Default is false.
(Read and Write property)

102.11.29 autoPlayDelay as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: The time to wait before the slideshow will start automatically.
Notes: Value is in seconds.
(Read and Write computed property)

102.11.30 Events

102.11.31 canExportSlideshowItemAtIndex(index as Integer, applicationBundleIdentifier as string) as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Should the export button be enabled for a given item at index?
Notes: This event is optional.

102.11.32 slideshowDidChangeCurrentIndex(newIndex as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Slideshow did change current item index.

102.11.33 slideshowDidStop

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Slideshow did stop
Notes: This event is optional.

102.11.34 slideshowWillStart

MBS AVFoundation Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Slideshow will start.
Notes: This event is optional.

102.11.35 Constants

Constants

Constant	Value	Description
iPhotoBundleIdentifier	"com.apple.iPhoto"	The iPhoto application identifier. May be used on the export functions.
kPDFDisplayBoxArtBox	4	One of the possible values for the PDFDisplayBox property.
kPDFDisplayBoxBleedBox	2	One of the possible values for the PDFDisplayBox property.
kPDFDisplayBoxCropBox	1	One of the possible values for the PDFDisplayBox property.
kPDFDisplayBoxMediaBox	0	One of the possible values for the PDFDisplayBox property.
kPDFDisplayBoxTrimBox	3	One of the possible values for the PDFDisplayBox property.
kPDFDisplaySinglePage	0	One of the PDF display mode constants.
kPDFDisplaySinglePageContinuous	1	One of the PDF display mode constants.
kPDFDisplayTwoUp	2	One of the PDF display mode constants.
kPDFDisplayTwoUpContinuous	3	One of the PDF display mode constants.

Chapter 103

ImageMagick7

103.1 module ImageMagick7MBS

103.1.1 module ImageMagick7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for global functions.
Notes: The MBS Plugin can load 8, 16, 32 or 64 bit ImageMagick libraries with or without HDRI support. We detect what library is loaded and adjust in various functions. Check QuantumDepth, QuantumSize and HDRI properties.

All class names have currently 7 in the class name to give users of the older classes time for the transition. Currently we use ImageMagick 7.0.9. The plugin may work with older/newer versions of 7.x.

We do have functions to use Xojo pictures with CopyPicture and SetPicture. Those move pixels as they are, so it is up to you to do proper color management. As Xojo pictures are just 8bit RGB, you may loose information on conversion. ExportPixels and ImportPixels functions can move pixel data into/from memory blocks.

Best to avoid Xojo pictures and load image here, modify it and save it again.
Blog Entries

- MBS Xojo Plugins, version 19.6pr1

103.1.2 Methods

103.1.3 ClampToQuantum(value as Double) as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clamps given value to the range for quantum.
Notes: Limits range between 0 and QuantumRange and for non-HDRI rounds value.

103.1.4 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the MagickCore environment.
Notes: path: the execution path of the current ImageMagick client.

See MagickCoreGenesis function in ImageMagick documentation.

103.1.5 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the MagickCore library file.
Example:

```
#If TargetMacOS Then

// installed via homebrew
Var f As New FolderItem("/opt/homebrew/Cellar/imagemagick/7.1.1-6/lib/libMagickCore-7.Q16HDRI.10.dylib",
FolderItem.PathModes.Native)

If ImageMagick7MBS.LoadLibraryFile(f) Then

'MsgBox "loaded"

Else

MsgBox "failed to load: "+ImageMagick7MBS.LoadErrorString

End If

#Else
If ImageMagick7MBS.LoadLibrary("CORE_RL_MagickCore_.dll") Then
```

```
'MsgBox "loaded"

Else

MsgBox "failed to load: "+ImageMagick7MBS.LoadErrorString

End If
#EndIf
```

Notes: Returns true on success and false on failure.
LoadErrorString is set with error string if available.

103.1.6 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the MagickCore library file.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("libMagickCore-7.Q16HDRI.7.dylib")

If ImageMagick7MBS.LoadLibraryFile(f) Then

MsgBox "loaded"

Else

MsgBox "failed to load: "+ImageMagick7MBS.LoadErrorString

End If
```

Notes: Returns true on success and false on failure.
LoadErrorString is set with error string if available.

103.1.7 MagickInfoList as IMMagickInfoList7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of MagickInfo objects.
Notes: See GetMagickInfoList function in ImageMagick documentation.

103.1.8 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes: If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

See MagickToMime function in ImageMagick documentation.

103.1.9 NewImageInfo as IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates new image info object.
Notes: See CloneImageInfo function in ImageMagick documentation.

103.1.10 NewImageList as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty image list.
Notes: See NewImageList function in ImageMagick documentation.

103.1.11 PrintMagickVersion

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Identifies the ImageMagick version by printing its attributes to the file. Attributes include the copyright, features, and delegates.
Notes: See ListMagickVersion function in ImageMagick documentation.

103.1.12 ScaleQuantumToChar(value as Double) as UInt8

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a quantum value to 8 bit unsigned integer.
Notes: Depending on which library is loaded a quantum is an UInt8, UInt16, UInt32, Single or Double value.
This function normalizes and rounds values to nearest 8 bit integer value.

103.1.13 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

103.1.14 Properties

103.1.15 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick API copyright as a string.
Notes: See GetMagickCopyright function in ImageMagick documentation.
(Read only property)

103.1.16 Delegates as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick delegate libraries.
Notes: See GetMagickDelegates function in ImageMagick documentation.
(Read only property)

103.1.17 Epsilon as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Small value.
Notes: Two values are considered equal if the difference is smaller than epsilon.
(Read only property)

103.1.18 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick features.
Example:

MsgBox ImageMagick7MBS.Features

Notes: See GetMagickFeatures function in ImageMagick documentation.
e.g. "Cipher DPC Modules OpenCL OpenMP(2.0)".
(Read only property)

103.1.19 HDRI as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether HDRI is used.
Notes: If the plugin detects HDRI mode for the library, we use floats (8 and 16 bit depth) or doubles (32 and 64 bit depth).
(Read only property)

103.1.20 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick home URL.
Notes: See GetMagickHomeURL function in ImageMagick documentation.
(Read only property)

103.1.21 Huge as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Huge value.
Notes: Values bigger than Huge are far over the range of a quantum.
(Read only property)

103.1.22 License as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick API license as a string.
Notes: See GetMagickLicense function in ImageMagick documentation.
(Read only property)

103.1.23 LoadErrorString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error from LoadLibrary call.
Notes: (Read only property)

103.1.24 MagickPrecision as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the maximum number of significant digits to be printed.
Notes: See GetMagickPrecision function in ImageMagick documentation.
(Read and Write property)

103.1.25 MagickSignature as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a signature that uniquely encodes the MagickCore libary version, quantum depth, HDRI status, OS word size, and endianness.
Notes: See GetMagickSignature function in ImageMagick documentation.
(Read only property)

103.1.26 MaxColormapSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum size of a color map.
Notes: Value is 256 for 8 bit or 65536 for higher bit depths.
(Read only property)

103.1.27 MaxMap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum index in a color map.
Notes: Either 255 for 8 bit or 65535 for 16 bit or higher.
(Read only property)

103.1.28 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick package name.
Notes: See GetMagickPackageName function in ImageMagick documentation.
(Read only property)

103.1.29 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quantum depth.
Notes: Can be 8, 16, 32 or 64 bit depending on the loaded image magick library.
(Read only property)

103.1.30 QuantumDepthString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick quantum depth.
Notes: Returns the quantum depth is returned as a number.
See GetMagickQuantumDepth function in ImageMagick documentation.
(Read only property)

103.1.31 QuantumRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum value for the range of quantums.
Notes: Depending on quantum depth ranges from 255 to &hFFFFFFFF.
(Read only property)

103.1.32 QuantumRangeString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick quantum range.
Notes: See GetMagickQuantumRange function in ImageMagick documentation.
e.g. "((Quantum) 65535)"
(Read only property)

103.1.33 QuantumSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of a quantum value in bytes.
Notes: Used to allocate memoryblocks of right size.
e.g. Width * Height * QuantumSize * ChannelCount.
(Read only property)

103.1.34 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick release date.
Notes: See GetMagickReleaseDate function in ImageMagick documentation.
(Read only property)

103.1.35 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick API version as a string.
Example:

```
MsgBox ImageMagick7MBS.Version
// e.g. "ImageMagick 7.0.9-2 Q16 x86 2019-10-30 http://www.imagemagick.org"
```

Notes: See GetMagickVersion function in ImageMagick documentation.
(Read only property)

103.1.36 VersionNumber as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the ImageMagick API version as a number.
Notes: See GetMagickVersion function in ImageMagick documentation.
e.g. &h709 for 7.0.9.
(Read only property)

103.2 class IMChannelStatistics7MBS

103.2.1 class IMChannelStatistics7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for channel statistics.
Notes: Obtain image statistics. Statistics are normalized to the range of 0.0 to 1.0 and are output into this class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

103.2.2 Methods

103.2.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

103.2.4 Properties

103.2.5 Area as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Area.
Notes: (Read only property)

103.2.6 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth.
Notes: (Read only property)

103.2.7 Entropy as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Entropy.
Notes: (Read only property)

103.2.8 Kurtosis as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Kurtosis
Notes: (Read only property)

103.2.9 Maxima as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value observed.
Notes: (Read only property)

103.2.10 Mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average (mean) value observed.
Notes: (Read only property)

103.2.11 Minima as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value observed.
Notes: (Read only property)

103.2.12 Skewness as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Skewness.
Notes: (Read only property)

103.2.13 StandardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Standard deviation, sqrt(variance)
Notes: (Read only property)

103.2.14 Sum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sum.
Notes: (Read only property)

103.2.15 SumCubed as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sum cubed
Notes: (Read only property)

103.2.16 SumFourthPower as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sum fourth power.
Notes: (Read only property)

103.2.17 SumSquared as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sum squared.
Notes: (Read only property)

103.2.18 Variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Variance.
Notes: (Read only property)

103.3 class IMException7MBS

103.3.1 class IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an exception.
Notes: Subclass of the RuntimeException class.

103.3.2 Properties

103.3.3 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description text.
Notes: (Read and Write property)

103.3.4 Reason as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reason text.
Notes: (Read and Write property)

103.3.5 Severity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code for exception.
Notes: (Read and Write property)

103.4 class IMFrameInfo7MBS

103.4.1 class IMFrameInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a frame.

103.4.2 Methods

103.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with zero values.
See also:

- 103.4.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer) 15756

103.4.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with given values.
See also:

- 103.4.3 Constructor 15756

103.4.5 Properties

103.4.6 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the rectangle.
Notes: (Read and Write property)

103.4.7 InnerBevel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The inner bevel size.
Notes: (Read and Write property)

103.4.8 OuterBevel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The outer bevel size.
Notes: (Read and Write property)

103.4.9 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the rectangle.
Notes: (Read and Write property)

103.4.10 X as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

103.4.11 Y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

103.5 class IMGeometryInfo7MBS

103.5.1 class IMGeometryInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for geometry info.

103.5.2 Methods

103.5.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

103.5.4 Properties

103.5.5 chi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The chi value.
Notes: (Read and Write property)

103.5.6 psi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The psi value.
Notes: (Read and Write property)

103.5.7 rho as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rho value.
Notes: (Read and Write property)

103.5.8 sigma as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sigma value.
Notes: (Read and Write property)

103.5.9 xi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The xi value.
Notes: (Read and Write property)

103.6 class IMImage7MBS

103.6.1 class IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an ImageMagick image.
Notes: See xx function in ImageMagick documentation.

103.6.2 Methods

103.6.3 AcquireImageColormap(count as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an image colormap and initializes it to a linear gray colorspace.
Notes: If the image already has a colormap, it is replaced. AcquireImageColormap() returns true if successful, otherwise false if there is not enough memory.

colors: the number of colors in the image colormap.

See AcquireImageColormap function in ImageMagick documentation.

103.6.4 AdaptiveBlur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adaptively blurs the image by blurring less intensely near image edges and more intensely far from edges.
Notes: We blur the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and AdaptiveBlur selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See AdaptiveBlurImage function in ImageMagick documentation.

103.6.5 AdaptiveResize(columns as Integer, Rows as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adaptively resize image with pixel resampling.
Notes: This is shortcut function for a fast interpolative resize using mesh interpolation. It works well for small resizes of less than +/- 50 of the original image size. For larger resizing on images a full filtered and slower resize function should be used instead.

columns: the number of columns in the resized image.
rows: the number of rows in the resized image.

See AdaptiveResizeImage function in ImageMagick documentation.

103.6.6 AdaptiveSharpen(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adaptively sharpens the image by sharpening more intensely near image edges and less intensely far from edges.
Notes: We sharpen the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and AdaptiveSharpen selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See AdaptiveSharpenImage function in ImageMagick documentation.

103.6.7 AdaptiveThreshold(width as Integer, height as integer, bias as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes: This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks.

width: the width of the local neighborhood.
height: the height of the local neighborhood.

bias: the mean bias.

See AdaptiveThresholdImage function in ImageMagick documentation.

103.6.8 AddNoise(NoiseType as integer, value as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds random noise to the image.
Notes: channel: the channel type.
noise_type: The type of noise: Uniform, Gaussian, Multiplicative, Impulse, Laplacian, or Poisson.
attenuate: attenuate the random distribution.

See AddNoiseImage function in ImageMagick documentation.

103.6.9 AffineTransform(matrix as IMImageAffineMatrix7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms an image as dictated by the affine matrix.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See xx function in ImageMagick documentation.

103.6.10 AppendImageToList(img as IMImage7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends the second image list to the end of the first list. The given image list pointer is left unchanged, unless it was empty.
Notes: See xx function in ImageMagick documentation.

103.6.11 AuthenticPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtains a pixel region for read/write access.

Notes: If the region is successfully accessed, a pointer to a Quantum array representing the region is returned, otherwise NULL is returned.

The returned pointer may point to a temporary working copy of the pixels or it may point to the original pixels in memory. Performance is maximized if the selected region is part of one row, or one or more full rows, since then there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image has corresponding metacontent,call GetAuthenticMetacontent() after invoking GetAuthenticPixels() to obtain the meta-content corresponding to the region. Once the Quantum array has been updated, the changes must be saved back to the underlying image using SyncAuthenticPixels() or they may be lost.

See xx function in ImageMagick documentation.

103.6.12 AutoGamma as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: See AutoGammaImage function in ImageMagick documentation.

103.6.13 AutoLevel as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: See AutoLevelImage function in ImageMagick documentation.

103.6.14 AutoOrient(OrientationType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts an image so that its orientation is suitable for viewing (i.e. top-left orientation).
Notes: orientation: Current image orientation.

See AutoOrientImage function in ImageMagick documentation.

103.6.15 AutoThreshold(autoThresholdMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Automatically performs image thresholding dependent on which method you specify.
Notes: method: choose from Kapur, OTSU, or Triangle.

See AutoThresholdImage function in ImageMagick documentation.

103.6.16 Bilevel(threshold as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes: The result is a high-contrast image.

More precisely each channel value of the image is 'thresholded' so that if it is equal to or less than the given value it is set to zero, while any value greater than that give is set to it maximum or QuantumRange.

This function is what is used to implement the "-threshold" operator for the command line API.

If the default channel setting is given the image is thresholded using just the gray 'intensity' of the image, rather than the individual channels.

threshold: define the threshold values.

See BilevelImage function in ImageMagick documentation.

103.6.17 BlackThreshold(thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is like Threshold but forces all pixels below the threshold into black while leaving all pixels at or above the threshold unchanged.
Notes: threshold: define the threshold value.

See BlackThresholdImage function in ImageMagick documentation.

103.6.18 BlueShift(factor as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mutes the colors of the image to simulate a scene at nighttime in the moonlight.
Notes: factor: the shift factor.

See BlueShiftImage function in ImageMagick documentation.

103.6.19 Blur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, the radius should be larger than sigma. Use a radius of 0 and Blur selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.

See BlurImage function in ImageMagick documentation.

103.6.20 Border(rectangle as IMRectangleInfo7MBS, CompositeOperator as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Surrounds the image with a border of the color defined by the bordercolor member of the image structure.
Notes: The width and height of the border are defined by the corresponding members of the rectangle.

rectangle: define the width and height of the border.
CompositeOperator: the composite operator.

See BorderImage function in ImageMagick documentation.

103.6.21 BrightnessContrast(brightness as double, contrast as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the brightness and/or contrast of an image.
Notes: It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

See BrightnessContrastImage function in ImageMagick documentation.

103.6.22 Charcoal(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image that is a copy of an existing one with the edge highlighted.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

radius: the radius of the pixel neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See CharcoalImage function in ImageMagick documentation.

103.6.23 Chop(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a region of an image and collapses the image to occupy the removed portion.
Notes: rect: Define the region of the image to chop.

See ChopImage function in ImageMagick documentation.

103.6.24 CLAHE(Width as Integer, Height as Integer, NumberBins as Integer, ClipLimit as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is a variant of adaptive histogram equalization in which the contrast amplification is limited, so as to reduce this problem of noise amplification.
Notes: width: the width of the tile divisions to use in horizontal direction.
height: the height of the tile divisions to use in vertical direction.

NumberBins: number of bins for histogram ("dynamic range").
ClipLimit: contrast limit for localised changes in contrast. A limit less than 1 results in standard non-contrast limited AHE.

See CLAHEImage function in ImageMagick documentation.

103.6.25 Clamp as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clamps image pixels.
Notes: Set each pixel whose value is below zero to zero and any the pixel whose value is above the quantum range to the quantum range (e.g. 65535) otherwise the pixel value remains unchanged.

See xx function in ImageMagick documentation.

103.6.26 ClampToQuantum(value as Double) as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clamps given value to the range for quantum.
Notes: Limits range between 0 and QuantumRange and for non-HDRI rounds value.

103.6.27 Clip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clips along the first path from the 8BIM profile, if present.
Notes: See ClipImage function in ImageMagick documentation.

103.6.28 Clone as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies an image and returns the copy as a new image object.
Notes: See CloneImage function in ImageMagick documentation.

103.6.29 CloneImageProfiles(SourceImage as IMImage7MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones one or more image profiles.
Notes: See xx function in ImageMagick documentation.

103.6.30 CloneProperties(Source as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones all the image properties from source image to current image.
Notes: See CloneImageProperties function in ImageMagick documentation.

103.6.31 Clut(clutImage as IMImage7MBS, pixelInterpolateMethod as integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes: The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

clutImage: the color lookup table image for replacement color values.
method: the pixel interpolation method.

See ClutImage function in ImageMagick documentation.

103.6.32 CoalesceImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composites a set of images while respecting any page offsets and disposal methods.
Notes: GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. A new image sequence is returned with all images the same size as the first images virtual canvas and composited with the next image in the sequence.

See CoalesceImages function in ImageMagick documentation.

103.6.33 ColorDecisionList(ColorCorrectionCollection as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts a lightweight Color Correction Collection (CCC) file which solely contains one or more color corrections and applies the correction to the image.
Notes: Here is a sample CCC file:

<ColorCorrectionCollection xmlns="urn:ASC:CDL:v1.2">
<ColorCorrection id="cc03345">
<SOPNode>
<Slope>0.9 1.2 0.5 </Slope>
<Offset>0.4 -0.5 0.6 </Offset>
<Power>1.0 0.8 1.5 </Power>
</SOPNode>
<SATNode>
<Saturation>0.85 </Saturation>
</SATNode>
</ColorCorrection>
</ColorCorrectionCollection>
which includes the slop, offset, and power for each of the RGB channels as well as the saturation.

ColorCorrectionCollection: the color correction collection in XML.

See ColorDecisionListImage function in ImageMagick documentation.

103.6.34 Colorize(opacity as string, pixelInfo as IMPixelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blends the fill color with each pixel in the image.
Notes: A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90 red, 100 green, and 10 blue).

blend: A character string indicating the level of blending as a percentage.
colorize: A color value.

See ColorizeImage function in ImageMagick documentation.

103.6.35 ColorspaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the potential type of image: sRGBColorspaceType, RGBColorspaceType, GRAYColorspaceType, etc.
Notes: See xx function in ImageMagick documentation.

103.6.36 Combine(Colorspace as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines one or more images into a single image.
Notes: The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

See CombineImages function in ImageMagick documentation.

103.6.37 CompareImagesLayers(ImageLayerMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the LayerMethod specified) it discovers.
Notes: Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

method: the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer,

CompareOverlayLayer.

See xx function in ImageMagick documentation.

103.6.38 ComplexImages(ComplexOperator as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs complex mathematics on an image sequence.
Notes: See ComplexImages function in ImageMagick documentation.

103.6.39 Composite(ComposeOperator as integer, Image as IMImage7MBS, ClipToSelf as boolean, xOffset as integer, yOffset as integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second image composited onto the first at the specified offset, using the specified composite method.
Notes: See xx function in ImageMagick documentation.

103.6.40 CompositeLayers(CompositeOperator as Integer, Source as IMImage7MBS, XOffset as Integer, YOffset as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compose the source image sequence over the destination image sequence, starting with the current image in both lists.
Notes: Each layer from the two image lists are composted together until the end of one of the image lists is reached. The offset of each composition is also adjusted to match the virtual canvas offsets of each layer. As such the given offset is relative to the virtual canvas, and not the actual image.

Composition uses given x and y offsets, as the 'origin' location of the source images virtual canvas (not the real image) allowing you to compose a list of 'layer images' into the destiantioni images. This makes it well sutiable for directly composing 'Clears Frame Animations' or 'Coaleased Animations' onto a static or other 'Coaleased Animation' destination image list. GIF disposal handling is not looked at.

Special case:- If one of the image sequences is the last image (just a single image remaining), that image is repeatally composed with all the images in the other image list. Either the source or destination lists may be the single image, for this situation.

In the case of a single destination image (or last image given), that image will ve cloned to match the number of images remaining in the source image list.

This is equivelent to the "-layer Composite" Shell API operator.

See xx function in ImageMagick documentation.

103.6.41 CompressColormap as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: compresses an image colormap by removing any duplicate or unused color entries.
Notes: Returns true on success.
See CompressImageColormap function in ImageMagick documentation.

103.6.42 ConsolidateCMYKImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Consolidates separate C, M, Y, and K planes into a single image.
Notes: See ConsolidateCMYKImages function in ImageMagick documentation.

103.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an image from the pixel data you supply.
Notes: The pixel data must be in scanline order top-to-bottom. The data can be char, short int, int, float, or double. Float and double require the pixels to be normalized [0..1] , otherwise [0..QuantumRange] . For example, to create a 640x480 image from unsigned red-green-blue character data, use:

image = new IMImage7MBS(640,480,"RGB", kCharPixel, pixels)

columns: width in pixels of the image.
rows: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
storage: Define the data type of the pixels. Float and double types are expected to be normalized [0..1]

otherwise [0..QuantumRange] . Choose from these types: CharPixel, DoublePixel, FloatPixel, IntegerPixel, LongPixel, QuantumPixel, or ShortPixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ConstituteImage function in ImageMagick documentation.

- 103.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 15773
- 103.6.46 Constructor(Pic as Picture) 15774

103.6.44 Constructor(info as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image.
Notes: Returns a pointer to an image initialized to default values.
Many of the image default values are set from the image info. For example, filename, compression, depth, background color, and others.

See AcquireImage function in ImageMagick documentation.
See also:

- 103.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 15772
- 103.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 15773
- 103.6.46 Constructor(Pic as Picture) 15774

103.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a blank image canvas of the specified size and background color.
Notes: info: the image details.
width: the image width.
height: the image height.
background: the image color.

See NewMagickImage function in ImageMagick documentation.
See also:

- 103.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 15772

- 103.6.46 Constructor(Pic as Picture) 15774

103.6.46 Constructor(Pic as Picture)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture based on Xojo picture.
Notes: Creates a new image and uses SetPicture method to fill it.

See NewMagickImage function in ImageMagick documentation.
See also:

- 103.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 15772

- 103.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 15773

103.6.47 Contrast(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes: Set sharpen to a True to increase the image contrast otherwise the contrast is reduced.

sharpen: Increase or decrease image contrast.

See ContrastImage function in ImageMagick documentation.

103.6.48 ContrastStretch(BlackPoint as double, WhitePoint as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is a simple image enhancement technique that attempts to improve the contrast in an image by 'stretching' the range of intensity values it contains to span a desired range of values.

Notes: It differs from the more sophisticated histogram equalization in that it can only apply a linear scaling function to the image pixel values. As a result the 'enhancement' is less harsh.

BlackPoint: the black point.
WhitePoint: the white point.

See ContrastStretchImage function in ImageMagick documentation.

103.6.49 Convolve(kernelInfo as IMKernelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a custom convolution kernel to the image.
Notes: See ConvolveImage function in ImageMagick documentation.

103.6.50 CopyPicture as Picture

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies RGB or gray pixels into a new Xojo picture.
Notes: You must make sure you have the right color space to make this work well with colorspaces. Xojo on Mac uses Generic RGB, while Windows may use the colorspace of the display.

As conversion between various quantum depths can be slow, please use rarely.

See also ExportPixels and ImportPixels to read/write pixel data to/from memory blocks.
See GetAuthenticPixels function in ImageMagick documentation.

103.6.51 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Windows HBITMAP from an image.
Notes: See ImageToHBITMAP function in ImageMagick documentation.

103.6.52 Crop(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts a region of the image starting at the offset defined by geometry.
Notes: Region must be fully defined, and no special handling of geometry flags is performed.

See CropImage function in ImageMagick documentation.

103.6.53 CropToTiles(CropGeometry as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

CropGeometry: A crop geometry string.

See CropImageToTiles function in ImageMagick documentation.

103.6.54 CycleColormap(displace as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Displaces an image's colormap by a given number of positions.
Notes: If you cycle the colormap a number of times you can produce a psychodelic effect.

WARNING: this assumes an images colormap is in a well know and defined order. Currently Imagemagick has no way of setting that order.

displace: displace the colormap this amount.

See CycleColormap function in ImageMagick documentation.

103.6.55 Decipher(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts cipher pixels to plain pixels.
Notes: See xx function in ImageMagick documentation.

103.6.56 DefineProperty(PropertyKeyValue as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Associates an assignment string of the form "key=value" with an artifact or options.
Notes: It is equivelent to SetProperty().
See DefineImageProperty function in ImageMagick documentation.

103.6.57 DeleteImageProfile(Name as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a profile from the image by its name.
Notes: See xx function in ImageMagick documentation.

103.6.58 DeleteProperty(Key as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an image property.
Notes: key: the image property.
See DeleteImageProperty function in ImageMagick documentation.

103.6.59 Deskew(x as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes skew from the image.
Notes: Skew is an artifact that occurs in scanned images because of the camera being misaligned, imperfections in the scanning or surface, or simply because the paper was not placed completely flat when scanned.

The result will be auto-croped if the artifact "deskew:auto-crop" is defined, while the amount the image is to be deskewed, in degrees is also saved as the artifact "deskew:angle".

threshold: separate background from foreground.

See DeskewImage function in ImageMagick documentation.

103.6.60 Despeckle as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes: A speckle removing filter uses a complementary hulling technique (raising pixels that are darker than their surrounding neighbors, then complementarily lowering pixels that are brighter than their surrounding neighbors) to reduce the speckle index of that image (reference Crimmins speckle removal).

See DespeckleImage function in ImageMagick documentation.

103.6.61 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys an image list.
Notes: See DestroyImageList function in ImageMagick documentation.

103.6.62 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases memory associated with an image profile map.
Notes: See xx function in ImageMagick documentation.

103.6.63 DestroyProperties

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destroys all properties and associated memory attached to the given image.
Notes: See DestroyImageProperties function in ImageMagick documentation.

103.6.64 DisposeImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the coalesced frames of a GIF animation as it would appear after the GIF dispose method of that frame has been applied.
Notes: That is it returned the appearance of each frame before the next is overlaid.

See DisposeImages function in ImageMagick documentation.

103.6.65 Distort(DistortImageMethod as integer, values() as double, bestfit as boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes: If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

method: the method of image distortion.
ArcDistortion always ignores source image offset, and always 'bestfit' the destination image with the top left corner offset relative to the polar mapping center.
Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided.
Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.

values: an array of floating point arguments for this method.

bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

See DistortImage function in ImageMagick documentation.

103.6.66 DistortResize(x as Integer, y as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image using the equivalent but slower image distortion operator.
Notes: The filter is applied using a EWA cylindrical resampling. But like resize the final image size is limited to whole pixels with no effects by virtual-pixels on the result.

Note that images containing a transparency channel will be twice as slow to resize as images one without transparency.

See DistortResizeImage function in ImageMagick documentation.

103.6.67 Edge(radius as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds edges in an image.
Notes: Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.

radius: the radius of the pixel neighborhood.

See EdgeImage function in ImageMagick documentation.

103.6.68 Emboss(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a grayscale image with a three-dimensional effect.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma).

For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss() selects a suitable radius for you.

radius: the radius of the pixel neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See EmbossImage function in ImageMagick documentation.

103.6.69 Encipher(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts pixels to cipher-pixels.
Notes: See xx function in ImageMagick documentation.

103.6.70 Enhance as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a digital filter that improves the quality of a noisy image.
Notes: See xx function in ImageMagick documentation.

103.6.71 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a histogram equalization to the image.
Notes: See xx function in ImageMagick documentation.

103.6.72 Excerpt(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a excerpt of the image as defined by the geometry.
Notes: geometry: Define the region of the image to extend with members x, y, width, and height.

See ExcerptImage function in ImageMagick documentation.

103.6.73 ExportPixels(x as integer, y as integer, width as integer, height as integer, map as string, storageType as integer, data as Ptr) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts pixel data from an image and returns it to you.
Notes: The method returns MagickTrue on success otherwise MagickFalse if an error is encountered. The data is returned as char, short int, Quantum, unsigned int, unsigned long long, float, or double in the order specified by map.

Suppose you want to extract the first scanline of a 640x480 image as character data in red-green-blue order:

image.ExportImagePixels(0, 0, 640, 480, "RGB", kCharPixel, pixels)

- x,y,width,height: These values define the perimeter of a region of pixels you want to extract.
- map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
- type: Define the data type of the pixels. Float and double types are normalized to [0..1] otherwise [0..QuantumRange] . Choose from these types: CharPixel (char *), DoublePixel (double *), FloatPixel (float *), LongPixel (unsigned int *), LongLongPixel (unsigned long long *), QuantumPixel (Quantum *), or ShortPixel (unsigned short *).

pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ExportImagePixels function in ImageMagick documentation.

103.6.74 Extent(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes: Set the (x,y) offset of the geometry to move the original image relative to the extended image.

rect: Define the region of the image to extend with members x, y, width, and height.

See ExtentImage function in ImageMagick documentation.
See also:

- 103.6.235 extent as Integer 15830

103.6.75 Flip as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes: See FlipImage function in ImageMagick documentation.

103.6.76 Flop as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: See FlopImage function in ImageMagick documentation.

103.6.77 ForwardFourierTransformImage(modulus as Boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Implements the discrete Fourier transform (DFT) of the image either as a magnitude / phase or real / imaginary image pair.
Notes: modulus: if true, return as transform as a magnitude / phase pair otherwise a real / imaginary image pair.
See ForwardFourierTransformImage function in ImageMagick documentation.

103.6.78 Frame(frameInfo as IMFrameInfo7MBS, CompositeOperator as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the matte_color member of image. Members width and height of frame_info specify the border width of the vertical and horizontal sides of the frame. Members inner and outer indicate the width of the inner and outer shadows of the frame.

frameInfo: Define the width and height of the frame and its bevels.
CompositeOperator: the composite operator.

See FrameImage function in ImageMagick documentation.

103.6.79 Fx(expression as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a mathematical expression to the specified image.
Notes: expression: A mathematical expression.

See FxImage function in ImageMagick documentation.

103.6.80 Gamma(level as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gamma-corrects a particular image channel.
Notes: The same image viewed on different devices will have perceptual differences in the way the image's intensities are represented on the screen. Specify individual gamma levels for the red, green, and blue channels, or adjust all three with the gamma parameter. Values typically range from 0.8 to 2.3.

You can also reduce the influence of a particular channel with a gamma value of 0.

level: the image gamma as a string (e.g. 1.6,1.2,1.0).

See GammaImage function in ImageMagick documentation.
See also:

- 103.6.240 Gamma as Double 15831

103.6.81 GaussianBlur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blurs an image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.

See GaussianBlurImage function in ImageMagick documentation.

103.6.82 GetImageDynamicThreshold(clusterThreshold as Double, smoothThreshold as Double, byref pixelinfo as IMPixelInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the dynamic threshold for an image.
Notes: clusterThreshold: This double represents the minimum number of pixels contained in a hexahedra before it can be considered valid (expressed as a percentage).
smoothThreshold: the smoothing threshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative.
pixelinfo: return the dynamic threshold here.

Returns true on success.
See GetImageDynamicThreshold function in ImageMagick documentation.

103.6.83 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a profile associated with an image by name.
Notes: See xx function in ImageMagick documentation.

103.6.84 GetImageQuantizeError as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Measures the difference between the original and quantized images.
Notes: This difference is the total quantization error.
The error is computed by summing over all pixels in an image the distance squared in RGB space between each reference pixel value and its quantized value. These values are computed:

- mean_error_per_pixel: This value is the mean error for any single pixel in the image.
- normalized_mean_square_error: This value is the normalized mean quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in the image.
- normalized_maximum_square_error: This value is the normalized maximum quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in your image.

See GetImageQuantizeError function in ImageMagick documentation.

103.6.85 GetMagickProperty(ImageInfo as IMImageInfo7MBS = nil, embedText as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets attributes or calculated values that is associated with a fixed known property name, or single letter property.
Notes: It may be called if no image is defined (IMv7), in which case only global ImageInfo values are available:

\n newline
\r carriage return
<less-than character.
>greater-than character.
& ampersand character.
%% a percent sign
%b file size of image read in
%c comment meta-data property
%d directory component of path
%e filename extension or suffix
%f filename (including suffix)
%g layer canvas page geometry (equivalent to "%Wx%H%X%Y")
%h current image height in pixels
%i image filename (note: becomes output filename for "info:")
%k CALCULATED: number of unique colors
%l label meta-data property
%m image file format (file magic)
%n number of images in current image sequence
%o output filename (used for delegates)
%p index of image in current image list
%q quantum depth (compile-time constant)
%r image class and colorspace
%s scene number (from input unless re-assigned)
%t filename without directory or extension (suffix)
%u unique temporary filename (used for delegates)
%w current width in pixels
%x x resolution (density)
%y y resolution (density)
%z image depth (as read in unless modified, image save depth)
%A image transparency channel enabled (true/false)
%B file size of image in bytes
%C image compression type
%D image GIF dispose method
%G original image size (%wx%h; before any resizes)
%H page (canvas) height
%M Magick filename (original file exactly as given, including read mods)
%O page (canvas) offset (= %X%Y)

%P page (canvas) size (= %Wx%H)
%Q image compression quality (0 = default)
%S ?? scenes ??
%T image time delay (in centi-seconds)
%U image resolution units
%W page (canvas) width
%X page (canvas) x offset (including sign)
%Y page (canvas) y offset (including sign)
%Z unique filename (used for delegates)
%@ CALCULATED: trim bounding box (without actually trimming)
%# CALCULATED: 'signature' hash of image values

This routine only handles specifically known properties. It does not handle special prefixed properties, profiles, or expressions. Nor does it return any free-form property strings.

The returned string is stored in a structure somewhere, and should not be directly freed. If the string was generated (common) the string will be stored as as either as artifact or option 'get-property'. These may be deleted (cleaned up) when no longer required, but neither artifact or option is guranteed to exist.
See GetMagickProperty function in ImageMagick documentation.

103.6.86 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the next profile name for an image.
Notes: See xx function in ImageMagick documentation.

103.6.87 GetNextImageProperty as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the next free-form string property name.
Notes: See GetNextImageProperty function in ImageMagick documentation.

103.6.88 GetProperty(PropertyKey as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a value associated with an image property.
Notes: This includes, profile prefixes, such as "exif:", "iptc:" and "8bim:" It does not handle non-prifile prefixes, such as "fx:", "option:", or "artifact:".

The returned string is stored as a properity of the same name for faster lookup later.
See GetImageProperty function in ImageMagick documentation.

103.6.89 Grayscale(PixelIntensityMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the image to grayscale.
Notes: PixelIntensityMethod: the pixel intensity method.

See GrayscaleImage function in ImageMagick documentation.

103.6.90 HaldClut(clutImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a Hald color lookup table to the image.
Notes: A Hald color lookup table is a 3-dimensional color cube mapped to 2 dimensions. Create it with the HALD coder. You can apply any color transformation to the Hald image and then use this method to apply the transform to the image.

clutImage: the color lookup table image for replacement color values.

See HaldClutImage function in ImageMagick documentation.

103.6.91 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with a copy of the internal image structure.
Notes: See xx function in ImageMagick documentation.

103.6.92 Histogram as IMPixelInfo7MBS()

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the unique colors in an image.
Notes: Returns array of colors.
See GetImageHistogram function in ImageMagick documentation.

103.6.93 IdentifyImageGray as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns grayscale if all the pixels in the image have the same red, green, and blue intensities, and bi-level is the intensity is either 0 or QuantumRange.
Notes: Returns one of the image type constants.
Otherwise undefined is returned.
See IdentifyImageGray function in ImageMagick documentation.

103.6.94 IdentifyImageMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if all the pixels in the image have the same red, green, and blue intensities and the intensity is either 0 or QuantumRange.
Notes: See IdentifyImageMonochrome function in ImageMagick documentation.

103.6.95 IdentifyImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the potential type of image.
Notes: Bilevel Grayscale GrayscaleMatte Palette PaletteMatte TrueColor TrueColorMatte ColorSeparation ColorSeparationMatte

To ensure the image type matches its potential, use SetImageType.

See IdentifyImageType function in ImageMagick documentation.

103.6.96 IdentifyPaletteImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the image has 256 unique colors or less.
Notes: See IdentifyPaletteImage function in ImageMagick documentation.

103.6.97 ImageDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the depth of a particular image channel.
Notes: See GetImageDepth function in ImageMagick documentation.

103.6.98 ImageQuantumDepth(constrain as Boolean = false) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the depth of the image rounded to a legal quantum depth: 8, 16, or 32.
Notes: constrain: A value other than false, constrains the depth to a maximum of MAGICKCORE_QUANTUM_DEPTH.

See GetImageQuantumDepth function in ImageMagick documentation.

103.6.99 ImageStatistics as IMChannelStatistics7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns statistics for each channel in the image.
Notes: The statistics include the channel depth, its minima, maxima, mean, standard deviation, kurtosis and skewness.

See GetImageStatistics function in ImageMagick documentation.

103.6.100 ImagesToBlob(info as IMImageInfo7MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImageToBlobs saves multiple images in a blob.
Notes: It returns the image as a formatted blob. The magick member of the Image determines the format of the returned blob (GIF, JPEG, PNG, etc.). This method is the equivalent of WriteImage, but writes the formatted "file" to a memory buffer rather than to an actual file.
See ImagesToBlob function in ImageMagick documentation.

103.6.101 ImageToBlob(info as IMImageInfo7MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: ImageToBlob implements direct to memory image formats.
Notes: It returns the image as a formatted blob. The magick member of the Image determines the format of the returned blob (GIF, JPEG, PNG, etc.). This method is the equivalent of WriteImage, but writes the

formatted "file" to a memory buffer rather than to an actual file.
See ImageToBlob function in ImageMagick documentation.

103.6.102 Implode(amount as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method ImplodeImage returns a pointer to the image after it is implode. A null image is returned if there is a memory shortage.

amount: Define the extent of the implosion.
method: the pixel interpolation method.

See ImplodeImage function in ImageMagick documentation.

103.6.103 ImportPixels(x as integer, y as integer, width as integer, height as integer, map as string, storageType as integer, data as Ptr) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts pixel data and stores in the image at the location you specify.
Notes: The method returns true on success otherwise false if an error is encountered. The pixel data can be either char, Quantum, short int, unsigned int, unsigned long long, float, or double in the order specified by map.

Suppose your want to upload the first scanline of a 640x480 image from character data in red-green-blue order:

image.ImportImagePixels(0, 0, 640, 480, "RGB", kCharPixel, pixels)

- x,y,width,height: These values define the perimeter of a region of pixels you want to define.
- map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
- type: Define the data type of the pixels. Float and double types are normalized to [0..1] otherwise [0..QuantumRange] . Choose from these types: CharPixel (char *), DoublePixel (double *), FloatPixel (float *), LongPixel (unsigned int *), LongLongPixel (unsigned long long *), QuantumPixel (Quantum *), or ShortPixel (unsigned short *).
- pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ImportImagePixels function in ImageMagick documentation.

103.6.104 IntegralRotate(degrees as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the image an integral of 90 degrees.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the rotated image.

rotations: Specifies the number of 90 degree rotations.

See IntegralRotateImage function in ImageMagick documentation.

103.6.105 InterpolativeResize(columns as Integer, Rows as Integer, PixelInterpolateMethod as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resizes an image using the specified interpolation method.
Notes: columns: the number of columns in the resized image.
rows: the number of rows in the resized image.
method: the pixel interpolation method.

See xx function in ImageMagick documentation.

103.6.106 InterpretProperties(ImageInfo as IMImageInfo7MBS = nil, embedText as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces any embedded formatting characters with the appropriate image property and returns the interpreted text.
Notes: This searches for and replaces \n \r \replaced by newline, return, and percent resp. < > & replaced by '<', '>', '&' resp. replaced by percent

x [x] where 'x' is a single letter properity, case sensitive). [type:name] where 'type' a is special and known prefix. [name] where 'name' is a specifically known attribute, calculated value, or a per-image property string name, or a per-image 'artifact' (as generated from a global option). It may contain ':' as long as the prefix is not special.

Single letter substitutions will only happen if the character before the percent is NOT a number. But braced substitutions will always be performed. This prevents the typical usage of percent in a interpreted geometry argument from being substituted when the percent is a geometry flag.

If 'glob-expresions' ('*' or '?' characters) is used for 'name' it may be used as a search pattern to print multiple lines of "name=value\n" pairs of the associated set of properties.

ImageInfo: the image info. (required)
image: the image.
embedText: the address of a character string containing the embedded formatting characters.
See InterpretImageProperties function in ImageMagick documentation.

103.6.107 InverseFourierTransformImage(phaseImage as IMImage7MBS, modulus as Boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Implements the inverse discrete Fourier transform (DFT) of the image either as a magnitude / phase or real / imaginary image pair.
Notes: self: the magnitude or real image.
phaseImage: the phase or imaginary image.
modulus: if true, return transform as a magnitude / phase pair otherwise a real / imaginary image pair.
See InverseFourierTransformImage function in ImageMagick documentation.

103.6.108 IsEqual(other as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compare the pixels of two images and returns immediately if any pixel is not identical.
Notes: See IsImagesEqual function in ImageMagick documentation.

103.6.109 IsHighDynamicRangeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns MagickTrue if any pixel component is non-integer or exceeds the bounds of the quantum depth.
Notes: e.g. for Q16 0..65535.

See IsHighDynamicRangeImage function in ImageMagick documentation.

103.6.110 IsHistogram as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns MagickTrue if the image has 1024 unique colors or less.
Notes: See IsHistogramImage function in ImageMagick documentation.

103.6.111 IsImageOpaque as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if none of the pixels in the image have an alpha value other than OpaqueAlpha (QuantumRange).
Notes: Will return true immediatally if alpha channel is not available.

See IsImageOpaque function in ImageMagick documentation.

103.6.112 Kuwahara(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Kuwahara is an edge preserving noise reduction filter.
Notes: radius: the square window radius.
sigma: the standard deviation of the Gaussian, in pixels.

See KuwaharaImage function in ImageMagick documentation.

103.6.113 Level(BlackPoint as double, WhitePoint as double, gamma as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the levels of a particular image channel by scaling the colors falling between specified white and black points to the full available quantum range.
Notes: The parameters provided represent the black, and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value.

If a '!' flag is given, map black and white colors to the given levels rather than mapping those levels to black and white. See LevelizeImage() below.

Gamma specifies a gamma correction to apply to the image.

BlackPoint: The level to map zero (black) to.
WhitePoint: The level to map QuantumRange (white) to.

See LevelImage function in ImageMagick documentation.

103.6.114 LevelImageColors(BlackColor as IMPixelInfo7MBS, WhiteColor as IMPixelInfo7MBS, invert as Boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Levels image colors.
Notes: Maps the given color to "black" and "white" values, linearly spreading out the colors, and level values on a channel by channel bases, as per LevelImage(). The given colors allows you to specify different level ranges for each of the color channels separately.

If the boolean 'invert' is set true the image values will modifyed in the reverse direction. That is any existing "black" and "white" colors in the image will become the color values given, with all other values compressed appropriatally. This effectively maps a greyscale gradient into the given color gradient.

BlackColor: The color to map black to/from
WhiteColor: The color to map white to/from
invert: if true map the colors (levelize), rather than from (level)

See LevelImageColors function in ImageMagick documentation.

103.6.115 Levelize(BlackPoint as double, WhitePoint as double, gamma as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the reversed LevelImage() operation to just the specific channels specified.
Notes: It compresses the full range of color values, so that they lie between the given black and white points. Gamma is applied before the values are mapped.

LevelizeImage() can be called with by using a +level command line API option, or using a '!' on a -level or LevelImage() geometry string.

It can be used to de-contrast a greyscale image to the exact levels specified. Or by using specific levels for each channel of an image you can convert a gray-scale image to any linear color gradient, according to those levels.

BlackPoint: The level to map zero (black) to.
WhitePoint: The level to map QuantumRange (white) to.
gamma: adjust gamma by this factor before mapping values.

See LevelizeImage function in ImageMagick documentation.

103.6.116 LinearStretch(BlackPoint as double, WhitePoint as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Discards any pixels below the black point and above the white point and levels the remaining pixels.
Notes: blackPoint: the black point.
whitePoint: the white point.

See LinearStretchImage function in ImageMagick documentation.

103.6.117 LiquidRescale(columns as Integer, Rows as Integer, deltaX as Double, rigidity as Double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rescales image with seam carving.
Notes: columns: the number of columns in the rescaled image.
rows: the number of rows in the rescaled image.
deltaX: maximum seam transversal step (0 means straight seams).
rigidity: introduce a bias for non-straight seams (typically 0).

See LiquidRescaleImage function in ImageMagick documentation.

103.6.118 LocalContrast(radius as double, strength as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Attempts to increase the appearance of large-scale light-dark transitions.
Notes: Local contrast enhancement works similarly to sharpening with an unsharp mask, however the mask is instead created using an image with a greater blur distance.

radius: the radius of the Gaussian blur, in percentage with 100 resulting in a blur radius of 20 of largest dimension.
strength: the strength of the blur mask in percentage.

See LocalContrastImage function in ImageMagick documentation.

103.6.119 Magnify as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Doubles the size of the image with a pixel art scaling algorithm.
Notes: See xx function in ImageMagick documentation.

103.6.120 MergeImageLayers(ImageLayerMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes: The inital canvas's size depends on the given LayerMethod, and is initialized using the first images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

method: the method of selecting the size of the initial canvas.
MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.
FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.
MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.
TrimBoundsLayer: Determine the overall bounds of all the image layers just as in "MergeLayer", then adjust the the canvas and offsets to be relative to those bounds, without overlaying the images.
WARNING: a new image is not returned, the original image sequence page data is modified instead.

See MergeImageLayers function in ImageMagick documentation.

103.6.121 Minify as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is a convenience method that scales an image proportionally to half its size.
Notes: See xx function in ImageMagick documentation.

103.6.122 MinMaxStretch(black as double, white as double, gamma as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stretches image colors.
Notes: Uses the exact minimum and maximum values found in each of the channels given, as the BlackPoint and WhitePoint to linearly stretch the colors (and histogram) of the image. The stretch points are also moved further inward by the adjustment values given.

If the adjustment values are both zero this function is equivalent to a perfect normalization (or autolevel) of the image.

Each channel is stretched independantally of each other (producing color distortion) unless the special 'SyncChannels' flag is also provided in the channels setting. If this flag is present the minimum and maximum point will be extracted from all the given channels, and those channels will be stretched by exactly the same amount (preventing color distortion).

In the special case that only ONE value is found in a channel of the image that value is not stretched, that value is left as is.

The 'SyncChannels' is turned on in the 'DefaultChannels' setting by default.

See MinMaxStretchImage function in ImageMagick documentation.

black, white: move the black / white point inward from the minimum and maximum points by this color value.
gamma: the gamma.

103.6.123 Modify as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ensures that there is only a single reference to the image to be modified, updating the provided image pointer to point to a clone of the original image if necessary.
Notes: See ModifyImage function in ImageMagick documentation.

103.6.124 Modulate(modulate as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lets you control the brightness, saturation, and hue of an image.
Notes: Modulate represents the brightness, saturation, and hue as one parameter (e.g. 90,150,100). If the image colorspace is HSL, the modulation is lightness, saturation, and hue. For HWB, use blackness, whiteness, and hue. And for HCL, use chrome, luma, and hue.

modulate: Define the percent change in brightness, saturation, and hue.

See ModulateImage function in ImageMagick documentation.

103.6.125 Morphology(MorphologyMethod as Integer, iterations as Integer, kernel as IMKernelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a user supplied kernel to the image according to the given mophology method.
Notes: This function applies any and all user defined settings before calling the above internal function MorphologyApply().

User defined settings include... * Output Bias for Convolution and correlation (”-define convolve:bias=??”) * Kernel Scale/normalize settings (”-define convolve:scale=??”) This can also includes the addition of a scaled unity kernel. * Show Kernel being applied (”-define morphology:showKernel=1”)

Other operators that do not want user supplied options interfering, especially ”convolve:bias” and ”morphology:showKernel” should use MorphologyApply() directly.

See MorphologyImage function in ImageMagick documentation.

103.6.126 MotionBlur(radius as double, sigma as double, angle as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simulates motion blur.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlurImage() selects a suitable radius for you. Angle gives the angle of the blurring motion.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
angle: Apply the effect along this angle.

See MotionBlurImage function in ImageMagick documentation.

103.6.127 Negate(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the colors in the reference image.
Notes: The grayscale option means that only grayscale values within the image are negated.

grayscale: If True, only negate grayscale pixels within the image.

See xx function in ImageMagick documentation.

103.6.128 Normalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Normalize method enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: See NormalizeImage function in ImageMagick documentation.

103.6.129 NumberColors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of unique colors in an image.
Notes: See GetNumberColors function in ImageMagick documentation.

103.6.130 OilPaint(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a special effect filter that simulates an oil painting.
Notes: Each pixel is replaced by the most frequent color occurring in a circular region defined by radius.

radius: the radius of the circular neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See xx function in ImageMagick documentation.

103.6.131 OneAuthenticPixel(X as Integer, Y as Integer) as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a single pixel at the specified (x,y) location.
Notes: The image background color is returned if an error occurs.
See GetOneAuthenticPixel function in ImageMagick documentation.

Memoryblock should have size of ChannelCount * QuantumSize.
Format of pixel values depend on what quantum size/type your library copy uses!

Use OneVirtualPixelInfo for a type independent color information.

103.6.132 OneVirtualPixel(X as Integer, Y as Integer) as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a single virtual pixel at the specified (x,y) location.
Notes: The image background color is returned if an error occurs.
If you plan to modify the pixel, use GetOneAuthenticPixel() instead.
See GetOneVirtualPixel function in ImageMagick documentation.

Memoryblock should have size of ChannelCount * QuantumSize.
Format of pixel values depend on what quantum size/type your library copy uses!

Use OneVirtualPixelInfo for a type independent color information.

103.6.133 OneVirtualPixelInfo(virtualPixelMethod as Integer, X as Integer, Y as Integer) as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a single pixel at the specified (x,y) location.
Notes: The image background color is returned if an error occurs.
If you plan to modify the pixel, use GetOneAuthenticPixel() instead.
See GetOneVirtualPixelInfo function in ImageMagick documentation.

103.6.134 OptimizeImageLayers as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares each image the GIF disposed forms of the previous image in the sequence.
Notes: From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

See OptimizeImageLayers function in ImageMagick documentation.

103.6.135 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes: Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

See OptimizeImageTransparency function in ImageMagick documentation.

103.6.136 OptimizePlusImageLayers as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: OptimizePlusImageLayers is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: See OptimizeImagePlusLayers function in ImageMagick documentation.

103.6.137 OrderedDither(threshold as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Will perform a ordered dither based on a number of pre-defined dithering threshold maps, but over multiple intensity levels, which can be different for different channels, according to the input argument.
Notes: threshold: A string containing the name of the threshold dither map to use, followed by zero or more numbers representing the number of color levels tho dither between.
Any level number less than 2 will be equivalent to 2, and means only binary dithering will be applied to each color channel.
No numbers also means a 2 level (bitmap) dither will be applied to all channels, while a single number is the number of levels applied to each channel in sequence. More numbers will be applied in turn to each of the color channels.
For example: "o3x3,6" will generate a 6 level posterization of the image with a ordered 3x3 diffused pixel

dither being applied between each level. While checker,8,8,4 will produce a 332 colormaped image with only a single checkerboard hash pattern (50 grey) between each color level, to basically double the number of color levels with a bare minimim of dithering.

See OrderedDitherImage function in ImageMagick documentation.

103.6.138 Perceptible(epsilon as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set each pixel whose value is less than | epsilon | to epsilon or -epsilon (whichever is closer) otherwise the pixel value remains unchanged.
Notes: epsilon: the epsilon threshold (e.g. 1.0e-9).

See PerceptibleImage function in ImageMagick documentation.

103.6.139 Ping(path as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the properties of an image or image sequence except for the pixels.
Notes: It is much faster and consumes far less memory than Read(). On failure, a nil image is returned and exception describes the reason for the failure.

See PingImage function in ImageMagick documentation.
See also:

- 103.6.273 Ping as Boolean 15838

103.6.140 Posterize(levels as Integer, DitherMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reduces the image to a limited number of colors for a "poster" effect.
Notes: levels: Number of color levels allowed in each channel. Very low values (2, 3, or 4) have the most visible effect.
DitherMethod: choose from UndefinedDitherMethod, NoDitherMethod, RiemersmaDitherMethod, Floyd-SteinbergDitherMethod.

Returns true on success.
See PosterizeImage function in ImageMagick documentation.

103.6.141 Preview(PreviewType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tiles 9 thumbnails of the specified image with an image processing operation applied with varying parameters.
Notes: This may be helpful pin-pointing an appropriate parameter for a particular image processing operation.

preview: the image processing operation. See preview constants.

See xx function in ImageMagick documentation.

103.6.142 Profile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Associates, applies, or removes an ICM, IPTC, or generic profile with / to / from an image.
Notes: If the profile is nil, it is removed from the image otherwise added or applied. Use a name of '*' and a profile of nil to remove all profiles from the image.

ICC and ICM profiles are handled as follows: If the image does not have an associated color profile, the one you provide is associated with the image and the image pixels are not transformed. Otherwise, the colorspace transform defined by the existing and new profile are applied to the image pixels and the new profile is associated with the image.

name: Name of profile to add or remove: ICC, IPTC, or generic profile.
ProfileData: the profile data.

See ProfileImage function in ImageMagick documentation.

103.6.143 Properties as Dictionary

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all properties with values.
Example:

```
Var f As FolderItem = GetFolderItem("/Users/cs/Pictures/IMG_3625.jpg", FolderItem.PathTypeNative)
Var i As New IMImageInfo7MBS

i.Filename = f.NativePath
```

```
Var p As IMImage7MBS = i.ReadImage
Var d As Dictionary = p.Properties
Break // see in debugger
```

Notes: See ResetImagePropertyIterator, GetNextImageProperty and GetImageProperty functions in ImageMagick documentation.

103.6.144 Quantize(quantizeInfo as IMQuantizeInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Analyzes the colors within a reference image and chooses a fixed number of colors to represent the image.
Notes: The goal of the algorithm is to minimize the color difference between the input and output image while minimizing the processing time.

quantizeInfo: Specifies a QuantizeInfo object.

Returns true on success.
See QuantizeImage function in ImageMagick documentation.

103.6.145 QuantizeImages(quantizeInfo as IMQuantizeInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: analyzes the colors within a set of reference images and chooses a fixed number of colors to represent the set.
Notes: The goal of the algorithm is to minimize the color difference between the input and output images while minimizing the processing time.

quantizeInfo: Specifies an QuantizeInfo structure.
self: Specifies a list of Images.
See QuantizeImages function in ImageMagick documentation.

103.6.146 QueueAuthenticPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queues a mutable pixel region.
Notes: If the region is successfully initialized a pointer to a Quantum array representing the region is returned, otherwise nil is returned. The returned pointer may point to a temporary working buffer for the pixels or it may point to the final location of the pixels in memory.

Write-only access means that any existing pixel values corresponding to the region are ignored. This is useful if the initial image is being created from scratch, or if the existing pixel values are to be completely replaced without need to refer to their pre-existing values. The application is free to read and write the pixel buffer returned by QueueAuthenticPixels() any way it pleases. QueueAuthenticPixels() does not initialize the pixel array values. Initializing pixel array values is the application's responsibility.

Performance is maximized if the selected region is part of one row, or one or more full rows, since then there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image type is CMYK or the storage class is PseudoClass, call GetAuthenticMetacontent() after invoking GetAuthenticPixels() to obtain the meta-content (of type void) corresponding to the region. Once the Quantum (and/or Quantum) array has been updated, the changes must be saved back to the underlying image using SyncAuthenticPixels() or they may be lost.

x, y, width and height define the perimeter of a region of pixels.

See QueueAuthenticPixels function in ImageMagick documentation.
Format of pixel values depend on what quantum size/type your library copy uses!

103.6.147 RaiseImage(rectangle as IMRectangleInfo7MBS, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes: Members width and height of raise_info define the width of the vertical and horizontal edge of the effect.

rectangle: Define the width and height of the raise area.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

See RaiseImage function in ImageMagick documentation.

103.6.148 RandomThreshold(minThreshold as Double, maxThreshold as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes: The result is a low-contrast, two color image.

low,high: Specify the high and low thresholds. These values range from 0 to QuantumRange.

See xx function in ImageMagick documentation.

103.6.149 RangeThreshold(lowBlack as Double, lowWhite as double, highWhite as double, highBlack as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies soft and hard thresholding.
Notes: lowBlack: Define the minimum black threshold value.
lowWhite: Define the minimum white threshold value.
highWhite: Define the maximum white threshold value.
highBlack: Define the maximum black threshold value.

See RangeThresholdImage function in ImageMagick documentation.

103.6.150 Read(path as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image or image sequence from a file or file handle.
Notes: The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadImage function in ImageMagick documentation.

103.6.151 Remap(quantizeInfo as IMQuantizeInfo7MBS, remapImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the colors of an image with the closest of the colors from the reference image.
Notes: quantizeInfo: Specifies an QuantizeInfo object.
remapImage: the reference image.

Returns true on success.
See RemapImage function in ImageMagick documentation.

103.6.152 RemapImages(quantizeInfo as IMQuantizeInfo7MBS, remapImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the colors of a sequence of images with the closest color from a reference image.
Notes: quantizeInfo: Specifies an QuantizeInfo object.
remapImage: the reference image.

Returns true on success.
See RemapImages function in ImageMagick documentation.

103.6.153 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that is exactly the same as the next image in the given image list.
Notes: Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

See xx function in ImageMagick documentation.

103.6.154 RemoveFirstImageFromList as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes and returns the first image in the list.
Notes: If the given image list pointer pointed to the removed first image, it is set to the new first image of list, or nil if list was emptied, otherwise it is left as is.

See RemoveFirstImageFromList function in ImageMagick documentation.

103.6.155 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a named profile from the image and returns its value.
Notes: See xx function in ImageMagick documentation.

103.6.156 RemoveProperty(Key as String)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a property from the image and returns its value.
Notes: See RemoveImageProperty function in ImageMagick documentation.

103.6.157 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any image that as a zero delay time.
Notes: Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

See RemoveZeroDelayLayers function in ImageMagick documentation.

103.6.158 Resample(xResolution as Double, yResolution as Double, filter as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize image in terms of its pixel size, so that when displayed at the given resolution it will be the same size in terms of real world units as the original image at the original resolution.
Notes: xResolution: the new image x resolution.
yResolution: the new image y resolution.
filter: Image filter to use.

See ResampleImage function in ImageMagick documentation.

103.6.159 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile to iterate over all the profiles associated with an image.

See ResetImageProfileIterator function in ImageMagick documentation.

103.6.160 ResetPropertyIterator

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the image properties iterator.
Notes: Use it in conjunction with GetNextImageProperty() to iterate over all the values associated with an image property.
See ResetImagePropertyIterator function in ImageMagick documentation.

103.6.161 Resize(columns as integer, rows as integer, FilterID as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions, using the given filter (see AcquireFilterInfo()).
Notes: If an undefined filter is given the filter defaults to Mitchell for a colormapped image, a image with a matte channel, or if the image is enlarged. Otherwise the filter defaults to a Lanczos.

columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.
filterID: Image filter to use.

See ResizeImage function in ImageMagick documentation.

103.6.162 Roll(x as integer, y as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offsets an image as defined by x and y offsets.
Notes: x: the number of columns to roll in the horizontal direction.
y: the number of rows to roll in the vertical direction.

See RollImage function in ImageMagick documentation.

103.6.163 Rotate(degrees as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image that is a rotated copy of an existing one.
Notes: Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'background_color' of the image. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

degrees: Specifies the number of degrees to rotate the image.

See RotateImage function in ImageMagick documentation.

103.6.164 RotationalBlur(Angle as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a radial blur to the image.
Notes: angle: the angle of the radial blur.
blur: the blur.

See RotationalBlurImage function in ImageMagick documentation.

103.6.165 Sample(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales an image to the desired dimensions with pixel sampling.
Notes: Unlike other scaling methods, this method does not introduce any additional color into the scaled image.

columns: the number of columns in the sampled image.
rows: the number of rows in the sampled image.

See SampleImage function in ImageMagick documentation.

103.6.166 Scale(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions.
Notes: columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.

See ScaleImage function in ImageMagick documentation.

103.6.167 ScaleQuantumToChar(value as Double) as UInt8

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales a quantum value to 8 bit unsigned integer.
Notes: Depending on which library is loaded a quantum is an UInt8, UInt16, UInt32, Single or Double value.
This function normalizes and rounds values to nearest 8 bit integer value.

103.6.168 Segment(colorspaceType as Integer, verbose as Boolean, clusterThreshold as Double, smoothThreshold as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Segment an image by analyzing the histograms of the color components and identifying units

that are homogeneous with the fuzzy C-means technique.
Notes: colorspace: Indicate the colorspace.
verbose: Set to true to print detailed information about the identified classes.
clusterThreshold: This represents the minimum number of pixels contained in a hexahedra before it can be considered valid (expressed as a percentage).
smoothThreshold: the smoothing threshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative.

Returns true on success.
See SegmentImage function in ImageMagick documentation.

103.6.169 SelectiveBlur(radius as double, sigma as double, threshold as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Selectively blur pixels within a contrast threshold.
Notes: It is similar to the unsharpen mask that sharpens everything with contrast above a certain threshold.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
threshold: only pixels within this contrast threshold are included in the blur operation.

See SelectiveBlurImage function in ImageMagick documentation.

103.6.170 Separate(ChannelType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Separates a channel from the image and returns it as a grayscale image.
Notes: See ChannelType constants for parameter.
See SeparateImage function in ImageMagick documentation.

103.6.171 SeparateImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a separate grayscale image for each channel specified.
Notes: See SeparateImages function in ImageMagick documentation.

103.6.172 SetGray as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if all the pixels in the image have the same red, green, and blue intensities and changes the type of the image to bi-level or grayscale.
Notes: See xx function in ImageMagick documentation.

103.6.173 SetImageAlphaChannel(AlphaChannelOption as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Activates, deactivates, resets, or sets the alpha channel.
Notes: The alpha channel types: ActivateAlphaChannel, AssociateAlphaChannel, CopyAlphaChannel, DeactivateAlphaChannel, DisassociateAlphaChannel, ExtractAlphaChannel, OffAlphaChannel, OnAlphaChannel, OpaqueAlphaChannel, SetAlphaChannel, ShapeAlphaChannel, and TransparentAlphaChannel.

see AlphaChannel constants.

See SetImageAlphaChannel function in ImageMagick documentation.

103.6.174 SetImageColorMetric(other as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Measures the difference between colors at each pixel location of two images.
Notes: A value other than 0 means the colors match exactly. Otherwise an error measure is computed by summing over all pixels in an image the distance squared in RGB space between each image pixel and its corresponding pixel in the reconstruct image. The error measure is assigned to these image members:

- mean_error_per_pixel: The mean error for any single pixel in the image.
- normalized_mean_error: The normalized mean quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in the image.
- normalized_maximum_error: The normalized maximum quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in your image.

A small normalized mean square error, accessed as image->normalized_mean_error, suggests the images are very similar in spatial layout and color.

See SetImageColorMetric function in ImageMagick documentation.

103.6.175 SetImageColorspace(Colorspace as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the colorspace member of the Image object.
Notes: See SetImageColorspace function in ImageMagick documentation.

103.6.176 SetImageDepth(depth as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the depth of the image.
Notes: See SetImageDepth function in ImageMagick documentation.

103.6.177 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a named profile to the image.
Notes: If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: the profile name, for example icc, exif, and 8bim (8bim is the Photoshop wrapper for iptc profiles).
profile: A String that contains the named profile.

See SetImageProfile function in ImageMagick documentation.

103.6.178 SetImageType(type as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the type of image.
Notes: Choose from these types:
Bilevel Grayscale GrayscaleMatte Palette PaletteMatte TrueColor TrueColorMatte ColorSeparation ColorSeparationMatte OptimizeType

See SetImageType function in ImageMagick documentation.

103.6.179 SetMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if image is monochrome and changes type to black & white.
Notes: Returns true if all the pixels in the image have the same red, green, and blue intensities and the intensity is either 0 or QuantumRange and changes the type of the image to bi-level.

See SetImageMonochrome function in ImageMagick documentation.

103.6.180 SetPicture(pic as Picture) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets pixel to the values in the picture.
Notes: You must make sure you have the right color space to make this work well with colorspaces.
Xojo on Mac uses Generic RGB, while Windows may use the colorspace of the display.

Returns true in case of success and false in case of failure.
As conversion between various quantum depths can be slow, please use rarely.

See also ExportPixels and ImportPixels to read/write pixel data to/from memory blocks.
See GetAuthenticPixels and SyncAuthenticPixels functions in ImageMagick documentation.

103.6.181 SetProperty(PropertyKey as String, Value as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the given string value either to specific known attribute or to a freeform property string.
Notes: Attempting to set a property that is normally calculated will produce an exception.
See SetImageProperty function in ImageMagick documentation.

103.6.182 Shade(gray as boolean, azimuth as double, elevation as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shines a distant light on an image to create a three-dimensional effect.
Notes: You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.

gray: A value other than zero shades the intensity of each pixel.
azimuth, elevation: Define the light source direction.

See ShadeImage function in ImageMagick documentation.

103.6.183 Sharpen(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens the image.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

Using a separable kernel would be faster, but the negative weights cancel out on the corners of the kernel producing often undesirable ringing in the filtered result; this can be avoided by using a 2D gaussian shaped image sharpening kernel instead.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See SharpenImage function in ImageMagick documentation.

103.6.184 Shave(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shaves pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Shave returns a pointer to the shaved image. A null image is returned if there is a memory shortage or if the image width or height is zero.

rect: Specifies a RectangleInfo which defines the region of the image to crop.

See ShaveImage function in ImageMagick documentation.

103.6.185 Shear(Xshear as double, Yshear as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image that is an image copy of an existing one.
Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, Xshear is measured relative to the Y axis, and similarly, for Y direction shears Yshear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'backgroundColor' of the image.. Shear() allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See ShearImage function in ImageMagick documentation.

103.6.186 ShearRotate(degrees as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new image that is a rotated copy of an existing one.
Notes: Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'background_color' of the image. ShearRotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

degrees: Specifies the number of degrees to rotate the image.

See ShearRotateImage function in ImageMagick documentation.

103.6.187 SigmoidalContrast(sharpen as boolean, contrast as Double, midpoint as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: adjusts the contrast of an image with a non-linear sigmoidal contrast algorithm.
Notes: Increase the contrast of the image using a sigmoidal transfer function without saturating highlights or shadows. Contrast indicates how much to increase the contrast (0 is none; 3 is typical; 20 is pushing it); mid-point indicates where midtones fall in the resultant image (0 is white; 50 is middle-gray; 100 is black). Set sharpen to MagickTrue to increase the image contrast otherwise the contrast is reduced.

sharpen: Increase or decrease image contrast.

contrast: strength of the contrast, the larger the number the more 'threshold-like' it becomes.
midpoint: midpoint of the function as a color value 0 to QuantumRange.

See SigmoidalContrastImage function in ImageMagick documentation.

103.6.188 Solarize(threshold as double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a special effect to the image, similar to the effect achieved in a photo darkroom by selectively exposing areas of photo sensitive paper to light.
Notes: Threshold ranges from 0 to QuantumRange and is a measure of the extent of the solarization.

threshold: Define the extent of the solarization.

See SolarizeImage function in ImageMagick documentation.

103.6.189 SortColormapByIntensity as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: sorts the colormap of a PseudoClass image by decreasing color intensity.
Notes: See SortColormapByIntensity function in ImageMagick documentation.

103.6.190 SparseColor(SparseColorMethod as Integer, arguments() as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Given a set of coordinates, interpolates the colors found at those coordinates, across the whole image, using various methods.
Notes: method: the method to fill in the gradient between the control points.
The methods used for SparseColor() are often simular to methods used for DistortImage(), and even share the same code for determination of the function coefficents, though with more dimensions (or resulting values).
values: array of floating point arguments for this method– x,y,color_values– with color_values given as normalized values.

See SparseColorImage function in ImageMagick documentation.

103.6.191 Splice(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splices a solid color into the image as defined by the geometry.
Notes: rect: Define the region of the image to splice with members x, y, width, and height.

See SpliceImage function in ImageMagick documentation.

103.6.192 Spread(pixelInterpolateMethod as integer, radius as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is a special effects method that randomly displaces each pixel in a square area defined by the radius parameter.
Notes: method: intepolation method.
radius: choose a random pixel in a neighborhood of this extent.

See SpreadImage function in ImageMagick documentation.

103.6.193 Stegano(watermarkImage as IMImage7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Hides a digital watermark within the image.
Notes: Recover the hidden watermark later to prove that the authenticity of an image. Offset defines the start position within the image to hide the watermark.

See SteganoImage function in ImageMagick documentation.

103.6.194 Stereo(otherImage as IMImage7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes: Special red-green stereo glasses are required to view this effect.

See StereoImage function in ImageMagick documentation.

103.6.195 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strips an image of all profiles and comments.
Notes: See StripImage function in ImageMagick documentation.

103.6.196 Swirl(degrees as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swirls the pixels about the center of the image, where degrees indicates the sweep of the arc through which each pixel is moved.
Notes: You get a more dramatic effect as the degrees move from 1 to 360.

degrees: Define the tightness of the swirling effect.
method: the pixel interpolation method.

See xx function in ImageMagick documentation.

103.6.197 Sync as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Synchronizes image properties.
Notes: See SyncImage function in ImageMagick documentation.

103.6.198 SyncAuthenticPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the image pixels to the in-memory or disk cache.
Notes: The method returns MagickTrue if the pixel region is flushed, otherwise MagickFalse.
See SyncAuthenticPixels function in ImageMagick documentation.

103.6.199 Texture(Image as IMImage7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Layer a texture on pixels matching image background color.
Notes: See xx function in ImageMagick documentation.

103.6.200 Thumbnail(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the size of an image to the given dimensions and removes any associated profiles.
Notes: The goal is to produce small low cost thumbnail images suited for display on the Web.

columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.

See ThumbnailImage function in ImageMagick documentation.

103.6.201 TransformColorspace(ColorSpace as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transforms an image colorspace, changing the image data to reflect the new colorspace.
Notes: See TransformImageColorspace function in ImageMagick documentation.

103.6.202 Transpose as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.
Notes: See TransposeImage function in ImageMagick documentation.

103.6.203 Transverse as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.
Notes: See TransverseImage function in ImageMagick documentation.

103.6.204 Trim as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trims pixels from the image edges.
Notes: It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See TrimImage function in ImageMagick documentation.

103.6.205 UniqueColors as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the unique colors of an image.
Notes: See UniqueImageColors function in ImageMagick documentation.

103.6.206 UnsharpMask(radius as double, sigma as double, amount as double, threshold as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sharpens one or more image channels.
Notes: We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
gain: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence gain.

See UnsharpMaskImage function in ImageMagick documentation.

103.6.207 VirtualPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an immutable pixel region.
Notes: If the region is successfully accessed, a pointer to it is returned, otherwise nil is returned. The returned pointer may point to a temporary working copy of the pixels or it may point to the original pixels in memory. Performance is maximized if the selected region is part of one row, or one or more full rows, since there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image type is CMYK or the storage class is PseudoClass, call AuthenticMetacontent after invoking AuthenticPixels to access the meta-content (of type void) corresponding to the the region.

If you plan to modify the pixels, use GetAuthenticPixels() instead.

Note, the VirtualPixels() and AuthenticPixels() methods are not thread-safe. In a threaded environment, use CacheViewVirtualPixels() or CacheViewAuthenticPixels() instead.

See GetVirtualPixels function in ImageMagick documentation.
Format of pixel values depend on what quantum size/type your library copy uses!

103.6.208 Wave(amplitude as double, wavelength as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a "ripple" effect in the image by shifting the pixels vertically along a sine wave whose amplitude and wavelength is specified by the given parameters.
Notes: amplitude, wavelength: Define the amplitude and wave length of the sine wave.
pixelInterpolateMethod: the pixel interpolation method.

See WaveImage function in ImageMagick documentation.

103.6.209 WhiteThreshold(thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is like ThresholdImage() but forces all pixels above the threshold into white while leaving all pixels at or below the threshold unchanged.
Notes: threshold: Define the threshold value.

See WhiteThresholdImage function in ImageMagick documentation.

103.6.210 Properties

103.6.211 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha color.
Notes: When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

103.6.212 AlphaTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pixel trait for alpha channel.
Notes: Is transparency channel defined and active?
(Read and Write property)

103.6.213 AuthenticMetacontent as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the authentic metacontent corresponding with the last call to QueueAuthenticPixels() or GetVirtualPixels().
Notes: Nil is returned if the associated pixels are not available.
See GetAuthenticMetacontent function in ImageMagick documentation.
(Read only property)

103.6.214 AuthenticPixelQueue as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the authentic pixels associated corresponding with the last call to QueueAuthenticPixels or GetAuthenticPixels.
Notes: See GetAuthenticPixelQueue function in ImageMagick documentation.
(Read only property)

103.6.215 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current background color attribute.
Notes: When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

103.6.216 BlackPointCompensation as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to enable black point compensation for color space conversions.
Notes: (Read and Write property)

103.6.217 BlobSize as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the blob.
Notes: (Read only property)

103.6.218 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current bordercolor attribute.
Notes: When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

103.6.219 ChannelMask as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel mask field.
Notes: See Channel constants.
(Read and Write property)

103.6.220 Channels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel mask.
Notes: (Read and Write property)

103.6.221 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Size of color table, or actual color count.
Notes: Only valid if image is not DirectClass.
(Read only property)

103.6.222 Colorspace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorspace of image data.
Notes: (Read only property)

103.6.223 Columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Physical width of image in pixel.
Notes: (Read only property)

103.6.224 Compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Alpha composition method for layered images.
Notes: (Read and Write property)

103.6.225 CompositeMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to composite with mask.
Notes: (Read and Write property)

103.6.226 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression of image when read/write.
Notes: (Read and Write property)

103.6.227 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug output attribute.
Notes: (Read and Write property)

103.6.228 Delay as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Animation delay time.
Notes: (Read and Write property)

103.6.229 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Depth of image on read/write.
Notes: (Read only property)

103.6.230 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The directory.
Notes: (Read and Write property)

103.6.231 Dispose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: GIF animation disposal method.
Notes: (Read and Write property)

103.6.232 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dithering on/off.
Notes: (Read and Write property)

103.6.233 Duration as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Total animation duration.
Notes: sum(delay*iterations)
(Read and Write property)

103.6.234 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw data integer ordering on read/write.
Notes: (Read and Write property)

103.6.235 extent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Size of image read from disk.
Notes: (Read only property)
See also:

- 103.6.74 Extent(rect as IMRectangleInfo7MBS) as IMImage7MBS 15782

103.6.236 ExtractInfo as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Info.
Notes: (Read and Write property)

103.6.237 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path of the image.
Notes: (Read and Write property)

103.6.238 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resize/distort filter to apply.
Notes: (Read and Write property)

103.6.239 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current color fuzz attribute.
Notes: (Read and Write property)

103.6.240 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gamme of the image.
Notes: (Read only property)
See also:

• 103.6.80 Gamma(level as double) as Boolean 15784

103.6.241 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geomtry.
Notes: (Read and Write property)

103.6.242 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gravity attribute for positioning in image.
Notes: (Read and Write property)

103.6.243 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.6.244 HasAlphaChannel as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns false if the image alpha channel is not activated.
Notes: That is, the image is RGB rather than RGBA or CMYK rather than CMYKA.
See GetImageAlphaChannel function in ImageMagick documentation.
(Read only property)

103.6.245 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Physical height of image in pixel.
Notes: (Read only property)

103.6.246 ImageExtent as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image extent.
Notes: See GetImageExtent function in ImageMagick documentation.
(Read only property)

103.6.247 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image type.
Notes: See Type constants like TrueColorType for RGB images.
(Read only property)

103.6.248 Intensity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Method to generate an intensity value from a pixel.
Notes: (Read and Write property)

103.6.249 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace setting.
Notes: (Read and Write property)

103.6.250 Interpolate as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Interpolation of color for between pixel lookups.
Notes: (Read and Write property)

103.6.251 IsBlobExempt as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is exempt.
Notes: See IsBlobExempt function in ImageMagick documentation.
(Read only property)

103.6.252 IsBlobSeekable as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is seekable.
Notes: See IsBlobSeekable function in ImageMagick documentation.
(Read only property)

103.6.253 IsBlobTemporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the blob is temporary.
Notes: See IsBlobTemporary function in ImageMagick documentation.
(Read only property)

103.6.254 IsImageGray as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the type of the image is grayscale or bi-level.
Notes: See IsImageGray function in ImageMagick documentation.
(Read only property)

103.6.255 IsImageMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if type of the image is bi-level.
Notes: See IsImageMonochrome function in ImageMagick documentation.
(Read only property)

103.6.256 IsImageObject as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the image sequence contains a valid set of image objects.
Notes: See IsImageObject function in ImageMagick documentation.
(Read only property)

103.6.257 IsPaletteImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns MagickTrue if the image is PseudoClass and has 256 unique colors or less.
Notes: See IsPaletteImage function in ImageMagick documentation.
(Read only property)

103.6.258 IsTaintImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true any pixel in the image has been altered since it was first constituted.
Notes: has image been modified since reading
(Read only property)

103.6.259 Iterations as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of interations for GIF animations.
Notes: (Read and Write property)

103.6.260 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

103.6.261 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception raised.
Notes: (Read and Write property)

103.6.262 ListImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image list links.
Notes: (Read only property)

103.6.263 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magick module to use for encode/decode.
Notes: (Read and Write property)

103.6.264 MaskTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pixel trait for the mask.
Notes: Apply the clip or composite mask .
(Read and Write property)

103.6.265 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matte color.
Notes: When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

103.6.266 MetacontentExtent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of meta content.
Notes: (Read only property)

103.6.267 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The montage setting.
Notes: (Read and Write property)

103.6.268 NextImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image list links.
Notes: (Read only property)

103.6.269 NumberChannels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels.
Notes: (Read only property)

103.6.270 NumberMetaChannels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of meta channels..
Notes: (Read only property)

103.6.271 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Photo orientation of image.
Notes: (Read and Write property)

103.6.272 Page as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Virtual canvas size and offset of image.
Notes: (Read and Write property)

103.6.273 Ping as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: No image data read, just attributes.
Notes: (Read only property)
See also:

- 103.6.139 Ping(path as string) as IMImage7MBS 15804

103.6.274 PixelCacheFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries file path for cache file.
Notes: See GetPixelCacheFilename function in ImageMagick documentation.
(Read only property)

103.6.275 PixelCacheType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries pixel cache type.
Notes: See GetImagePixelCacheType function in ImageMagick documentation.
(Read only property)

103.6.276 PreviousImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image list links.
Notes: (Read only property)

103.6.277 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression quality setting, meaning varies.
Notes: (Read and Write property)

103.6.278 ReadMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to read mask.
Notes: (Read and Write property)

103.6.279 ReferenceCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns reference count for this image.
Notes: Several image objects can share pixel memory.
Calling Modify function makes sure you have your own pixels to modify.
(Read only property)

103.6.280 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to release the object in destructor.
Notes: (Read and Write property)

103.6.281 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes: (Read and Write property)

103.6.282 Resolution as IMPointInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image resolution/density.
Notes: See also Units property for the resolution unit.

(Read and Write property)

103.6.283 Rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Physical height of image in pixel.
Notes: (Read only property)

103.6.284 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Index of image in multi-image file.
Notes: (Read and Write property)

103.6.285 StartLoop as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The start loop value.
Notes: For GIF.
(Read and Write property)

103.6.286 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The storage class of the image.
Notes: (Read only property)

103.6.287 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Has image been modified since reading.
Notes: (Read and Write property)

103.6.288 TicksPerSecond as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Units for delay time, default 100 for GIF.
Notes: (Read and Write property)

103.6.289 TileOffset as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tile offset.
Notes: (Read and Write property)

103.6.290 TotalColors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Total number of colors.
Notes: (Read and Write property)

103.6.291 TransparentColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color for 'transparent' color index in GIF.
Notes: When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

103.6.292 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image type.
Notes: (Read only property)

103.6.293 Units as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolution/density ppi or ppc.
Notes: (Read and Write property)

103.6.294 VirtualMetacontent as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the virtual metacontent corresponding with the last call to QueueAuthenticPixels or GetVirtualPixels.
Notes: Nil is returned if the meta-content are not available.
See GetVirtualMetacontent function in ImageMagick documentation.
(Read only property)

103.6.295 VirtualPixelQueue as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the virtual pixels associated corresponding with the last call to QueueAuthenticPixels or GetVirtualPixels.
Notes: See GetVirtualPixelQueue function in ImageMagick documentation.
(Read only property)

103.6.296 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Physical width of image in pixel.
Notes: (Read only property)

103.6.297 WriteMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to write mask.
Notes: (Read and Write property)

103.6.298 Constants

Constants

Constant	Value	Description
kTransparentAlpha	0	The value for transparent alpha.

Intent

Constant	Value	Description
kAbsoluteIntent	3	
kPerceptualIntent	2	
kRelativeIntent	4	
kSaturationIntent	1	
kUndefinedIntent	0	

Alpha Channel

Constant	Value	Description
kActivateAlphaChannel	1	
kAssociateAlphaChannel	2	
kBackgroundAlphaChannel	3	
kCopyAlphaChannel	4	
kDeactivateAlphaChannel	5	
kDisassociateAlphaChannel	7	
kDiscreteAlphaChannel	6	
kExtractAlphaChannel	8	
kOffAlphaChannel	9	
kOnAlphaChannel	10	
kOpaqueAlphaChannel	11	
kRemoveAlphaChannel	12	
kSetAlphaChannel	13	
kShapeAlphaChannel	14	
kTransparentAlphaChannel	15	
kUndefinedAlphaChannel	0	

Complex Operators

Constant	Value	Description
kAddComplexOperator	1	Add
kConjugateComplexOperator	2	ConjugateC
kDivideComplexOperator	3	Divide
kMagnitudePhaseComplexOperator	4	Magnitude Phase
kMultiplyComplexOperator	5	Multiply
kRealImaginaryComplexOperator	6	Real Imaginary
kSubtractComplexOperator	7	Subtract
kUndefinedComplexOperator	0	Undefined

Preview

Constant	Value	Description
kAddNoisePreview	14	
kBlurPreview	16	
kBrightnessPreview	6	
kCharcoalDrawingPreview	28	
kDespecklePreview	12	
kDullPreview	9	
kEdgeDetectPreview	18	
kGammaPreview	7	
kGrayscalePreview	10	
kHuePreview	4	
kImplodePreview	25	
kJPEGPreview	29	
kOilPaintPreview	27	
kQuantizePreview	11	
kRaisePreview	22	
kReduceNoisePreview	13	
kRollPreview	3	
kRotatePreview	1	
kSaturationPreview	5	
kSegmentPreview	23	
kShadePreview	21	
kSharpenPreview	15	
kShearPreview	2	
kSolarizePreview	20	
kSpiffPreview	8	
kSpreadPreview	19	
kSwirlPreview	24	
kThresholdPreview	17	
kUndefinedPreview	0	
kWavePreview	26	

Distortion

Constant	Value	Description
kAffineDistortion	1	
kAffineProjectionDistortion	2	
kArcDistortion	9	
kBarrelDistortion	14	
kBarrelInverseDistortion	15	
kBilinearDistortion	6	
kBilinearForwardDistortion	6	
kBilinearReverseDistortion	7	
kCylinder2PlaneDistortion	12	
kDePolarDistortion	11	
kPerspectiveDistortion	4	
kPerspectiveProjectionDistortion	5	
kPlane2CylinderDistortion	13	
kPolarDistortion	10	
kPolynomialDistortion	8	
kResizeDistortion	17	
kScaleRotateTranslateDistortion	3	
kSentinelDistortion	18	
kShepardsDistortion	16	
kUndefinedDistortion	0	

Composite Operators

Constant	Value	Description
kAlphaCompositeOp	1	
kAtopCompositeOp	2	
kBlendCompositeOp	3	
kBlurCompositeOp	4	
kBumpmapCompositeOp	5	
kChangeMaskCompositeOp	6	
kClearCompositeOp	7	
kColorBurnCompositeOp	8	
kColorDodgeCompositeOp	9	
kColorizeCompositeOp	10	
kCopyAlphaCompositeOp	17	
kCopyBlackCompositeOp	11	
kCopyBlueCompositeOp	12	
kCopyCompositeOp	13	
kCopyCyanCompositeOp	14	
kCopyGreenCompositeOp	15	
kCopyMagentaCompositeOp	16	
kCopyRedCompositeOp	18	
kCopyYellowCompositeOp	19	
kDarkenCompositeOp	20	
kDarkenIntensityCompositeOp	21	
kDifferenceCompositeOp	22	
kDisplaceCompositeOp	23	
kDissolveCompositeOp	24	
kDistortCompositeOp	25	
kDivideDstCompositeOp	26	
kDivideSrcCompositeOp	27	
kDstAtopCompositeOp	28	
kDstCompositeOp	29	
kDstInCompositeOp	30	
kDstOutCompositeOp	31	
kDstOverCompositeOp	32	
kExclusionCompositeOp	33	
kHardLightCompositeOp	34	
kHardMixCompositeOp	35	
kHueCompositeOp	36	
kInCompositeOp	37	
kIntensityCompositeOp	38	
kLightenCompositeOp	39	
kLightenIntensityCompositeOp	40	
kLinearBurnCompositeOp	41	
kLinearDodgeCompositeOp	42	
kLinearLightCompositeOp	43	
kLuminizeCompositeOp	44	
kMathematicsCompositeOp	45	
kMinusDstCompositeOp	46	
kMinusSrcCompositeOp	47	
kModulateCompositeOp	48	
kModulusAddCompositeOp	49	
kModulusSubtractCompositeOp	50	
kMultiplyCompositeOp	51	
kNoCompositeOp	52	
kOutCompositeOp	53	
kOverCompositeOp	54	
kOverlayCompositeOp	55	
kPegtopLightCompositeOp	56	
kPinLightCompositeOp	57	
kPlusCompositeOp	58	

Dispose

Constant	Value	Description
kBackgroundDispose	2	
kNoneDispose	1	
kPreviousDispose	3	
kUndefinedDispose	0	
kUnrecognizedDispose	0	

Color Interpolate

Constant	Value	Description
kBarycentricColorInterpolate	1	
kBilinearColorInterpolate	7	
kInverseColorInterpolate	19	
kManhattanColorInterpolate	20	
kPolynomialColorInterpolate	8	
kShepardsColorInterpolate	16	
kUndefinedColorInterpolate	0	
kVoronoiColorInterpolate	18	

Color Types

Constant	Value	Description
kBilevelType	1	
kColorSeparationAlphaType	9	
kColorSeparationType	8	
kGrayscaleAlphaType	3	
kGrayscaleType	2	
kOptimizeType	10	
kPaletteAlphaType	5	
kPaletteBilevelAlphaType	11	
kPaletteType	4	
kTrueColorAlphaType	7	
kTrueColorType	6	
kUndefinedType	0	

Orientations

Constant	Value	Description
kBottomLeftOrientation	4	
kBottomRightOrientation	3	
kLeftBottomOrientation	8	
kLeftTopOrientation	5	
kRightBottomOrientation	7	
kRightTopOrientation	6	
kTopLeftOrientation	1	
kTopRightOrientation	2	
kUndefinedOrientation	0	

Color Spaces

Constant	Value	Description
kCMYColorspace	1	
kCMYKColorspace	2	
kGRAYColorspace	3	
kHCLColorspace	4	
kHCLpColorspace	5	
kHSBColorspace	6	
kHSIColorspace	7	
kHSLColorspace	8	
kHSVColorspace	9	
kHWBColorspace	10	
kLabColorspace	11	
kLCHabColorspace	13	
kLCHColorspace	12	
kLCHuvColorspace	14	
kLinearGRAYColorspace	33	
kLMSColorspace	16	
kLogColorspace	15	
kLuvColorspace	17	
kOHTAColorspace	18	
kRec601YCbCrColorspace	19	
kRec709YCbCrColorspace	20	
kRGBColorspace	21	
kscRGBColorspace	22	
ksRGBColorspace	23	
kTransparentColorspace	24	
kUndefinedColorspace	0	
kxyYColorspace	25	
kXYZColorspace	26	
kYCbCrColorspace	27	
kYCCColorspace	28	
kYDbDrColorspace	29	
kYIQColorspace	30	
kYPbPrColorspace	31	
kYUVColorspace	32	

Layers

Constant	Value	Description
kCoalesceLayer	1	
kCompareAnyLayer	2	
kCompareClearLayer	3	
kCompareOverlayLayer	4	
kCompositeLayer	12	
kDisposeLayer	5	
kFlattenLayer	14	
kMergeLayer	13	
kMosaicLayer	15	
kOptimizeImageLayer	7	
kOptimizeLayer	6	
kOptimizePlusLayer	8	
kOptimizeTransLayer	9	
kRemoveDupsLayer	10	
kRemoveZeroLayer	11	
kTrimBoundsLayer	16	
kUndefinedLayer	0	

Cache

Constant	Value	Description
kDiskCache	1	
kDistributedCache	2	
kMapCache	3	
kMemoryCache	4	
kPingCache	5	
kUndefinedCache	0	

Interlace

Constant	Value	Description
kGIFInterlace	5	
kJPEGInterlace	6	
kLineInterlace	2	
kNoInterlace	1	
kPartitionInterlace	4	
kPlaneInterlace	3	
kPNGInterlace	7	
kUndefinedInterlace	0	

Threshold Methods

Constant	Value	Description
kKapurThresholdMethod	1	
kOTSUThresholdMethod	2	
kTriangleThresholdMethod	3	
kUndefinedThresholdMethod	0	

Resolutions

Constant	Value	Description
kPixelsPerCentimeterResolution	2	
kPixelsPerInchResolution	1	
kUndefinedResolution	0	

103.7 class IMImageAffineMatrix7MBS

103.7.1 class IMImageAffineMatrix7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an affine transformation matrix.

103.7.2 Methods

103.7.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Initializes with an identity matrix.

103.7.4 Properties

103.7.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation-x part of the affine transformation.
Notes: (Read and Write property)

103.7.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation-y part of the affine transformation.
Notes: (Read and Write property)

103.7.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale-x part of the affine transformation.
Notes: (Read and Write property)

103.7.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale-y part of the affine transformation.
Notes: (Read and Write property)

103.7.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate-x part of the affine transformation.
Notes: (Read and Write property)

103.7.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The translate-y part of the affine transformation.
Notes: (Read and Write property)

103.8 class IMImageInfo7MBS

103.8.1 class IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for image info.
Notes: This represents usually an image you want to load or save.
Blog Entries

- MBS Xojo Plugins, version 20.0pr5

103.8.2 Methods

103.8.3 BlobToImage(Data as MemoryBlock) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: BlobToImage implements direct to memory image formats. It returns the blob as an image.
Notes: See BlobToImage function in ImageMagick documentation.
See also:

- 103.8.4 BlobToImage(Data as String) as IMImage7MBS 15854

103.8.4 BlobToImage(Data as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: BlobToImage implements direct to memory image formats. It returns the blob as an image.
Notes: See BlobToImage function in ImageMagick documentation.
See also:

- 103.8.3 BlobToImage(Data as MemoryBlock) as IMImage7MBS 15854

103.8.5 Clone as IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Makes a copy of the given image info object.
Notes: See CloneImageInfo function in ImageMagick documentation.

103.8.6 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty image info.
Notes: See CloneImageInfo function in ImageMagick documentation.
See also:

- 103.8.7 Constructor(ImageInfo as IMImageInfo7MBS) 15855

103.8.7 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of an existing image info.
Notes: See CloneImageInfo function in ImageMagick documentation.
See also:

- 103.8.6 Constructor 15854

103.8.8 PingBlob(Data as MemoryBlock) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pings a blob.
Notes: Reads image attributes, but not image data.
See PingBlob function in ImageMagick documentation.
See also:

- 103.8.9 PingBlob(Data as String) as IMImage7MBS 15855

103.8.9 PingBlob(Data as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pings a blob.
Notes: Reads image attributes, but not image data.
See PingBlob function in ImageMagick documentation.
See also:

- 103.8.8 PingBlob(Data as MemoryBlock) as IMImage7MBS 15855

103.8.10 PingImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the properties of an image or image sequence except for the pixels.
Notes: It is much faster and consumes far less memory than ReadImage. On failure, a nil image is returned

and exception describes the reason for the failure.

See PingImage function in ImageMagick documentation.

103.8.11 PingImages(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pings one or more images and returns them as an image list.
Notes: See xx function in ImageMagick documentation.

103.8.12 ReadImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image or image sequence from a file or file handle.
Notes: The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadImage function in ImageMagick documentation.

103.8.13 ReadImages(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads one or more images and returns them as an image list.
Notes: See xx function in ImageMagick documentation.

103.8.14 ReadInlineImage(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a Base64-encoded inline image or image sequence.
Notes: The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadInlineImage function in ImageMagick documentation.

103.8.15 WriteImage(image as IMImage7MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an image or an image sequence to a file or file handle.
Notes: If writing to a file is on disk, the name is defined by the filename member of the image object. WriteImage returns False is there is a memory shortage or if the image cannot be written. Check the exception member of image to determine the cause for any failure.

See WriteImage function in ImageMagick documentation.

103.8.16 WriteImages(image as IMImage7MBS, filename as String) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes an image sequence into one or more files.
Notes: While WriteImage can write an image sequence, it is limited to writing the sequence into a single file using a format which supports multiple frames. WriteImages, however, does not have this limitation, instead it generates multiple output files if necessary (or when requested). When ImageInfo's adjoin flag is set to False, the file name is expected to include a printf-style formatting string for the frame number (e.g. "image02d.png").

See WriteImages function in ImageMagick documentation.

103.8.17 Properties

103.8.18 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save images to separate scene files.
Notes: (Read and Write property)

103.8.19 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Affirm flag.
Notes: (Read and Write property)

103.8.20 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha color value.
Notes: (Read and Write property)

103.8.21 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The anti alias flag.
Notes: (Read and Write property)

103.8.22 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The background color.
Notes: (Read and Write property)

103.8.23 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border color.
Notes: (Read and Write property)

103.8.24 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The channel types.
Notes: See ChannelType constants.
(Read and Write property)

103.8.25 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorspace of image data.
Notes: See Colorspace constants.
(Read and Write property)

103.8.26 Compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Alpha composition method for layered images.
Notes: (Read and Write property)

103.8.27 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression of image when read/write.
Notes: (Read and Write property)

103.8.28 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Debug enabled.
Notes: (Read and Write property)

103.8.29 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: DUP for image and draw_info.
Notes: (Read and Write property)

103.8.30 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Depth of image on read/write.
Notes: (Read and Write property)

103.8.31 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: dithering on/off.
Notes: (Read and Write property)

103.8.32 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: raw data integer ordering on read/write.
Notes: (Read and Write property)

103.8.33 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crop/resize string on image read.
Notes: (Read and Write property)

103.8.34 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path of the image.
Notes: (Read and Write property)

103.8.35 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font name for drawing functions.
Notes: (Read and Write property)

103.8.36 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current color fuzz attribute.
Notes: (Read and Write property)

103.8.37 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.8.38 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Interlace for image write.
Notes: See Interlace constants.
(Read and Write property)

103.8.39 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

103.8.40 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception raised.
Notes: (Read and Write property)

103.8.41 Length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of data.
Notes: (Read and Write property)

103.8.42 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magick module to use for encode/decode.
Notes: (Read and Write property)

103.8.43 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matte color.
Notes: (Read and Write property)

103.8.44 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to read/write pcl,pdf,ps,xps as monocrome image.
Notes: (Read and Write property)

103.8.45 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of the image.
Notes: See orientation constants.
(Read and Write property)

103.8.46 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page number.
Notes: (Read and Write property)

103.8.47 Ping as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If enabled only fast read image attributes, not image data.
Notes: (Read and Write property)

103.8.48 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The point size.
Notes: (Read and Write property)

103.8.49 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compression quality setting, meaning varies.
Notes: (Read and Write property)

103.8.50 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wether to release the object in destructor.
Notes: (Read and Write property)

103.8.51 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: JPEG write sampling factor.
Notes: (Read and Write property)

103.8.52 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starting value for image save numbering.
Notes: (Read and Write property)

103.8.53 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Total number of images in list - for escapes.
Notes: (Read and Write property)

103.8.54 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scene numbers that is to be read in.
Notes: (Read and Write property)

103.8.55 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: X windows server name - display/animate.
Notes: (Read and Write property)

103.8.56 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image generation size.
Notes: (Read and Write property)

103.8.57 Synchronize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Synchronize flag.
Notes: (Read and Write property)

103.8.58 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether image file is temporary.
Notes: image file to be deleted after read "empemeral:".
(Read and Write property)

103.8.59 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: montage/display background tile.
Notes: (Read and Write property)

103.8.60 TransparentColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: color for transparent index in color tables.
Notes: (Read and Write property)

103.8.61 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image type.
Notes: e.g. TrueColorAlphaType.
(Read and Write property)

103.8.62 Unique as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unique tempory filename - delegates.
Notes: (Read and Write property)

103.8.63 Units as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The resolution unit.
Notes: Density pixels/inch or pixel/cm.
Either kPixelsPerInchResolution or kPixelsPerCentimeterResolution.

(Read and Write property)

103.8.64 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verbose output enable/disable.
Notes: (Read and Write property)

103.9 class IMKernelInfo7MBS

103.9.1 class IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The kernel information details.

103.9.2 Methods

103.9.3 Clone as IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the kernel info object.
Notes: Creates a new clone of the given Kernel List so that its can be modified without effecting the original.

103.9.4 Constructor(KernelInfo as IMKernelInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the kernel.
See also:

- 103.9.5 Constructor(kernelString as String) 15867
- 103.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS) 15869

103.9.5 Constructor(kernelString as String)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Takes the given string (generally supplied by the user) and converts it into a Morphology/Convolution Kernel.
Notes: This allows users to specify a kernel from a number of pre-defined kernels, or to fully specify their own kernel for a specific Convolution or Morphology Operation.

The kernel so generated can be any rectangular array of floating point values (doubles) with the 'control point' or 'pixel being affected' anywhere within that array of values.

Previously IM was restricted to a square of odd size using the exact center as origin, this is no longer the case, and any rectangular kernel with any value being declared the origin. This in turn allows the use of

highly asymmetrical kernels.

The floating point values in the kernel can also include a special value known as 'nan' or 'not a number' to indicate that this value is not part of the kernel array. This allows you to shaped the kernel within its rectangular area. That is 'nan' values provide a 'mask' for the kernel shape. However at least one non-nan value must be provided for correct working of a kernel.

The returned kernel should be freed using the DestroyKernelInfo() when you are finished with it. Do not free this memory yourself.

Input kernel defintion strings can consist of any of three types.

"name:args [[@><] " Select from one of the built in kernels, using the name and geometry arguments supplied. See AcquireKernelBuiltIn()

"WxH [+X+Y] [@><] :num, num, num ..." a kernel of size W by H, with W*H floating point numbers following. the 'center' can be optionally be defined at +X+Y (such that +0+0 is top left corner). If not defined the pixel in the center, for odd sizes, or to the immediate top or left of center for even sizes is automatically selected.

"num, num, num, num, ..." list of floating point numbers defining an 'old style' odd sized square kernel. At least 9 values should be provided for a 3x3 square kernel, 25 for a 5x5 square kernel, 49 for 7x7, etc. Values can be space or comma separated. This is not recommended.

You can define a 'list of kernels' which can be used by some morphology operators A list is defined as a semi-colon separated list kernels.

" kernel ; kernel ; kernel ; "

Any extra ';' characters, at start, end or between kernel defintions are simply ignored.

The special flags will expand a single kernel, into a list of rotated kernels. A '@' flag will expand a 3x3 kernel into a list of 45-degree cyclic rotations, while a '>' will generate a list of 90-degree rotations. The '<' also exands using 90-degree rotates, but giving a 180-degree reflected kernel before the +/- 90-degree rotations, which can be important for Thinning operations.

Note that 'name' kernels will start with an alphabetic character while the new kernel specification has a ':' character in its specification string. If neither is the case, it is assumed an old style of a simple list of numbers generating a odd-sized square kernel has been given.

kernelString: the Morphology/Convolution kernel wanted.

See also AcquireKernelInfo in ImageMagick documentation.
See also:

- 103.9.4 Constructor(KernelInfo as IMKernelInfo7MBS) 15867
- 103.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS) 15869

103.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns one of the 'named' built-in types of kernels used for special purposes such as gaussian blurring, skeleton pruning, and edge distance determination.
Notes: They take a KernelType, and a set of geometry style arguments, which were typically decoded from a user supplied string, or from a more complex Morphology Method that was requested.

A description of each parameter follows:

type: the pre-defined type of kernel wanted
args: arguments defining or modifying the kernel

Convolution Kernels
Unity The a No-Op or Scaling single element kernel.
Gaussian: { radius } , { sigma } Generate a two-dimensional gaussian kernel, as used by -gaussian. The sigma for the curve is required. The resulting kernel is normalized,
If 'sigma' is zero, you get a single pixel on a field of zeros.
NOTE: that the 'radius' is optional, but if provided can limit (clip) the final size of the resulting kernel to a square 2*radius+1 in size. The radius should be at least 2 times that of the sigma value, or sever clipping and aliasing may result. If not given or set to 0 the radius will be determined so as to produce the best minimal error result, which is usally much larger than is normally needed.
LoG: { radius } , { sigma } "Laplacian of a Gaussian" or "Mexician Hat" Kernel. The supposed ideal edge detection, zero-summing kernel.
An alternative to this kernel is to use a "DoG" with a sigma ratio of approx 1.6 (according to wikipedia).
DoG: { radius } , { sigma1 } , { sigma2 } "Difference of Gaussians" Kernel. As "Gaussian" but with a gaussian produced by 'sigma2' subtracted from the gaussian produced by 'sigma1'. Typically sigma2 >sigma1. The result is a zero-summing kernel.
Blur: { radius } , { sigma } [, { angle }] Generates a 1 dimensional or linear gaussian blur, at the angle given (current restricted to orthogonal angles). If a 'radius' is given the kernel is clipped to a width of 2*radius+1. Kernel can be rotated by a 90 degree angle.
If 'sigma' is zero, you get a single pixel on a field of zeros.
Note that two convolutions with two "Blur" kernels perpendicular to each other, is equivalent to a far larger "Gaussian" kernel with the same sigma value, However it is much faster to apply. This is how the "-blur" operator actually works.
Comet: { width } , { sigma } , { angle } Blur in one direction only, much like how a bright object leaves a

comet like trail. The Kernel is actually half a gaussian curve, Adding two such blurs in opposite directions produces a Blur Kernel. Angle can be rotated in multiples of 90 degrees.
Note that the first argument is the width of the kernel and not the radius of the kernel.
Binomial: [{ radius }] Generate a discrete kernel using a 2 dimentional Pascel's Triangle of values. Used for special forma of image filters.

- 103.9.4 Constructor(KernelInfo as IMKernelInfo7MBS) 15867
- 103.9.5 Constructor(kernelString as String) 15867

103.9.7 Scale(scaleFactor as double, GeometryFlags as integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the given kernel.
Notes: Scales the given kernel list by the given amount, with or without normalization of the sum of the kernel values (as per given flags).

By default (no flags given) the values within the kernel is scaled directly using given scaling factor without change.

If either of the two 'normalize_flags' are given the kernel will first be normalized and then further scaled by the scaling factor value given.

Kernel normalization ('normalize_flags' given) is designed to ensure that any use of the kernel scaling factor with 'Convolve' or 'Correlate' morphology methods will fall into -1.0 to +1.0 range. Note that for non-HDRI versions of IM this may cause images to have any negative results clipped, unless some 'bias' is used.

More specifically. Kernels which only contain positive values (such as a 'Gaussian' kernel) will be scaled so that those values sum to +1.0, ensuring a 0.0 to +1.0 output range for non-HDRI images.

For Kernels that contain some negative values, (such as 'Sharpen' kernels) the kernel will be scaled by the absolute of the sum of kernel values, so that it will generally fall within the +/- 1.0 range.

For kernels whose values sum to zero, (such as 'Laplician' kernels) kernel will be scaled by just the sum of the postive values, so that its output range will again fall into the +/- 1.0 range.

For special kernels designed for locating shapes using 'Correlate', (often only containing +1 and -1 values, representing foreground/brackground matching) a special normalization method is provided to scale the positive values separately to those of the negative values, so the kernel will be forced to become a zero-sum kernel better suited to such searches.

WARNING: Correct normalization of the kernel assumes that the '*_range' attributes within the kernel structure have been correctly set during the kernels creation.

NOTE: The values used for 'normalize_flags' have been selected specifically to match the use of geometry options, so that '!' means NormalizeValue, '^' means CorrelateNormalizeValue. All other GeometryFlags values are ignored.

scaleFactor: zero. If the kernel is normalized regardless of any flags.
GeometryFlags: specifically: NormalizeValue, CorrelateNormalizeValue, and/or PercentValue.

See also ScaleKernelInfo in ImageMagick documentation.

103.9.8 ScaleGeometry(Geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales using a geometry.
Notes: Takes a geometry argument string, typically provided as a "-set option:convolve:scale { geometry } " user setting, and modifies the kernel according to the parsed arguments of that setting.

The first argument (and any normalization flags) are passed to ScaleKernelInfo() to scale/normalize the kernel. The second argument is then passed to UnityAddKernelInfo() to add a scled unity kernel into the scaled/normalized kernel.

geometry: "-set option:convolve:scale { geometry } " setting.

See also ScaleGeometryKernelInfo in ImageMagick documentation.

103.9.9 UnityAddKernelInfo(scale as double)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a given amount of the 'Unity' Convolution Kernel to the given pre-scaled and normalized Kernel.
Notes: This in effect adds that amount of the original image into the resulting convolution kernel. This value is usually provided by the user as a percentage value in the 'convolve:scale' setting.

The resulting effect is to convert the defined kernels into blended soft-blurs, unsharp kernels or into sharpening kernels.

See also UnityAdditionKernelInfo in ImageMagick documentation.

103.9.10 Properties

103.9.11 Angle as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The angle parameter.
Notes: (Read and Write property)

103.9.12 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.9.13 Height as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height value.
Notes: (Read and Write property)

103.9.14 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last error code.
Notes: (Read and Write property)

103.9.15 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last exception raised.
Notes: (Read and Write property)

103.9.16 Maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum parameter.
Notes: (Read and Write property)

103.9.17 Minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum parameter.
Notes: (Read and Write property)

103.9.18 NegativeRange as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The negative range parameter.
Notes: (Read and Write property)

103.9.19 NextKernel as IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next kernel in a list of kernels.
Notes: (Read only property)

103.9.20 PositiveRange as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The postive range parameter.
Notes: (Read and Write property)

103.9.21 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to release to kernel info structure in destructor.
Notes: (Read and Write property)

103.9.22 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of kernel.
Notes: See Kernel constants.
(Read and Write property)

103.9.23 Values as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer to the values.
Notes: (Read only property)

103.9.24 Width as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width value.
Notes: (Read and Write property)

103.9.25 X as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: X coordinate.
Notes: (Read and Write property)

103.9.26 Y as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y coordinate.
Notes: (Read and Write property)

103.9.27 Constants

Kernel

Constant	Value	Description
KernelBinomial	7	Binomial
KernelBlur	5	Convolution Kernels, Gaussian Based.
KernelChebyshev	33	One Distance Measuring Kernel.
KernelComet	6	Convolution Kernels, Gaussian Based.
KernelCompass	13	Convolution Kernel.
KernelConvexHull	30	A Hit And Miss Kernel.
KernelCorners	25	A Hit And Miss Kernel.
KernelCross	21	A shape kernel.
KernelDiagonals	26	A Hit And Miss Kernel.
KernelDiamond	15	A shape kernel.
KernelDisk	19	A shape kernel.
KernelDoG	3	Convolution Kernels, Gaussian Based.
KernelEdges	24	A Hit And Miss Kernel.
KernelEuclidean	36	One Distance Measuring Kernel.
KernelFreiChen	10	Convolution Kernel.
KernelGaussian	2	Convolution Kernels, Gaussian Based.
KernelKirsch	14	Convolution Kernel.
KernelLaplacian	8	Convolution Kernel.
KernelLineEnds	27	A Hit And Miss Kernel.
KernelLineJunctions	28	A Hit And Miss Kernel.
KernelLoG	4	Convolution Kernels, Gaussian Based.
KernelManhattan	34	One Distance Measuring Kernel.
KernelOctagon	18	A shape kernel.
KernelOctagonal	35	One Distance Measuring Kernel.
KernelPeaks	23	A Hit And Miss Kernel.
KernelPlus	20	A shape kernel.
KernelPrewitt	12	Convolution Kernel.
KernelRectangle	17	A shape kernel.
KernelRidges	29	A Hit And Miss Kernel.
KernelRing	22	A shape kernel.
KernelRoberts	11	Convolution Kernel.
KernelSkeleton	32	A Hit And Miss Kernel.
KernelSobel	9	Convolution Kernel.
KernelSquare	16	A shape kernel.
KernelThinSE	31	A Hit And Miss Kernel.
KernelUndefined	0	equivalent to Unity Kernel
KernelUnity	1	The no-op or 'original image' kernel
KernelUserDefinedKernel	37	User Specified Kernel Array

Morphology

Constant	Value	Description
MorphologyBottomHat	17	
MorphologyClose	9	
MorphologyCloseIntensity	11	
MorphologyConvolve	1	
MorphologyCorrelate	2	
MorphologyDilate	4	
MorphologyDilateIntensity	6	
MorphologyDistance	21	
MorphologyEdge	15	
MorphologyEdgeIn	13	
MorphologyEdgeOut	14	
MorphologyErode	3	
MorphologyErodeIntensity	5	
MorphologyHitAndMiss	18	
MorphologyIterativeDistance	7	
MorphologyOpen	8	
MorphologyOpenIntensity	10	
MorphologySmooth	12	
MorphologyThicken	20	
MorphologyThinning	19	
MorphologyTopHat	16	
MorphologyUndefined	0	
MorphologyVoronoi	22	

103.10 class IMMagickInfo7MBS

103.10.1 class IMMagickInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an encoder/decoder module.

103.10.2 Properties

103.10.3 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description field.
Notes: e.g. "Joint Photographic Experts Group JFIF format" for JPEG format.
(Read only property)

103.10.4 flags as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various flags.
Notes: (Read only property)

103.10.5 FormatType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of format defined.
Notes: (Read only property)

103.10.6 MimeType as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime type.
Notes: e.g. "image/jpeg" for JPEG format.
(Read only property)

103.10.7 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module name.
Notes: (Read only property)

103.10.8 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the encoder/decoder.
Notes: (Read only property)

103.10.9 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The note for this magick.
Notes: (Read only property)

103.10.10 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number.
Notes: e.g. ”libjpeg 90” for JPEG library.
(Read only property)

103.10.11 Constants

Flags

Constant	Value	Description
FlagAdjoin	&h0001	Supports adjoin.
FlagBlobSupport	&h0002	Supports blob handling, e.g. reading image from memory.
FlagDecoderSeekableStream	&h0200	Decoder supports seakable streams.
FlagDecoderThreadSupport	&h0004	Supports decoding with threads.
FlagEncoderSeekableStream	&h0400	Encoder supports seekable streams.
FlagEncoderThreadSupport	&h0008	Supports encoding with threads.
FlagEndianSupport	&h0010	Supports endian.
FlagNone	&h0000	No flags set.
FlagRawSupport	&h0020	Whether RAW processing is supported.
FlagSeekableStream	&h0040	Supports seakable streams.
FlagStealth	&h0080	Stealth flag (hidden).
FlagUseExtension	&h0100	Uses extension.

Format Types

Constant	Value	Description
FormatTypeExplicit	2	Explicit defined format type.
FormatTypeImplicit	1	Implicit defined format type.
FormatTypeUndefined	0	Not defined.

103.11 class IMMagickInfoList7MBS

103.11.1 class IMMagickInfoList7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an array of magick info objects.

103.11.2 Methods

103.11.3 Item(index as integer) as IMMagickInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an item by the index.
Notes: Index is zero based to Count-1.

103.11.4 Properties

103.11.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries.
Notes: (Read only property)

103.11.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

103.12 class IMMissingFunctionException7MBS

103.12.1 class IMMissingFunctionException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The exception for a missing function.
Notes: Subclass of the RuntimeException class.

103.13 class IMMontageInfo7MBS

103.13.1 class IMMontageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for montage settings.

103.13.2 Methods

103.13.3 Clone(ImageInfo as IMImageInfo7MBS) as IMMontageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the montage settings.

103.13.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes object.
Notes: Same as destructor.

103.13.5 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

103.13.6 Properties

103.13.7 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha color.
Notes: (Read and Write property)

103.13.8 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The background color.
Notes: (Read and Write property)

103.13.9 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border color.
Notes: (Read and Write property)

103.13.10 BorderWidth as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border width.
Notes: (Read and Write property)

103.13.11 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to output debug messages.
Notes: (Read and Write property)

103.13.12 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The filename.
Notes: (Read and Write property)

103.13.13 Fill as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill color.
Notes: (Read and Write property)

103.13.14 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font name.
Notes: (Read and Write property)

103.13.15 Frame as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frame.
Notes: (Read and Write property)

103.13.16 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry.
Notes: (Read and Write property)

103.13.17 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gravity setting.
Notes: (Read and Write property)

103.13.18 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.13.19 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

103.13.20 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception raised.
Notes: (Read and Write property)

103.13.21 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The matte color.
Notes: (Read and Write property)

103.13.22 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The point size.
Notes: (Read and Write property)

103.13.23 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to release object in destructor.
Notes: (Read and Write property)

103.13.24 Shadow as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use shadow.
Notes: (Read and Write property)

103.13.25 Stroke as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stroke color.
Notes: (Read and Write property)

103.13.26 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The texture string.
Notes: (Read and Write property)

103.13.27 Tile as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tile string.
Notes: (Read and Write property)

103.13.28 Title as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title string.
Notes: (Read and Write property)

103.13.29 Constants

Montage Modes

Constant	Value	Description
MontageModeConcatenate	3	Concatenate
MontageModeFrame	1	Frame
MontageModeUndefined	0	Undefined
MontageModeUnframe	2	Unframe

103.14 class IMOptionInfo7MBS

103.14.1 class IMOptionInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for options.

103.14.2 Methods

103.14.3 CommandOptionToMnemonic(option as integer, type as integer) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries command name for a given option number.

103.14.4 GetCommandOptionInfo(name as string) as IMOptionInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries option info for given command code.

103.14.5 IsCommandOption(name as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether the given option is a command option.

103.14.6 Properties

103.14.7 Flags as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

103.14.8 Mnemonic as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the option.
Notes: (Read and Write property)

103.14.9 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stealth property.
Notes: This option is hidden.
(Read and Write property)

103.14.10 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of option.
Notes: (Read and Write property)

103.14.11 Constants

Validate Types

Constant	Value	Description
AllValidate	&h7fffffff	
ColorspaceValidate	&h00001	
CompareValidate	&h00002	
CompositeValidate	&h00004	
ConvertValidate	&h00008	
FormatsDiskValidate	&h00010	
FormatsMapValidate	&h00020	
FormatsMemoryValidate	&h00040	
IdentifyValidate	&h00080	
ImportExportValidate	&h00100	
MagickValidateOptions	74	
MontageValidate	&h00200	
NoValidate	&h00000	
StreamValidate	&h00400	
UndefinedValidate	0	

Flags

Constant	Value	Description
AlwaysInterpretArgsFlag	&h0400	Always Interpret escapes in Args. CF: ”convert” compatibility mode
DeprecateOptionFlag	&h4000	Deprecate option (no code).
DrawInfoOptionFlag	&h0002	Setting stored in DrawInfo
FireOptionFlag	&h2000	Convert operation seq firing point
GenesisOptionFlag	&h0080	MagickCommandGenesis() Only Option
GlobalOptionFlag	&h0008	Global Setting or Control
ImageInfoOptionFlag	&h0001	Setting stored in ImageInfo
ListOperatorFlag	&h0040	Multi-Image processing operator
NeverInterpretArgsFlag	&h0800	Never Interpret escapes in Args. EG: filename, or delayed escapes.
NoImageOperatorFlag	&h0010	Images not required operator
NonMagickOptionFlag	&h1000	Option not used by Magick Command.
QuantizeInfoOptionFlag	&h0004	Setting stored in QuantizeInfo
ReplacedOptionFlag	&h8800	Replaced Option (but still works).
SettingOptionFlags	&h000F	mask any setting option
SimpleOperatorFlag	&h0020	Simple Image processing operator
SpecialOptionFlag	&h0100	Operator with Special Requirements. EG: for specific CLI commands
UndefinedOptionFlag	&h0000	option flag is not in use

Command Options

Constant	Value	Description
MagickAlignOptions	0	
MagickAlphaChannelOptions	1	
MagickAutoThresholdOptions	77	
MagickBooleanOptions	2	
MagickCacheOptions	3

103.15 class IMPixelInfo7MBS

103.15.1 class IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a pixel info.
Blog Entries

- MBS Xojo Plugins, version 20.5pr6

103.15.2 Methods

103.15.3 Clone as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the object.

103.15.4 Constructor(Image as IMImage7MBS = nil)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

103.15.5 Properties

103.15.6 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha quantum.
Notes: Defaults to opaque value, e.g. 65535 for 16 bit.
(Read and Write property)

103.15.7 AlphaTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha channel pixel trait.
Notes: If zero, no alpha.

(Read and Write property)

103.15.8 black as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black color quantum.
Notes: (Read and Write property)

103.15.9 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color quantum.
Notes: (Read and Write property)

103.15.10 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space.
Notes: Defaults to ksRGBColorspace.
(Read and Write property)

103.15.11 Count as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count value.
Notes: (Read and Write property)

103.15.12 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color depth.
Notes: Defaults to quantum depth.
(Read and Write property)

103.15.13 fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fuzz value.
Notes: (Read and Write property)

103.15.14 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color quantum.
Notes: (Read and Write property)

103.15.15 index as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index quantum.
Notes: (Read and Write property)

103.15.16 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color quantum.
Notes: (Read and Write property)

103.15.17 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The storage class.
Notes: Defaults to kDirectClass.
(Read and Write property)

103.16 class IMPointInfo7MBS

103.16.1 class IMPointInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a x/y point.

103.16.2 Methods

103.16.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with 0/0 values.
See also:

- 103.16.4 Constructor(X as Double, Y as Double) 15895

103.16.4 Constructor(X as Double, Y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with given values.
See also:

- 103.16.3 Constructor 15895

103.16.5 Properties

103.16.6 X as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x coordinate.
Notes: (Read and Write property)

103.16.7 Y as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y coordinate.
Notes: (Read and Write property)

103.17 class IMQuantizeInfo7MBS

103.17.1 class IMQuantizeInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for quantize settings.
Blog Entries

- MBS Xojo Plugins, version 20.0pr5

103.17.2 Methods

103.17.3 Clone as IMQuantizeInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Makes a copy of the given quantize info object.
Notes: See CloneQuantizeInfo function in ImageMagick documentation.

103.17.4 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty quantize info.
Notes: See AcquireQuantizeInfo function in ImageMagick documentation.
See also:

- 103.17.5 Constructor(ImageInfo as IMImageInfo7MBS) 15897
- 103.17.6 Constructor(QuantizeInfo as IMQuantizeInfo7MBS) 15898

103.17.5 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new quantize info.
Notes: If ImageInfo is not empty, copies a few settings from there.
See AcquireQuantizeInfo function in ImageMagick documentation.
See also:

- 103.17.4 Constructor 15897
- 103.17.6 Constructor(QuantizeInfo as IMQuantizeInfo7MBS) 15898

103.17.6 Constructor(QuantizeInfo as IMQuantizeInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Makes a copy of the given quantize info object.
Notes: See CloneQuantizeInfo function in ImageMagick documentation.
See also:

- 103.17.4 Constructor 15897
- 103.17.5 Constructor(ImageInfo as IMImageInfo7MBS) 15897

103.17.7 Properties

103.17.8 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space.
Notes: (Read and Write property)

103.17.9 DitherMethod as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dither method.
Notes: (Read and Write property)

103.17.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.17.11 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

103.17.12 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exception raised.
Notes: (Read and Write property)

103.17.13 MeasureError as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to measure error.
Notes: (Read and Write property)

103.17.14 NumberColors as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors.
Notes: (Read and Write property)

103.17.15 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to release memory in destructor.
Notes: (Read and Write property)

103.17.16 TreeDepth as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tree depth.
Notes: (Read and Write property)

103.17.17 Constants

Dither Methods

Constant	Value	Description
DitherMethodFloydSteinberg	3	FloydSteinberg
DitherMethodNo	1	No
DitherMethodRiemersma	2	Riemersma
DitherMethodUndefined	0	Undefined

103.18 class IMRectangleInfo7MBS

103.18.1 class IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a rectangle.

103.18.2 Methods

103.18.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with zero values.
See also:

- 103.18.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer) 15901

103.18.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the point object with given values.
See also:

- 103.18.3 Constructor 15901

103.18.5 Properties

103.18.6 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the rectangle.
Notes: (Read and Write property)

103.18.7 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the rectangle.
Notes: (Read and Write property)

103.18.8 X as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

103.18.9 Y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

Chapter 104

ImagePlayground

104.1 class ImagePlaygroundMBS

104.1.1 class ImagePlaygroundMBS

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The class to use the Image Playground.
Notes: The image playground to generate images with Apple Intelligence.
Requires macOS 15.2 or iOS 18.2.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.0
- MBS Xojo Plugins, version 24.6pr6
- Use Image Playground in Xojo
- MBS Xojo Plugins, version 24.6pr5

104.1.2 Methods

104.1.3 AddConcept(text as String)

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Adds a concept.
Example:

```
Var controller as New ImagePlaygroundMBS
controller.AddConcept "Cat"
controller.AddConcept "New Year"
```

controller.Present

Notes: Builds a playground concept by parsing a short text that describes the contents of the image.

104.1.4 AddExtractedConcept(text as String, Title as String = "")

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Adds a concept.
Notes: Builds a playground concept by extracting multiple concepts from a long text that describes the contents of the image and a title that concisely summarizes the contents of the text.

Text: Suitable for long strings, like paragraphs or entire documents.
The system will try to extract important or interesting concepts from the string and add them to the playground, so that each concept becomes an input prompt to the diffusion models.
However, if the string does not meet the minimum length required for concept extraction, it might decide to use the string as-is as input prompt.

Title: Helps guiding the extraction of concepts from text by providing a summary of the contents of text.

104.1.5 Available as Integer

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Checks for availability.
Example:

```
Var a As Integer = ImagePlaygroundMBS.Available

Select Case a

Case ImagePlaygroundMBS.AvailabilityAvailable
AvailableLabel.Text = "Available"

Case ImagePlaygroundMBS.AvailabilityNotAvailable
AvailableLabel.Text = "Not Available"

Case ImagePlaygroundMBS.AvailabilityOldOS
AvailableLabel.Text = "OldOS"

Case ImagePlaygroundMBS.AvailabilityUnknown
AvailableLabel.Text = "Unknown"
```

```
Case ImagePlaygroundMBS.AvailabilityUnsupportedPlatform
AvailableLabel.Text = "Unsupported Platform"

End Select
```

Notes: The value of this property is AvailabilityAvailable when the current device supports image generation. A device might not support this feature if the device or system doesn,Äôt have the resources necessary to generate the images.

Returns AvailabilityOldOS if called on older macOS versions.

104.1.6 ClearConcepts

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Clears the list of concepts.

104.1.7 Constructor

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The constructor.
Example:

```
Var controller as New ImagePlaygroundMBS
controller.Present
```

104.1.8 Destructor

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The destructor.

104.1.9 Present

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Shows the image playground.
Notes: Will create a dialog to show the user the playground.

104.1.10 Properties

104.1.11 ConceptCount as Integer

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: Queries the number of concepts.
Notes: (Read only property)

104.1.12 Handle as Integer

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: This is an UIViewController or NSViewController.
(Read and Write property)

104.1.13 ImageFile as FolderItem

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The last image file created.
Notes: This gets deleted in the destructor.
(Read only property)

104.1.14 SourceImage as Picture

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The the source image.
Notes: An image to use as source input for generating the new image.
If you have an existing image that you want to use as a starting point for the new image, add it to this property. If you don,Äôt supply a source image, the system creates the new image from the prompt text you provide.
Typically, you provide an image big enough to fit the device,Äôs display. The expected minimum size is 384 x 384 pixels, and the recommended maximum size is 4096 x 4096 pixels.
(Read and Write property)

104.1.15 Events

104.1.16 Cancelled

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The image playground was cancelled.

104.1.17 CreatedImage(file as FolderItem)

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The event raised when we got an image.
Example:

```
Sub CreatedImage(file as FolderItem) Handles CreatedImage
MainWindow.ShowPicture Picture.Open(file)
End Sub
```

104.1.18 Hidden

MBS Swift Plugin, Plugin Version: 25.0, Platforms: macOS, iOS, Targets: All.

Function: The Popover was hidden by clicking away.

104.1.19 Constants

Availability

Constant	Value	Description
AvailabilityAvailable	1	Image Playground is available.
AvailabilityNotAvailable	2	Not available.
AvailabilityOldOS	3	You have an older operation system.
AvailabilityUnknown	0	Status not yet checked.
AvailabilityUnsupportedPlatform	4	Unsupported platform, e.g. Windows

Chapter 105

Instant Message

105.1 class IMServiceMBS

105.1.1 class IMServiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** An IMService object represents a service available to a user through iChat, such as AIM, Jabber, and Bonjour.
Notes: Each IMService object represents one service available through iChat. Class methods such as allServices and serviceWithName will return these objects. Each object acts as the liaison to its single service, allowing you to access the individual user's global status, the user's list of acquaintances, and other information which can be integrated into your application.

You may want to subclass the InstantMessageMBS class to get events for changes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Blog Entries

- MBS Xojo Plugins, version 20.5pr8

105.1.2 Methods

105.1.3 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the folderitem of the image corresponding to the IMPersonStatus specified by status.
Notes: Convenience function which does the same as InstantMessageMBS.imageFileForStatus.

105.1.4 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Returns the image name for the given status.
Example:

MsgBox IMServiceMBS.imageNameForStatus(IMServiceMBS.IMPersonStatusIdle)

Notes: Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

105.1.5 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the URL of the image corresponding to the IMPersonStatus specified by status.
Notes: Convenience function which does the same as InstantMessageMBS.imageURLForStatus.

105.1.6 IMCapabilityAudioConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.7 IMCapabilityDirectIM as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.8 IMCapabilityFileSharing as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.9 IMCapabilityFileTransfer as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.10 IMCapabilityText as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.11 IMCapabilityVideoConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.

105.1.12 IMPersonAVBusyKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's busy status. The value is a number set to 0 if the person's audio/video capabilities are available, or 1 if they are busy.

105.1.13 IMPersonCapabilitiesKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's iChat capabilities. The value is an array of capability properties. Check for IMCapability* strings in this array.

105.1.14 IMPersonEmailKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's email address. The value is a string containing the person's email address. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first email address of that person.

105.1.15 IMPersonFirstNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's first name. The value is a string containing the person's first name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first name of that person.

105.1.16 IMPersonIdleSinceKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's idle status. The value is a date containing the time, in seconds, since the last user activity. Available if the person's status is idle.

105.1.17 IMPersonLastNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's last name. The value is a string containing the person's last name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the last name of that person.

105.1.18 IMPersonPictureDataKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's image. The value is a string containing the image for the person's icon.

105.1.19 IMPersonScreenNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's screen name. The value is a string containing the service-specific identifier for a person. For example, "User123" or "steve@mac.com" for AIM, and "John Doe" for Bonjour.

105.1.20 IMPersonServiceNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's service name. The value is a string containing the name of the service this person belongs to.

105.1.21 IMPersonStatusKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's online status. The value is a number representing the current online status of the person, if known.

105.1.22 IMPersonStatusMessageKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: One of the keys for the info dictionaries.
Notes: Used to obtain a person's status message. The value is a string containing the person's current status message.

105.1.23 infoForAllScreenNames as dictionary()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns information about all people and all accounts currently logged in to the service.
Notes: If a person is logged in on multiple accounts (determined by the user's Address Book), this method will return the information for all of the logged-in accounts.

Returns an Array of the dictionaries. Use IMPerson*Key strings for the keys in that dictionary.

105.1.24 infoForPreferredScreenNames as dictionary()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns information about all people and their primary accounts currently logged in to the service.
Notes: If a person is logged in on multiple accounts (determined by the user's Address Book), this method will only return the information for the preferred account. The preferred account is determined by iChat, using a combination of capabilities (video chat capability, audio chat capability, and so on), status (available, idle, away), and other user attributes.

Returns an Array of the dictionaries for all people and is guaranteed to provide only one array entry for any logged-in person. Use IMPerson*Key strings for the keys in that dictionary.

105.1.25 infoForScreenName(name as string) as dictionary

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns information about the person specified by his/her screenName.
Notes: screenName: A string containing the screen name identifier of a person.

Returns a dictionary on success and nil on failure. Use IMPerson*Key strings for the keys in that dictionary.

105.1.26 LocalizedName as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the user-visible localized name of the service.
Example:

```
Var services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedName
next
```

Notes: Returns a String. Will contain the localized service name, such as "AOL Instant Messenger", "Jabber", or "Bonjour", for example. This string will be localized if required.

105.1.27 LocalizedShortName as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns a shorter version, if available, of the user-visible localized name of the service.
Example:

```
Var services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedShortName
next
```

Notes: Returns a "" on failure. Will return a localized string if required.

105.1.28 Name as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the fixed canonical name of the service.
Example:

```
Var services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.Name
next
```

Notes: Returns a "" on failure. This string is not localized.

105.1.29 peopleWithScreenName(screenName as string) as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns the Address Book person objects that correspond to the person with the screenName matched by screenName.
Notes: screenName: An string containing the screen name identifier of a person or persons.

Returns an array of ABPersonMBS objects that match the screen name matched by screenName. Can return an empty array or an array with one or more items.

Returns empty array on failure.

105.1.30 screenNamesForPerson(person as ABPersonMBS) as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns a list of valid screen names for any given person.
Example:

```
// show my screennames on all services

Var AddressBook as new ABAddressBookMBS
Var owner as ABPersonMBS = AddressBook.owner
Var services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedName+":"+EndOfLine+join(service.screenNamesForPerson(owner), EndOfLine)
next
```

Notes: person: An Address Book ABPerson object.
Returns an Array of Strings that are valid screen names for the person specified by person. See Address Book documentation for more information on ABPerson and accessing the user's address book. Can return an empty array or an array with one or more items.

Returns an empty array on failure.

105.1.31 Status as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the login status of the service.
Notes: Returns the appropriate IMServiceStatus number.

105.1.32 Properties

105.1.33 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Handle to the internal used IMService reference.
Notes: (Read and Write property)

105.1.34 Constants

Constants

Constant	Value	Description
IMPersonStatusAvailable	4	A status constant.
IMPersonStatusAway	3	A status constant.
IMPersonStatusIdle	2	A status constant.
IMPersonStatusNoStatus	5	The status constant for persons where the status is unknown. Mac OS X 10.5 only.
IMPersonStatusOffline	1	A status constant.
IMPersonStatusUnknown	0	A status constant.
IMServiceStatusDisconnected	1	A status constant.
IMServiceStatusLoggedIn	4	A status constant.
IMServiceStatusLoggedOut	0	A status constant.
IMServiceStatusLoggingIn	3	A status constant.
IMServiceStatusLoggingOut	2	A status constant.

105.2 class InstantMessageMBS

105.2.1 class InstantMessageMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: The class to handle Instant Message support for Mac OS X 10.4 and newer.
Notes: This class is based on the Instant Message framework from Apple.
it can be used to get the status of iChat.
Blog Entries

- Addressbook classes updated

105.2.2 Methods

105.2.3 allServices as IMServiceMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns the list of services currently available to the user, regardless of their status.
Notes: Returns nil on failure.

Returns a array with IMServiceMBS objects corresponding to the current available services (AIM, Bonjour, Jabber, and so on.)

105.2.4 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Whether the InstantMessaging framework is available or not.
Notes: Should be true on Mac OS X 10.4.

105.2.5 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the folderitem of the image corresponding to the IMPersonStatus specified by status.
Notes: This image reflects the status of the user, and is usually reflected by a colored bubble or triangle.

Returns nil on failure.
This is a convenience function which will call imageFileForStatus and return the folderitem matching the

URL in case it points to a disc file.

For Mac OS X 10.4 all images are stored as TIFF files on hard disc. Use the TiffPictureMBS class to load them (OpenAsPicture will not work because of the masks).

values:

IMPersonStatusUnknown	= 0
IMPersonStatusOffline	= 1
IMPersonStatusIdle	= 2
IMPersonStatusAway	= 3
IMPersonStatusAvailable	= 4

105.2.6 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Returns the image name for the given status.
Notes: Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

105.2.7 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns the URL of the image corresponding to the IMPersonStatus specified by status.
Notes: This image reflects the status of the user, and is usually reflected by a colored bubble or triangle.

Returns nil on failure.

values:

IMPersonStatusUnknown	= 0
IMPersonStatusOffline	= 1
IMPersonStatusIdle	= 2
IMPersonStatusAway	= 3
IMPersonStatusAvailable	= 4

105.2.8 myIdleTime as Double

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Class method to return the idle time of the active user.
Notes: Returns in seconds the time since the currently active user went idle.

105.2.9 myStatus as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Class method to return the status of the currently active user.
Notes: This status is global across all services.

values:

IMPersonStatusUnknown	= 0
IMPersonStatusOffline	= 1
IMPersonStatusIdle	= 2
IMPersonStatusAway	= 3
IMPersonStatusAvailable	= 4

105.2.10 notificationCenter as NSNotificationCenterMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Returns the custom notification center for the service.
Notes: A custom notification center that manages IMService notifications.
Available in Mac OS X v10.4 and later.

105.2.11 serviceWithName(name as string) as IMServiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Returns only the service specified by a given name.
Notes: name: A String containing a service name as returned by a previous call to name.
Hard-coding the service names internally is not recommended.

Returns an IMService object corresponding to the available service specified by name.
Returns nil on any failure.

105.2.12 Events

105.2.13 MyStatusChanged

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: This event is called when the local user changes online status.
Notes: The client should call myStatus function to get the new status.

105.2.14 PersonInfoChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Event sent when a screenName changes some aspect of their published information.
Notes: The user information dictionary will always contain an ScreenName and may contain any of the following values: StatusMessage, IdleSince, FirstName, LastName, IMPersonEmailKey, PictureData, AVAvailable and AVBusy, Capabilities values.

105.2.15 PersonStatusChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Event sent when a different user (screenName) logs in, logs off, goes away, and so on.
Notes: The info object knows the ScreenName and the Status of the person.

105.2.16 ServiceStatusChanged

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Event sent when the user logs in, logs off, goes away, and so on.
Notes: Call MyStatus to get the new state.

105.2.17 StatusImagesChangedAppearance

MBS MacCocoa Plugin, Plugin Version: 7.1, Platform: macOS, Targets: Desktop only.

Function: Event sent when the user changes their preferred images for displaying status.
Notes: Clients that display status information graphically (using the green/yellow/red dots) should call imageURLForStatus to get the new image.

Chapter 106

IO Registry

106.1 class DarwinDriveStatisticsMBS

106.1.1 class DarwinDriveStatisticsMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for an iterator over the IORegistry drives.
Example:

```
Var d as DarwinDriveStatisticsMBS
Var l as CFDictionaryMBS

d=new DarwinDriveStatisticsMBS
l=d.NextDrive
while l<>Nil
CFShowMBS l
l=d.NextDrive
wend
```

106.1.2 Methods

106.1.3 close

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

106.1.4 kIOBlockStorageDriverStatisticsBytesReadKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of bytes read since the block storage driver was instantiated.

This property describes the number of bytes read since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.5 kIOBlockStorageDriverStatisticsBytesWrittenKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of bytes written since the block storage driver was instantiated.

This property describes the number of bytes written since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.6 kIOBlockStorageDriverStatisticsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The key value used to get a statistics dictionary from the drive information dictionary.

106.1.7 kIOBlockStorageDriverStatisticsLatentReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of nanoseconds of latency during reads since the block storage driver was instantiated.

This property describes the number of nanoseconds of latency during reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.8 kIOBlockStorageDriverStatisticsLatentWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of nanoseconds of latency during writes since the block storage driver was instantiated.

This property describes the number of nanoseconds of latency during writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.9 kIOBlockStorageDriverStatisticsReadErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of read errors encountered since the block storage driver was instantiated.
This property describes the number of read errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.10 kIOBlockStorageDriverStatisticsReadRetriesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of read retries required since the block storage driver was instantiated.

This property describes the number of read retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.11 kIOBlockStorageDriverStatisticsReadsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of read operations processed since the block storage driver was instantiated.

This property describes the number of read operations processed since the block storage driver was instanti-

ated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.12 kIOBlockStorageDriverStatisticsTotalReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of nanoseconds spent performing reads since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.13 kIOBlockStorageDriverStatisticsTotalWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of nanoseconds spent performing writes since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

106.1.14 kIOBlockStorageDriverStatisticsWriteErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of write errors encountered since the block storage driver was instantiated.
This property describes the number of write errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.15 kIOBlockStorageDriverStatisticsWriteRetriesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of write retries required since the block storage driver was instantiated.

This property describes the number of write retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

106.1.16 kIOBlockStorageDriverStatisticsWritesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the statistics dictionary.
Notes: Describes the number of write operations processed since the block storage driver was instantiated.

This property describes the number of write operations processed since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

106.1.17 NextDrive as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dictionary describing the next drive in the list.

106.1.18 Reset

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves you back to the beginning of the list.

106.1.19 Properties

106.1.20 Handle as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

106.2 module IORegistryMBS

106.2.1 module IORegistryMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A module for accessing the Mac OS X IO Registry.
Notes: The IORegistryMBS stores information about the installed hardware.
Blog Entries

106.2.2 Methods

106.2.3 AudioRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the Audio tree inside the IO Registry.

106.2.4 DeviceRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the Device tree inside the IO Registry.

106.2.5 FirewireRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the Firewire tree inside the IO Registry.

106.2.6 MatchingServices(servicename as string) as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the nodes matching the servicename.
Example:

```
// search for Serial devices
Var devices() as IORegistryNodeMBS = IORegistryMBS.MatchingServices("IOSerialBSDClient")
Var names(-1) as string

// check devices and query names
for each dev as IORegistryNodeMBS in devices
Var dic as Dictionary = dev.Properties
names.Append dic.Lookup("IOTTYBaseName","")
next

// show all names
MsgBox Join(names,EndOfLine)
```

106.2.7 PerformanceStatistics(index as Integer = 0) as Dictionary

MBS MacCF Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries performance statistics for first graphics card on a Mac.
Example:

```
Var d as Dictionary = IORegistryMBS.PerformanceStatistics

if d <>nil then

Var gpuCoreUse as Int64 = d.Value("GPU Core Utilization")
Var freeVramCount as Int64 = d.Value("vramFreeBytes")
Var usedVramCount as Int64 = d.Value("vramUsedBytes")

Var sum as int64 = (freeVramCount+usedVramCount)

List.AddRow format(gpuCoreUse/1000000000.0, "0%"), Format(freeVramCount/1024.0/1024.0, "0")+" MB
of "+Format(sum/1024.0/1024.0, "0")+" MB", Format(usedVramCount / sum, "0%")
list.ScrollPosition = list.ListCount
else
Break
end if
```

Notes: The dictionary contains details about performance of graphics card.
This includes vramFreeBytes and vramUsedBytes for memory usage as well as "GPU Core Utilization" key with GPU time used.

Returns nil on any error.

Index is zero for first graphics card.
Or 1 for second graphics card.

106.2.8 PowerRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the Power tree inside the IO Registry.

106.2.9 Present as Boolean

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is the IORegistryMBS working?
Notes: Returns true on Mac OS X and false on other platforms.

106.2.10 Root(plane as string) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the IORegistry tree with the given plane name.
Example:

```
// shows names of all USB devices
Var u as IORegistryNodeMBS = IORegistryMBS.Root("IOUSB") // same as USBRoot function

// now loop over all devices with all children (non recursive)
Var names(-1) as string
Var nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>=0
Var p as IORegistryNodeMBS = nodes.pop

names.Append p.Name
for each c as IORegistryNodeMBS in p.Children
nodes.Append c
next
wend

// and display array with names
```

```
MsgBox Join(names,EndOfLine)
```

106.2.11 ServiceRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the Service tree inside the IO Registry.

106.2.12 USBRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root of the USB tree inside the IO Registry.
Example:

```
// shows names of all USB devices
Var u as IORegistryNodeMBS = IORegistryMBS.USBRoot

// now loop over all devices with all children (non recursive)
Var names(-1) as string
Var nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>=0
Var p as IORegistryNodeMBS = nodes.pop

names.Append p.Name
for each c as IORegistryNodeMBS in p.Children
nodes.Append c
next
wend

// and display array with names
MsgBox Join(names,EndOfLine)
```

106.3 class IORegistryNodeMBS

106.3.1 class IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a node inside the IO Registry.

106.3.2 Methods

106.3.3 CFProperties as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a CFDictionary object with all the properties of this note.

106.3.4 Child(index as Integer) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the IORegistryNodeMBS with the given index.
Notes: Index from 0 to ChildCount-1.

106.3.5 Children as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all child nodes.

106.3.6 Parents as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array with all parent nodes.

106.3.7 Properties as Dictionary

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a Xojo dictionary with all the properties of this note.

106.3.8 Properties

106.3.9 Busy as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the busyState of an IOService.
Notes: Many activities in IOService are asynchronous. When registration, matching, or termination is in progress on an IOService, its busyState is increased by one. Change in busyState to or from zero also changes the IOService's provider's busyState by one, which means that an IOService is marked busy when any of the above activities is ocurring on it or any of its clients.
(Read only property)

106.3.10 ChildCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of sub nodes.
Notes: (Read only property)

106.3.11 DataCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of data items.
Notes: (Read only property)

106.3.12 IOClass as String

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the IOKit class.
Notes: (Read only property)

106.3.13 Name as String

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of this node.
Notes: (Read only property)

106.3.14 ParentCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of parent nodes for this node.
Notes: Typically one.
(Read only property)

106.3.15 Path as String

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The path of this node.
Notes: Useful for finding a node again.
(Read only property)

106.3.16 RetainCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retain count of this object.
Notes: (Read only property)

Chapter 107

iOS

107.1 class UIDeviceMBS

107.1.1 class UIDeviceMBS

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A representation of the current device.
Example:

Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.SystemName + EndOfLine+ currentDevice.SystemVersion

Notes: Use a UIDevice object to get information about the device such as assigned name, device model, and operating-system name and version. You also use the UIDevice instance to detect changes in the device,Äôs characteristics, such as physical orientation. You get the current orientation using the orientation property or receive change notifications by using the OrientationDidChange event. Before using either of these techniques to get orientation data, you must enable data delivery using the beginGeneratingDeviceOrientationNotifications method. When you no longer need to track the device orientation, call the endGeneratingDeviceOrientationNotifications method to disable the delivery of notifications.

Similarly, you can use the UIDevice instance to obtain information and notifications about changes to the battery,Äôs charge state (described by the batteryState property) and charge level (described by the batteryLevel property). The UIDevice instance also provides access to the proximity sensor state (described by the proximityState property). The proximity sensor detects whether the user is holding the device close to their face. Enable battery monitoring or proximity sensing only when you need it.

You can also use the playInputClick instance method to play keyboard input clicks in custom input and keyboard accessory views.

Blog Entries

- News from the MBS Xojo Plugins Version 24.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 24.3

- MBS Xojo Plugins, version 24.3pr4

107.1.2 Methods

107.1.3 beginGeneratingDeviceOrientationNotifications

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: Begins the generation of notifications of device orientation changes.
Notes: You must call this method before attempting to get orientation data from the device. This method enables the device,Äôs accelerometer hardware and begins the delivery of acceleration events to the device. The device subsequently uses these events to post UIDeviceOrientationDidChangeNotification notifications when the device orientation changes and to update the orientation property.
You may nest calls to this method safely, but you should always match each call with a corresponding call to the endGeneratingDeviceOrientationNotifications method.

107.1.4 Constructor

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The constructor.

107.1.5 currentDevice as UIDeviceMBS

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An object that represents the current device.

107.1.6 Destructor

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The destructor.

107.1.7 endGeneratingDeviceOrientationNotifications

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: Ends the generation of notifications of device orientation changes.
Notes: This method stops the posting of UIDeviceOrientationDidChangeNotification notifications and notifies the system that it can power down the accelerometer hardware if it isn,Äôt in use elsewhere. You call this method after a previous call to the beginGeneratingDeviceOrientationNotifications method.

107.1.8 Properties

107.1.9 BatteryLevel as Double

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The battery charge level for the device.
Notes: Battery level ranges from 0.0 (fully discharged) to 1.0 (100% charged). Before accessing this property, ensure that battery monitoring is enabled.

If battery monitoring is not enabled, battery state is BatteryStateUnknown and the value of this property is –1.0.
(Read only property)

107.1.10 BatteryMonitoringEnabled as Boolean

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether battery monitoring is enabled.
Notes: Enable battery monitoring if your app needs to be notified of changes to the battery state, or if you want to check the battery charge level.

The default value of this property is false, which:

- Disables the posting of battery-related notifications
- Disables the ability to read battery charge level and battery state

(Read and Write property)

107.1.11 BatteryState as Integer

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The battery state for the device.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

Var s As String
Select Case currentDevice.BatteryState
Case UIDeviceMBS.BatteryStateCharging
s = "Charging"
Case UIDeviceMBS.BatteryStateUnplugged
s = "Unplugged"
Case UIDeviceMBS.BatteryStateFull
s = "Full"
Case UIDeviceMBS.BatteryStateUnknown
s = "Unknown"
End Select

MessageBox s
```

Notes: The value for batteryState is one of the constants.

If battery monitoring is not enabled, the value of this property is BatteryStateUnknown.
(Read only property)

107.1.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

107.1.13 identifierForVendor as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An alphanumeric string that uniquely identifies a device to the app,Äôs vendor.
Notes: The value of this property is the same for apps that come from the same vendor running on the same device. A different value is returned for apps on the same device that come from different vendors, and for apps on different devices regardless of vendor.

Normally, the vendor is determined by data provided by the App Store. If the app wasn,Äôt installed from the app store (such as enterprise apps and apps still in development), then a vendor identifier is calculated based on the app,Äôs bundle ID. The bundle ID is assumed to be in reverse-DNS format.

In IOS 7 or later, all components of the bundle except for the last component are used to generate the vendor ID. If the bundle ID only has a single component, then the entire bundle ID is used.

The following table shows a collection of bundle IDs and which portions of the bundle ID the system uses to calculate the vendor ID.

For example, com.example.app1 and com.example.app2 would appear to have the same vendor ID.
If the value is nil, wait and get the value again later. This happens, for example, after the device has been restarted but before the user has unlocked the device.
The value in this property remains the same while the app (or another app from the same vendor) is installed on the iOS device. The value changes when the user deletes all of that vendor,Äôs apps from the device and subsequently reinstalls one or more of them. The value can also change when installing test builds using Xcode or when installing an app on a device using ad-hoc distribution. Therefore, if your app stores the value of this property anywhere, you should gracefully handle situations where the identifier changes.
(Read only property)

107.1.14 InterfaceOrientation as Integer

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The current orientation of the front window.
Notes: Little helper method to check what the front window has as device orientation.
(Read only property)

107.1.15 isGeneratingDeviceOrientationNotifications as Boolean

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the device generates orientation notifications.
Notes: If the value of this property is YES, the shared UIDevice object posts a UIDeviceOrientationDidChangeNotification notification when the device changes orientation (and raises event). If the value is false, it generates no orientation notifications. Device orientation notifications can only be generated between calls to the beginGeneratingDeviceOrientationNotifications and endGeneratingDeviceOrientationNotifications methods.
(Read only property)

107.1.16 isMultitaskingSupported as Boolean

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the current device supports multitasking.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.isMultitaskingSupported.ToString
```

Notes: (Read only property)

107.1.17 LocalizedModel as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The model of the device as a localized string.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.Model + EndOfLine+ currentDevice.LocalizedModel
```

Notes: The value of this property is a string that contains a localized version of the string returned from model.
(Read only property)

107.1.18 Model as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The model of the device.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.Model + EndOfLine+ currentDevice.LocalizedModel
```

Notes: Possible examples of model strings are ‚ÄùiPhone‚Äù and ‚ÄùiPod touch‚Äù.
(Read only property)

107.1.19 Name as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The name of the device.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.Name + EndOfLine+ currentDevice.Model
```

Notes: The default value of this property varies according to the device,Äôs operating system version number.

Real name until iOS 15, otherwise just "iPhone"

In iOS, the user-assigned device name is available in the Settings app under General >About >Name. To access the user-assigned device name through this property in iOS 16 and later, your app must meet certain criteria and be assigned an entitlement. For information, see com.apple.developer.device-information.user-assigned-device-name.
(Read only property)

107.1.20 Orientation as Integer

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The physical orientation of the device.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

Var s As String
Select Case currentDevice.Orientation
Case UIDeviceMBS.DeviceOrientationFaceDown
s = "FaceDown"
Case UIDeviceMBS.DeviceOrientationFaceUp
s = "FaceUp"
Case UIDeviceMBS.DeviceOrientationLandscapeLeft
s = "LandscapeLeft"
Case UIDeviceMBS.DeviceOrientationLandscapeRight
s = "LandscapeRight"
Case UIDeviceMBS.DeviceOrientationPortrait
s = "Portrait"
Case UIDeviceMBS.DeviceOrientationPortraitUpsideDown
s = "PortraitUpsideDown"
```

```
Case UIDeviceMBS.DeviceOrientationUnknown
s = "Unknown"
End Select

MessageBox s
```

Notes: The value of the property is a constant that indicates the current orientation of the device. This value represents the physical orientation of the device and may be different from the current orientation of your application,Äôs user interface. See DeviceOrientation constants for descriptions of the possible values. The value of this property always returns 0 unless orientation notifications have been enabled by calling beginGeneratingDeviceOrientationNotifications.
(Read only property)

107.1.21 ProximityMonitoringEnabled as Boolean

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether proximity monitoring is enabled.
Notes: Enable proximity monitoring only when your application needs to be notified of changes to the proximity state. Otherwise, disable proximity monitoring. The default value is false.

Not all iOS devices have proximity sensors. To determine if proximity monitoring is available, attempt to enable it. If the value of the proximityMonitoringEnabled property remains NO, proximity monitoring isn,Äôt available.
(Read and Write property)

107.1.22 ProximityState as Boolean

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the proximity sensor is close to the user.
Notes: (Read only property)

107.1.23 SystemName as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The name of the operating system running on the device.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice
MessageBox currentDevice.SystemName
```

Notes: (Read only property)

107.1.24 SystemVersion as String

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The current version of the operating system.
Example:

```
Var currentDevice As UIDeviceMBS = UIDeviceMBS.currentDevice

MessageBox currentDevice.SystemName + EndOfLine+ currentDevice.SystemVersion
```

Notes: (Read only property)

107.1.25 UserInterfaceIdiom as Integer

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: The style of interface to use on the current device.
Notes: For universal applications, you can use this property to tailor the behavior of your application for a specific type of device. For example, iPhone and iPad devices have different screen sizes, so you might want to create different views and controls based on the type of the current device.
(Read only property)

107.1.26 Events

107.1.27 BatteryLevelDidChange

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An event raised when the battery level changes.
Notes: For this notification to be sent, you must set the batteryMonitoringEnabled property to true.

Notifications for battery level change are sent no more frequently than once per minute. Don,Äôt attempt to calculate battery drainage rate or battery time remaining; drainage rate can change frequently depending on built-in applications as well as your application.

You can obtain the battery level by getting the value of the batteryLevel property.

107.1.28 BatteryStateDidChange

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An even raised when battery state changes.
Notes: For this notification to be sent, you must set the batteryMonitoringEnabled property to true.

You can obtain the battery state by getting the value of the batteryState property.

107.1.29 OrientationDidChange

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An even raised when the orientation of the device changes.
Notes: You can obtain the new orientation by getting the value of the orientation property.

107.1.30 ProximityStateDidChange

MBS iOS Plugin, Plugin Version: 24.3, Platform: iOS, Targets: iOS only.

Function: An event raied when the state of the proximity sensor changes.
Notes: You can obtain the proximity state by getting the value of the proximityState property.

107.1.31 Constants

Battery States

Constant	Value	Description
BatteryStateCharging	2	The device is plugged into power and the battery is less than 100% charged.
BatteryStateFull	3	The device is plugged into power and the battery is 100% charged.
BatteryStateUnknown	0	The battery state for the device can,Äôt be determined.
BatteryStateUnplugged	1	The device isn,Äôt plugged into power; the battery is discharging.

Device Orientations

Constant	Value	Description
DeviceOrientationFaceDown	6	The device is held parallel to the ground with the screen facing downwa
DeviceOrientationFaceUp	5	The device is held parallel to the ground with the screen facing upwards
DeviceOrientationLandscapeLeft	3	The device is in landscape mode, with the device held upright and the facing camera on the left side.
DeviceOrientationLandscapeRight	4	The device is in landscape mode, with the device held upright and the facing camera on the right side.
DeviceOrientationPortrait	1	The device is in portrait mode, with the device held upright and the front-camera at the top.
DeviceOrientationPortraitUpsideDown	2	The device is in portrait mode but upside down, with the device held u and the front-facing camera at the bottom.
DeviceOrientationUnknown	0	The orientation of the device can,Äôt be determined.

User Interface Idioms

Constant	Value	Description
UserInterfaceIdiomCarPlay	3	An interface designed for an in-car experience.
UserInterfaceIdiomMac	5	An interface designed for the Mac.
UserInterfaceIdiomPad	1	An interface designed for iPad.
UserInterfaceIdiomPhone	0	An interface designed for iPhone and iPod touch.
UserInterfaceIdiomTV	2	An interface designed for tvOS and Apple TV.
UserInterfaceIdiomUnspecified	-1	An unspecified idiom.
UserInterfaceIdiomVision	6	An interface designed for visionOS and Apple Vision Pro.

Chapter 108

iTunes

108.1 class iTunesLibraryAlbumMBS

108.1.1 class iTunesLibraryAlbumMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Represents an album where a given media item (MediaItem) is contained.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.1.2 Methods

108.1.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.1.4 Properties

108.1.5 AlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The artist associated with this album.
Notes: (Read only property)

108.1.6 Artist as iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The artist.
Notes: Deprecated. Will be removed in future versions.
(Read only property)

108.1.7 Compilation as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this album is a compilation.
Notes: (Read only property)

108.1.8 DiscCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The number of discs in this album.
Notes: (Read only property)

108.1.9 DiscNumber as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The index (i.e. 1, 2, 3, etc.) of the disc this album refers to within a compilation.0
Notes: (Read only property)

108.1.10 Gapless as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this track's album is gapless.
Notes: (Read only property)

108.1.11 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.1.12 Rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The rating of this track's album.
Notes: (Read only property)

108.1.13 RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The rating of this track's album.
Notes: (Read only property)

108.1.14 SortAlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The artist associated with this album. This field should be used when sorting.
Notes: (Read only property)

108.1.15 SortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of this that should be used for sorting purposes.
Notes: (Read only property)

108.1.16 Title as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of this album.
Notes: (Read only property)

108.1.17 TrackCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Number of tracks in this album.
Notes: (Read only property)

108.2 class iTunesLibraryArtistMBS

108.2.1 class iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Represents an artist, such as the performer of a song.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.2.2 Methods

108.2.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.2.4 Properties

108.2.5 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.2.6 name as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of this artist.
Notes: (Read only property)

108.2.7 sortName as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of this artist that should be used for sorting purposes.
Notes: (Read only property)

108.3 class iTunesLibraryArtworkMBS

108.3.1 class iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Represents a media item artwork.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.3.2 Methods

108.3.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.3.4 Properties

108.3.5 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.3.6 image as NSImageMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The NSImage formed by using image Data.
Notes: (Read only property)

108.3.7 imageData as Memoryblock

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The data (bytes) of this artwork image.
Notes: (Read only property)

108.3.8 imageDataFormat as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The fortmat of the data returned by the imageData method.
Notes: (Read only property)

108.3.9 Constants

Constants

Constant	Value	Description
ITLibArtworkFormatBitmap	1	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data format is a bitmap.
ITLibArtworkFormatBMP	6	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a BMP image.
ITLibArtworkFormatGIF	4	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a GIF image.
ITLibArtworkFormatJPEG	2	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a JPEG image.
ITLibArtworkFormatJPEG2000	3	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a JPEG2000 image.
ITLibArtworkFormatNone	0	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data format is unknown.
ITLibArtworkFormatPICT	8	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a PICT image.
ITLibArtworkFormatPNG	5	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a PNG image.
ITLibArtworkFormatTIFF	7	One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method. The image data corresponds to a TIFF image.

108.4 class iTunesLibraryMBS

108.4.1 class iTunesLibraryMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: A class representing an iTunes library whose metadata is being queried.
Notes: Requires iTunes 11 on Mac OS X. And your app must be code signed.

108.4.2 Methods

108.4.3 allMediaItems as iTunesLibraryMediaItemMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: All media items in the library.

108.4.4 allPlaylists as iTunesLibraryPlaylistMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: All playlists in the library.

108.4.5 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Retrieves the artwork from a media file.
Notes: mediaFile: The folderitem of the media file whose artwork should be extracted.

Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was not found or could not be extracted.
See also:

- 108.4.6 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS 15956

108.4.6 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Retrieves the artwork from a media file.
Notes: mediaFileURL: The URL of the media file whose artwork should be extracted.
Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was not found or could not be extracted.
See also:

- 108.4.5 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS 15955

108.4.7 Constructor(requestedAPIVersion as string, byref error as NSErrorMBS, threaded as boolean = false)

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Initializes an instance of ITLibrary which can be used to retrieve media entities.
Notes: Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.
At this point all media entities will be cached in memory until the time the object is deallocated.
requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.
error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

If handle is 0, the initialization failed.
Requires that your app is code signed.

Added threaded parameter in version 20.0 of the MBS Plugins. If true, the work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

108.4.8 libraryWithAPIVersion(requestedAPIVersion as string, byref error as NSErrorMBS) as iTunesLibraryMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Initializes an instance of ITLibrary which can be used to retrieve media entities.
Notes: Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.
At this point all media entities will be cached in memory until the time the object is deallocated.
requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.
error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

Returns a Library instance, or nil if this method fails.
Requires that your app is code signed.

108.4.9 Properties

108.4.10 apiMajorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The major version number of this API.
Notes: (Read only property)

108.4.11 apiMinorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The minor version number of this API.
Notes: (Read only property)

108.4.12 applicationVersion as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The version of iTunes being accessed.
Notes: (Read only property)

108.4.13 features as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: A bitwise OR combination of the features of this library.
Notes: (Read only property)

108.4.14 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.4.15 musicFolderLocation as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The location of the iTunes music folder.
Notes: (Read only property)

108.4.16 showContentRating as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether to show content rating labels.
Notes: (Read only property)

108.4.17 Constants

Constants

Constant	Value	Description
ITLibExportFeatureNone	0	One of the constants describe the features supported by a given iTunes library. No features are supported.

108.5 class iTunesLibraryMediaEntityMBS

108.5.1 class iTunesLibraryMediaEntityMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Abstract superclass for MediaItem and Playlist instances.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 19.3pr2

108.5.2 Methods

108.5.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.5.4 enumerateValuesExceptForProperties(propertyNames() as string) as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Queries all keys and values for all properties except the given property names.

108.5.5 enumerateValuesForAllProperties as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Queries all keys and values.

108.5.6 enumerateValuesForProperties(propertyNames() as string) as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Queries all keys and values with the given property names.

108.5.7 ITLibMediaEntityPropertyPersistentID as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The property key for the persistent id.

108.5.8 valueForProperty(PropertyName as string) as Variant

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Gets the value for a specified media property key.
Notes: The media property keys you can use with this property are listed in this document and in Media Item Property Keys and Playlist Property Keys.
property: The media property key that you want the corresponding value of.
Returns the value for the media property key.

108.5.9 Properties

108.5.10 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.5.11 persistentID as Int64

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The unique identifier of this media entity.
Notes: (Read only property)

108.6 class iTunesLibraryMediaItemMBS

108.6.1 class iTunesLibraryMediaItemMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: A media item represents a single piece of media (such as a song, a video, a podcast, etc) in the iTunes library.
Notes: A media item has an overall unique identifier, accessed using the persistentID property. The media item metadata may be accessed through its individual properties or via the iTunesLibraryMediaEntityMBS general property accessor methods.
Subclass of the iTunesLibraryMediaEntityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.6.2 Methods

108.6.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.6.4 ITLibMediaItemPropertyAddedDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.5 ITLibMediaItemPropertyAlbumArtist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.6 ITLibMediaItemPropertyAlbumDiscCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.7 ITLibMediaItemPropertyAlbumDiscNumber as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.8 ITLibMediaItemPropertyAlbumIsCompilation as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.9 ITLibMediaItemPropertyAlbumIsGapless as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.10 ITLibMediaItemPropertyAlbumRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.11 ITLibMediaItemPropertyAlbumRatingComputed as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.12 ITLibMediaItemPropertyAlbumTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.13 ITLibMediaItemPropertyAlbumTrackCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.14 ITLibMediaItemPropertyArtistName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.15 ITLibMediaItemPropertyArtwork as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.16 ITLibMediaItemPropertyBeatsPerMinute as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.17 ITLibMediaItemPropertyBitRate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.18 ITLibMediaItemPropertyCategory as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.19 ITLibMediaItemPropertyComments as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.20 ITLibMediaItemPropertyComposer as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.21 ITLibMediaItemPropertyContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.22 ITLibMediaItemPropertyDescription as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.23 ITLibMediaItemPropertyFileType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.24 ITLibMediaItemPropertyGenre as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.25 ITLibMediaItemPropertyGrouping as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.26 ITLibMediaItemPropertyHasArtwork as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.27 ITLibMediaItemPropertyIsDRMProtected as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.28 ITLibMediaItemPropertyIsPurchased as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.29 ITLibMediaItemPropertyIsUserDisabled as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.30 ITLibMediaItemPropertyIsVideo as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.31 ITLibMediaItemPropertyKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.32 ITLibMediaItemPropertyLastPlayDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.33 ITLibMediaItemPropertyLocation as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.34 ITLibMediaItemPropertyLocationType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.35 ITLibMediaItemPropertyLyricsContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.36 ITLibMediaItemPropertyMediaKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.37 ITLibMediaItemPropertyModifiedDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.38 ITLibMediaItemPropertyPlayCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.39 ITLibMediaItemPropertyRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.40 ITLibMediaItemPropertyRatingComputed as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.41 ITLibMediaItemPropertyReleaseDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.42 ITLibMediaItemPropertySampleRate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.43 ITLibMediaItemPropertySize as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.44 ITLibMediaItemPropertySkipDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.45 ITLibMediaItemPropertySortAlbumArtist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.46 ITLibMediaItemPropertySortAlbumTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.47 ITLibMediaItemPropertySortArtistName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.48 ITLibMediaItemPropertySortComposer as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.49 ITLibMediaItemPropertySortTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.50 ITLibMediaItemPropertyStartTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.51 ITLibMediaItemPropertyStopTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.52 ITLibMediaItemPropertyTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.53 ITLibMediaItemPropertyTotalTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.54 ITLibMediaItemPropertyTrackNumber as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.55 ITLibMediaItemPropertyUserSkipCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.56 ITLibMediaItemPropertyVideoEpisode as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.57 ITLibMediaItemPropertyVideoEpisodeOrder as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.58 ITLibMediaItemPropertyVideoHeight as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.59 ITLibMediaItemPropertyVideoIsHD as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.60 ITLibMediaItemPropertyVideoSeason as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.61 ITLibMediaItemPropertyVideoSeries as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.62 ITLibMediaItemPropertyVideoSortSeries as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.63 ITLibMediaItemPropertyVideoWidth as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.64 ITLibMediaItemPropertyVoiceOverLanguage as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.65 ITLibMediaItemPropertyVolumeAdjustment as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.66 ITLibMediaItemPropertyVolumeNormalizationEnergy as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.67 ITLibMediaItemPropertyYear as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the constants for properties.

108.6.68 Properties

108.6.69 addedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and media item this media item was added to the iTunes database.
Notes: (Read only property)

108.6.70 addedDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function:

The date and media item this media item was added to the iTunes database.

Notes:

(Read only property)

108.6.71 album as iTunesLibraryAlbumMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The album where this media item belongs.
Notes: (Read only property)

108.6.72 artist as iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The artist associated with this media item.
Notes: (Read only property)

108.6.73 artwork as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item has artwork.
Notes: (Read only property)

108.6.74 ArtworkAvailable as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item has artwork.
Notes: (Read only property)

108.6.75 beatsPerMinute as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The BPM (beats per minute) of this media item.
Notes: (Read only property)

108.6.76 bitrate as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The bitrate of this media item in kbps.
Notes: (Read only property)

108.6.77 category as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The podcast category of this media item (implies this media item is a podcast).
Notes: (Read only property)

108.6.78 comments as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Any comments associated with this media item.
Notes: (Read only property)

108.6.79 composer as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of the composer associated with this media item.
Notes: (Read only property)

108.6.80 contentRating as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The extended content rating of this media item.
Notes: (Read only property)

108.6.81 description as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Any podcast description of with this media item (implies this media item is a podcast).
Notes: (Read only property)

108.6.82 DRMProtected as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item is DRM protected.
Notes: (Read only property)

108.6.83 fileType as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The type of the file this media item refers to.
Notes: (Read only property)

108.6.84 genre as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The genre associated with this media item.
Notes: (Read only property)

108.6.85 grouping as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The grouping of this media item.
Notes: (Read only property)

108.6.86 kind as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: This media item's file kind (ex. MPEG audio file).
Notes: (Read only property)

108.6.87 lastPlayedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time this media item was last played in iTunes, or nil if this media item has not been played.
Notes: (Read only property)

108.6.88 lastPlayedDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time this media item was last played in iTunes, or nil if this media item has not been played.
Notes: (Read only property)

108.6.89 location as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The location of this media item on disk.
Notes: (Read only property)

108.6.90 locationFile as FolderItem

MBS MacExtras Plugin, Plugin Version: 15.2, Platform: macOS, Targets: Desktop only.

Function: The location of this media item on disk.
Notes: For your convenience we provide this folderitem if location points to a valid file.
(Read only property)

108.6.91 locationType as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The type of this media item with respect to its location.
Notes: (Read only property)

108.6.92 lyricsContentRating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The content rating of this media item's lyrics.
Notes: (Read only property)

108.6.93 mediaKind as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: This media item's media kind.
Notes: (Read only property)

108.6.94 modifiedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time this media item was last modified.
Notes: (Read only property)

108.6.95 modifiedDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time this media item was last modified.
Notes: (Read only property)

108.6.96 playCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The number of times this media item has been played in iTunes.
Notes: (Read only property)

108.6.97 Purchased as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item was purchased.
Notes: (Read only property)

108.6.98 rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The rating of this media item.
Notes: (Read only property)

108.6.99 RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item's rating is computed.
Notes: (Read only property)

108.6.100 releaseDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date this media item was released.
Notes: (Read only property)

108.6.101 releaseDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date this media item was released.
Notes: (Read only property)

108.6.102 sampleRate as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The sample rate of this media item in samples per second.
Notes: (Read only property)

108.6.103 size as UInt64

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The size in bytes of this media item on disk.
Notes: (Read only property)

108.6.104 skipCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The number of times this media item has been skiped.
Notes: (Read only property)

108.6.105 skipDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when this media item was last skipped.
Notes: (Read only property)

108.6.106 skipDateTime as DateTime

MBS MacExtras Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time when this media item was last skipped.
Notes: (Read only property)

108.6.107 sortComposer as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of the composer associated with this media item that should be used for sorting purposes.
Notes: (Read only property)

108.6.108 sortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The title of this media item that should be used for sorting purposes.
Notes: (Read only property)

108.6.109 startTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The start time of this media item given that the media item is a podcast.
Notes: (Read only property)

108.6.110 stopTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The stop time of this media item given that the media item is a podcast.
Notes: (Read only property)

108.6.111 title as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The title of this media item.
Notes: (Read only property)

108.6.112 totalTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The length of this media item in seconds.
Notes: (Read only property)

108.6.113 trackNumber as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The position of this media item within its album.
Notes: (Read only property)

108.6.114 userDisabled as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether the user has disabled this media item.
Notes: (Read only property)

108.6.115 video as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this media item is a video media item (video podcast, movie, etc).
Notes: (Read only property)

108.6.116 videoInfo as iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The video information of this media item (implies this media item is a video media item).
Notes: (Read only property)

108.6.117 voiceOverLanguage as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The voice-over language of this media item.
Notes: (Read only property)

108.6.118 volumeAdjustment as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The volume adjustment used for this media item if any.
Notes: (Read only property)

108.6.119 volumeNormalizationEnergy as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The volume normalization energy applied to this media item.
Notes: (Read only property)

108.6.120 year as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The year when this media item was released.
Notes: (Read only property)

108.6.121 Constants

Constants

Constant	Value	Description
ITLibMediaItemLocationTypeFile	1	One of the constants to specify possible the type of a media item to its location. The media item location refers to a local file.
ITLibMediaItemLocationTypeRemote	3	One of the constants to specify possible the type of a media item to its location. The media item location refers to a remote file.
ITLibMediaItemLocationTypeUnknown	0	One of the constants to specify possible the type of a media item to its location. The media item type is not known.
ITLibMediaItemLocationTypeURL	2	One of the constants to specify possible the type of a media item to its location. The media item location refers to a URL (for example, a podcas
ITLibMediaItemLyricsContentRatingClean	2	One of the constants to specify the possible ratings of media iter The media item lyrics do not contain explicit language.
ITLibMediaItemLyricsContentRatingExplicit	1	One of the constants to specify the possible ratings of media iter The media item lyrics contain explicit language.
ITLibMediaItemLyricsContentRatingNone	0	One of the constants to specify the possible ratings of media iter No rating information for the media item lyrics.
ITLibMediaItemMediaKindAlertTone	21	One of the constants to specify the possible media kinds of a item. The media item is an audio tone on an iOS device which is no ringtone.
ITLibMediaItemMediaKindAudiobook	5	One of the constants to specify the possible media kinds of a item. The media item is an audiobook.
ITLibMediaItemMediaKindBook	19	One of the constants to specify the possible media kinds of a item. The media item is an EPUB or iBooks Author book.
ITLibMediaItemMediaKindDigitalBooklet	15	One of the constants to specify the possible media kinds of a item. The media item is an iTunes Extra or an iTunes LP.
ITLibMediaItemMediaKindHomeVideo	12	One of the constants to specify the possible media kinds of a item. The media item is a non-iTunes Store movie.
ITLibMediaItemMediaKindInteractiveBooklet	9	One of the constants to specify the possible media kinds of a item. The media item is a QuickTime movie with embedded flash (dep
ITLibMediaItemMediaKindIOSApplication	16	One of the constants to specify the possible media kinds of a item. The media item is an iPhone or iPod touch application.
ITLibMediaItemMediaKindiTunesU	18	One of the constants to specify the possible media kinds of a item. The media item is an iTunesU audio of video file.
ITLibMediaItemMediaKindMovie	3	One of the constants to specify the possible media kinds of a item. The media item is a movie.
ITLibMediaItemMediaKindMusicVideo	7	One of the constants to specify the possible media kinds of a item. The media item is a music video.
ITLibMediaItemMediaKindPDFBook	20	One of the constants to specify the possible media kinds of a item. The media item is a PDF treated as Books in the UI unless over user.
ITLibMediaItemMediaKindPDFBooklet	6	One of the constants to specify the possible media kinds of a item. The media item is an unwrapped PDF file that is part of a Musi
ITLibMediaItemMediaKindPodcast	4	One of the constants to specify the possible media kinds of a item.

108.7 class iTunesLibraryMediaItemVideoInfoMBS

108.7.1 class iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Encapsulates the video information of a video media item.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.7.2 Methods

108.7.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.7.4 Properties

108.7.5 episode as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The TV episode the video is associated with (implies the track is a TV show).
Notes: (Read only property)

108.7.6 episodeOrder as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The TV episode order the video is associated with (implies the track is a TV show).
Notes: (Read only property)

108.7.7 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

108.7.8 HD as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether the video is high definition.
Notes: (Read only property)

108.7.9 season as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of TV season the video is associated with (implies the track is a TV show).
Notes: (Read only property)

108.7.10 series as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of TV series the video is associated with (implies track is a TV show).
Notes: (Read only property)

108.7.11 sortSeries as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name of the TV series the video is associated with that should be used for when sorting (implies the track is a TV show).
Notes: (Read only property)

108.7.12 videoHeight as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The height of the video.
Notes: (Read only property)

108.7.13 videoWidth as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The width of the video.
Notes: (Read only property)

108.8 class iTunesLibraryPlaylistMBS

108.8.1 class iTunesLibraryPlaylistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: A playlist is a collection of related media items.
Notes: (Media items are described in iTunesLibraryMediaItemMBS Class Reference.)
Each playlist has a name, a set of attributes, and a unique identifier that persists across application launches.
Subclass of the iTunesLibraryMediaEntityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.8.2 Methods

108.8.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

108.8.4 items(threaded as boolean = false) as iTunesLibraryMediaItemMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The media items contained within this playlist.

108.8.5 ITLibPlaylistPropertyAllItemsPlaylist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.6 ITLibPlaylistPropertyDistinguisedKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.7 ITLibPlaylistPropertyItems as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.8 ITLibPlaylistPropertyMaster as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.9 ITLibPlaylistPropertyName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.10 ITLibPlaylistPropertyParentPersistentID as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.11 ITLibPlaylistPropertyVisible as string

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: One of the playlist property.

108.8.12 Properties

108.8.13 AllItemsPlaylist as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this playlist is an "all items" playlist.
Notes: i.e. marked items in playlist exceeds the total tracks in the playlist so the playlist is a discreet object.

(Read only property)

108.8.14 DistinguishedKind as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The distinguished kind of this playlist.
Notes: (Read only property)

108.8.15 Master as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this playlist is a master playlist.
Notes: (Read only property)

108.8.16 name as String

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The name or title of this playlist.
Notes: (Read only property)

108.8.17 ParentID as Int64

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The unique identifier of this playlist' parent.
Notes: Changed to Int64 for MBS Plugin 19.5.
(Read only property)

108.8.18 Visible as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this playlist is visible.
Notes: (Read only property)

108.8.19 Constants

Constants

Constant	Value	Description
ITLibDistinguishedPlaylistKind90sMusic	42	One of the constants to specify the possible kinds of playli The playlist is the default 90's music iTunes playlist.
ITLibDistinguishedPlaylistKindBooks	4	One of the constants to specify the possible kinds of playli The playlist contains all the books in the iTunes Library
ITLibDistinguishedPlaylistKindClassicalMusic	48	One of the constants to specify the possible kinds of playli The playlist is the default Classical Music smart playlist ge
ITLibDistinguishedPlaylistKindHomeVideos	50	One of the constants to specify the possible kinds of playli The playlist contains all homes videos in the iTunes Librar
ITLibDistinguishedPlaylistKindiTunesU	26	One of the constants to specify the possible kinds of playli The playlist contains the user's iTunesU items.
ITLibDistinguishedPlaylistKindLibraryMusicVideos	49	One of the constants to specify the possible kinds of playli The playlist contains all music videos in the iTunes Librar same as the default Music Videos smart playlist.
ITLibDistinguishedPlaylistKindMovies	1	One of the constants to specify the possible kinds of playli The playlist contains all the movies in the iTunes Library.
ITLibDistinguishedPlaylistKindMusic	3	One of the constants to specify the possible kinds of playli The playlist contains all the music items in the iTunes Lib
ITLibDistinguishedPlaylistKindMusicVideos	47	One of the constants to specify the possible kinds of playli The playlist is the default Music Videos smart playlist gen
ITLibDistinguishedPlaylistKindMyTopRated	43	One of the constants to specify the possible kinds of playli The playlist is the default Top Rated smart playlist genera
ITLibDistinguishedPlaylistKindNone	0	One of the constants to specify the possible kinds of playli The playlist is not a distinguished playlist.
ITLibDistinguishedPlaylistKindPodcasts	7	One of the constants to specify the possible kinds of playli The playlist contains all the podcasts in the iTunes library
ITLibDistinguishedPlaylistKindPurchases	16	One of the constants to specify the possible kinds of playli The playlist contains all the user's purchases in the iTunes
ITLibDistinguishedPlaylistKindRecentlyAdded	46	One of the constants to specify the possible kinds of playli The playlist is the default Recently Added smart playlist ge
ITLibDistinguishedPlaylistKindRecentlyPlayed	45	One of the constants to specify the possible kinds of playli The playlist is the default Recently Played smart playlist g .
ITLibDistinguishedPlaylistKindRingtones	5	One of the constants to specify the possible kinds of playli The playlist contains all the ringtones in the iTunes Librar
ITLibDistinguishedPlaylistKindTop25MostPlayed	44	One of the constants to specify the possible kinds of playli The playlist is the default 25 Most Played smart playlist ge
ITLibDistinguishedPlaylistKindTVShows	2	One of the constants to specify the possible kinds of playli The playlists contains all the TV shows in the iTunes Libr
ITLibDistinguishedPlaylistKindVoiceMemos	14	One of the constants to specify the possible kinds of playli The playlist contains all voice memos.

Chapter 109

Java

109.1 class JavaArrayMBS

109.1.1 class JavaArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for a java array object.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 19.2pr5

109.1.2 Methods

109.1.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.1.4 Properties

109.1.5 Length as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of items in the array.
Notes: Returns 0 on any error.
(Read only property)

109.2 class JavaBooleanArrayMBS

109.2.1 class JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java boolean array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.2.2 Methods

109.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.2.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.byte(index) to access.

109.2.5 Values as Boolean()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.2.6 Properties

109.2.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.2.8 Value(index as Integer) as Boolean

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.3 class JavaByteArrayMBS

109.3.1 class JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java byte array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.3.2 Methods

109.3.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.3.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.Byte(index) to access.

109.3.5 Values as Int8()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.3.6 Properties

109.3.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.3.8 Value(index as Integer) as Int8

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.4 class JavaCharArrayMBS

109.4.1 class JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java char array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.4.2 Methods

109.4.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.4.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.UShortMBS(index*2) to access.

109.4.5 Values as UInt16()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.4.6 Properties

109.4.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.4.8 Value(index as Integer) as UInt16

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.5 class JavaClassMBS

109.5.1 class JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for a Java class.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.5.2 Methods

109.5.3 AllocateObject as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allocates a new Java object without invoking any of the constructors for the object. #
Notes: Returns a reference to the object or nil on any error.

Does not work for array classes.
Throws InstantiationException if the class is an interface or an abstract class.

109.5.4 CallStaticBooleanMethod(MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a boolean return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The

methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.5 CallStaticByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a byte return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.6 CallStaticCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a char return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on

platform)

109.5.7 CallStaticDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a double return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.8 CallStaticFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a float return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.9 CallStaticIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with an integer return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.10 CallStaticLongMethod(MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a long return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.11 CallStaticMain(args() as string)

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static main method and passes the String array.

109.5.12 CallStaticMethod(MethodID as JavaMethodMBS, args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method.
Example:

```
Var vm As JavaVMMBS // your initialized VM

// 1. Find class
Var jclass As JavaClassMBS =vm.FindClass("stringtest")

if jclass=nil then
msgbox "Can't find stringtest class"
Return
end if

// 2. lookup method
Var jmethod3 As JavaMethodMBS = jclass.GetStaticMethod("setValue","(Ljava/lang/String;)V")
if jmethod3=nil then
MsgBox "Failed to find setValue method."
Return
end if

// 3. Call static method
Var param3() As Variant
param3.append "Hello World"
Call jclass.CallStaticMethod(jmethod3,param3)

MsgBox "done"
```

Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

109.5.13 CallStaticObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with an object return value.
Example:

```
Var e as JavaVMMBS // global

// Call "public static String getMessage()" and "public static void setMessage(String theMessage)" from class "test".

Var jclass, sclass as JavaClassMBS
Var jmethod as JavaMethodMBS
Var jstring as JavaStringMBS
Var args as JavaObjectArrayMBS
Var m as MemoryBlock
Var s as String
Var jfield as JavaFieldMBS

jclass=e.FindClass("test")

if jclass=nil then
msgbox "Can't find test class"
else
jmethod = jclass.GetStaticMethod("setMessage", "(Ljava/lang/String;)V")

if jmethod=nil then
msgbox "Can't find HelloWorld.setMessage"
else
jstring = e.NewStringUTF8("Hello from Xojo!")
if jstring=nil then
msgbox "Out of memory"
else
m=NewMemoryBlock(8) // 8 bytes per parameter
m.Int64Value(0)=jstring.Handle

jclass.CallStaticVoidMethod(jmethod, m)

jmethod = jclass.GetStaticMethod("getMessage", "()Ljava/lang/String;")

if jmethod=nil then
msgbox "Can't find HelloWorld.getMessage"
```

```
else
m=NewMemoryBlock(8) // 8 bytes per parameter
m.Int64Value(0)=jstring.Handle

jstring=JavaStringMBS(jclass.CallStaticObjectMethod(jmethod,m))

MsgBox jstring.CopyStringUTF
end if
end if
end if
end if
```

Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.14 CallStaticShortMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with a short return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.15 CallStaticVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a static method with no return value.
Notes: This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.5.16 Constructor

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.5.17 Fields as JavaFieldMBS()

MBS Java Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the list of fields in the class.
Example:

```
// List field names

Var vm as JavaVMMBS // your VM
Var jclass As JavaClassMBS = vm.FindClass("test")
Var fields() As JavaFieldMBS = jclass.Fields
Var fieldNames() As String

For Each field As JavaFieldMBS In fields
fieldNames.add field.Name
Next

MessageBox String.FromArray(fieldNames, EndOfLine)
```

Notes: This includes static fields.
Does not include items from super class.

109.5.18 GetField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for the Field with the given Name and Signature.
Notes: Nil on any error.

The signature is a string derived from the field's type or method's arguments and return type, as shown here:

Java Type	Signature
boolean	Z
byte	B
char	C
short	S
int	I
long	L
float	F
double	D
void	V
objects	Lfully-qualified-class-name;
arrays	[array-type
methods	(argument-types)return-type

109.5.19 GetMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches the method with the given name and signature.
Example:

```
Var jclass as JavaClassMBS
Var method as JavaMethodMBS

method=jclass.GetMethod("mymethod", "( [ Ljava/lang/String;)V")
```

Notes: Returns the method ID for an instance (non-static) method of a class or interface. The method may be defined in one of the the class's super classes and inherited by the class. The method is determined by its name and signature.

To obtain the method ID of a constructor, supply <init>as the method name and void (V) as the return type.

Nil on any error.

Throws NoSuchMethodError if the specified method cannot be found.

The signature is a string derived from the field's type or method's arguments and return type, as shown here:

Java Type	Signature
boolean	Z
byte	B
char	C
short	S
int	I
long	L
float	F
double	D
void	V
objects	Lfully-qualified-class-name;
arrays	[array-type
methods	(argument-types)return-type

109.5.20 GetStaticField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches the static field with the given name and signature.
Notes: Nil on any error.

109.5.21 GetStaticMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the method ID for a static method of a class. The method is specified by its name and signature.
Example:

```
Var jclass as JavaClassMBS
Var method as JavaMethodMBS

method=jclass.GetStaticMethod("main", "( [ Ljava/lang/String;)V")
```

Notes: Nil on any error.
e.g. the signature of the default static main method is "([Ljava/lang/String;)V" which means return type void at the end and before an array of string.

109.5.22 Methods as JavaMethodMBS()

MBS Java Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the list of methods in this class.
Example:

```
// List method names

Var vm as JavaVMMBS // your VM
Var jclass As JavaClassMBS = vm.FindClass("test")
Var Methods() As JavaMethodMBS = jclass.Methods
Var MethodNames() As String

For Each Method As JavaMethodMBS In Methods
MethodNames.add Method.Name
Next

MessageBox String.FromArray(MethodNames, EndOfLine)
```

Notes: This includes constructors with name "<init>", private, protected, public and static methods.
Does not include items from super class.

109.5.23 NewObject(methodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constructs a new Java object.

Notes: The method ID indicates which constructor method to invoke. This ID must be obtained by calling GetMethod with <init>as the method name and void (V) as the return type.

Returns nil on any error.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

Throws Java InstantiationException if the class is an interface or an abstract class.
See also:

- 109.5.24 NewObject(MethodID as JavaMethodMBS, args() as Variant) as JavaObjectMBS 16010

109.5.24 NewObject(MethodID as JavaMethodMBS, args() as Variant) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constructs a new Java object.
Example:

```
Var vm as JavaVMMBS // your initialized VM

// 1. Find class
Var jclass As JavaClassMBS=vm.FindClass("stringtest")

If jclass = Nil Then
MsgBox "Can't find stringtest class"
Return
End If

// 2. Call constructor
Var jmethod As JavaMethodMBS = jclass.GetMethod("<init>", "(ILjava/lang/String;D)V")

If jmethod = Nil Then
MsgBox "Can't find constructor"
Return
End If

Var param() As Variant
// 1. Parameter with Integer: I
param.Append 123
// 2. Parameter with string: Ljava/lang/String;
```

```
param.Append "Hello World"
// 3. Parameter with double: D
param.Append 3.14
Var jobject As JavaObjectMBS = jclass.NewObject(jmethod, param)

If jobject = Nil Then
MsgBox "Constructor failed!?"
Else
MsgBox "OK: "+jobject.ClassName
End If
```

Notes: The method ID indicates which constructor method to invoke. This ID must be obtained by calling GetMethod with <init>as the method name and void (V) as the return type.

Returns nil on any error.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

Throws Java InstantiationException if the class is an interface or an abstract class.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.
See also:

- 109.5.23 NewObject(methodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS 16009

109.5.25 Superclass as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Points to the superclass of this class.
Notes: Nil if no superclass exists.

109.5.26 Properties

109.5.27 StaticBooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static boolean field in this class.
Notes: (Read and Write computed property)

109.5.28 StaticByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static byte field in this class.
Notes: (Read and Write computed property)

109.5.29 StaticCharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static char field in this class.
Notes: (Read and Write computed property)

109.5.30 StaticDoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static double field in this class.
Notes: (Read and Write computed property)

109.5.31 StaticField(TheField as JavaFieldMBS) as Variant

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static field in this class.
Example:

```
Var jclass As JavaClassMBS=vm.FindClass("stringtest")

If jclass = Nil Then
MsgBox "Can't find stringtest class"
Return
End If

Var field As JavaFieldMBS = jclass.GetField("Name", "Ljava/lang/String;")
Var v As Variant = jclass.StaticField(field)
Var js As JavaStringMBS = v
MsgBox js
```

Notes: This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

Do not use for generic fields!
(Read and Write computed property)

109.5.32 StaticFloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static float field in this class.
Notes: (Read and Write computed property)

109.5.33 StaticIntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static integer field in this class.
Example:

```
Var f as FolderItem

f=SpecialFolder.Desktop.Child("ojdbc14.jar")

Var j as new JavaVMMBS(f)

Var c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")
```

```
Var field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c.StaticIntField(field))
```

Notes: (Read and Write computed property)

109.5.34 StaticLongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static long field in this class.
Notes: (Read and Write computed property)

109.5.35 StaticObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static object field in this class.
Notes: (Read and Write computed property)

109.5.36 StaticShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a static short field in this class.
Notes: (Read and Write computed property)

109.6 class JavaDoubleArrayMBS

109.6.1 class JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java double array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.6.2 Methods

109.6.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.6.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.DoubleValue(index*4) to access.

109.6.5 Values as Double()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.6.6 Properties

109.6.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.6.8 Value(index as Integer) as Double

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.7 class JavaFieldMBS

109.7.1 class JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java field ID.
Example:

```
Var f as FolderItem

f=SpecialFolder.Desktop.Child("ojdbc14.jar")

Var j as new JavaVMMBS(f)

Var c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")

Var field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c.StaticIntField(figield))
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Upgrading our Java Support for Xojo

109.7.2 Methods

109.7.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.7.4 Properties

109.7.5 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fieldID of this field.
Notes: (Read only property)

109.7.6 Name as String

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the field.
Notes: This is the name you passed in to GetField or GetStaticField functions.
(Read only property)

109.7.7 Signature as String

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The signature of the field.
Notes: This is the signature you passed in to GetField or GetStaticField functions.
(Read only property)

109.8 class JavaFloatArrayMBS

109.8.1 class JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java float array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.8.2 Methods

109.8.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.8.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.SingleValue(index*4) to access.

109.8.5 Values as Single()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.8.6 Properties

109.8.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.8.8 Value(index as Integer) as Single

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.9 class JavaHandleNilExceptionMBS

109.9.1 class JavaHandleNilExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception which is raised whenever a Java function is operations on an object and there is none.
Notes: For example if you call a method on the JavaObjectMBS class which requires the handle value being not zero, the exception raises if the handle value is zero.
Subclass of the RuntimeException class.

109.10 class JavaIntArrayMBS

109.10.1 class JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java int array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.10.2 Methods

109.10.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.10.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.Long(index*4) to access.

109.10.5 Values as Integer()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.10.6 Properties

109.10.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.10.8 Value(index as Integer) as Int32

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.11 class JavaLongArrayMBS

109.11.1 class JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java long array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.11.2 Methods

109.11.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.11.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.Int64DoubleMBS(index*8) to access.

109.11.5 Values as Int64()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.11.6 Properties

109.11.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.11.8 Value(index as Integer) as Int64

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.12 class JavaMethodMBS

109.12.1 class JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java method ID.
Notes: In terminal you can use "javap -s <classname>" to display the class with the method names and parameters.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.12.2 Methods

109.12.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.12.4 Properties

109.12.5 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The methodID of this method.
Notes: (Read only property)

109.12.6 Name as String

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the method.
Notes: This is the name you passed in to GetMethod or GetStaticMethod functions.
(Read only property)

109.12.7 Signature as String

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The signature of the method.
Notes: This is the signature you passed in to GetMethod or GetStaticMethod functions.
(Read only property)

109.13 class JavaNotInitializedExceptionMBS

109.13.1 class JavaNotInitializedExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception which is raised whenever a Java function is called which requires you to initialize the JVM before calling it.
Notes: Subclass of the RuntimeException class.

109.14 class JavaObjectArrayMBS

109.14.1 class JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java object array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.14.2 Methods

109.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.14.4 Values as JavaObjectMBS()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.14.5 Properties

109.14.6 ArrayElement(index as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use Value instead. **Function:** The object at the given index in the array.
Notes: May return nil if the array is empty on the given index or if the index is out of bounds or any other error occurs.

Index is 0 based.

Throws
ArrayIndexOutOfBoundsException: if index does not specify a valid index in the array.
ArrayStoreException: if the class of value is not a subclass of the element class of the array.
(Read and Write computed property)

109.14.7 Value(index as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.15 class JavaObjectMBS

109.15.1 class JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.15.2 Methods

109.15.3 CallBooleanMethod(MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a boolean value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.4 CallByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a byte value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.5 CallCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a char value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.6 CallDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a double value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.7 CallFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a float value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.8 CallIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with an integer value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from

the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.9 CallLongMethod(MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a long value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.10 CallMethod(MethodID as JavaMethodMBS, args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method.
Example:

```
Var vm As JavaVMMBS // your initialized VM

// 1. Find class
Var jclass As JavaClassMBS =vm.FindClass("stringtest")

if jclass=nil then
msgbox "Can't find stringtest class"
Return
end if
```

```
// 2. Call constructor
Var jmethod1 as JavaMethodMBS = jclass.GetMethod("<init>", "()V")

if jmethod1=nil then
msgbox "Can't find constructor"
Return
end if

// 3. Create object
Var param1() As Variant
Var jobject1 as JavaObjectMBS=jclass.NewObject(jmethod1, param1)

if jobject1=nil then
MsgBox "Constructor failed!?"
Return
end if

// 4. lookup method
Var jmethod3 As JavaMethodMBS = jclass.GetMethod("setValue","(Ljava/lang/String;)V")
if jmethod3=nil then
MsgBox "Failed to find setValue method."
Return
end if

// 5. Call method
Var param3() As Variant
param3.append "Hello World"
Call jobject1.CallMethod(jmethod3,param3)

MsgBox "done"
```

Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), dou-

ble, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

109.15.11 CallNonvirtualBooleanMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a boolean value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.12 CallNonvirtualByteMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a byte value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on

platform)

109.15.13 CallNonvirtualCharMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a char value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.14 CallNonvirtualDoubleMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a double value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.15 CallNonvirtualFloatMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a float value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.16 CallNonvirtualIntMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with an integer value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.17 CallNonvirtualLongMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a long value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.18 CallNonvirtualMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMB args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

109.15.19 CallNonvirtualObjectMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with an object value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.20 CallNonvirtualShortMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with a short value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.21 CallNonvirtualVoidMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a non virtual method with no return value.
Notes: This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.22 CallObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with an object value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.23 CallShortMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with a short value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.24 CallVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls a virtual method with no return value.
Notes: This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

109.15.25 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.15.26 GetDirectBufferAddress(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the address of the memory from a directbuffer object.
Notes: Returns 0 on any error.

109.15.27 GetDirectBufferCapacity(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the size of the memory from a directbuffer object.
Notes: Returns 0 on any error.

109.15.28 IsInstanceOf(TheClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tests whether an object is an instance of a class.
Notes: Returns true if obj can be cast to TheClass; otherwise, returns false. A nil object can be cast to any class.

109.15.29 IsSameObject(obj as JavaObjectMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tests whether two references refer to the same Java object.
Notes: Returns true if ref1 and ref2 refer to the same Java object, or are both nil; otherwise, returns false.

False on any error.

109.15.30 ObjectClass as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the class of an object.
Notes: Returns nil on any error.

109.15.31 Properties

109.15.32 ClassName as String

MBS Java Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries class name of object.
Notes: (Read only property)

109.15.33 Database as Variant

MBS Java Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the database object.
Notes: The variant is a JavaDatabaseMBS.
Do not assign new values, please.
This is set for all database classes, so the database isn't release from memory before you finished using this object.
(Read and Write property)

109.15.34 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the jobject.
Notes: (Read and Write property)

109.15.35 Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read and Write property)

109.15.36 Tag as Variant

MBS Java Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This is a property you can use for whatever you like.
Notes: The property value is stored as long as the RB object lives. The Java object may live longer.
(Read and Write property)

109.15.37 VM as JavaVMMBS

MBS Java Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the virtual machine.
Notes: Please do not assign new value unless you know what you do.
(Read and Write property)

109.15.38 BooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a boolean field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.39 ByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a byte field in this class.
Notes: Do not use for static fields!

(Read and Write computed property)

109.15.40 CharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a char field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.41 DoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a double field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.42 Field(TheField as JavaFieldMBS) as Variant

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a field in this class.
Notes: This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

Do not use for static fields!
(Read and Write computed property)

109.15.43 FloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a single field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.44 IntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for an integer field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.45 LongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a long field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.46 ObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for an object field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.15.47 ShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value for a short field in this class.
Notes: Do not use for static fields!
(Read and Write computed property)

109.16 class JavaShortArrayMBS

109.16.1 class JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java short array object.
Notes: Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.16.2 Methods

109.16.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.16.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: All the elements in this array as one memoryblock.
Notes: Use memoryblock.short(index*2) to access.

109.16.5 Values as Int16()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a Xojo array with values.

109.16.6 Properties

109.16.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set a region of the array.
Notes: Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)

109.16.8 Value(index as Integer) as Int16

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set the value with given index.
Notes: May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

109.17 class JavaStringMBS

109.17.1 class JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java string class.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.17.2 Methods

109.17.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

109.17.4 CopyString as string

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Function: Copies the content of the string into a Xojo string.
Notes: Returns "" on any error. The string returned is marked as being Unicode (16bit).
Deprecated in favor of StringValue property and auto conversion with Operator_Convert.
See also:

- 109.17.5 CopyString(start as Integer, len as Integer) as string

109.17.5 CopyString(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies the content of the string into a Xojo string.
Example:

```
Var s as string
Var js as JavaStringMBS // your java string

s=js.CopyString(0,1) // copies first character
s=js.CopyString(3,6) // copies six charcters from starting at the forth
```

Notes: Returns "" on any error. The string returned is marked as being Unicode (16bit).
For the first character to be the start use start=0.
For the first character to be the end use len=1 and start=0.
May crash on bad values for start and len.
See also:

- 109.17.4 CopyString as string 16050

109.17.6 CopyStringUTF as string

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Function: Copies the content of the string into a Xojo string.
Notes: Returns "" on any error. The string returned is marked as being UTF8.
Deprecated in favor of StringValue property and auto conversion with Operator_Convert.
See also:

- 109.17.7 CopyStringUTF(start as Integer, len as Integer) as string 16051

109.17.7 CopyStringUTF(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies the content of the string into a Xojo string.
Notes: Returns "" on any error. The string returned is marked as being UTF8.
Start is 0 based.
May crash on bad values for start and len.
See also:

- 109.17.6 CopyStringUTF as string 16051

109.17.8 Operator_Convert as string

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts to a string automatically.
Notes: Do not call it, just assign JavaStringMBS to a string an Xojo calls this internally.

109.17.9 UTFLength as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Function: The length of the string in bytes encoded as UTF8.
Notes: Returns 0 on any error.

109.17.10 Properties

109.17.11 Length as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The length of this string in unicode characters.
Notes: Returns 0 on any error.
(Read only property)

109.17.12 StringValue as String

MBS Java Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string value as property.
Notes: Uses UTF-8 internally.
(Read only property)

109.18 class JavaThrowableMBS

109.18.1 class JavaThrowableMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The wrapper class for the java throwable object.
Notes: Subclass of the JavaObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.19 class JavaVMMBS

109.19.1 class JavaVMMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a java virtual machine.
Example:

```
Var vm as JavaVMMBS // global

const JNI_VERSION_1_1 = &h00010001
const JNI_VERSION_1_2 = &h00010002
const JNI_VERSION_1_4 = &h00010004

if TargetLinux then
// change path for your linux PC!
JavaVMMBS.SetLibraryPath("/home/cs/jre1.6.0_05/lib/i386/client/libjvm.so")
end if

Var options(-1) as string
Var f as FolderItem=GetFolderItem("test.jar")

vm=new JavaVMMBS(JNI_VERSION_1_4, options, f, false)

if vm.Handle = 0 then
MsgBox "Can't create Java VM"
else
MsgBox "Java Initialized."
end if
```

Notes: Add Linux support plugin version 8.7.

Releasing the java vm (by releasing all java objects), and reinitializing can fail.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.

While the plugin supports to have several instances, it seems like JNI does not support that.

On Windows, we look into Local Machine\SOFTWARE\JavaSoft\Java Runtime Environment in registry to find the newest entry and the path to the jvm.dll file. Please note that on Windows you can install 32-bit

and 64-bit version of Java and you need the matching bit number to FileMaker application.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites spreading malware!

109.19.2 Methods

109.19.3 Constructor(path as folderitem)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the Java virtual machine.
Notes: This is a convenience function which initializes the java with version=JNI_VERSION_1_4 and no options except the specified path.
The path can be a folderitem pointing to a jar file or a folder with class files.

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your

options and paths are not passed to VM.
See also:

- 109.19.4 Constructor(path as string) 16056
- 109.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean) 16057
- 109.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16058
- 109.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean) 16059

109.19.4 Constructor(path as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the Java virtual machine.
Notes: This is a convenience function which initializes the java engine with version=JNI_VERSION_1_4 and no options except the specified path.
The path can be a path pointing to a jar file or a folder with class files. If you use more than one path, you need to separate them with ";". Seems like on Mac OS X and Linux the separator is ":".

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.
See also:

- 109.19.3 Constructor(path as folderitem) 16055
- 109.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean) 16057
- 109.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16058
- 109.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean) 16059

109.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the java virtual machine.
Notes: Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI_VERSION_1_x constants.

A note for Mac OS X and Java versions:

To specify the current preferred JDK in a family of JVM's, say the 1.5.x family, applications should set the environment variable JAVA_JVM_VERSION to 1.5, and then pass JNI_VERSION_1_4 into JNI_CreateJavaVM as the vm_args.version. To get a specific Java 1.5 JVM, say Java 1.5.0, set the environment variable JAVA_JVM_VERSION to 1.5.0. For Java 1.6 it will be the same in that applications will need to set the environment variable JAVA_JVM_VERSION to 1.6 to specify the current preferred 1.6 Java VM, and to get a specific Java 1.6 JVM, say Java 1.6.1, set the environment variable JAVA_JVM_VERSION to 1.6.1.

To make this sample bring up the current preferred 1.5 JVM, set the environment variable JAVA_JVM_VERSION to 1.5 before calling JNI_CreateJavaVM as shown below. Applications must currently check for availability of JDK 1.5 before requesting it. If your application requires JDK 1.5 and it is not found, it is your responsibility to report an error to the user. To verify if a JVM is installed, check to see if the symlink, or directory exists for the JVM in /System/Library/Frameworks/JavaVM.framework/Versions/ before setting the environment variable JAVA_JVM_VERSION.

If the environment variable JAVA_JVM_VERSION is not set, and JNI_VERSION_1_4 is passed into JNI_CreateJavaVM as the vm_args.version, JNI_CreateJavaVM will return the current preferred JDK. Java 1.4.2 is the preferred JDK as of the release of this sample and the release of Mac OS X 10.4.

Useful option strings:

"-verbose:jni"	show debug output on the console
"-Xms256M"	initial memory
"-Xmx512M"	maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your

options and paths are not passed to VM.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites spreading malware!

109.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the Java virtual machine.
Example:

```
Var JarPath as folderitem = specialfolder.desktop.child("test.jar")
Var options() as string

options.append "-Xms256M"
options.append "-Xmx512M"

Var v as new JavaVMMBS( JavaVMMBS.JNI_VERSION_1_4, options, JarPath, false)
```

Notes: This is a convenience function which initializes the java engine with adding the given path to the options.

Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI_VERSION_1_x constants.
The path can be a folderitem pointing to a jar file or a folder with class files.

Useful option strings:

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if

"-verbose:jni"	show debug output on the console
"-Xms256M"	initial memory
"-Xmx512M"	maximum memory

there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

- 109.19.3 Constructor(path as folderitem) 16055
- 109.19.4 Constructor(path as string) 16056
- 109.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean) 16057
- 109.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16058

109.19.8 DefineClass(name as string, Data as MemoryBlock) as JavaClassMBS

MBS Java Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads a class from a buffer of raw class data.
Notes: Returns nil in case of error or valid class object on success.
You may want to load a class file and pass it here as String or MemoryBlock.
To read jar file, you can use our archive classes to expand zip archives.
See also:

- 109.19.9 DefineClass(name as string, Data as String) as JavaClassMBS 16060

109.19.9 DefineClass(name as string, Data as String) as JavaClassMBS

MBS Java Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads a class from a buffer of raw class data.
Notes: Returns nil in case of error or valid class object on success.
You may want to load a class file and pass it here as String or MemoryBlock.
To read jar file, you can use our archive classes to expand zip archives.
See also:

- 109.19.8 DefineClass(name as string, Data as MemoryBlock) as JavaClassMBS 16060

109.19.10 FindClass(name as string) as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches a class based on the name.
Example:

```
Var e as JavaVMMBS // global
Var c as JavaClassMBS
c=e.FindClass("java/lang/String")
```

Notes: This function loads a locally defined class. It searches the directories and zip files specified by the CLASSPATH environment variable for the class with the specified name.

name: a fully qualified class name (that is, a package name, delimited by "/", followed by the class name). If the name begins with " [" (the array signature character), it returns an array class.

Returns nil on any error.

If your class is not found, it may be possible that it can't be loaded as the jar archive has dependencies to other jar archives.

109.19.11 FreeCurrentThread

MBS Java Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases the thread in Java.
Example:

```
Var w as JavaVMMBS // your vm object
w.FreeCurrentThread
```

Notes: The plugin is written to detect if you use it in a thread. But when the thread ends you need to deregister it with the Java runtime.

109.19.12 FromReflectedField(field as JavaObjectMBS) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searchs the field which matches the reflected field object.

109.19.13 FromReflectedMethod(method as JavaObjectMBS) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searchs the method which matches the reflected method object.

109.19.14 IsAssignableFrom(TheSubClass as JavaClassMBS, TheSuperClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if the class is assignable from the other class.
Notes: That means that the sub class is somewhere down the class tree from the super class.

109.19.15 LoadedClasses as JavaClassMBS()

MBS Java Plugin, Plugin Version: 25.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the list of classes.
Example:

```
// show all class names

var vm as JavaVMMBS // your VM
Var arg As New MemoryBlock(8)
Var LoadedClassNames() As String
Var LoadedClasses() As JavaClassMBS = vm.LoadedClasses
For Each c As JavaClassMBS In LoadedClasses
Var jc As JavaClassMBS = c.ObjectClass
Var jm As JavaMethodMBS = jc.GetMethod("getName", "()Ljava/lang/String;")
Var jo As Variant = c.CallObjectMethod(jm, arg)
Var js As JavaStringMBS = jo
Var name As String = js.StringValue
LoadedClassNames.Add name
Next
MessageBox String.FromArray(LoadedClassNames, EndOfLine)
```

Notes: Does not include items from super class.

109.19.16 MonitorEnter(obj as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enters the monitor associated with the underlying Java object referred to by obj.
Notes: Returns zero on success; otherwise, returns a negative value on failure.

Each Java objects has a monitor associated with it. If the current thread already owns the monitor associated with ref, it increments a counter in the monitor indicating the number of times this thread has entered the monitor. If the monitor associated with ref is not owned by any thread, the current thread becomes the owner of the monitor, setting the entry count of this monitor to 1. If another thread already owns the monitor associated with ref, the current thread waits until the monitor is released, then tries again to gain ownership.

109.19.17 MonitorExit(obj as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases the monitor.
Notes: The current thread must be the owner of the monitor associated with the underlying Java object referred to by ref. The thread decrements the counter indicating the number of times it has entered this monitor. If as a result the value of the counter becomes zero, the current thread releases the montior.

Returns zero on success; otherwise, returns a negative value on failure.

109.19.18 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.19 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS 16064
- 109.19.20 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS 16064

109.19.19 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for booleans with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.18 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS 16063
- 109.19.20 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS 16064

109.19.20 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new boolean array with given values.
See also:

- 109.19.18 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS 16063
- 109.19.19 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS 16064

109.19.21 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.22 NewByteArray(size as Integer) as JavaByteArrayMBS 16064
- 109.19.23 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS 16065

109.19.22 NewByteArray(size as Integer) as JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for bytes with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.21 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS 16064
- 109.19.23 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS 16065

109.19.23 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new byte array with given values.
See also:

- 109.19.21 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS 16064
- 109.19.22 NewByteArray(size as Integer) as JavaByteArrayMBS 16064

109.19.24 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.25 NewCharArray(size as Integer) as JavaCharArrayMBS 16065
- 109.19.26 NewCharArray(values() as UInt16) as JavaCharArrayMBS 16065

109.19.25 NewCharArray(size as Integer) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for chars (16bit) with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.24 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS 16065
- 109.19.26 NewCharArray(values() as UInt16) as JavaCharArrayMBS 16065

109.19.26 NewCharArray(values() as UInt16) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new char array with given values.
See also:

- 109.19.24 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS 16065
- 109.19.25 NewCharArray(size as Integer) as JavaCharArrayMBS 16065

109.19.27 NewDirectByteBuffer(address as Integer, size as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new DirectBuffer object based on the values in address and size.
See also:

- 109.19.28 NewDirectByteBuffer(mem as memoryblock) as JavaObjectMBS 16066

109.19.28 NewDirectByteBuffer(mem as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new DirectBuffer object based on a memoryblock.
Notes: Keep the memoryblock until this object is destroyed.
See also:

- 109.19.27 NewDirectByteBuffer(address as Integer, size as Integer) as JavaObjectMBS 16066

109.19.29 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.30 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS 16067
- 109.19.31 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS 16067

109.19.30 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for doubles with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.29 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS 16066
- 109.19.31 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS 16067

109.19.31 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new double array with given values.
See also:

- 109.19.29 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS 16066
- 109.19.30 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS 16067

109.19.32 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.33 NewFloatArray(size as Integer) as JavaFloatArrayMBS 16067
- 109.19.34 NewFloatArray(values() as Single) as JavaFloatArrayMBS 16068

109.19.33 NewFloatArray(size as Integer) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for singles with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.32 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS 16067
- 109.19.34 NewFloatArray(values() as Single) as JavaFloatArrayMBS 16068

109.19.34 NewFloatArray(values() as Single) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new float array with given values.
See also:

- 109.19.32 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS 16067
- 109.19.33 NewFloatArray(size as Integer) as JavaFloatArrayMBS 16067

109.19.35 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.36 NewIntArray(size as Integer) as JavaIntArrayMBS 16068
- 109.19.37 NewIntArray(values() as Int32) as JavaIntArrayMBS 16068

109.19.36 NewIntArray(size as Integer) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for integers with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.35 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS 16068
- 109.19.37 NewIntArray(values() as Int32) as JavaIntArrayMBS 16068

109.19.37 NewIntArray(values() as Int32) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new Int32 array with given values.
See also:

- 109.19.35 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS 16068
- 109.19.36 NewIntArray(size as Integer) as JavaIntArrayMBS 16068

109.19.38 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.39 NewLongArray(size as Integer) as JavaLongArrayMBS 16069
- 109.19.40 NewLongArray(values() as Int64) as JavaLongArrayMBS 16069

109.19.39 NewLongArray(size as Integer) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for 64 bit integers with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.38 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS 16069
- 109.19.40 NewLongArray(values() as Int64) as JavaLongArrayMBS 16069

109.19.40 NewLongArray(values() as Int64) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new Int64 array with given values.
See also:

- 109.19.38 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS 16069
- 109.19.39 NewLongArray(size as Integer) as JavaLongArrayMBS 16069

109.19.41 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.42 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS 16070
- 109.19.43 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS 16070

109.19.42 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constructs a new array holding objects in class elementClass.
Notes: All elements are initially set to initialElement.
Returns nil on any error.
See also:

- 109.19.41 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS 16070
- 109.19.43 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS 16070

109.19.43 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new Java object array with given size.
See also:

- 109.19.41 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS 16070
- 109.19.42 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS 16070

109.19.44 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 109.19.45 NewShortArray(size as Integer) as JavaShortArrayMBS 16071
- 109.19.46 NewShortArray(values() as Int16) as JavaShortArrayMBS 16071

109.19.45 NewShortArray(size as Integer) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new array for shorts with the given size.
Notes: Returns nil on any error.
See also:

- 109.19.44 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS 16070
- 109.19.46 NewShortArray(values() as Int16) as JavaShortArrayMBS 16071

109.19.46 NewShortArray(values() as Int16) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new short array with given values.
See also:

- 109.19.44 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS 16070
- 109.19.45 NewShortArray(size as Integer) as JavaShortArrayMBS 16071

109.19.47 NewStringArray(size as integer, InitialValue as JavaStringMBS = nil) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new Java string array with given size.
See also:

- 109.19.48 NewStringArray(values() as String) as JavaObjectArrayMBS 16072

109.19.48 NewStringArray(values() as String) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates new string array with given values.
See also:

- 109.19.47 NewStringArray(size as integer, InitialValue as JavaStringMBS = nil) as JavaObjectArrayMBS 16071

109.19.49 NewStringUnicode(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new string.
Notes: Preferres an Unicode encoded string.

109.19.50 NewStringUTF8(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new string.
Example:

```
// init Java
Var options() as string
Var javaVm as new JavaVMMBS(JavaVMMBS.JNI_VERSION_1_4, options, true)

// Get system class
Var system As JavaClassMBS = javaVm.FindClass("java/lang/System")

If system <>Nil Then

// query method
Var transfomerGetPropertyId as JavaMethodMBS = system.GetStaticMethod("getProperty", "(Ljava/lang/String;)Ljava/lan
If transfomerGetPropertyId <>Nil Then

// make parameters
Var keyString As JavaStringMBS = javaVm.NewStringUTF8("os.version")
Var m as New MemoryBlock(8)
m.Int64Value(0)=keyString.Handle

// run it
```

```
Var r as JavaObjectMBS = system.CallStaticObjectMethod(transfomerGetPropertyId, m)

if r<>Nil then
// show result
Var s as JavaStringMBS = JavaStringMBS(r)
MsgBox s.CopyStringUTF
end if

End If
End If
```

Notes: Preferres an UTF8 encoded string.

109.19.51 Runtime as JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the runtime object for the current VM so you can query the memory statistics.

109.19.52 SetLibraryPath(path as folderitem)

MBS Java Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the path where to find the java library.
Notes: Must be called before you use the constructor.
If this is empty on Windows, we will look into registry.
If this is empty on MacOS, we ask the Java.framework for the functions.
See also:

- 109.19.53 SetLibraryPath(path as string) 16073

109.19.53 SetLibraryPath(path as string)

MBS Java Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the path where to find the java library.
Example:

```
if TargetLinux then
// change path for your linux PC!
JavaVMMBS.SetLibraryPath("/home/cs/jre1.6.0_05/lib/i386/client/libjvm.so")
```

end if

Notes: Must be called before you use the constructor.
If this is empty on Windows, we will look into registry.
If this is empty on MacOS, we ask the Java.framework for the functions.
See also:

- 109.19.52 SetLibraryPath(path as folderitem) 16073

109.19.54 ToReflectedField(TheClass as JavaClassMBS, fieldID as JavaFieldMBS, isStatic as boolean) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new reflected field object for the given field.

109.19.55 ToReflectedMethod(TheClass as JavaClassMBS, methodID as JavaMethodMBS, isStatic as boolean) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new reflected method object for the given method.

109.19.56 Version as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the version of the java engine.
Notes: Currently the plugin always uses version 1.4.

Returns the major version number in the higher 16 bits and the minor version number in the lower 16 bits.

In JDK1.1, GetVersion() returns 0x00010001.

109.19.57 Properties

109.19.58 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle of the JavaVM.
Notes: (Read only property)

109.19.59 Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read and Write property)

109.19.60 Constants

Constants

Constant	Value	Description
JNI_VERSION_1_1	&h00010001	One of the constants to specify the JNI version in the constructor.
JNI_VERSION_1_2	&h00010002	One of the constants to specify the JNI version in the constructor.
JNI_VERSION_1_4	&h00010004	One of the constants to specify the JNI version in the constructor.
JNI_VERSION_1_6	&h00010006	One of the constants to specify the JNI version in the constructor.

Chapter 110

Java Database

110.1 class JavaBlobMBS

110.1.1 class JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The java class for a binary large object.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.1.2 Methods

110.1.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.1.4 getBytes(Position as Int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves all or part of the BLOB value that this Blob object represents, as an array of bytes.
Notes: This byte array contains up to length consecutive bytes starting at position pos.

pos: the ordinal position of the first byte in the BLOB value to be extracted; the first byte is at position 1
length: the number of consecutive bytes to be copied

Returns a byte array (as string) containing up to length consecutive bytes from the BLOB value designated by this Blob object, starting with the byte at position pos

110.1.5 length as int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of bytes in the BLOB value designated by this Blob object.

110.1.6 position(SearchString as JavaBlobMBS, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte position in the BLOB value designated by this Blob object at which pattern begins. The search begins at position start.
Notes: pattern: the Blob object designating the BLOB value for which to search
start: the position in the BLOB value at which to begin searching; the first position is 1

Returns the position at which the pattern begins, else -1
See also:

- 110.1.7 position(SearchString as String, Position as Int64) as Int64 16078

110.1.7 position(SearchString as String, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte position at which the specified byte array pattern begins within the BLOB value that this Blob object represents.
Notes: The search for pattern begins at position start.

pattern: the byte array for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the pattern appears, else -1
See also:

- 110.1.6 position(SearchString as JavaBlobMBS, Position as Int64) as Int64 16078

110.1.8 setBytes(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the given array of bytes to the BLOB value that this Blob object represents, starting at position pos, and returns the number of bytes written.
Notes: pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to the BLOB value that this Blob object represents

Returns the number of bytes written
See also:

- 110.1.9 setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer 16079

110.1.9 setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes all or part of the given byte array to the BLOB value that this Blob object represents and returns the number of bytes written.
Notes: Writing starts at position pos in the BLOB value; len bytes from the given byte array are written.

pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to this BLOB object
offset: the offset into the array bytes at which to start reading the bytes to be set
len: the number of bytes to be written to the BLOB value from the array of bytes bytes

Returns the number of bytes written
See also:

- 110.1.8 setBytes(Position as Int64, Value as String) as Integer 16079

110.1.10 truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Truncates the BLOB value that this Blob object represents to be len bytes in length.
Notes: len: the length, in bytes, to which the BLOB value that this Blob object represents should be truncated

110.2 class JavaCallableStatementMBS

110.2.1 class JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Xojo class to handle a CallableStatement in Java.
Notes: The interface used to execute SQL stored procedures. The JDBC API provides a stored procedure SQL escape syntax that allows stored procedures to be called in a standard way for all RDBMSs. This escape syntax has one form that includes a result parameter and one that does not. If used, the result parameter must be registered as an OUT parameter. The other parameters can be used for input, output or both. Parameters are referred to sequentially, by number, with the first parameter being 1.

{ ?= call <procedure-name>[<arg1>,<arg2>, ...] }
{ call <procedure-name>[<arg1>,<arg2>, ...] }

IN parameter values are set using the set methods inherited from PreparedStatement. The type of all OUT parameters must be registered prior to executing the stored procedure; their values are retrieved after execution via the get methods provided here.

A CallableStatement can return one ResultSet object or multiple ResultSet objects. Multiple ResultSet objects are handled using operations inherited from Statement.

For maximum portability, a call's ResultSet objects and update counts should be processed prior to getting the values of output parameters.
Subclass of the JavaStatementMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.2.2 Methods

110.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC BLOB parameter as a Blob object in the Java programming language.
Notes: Parameters:
i - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 110.2.5 getBlob(parameterName as string) as JavaBlobMBS 16082

110.2.5 getBlob(parameterName as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC BLOB parameter as a Blob object in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 110.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS 16082

110.2.6 getBoolean(parameterIndex as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC BIT parameter as a boolean in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is false.
See also:

- 110.2.7 getBoolean(parameterName as string) as boolean 16083

110.2.7 getBoolean(parameterName as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC BIT parameter as a boolean in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is false.
See also:

- 110.2.6 getBoolean(parameterIndex as Integer) as boolean 16082

110.2.8 getByte(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC TINYINT parameter as a byte in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.9 getByte(parameterName as string) as Integer 16083

110.2.9 getByte(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC TINYINT parameter as a byte in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.8 getByte(parameterIndex as Integer) as Integer 16083

110.2.10 getClob(parameterIndex as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC CLOB parameter as a Clob object in the Java programming language.
Notes: Parameters:
i - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 110.2.11 getClob(parameterName as string) as JavaClobMBS 16084

110.2.11 getClob(parameterName as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC CLOB parameter as a Clob object in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 110.2.10 getClob(parameterIndex as Integer) as JavaClobMBS 16084

110.2.12 getDouble(parameterIndex as Integer) as Double

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC DOUBLE parameter as a double in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.13 getDouble(parameterName as string) as Double 16085

110.2.13 getDouble(parameterName as string) as Double

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC DOUBLE parameter as a double in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.12 getDouble(parameterIndex as Integer) as Double 16084

110.2.14 getFloat(parameterIndex as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC FLOAT parameter as a float in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.15 getFloat(parameterName as string) as single 16085

110.2.15 getFloat(parameterName as string) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC FLOAT parameter as a float in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.14 getFloat(parameterIndex as Integer) as single 16085

110.2.16 getInt(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC INTEGER parameter as an int in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.17 getInt(parameterName as string) as Integer 16086

110.2.17 getInt(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC INTEGER parameter as an int in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.16 getInt(parameterIndex as Integer) as Integer 16086

110.2.18 getLong(parameterIndex as Integer) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC BIGINT parameter as a long in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.19 getLong(parameterName as string) as Int64 16087

110.2.19 getLong(parameterName as string) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC BIGINT parameter as a long in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.18 getLong(parameterIndex as Integer) as Int64 16086

110.2.20 getShort(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC SMALLINT parameter as a short in the Java programming language.
Notes: Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.21 getShort(parameterName as string) as Integer 16087

110.2.21 getShort(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC SMALLINT parameter as a short in the Java programming language.
Notes: Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 110.2.20 getShort(parameterIndex as Integer) as Integer 16087

110.2.22 getString(parameterIndex as Integer) as String

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.
Notes: For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is null.
See also:

- 110.2.23 getString(parameterName as string) as String 16088

110.2.23 getString(parameterName as string) as String

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of a JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.
Notes: For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is null.
See also:

- 110.2.22 getString(parameterIndex as Integer) as String 16088

110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the OUT parameter in ordinal position parameterIndex to the JDBC type sqlType.
Notes: All OUT parameters must be registered before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.
See also:

- 110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16089
- 110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16090
- 110.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16090
- 110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16091
- 110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16092

110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the parameter in ordinal position parameterIndex to be of JDBC type sqlType.
Notes: This method must be called before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the SQL type code defined by java.sql.Types.
scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.
See also:

- 110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16088
- 110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16090
- 110.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16090
- 110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16091

- 110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16092

110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the designated output parameter.
Notes: This version of the method registerOutParameter should be used for a user-defined or REF output parameter. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-defined parameter, the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-defined and REF parameters. Although it is intended for user-defined and REF parameters, this method may be used to register a parameter of any JDBC type. If the parameter does not have a user-defined or REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getter method whose Java type corresponds to the parameter's registered SQL type.

Parameters:
paramIndex - the first parameter is 1, the second is 2,...
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16088
- 110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16089
- 110.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16090
- 110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16091
- 110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16092

110.2.27 registerOutParameter(parameterName as string, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the OUT parameter named parameterName to the JDBC type sqlType.
Notes: Registers the OUT parameter named parameterName to the JDBC type sqlType. All OUT parameters must be registered before a stored procedure is executed.

The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

Parameters:
parameterName - the name of the parameter
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.
See also:

- 110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16088
- 110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16089
- 110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16090
- 110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16091
- 110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16092

110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the parameter named parameterName to be of JDBC type sqlType.
Notes: This method must be called before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

Parameters:
parameterName - the name of the parameter
sqlType - SQL type code defined by java.sql.Types.
scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.
See also:

- 110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16088

- 110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16089
- 110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16090
- 110.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16090
- 110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16092

110.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers the designated output parameter.
Notes: This version of the method registerOutParameter should be used for a user-named or REF output parameter. Examples of user-named types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-named parameter the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-named and REF parameters. Although it is intended for user-named and REF parameters, this method may be used to register a parameter of any JDBC type. If the parameter does not have a user-named or REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getXXX method whose Java type XXX corresponds to the parameter's registered SQL type.

Parameters:
parameterName - the name of the parameter
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 110.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16088
- 110.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16089
- 110.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16090
- 110.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16090
- 110.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16091

110.2.30 setBoolean(parameterName as string, x as boolean)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java boolean value.
Notes: The driver converts this to an SQL BIT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.31 setByte(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java byte value.
Notes: The driver converts this to an SQL TINYINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.32 setDouble(parameterName as string, x as Double)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java double value.
Notes: The driver converts this to an SQL DOUBLE value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.33 setFloat(parameterName as string, x as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java float value.
Notes: The driver converts this to an SQL FLOAT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter

x - the parameter value

110.2.34 setInt(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java int value.
Notes: The driver converts this to an SQL INTEGER value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.35 setLong(parameterName as string, x as int64)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java long value.
Notes: The driver converts this to an SQL BIGINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.36 setNull(parameterName as string, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to SQL NULL.
Notes: Note: You must specify the parameter's SQL type.

Parameters:
parameterName - the name of the parameter
sqlType - the SQL type code defined in java.sql.Types
See also:

- 110.2.37 setNull(parameterName as string, sqlType as Integer, typeName as string)

110.2.37 setNull(parameterName as string, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to SQL NULL.
Notes: This version of the method setNull should be used for user-defined types and REF type parameters. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Note: To be portable, applications must give the SQL type code and the fully-qualified SQL type name when specifying a NULL user-defined or REF parameter. In the case of a user-defined type the name is the type name of the parameter itself. For a REF parameter, the name is the type name of the referenced type. If a JDBC driver does not need the type code or type name information, it may ignore it. Although it is intended for user-defined and Ref parameters, this method may be used to set a null parameter of any JDBC type. If the parameter does not have a user-defined or REF type, the given typeName is ignored.

Parameters:
parameterName - the name of the parameter
sqlType - a value from java.sql.Types
typeName - the fully-qualified name of an SQL user-defined type; ignored if the parameter is not a user-defined type or SQL REF value
See also:

- 110.2.36 setNull(parameterName as string, sqlType as Integer) 16094

110.2.38 setShort(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java short value.
Notes: The driver converts this to an SQL SMALLINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

110.2.39 setString(parameterName as string, x as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java String value.
Notes: The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.
Parameters:

parameterName - the name of the parameter
x - the parameter value

110.2.40 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the last OUT parameter read had the value of SQL NULL.
Notes: Note that this method should be called only after calling a getter method; otherwise, there is no value to use in determining whether it is null or not.

Returns:
true if the last parameter read was SQL NULL; false otherwise

110.3 class JavaClobMBS

110.3.1 class JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The java class for large character objects.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.3.2 Methods

110.3.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.3.4 getSubString(Position as int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a copy of the specified substring in the CLOB value designated by this Clob object.
Notes: The substring begins at position pos and has up to length consecutive characters.

Parameters:
pos: the first character of the substring to be extracted. The first character is at position 1.
length: the number of consecutive characters to be copied

Returns a String that is the specified substring in the CLOB value designated by this Clob object

110.3.5 length as int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of characters in the CLOB value designated by this Clob object.
Notes: Returns length of the CLOB in characters.

110.3.6 position(SearchString as JavaClobMBS, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the character position at which the specified Clob object searchstr appears in this Clob object.
Notes: The search begins at position start.

SearchString: the Clob object for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the Clob object appears or -1 if it is not present; the first position is 1
See also:

- 110.3.7 position(SearchString as String, Start as Int64) as Int64 16098

110.3.7 position(SearchString as String, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the character position at which the specified substring searchstr appears in the SQL CLOB value represented by this Clob object.
Notes: The search begins at position start.

searchstr: the substring for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the substring appears or -1 if it is not present; the first position is 1
See also:

- 110.3.6 position(SearchString as JavaClobMBS, Start as Int64) as Int64 16098

110.3.8 setString(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the given Java String to the CLOB value that this Clob object designates at the position pos.

Notes: Position: the position at which to start writing to the CLOB value that this Clob object represents
Value: the string to be written to the CLOB value that this Clob designates

Returns the number of characters written
See also:

- 110.3.9 setString(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer 16099

110.3.9 setString(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes Length characters of Value, starting at character offset, to the CLOB value that this Clob represents.
Notes: Position: the position at which to start writing to this CLOB object
Value: the string to be written to the CLOB value that this Clob object represents
Offset: the offset into str to start reading the characters to be written
Length: the number of characters to be written

Returns the number of characters written
See also:

- 110.3.8 setString(Position as Int64, Value as String) as Integer 16098

110.3.10 truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Truncates the CLOB value that this Clob designates to have a length of len characters.
Notes: len: the length, in bytes, to which the CLOB value should be truncated

110.4 class JavaConnectionMBS

110.4.1 class JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a java connection.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Encrypted Access database in Xojo
- MBS Real Studio Plugins, version 11.3pr11

110.4.2 Methods

110.4.3 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all warnings reported for this Connection object.
Notes: After a call to this method, the method getWarnings returns null until a new warning is reported for this Connection object.

110.4.4 close

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases this Connection object's database and JDBC resources immediately instead of waiting for them to be automatically released.

110.4.5 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

110.4.6 commit

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Makes all changes made since the previous commit/rollback permanent and releases any database locks currently held by the Connection.
Notes: See the java documentation for details on java.sql.Connection.Commit.

110.4.7 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

110.4.8 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may be updated.

110.4.9 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.4.10 createBlob as JavaBlobMBS

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constructs an object that implements the Blob interface.
Notes: The object returned initially contains no data. The setBinaryStream and setBytes methods of the Blob interface may be used to add data to the Blob.

110.4.11 createClob as JavaClobMBS

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constructs an object that implements the Clob interface.
Notes: The object returned initially contains no data. The setAsciiStream, setCharacterStream and setString methods of the Clob interface may be used to add data to the Clob.

110.4.12 createStatement as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a Statement object for sending SQL statements to the database.
Notes: SQL statements without parameters are normally executed using Statement objects. If the same SQL statement is executed many times, it may be more efficient to use a PreparedStatement object.
Result sets created using the returned Statement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Returns:
a new default Statement object
See also:

- 110.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS 16102
- 110.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS 16103

110.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a Statement object that will generate ResultSet objects with the given type and concurrency.
Notes: This method is the same as the createStatement method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

Returns:
a new Statement object that will generate ResultSet objects with the given type and concurrency
See also:

- 110.4.12 createStatement as JavaStatementMBS 16102
- 110.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS 16103

110.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a Statement object that will generate ResultSet objects with the given type, concurrency, and holdability.
Notes: This method is the same as the createStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.
Parameters:
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new Statement object that will generate ResultSet objects with the given type, concurrency, and holdability
See also:

- 110.4.12 createStatement as JavaStatementMBS 16102
- 110.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS 16102

110.4.15 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.4.16 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.4.17 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.4.18 getMetaData as JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a DatabaseMetaData object that contains metadata about the database to which this Connection object represents a connection.
Notes: The metadata includes information about the database's tables, its supported SQL grammar, its stored procedures, the capabilities of this connection, and so on.
Returns:
a DatabaseMetaData object for this Connection object

110.4.19 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

110.4.20 isClosed as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this Connection object has been closed.
Notes: A connection is closed if the method close has been called on it or if certain fatal errors have occurred. This method is guaranteed to return true only when it is called after the method Connection.close has been called.
This method generally cannot be called to determine whether a connection to a database is valid or invalid. A typical client can determine that a connection is invalid by catching any exceptions that might be thrown when an operation is attempted.

Returns:
true if this Connection object is closed; false if it is still open

110.4.21 nativeSQL(sql as string) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts the given SQL statement into the system's native SQL grammar.
Notes: A driver may convert the JDBC SQL grammar into its system's native SQL grammar prior to sending it. This method returns the native form of the statement that the driver would have sent.
Parameters:
sql - an SQL statement that may contain one or more '?' parameter placeholders
Returns:
the native form of this statement

110.4.22 prepareCall(sql as string) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a CallableStatement object for calling database stored procedures.
Notes: The CallableStatement object provides methods for setting up its IN and OUT parameters, and methods for executing the call to a stored procedure.
Note: This method is optimized for handling stored procedure call statements. Some drivers may send the call statement to the database when the method prepareCall is done; others may wait until the CallableStatement object is executed. This has no direct effect on users; however, it does affect which method throws certain SQLExceptions.

Result sets created using the returned CallableStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' parameter placeholders. Typically this statement is a JDBC function call escape string.
Returns:
a new default CallableStatement object containing the pre-compiled SQL statement
See also:

- 110.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS 16106

- 110.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS 16107

110.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.
Notes: This method is the same as the prepareCall method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain on or more ? parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
Returns:
a new CallableStatement object containing the pre-compiled SQL statement that will produce ResultSet objects with the given type and concurrency
See also:

- 110.4.22 prepareCall(sql as string) as JavaCallableStatementMBS 16105

- 110.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS 16107

110.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.
Notes: This method is the same as the prepareCall method above, but it allows the default result set type, result set concurrency type and holdability to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain on or more ? parameters
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new CallableStatement object, containing the pre-compiled SQL statement, that will generate ResultSet objects with the given type, concurrency, and holdability
See also:

- 110.4.22 prepareCall(sql as string) as JavaCallableStatementMBS 16105
- 110.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS 16106

110.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a PreparedStatement object for sending parameterized SQL statements to the database.
Notes: A SQL statement with or without IN parameters can be pre-compiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLException objects.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' IN parameter placeholders
See also:

- 110.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16108
- 110.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16109
- 110.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16109

110.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a default PreparedStatement object that has the capability to retrieve auto-generated keys.
Notes: The given constant tells the driver whether it should make auto-generated keys available for retrieval. This parameter is ignored if the SQL statement is not an INSERT statement.
Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLExceptions.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' IN parameter placeholders
autoGeneratedKeys - a flag indicating whether auto-generated keys should be returned; one of Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS
Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will have the capability of returning auto-generated keys
See also:

- 110.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS 16107
- 110.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16109

- 110.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16109

110.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a PreparedStatement object that will generate ResultSet objects with the given type and concurrency.
Notes: This method is the same as the prepareStatement method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
Returns:
a new PreparedStatement object containing the pre-compiled SQL statement that will produce ResultSet objects with the given type and concurrency
See also:

- 110.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS 16107
- 110.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16108
- 110.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16109

110.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a PreparedStatement object that will generate ResultSet objects with the given type, concurrency, and holdability.
Notes: This method is the same as the prepareStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.

Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN

parameters
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will generate ResultSet objects with the given type, concurrency, and holdability
See also:

- 110.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS 16107
- 110.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16108
- 110.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16109

110.4.29 releaseSavepoint(safepoint as JavaSavepointMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes the given Savepoint object from the current transaction.
Notes: Any reference to the savepoint after it have been removed will cause an SQLException to be thrown.

savepoint: the Savepoint object to be removed

110.4.30 rollback

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Drops all changes made since the previous commit/rollback and releases any database locks currently held by this Connection.
Notes: This method should be used only when auto- commit has been disabled.

See the java documentation for details on java.sql.Connection.Rollback.
See also:

- 110.4.31 rollback(safepoint as JavaSavepointMBS) 16111

110.4.31 rollback(safepoint as JavaSavepointMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Undoes all changes made after the given Savepoint object was set.
Notes: This method should be used only when auto-commit has been disabled.

savepoint: the Savepoint object to roll back to
See also:

- 110.4.30 rollback 16110

110.4.32 setSavepoint as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates an unnamed savepoint in the current transaction and returns the new Savepoint object that represents it.
See also:

- 110.4.33 setSavepoint(name as string) as JavaSavepointMBS 16111

110.4.33 setSavepoint(name as string) as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a savepoint with the given name in the current transaction and returns the new Savepoint object that represents it.
Notes: name: a String containing the name of the savepoint
returns the new Savepoint object
See also:

- 110.4.32 setSavepoint as JavaSavepointMBS 16111

110.4.34 TRANSACTION_NONE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A constant indicating that transactions are not supported.

110.4.35 TRANSACTION_READ_COMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A constant indicating that dirty reads are prevented; non-repeatable reads and phantom reads can occur.
Notes: This level only prohibits a transaction from reading a row with uncommitted changes in it.

110.4.36 TRANSACTION_READ_UNCOMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A constant indicating that dirty reads, non-repeatable reads and phantom reads can occur.
Notes: This level allows a row changed by one transaction to be read by another transaction before any changes in that row have been committed (a "dirty read"). If any of the changes are rolled back, the second transaction will have retrieved an invalid row.

110.4.37 TRANSACTION_REPEATABLE_READ as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A constant indicating that dirty reads and non-repeatable reads are prevented; phantom reads can occur.
Notes: This level prohibits a transaction from reading a row with uncommitted changes in it, and it also prohibits the situation where one transaction reads a row, a second transaction alters the row, and the first transaction rereads the row, getting different values the second time (a "non-repeatable read").

110.4.38 TRANSACTION_SERIALIZABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A constant indicating that dirty reads, non-repeatable reads and phantom reads are prevented.
Notes: This level includes the prohibitions in TRANSACTION_REPEATABLE_READ and further prohibits the situation where one transaction reads all rows that satisfy a WHERE condition, a second transaction inserts a row that satisfies that WHERE condition, and the first transaction rereads for the same condition, retrieving the additional "phantom" row in the second read.

110.4.39 typeARRAY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type ARRAY.

110.4.40 typeBIGINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BIGINT.
Example:

```
Var d as JavaConnectionMBS
MsgBox str(d.typeBIGINT)
```

110.4.41 typeBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BINARY.

110.4.42 typeBIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BIT.

110.4.43 typeBLOB as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BLOB.

110.4.44 typeCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CHAR.

110.4.45 typeCLOB as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CLOB.

110.4.46 typeDATE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DATE.

110.4.47 typeDECIMAL as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DECIMAL.

110.4.48 typeDISTINCT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DISTINCT.

110.4.49 typeDOUBLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DOUBLE.

110.4.50 typeFLOAT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type FLOAT.

110.4.51 typeINTEGER as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type INTEGER.

110.4.52 typeJAVA_OBJECT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type JAVA_OBJECT.

110.4.53 typeLONGVARBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type LONGVARBINARY.

110.4.54 typeLONGVARCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type LONGVARCHAR.

110.4.55 typeNULL as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type NULL.

110.4.56 typeNUMERIC as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type NUMERIC.

110.4.57 typeOTHER as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language that indicates that the SQL type is database-specific and gets mapped to a Java object that can be accessed via the methods getObject and setObject.

110.4.58 typeREAL as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REAL.

110.4.59 typeREF as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REF.

110.4.60 typeSMALLINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type SMALLINT.

110.4.61 typeSTRUCT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type STRUCT.

110.4.62 typeTIME as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIME.

110.4.63 typeTIMESTAMP as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIMESTAMP.

110.4.64 typeTINYINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TINYINT.

110.4.65 typeVARBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type VARBINARY.

110.4.66 typeVARCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type VARCHAR.

110.4.67 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object whose cursor may move only forward.

110.4.68 TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

110.4.69 TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

110.4.70 Properties

110.4.71 AutoCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current auto-commit state.
Notes: See the java documentation for details on java.sql.Connection.SetAutoCommit.
(Read and Write computed property)

110.4.72 Catalog as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets or gets the given catalog name in order to select a subspace of this Connection object's database in which to work.
Notes: If the driver does not support catalogs, it will silently ignore this request.
(Read and Write computed property)

110.4.73 Holdability as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Changes or retrieves the holdability of ResultSet objects created using this Connection object to the given holdability.
Notes: Parameters:
holdability - a ResultSet holdability constant; one of ResultSet.HOLD_CURSORS_OVER_COMMIT or

ResultSet.CLOSE_CURSORS_AT_COMMIT
(Read and Write computed property)

110.4.74 ReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this connection in read-only mode as a hint to enable database optimizations.
Notes: See the java documentation for details on java.sql.Connection.SetReadOnly.
(Read and Write computed property)

110.4.75 TransactionIsolation as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attempts to change the transaction isolation level for this Connection object to the one given.
Notes: The constants defined in the interface Connection are the possible transaction isolation levels.
Note: If this method is called during a transaction, the result is implementation-defined.

Parameters:
level - one of the following Connection constants: Connection.TRANSACTION_READ_UNCOMMITTED, Connection.TRANSACTION_READ_COMMITTED, Connection.TRANSACTION_REPEATABLE_READ, or Connection.TRANSACTION_SERIALIZABLE. (Note that Connection.TRANSACTION_NONE cannot be used because it specifies that transactions are not supported.)
(Read and Write computed property)

110.5 class JavaDatabaseMBS

110.5.1 class JavaDatabaseMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to handle database access using JDBC drivers.
Notes: This class is not a subclass of RB's database class, so you can use it with Xojo Standard Edition.

Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)

Add Linux support plugin version 8.7.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.
Subclass of the JavaObjectMBS class.

110.5.2 Methods

110.5.3 connect(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connects directly to the database calling the Drivers's connect method.
Notes: While getConnection calls DriverManager, this calls directly the driver.

Attempts to make a database connection to the given URL. The driver should return "null" if it realizes it is the wrong kind of driver to connect to the given URL. This will be common, as when the JDBC driver manager is asked to connect to a given URL it passes the URL to each loaded driver in turn.
The driver should throw an SQLException if it is the right driver to connect to the given URL but has trouble connecting to the database.

The java.util.Properties argument can be used to pass arbitrary string tag/value pairs as connection arguments. Normally at least "user" and "password" properties should be included in the Properties object. (the plugin passes empty Properties object)

url - the URL of the database to which to connect

Returns a Connection object that represents a connection to the URL
Throws SQLException - if a database access error occurs

110.5.4 Constructor(vm as JavaVMMBS, driverclass as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new java database object.
Example:

```
Var vm as JavaVMMBS // your VM
Var db as JavaDatabaseMBS

db=new JavaDatabaseMBS(vm,"com.mysql.jdbc.Driver")
```

Notes: The driverclass is the name of the main class of the jdbc driver.

110.5.5 getConnection(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attempts to establish a connection to the given database URL.
Example:

```
Var d as JavaDatabaseMBS
Var c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

Notes: The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

Parameters:
url - a database url of the form jdbc:subprotocol:subname
Returns:
a connection to the URL
See also:

- 110.5.6 getConnection(url as string, username as string, password as string) as JavaConnectionMBS 16123

110.5.6 getConnection(url as string, username as string, password as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attempts to establish a connection to the given database URL.
Example:

```
Var d as JavaDatabaseMBS
Var c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

Notes: The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

Parameters:
url - a database url of the form jdbc:subprotocol:subname
user - the database user on whose behalf the connection is being made
password - the user's password

Returns:
a connection to the URL
See also:

- 110.5.5 getConnection(url as string) as JavaConnectionMBS 16122

110.5.7 IsDriverLoaded as Boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether a driver has been loaded.

110.5.8 println(message as string)

MBS Java Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Prints a message to the current JDBC log stream.

110.5.9 Properties

110.5.10 LoginTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that a driver will wait while attempting to connect to a database.
Notes: The login time limit in seconds.
(Read and Write computed property)

110.6 class JavaDatabaseMetaDataMBS

110.6.1 class JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Comprehensive information about the database as a whole.
Notes: This interface is implemented by driver vendors to let users know the capabilities of a Database Management System (DBMS) in combination with the driver based on JDBCTM technology ("JDBC driver") that is used with it. Different relational DBMSs often support different features, implement features in different ways, and use different data types. In addition, a driver may implement a feature on top of what the DBMS offers. Information returned by methods in this interface applies to the capabilities of a particular driver and a particular DBMS working together. Note that as used in this documentation, the term "database" is used generically to refer to both the driver and DBMS.

A user for this interface is commonly a tool that needs to discover how to deal with the underlying DBMS. This is especially true for applications that are intended to be used with more than one DBMS. For example, a tool might use the method getTypeInfo to find out what data types can be used in a CREATE TABLE statement. Or a user might call the method supportsCorrelatedSubqueries to see if it is possible to use a correlated subquery or supportsBatchUpdates to see if it is possible to use batch updates.

Some DatabaseMetaData methods return lists of information in the form of ResultSet objects. Regular ResultSet methods, such as getString and getInt, can be used to retrieve the data from these ResultSet objects. If a given form of metadata is not available, the ResultSet getter methods throw an SQLException.

Some DatabaseMetaData methods take arguments that are String patterns. These arguments all have names such as fooPattern. Within a pattern String, "%" means match any substring of 0 or more characters, and "_" means match any one character. Only metadata entries matching the search pattern are returned. If a search pattern argument is set to null, that argument's criterion will be dropped from the search.

A method that gets information about a feature that the driver does not support will throw an SQLException. In the case of methods that return a ResultSet object, either a ResultSet object (which may be empty) is returned or an SQLException is thrown.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.6.2 Methods

110.6.3 allProceduresAreCallable as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current user can call all the procedures returned by the method getProcedures.
Notes: Returns true if so; false otherwise

110.6.4 allTablesAreSelectable as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current user can use all the tables returned by the method getTables in a SELECT statement.
Notes: Returns true if so; false otherwise

110.6.5 attributeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values might not be allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

110.6.6 attributeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values are definitely allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

110.6.7 attributeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that whether NULL values are allowed is not known.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

110.6.8 bestRowNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the best row identifier is NOT a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

110.6.9 bestRowPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the best row identifier is a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

110.6.10 bestRowSession as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the scope of the best row identifier is the remainder of the current session.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

110.6.11 bestRowTemporary as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the scope of the best row identifier is very temporary, lasting only while the row is being used.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

110.6.12 bestRowTransaction as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the scope of the best row identifier is the remainder of the current transaction.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

110.6.13 bestRowUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the best row identifier may or may not be a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

110.6.14 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column might not allow NULL values.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

110.6.15 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column definitely allows NULL values.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

110.6.16 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the nullability of columns is unknown.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

110.6.17 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.6.18 dataDefinitionCausesTransactionCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a data definition statement within a transaction forces the transaction to commit.

110.6.19 dataDefinitionIgnoredInTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database ignores a data definition statement within a transaction.

110.6.20 deletesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether or not a visible row delete can be detected by calling the method ResultSet.rowDeleted.
Notes: If the method deletesAreDetected returns false, it means that deleted rows are removed from the result set.

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if deletes are detected by the given result set type; false otherwise

110.6.21 doesMaxRowSizeIncludeBlobs as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the return value for the method getMaxRowSize includes the SQL data types LONGVARCHAR and LONGVARBINARY.
Notes: Returns true if so; false otherwise.

110.6.22 getAttributes(catalog as string, schemaPattern as string, typeNamePattern as string, attributeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the given attribute of the given type for a user-defined type (UDT) that is available in the given schema and catalog.
Notes: Descriptions are returned only for attributes of UDTs matching the catalog, schema, type, and attribute name criteria. They are ordered by TYPE_SCHEM, TYPE_NAME and ORDINAL_POSITION. This description does not contain inherited attributes.

The ResultSet object that is returned has the following columns:

TYPE_CAT String =>type catalog (may be null)
TYPE_SCHEM String =>type schema (may be null)
TYPE_NAME String =>type name
ATTR_NAME String =>attribute name
DATA_TYPE int =>attribute type SQL type from java.sql.Types
ATTR_TYPE_NAME String =>Data source dependent type name. For a UDT, the type name is fully qualified. For a REF, the type name is fully qualified and represents the target type of the reference type.
ATTR_SIZE int =>column size. For char or date types this is the maximum number of characters; for numeric or decimal types this is precision.
DECIMAL_DIGITS int =>the number of fractional digits
NUM_PREC_RADIX int =>Radix (typically either 10 or 2)
NULLABLE int =>whether NULL is allowed
attributeNoNulls - might not allow NULL values
attributeNullable - definitely allows NULL values
attributeNullableUnknown - nullability unknown
REMARKS String =>comment describing column (may be null)
ATTR_DEF String =>default value (may be null)
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
CHAR_OCTET_LENGTH int =>for char types the maximum number of bytes in the column
ORDINAL_POSITION int =>index of column in table (starting at 1)
IS_NULLABLE String =>"false" means column definitely does not allow NULL values; "true" means the

column might allow NULL values. An empty string means unknown.
SCOPE_CATALOG String =>catalog of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_SCHEMA String =>schema of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_TABLE String =>table name that is the scope of a reference attribute (null if the DATA_TYPE isn't REF)
SOURCE_DATA_TYPE short =>source type of a distinct type or user-generated Ref type,SQL type from java.sql.Types (null if DATA_TYPE isn't DISTINCT or user-generated REF)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
typeNamePattern - a type name pattern; must match the type name as it is stored in the database
attributeNamePattern - an attribute name pattern; must match the attribute name as it is declared in the database

Returns:
a ResultSet object in which each row is an attribute description

Throws:
SQLException - if a database access error occurs

110.6.23 getCatalogs as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the catalog names available in this database. The results are ordered by catalog name.
Notes: The catalog column is:

TABLE_CAT String =>catalog name

Returns:
a ResultSet object in which each row has a single String column that is a catalog name

Throws:
SQLException - if a database access error occurs

110.6.24 getCatalogSeparator as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the String that this database uses as the separator between a catalog and table name.

110.6.25 getCatalogTerm as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the database vendor's preferred term for "catalog".

110.6.26 getColumnPrivileges(catalog as string, schema as string, table as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the access rights for a table's columns.
Notes: Only privileges matching the column name criteria are returned. They are ordered by COLUMN_NAME and PRIVILEGE.

Each privilige description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
COLUMN_NAME String =>column name
GRANTOR =>grantor of access (may be null)
GRANTEE String =>grantee of access
PRIVILEGE String =>name of access (SELECT, INSERT, UPDATE, REFRENCES, ...)
IS_GRANTABLE String =>"true" if grantee is permitted to grant to others; "false" if not; null if unknown
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:

ResultSet - each row is a column privilege description

Throws:
SQLException - if a database access error occurs

110.6.27 getColumns(catalog as string, schemaPattern as string, tableNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of table columns available in the specified catalog.
Notes: Only column descriptions matching the catalog, schema, table and column name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and ORDINAL_POSITION.

Each column description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
COLUMN_NAME String =>column name
DATA_TYPE int =>SQL type from java.sql.Types
TYPE_NAME String =>Data source dependent type name, for a UDT the type name is fully qualified
COLUMN_SIZE int =>column size. For char or date types this is the maximum number of characters, for numeric or decimal types this is precision.
BUFFER_LENGTH is not used.
DECIMAL_DIGITS int =>the number of fractional digits
NUM_PREC_RADIX int =>Radix (typically either 10 or 2)
NULLABLE int =>is NULL allowed.
columnNoNulls - might not allow NULL values
columnNullable - definitely allows NULL values
columnNullableUnknown - nullability unknown
REMARKS String =>comment describing column (may be null)
COLUMN_DEF String =>default value (may be null)
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
CHAR_OCTET_LENGTH int =>for char types the maximum number of bytes in the column
ORDINAL_POSITION int =>index of column in table (starting at 1)
IS_NULLABLE String =>"false" means column definitely does not allow NULL values; "true" means the column might allow NULL values. An empty string means nobody knows.
SCOPE_CATLOG String =>catalog of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_SCHEMA String =>schema of table that is the scope of a reference attribute (null if the DATA_TYPE isn't REF)

SCOPE_TABLE String =>table name that this the scope of a reference attribute (null if the DATA_TYPE isn't REF)
SOURCE_DATA_TYPE short =>source type of a distinct type or user-generated Ref type, SQL type from java.sql.Types (null if DATA_TYPE isn't DISTINCT or user-generated REF)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row is a column description

Throws:
SQLException - if a database access error occurs

110.6.28 getConnection as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the connection that produced this metadata object.

110.6.29 getCrossReference(primaryCatalog as string, primarySchema as string, primaryTable as string, foreignCatalog as string, foreignSchema as string, foreignTable as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the foreign key columns in the given foreign key table that reference the primary key columns of the given primary key table (describe how one table imports another's key).
Notes: This should normally return a single foreign key/primary key pair because most tables import a foreign key from a table only once. They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ.
Each foreign key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog (may be null)
PKTABLE_SCHEM String =>primary key table schema (may be null)
PKTABLE_NAME String =>primary key table name

PKCOLUMN_NAME String =>primary key column name
FKTABLE_CAT String =>foreign key table catalog (may be null) being exported (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null) being exported (may be null)
FKTABLE_NAME String =>foreign key table name being exported
FKCOLUMN_NAME String =>foreign key column name being exported
KEY_SEQ short =>sequence number within foreign key
UPDATE_RULE short =>What happens to foreign key when primary is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition
Parameters:
primaryCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
primarySchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
primaryTable - the name of the table that exports the key; must match the table name as it is stored in the database
foreignCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
foreignSchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
foreignTable - the name of the table that imports the key; must match the table name as it is stored in the database
Returns:
ResultSet - each row is a foreign key column description
Throws:
SQLException - if a database access error occurs

110.6.30 getDatabaseMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the major version number of the underlying database.

110.6.31 getDatabaseMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the minor version number of the underlying database.

110.6.32 getDatabaseProductName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of this database product.

110.6.33 getDatabaseProductVersion as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the version number of this database product.

110.6.34 getDefaultTransactionIsolation as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves this database's default transaction isolation level.
Notes: The possible values are defined in java.sql.Connection.

110.6.35 getDriverMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves this JDBC driver's major version number.

110.6.36 getDriverMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves this JDBC driver's minor version number.

110.6.37 getDriverName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of this JDBC driver.

110.6.38 getDriverVersion as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the version number of this JDBC driver as a String.

110.6.39 getExportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the foreign key columns that reference the given table's primary key columns (the foreign keys exported by a table).
Notes: They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ. Each foreign key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog (may be null)
PKTABLE_SCHEM String =>primary key table schema (may be null)
PKTABLE_NAME String =>primary key table name
PKCOLUMN_NAME String =>primary key column name
FKTABLE_CAT String =>foreign key table catalog (may be null) being exported (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null) being exported (may be null)
FKTABLE_NAME String =>foreign key table name being exported
FKCOLUMN_NAME String =>foreign key column name being exported
KEY_SEQ short =>sequence number within foreign key
UPDATE_RULE short =>What happens to foreign key when primary is updated:

importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in this database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in this database

Returns:
a ResultSet object in which each row is a foreign key column description

Throws:
SQLException - if a database access error occurs

110.6.40 getExtraNameCharacters as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves all the "extra" characters that can be used in unquoted identifier names (those beyond a-z, A-Z, 0-9 and _).

110.6.41 getIdentifierQuoteString as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the string used to quote SQL identifiers. This method returns a space " " if identifier quoting is not supported.

110.6.42 getImportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the primary key columns that are referenced by a table's foreign key columns (the primary keys imported by a table).
Notes: They are ordered by PKTABLE_CAT, PKTABLE_SCHEM, PKTABLE_NAME, and KEY_SEQ. Each primary key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog being imported (may be null)
PKTABLE_SCHEM String =>primary key table schema being imported (may be null)
PKTABLE_NAME String =>primary key table name being imported
PKCOLUMN_NAME String =>primary key column name being imported
FKTABLE_CAT String =>foreign key table catalog (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null)
FKTABLE_NAME String =>foreign key table name
FKCOLUMN_NAME String =>foreign key column name
KEY_SEQ short =>sequence number within a foreign key
UPDATE_RULE short =>What happens to a foreign key when the primary key is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

Throws:
SQLException - if a database access error occurs

110.6.43 getJDBCMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the major JDBC version number for this driver.

110.6.44 getJDBCMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the minor JDBC version number for this driver.

110.6.45 getMaxBinaryLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of hex characters this database allows in an inline binary literal.
Notes: Returns the maximum length (in hex characters) for a binary literal; a result of zero means that there is no limit or the limit is not known

110.6.46 getMaxCatalogNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters that this database allows in a catalog name.
Notes: Returns the maximum number of characters allowed in a catalog name; a result of zero means that there is no limit or the limit is not known

110.6.47 getMaxCharLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters this database allows for a character literal.
Notes: Returns the maximum number of characters allowed for a character literal; a result of zero means that there is no limit or the limit is not known

110.6.48 getMaxColumnNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters this database allows for a column name.
Notes: Returns the maximum number of characters allowed for a column name; a result of zero means that there is no limit or the limit is not known

110.6.49 getMaxColumnsInGroupBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of columns this database allows in a GROUP BY clause.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

110.6.50 getMaxColumnsInIndex as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of columns this database allows in an index.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

110.6.51 getMaxColumnsInOrderBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of columns this database allows in an ORDER BY clause.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

110.6.52 getMaxColumnsInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of columns this database allows in a SELECT list.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

110.6.53 getMaxColumnsInTable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of columns this database allows in a table.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

110.6.54 getMaxConnections as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of concurrent connections to this database that are possible.
Notes: Returns the maximum number of active connections possible at one time; a result of zero means that there is no limit or the limit is not known

110.6.55 getMaxCursorNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters that this database allows in a cursor name.
Notes: Returns the maximum number of characters allowed in a cursor name; a result of zero means that there is no limit or the limit is not known

110.6.56 getMaxIndexLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of bytes this database allows for an index, including all of the parts of the index.
Notes: Returns the maximum number of bytes allowed; this limit includes the composite of all the constituent parts of the index; a result of zero means that there is no limit or the limit is not known

110.6.57 getMaxProcedureNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters that this database allows in a procedure name.
Notes: Returns the maximum number of characters allowed in a procedure name; a result of zero means that there is no limit or the limit is not known

110.6.58 getMaxRowSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of bytes this database allows in a single row.
Notes: Returns the maximum number of bytes allowed for a row; a result of zero means that there is no limit or the limit is not known

110.6.59 getMaxSchemaNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters that this database allows in a schema name.
Notes: Returns the maximum number of characters allowed in a schema name; a result of zero means that there is no limit or the limit is not known

110.6.60 getMaxStatementLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters this database allows in an SQL statement.
Notes: Returns the maximum number of characters allowed for an SQL statement; a result of zero means that there is no limit or the limit is not known

110.6.61 getMaxStatements as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of active statements to this database that can be open at the same time.
Notes: Returns the maximum number of statements that can be open at one time; a result of zero means that there is no limit or the limit is not known

110.6.62 getMaxTableNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters this database allows in a table name.
Notes: Returns the maximum number of characters allowed for a table name; a result of zero means that there is no limit or the limit is not known

110.6.63 getMaxTablesInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of tables this database allows in a SELECT statement.
Notes: Returns the maximum number of tables allowed in a SELECT statement; a result of zero means that there is no limit or the limit is not known

110.6.64 getMaxUserNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the maximum number of characters this database allows in a user name.
Notes: Returns the maximum number of characters allowed for a user name; a result of zero means that there is no limit or the limit is not known

110.6.65 getNumericFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a comma-separated list of math functions available with this database.
Notes: These are the Open /Open CLI math function names used in the JDBC function escape clause.

110.6.66 getPrimaryKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the given table's primary key columns. They are ordered by COLUMN_NAME.
Notes: Each primary key column description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
COLUMN_NAME String =>column name
KEY_SEQ short =>sequence number within primary key
PK_NAME String =>primary key name (may be null)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

110.6.67 getProcedureColumns(catalog as string, schemaPattern as string, procedureNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the given catalog's stored procedure parameter and result columns.
Notes: Only descriptions matching the schema, procedure and parameter name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME. Within this, the return value, if any, is first. Next are the parameter descriptions in call order. The column descriptions follow in column number order.

Each row in the ResultSet is a parameter description or column description with the following fields:

PROCEDURE_CAT String =>procedure catalog (may be null)
PROCEDURE_SCHEM String =>procedure schema (may be null)
PROCEDURE_NAME String =>procedure name
COLUMN_NAME String =>column/parameter name
COLUMN_TYPE Short =>kind of column/parameter:
procedureColumnUnknown - nobody knows
procedureColumnIn - IN parameter
procedureColumnInOut - INOUT parameter
procedureColumnOut - OUT parameter
procedureColumnReturn - procedure return value
procedureColumnResult - result column in ResultSet
DATA_TYPE int =>SQL type from java.sql.Types
TYPE_NAME String =>SQL type name, for a UDT type the type name is fully qualified
PRECISION int =>precision
LENGTH int =>length in bytes of data
SCALE short =>scale
RADIX short =>radix
NULLABLE short =>can it contain NULL.
procedureNoNulls - does not allow NULL values
procedureNullable - allows NULL values
procedureNullableUnknown - nullability unknown
REMARKS String =>comment describing parameter/column
Note: Some databases may not return the column descriptions for a procedure. Additional columns beyond REMARKS can be defined by the database.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the

database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database
Returns:
ResultSet - each row describes a stored procedure parameter or column
Throws:
SQLException - if a database access error occurs

110.6.68 getProcedures(catalog as string, schemaPattern as string, procedureNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the stored procedures available in the given catalog.
Notes: Only procedure descriptions matching the schema and procedure name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME.

Each procedure description has the the following columns:

PROCEDURE_CAT String =>procedure catalog (may be null)
PROCEDURE_SCHEM String =>procedure schema (may be null)
PROCEDURE_NAME String =>procedure name
reserved for future use
reserved for future use
reserved for future use
REMARKS String =>explanatory comment on the procedure
PROCEDURE_TYPE short =>kind of procedure:
procedureResultUnknown - May return a result
procedureNoResult - Does not return a result
procedureReturnsResult - Returns a result
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the database

Returns:
ResultSet - each row is a procedure description

Throws:
SQLException - if a database access error occurs

110.6.69 getProcedureTerm as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the database vendor's preferred term for "procedure".

110.6.70 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the default holdability of this ResultSet object.
Notes: Returns:
the default holdability; either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

110.6.71 getSchemas as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the schema names available in this database.
Notes: The results are ordered by schema name.

The schema column is:

TABLE_SCHEM String =>schema name
TABLE_CATALOG String =>catalog name (may be null)
Returns:
a ResultSet object in which each row is a schema decription

Throws:
SQLException - if a database access error occurs

110.6.72 getSchemaTerm as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the database vendor's preferred term for "schema".

110.6.73 getSearchStringEscape as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the string that can be used to escape wildcard characters.
Notes: This is the string that can be used to escape '_' or '%' in the catalog search parameters that are a pattern (and therefore use one of the wildcard characters).
The '_' character represents any single character; the '%' character represents any sequence of zero or more characters.

110.6.74 getSQLKeywords as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a comma-separated list of all of this database's SQL keywords that are NOT also SQL92 keywords.

110.6.75 getSQLStateType as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the SQLSTATE returned by SQLException.getSQLState is X/Open (now known as Open Group) SQL CLI or SQL99.
Notes: Returns:
the type of SQLSTATE; one of: sqlStateXOpen or sqlStateSQL99

110.6.76 getStringFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a comma-separated list of string functions available with this database.
Notes: These are the Open Group CLI string function names used in the JDBC function escape clause.

110.6.77 getSuperTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the table hierarchies defined in a particular schema in this database.
Notes: Only supertable information for tables matching the catalog, schema and table name are returned. The table name parameter may be a fully- qualified name, in which case, the catalog and schemaPattern parameters are ignored. If a table does not have a super table, it is not listed here. Supertables have to be defined in the same catalog and schema as the sub tables. Therefore, the type description does not need to include this information for the supertable.

Each type description has the following columns:

TABLE_CAT String =>the type's catalog (may be null)
TABLE_SCHEM String =>type's schema (may be null)
TABLE_NAME String =>type name
SUPERTABLE_NAME String =>the direct super type's name
Note: If the driver does not support type hierarchies, an empty result set is returned.

Parameters:
catalog - a catalog name; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
schemaPattern - a schema name pattern; "" retrieves those without a schema
tableNamePattern - a table name pattern; may be a fully-qualified name

Returns:
a ResultSet object in which each row is a type description

Throws:
SQLException - if a database access error occurs

110.6.78 getSuperTypes(catalog as string, schemaPattern as string, typeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the user-defined type (UDT) hierarchies defined in a particular schema in this database.
Notes: Only the immediate super type/ sub type relationship is modeled.
Only supertype information for UDTs matching the catalog, schema, and type name is returned. The type

name parameter may be a fully-qualified name. When the UDT name supplied is a fully-qualified name, the catalog and schemaPattern parameters are ignored.

If a UDT does not have a direct super type, it is not listed here. A row of the ResultSet object returned by this method describes the designated UDT and a direct supertype. A row has the following columns:

TYPE_CAT String =>the UDT's catalog (may be null)
TYPE_SCHEM String =>UDT's schema (may be null)
TYPE_NAME String =>type name of the UDT
SUPERTYPE_CAT String =>the direct super type's catalog (may be null)
SUPERTYPE_SCHEM String =>the direct super type's schema (may be null)
SUPERTYPE_NAME String =>the direct super type's name
Note: If the driver does not support type hierarchies, an empty result set is returned.

Parameters:
catalog - a catalog name; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
schemaPattern - a schema name pattern; "" retrieves those without a schema
typeNamePattern - a UDT name pattern; may be a fully-qualified name

Returns:
a ResultSet object in which a row gives information about the designated UDT

Throws:
SQLException - if a database access error occurs

110.6.79 getSystemFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a comma-separated list of system functions available with this database.
Notes: These are the Open Group CLI system function names used in the JDBC function escape clause.

110.6.80 getTablePrivileges(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the access rights for each table available in a catalog.

Notes: Note that a table privilege applies to one or more columns in the table. It would be wrong to assume that this privilege applies to all columns (this may be true for some systems but is not true for all.)
Only privileges matching the schema and table name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and PRIVILEGE.

Each privilige description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
GRANTOR =>grantor of access (may be null)
GRANTEE String =>grantee of access
PRIVILEGE String =>name of access (SELECT, INSERT, UPDATE, REFRENCES, ...)
IS_GRANTABLE String =>"true" if grantee is permitted to grant to others; "false" if not; null if unknown
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a table privilege description

Throws:
SQLException - if a database access error occurs

110.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the tables available in the given catalog.
Notes: Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are ordered by TABLE_TYPE, TABLE_SCHEM and TABLE_NAME.
Each table description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

REMARKS String =>explanatory comment on the table
TYPE_CAT String =>the types catalog (may be null)
TYPE_SCHEM String =>the types schema (may be null)
TYPE_NAME String =>type name (may be null)
SELF_REFERENCING_COL_NAME String =>name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String =>specifies how values in SELF_REFERENCING_COL_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)
Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs
See also:

- 110.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS 16153

110.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of the tables available in the given catalog.
Notes: Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are ordered by TABLE_TYPE, TABLE_SCHEM and TABLE_NAME.
Each table description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".
REMARKS String =>explanatory comment on the table

TYPE_CAT String =>the types catalog (may be null)
TYPE_SCHEM String =>the types schema (may be null)
TYPE_NAME String =>type name (may be null)
SELF_REFERENCING_COL_NAME String =>name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String =>specifies how values in SELF_REFERENCING_COL_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)
Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs
See also:

- 110.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS 16152

110.6.83 getTableTypes as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the table types available in this database.
Notes: The table type is:

TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

Returns:
a ResultSet object in which each row has a single String column that is a table type

Throws:
SQLException - if a database access error occurs

110.6.84 getTimeDateFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a comma-separated list of the time and date functions available with this database.

110.6.85 getTypeInfos as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of all the standard SQL types supported by this database.
Notes: They are ordered by DATA_TYPE and then by how closely the data type maps to the corresponding JDBC SQL type.

Each type description has the following columns:

TYPE_NAME String =>Type name
DATA_TYPE int =>SQL data type from java.sql.Types
PRECISION int =>maximum precision
LITERAL_PREFIX String =>prefix used to quote a literal (may be null)
LITERAL_SUFFIX String =>suffix used to quote a literal (may be null)
CREATE_PARAMS String =>parameters used in creating the type (may be null)
NULLABLE short =>can you use NULL for this type.
typeNoNulls - does not allow NULL values
typeNullable - allows NULL values
typeNullableUnknown - nullability unknown
CASE_SENSITIVE boolean=>is it case sensitive.
SEARCHABLE short =>can you use "WHERE" based on this type:
typePredNone - No support
typePredChar - Only supported with WHERE .. LIKE
typePredBasic - Supported except for WHERE .. LIKE
typeSearchable - Supported for all WHERE ..
UNSIGNED_ATTRIBUTE boolean =>is it unsigned.
FIXED_PREC_SCALE boolean =>can it be a money value.
AUTO_INCREMENT boolean =>can it be used for an auto-increment value.
LOCAL_TYPE_NAME String =>localized version of type name (may be null)
MINIMUM_SCALE short =>minimum scale supported
MAXIMUM_SCALE short =>maximum scale supported
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
NUM_PREC_RADIX int =>usually 2 or 10

Returns:

a ResultSet object in which each row is an SQL type description

Throws:
SQLException - if a database access error occurs

This method is named getTypeInfo in Java and getTypeInfos in this plugin because Xojo has a global method and sees a conflict.

110.6.86 getURL as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the URL for this DBMS.
Notes: Returns the URL for this DBMS or "" if it cannot be generated.

110.6.87 getUserName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the user name as known to this database.

110.6.88 getVersionColumns(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a description of a table's columns that are automatically updated when any value in a row is updated. They are unordered.
Notes: Each column description has the following columns:

SCOPE short =>is not used
COLUMN_NAME String =>column name
DATA_TYPE int =>SQL data type from java.sql.Types
TYPE_NAME String =>Data source-dependent type name
COLUMN_SIZE int =>precision
BUFFER_LENGTH int =>length of column value in bytes
DECIMAL_DIGITS short =>scale
PSEUDO_COLUMN short =>whether this is pseudo column like an Oracle ROWID

versionColumnUnknown - may or may not be pseudo column
versionColumnNotPseudo - is NOT a pseudo column
versionColumnPseudo - is a pseudo column
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
a ResultSet object in which each row is a column description

110.6.89 importedKeyCascade as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For the column UPDATE_RULE, indicates that when the primary key is updated, the foreign key (imported key) is changed to agree with it.
Notes: For the column DELETE_RULE, it indicates that when the primary key is deleted, rows that imported that key are deleted.
A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.90 importedKeyInitiallyDeferred as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.91 importedKeyInitiallyImmediate as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.92 importedKeyNoAction as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key has been imported, it cannot be updated or deleted.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.93 importedKeyNotDeferrable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.94 importedKeyRestrict as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For the column UPDATE_RULE, indicates that a primary key may not be updated if it has been imported by another table as a foreign key.
Notes: For the column DELETE_RULE, indicates that a primary key may not be deleted if it has been imported by another table as a foreign key.
A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.95 importedKeySetDefault as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key is updated or deleted, the foreign key (imported key) is set to the default value.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects

returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.96 importedKeySetNull as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For the columns UPDATE_RULE and DELETE_RULE, indicates that when the primary key is updated or deleted, the foreign key (imported key) is changed to NULL.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

110.6.97 insertsAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether or not a visible row insert can be detected by calling the method ResultSet.rowInserted.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the specified result set type; false otherwise

110.6.98 isCatalogAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog appears at the start of a fully qualified table name. If not, the catalog appears at the end.

110.6.99 isReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database is in read-only mode.

110.6.100 locatorsUpdateCopy as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether updates made to a LOB are made on a copy or directly to the LOB.
Notes: Returns:
true if updates are made to a copy of the LOB; false if updates are made directly to the LOB

110.6.101 nullPlusNonNullIsNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports concatenations between NULL and non-NULL values being NULL.

110.6.102 nullsAreSortedAtEnd as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether NULL values are sorted at the end regardless of sort order.

110.6.103 nullsAreSortedAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether NULL values are sorted at the start regardless of sort order.

110.6.104 nullsAreSortedHigh as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether NULL values are sorted high.
Notes: Sorted high means that NULL values sort higher than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the end. By contrast, the method nullsAreSortedAtEnd indicates whether NULL values are sorted at the end regardless of sort order.

110.6.105 nullsAreSortedLow as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether NULL values are sorted low.
Notes: Sorted low means that NULL values sort lower than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the beginning. By contrast, the method nullsAreSortedAtStart indicates whether NULL values are sorted at the beginning regardless of sort order.

110.6.106 othersDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether deletes made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if deletes made by others are visible for the given result set type; false otherwise

110.6.107 othersInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether inserts made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if inserts made by others are visible for the given result set type; false otherwise

110.6.108 othersUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether updates made by others are visible.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if updates made by others are visible for the given result set type; false otherwise

110.6.109 ownDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a result set's own deletes are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if deletes are visible for the given result set type; false otherwise

110.6.110 ownInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a result set's own inserts are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if inserts are visible for the given result set type; false otherwise

110.6.111 ownUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether for the given type of ResultSet object, the result set's own updates are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

110.6.112 procedureColumnIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores IN parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

110.6.113 procedureColumnInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores INOUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

110.6.114 procedureColumnOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores OUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method get-

ProcedureColumns.

110.6.115 procedureColumnResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores results.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

110.6.116 procedureColumnReturn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the column stores return values.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

110.6.117 procedureColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that type of the column is unknown.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

110.6.118 procedureNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values are not allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

110.6.119 procedureNoResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the procedure does not return a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

110.6.120 procedureNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that NULL values are allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

110.6.121 procedureNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that whether NULL values are allowed is unknown.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

110.6.122 procedureResultUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that it is not known whether the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

110.6.123 procedureReturnsResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

110.6.124 sqlStateSQL99 as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the value is an SQL99 SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

110.6.125 sqlStateXOpen as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the value is an X/Open (now know as Open Group) SQL CLI SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

110.6.126 storesLowerCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in lower case.

110.6.127 storesLowerCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in lower case.

110.6.128 storesMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in mixed case.

110.6.129 storesMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

110.6.130 storesUpperCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in upper case.

110.6.131 storesUpperCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in upper case.

110.6.132 supportsAlterTableWithAddColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports ALTER TABLE with add column.

110.6.133 supportsAlterTableWithDropColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports ALTER TABLE with drop column.

110.6.134 supportsANSI92EntryLevelSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 entry level SQL grammar.

110.6.135 supportsANSI92FullSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 full SQL grammar supported.

110.6.136 supportsANSI92IntermediateSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ANSI92 intermediate SQL grammar supported.

110.6.137 supportsBatchUpdates as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports batch updates.
Notes: Returns:
true if this database supports batch upcates; false otherwise

110.6.138 supportsCatalogsInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a data manipulation statement.

110.6.139 supportsCatalogsInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

110.6.140 supportsCatalogsInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

110.6.141 supportsCatalogsInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a procedure call statement.

110.6.142 supportsCatalogsInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in a table definition statement.

110.6.143 supportsColumnAliasing as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports column aliasing.
Notes: If so, the SQL AS clause can be used to provide names for computed columns or to provide alias names for columns as required.

110.6.144 supportsConvert as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the CONVERT function between SQL types.
See also:

- 110.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean 16170

110.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the CONVERT for two given SQL types.
Notes: Parameters:
fromType - the type to convert from; one of the type codes from the class JavaDatabaseMBS
toType - the type to convert to; one of the type codes from the class JavaDatabaseMBS

Returns:
true if so; false otherwise
See also:

- 110.6.144 supportsConvert as boolean 16170

110.6.146 supportsCoreSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Core SQL grammar.

110.6.147 supportsCorrelatedSubqueries as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports correlated subqueries.

110.6.148 supportsDataDefinitionAndDataManipulationTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports both data definition and data manipulation statements within a transaction.

110.6.149 supportsDataManipulationTransactionsOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports only data manipulation statements within a transaction.

110.6.150 supportsDifferentTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether, when table correlation names are supported, they are restricted to being different from the names of the tables.

110.6.151 supportsExpressionsInOrderBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports expressions in ORDER BY lists.

110.6.152 supportsExtendedSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Extended SQL grammar.

110.6.153 supportsFullOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports full nested outer joins.

110.6.154 supportsGetGeneratedKeys as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether auto-generated keys can be retrieved after a statement has been executed.
Notes: Returns:
true if auto-generated keys can be retrieved after a statement has executed; false otherwise

110.6.155 supportsGroupBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports some form of GROUP BY clause.

110.6.156 supportsGroupByBeyondSelect as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using columns not included in the SELECT statement in a GROUP BY clause provided that all of the columns in the SELECT statement are included in the GROUP BY clause.

110.6.157 supportsGroupByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using a column that is not in the SELECT statement in a GROUP BY clause.

110.6.158 supportsIntegrityEnhancementFacility as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the SQL Integrity Enhancement Facility.

110.6.159 supportsLikeEscapeClause as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports specifying a LIKE escape clause.

110.6.160 supportsLimitedOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database provides limited support for outer joins.
Notes: (This will be true if the method supportsFullOuterJoins returns true).

110.6.161 supportsMinimumSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the ODBC Minimum SQL grammar.

110.6.162 supportsMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case unquoted SQL identifiers as case sensitive and as a result stores them in mixed case.

110.6.163 supportsMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

110.6.164 supportsMultipleOpenResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether it is possible to have multiple ResultSet objects returned from a CallableStatement object simultaneously.
Notes: Returns:
true if a CallableStatement object can return multiple ResultSet objects simultaneously; false otherwise

110.6.165 supportsMultipleResultSets as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports getting multiple ResultSet objects from a single call to the method execute.

110.6.166 supportsMultipleTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database allows having multiple transactions open at once (on different connections).

110.6.167 supportsNamedParameters as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports named parameters to callable statements.
Notes: Returns:

true if named parameters are supported; false otherwise

110.6.168 supportsNonNullableColumns as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether columns in this database may be defined as non-nullable.

110.6.169 supportsOpenCursorsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping cursors open across commits.

110.6.170 supportsOpenCursorsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping cursors open across rollbacks.

110.6.171 supportsOpenStatementsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping statements open across commits.

110.6.172 supportsOpenStatementsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports keeping statements open across rollbacks.

110.6.173 supportsOrderByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports using a column that is not in the SELECT statement in an ORDER BY clause.

110.6.174 supportsOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports some form of outer join.

110.6.175 supportsPositionedDelete as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a catalog name can be used in an index definition statement.

110.6.176 supportsPositionedUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports positioned UPDATE statements.

110.6.177 supportsResultSetConcurrency(type as Integer, concurrency as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given concurrency type in combination with the given result set type.

110.6.178 supportsResultSetHoldability(holdability as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given result set holdability.
Notes: Parameters:
holdability - one of the following constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
true if so; false otherwise

110.6.179 supportsResultSetType(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given result set type.

110.6.180 supportsSavepoints as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports savepoints.
Notes: Returns:
true if savepoints are supported; false otherwise

110.6.181 supportsSchemasInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a data manipulation statement.

110.6.182 supportsSchemasInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in an index definition statement.

110.6.183 supportsSchemasInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a privilege definition statement.

110.6.184 supportsSchemasInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a procedure call statement.

110.6.185 supportsSchemasInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a schema name can be used in a table definition statement.

110.6.186 supportsSelectForUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SELECT FOR UPDATE statements.

110.6.187 supportsStatementPooling as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports statement pooling.
Notes: Returns:
true if so; false otherwise

110.6.188 supportsStoredProcedures as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports stored procedure calls that use the stored procedure escape syntax.

110.6.189 supportsSubqueriesInComparisons as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in comparison expressions.

110.6.190 supportsSubqueriesInExists as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in EXISTS expressions.

110.6.191 supportsSubqueriesInIns as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in IN statements.

110.6.192 supportsSubqueriesInQuantifieds as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports subqueries in quantified expressions.

110.6.193 supportsTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports table correlation names.

110.6.194 supportsTransactionIsolationLevel(level as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports the given transaction isolation level.
Notes: Parameters:
level - one of the transaction isolation levels defined in javaConnectionMBS

Returns:
true if so; false otherwise

110.6.195 supportsTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports transactions.
Notes: If not, invoking the method commit is a noop, and the isolation level is TRANSACTION_NONE.

110.6.196 supportsUnion as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SQL UNION.

110.6.197 supportsUnionAll as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database supports SQL UNION ALL.

110.6.198 tableIndexClustered as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is a clustered index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

110.6.199 tableIndexHashed as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is a hashed index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

110.6.200 tableIndexOther as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this table index is not a clustered index, a hashed index, or table statistics; it is something other than these.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

110.6.201 tableIndexStatistic as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this column contains table statistics that are returned in conjunction with a table's index descriptions.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

110.6.202 typeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that a NULL value is NOT allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getType-

Info.

110.6.203 typeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

110.6.204 typeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that it is not known whether a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

110.6.205 typePredBasic as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that one can base all WHERE search clauses except WHERE . . . LIKE on this data type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

110.6.206 typePredChar as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the only WHERE search clause that can be based on this type is WHERE . . . LIKE.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

110.6.207 typePredNone as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that WHERE search clauses are not supported for this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

110.6.208 typeSearchable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that all WHERE search clauses can be based on this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

110.6.209 updatesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether or not a visible row update can be detected by calling the method ResultSet.rowUpdated.
Notes: Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the result set type; false otherwise

110.6.210 usesLocalFilePerTable as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database uses a file for each table.

110.6.211 usesLocalFiles as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether this database stores tables in a local file.

110.6.212 versionColumnNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column is NOT a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

110.6.213 versionColumnPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column is a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

110.6.214 versionColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that this version column may or may not be a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

110.7 class JavaExceptionMBS

110.7.1 class JavaExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception class used to report java exception.
Notes: For SQLExceptions the ErrorNumber property will be filled.
For all java exceptions the message property is filled.
Subclass of the RuntimeException class.
Blog Entries

- Encrypted Access database in Xojo

110.7.2 Methods

110.7.3 RaiseJavaException(message as string)

MBS Java Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A method to test exception handling.
Example:

JavaExceptionMBS.RaiseJavaException "Just a test!"

Notes: This method raises a new JavaExceptionMBS with the given message.

110.8 class JavaInputStreamMBS

110.8.1 class JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The plugin class for an inputstream.
Example:

```
// your result set
Var r as JavaResultSetMBS

// get binary data for BLOB column nameed 'data'
Var myInputStream as JavaInputStreamMBS = r.getBinaryStream( "data" )
if myInputStream <>nil Then

// read byte for byte in a loop
// better use other read() method with buffer
Var data as string

Do
Var c as Integer = myInputStream.read
If c = -1 then exit

data = data + chrb(c)
Loop

Var myPicture as Picture = Picture.FromData(data)

// work with picture here
End If
```

Notes: This abstract class in java is the superclass of all classes representing an input stream of bytes.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 13.1pr7

110.8.2 Methods

110.8.3 available as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking by the next invocation of a method for this input stream.
Notes: The next invocation might be the same thread or another thread. A single read or skip of this many bytes will not block, but may read or skip fewer bytes.
Note that while some implementations of InputStream will return the total number of bytes in the stream, many will not. It is never correct to use the return value of this method to allocate a buffer intended to hold all data in this stream.

A subclass' implementation of this method may choose to throw an IOException if this input stream has been closed by invoking the close() method.

The available method for class InputStream always returns 0.

This method should be overridden by subclasses.

Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking or 0 when it reaches the end of the input stream.

Throws:
IOException - if an I/O error occurs.

110.8.4 close

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes this input stream and releases any system resources associated with the stream.

110.8.5 Constructor

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.8.6 mark(readlimit as Integer)

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Marks the current position in this input stream.
Notes: A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
The readlimit arguments tells this input stream to allow that many bytes to be read before the mark position gets invalidated.

The general contract of mark is that, if the method markSupported returns true, the stream somehow remembers all the bytes read after the call to mark and stands ready to supply those same bytes again if and whenever the method reset is called. However, the stream is not required to remember any data at all if more than readlimit bytes are read from the stream before reset is called.

Marking a closed stream should not have any effect on the stream.

The mark method of InputStream does nothing.

Parameters:
readlimit - the maximum limit of bytes that can be read before the mark position becomes invalid.

110.8.7 markSupported as boolean

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tests if this input stream supports the mark and reset methods.
Notes: Whether or not mark and reset are supported is an invariant property of a particular input stream instance. The markSupported method of InputStream returns false.

Returns true if this stream instance supports the mark and reset methods; false otherwise.

110.8.8 read as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the next byte of data from the input stream.
Notes: The value byte is returned as an int in the range 0 to 255. If no byte is available because the end of the stream has been reached, the value -1 is returned. This method blocks until input data is available,

the end of the stream is detected, or an exception is thrown.
A subclass must provide an implementation of this method.

Returns the next byte of data, or -1 if the end of the stream is reached.

Throws:
IOException - if an I/O error occurs.
See also:

- 110.8.9 read(bytes as JavaByteArrayMBS) as Integer 16190
- 110.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16191

110.8.9 read(bytes as JavaByteArrayMBS) as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads some number of bytes from the input stream and stores them into the buffer array bytes.
Notes: The number of bytes actually read is returned as an integer. This method blocks until input data is available, end of file is detected, or an exception is thrown.
If the length of bytes is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at the end of the file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [0] , the next one into bytes [1] , and so on. The number of bytes read is, at most, equal to the length of bytes. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [0] through bytes [k-1] , leaving elements bytes [k] through bytes [bytes.length-1] unaffected.

The read(bytes) method for class InputStream has the same effect as:

read(bytes, 0, bytes.length)

Parameters:
bytes: the buffer into which the data is read.

Returns the total number of bytes read into the buffer, or -1 is there is no more data because the end of the stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than the end of the file, if the input stream has been closed, or if some other I/O error occurs.

NullPointerException - if bytes is null.
See also:

- 110.8.8 read as Integer 16189
- 110.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16191

110.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads up to Length bytes of data from the input stream into an array of bytes.
Notes: An attempt is made to read as many as Length bytes, but a smaller number may be read. The number of bytes actually read is returned as an integer.
This method blocks until input data is available, end of file is detected, or an exception is thrown.

If Length is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at end of file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [Offset] , the next one into bytes [Offset+1] , and so on. The number of bytes read is, at most, equal to Length. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [Offset] through bytes [Offset+k-1] , leaving elements bytes [Offset+k] through bytes [Offset+Length-1] unaffected.

In every case, elements bytes [0] through bytes [Offset] and elements bytes [Offset+Length] through bytes [bytes.length-1] are unaffected.

The read(bytes, Offset, Length) method for class InputStream simply calls the method read() repeatedly. If the first such call results in an IOException, that exception is returned from the call to the read(bytes, Offset, Length) method. If any subsequent call to read() results in a IOException, the exception is caught and treated as if it were end of file; the bytes read up to that point are stored into bytes and the number of bytes read before the exception occurred is returned. The default implementation of this method blocks until the requested amount of input data len has been read, end of file is detected, or an exception is thrown. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters:
bytes: the buffer into which the data is read.
Offset: the start offset in array bytes at which the data is written.
Length: the maximum number of bytes to read.

Returns the total number of bytes read into the buffer, or -1 if there is no more data because the end of the

stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than end of file, or if the input stream has been closed, or if some other I/O error occurs.
NullPointerException - If bytes is null.
IndexOutOfBoundsException - If Offset is negative, Length is negative, or Length is greater than bytes.length - Offset
See also:

- 110.8.8 read as Integer 16189
- 110.8.9 read(bytes as JavaByteArrayMBS) as Integer 16190

110.8.11 reset

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Repositions this stream to the position at the time the mark method was last called on this input stream.
Notes: The general contract of reset is:

- If the method markSupported returns true, then:
- If the method mark has not been called since the stream was created, or the number of bytes read from the stream since mark was last called is larger than the argument to mark at that last call, then an IOException might be thrown.
- If such an IOException is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset.
- If the method markSupported returns false, then:
- The call to reset may throw an IOException.
- If an IOException is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

The method reset for class InputStream does nothing except throw an IOException.

Throws:
IOException - if this stream has not been marked or if the mark has been invalidated.

110.8.12 skip(count as Int64) as Int64

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Skips over and discards count bytes of data from this input stream.
Notes: The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before count bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If count is negative, no bytes are skipped.
The skip method of this class creates a byte array and then repeatedly reads into it until count bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method. For instance, the implementation may depend on the ability to seek.

Parameters:
count: the number of bytes to be skipped.

Returns the actual number of bytes skipped.

Throws:
IOException - if the stream does not support seek, or if some other I/O error occurs.

110.9 class JavaParameterMetaDataMBS

110.9.1 class JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that can be used to get information about the types and properties of the parameters in a PreparedStatement object.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.9.2 Methods

110.9.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.9.4 getParameterClassName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the fully-qualified name of the Java class whose instances should be passed to the method PreparedStatement.setObject.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method PreparedStatement.setObject to set the value in the specified parameter. This is the class name used for custom mapping.

110.9.5 getParameterCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of parameters in the PreparedStatement object for which this ParameterMetaData object contains information.

Notes: Returns:
the number of parameters

110.9.6 getParameterMode(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's mode.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
mode of the parameter; one of ParameterMetaData.parameterModeIn, ParameterMetaData.parameterModeOut, or ParameterMetaData.parameterModeInOut ParameterMetaData.parameterModeUnknown.

110.9.7 getParameterType(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's SQL type.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

110.9.8 getParameterTypeName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's database-specific type name.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
type the name used by the database. If the parameter type is a user-defined type, then a fully-qualified type name is returned.

110.9.9 getPrecision(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's number of decimal digits.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
precision

110.9.10 getScale(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated parameter's number of digits to right of the decimal point.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
scale

110.9.11 isNullable(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether null values are allowed in the designated parameter.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
the nullability status of the given parameter; one of ParameterMetaData.parameterNoNulls, ParameterMetaData.parameterNullable, or ParameterMetaData.parameterNullableUnknown

110.9.12 isSigned(param as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether values for the designated parameter can be signed numbers.
Notes: Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:

true if so; false otherwise

110.9.13 parameterModeIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is IN.

110.9.14 parameterModeInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is INOUT.

110.9.15 parameterModeOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the parameter's mode is OUT.

110.9.16 parameterModeUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the mode of the parameter is unknown.

110.9.17 parameterNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a parameter will not allow NULL values.

110.9.18 parameterNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a parameter will allow NULL values.

110.9.19 parameterNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the nullability of a parameter is unknown.

110.10 class JavaPreparedStatementMBS

110.10.1 class JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that represents a precompiled SQL statement.
Notes: A SQL statement is precompiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: The setter methods (setShort, setString, and so on) for setting IN parameter values must specify types that are compatible with the defined SQL type of the input parameter. For instance, if the IN parameter has SQL type INTEGER, then the method setInt should be used.

If arbitrary parameter type conversions are required, the method setObject should be used with a target SQL type.

In the following example of setting a parameter, con represents an active connection:

PreparedStatement pstmt = con.prepareStatement("UPDATE EMPLOYEES SET SALARY = ? WHERE ID = ?");
pstmt.setBigDecimal(1, 153833.00)
pstmt.setInt(2, 110592)
Subclass of the JavaStatementMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.4pr3
- MBS Real Studio Plugins, version 11.3pr1

110.10.2 Methods

110.10.3 addBatch

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a set of parameters to this PreparedStatement object's batch of commands.

110.10.4 clearParameters

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears the current parameter values immediately.
Notes: In general, parameter values remain in force for repeated use of a statement. Setting a parameter value automatically clears its previous value. However, in some cases it is useful to immediately release the resources used by the current parameter values; this can be done by calling the method clearParameters.

110.10.5 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.10.6 execute as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL statement in this PreparedStatement object, which may be any kind of SQL statement.
Notes: Some prepared statements return multiple results; the execute method handles these complex statements as well as the simpler form of statements handled by the methods executeQuery and executeUpdate. The execute method returns a boolean to indicate the form of the first result. You must call either the method getResultSet or getUpdateCount to retrieve the result; you must call getMoreResults to move to any subsequent result(s).

Returns:
true if the first result is a ResultSet object; false if the first result is an update count or there is no result

110.10.7 executeQuery as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL query in this PreparedStatement object and returns the ResultSet object generated by the query.
Notes: Returns:
a ResultSet object that contains the data produced by the query; never null

110.10.8 executeUpdate as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the SQL statement in this PreparedStatement object, which must be an SQL INSERT, UPDATE or DELETE statement; or an SQL statement that returns nothing, such as a DDL statement.
Notes: Returns:
either (1) the row count for INSERT, UPDATE, or DELETE statements or (2) 0 for SQL statements that return nothing.

110.10.9 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves a ResultSetMetaData object that contains information about the columns of the ResultSet object that will be returned when this PreparedStatement object is executed.
Notes: Because a PreparedStatement object is precompiled, it is possible to know about the ResultSet object that it will return without having to execute it. Consequently, it is possible to invoke the method getMetaData on a PreparedStatement object rather than waiting to execute it and then invoking the ResultSet.getMetaData method on the ResultSet object that is returned.

NOTE: Using this method may be expensive for some drivers due to the lack of underlying DBMS support.

Returns:
the description of a ResultSet object's columns or null if the driver cannot return a ResultSetMetaData object

110.10.10 getParameterMetaData as JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number, types and properties of this PreparedStatement object's parameters.
Notes: Returns:
a ParameterMetaData object that contains information about the number, types and properties of this PreparedStatement object's parameters

110.10.11 setBlob(parameterIndex as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Blob object.
Notes: The driver converts this to an SQL BLOB value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - a Blob object that maps an SQL BLOB value

110.10.12 setBoolean(parameterIndex as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java boolean value.
Notes: The driver converts this to an SQL BIT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.13 setByte(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java byte value.
Notes: The driver converts this to an SQL TINYINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.14 setBytes(parameterIndex as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java array of bytes.
Notes: The driver converts this to an SQL VARBINARY or LONGVARBINARY (depending on the argument's size relative to the driver's limits on VARBINARY values) when it sends it to the database.

parameterIndex: the first parameter is 1, the second is 2, ...
Value: the parameter value as a string.

110.10.15 setClob(parameterIndex as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Clob object.
Notes: The driver converts this to an SQL CLOB value when it sends it to the database.

Parameters:
i - the first parameter is 1, the second is 2, ...
value - a Clob object that maps an SQL CLOB value

110.10.16 setDate(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Date object.
Notes: You need to create a java.sql.Date object yourself to use this.

110.10.17 setDouble(parameterIndex as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java double value.
Notes: The driver converts this to an SQL DOUBLE value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.18 setFloat(parameterIndex as Integer, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java float value.
Notes: The driver converts this to an SQL FLOAT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.19 setInt(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java int value.
Notes: The driver converts this to an SQL INTEGER value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.20 setLong(parameterIndex as Integer, value as Int64)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java long value.
Notes: The driver converts this to an SQL BIGINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.21 setNull(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to SQL NULL.
Notes: You must specify the parameter's SQL type.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...

sqlType - the SQL type code defined in java.sql.Types

110.10.22 setShort(parameterIndex as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java short value.
Notes: The driver converts this to an SQL SMALLINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.23 setString(parameterIndex as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Java String value.
Notes: The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
value - the parameter value

110.10.24 setTime(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given time object.
Notes: You need to create a java.sql.Time object yourself to use this.

110.10.25 setTimestamp(parameterIndex as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the designated parameter to the given Timestamp object.
Notes: You need to create a java.sql.Timestamp object yourself to use this.

110.11 class JavaResultSetMBS

110.11.1 class JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a recordset in Java.
Notes: Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 24.4pr3

110.11.2 Methods

110.11.3 absolute(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the given row number in this ResultSet object.
Example:

```
Var db as JavaConnectionMBS // your database
Var r as JavaResultSetMBS
Var s as JavaStatementMBS

// check second row
s=db.createStatement
r=s.executeQuery("SELECT * from myTable")

if r<>Nil then
if r.absolute(2) then
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
end if
end if
```

Notes: See the java documentation for details on java.sql.ResultSet.absolute.

110.11.4 afterLast

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the end of this ResultSet object, just after the last row.
Notes: See the java documentation for details on java.sql.ResultSet.afterLast.

110.11.5 beforeFirst

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the front of this ResultSet object, just before the first row.
Notes: See the java documentation for details on java.sql.ResultSet.beforeFirst.

110.11.6 cancelRowUpdates

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels the updates made to the current row in this ResultSet object.
Notes: This method may be called after calling an updater method(s) and before calling the method updateRow to roll back the updates made to a row. If no updates have been made or updateRow has already been called, this method has no effect.

See the java documentation for details on java.sql.ResultSet.cancelRowUpdates.

110.11.7 clearWarnings

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all warnings reported on this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.clearWarnings.

110.11.8 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

110.11.9 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

110.11.10 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the concurrency mode for a ResultSet object that may be updated.

110.11.11 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.11.12 deleteRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deletes the current row from this ResultSet object and from the underlying database.
Notes: See the java documentation for details on java.sql.ResultSet.deleteRow.

110.11.13 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.11.14 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.11.15 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

110.11.16 findColumn(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maps the given ResultSet column name to its ResultSet column index.
Example:

```
Var r as JavaResultSetMBS // your result set
MsgBox str(r.findColumn("test_id"))+" "+str(r.findColumn("test_val"))
```

Notes: Returns 0 on any error.
See the java documentation for details on java.sql.ResultSet.findColumn.

110.11.17 first as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the first row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.first.

110.11.18 getAsciiStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set.
See also:

- 110.11.19 getAsciiStream(column as string) as JavaInputStreamMBS 16211

110.11.19 getAsciiStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as an Array object in the Java programming language.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream

of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 110.11.18 getAsciiStream(column as Integer) as JavaInputStreamMBS 16211

110.11.20 getBinaryStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set

See also:

- 110.11.21 getBinaryStream(column as string) as JavaInputStreamMBS 16213

110.11.21 getBinaryStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the result is null.

Throws SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 110.11.20 getBinaryStream(column as Integer) as JavaInputStreamMBS 16212

110.11.22 getBlob(column as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes: Column: the first column is 1, the second is 2, ...

Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 110.11.23 getBlob(column as string) as JavaBlobMBS 16214

110.11.23 getBlob(column as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes: column: the name of the column from which to retrieve the value
Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 110.11.22 getBlob(column as Integer) as JavaBlobMBS 16213

110.11.24 getBoolean(column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 110.11.25 getBoolean(column as string) as boolean 16214

110.11.25 getBoolean(column as string) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 110.11.24 getBoolean(column as Integer) as boolean 16214

110.11.26 getByte(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:

the column value; if the value is SQL NULL, the value returned is 0
See also:

- 110.11.27 getByte(column as string) as Integer 16215

110.11.27 getByte(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 110.11.26 getByte(column as Integer) as Integer 16214

110.11.28 getBytes(column as Integer) as string

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes: column: the first column is 1, the second is 2, ...
the plugin gives you the bytes as a string with no encoding.
See also:

- 110.11.29 getBytes(column as string) as string 16215

110.11.29 getBytes(column as string) as string

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes: the plugin gives you the bytes as a string with no encoding.
See also:

- 110.11.28 getBytes(column as Integer) as string 16215

110.11.30 getClob(column as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes: Column: the first column is 1, the second is 2, ...
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 110.11.31 getClob(column as string) as JavaClobMBS 16216

110.11.31 getClob(column as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes: column: the name of the column from which to retrieve the value
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 110.11.30 getClob(column as Integer) as JavaClobMBS 16216

110.11.32 getConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the concurrency mode of this ResultSet object.
Notes: The concurrency used is determined by the Statement object that created the result set.
Returns:
the concurrency type, either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

110.11.33 getCursorName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the SQL cursor used by this ResultSet object.
Notes: In SQL, a result table is retrieved through a cursor that is named. The current row of a result set can be updated or deleted using a positioned update/delete statement that references the cursor name. To insure that the cursor has the proper isolation level to support update, the cursor's SELECT statement

should be of the form SELECT FOR UPDATE. If FOR UPDATE is omitted, the positioned updates may fail.

The JDBC API supports this SQL feature by providing the name of the SQL cursor used by a ResultSet object. The current row of a ResultSet object is also the current row of this SQL cursor.

Note: If positioned update is not supported, a SQLException is thrown.

Returns:
the SQL name for this ResultSet object's cursor

110.11.34 getDate(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries date value.
See also:

- 110.11.35 getDate(column as string) as JavaObjectMBS 16217

110.11.35 getDate(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries date value.
See also:

- 110.11.34 getDate(column as integer) as JavaObjectMBS 16217

110.11.36 getDouble(column as Integer) as Double

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a double.
Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 110.11.37 getDouble(column as string) as Double 16218

110.11.37 getDouble(column as string) as Double

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a double.
Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 110.11.36 getDouble(column as Integer) as Double 16217

110.11.38 getFloat(column as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 110.11.39 getFloat(column as string) as single 16218

110.11.39 getFloat(column as string) as single

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 110.11.38 getFloat(column as Integer) as single 16218

110.11.40 getInt(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0

See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 110.11.41 getInt(column as string) as Integer 16219

110.11.41 getInt(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int.
Example:

```
Var r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 110.11.40 getInt(column as Integer) as Integer 16218

110.11.42 getLong(column as Integer) as int64

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 110.11.43 getLong(column as string) as int64 16219

110.11.43 getLong(column as string) as int64

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.

See also:

- 110.11.42 getLong(column as Integer) as int64 16219

110.11.44 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number, types and properties of this ResultSet object's columns.
Notes: Returns:
the description of this ResultSet object's columns

110.11.45 getRow as Integer

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current row number.
Notes: See the java documentation for details on java.sql.ResultSet.getRow.

110.11.46 getShort(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes: Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0.
See also:

- 110.11.47 getShort(column as string) as Integer 16220

110.11.47 getShort(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.

Notes: Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 110.11.46 getShort(column as Integer) as Integer 16220

110.11.48 getString(column as Integer) as string

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a String.
Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 110.11.49 getString(column as string) as string 16221

110.11.49 getString(column as string) as string

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of the designated column in the current row of this ResultSet object as a String.
Example:

```
Var r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 110.11.48 getString(column as Integer) as string 16221

110.11.50 getTime(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries time value.
See also:

- 110.11.51 getTime(column as string) as JavaObjectMBS 16222

110.11.51 getTime(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries time value.
See also:

- 110.11.50 getTime(column as integer) as JavaObjectMBS 16221

110.11.52 getTimestamp(column as integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries timestamp value.
See also:

- 110.11.53 getTimestamp(column as string) as JavaObjectMBS 16222

110.11.53 getTimestamp(column as string) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries timestamp value.
See also:

- 110.11.52 getTimestamp(column as integer) as JavaObjectMBS 16222

110.11.54 getType as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the type of this ResultSet object.
Notes: The type is determined by the Statement object that created the result set.
Returns:
ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

110.11.55 getUnicodeStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deprecated. use getCharacterStream in place of getUnicodeStream
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as as a stream of two-byte 3 characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHARvalues. The JDBC driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

- 110.11.56 getUnicodeStream(column as string) as JavaInputStreamMBS 16223

110.11.56 getUnicodeStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deprecated. use getCharacterStream instead
Notes: Retrieves the value of the designated column in the current row of this ResultSet object as a stream of two-byte Unicode characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC technology-enabled driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

Parameters:

column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

- 110.11.55 getUnicodeStream(column as Integer) as JavaInputStreamMBS 16223

110.11.57 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

110.11.58 insertRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Inserts the contents of the insert row into this ResultSet objaect and into the database.
Notes: See the java documentation for details on java.sql.ResultSet.insertRow.

110.11.59 isAfterLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is after the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isAfterLast.

110.11.60 isBeforeFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the cursor is before the first row in this ResultSet object.
Notes: Returns:
true if the cursor is before the first row; false if the cursor is at any other position or the result set contains no rows

See the java documentation for details on java.sql.ResultSet.isBeforeFirst.

110.11.61 isFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is on the first row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isFirst.

110.11.62 isLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the cursor is on the last row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isLast.

110.11.63 last as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.last.

110.11.64 moveToCurrentRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the remembered cursor position, usually the current row.
Notes: This method has no effect if the cursor is not on the insert row.

See the java documentation for details on java.sql.ResultSet.moveToCurrentRow.

110.11.65 moveToInsertRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the insert row.
Notes: The current cursor position is remembered while the cursor is positioned on the insert row. The insert row is a special row associated with an updatable result set. It is essentially a buffer where a new row may be constructed by calling the updater methods prior to inserting the row into the result set. Only the updater, getter, and insertRow methods may be called when the cursor is on the insert row. All of the columns in a result set must be given a value each time this method is called before calling insertRow. An updater method must be called before a getter method can be called on a column value.

See the java documentation for details on java.sql.ResultSet.moveToInsertRow.

110.11.66 NextRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor down one row from its current position.
Notes: See the java documentation for details on java.sql.ResultSet.next.

110.11.67 previousRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor to the previous row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.previous.

110.11.68 refreshRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Refreshes the current row with its most recent value in the database.
Notes: This method cannot be called when the cursor is on the insert row.
The refreshRow method provides a way for an application to explicitly tell the JDBC driver to refetch a row(s) from the database. An application may want to call refreshRow when caching or prefetching is being done by the JDBC driver to fetch the latest value of a row from the database. The JDBC driver may actually refresh multiple rows at once if the fetch size is greater than one.

All values are refetched subject to the transaction isolation level and cursor sensitivity. If refreshRow is called after calling an updater method, but before calling the method updateRow, then the updates made to the row are lost. Calling the method refreshRow frequently will likely slow performance.

110.11.69 relative(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves the cursor a relative number of rows, either positive or negative.
Notes: See the java documentation for details on java.sql.ResultSet.relative.

110.11.70 rowDeleted as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether a row has been deleted.
Notes: A deleted row may leave a visible "hole" in a result set. This method can be used to detect holes in a result set. The value returned depends on whether or not this ResultSet object can detect deletions.
Returns:
true if a row was deleted and deletions are detected; false otherwise

110.11.71 rowInserted as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current row has had an insertion.
Notes: The value returned depends on whether or not this ResultSet object can detect visible inserts.
Returns:
true if a row has had an insertion and insertions are detected; false otherwise

110.11.72 rowUpdated as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves whether the current row has been updated.
Notes: The value returned depends on whether or not the result set can detect updates.
Returns:
true if both (1) the row has been visibly updated by the owner or another and (2) updates are detected

110.11.73 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object whose cursor may move only forward.

110.11.74 TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

110.11.75 TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

110.11.76 updateBlob(column as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Blob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are

called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 110.11.77 updateBlob(column as string, value as JavaBlobMBS) 16229

110.11.77 updateBlob(column as string, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Blob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 110.11.76 updateBlob(column as Integer, value as JavaBlobMBS) 16228

110.11.78 updateBoolean(column as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a boolean value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.79 updateBoolean(column as string, value as boolean) 16229

110.11.79 updateBoolean(column as string, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a boolean value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.78 updateBoolean(column as Integer, value as boolean) 16229

110.11.80 updateByte(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.81 updateByte(column as string, value as Integer) 16230

110.11.81 updateByte(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.80 updateByte(column as Integer, value as Integer) 16230

110.11.82 updateBytes(column as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte array value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: column index starting at 1.
Value: The new byte array as a string.
See also:

- 110.11.83 updateBytes(column as string, Value as String) 16231

110.11.83 updateBytes(column as string, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a byte array value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: The column name.
Value: The new byte array as a string.
See also:

- 110.11.82 updateBytes(column as Integer, Value as String) 16231

110.11.84 updateClob(column as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Clob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 110.11.85 updateClob(column as string, value as JavaClobMBS) 16232

110.11.85 updateClob(column as string, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a java.sql.Clob value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 110.11.84 updateClob(column as Integer, value as JavaClobMBS) 16231

110.11.86 updateDate(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates date value.
Notes: You need to create a java.sql.Date object yourself to use this.
See also:

- 110.11.87 updateDate(column as string, value as JavaObjectMBS) 16232

110.11.87 updateDate(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates date value.
Notes: You need to create a java.sql.Date object yourself to use this.
See also:

- 110.11.86 updateDate(column as integer, value as JavaObjectMBS) 16232

110.11.88 updateDouble(column as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a double value.
Notes: The updater methods are used to update column values in the current row or the insert row. The

updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.89 updateDouble(column as string, value as Double) 16233

110.11.89 updateDouble(column as string, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a double value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.88 updateDouble(column as Integer, value as Double) 16232

110.11.90 updateFloat(column as Integer, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a float value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.91 updateFloat(column as string, value as single) 16234

110.11.91 updateFloat(column as string, value as single)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a float value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.90 updateFloat(column as Integer, value as single) 16233

110.11.92 updateInt(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with an int value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.93 updateInt(column as string, value as Integer) 16234

110.11.93 updateInt(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with an int value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column

x - the new column value
See also:

- 110.11.92 updateInt(column as Integer, value as Integer) 16234

110.11.94 updateLong(column as Integer, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a long value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.95 updateLong(column as string, value as int64) 16235

110.11.95 updateLong(column as string, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a long value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.94 updateLong(column as Integer, value as int64) 16235

110.11.96 updateNull(column as Integer)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives a nullable column a null value.
Notes: The updater methods are used to update column values in the current row or the insert row. The

updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
See also:

- 110.11.97 updateNull(column as string) 16236

110.11.97 updateNull(column as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a null value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
See also:

- 110.11.96 updateNull(column as Integer) 16235

110.11.98 updateRow

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the underlying database with the new contents of the current row of this ResultSet object.
Example:

```
Var r as JavaResultSetMBS
Var db as JavaConnectionMBS // your database
Var s as JavaStatementMBS

s=db.createStatement
r=s.executeQuery("SELECT test_id from myTable")

if r<>Nil then
while r.NextRecord
r.updateInt("test_id",10+r.getInt("test_id"))
r.updateRow
wend
end if
```

Notes: This method cannot be called when the cursor is on the insert row.

See the java documentation for details on java.sql.ResultSet.updateRow.

110.11.99 updateShort(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a short value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.100 updateShort(column as string, value as Integer) 16237

110.11.100 updateShort(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a short value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.99 updateShort(column as Integer, value as Integer) 16237

110.11.101 updateString(column as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a String value.
Notes: The updater methods are used to update column values in the current row or the insert row. The

updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 110.11.102 updateString(column as string, value as string) 16238

110.11.102 updateString(column as string, value as string)

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates the designated column with a String value.
Notes: The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnName - the name of the column
x - the new column value
See also:

- 110.11.101 updateString(column as Integer, value as string) 16237

110.11.103 updateTime(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates time value.
Notes: You need to create a java.sql.Time object yourself to use this.
See also:

- 110.11.104 updateTime(column as string, value as JavaObjectMBS) 16239

110.11.104 updateTime(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates time value.
Notes: You need to create a java.sql.Time object yourself to use this.
See also:

- 110.11.103 updateTime(column as integer, value as JavaObjectMBS) 16239

110.11.105 updateTimestamp(column as integer, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates timestamp value.
Notes: You need to create a java.sql.Timestamp object yourself to use this.
See also:

- 110.11.106 updateTimestamp(column as string, value as JavaObjectMBS) 16239

110.11.106 updateTimestamp(column as string, value as JavaObjectMBS)

MBS Java Plugin, Plugin Version: 24.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates timestamp value.
Notes: You need to create a java.sql.Timestamp object yourself to use this.
See also:

- 110.11.105 updateTimestamp(column as integer, value as JavaObjectMBS) 16239

110.11.107 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reports whether the last column read had a value of SQL NULL.
Notes: See the java documentation for details on java.sql.ResultSet.wasNull.

110.11.108 Properties

110.11.109 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives a hint as to the direction in which the rows in this ResultSet object will be processed.
Notes: The initial value is determined by the Statement object that produced this ResultSet object. The fetch direction may be changed at any time.

Parameters:
direction - an int specifying the suggested fetch direction; one of ResultSet.FETCH_FORWARD, ResultSet.FETCH_REVERSE, or ResultSet.FETCH_UNKNOWN
(Read and Write computed property)

110.11.110 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed for this ResultSet object.
Notes: If the fetch size specified is zero, the JDBC driver ignores the value and is free to make its own best guess as to what the fetch size should be. The default value is set by the Statement object that created the result set. The fetch size may be changed at any time.

Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

110.12 class JavaResultSetMetaDataMBS

110.12.1 class JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An object that can be used to get information about the types and properties of the columns in a ResultSet object.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.12.2 Methods

110.12.3 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a column does not allow NULL values.

110.12.4 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a column allows NULL values.

110.12.5 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the nullability of a column's values is unknown.

110.12.6 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.12.7 getCatalogName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's table's catalog name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the name of the catalog for the table in which the given column appears or "" if not applicable

110.12.8 getColumnClassName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the fully-qualified name of the Java class whose instances are manufactured if the method ResultSet.getObject is called to retrieve a value from the column.
Notes: ResultSet.getObject may return a subclass of the class returned by this method.

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method ResultSet.getObject to retrieve the value in the specified column. This is the class name used for custom mapping.

110.12.9 getColumnCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of columns in this ResultSet object.

110.12.10 getColumnDisplaySize(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates the designated column's normal maximum width in characters.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the normal maximum number of characters allowed as the width of the designated column

110.12.11 getColumnLabel(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's suggested title for use in printouts and displays.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the suggested column title

110.12.12 getColumnName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
column name

110.12.13 getColumnType(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated column's SQL type.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

110.12.14 getColumnTypeName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the designated column's database-specific type name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
type name used by the database. If the column type is a user-defined type, then a fully-qualified type name is returned.

110.12.15 getPrecision(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's number of decimal digits.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
precision

110.12.16 getScale(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's number of digits to right of the decimal point.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
scale

110.12.17 getSchemaName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the designated column's table's schema.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:

schema name or "" if not applicable

110.12.18 getTableName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the designated column's table name.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
table name or "" if not applicable

110.12.19 isAutoIncrement(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is automatically numbered, thus read-only.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.20 isCaseSensitive(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a column's case matters.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.21 isCurrency(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is a cash value

Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.22 isDefinitelyWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether a write on the designated column will definitely succeed.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.23 isNullable(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates the nullability of values in the designated column.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the nullability status of the given column; one of columnNoNulls, columnNullable or columnNullableUnknown

110.12.24 isReadOnly(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column is definitely not writable.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.25 isSearchable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the designated column can be used in a where clause.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.26 isSigned(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether values in the designated column are signed numbers.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.12.27 isWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates whether it is possible for a write on the designated column to succeed.
Notes: Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

110.13 class JavaRuntimeMBS

110.13.1 class JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The java class for runtime information.
Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.13.2 Methods

110.13.3 availableProcessors as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of processors available to the Java virtual machine.
Notes: This value may change during a particular invocation of the virtual machine. Applications that are sensitive to the number of available processors should therefore occasionally poll this property and adjust their resource usage appropriately.

110.13.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.13.5 freeMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the amount of free memory in the Java Virtual Machine.
Notes: Calling the gc method may result in increasing the value returned by freeMemory.

110.13.6 gc

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Invokes the garbage collection.
Notes: Calls "System.gc" in Java.

110.13.7 maxMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the maximum amount of memory that the Java virtual machine will attempt to use.
Notes: If there is no inherent limit then the value Long.MAX_VALUE will be returned.

110.13.8 totalMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the total amount of memory in the Java virtual machine.
Notes: The value returned by this method may vary over time, depending on the host environment.
Note that the amount of memory required to hold an object of any given type may be implementation-dependent.

110.14 class JavaSavepointMBS

110.14.1 class JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The representation of a savepoint, which is a point within the current transaction that can be referenced from the Connection.rollback method. When a transaction is rolled back to a savepoint all changes made after that savepoint are undone.
Notes: Savepoints can be either named or unnamed. Unnamed savepoints are identified by an ID generated by the underlying data source.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

110.14.2 Methods

110.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.14.4 getSavepointId as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the generated ID for the savepoint that this Savepoint object represents.

110.14.5 getSavepointName as string

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the savepoint that this Savepoint object represents.

110.15 class JavaStatementMBS

110.15.1 class JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The object used for executing a static SQL statement and returning the results it produces.
Notes: By default, only one ResultSet object per Statement object can be open at the same time. Therefore, if the reading of one ResultSet object is interleaved with the reading of another, each must have been generated by different Statement objects. All execution methods in the Statement interface implicitly close a statment's current ResultSet object if an open one exists.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Prefetching records from databases
- MBS Xojo / Real Studio Plugins, version 15.1pr1

110.15.2 Methods

110.15.3 addBatch(sql as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds the given SQL command to the current list of commmands for this Statement object.
Notes: The commands in this list can be executed as a batch by calling the method executeBatch.

NOTE: This method is optional.

Parameters:
sql - typically this is a static SQL INSERT or UPDATE statement

110.15.4 cancel

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels this Statement object if both the DBMS and driver support aborting an SQL statement.
Notes: This method can be used by one thread to cancel a statement that is being executed by another thread.

110.15.5 clearBatch

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Empties this Statement object's current list of SQL commands.
Notes: NOTE: This method is optional.

110.15.6 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all the warnings reported on this Statement object.
Notes: After a call to this method, the method getWarnings will return null until a new warning is reported for this Statement object.

110.15.7 close

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Releases this Statement object's database and JDBC resources immediately instead of waiting for this to happen when it is automatically closed.
Notes: It is generally good practice to release resources as soon as you are finished with them to avoid tying up database resources.
Calling the method close on a Statement object that is already closed has no effect.

Note: A Statement object is automatically closed when it is garbage collected. When a Statement object is closed, its current ResultSet object, if one exists, is also closed.

110.15.8 CLOSE_ALL_RESULTS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that all ResultSet objects that have previously been kept open should be closed when calling getMoreResults.

110.15.9 CLOSE_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the current ResultSet object should be closed when calling getMoreResults.

110.15.10 Constructor

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

110.15.11 execute(sql as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may return multiple results.
Notes: In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.
The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement

Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 110.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean 16253

110.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may return multiple results, and signals the driver that any auto-generated keys should be made available for retrieval.
Notes: The driver will ignore this signal if the SQL statement is not an INSERT statement.
In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.

The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement
autoGeneratedKeys - a constant indicating whether auto-generated keys should be made available for retrieval using the method getGeneratedKeys; one of the following constants: Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS
Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 110.15.11 execute(sql as string) as boolean 16253

110.15.13 executeBatch as Integer()

MBS Java Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Submits a batch of commands to the database for execution and if all commands execute successfully, returns an array of update counts.

110.15.14 executeQuery(sql as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which returns a single ResultSet object.
Notes: Parameters:
sql - an SQL statement to be sent to the database, typically a static SQL SELECT statement
Returns:
a ResultSet object that contains the data produced by the given query; never null

110.15.15 executeUpdate(Sql as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement, which may be an INSERT, UPDATE, or DELETE statement or an SQL statement that returns nothing, such as an SQL DDL statement.
Notes: Parameters:
sql - an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 110.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer 16255

110.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Executes the given SQL statement and signals the driver with the given flag about whether the auto-generated keys produced by this Statement object should be made available for retrieval.
Notes: Parameters:
sql - must be an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
autoGeneratedKeys - a flag indicating whether auto-generated keys should be made available for retrieval; one of the following constants: Statement.RETURN_GENERATED_KEYS Statement.NO_GENERATED_KEYS
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 110.15.15 executeUpdate(Sql as string) as Integer 16255

110.15.17 EXECUTE_FAILED as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that an error occured while executing a batch statement.

110.15.18 getGeneratedKeys as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves any auto-generated keys created as a result of executing this Statement object.
Notes: If this Statement object did not generate any keys, an empty ResultSet object is returned.

Returns:
a ResultSet object containing the auto-generated key(s) generated by the execution of this Statement object

110.15.19 getMoreResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves to this Statement object's next result, returns true if it is a ResultSet object, and implicitly closes any current ResultSet object(s) obtained with the method getResultSet.
Notes: There are no more results when the following is true:

```
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 110.15.20 getMoreResults(current as Integer) as boolean 16256

110.15.20 getMoreResults(current as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Moves to this Statement object's next result, deals with any current ResultSet object(s) according to the instructions specified by the given flag, and returns true if the next result is a ResultSet object.
Notes: There are no more results when the following is true:

```
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

Parameters:
current - one of the following Statement constants indicating what should happen to current ResultSet objects

obtained using the method getResultSet: Statement.CLOSE_CURRENT_RESULT, Statement.KEEP_CURRENT_RESULT, or Statement.CLOSE_ALL_RESULTS
Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 110.15.19 getMoreResults as boolean 16256

110.15.21 getResultSet as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current result as a ResultSet object.
Notes: This method should be called only once per result.

Returns:
the current result as a ResultSet object or null if the result is an update count or there are no more results

110.15.22 getResultSetConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set concurrency for ResultSet objects generated by this Statement object.
Notes: Returns:
either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

110.15.23 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set holdability for ResultSet objects generated by this Statement object.
Notes: Returns:
either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

110.15.24 getResultSetType as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the result set type for ResultSet objects generated by this Statement object.
Notes: Returns:
one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_S
SITIVE

110.15.25 getUpdateCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current result as an update count; if the result is a ResultSet object or there are no more results, -1 is returned.
Notes: This method should be called only once per result.

Returns:
the current result as an update count; -1 if the current result is a ResultSet object or there are no more results

110.15.26 KEEP_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that the current ResultSet object should not be closed when calling getMoreResults.

110.15.27 NO_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that generated keys should not be made available for retrieval.

110.15.28 RETURN_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that generated keys should be made available for retrieval.

110.15.29 setCursorName(name as string)

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SQL cursor name to the given String, which will be used by subsequent Statement object execute methods.
Notes: This name can then be used in SQL positioned update or delete statements to identify the current row in the ResultSet object generated by this statement. If the database does not support positioned update/delete, this method is a noop. To insure that a cursor has the proper isolation level to support updates, the cursor's SELECT statement should have the form SELECT FOR UPDATE. If FOR UPDATE is not present, positioned updates may fail.
Note: By definition, the execution of positioned updates and deletes must be done by a different Statement object than the one that generated the ResultSet object being used for positioning. Also, cursor names must be unique within a connection.

Parameters:
name - the new cursor name, which must be unique within a connection

110.15.30 SUCCESS_NO_INFO as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constant indicating that a batch statement executed successfully but that no count of the number of rows it affected is available.

110.15.31 Properties

110.15.32 EscapeProcessing as boolean

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether escape processing is on or off.
Notes: If escape scanning is on (the default), the driver will do escape substitution before sending the SQL statement to the database. Note: Since prepared statements have usually been parsed prior to making this call, disabling escape processing for PreparedStatements objects will have no effect.
Parameters:
enable - true to enable escape processing; false to disable it
(Read and Write computed property)

110.15.33 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fetch direction.
Notes: Gives the driver a hint as to the direction in which rows will be processed in ResultSet objects created using this Statement object. The default value is ResultSet.FETCH_FORWARD.
Note that this method sets the default fetch direction for result sets generated by this Statement object. Each result set has its own methods for getting and setting its own fetch direction.

Parameters:
direction - the initial direction for processing rows
(Read and Write computed property)

110.15.34 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed.
Notes: The number of rows specified affects only result sets created using this statement. If the value specified is zero, then the hint is ignored. The default value is zero.
Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

110.15.35 MaxFieldSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of bytes that can be returned for character and binary column values in a ResultSet object produced by this Statement object.
Notes: This limit applies only to BINARY, VARBINARY, LONGVARBINARY, CHAR, VARCHAR, and LONGVARCHAR columns. If the limit is exceeded, the excess data is silently discarded.
(Read and Write computed property)

110.15.36 MaxRows as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of rows that a ResultSet object produced by this Statement object can contain.
Notes: If this limit is exceeded, the excess rows are silently dropped.
(Read and Write computed property)

110.15.37 QueryTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of seconds the driver will wait for a Statement object to execute. If the limit is exceeded, a SQLException is thrown.
Notes: Returns:
the current query timeout limit in seconds; zero means there is no limit
(Read and Write computed property)

Chapter 111

JavaScript

111.1 class JavaScriptDateComponentsMBS

111.1.1 class JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for date components in JavaScript.
Example:

```
Var j As New JavaScriptEngineMBS

// get now
Var t1 As Double = j.Now

// as compoents
Var d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Var s1 As String = d1.SQLDateTime
// looks right?

// now convert back
Var t2 As Double = j.DateComponentsToTime(d1)
Var d2 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t2)
Var s2 As String = d2.SQLDateTime
// still looks right?

Var t3 As Double = j.DateComponentsToTime(d2)
// should be same time as above, but without fractions

Break
```

111.1.2 Properties

111.1.3 DateTimeValue as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The components as Xojo dateTime.
Notes: Convenience function to create date with UTC and values from this object.
(Read only property)

111.1.4 DateValue as Date

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The components as Xojo date.
Notes: Convenience function to create date with UTC and values from this object.
(Read only property)

111.1.5 Day as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: Ranges from 1 to 31.
(Read and Write property)

111.1.6 Hour as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour.
Notes: (Read and Write property)

111.1.7 Millisecond as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The milliseconds.
Notes: (Read and Write property)

111.1.8 Minute as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes.
Notes: (Read and Write property)

111.1.9 Month as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: Range is 1 to 12.
(Read and Write property)

111.1.10 Second as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds.
Notes: (Read and Write property)

111.1.11 SQLDateTime as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL date and time.
Notes: Convenience property to see value in debugger.
(Read only property)

111.1.12 WeekDay as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The week day value.
Notes: Range is 0 to 6. Sunday is 0, Monday is 1, Tuesday is 2, Wednesday is 3, Thursday is 4, Friday is 5 and Saturday is 6.
(Read and Write property)

111.1.13 Year as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read and Write property)

111.2 class JavaScriptEngineExceptionMBS

111.2.1 class JavaScriptEngineExceptionMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a fatal exception in our JavaScript engine.
Notes: See message property for reason of the exception.
Subclass of the RuntimeException class.
Blog Entries

- Our JavaScript engine for Xojo

111.3 class JavaScriptEngineMBS

111.3.1 class JavaScriptEngineMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for our embedded JavaScript engine.
Notes: We use DukTape, an embeddable Javascript engine, with a focus on portability and compact footprint.
https://duktape.org

Your own JavaScript engine is useful for:

- Running some snippet of JavaScript code without HTMLViewer.
- Using various JavaScript libraries
- Providing a scripting language to your own application.
- An lightweight alternative to XojoScript.
- Working with JSON data
- Enjoy using regular expressions, unicode text functions, number parsing and formatting with no platform dependencies

MBS Plugin added Input(), Yield() and Print() functions for your convenience.
Yield will pass CPU control to other threads, so background tasks continue to run.

MBS Plugin can convert JavaScript values to variant.
Boolean ->Boolean
Number ->Double
String ->String
Buffer ->MemoryBlock
Pointer ->Ptr
Array ->Variant array
Object ->JSON string
null ->nil

We convert variant to JavaScript:
nil ->null
Int32, Int64, Single, Double, Currency ->Number
Boolean ->Boolean
String, Text, Date ->String
Ptr ->Pointer
all other ->undefined

This class is like XojoScript, but using JavaScript as language.

Warning: error handling is broken in version 21.1 of the MBS Plugin. Please update to 22.2 for a fix.

See also JSContextMBS class to use JavaScript with the engine from WebKit in your projects. Since DukTape is only ES6, you may prefer the newer JavaScriptCore library with JSContextMBS class.

111.3.2 Methods

111.3.3 AddFunction(Name as String, JavaScript as String, FileName as String = "")

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a global function defined as a text string.
Example:

```
Var j As New JavaScriptEngineMBS
j.AddFunction "adder", "function (x,y) { return x+y; } "
```

Notes: Optional provide a file name to show in stack traces.
Function source code may contain a function name, but we use only the name parameter to register the function as global one.

111.3.4 CallFunction(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Var r As Variant = j.CallFunction("adder", 2, 3)
Break // check result in debugger
```

Notes: Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 111.3.5 CallFunction(Name as String, Params() as Variant) as Variant

111.3.5 CallFunction(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Var Params() As Variant
params.Append 3
params.Append 4
params.Append 5 // one too much ->will be ignored
Var r As Variant = j.CallFunction("adder", params)
Break // check result in debugger
```

Notes: Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 111.3.4 CallFunction(Name as String, ParamArray Params as Variant) as Variant 16270

111.3.6 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Notes: Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield

time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 111.3.7 CallFunctionMT(Name as String, Params() as Variant) as Variant 16272

111.3.7 CallFunctionMT(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a global function given the name.
Notes: Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 111.3.6 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant 16271

111.3.8 DateComponentsToTime(date as JavaScriptDateComponentsMBS) as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts date components to time.
Example:

```
Var j As New JavaScriptEngineMBS

Var d As New JavaScriptDateComponentsMBS
d.Year = 1970
d.Month = 1
d.day = 1

// shows zero as that's the start point in time for unix
MsgBox "Start Time: "+Str(j.DateComponentsToTime(d))
```

Notes: Convert components (year, month, day, etc), interpreted in UTC, into a time value. The weekday argument is ignored in the conversion. If the component values are invalid, an error is thrown.

There are some differences to the ECMAScript Date.UTC() built-in:

- There's no special handling of two-digit years. For example, Date.UTC(99, 0, 1) gets interpreted as 1999-01-01. If time is 99, it's interpreted as the year 99.
- The milliseconds component is allowed fractions (sub-millisecond resolution) so that the resulting time value may have fractions.

Like the ECMAScript primitives, the components can exceed their natural range and are normalized. For example, specifying minute as 120 is interpreted as adding 2 hours to the time value. The components are expressed as Integers to allow large and negative values to be used.

111.3.9 Destructor

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

111.3.10 Evaluate(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Var j As New JavaScriptEngineMBS

Var v As Variant = j.Evaluate("2+3")
MsgBox v.StringValue
```

Notes: This may include definition of functions and objects and using them.
Result is converted to variant and returned.

111.3.11 EvaluateMT(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Notes: Threaded version of Evaluate. If events or delegates are called on main thread, the preemptive thread waits for answer.

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

111.3.12 EvaluateToString(JavaScript as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Var j As New JavaScriptEngineMBS

Var s As String = j.EvaluateToString("2+3")
MsgBox s
```

Notes: This may include definition of functions and objects and using them.
Result is converted to string in JavaScript and returned as Xojo string.

111.3.13 InitModules

MBS Tools Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs Duktape module loading.
Notes: Only calls JS.InitModules once on a new instance of the JavaScript engine.
Define your own Duktape.modSearch() to provide environment specific module lookups.
After these steps, require() will be registered to the global object and the module system is ready to use.

111.3.14 LoadFunction(Name as String, Data as Memoryblock) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a global function from byte code.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Var m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
Var b as Boolean = j.LoadFunction("adder2", m)

// call it
Var r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Load a buffer containing bytecode, recreating the original ECMAScript function (with some limitations). You must ensure that the bytecode has been dumped with a compatible Duktape version and that the bytecode has not been modified since. Loading bytecode from an untrusted source is memory unsafe and may lead to exploitable vulnerabilities.

Returns true in case of success or false on failure.

111.3.15 Now as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current time as double value.
Notes: This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches Date.now() with the reservation that sub-millisecond resolution may be available.

111.3.16 RegisterFunction(Name as String, theDelegate as JavaScriptEngineDelegateMBS, ArgCount as Integer = -1, tag as Variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers a global function with given name to call delegate.
Example:

```
Var j As New JavaScriptEngineMBS
```

```
j.RegisterFunction "MyFunction", AddressOf testFunction, 1, Nil

// call in JavaScript
Var x As Variant = j.Evaluate("MyFunction(123);")

// call via plugin
Var r As Variant = j.CallFunction("MyFunction", "Hello")

Break

'Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
' MsgBox params(0).StringValue
' Return "ok"
'End Function
```

Notes: ArgCount can be in range from -1 to 15.
If -1 is passed, we allow variable number of arguments.
Tag is passed to delegate and allows you to pass a context object to the delegate.

111.3.17 SaveFunction(Name as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte code for global JavaScript function.
Example:

```
Var j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Var m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
Var b as Boolean = j.LoadFunction("adder2", m)

// call it
Var r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Dump an ECMAScript function at stack top into bytecode, replacing the function with a buffer containing the bytecode data. The bytecode can be loaded back using LoadFunction().

111.3.18 TimeToDateComponents(time as Double) as JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts time to date components.
Example:

```
Var j As New JavaScriptEngineMBS

// get now
Var t1 As Double = j.Now

// as compoents
Var d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Var s1 As String = d1.SQLDateTime
// looks right?

Break
```

Notes: Convert a time value to components (year, month, day, etc) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

There are some differences to the ECMAScript Date UTC accessors like Date.prototype.getUTCMinutes():

The time value is allowed to have fractions (sub-millisecond resolution) so that the millisecond component may also have fractions.

111.3.19 Properties

111.3.20 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

111.3.21 MemoryBlocks as Dictionary

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with references memoryblocks.
Notes: Just for debugging to inspect.

Memoryblocks need to stay here to avoid them being destructed too early, which can cause crashes.
(Read only property)

111.3.22 ObjectCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global object counter.
Notes: A fresh JavaScript engine already has about 400 objects for the built-in functionality.
(Read only property)

111.3.23 StringCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global string counter.
Notes: A fresh JavaScript engine already has about 1000 strings.
(Read only property)

111.3.24 GlobalMemoryBlock(PropertyName as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query or assign a global property to reference memoryblock.
Notes: A normal memoryblock passed as parameter to a function or property would be copied.
This method allows you to define a buffer in JavaScript to reference the bytes in a memoryblock, so all changes are visible in Xojo directly.

You can assign nil as value to clear a memoryblock.
(Read and Write computed property)

111.3.25 GlobalProperty(PropertyName as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property.
Example:

```
Var j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
```

MsgBox j.GlobalProperty("Hello")

Notes: Values are converted to/from variant.
(Read and Write computed property)

111.3.26 GlobalPropertyJSON(PropertyName as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property as JSON.
Example:

Var j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MsgBox j.GlobalPropertyJSON("Hello")

j.GlobalPropertyJSON("test") = " [1,2,3] "
MsgBox j.GlobalPropertyJSON("test")

Notes: Same as GlobalProperty, but needs JSON text.
(Read and Write computed property)

111.3.27 Events

111.3.28 Input(values() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input event.
Notes: Called in JavaScript with Input() function call.
Takes variable number of arguments, which are provided as variants here.
Return a value, which we pass through to JavaScript as function result.

111.3.29 Print(values() as Variant)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The print event.
Notes: Called in JavaScript with Print() function call.
Takes variable number of arguments, which are provided as variants here.

111.3.30 Delegates

111.3.31 JavaScriptEngineDelegateMBS(Name as String, Params() as Variant, tag as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate definition for RegisterFunction function.
Example:

```
Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
MsgBox params(0).StringValue
Return "ok"
End Function
```

Notes: We pass name of function, parameters and tag value.
Result is returned to JavaScript.

111.4 class JSClassMBS

111.4.1 class JSClassMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a class in javascript.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

111.4.2 Methods

111.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

111.4.4 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript object for current class.

111.4.5 Properties

111.4.6 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for this class.
Notes: (Read only property)

111.4.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The handle for the class object.
Notes: (Read and Write property)

111.4.8 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSClass object exists, this value is kept referenced. (Read and Write property)

111.5 class JSContextGroupMBS

111.5.1 class JSContextGroupMBS

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a JavaScript context group.
Notes: A group that associates JavaScript contexts with one another.
Contexts in the same group may share and exchange JavaScript objects.

111.5.2 Methods

111.5.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.

111.5.4 Properties

111.5.5 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

111.6 class JSContextMBS

111.6.1 class JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a javascript execution context.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
Var v as JSValueMBS = c.EvaluateScript("1+2", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes: This is the JavaScript engine used for WebKit, e.g. Safari.
See also JavaScriptEngineMBS class for cross platform projects.

Updated for version 23.1 to work on Windows and Linux if you have a JavaScriptCore library to load.

111.6.2 Methods

111.6.3 CheckScriptSyntax(script as string, sourceURL as String, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks for syntax errors in a string of JavaScript.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
if c.CheckScriptSyntax("1+", "", e) then
MsgBox "OK"
else
// show error

MsgBox e.StringValue
end if
```

Notes: Script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValue in which to store a syntax error exception, if any.

Returns true if the script is syntactically correct, otherwise false.

111.6.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Example:

```
// create new context
Var c as new JSContextMBS
```

Notes: Creates a global JavaScript execution context.
See also:

- 111.6.5 Constructor(Group as JSContextGroupMBS) 16286

111.6.5 Constructor(Group as JSContextGroupMBS)

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a global JavaScript execution context in the context group provided.
See also:

- 111.6.4 Constructor 16285

111.6.6 EvaluateScript(script as string, sourceURL as String, thisObject as JSValueMBS, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Evaluates a string of JavaScript.
Example:

```
Var c as new JSContextMBS
Var e as JSValueMBS
Var v as JSValueMBS = c.EvaluateScript("1+", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes: script: A string containing the script to evaluate.
thisObject: The object to use as "this," or nil to use the global object as "this."
sourceURL: A string containing a URL for the script's source file. This is used by debuggers and when reporting exceptions. Pass "" if you do not care to include source file information.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from evaluating script, or nil if an exception is thrown.

111.6.7 GarbageCollect

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Performs a JavaScript garbage collection.
Notes: JavaScript values that are on the machine stack, in a register, protected by JSValueProtect, set as the global object of an execution context, or reachable from any such value will not be collected.

During JavaScript execution, you are not required to call this function; the JavaScript engine will garbage collect as needed. JavaScript values created within a context group are automatically destroyed when the last reference to the context group is released.

111.6.8 LoadLibrary(File as folderItem) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Notes: Does nothing on macOS or iOS since we use the library provided by Apple with the operation system.

You can load JavaScriptCore.dll on Windows here.
Make sure all dependencies are honored and you may use Dependency Walker application to look for dependencies.

You can load libjavascriptcoregtk.so on Linux here.
e.g. "/usr/lib/aarch64-linux-gnu/libjavascriptcoregtk-4.1.so" for Linux 64-bit on ARM

Returns true on success.
See also:

- 111.6.9 LoadLibrary(Path as String) as boolean 16287

111.6.9 LoadLibrary(Path as String) as boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the library.
Example:

```
#If TargetLinux Then

// you may need to check what version you have
If JSContextMBS.LoadLibraryPath("libjavascriptcoregtk-4.1.so") Then
MessageBox "Okay"
Else
MessageBox "Failed to load: "+JSContextMBS.LibraryError
End If

#ElseIf TargetWindows
```

```
// you may find somewhere a JavaScriptCore.dll for use here

// we just load the DLLs from iTunes into our folder with exe file:
// ASL.dll
// CoreFoundation.dll
// icudt62.dll
// JavaScriptCore.dll
// libdispatch.dll
// libicuin.dll
// libicuuc.dll
// objc.dll
// WTF.dll

If JSContextMBS.LoadLibraryPath("JavaScriptCore.dll") Then
MessageBox "Okay"
Else
MessageBox "Failed to load: "+JSContextMBS.LibraryError
End If

#endif
```

Notes: You can load JavaScriptCore.dll on Windows here.
Make sure all dependencies are honored and you may use Dependency Walker application to look for dependencies.

You can load libjavascriptcoregtk.so on Linux here.
e.g. "/usr/lib/aarch64-linux-gnu/libjavascriptcoregtk-4.1.so" for Linux 64-bit on ARM

Returns true on success.
See also:

- 111.6.8 LoadLibrary(File as folderItem) as boolean 16287

111.6.10 NewArray(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Array object.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
```

```
Var v as JSObjectMBS = c.NewArray(nil, e)
v.SetPropertyAtIndex(0, c.valueWithString("Hello"), e)
v.SetPropertyAtIndex(1, c.valueWithString("World"), e)
MsgBox v.JSONString
```

Notes: arguments: A JSValue array of data to populate the Array with.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is an Array.
The behavior of this function does not exactly match the behavior of the built-in Array constructor. Specifically, if one argument is supplied, this function returns an array with one element.
Requires Mac OS X 10.6 or newer.

111.6.11 NewDate(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Date object, as if by invoking the built-in Date constructor.
Example:

```
Var c as new JSContextMBS

Var year as JSValueMBS = c.valueWithDouble(2015)
Var month as JSValueMBS = c.valueWithDouble(5)
Var day as JSValueMBS = c.valueWithDouble(12)

Var e as JSValueMBS // exception
Var d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox d.JSONString
```

Notes: arguments: A JSValue array of arguments to pass to the Date Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a Date.
Requires Mac OS X 10.6 or newer.

111.6.12 NewError(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript Error object, as if by invoking the built-in Error constructor.
Example:

```
Var c as new JSContextMBS

Var parameters() as JSValueMBS
Parameters.Append c.valueWithString("Hello")

Var ex as JSValueMBS
Var e as JSValueMBS = c.NewError(Parameters, ex)
MsgBox e.StringValue
```

Notes: arguments: A JSValue array of arguments to pass to the Error Constructor.
JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a Error.
Requires Mac OS X 10.6 or newer.

111.6.13 NewFunction(name as string) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Convenience method for creating a JavaScript function which raises FunctionCalled event on invokation.
Notes: name: A string containing the function's name. This will be used when converting the function to string. Pass NULL to create an anonymous function.
Returns a JSObject that is a function. The object's prototype will be the default function prototype.
See also:

- 111.6.14 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS 16290

111.6.14 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a function with a given script as its body.
Example:

```
Var c as new JSContextMBS

// create a function
Var parameterNames() as string = array("value")
Var body as string = "return value*value;"
```

```
Var name as string = "test"

Var e as JSValueMBS
Var v as JSValueMBS = c.NewFunction(name, parameterNames, body, e )

MsgBox v.StringValue

// put it in global memory
c.globalObject.SetProperty "test", v, e

// and call it
Var r as JSValueMBS = c.EvaluateScript("test(5)", "", nil, e)
MsgBox r.StringValue
```

Notes: name: A string containing the function's name. This will be used when converting the function to string. Pass "" to create an anonymous function.
parameterNames: A string array containing the names of the function's parameters.
body: A string containing the script to use as the function's body.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store a syntax error exception, if any. Pass nil if you do not care to store a syntax error exception.
A JSObject that is a function, or nil if either body or parameterNames contains a syntax error. The object's prototype will be the default function prototype.
Use this method when you want to execute a script repeatedly, to avoid the cost of re-parsing the script before each execution.
See also:

- 111.6.13 NewFunction(name as string) as JSObjectMBS 16290

111.6.15 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a new object.

111.6.16 NewRegExp(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript RegExp object, as if by invoking the built-in RegExp constructor.

Notes: arguments: A JSValue array of arguments to pass to the RegExp Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a RegExp.
Requires Mac OS X 10.6 or newer.

111.6.17 SetExecutionTimeLimit(limit as double)

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets the script execution time limit.
Example:

```
Var c As New JSContextMBS
Var e As JSValueMBS

// allow 5 seconds
c.SetExecutionTimeLimit 5

System.DebugLog DateTime.Now.ToString
Var v As JSValueMBS = c.EvaluateScript("while(true) { } ", "", Nil, e)
System.DebugLog DateTime.Now.ToString
```

Notes: Limit: The time limit of allowed script execution time in seconds.

If you implement the ShouldTerminate event, it will be invoked when the time limit has been reached. This will give you a chance to decide if you want to terminate the script or not.

If you don't implement the event, the script will be terminated unconditionally when the time limit has been reached.

In order to guarantee that the execution time limit will take effect, you will need to call SetExecutionTime-Limit before you start executing any scripts.

111.6.18 valueWithBool(value as boolean) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the boolean type.
Example:

```
Var c as new JSContextMBS
Var v as JSValueMBS = c.valueWithBool(true)
MsgBox v.JSONString
```

111.6.19 valueWithDouble(value as Double) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the number type.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithDouble(5.6)
MsgBox v.StringValue
```

111.6.20 valueWithJSON(JSON as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value from a JSON formatted string.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
Var o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

Var e as JSValueMBS
Var p as JSValueMBS = o.GetProperty("length", e)

MsgBox p.StringValue // shows 3
```

Notes: Returns a JSValue containing the parsed value, or nil if the input is invalid.
Available on Mac OS X 10.7 and newer

111.6.21 valueWithNull as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the null type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
```

```
MsgBox "null"
end if
```

111.6.22 valueWithString(value as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the string type.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

111.6.23 valueWithUndefined as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript value of the undefined type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MsgBox "undefined"
end if
```

111.6.24 Properties

111.6.25 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Checks whether the JavaScriptCore library is loaded.
Notes: Checks whether the JavaScriptCore library is loaded.
Always loaded on macOS since we use the one coming with macOS.

For Windows you can load JavaScriptCore.dll and for Linux you can load the libjavascriptcoregtk.so file with LoadLibrary function.

Returns always true on macOS and iOS.
(Read only property)

111.6.26 globalObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the global object of a JavaScript execution context.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox c.globalObject.JSONString
```

Notes: (Read only property)

111.6.27 Group as JSContextGroupMBS

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the context group to which a JavaScript execution context belongs.
Notes: (Read only property)

111.6.28 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

111.6.29 Inspectable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the context is inspectable in Web Inspector.

Notes: Default is false.

Requires macos 13.3, ios 16.4 or newer.
(Read and Write property)

111.6.30 LibraryError as String

MBS MacFrameworks Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The error message from loading the library.
Notes: (Read only property)

111.6.31 Name as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name.
Example:

```
Var c as new JSContextMBS

c.Name = "Hello"
MsgBox c.Name
```

Notes: Requires Mac OS X 10.10 and newer.
(Read and Write property)

111.6.32 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSContext object exists, this value is kept referenced.
(Read and Write property)

111.6.33 Events

111.6.34 FunctionCalled(functionObject as JSObjectMBS, thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event called when your custom function is called.
Notes: Please return a value and in case of error set exception.

111.6.35 ShouldTerminate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 25.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The event invoked when script execution has exceeded the allowed time limit previously specified via SetExecutionTimeLimit.
Notes: If you return true, the timed out script will terminate.
If you return false, the script will run for another period of the allowed time limit specified via SetExecutionTimeLimit.

Within this event, you may call SetExecutionTimeLimit to set a new time limit.

111.7 class JSObjectMBS

111.7.1 class JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a Javascript Object.
Notes: Subclass of the JSValueMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

111.7.2 Methods

111.7.3 CallAsConstructor(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls an object as a constructor.
Notes: self: The JSObject to call as a constructor.
arguments: A JSValueMBS array of arguments to pass to the constructor.
JSException A pointer to a JSValueMBS in which to store an exception, if any.
Returns the JSObject that results from calling object as a constructor, or nil if an exception is thrown or object is not a constructor.

111.7.4 CallAsFunction(thisObject as JSValueMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls an object as a function.
Notes: self: The JSObject to call as a function.
thisObject: The object to use as "this," or nil to use the global object as "this."
arguments: A JSValueMBS array of arguments to pass to the function.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from calling object as a function, or nil if an exception is thrown or object is not a function.

111.7.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

111.7.6 DeleteProperty(name as string, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Deletes a property from an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox v.JSONString

call v.DeleteProperty "Hello", e

MsgBox v.JSONString
```

Notes: Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if the delete operation succeeds, otherwise false (for example, if the property has the kJSPropertyAttributeDontDelete attribute set).

111.7.7 GetProperty(name as string, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a property from an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
```

```
MsgBox v.GetProperty("Hello", e).StringValue
```

Notes: object: The JSObject whose property you want to get.
Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns the property's value if object has the property, otherwise the undefined value.

111.7.8 GetPropertyAtIndex(propertyIndex as Integer, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets a property from an object by numeric index.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
Var o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

Var e as JSValueMBS
Var p as JSValueMBS = o.GetProperty("length", e)

MsgBox "Length: "+p.StringValue

Var n as JSValueMBS = o.GetPropertyAtIndex(2, e)
MsgBox "3rd value in array: "+n.StringValue
```

Notes: The JSObject whose property you want to get.
propertyIndex: An integer value that is the property's name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the property's value if object has the property, otherwise the undefined value.

Calling GetPropertyAtIndex is equivalent to calling GetProperty with a string containing propertyIndex, but GetPropertyAtIndex provides optimized access to numeric properties.

111.7.9 HasProperty(name as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object has a given property.

Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSObjectMBS = c.NewArray(nil, e)
MsgBox str(v.HasProperty("length"))
```

Notes: name: A string containing the property's name.
Returns true if the object has a property whose name matches propertyName, otherwise false.

111.7.10 PropertyNames as String()

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the names of an object's enumerable properties.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox Join(v.PropertyNames, EndOfLine)
```

111.7.11 SetProperty(name as string, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets a property on an object.
Example:

```
Var c as new JSContextMBS

Var v as JSObjectMBS = c.globalObject
Var e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
```

Notes: Name: A string containing the property's name.
Value: A JSValue to use as the property's value.
JSException A pointer to a JSValueRef in which to store an exception, if any.

111.7.12 SetPropertyAtIndex(propertyIndex as Integer, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets a property on an object by numeric index.
Notes: propertyIndex: The property's name as a number.
value: A JSValue to use as the property's value.
exception: A JSValueMBS in which to store an exception, if any.

Calling SetPropertyAtIndex is equivalent to calling SetProperty with a string containing propertyIndex, but SetPropertyAtIndex provides optimized access to numeric properties.

111.7.13 Properties

111.7.14 isConstructor as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object can be called as a constructor.
Notes: Returns true if the object can be called as a constructor, otherwise false.
(Read only property)

111.7.15 isFunction as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether an object can be called as a function.
Example:

```
Var c as new JSContextMBS
Var f as JSObjectMBS = c.NewFunction("Hello")

MsgBox str(f.isFunction)
```

Notes: Returns true if the object can be called as a function, otherwise false.
(Read only property)

111.7.16 Prototype as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: An object's prototype.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

Var o as JSObjectMBS = JSObjectMBS(j)
MsgBox "object prototyp: "+o.Prototype.StringValue
```

Notes: (Read and Write property)

111.8 class JSValueMBS

111.8.1 class JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a Javascript value.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithDouble(1)
MsgBox j.StringValue
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

111.8.2 Methods

111.8.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

111.8.4 DoubleValue(byref JSException as JSValueMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
See also:

- 111.8.15 doubleValue as Double 16307

111.8.5 IsEqual(OtherValue as JSValueMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether two JavaScript values are equal, as compared by the JS == operator.
Example:

```
Var c as new JSContextMBS
```

```
Var s1 as JSValueMBS = c.valueWithJSON("""Hello""")
Var s2 as JSValueMBS = c.valueWithJSON("""Hello""")
Var e as JSValueMBS
MsgBox str(s1.IsEqual(s2, e))
```

Notes: OtherValue The second value to test.
exception: A JSValueMBS in which to store an exception, if any.
Returns true if the two values are equal, false if they are not equal or an exception is thrown.

111.8.6 IsInstanceOfConstructor(ConstructorFunction as JSObjectMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an object constructed by a given constructor, as compared by the JS instanceof operator.
Notes: ConstructorFunction: The constructor to test against.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if value is an object constructed by constructor, as compared by the JS instanceof operator, otherwise false.

111.8.7 IsObjectOfClass(ClassObject as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an object with a given class in its class chain.
Notes: ClassObject The JSClass to test against.
Returns true if value is an object and has jsClass in its class chain, otherwise false.

111.8.8 IsStrictEqual(OtherValue as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether two JavaScript values are strict equal, as compared by the JS === operator.
Example:

```
Var c as new JSContextMBS
Var j1 as JSValueMBS = c.valueWithDouble(1)
Var j2 as JSValueMBS = c.valueWithDouble(2)

MsgBox str(j1.IsStrictEqual(j2)) // false
MsgBox str(j1.IsStrictEqual(j1)) // true
```

Notes: OtherValue: The second value to test.
Returns true if the two values are strict equal, otherwise false.

111.8.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithJSON(" { ""tag"":""Hello"", ""value"":1 } ")
Var e as JSValueMBS
MsgBox j.JSONString(5, e)
```

Notes: Requires Mac OS X 10.7 and newer.

The number of spaces to indent when nesting. If 0, the resulting JSON will not contains newlines. The size of the indent is clamped to 10 spaces.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of serialization, or nil if an exception is thrown.
See also:

- 111.8.25 JSONString as string 16311

111.8.10 ObjectValue(byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to object and returns the resulting object.
Notes: JSException: A JSValueMBS in which to store an exception, if any.
Returns the JSObject result of conversion, or nil if an exception is thrown.

111.8.11 StringValue(byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Notes: JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of conversion, or nil if an exception is thrown.
See also:

- 111.8.26 StringValue as String 16311

111.8.12 Properties

111.8.13 booleanValue as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to boolean and returns the resulting boolean.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.booleanValue)
```

Notes: (Read only property)

111.8.14 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The context for this value.
Notes: (Read only property)

111.8.15 doubleValue as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithDouble(5.3)
MsgBox str(j.doubleValue)
```

Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
(Read only property)
See also:

- 111.8.4 DoubleValue(byref JSException as JSValueMBS) as Double 16304

111.8.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

111.8.17 isArray as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is an array.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isArray)
```

Notes: Returns true if value is an array, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

111.8.18 isBoolean as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the boolean type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.isBoolean)
```

Notes: Returns true if value's type is the boolean type, otherwise false.
(Read only property)

111.8.19 isDate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value is a date.
Example:

```
Var c as new JSContextMBS

Var year as JSValueMBS = c.valueWithDouble(2015)
Var month as JSValueMBS = c.valueWithDouble(5)
Var day as JSValueMBS = c.valueWithDouble(12)

Var e as JSValueMBS // exception
Var d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox str(d.isDate)
```

Notes: Returns true if value is a date, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

111.8.20 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the null type.
Example:

```
Var c as new JSContextMBS
Var n as JSValueMBS = c.valueWithNull

MsgBox str(n.isNull)
```

Notes: Returns true if value's type is the null type, otherwise false.
(Read only property)

111.8.21 isNumber as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the number type.
Example:

```
Var c as new JSContextMBS

Var j as JSValueMBS = c.valueWithDouble(5)
MsgBox str(j.isNumber)
```

Notes: Returns true if value's type is the number type, otherwise false.
(Read only property)

111.8.22 isObject as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the object type.
Example:

```
Var c as new JSContextMBS

Var e as JSValueMBS
Var v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isObject)
```

Notes: Returns true if value's type is the object type, otherwise false.
(Read only property)

111.8.23 isString as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the string type.
Example:

```
Var c as new JSContextMBS
Var s as JSValueMBS = c.valueWithJSON("""Hello""")
MsgBox str(s.isString)
```

Notes: Returns true if value's type is the string type, otherwise false.
(Read only property)

111.8.24 isUndefined as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Tests whether a JavaScript value's type is the undefined type.
Example:

```
Var c as new JSContextMBS
```

```
Var j as JSValueMBS = c.valueWithUndefined
MsgBox str(j.isUndefined)
```

Notes: Returns true if value's type is the undefined type, otherwise false.
(Read only property)

111.8.25 JSONString as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.JSONString
```

Notes: Requires Mac OS X 10.7 and newer.
(Read only property)
See also:

- 111.8.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string 16306

111.8.26 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Example:

```
Var c as new JSContextMBS

Var v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

Notes: Returns a JSString with the result of conversion, or NULL if an exception is thrown.
(Read only property)
See also:

- 111.8.11 StringValue(byref JSException as JSValueMBS) as string 16306

111.8.27 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The tag value.
Notes: You can store anything here and as long as the JSValue object exists, this value is kept referenced. (Read and Write property)

111.8.28 Type as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a JavaScript value's type.
Example:

```
Var c as new JSContextMBS
Var j as JSValueMBS

j = c.valueWithDouble(1) // double
'j = c.valueWithNull // null
'j = c.valueWithUndefined // undefined
'j = c.valueWithString("Hello") // string
'j = c.valueWithJSON(" { ""tag"": 1 } ") // object
'j = c.valueWithBool(true)

Select case j.Type
case JSValueMBS.kJSTypeUndefined
MsgBox "undefined"
case JSValueMBS.kJSTypeNull
MsgBox "null"
case JSValueMBS.kJSTypeBoolean
MsgBox "boolean "+str(j.booleanValue)
case JSValueMBS.kJSTypeNumber
MsgBox "number "+str(j.doubleValue)
case JSValueMBS.kJSTypeString
MsgBox "string "+j.StringValue
case JSValueMBS.kJSTypeObject
MsgBox "object "+j.JSONString
else
Break
end Select
```

Notes: (Read only property)

111.8.29 Constants

Types

Constant	Value	Description
kJSTypeBoolean	2	A primitive boolean value, one of true or false.
kJSTypeNull	1	The unique null value.
kJSTypeNumber	3	A primitive number value.
kJSTypeObject	5	An object value (meaning that this JSValueMBS is a JSObjectMBS).
kJSTypeString	4	A primitive string value.
kJSTypeUndefined	0	The unique undefined value.

Chapter 112

JavaScript Object Notation

112.1 class JSONEntryMBS

112.1.1 class JSONEntryMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for an entry in a JSON object or array.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONEntryMBS In o.IterateEntries
Break
// watch in debugger
Next
```

Notes: For objects, we use the keys as names here and for arrays the index.

- Moving to new JSONMBS class
- New JSON Plugin for Xojo

112.1.2 Methods

112.1.3 Constructor

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.
See also:

- 112.1.4 Constructor(other as JSONEntryMBS) 16316

112.1.4 Constructor(other as JSONEntryMBS)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The copy constructor.
See also:

- 112.1.3 Constructor 16316

112.1.5 Properties

112.1.6 Item as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The value of the entry as variant.
Notes: (Read only property)

112.1.7 Name as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The key name in the JSON object.
Notes: (Read only property)

112.2 class JSONIteratorMBS

112.2.1 class JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The iterator object use for for-each loops in Xojo.
Notes: Implements Iterable and Iterator interfaces.

This class is hidden for auto complete as you don't need to use it manually. Please use it using for each loops.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 23.6pr1
- News from the MBS Xojo Plugins Version 23.5
- Embracing for each loops

Interfaces: Iterator, Iterable

112.2.2 Methods

112.2.3 Constructor

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

112.2.4 Iterator as Iterator

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries the iterator object.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONMBS In o.Iterate
Break
```

```
// watch in debugger
Next
```

Notes: Returns self and is used internally by Xojo for the for each loops.
Part of the Iterable interface and needed for for-each loops.

112.2.5 MoveNext as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to next object for iterator.
Notes: Returns true on success and false in case of an error like end of iterator.
Part of the Iterator interface and needed for for-each loops.

112.2.6 Value as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current value for the iterator.
Notes: For an iterator over objects, this is a JSONMBS object.
For an iterator over entries, this is a JSONEntryMBS object.
For an iterator over values, this is a variant with the value.

Part of the Iterator interface and needed for for-each loops.

112.2.7 Properties

112.2.8 Index as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Current index in array or object.
Notes: We iterate over the items in an array or object.
Going by index avoids crashing if you edit the object/array, but going by index may skip an item if you added one before the current one or skip one if you remove one.
(Read only property)

112.2.9 Root as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The root object reference.
Notes: (Read only property)

112.3 class JSONMBS

112.3.1 class JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for JSON object parsing and creating.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "Hello", JSONMBS.NewNumberNode(1)
o.AddItemToObject "World", JSONMBS.NewNumberNode(2)

MsgBox o.toString
```

Notes: Our JSON class

- has a high performance.
- is based on a modern C++ library
- supports Xojo features like for-each loops with iterators
- is almost compatible to the old JSONMBS class from before
- is almost compatible to JSONItem class
- automatically converts between variant and JSONMBS as needed.
- reports errors with JSONException class.
- can query, search and replace JSON values with JSON Paths.
- can flatten and unflatten JSON.
- can create patches and merge them back with two ways.
- provides a lot of convenience functions.
- can convert from JSON to/from dictionaries and arrays.
- handles currency better and preserves digits.
- has a lot of duplicate method/property names for API 1 and 2 compatibility and you can choose whether you prefer Append vs Add, Insert vs. AddAt or Key vs. NameAt.
- preserves the order of object entries and allows explicit sorting.
- can convert to HTML for displaying itself.
- prefers case sensitive, but can optionally do case insensitive.

We can convert integer, boolean, string, double, arrays, dictionaries to JSON internally.
And convert back to variant containing integer, boolean, string, double, arrays and dictionaries.

We back ported things like GetChildNode, GetNextNode and GetPreviousNode, but those are not very efficient and you may want to move to using iterators, query values/entries/keys arrays or access items by index.

The old class is still available in a separated OldJSON Plugin for our customers for compatibility with class renamed to OldJSONMBS.

112.3.2 Methods

112.3.3 Add(Value as Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to an array.
Example:

```
Var o As New JSONMBS

o.Add 1
o.Add "Hello"
o.Add JSONMBS.NewNullNode

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and add the value.

Same as Add method.

112.3.4 AddAt(index As Integer, value As Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Insert a value to an array at the given index.
Example:

```
Var o As New JSONMBS

o.Append 1
o.AddAt 1,2

MessageBox o.toString

o.AddAt 1,3

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and insert the value.

Same as Insert method.

112.3.5 AddItemToArray(item as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an array.
Example:

```
Var subscriptionId As Integer = 123456
Var Quantity As Integer = 1

// build inner object
Var ji As JSONMBS = JSONMBS.NewObjectNode

ji.AddItemToObject "subscriptionId", JSONMBS.NewNumberNode(subscriptionId)
ji.AddItemToObject "newQuantity", JSONMBS.NewNumberNode(Quantity)

// array around it
Var ja As JSONMBS = JSONMBS.NewArrayNode
ja.AddItemToArray ji

// and object around
Var jo As JSONMBS = JSONMBS.NewObjectNode
jo.AddItemToObject "subscriptionAmendmentParameters", ja

Var json As String = jo.toString
MessageBox json

' {
' "subscriptionAmendmentParameters": [
' {
' "subscriptionId": 123456,
' "newQuantity": 1
' }
' ]
' }
```

Notes: If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

112.3.6 AddItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an object with given label.
Example:

```
Var subscriptionId As Integer = 123456
Var Quantity As Integer = 1

// build inner object
Var ji As JSONMBS = JSONMBS.NewObjectNode

ji.AddItemToObject "subscriptionId", JSONMBS.NewNumberNode(subscriptionId)
ji.AddItemToObject "newQuantity", JSONMBS.NewNumberNode(Quantity)

// array around it
Var ja As JSONMBS = JSONMBS.NewArrayNode
ja.AddItemToArray ji

// and object around
Var jo As JSONMBS = JSONMBS.NewObjectNode
jo.AddItemToObject "subscriptionAmendmentParameters", ja

Var json As String = jo.toString
MessageBox json

' {
' "subscriptionAmendmentParameters": [
' {
' "subscriptionId": 123456,
' "newQuantity": 1
' }
' ]
' }
```

Notes: If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

112.3.7 AddOrReplaceItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an object with given label.
Notes: Same as AddItemToObject, but removes old item for the label if it exists.

112.3.8 Append(Value as Variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends a value to an array.
Example:

```
Var o As New JSONMBS

o.Append 1
o.Append "Hello"
o.Append JSONMBS.NewNullNode

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and add the value.

Same as Add method.

112.3.9 ApplyMergePatch(target as JSONMBS, patch as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a merge patch to a json document.
Example:

```
Var source As New JSONMBS(" { "+_
" ""title"": ""Goodbye!"","+_
" ""author"" : { "+_
" ""givenName"" : ""John"","+_
" ""familyName"" : ""Doe""+_
" } ,"+_
" ""tags"": [ ""example"", ""sample"" ] ,"+_
" ""content"": ""This will be unchanged""+_
" } ")

Var patch As New JSONMBS(" { "+_
" ""title"": ""Hello!"","+_
" ""phoneNumber"": ""+01-123-456-7890"","+_
```

```
" ""author"": { "+_
" ""familyName"": null"+_
" } ,"+_
" ""tags"": [ ""example"" ] "+_
" } ")

Var result As JSONMBS = JSONMBS.ApplyMergePatch(source, patch)

Var sourceText As String = source.toString(True)
Var resultText As String = result.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The mergepatch function implement the IETF standard JSON Merge Patch

112.3.10 ApplyPatch(target as JSONMBS, patch as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a patch to a json document.
Example:

```
Var source As New JSONMBS(" { ""foo"": ""bar"" } ")
Var patch As New JSONMBS(" [ "+_
" { ""op"": ""add"", ""path"": ""/baz"", ""value"": ""qux"" } ,"+_
" { ""op"": ""add"", ""path"": ""/foo"", ""value"": [ ""bar"", ""baz"" ] } "+_
" ] ")

Var result As JSONMBS = JSONMBS.ApplyPatch(source, patch)

Var sourceText As String = source.toString(True)
Var resultText As String = result.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The jsonpatch functions implement the IETF standard JavaScript Object Notation (JSON) Patch.

The JSON Patch IETF standard requires that the JSON Patch method is atomic, so that if any JSON Patch operation results in an error, the target document is unchanged. The patch function implements this requirement by generating the inverse commands and building an undo stack, which is executed if any part of the patch fails.

112.3.11 ArrayItem(index as integer, Clone as Boolean = false) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array item with given index.
Notes: Added Clone parameter for version 20.4.
If Clone is true, we duplicate the JSON, so the new JSONMBS object does not point to origin JSONMBS object and exist independent.

112.3.12 ArrayItems(Clone as Boolean = false) as JSONMBS()

MBS Util Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array items.
Notes: If Clone is true, we duplicate the JSON, so the new JSONMBS objects do not point to origin JSONMBS object and exist independent.

112.3.13 Clear

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the JSON object.
Example:

```
Var j As New JSONMBS

j.add 1
j.add 2
j.Clear // remove all
j.add 3

MessageBox j.toString(false)
```

Notes: Removes all entries from array or object.

112.3.14 Clone as JSONMBS

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the JSON tree.

112.3.15 Close

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees node.
Notes: No need to call this as destructor does the same.
But this call allows you to release circular references.

112.3.16 Compare(Other as JSONMBS) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two objects and returns
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

Var j As New JSONMBS

j.add 1
j.add 2

If j.Compare(o) = 0 Then
MessageBox "equal"
Else
MessageBox "not equal"
End If
```

Notes: Returns 0 if both are equal, 1 if bigger and -1 if smaller.

112.3.17 Constructor

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty object.
Example:

```
Var c As Currency = 1.2345
Var d as Double = c

Var j As New JSONItem
j.Value("test") = d // can't use c here!
```

```
Var m As New JSONMBS
m.Value("test") = c

MessageBox j.ToString+EndOfLine+m.toString
// shows { "test":1.2344999999999999307 } vs { "test":1.2345 } since we store currency exactly.
```

See also:

- 112.3.18 Constructor(dic As Dictionary) 16329
- 112.3.19 Constructor(JSONString as String) 16329
- 112.3.20 Constructor(other as JSONMBS) 16330

112.3.18 Constructor(dic As Dictionary)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the content of the dictionary.
Example:

```
Var d As New Dictionary
d.Value(1) = 2
d.Value("Hello") = "World"

Var j As New JSONMBS(d)

MessageBox j.toString(False)
```

Notes: Converts all dictionary values to JSON objects internally.
See also:

- 112.3.17 Constructor 16328
- 112.3.19 Constructor(JSONString as String) 16329
- 112.3.20 Constructor(other as JSONMBS) 16330

112.3.19 Constructor(JSONString as String)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the given JSON String into the tree where this node is the root.
Example:

```
Var o as new JSONMBS(" { ""text"":""Hello World"" } ")
MsgBox o.toString
```

Notes: Text should be UTF-8.
Raises an exception in case of error.
See also:

- 112.3.17 Constructor 16328
- 112.3.18 Constructor(dic As Dictionary) 16329
- 112.3.20 Constructor(other as JSONMBS) 16330

112.3.20 Constructor(other as JSONMBS)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy constructor.
Notes: Makes a copy of all the nodes.
See also:

- 112.3.17 Constructor 16328
- 112.3.18 Constructor(dic As Dictionary) 16329
- 112.3.19 Constructor(JSONString as String) 16329

112.3.21 Convert as Variant

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON object to Xojo variant.
Example:

```
// build some JSON:

Var j As New JSONMBS

j.AddItemToObject "test", JSONMBS.NewNumberNode(123)
j.AddItemToObject "name", JSONMBS.NewStringNode("Joe")

// convert to Dictionary
Var v As Variant = j.Convert

// and back
Var o As JSONMBS = JSONMBS.Convert(v)
```

```
// show
MsgBox o.toString
```

Notes: Depending on the JSON content, you get variants containing values (string, double, boolean or nil), dictionaries or array of variants.

Dictionary is not case sensitive, so may not work correctly if you have duplicate keys with only different in case.

With version v24.3 we also convert JSONItem and convert folderitem, date or DateTime objects to strings.
See also:

- 112.3.22 Convert(value as variant) as JSONMBS 16331

112.3.22 Convert(value as variant) as JSONMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts Xojo variant to JSON object.
Example:

```
Var d As New Dictionary
Var n as Double = 1/3

d.Value("number") = n // default double handling

// custom formatted number
Var j As JSONMBS = JSONMBS.NewNumberNode(Str(n, "-0.0000000000"))

d.value("customNumber") = j
d.Value( "int64") = 1000000000000000000
d.Value("uint64") = 8000000000000000000

Var a() As String
a.Append "Hello"
a.Append "World"

d.Value("array") = a
d.Value("dictionary") = New Dictionary("a":1, "b":2, "c":3)

Var r As JSONMBS = JSONMBS.Convert(d)
MsgBox r.toString
```

Notes: Converts values in variant to matching JSON structures.
Currency is converted to double. Color is converted to integer. Dates are converted to string.

We detect arrays of String, Object, Variant, Single, Double, Int32, Int64, Boolean and Currency and convert them to JSON arrays. Dictionaries are converted to JSON objects with texts for keys.
Anything else can raise an exception about an unsupported type.

Please note that Xojo variants don't make a difference between signed and unsigned integers, so we always convert using signed integers.

With version v19.3, the array/dictionary can also contain JSONMBS objects.
With version v24.3 we also convert JSONItem and convert folderitem, date or DateTime objects to strings.
See also:

- 112.3.21 Convert as Variant 16330

112.3.23 DeleteItem(index as Integer)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an item from an array/object by index.
Example:

```
Var j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"

MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

Notes: Index is zero based.
See also:

- 112.3.24 DeleteItem(label as string) 16332

112.3.24 DeleteItem(label as string)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named item from an object.
Example:

```
Var j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"

MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

See also:

- 112.3.23 DeleteItem(index as Integer) 16332

112.3.25 Entries as JSONEntryMBS()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all entries.
Example:

```
Var j As New JSONMBS

j.Value("Hello") = "World"
j.Value("Test") = "Value"
j.Value("abc") = "cde"

Var entries() As JSONEntryMBS = j.Entries

Break
```

Notes: Convenience function to get all entries.
Converts values to variants as needed.

Works for both objects and arrays.

112.3.26 Equals(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two JSON are equal.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j2 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j3 as JSONMBS = JSONMBS.NewNumberNode(6)

if not j1.Equals(j2) then
break // failed
end if

if j3.Equals(j2) then
break // failed
end if

Break // okay
```

Notes: We compare recursively all nodes.
If structure and values are the same, we return true, otherwise false.
Objects do not need to have same order for entries.

112.3.27 FilterObjectArray(Name as String, Other as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filters JSON object array to find matching entries.
Example:

```
Var j As JSONMBS = JSONMBS.NewArrayNode

Var j1 As JSONMBS = JSONMBS.NewObjectNode
j1.AddItemToObject "id", JSONMBS.NewNumberNode(122)
j1.AddItemToObject "name", JSONMBS.NewStringNode("John")
j.AddItemToArray j1

Var j2 As JSONMBS = JSONMBS.NewObjectNode
j2.AddItemToObject "id", JSONMBS.NewNumberNode(123)
j2.AddItemToObject "name", JSONMBS.NewStringNode("Matt")
j.AddItemToArray j2

Var j3 As JSONMBS = JSONMBS.NewObjectNode
j3.AddItemToObject "id", JSONMBS.NewNumberNode(124)
```

```
j3.AddItemToObject "name", JSONMBS.NewStringNode("Bob")
j.AddItemToArray j3

Var resultArray As JSONMBS = j.FilterObjectArray("id", JSONMBS.NewNumberNode(123))
Var firstEntry As JSONMBS = resultArray.ArrayItem(0)

Break
```

Notes: Similar as if you loop and look for index of matching items with FindValueInObjectArray and transfer it yourself to a new array.

112.3.28 FindValueInArray(Other as JSONMBS, StartIndex as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in array.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewIntegerArray(array(3,4,5,6,7))
Var j2 as JSONMBS = JSONMBS.NewNumberNode(5)
Var j3 as JSONMBS = JSONMBS.NewNumberNode(8)
Var j4 as JSONMBS = JSONMBS.NewStringNode("5")

Var index1 as integer = j1.FindValueInArray(j2) // we can find this
Var index2 as integer = j1.FindValueInArray(j3) // value not found
Var index3 as integer = j1.FindValueInArray(j4) // can't find string in number array

if index1 = 2 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes: Returns zero based index or -1 if not found.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

StartIndex parameter added in version 21.5: Index of first element to check. Zero if not specified.
If you like to continue searching, you can pass last result + 1.

112.3.29 FindValueInObjectArray(Name as String, Other as JSONMBS, StartIndex as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in object array.
Example:

```
Var j1 as JSONMBS = JSONMBS.NewArrayNode
Var j2 as JSONMBS = JSONMBS.NewObjectNode

j2.AddItemToObject "Hello", JSONMBS.NewStringNode("World")
j2.AddItemToObject "ID", JSONMBS.NewStringNode("123")

j1.AddItemToArray j2

Var index1 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("123")) // we can find this
Var index2 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("456")) // value not found
Var index3 as integer = j1.FindValueInObjectArray("xxx", JSONMBS.NewStringNode("123")) // value not found

if index1 = 0 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes: Returns zero based index or -1 if not found.
We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

StartIndex parameter added in version 21.5: Index of first element to check. Zero if not specified.
If you like to continue searching, you can pass last result + 1.

112.3.30 Flatten(value as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flattens a json object or array to a single depth object of key-value pairs.
Example:

```
Var j As New JSONMBS

j.Value("Hello") = "World"
j.Value("test") = 123

Var f As JSONMBS = JSONMBS.Flatten(j)
Var s As String = f.toString

MessageBox s
// shows: { "$ [ 'Hello' ] ":"World","$ [ 'test' ] ":123 }
```

Notes: The keys in the flattened object are normalized json paths. The values are primitive (string, number, boolean, or null), empty object ({ }) or empty array ([ ]).

112.3.31 HasChild(label as string) as Boolean

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a child node for the node with the given label exists.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.hasChild("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasKey and HasName methods.

112.3.32 HasKey(Key as string) as boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a an object has the given key.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode
```

```
jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.HasKey("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasChild and HasName methods.

112.3.33 HasName(Name as string) as boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a an object has the given key.
Example:

```
Var jv as JSONMBS = JSONMBS.NewStringNode("value")
Var jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.HasName("key"))
```

Notes: Returns true if the entry exists or false if not.
Only for objects, not arrays.

Same as HasKey and HasChild methods.

112.3.34 Insert(index as integer, value as variant)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value into the index.
Example:

```
Var o As New JSONMBS

o.Append 1
```

```
o.Insert 1,2

MessageBox o.toString

o.Insert 1,3

MessageBox o.toString
```

Notes: Variant is converted to JSONMBS if needed.

If the self is an empty object, we replace it with an empty array and insert the value.

Same as AddAt method.

112.3.35 isValidJSON(JSON as string) as Boolean

MBS Util Plugin, Plugin Version: 24.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if JSON text is valid.
Notes: This parses the JSON text and returns true on success or false on failure.

This checks if the given text is a valid JSON fragment and can be e.g. added as value to a JSON object or array. So this returns true for proper formatted boolean, number and text pieces, too.

112.3.36 Iterate as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child nodes.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONMBS In o.Iterate
Break
// watch in debugger
Next
```

Notes: Provides JSONMBS objects for inspection.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

112.3.37 IterateEntries as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child entries.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As JSONEntryMBS In o.IterateEntries
Break
// watch in debugger
Next
```

Notes: Entries are provided with JSONEntryMBS objects and include key and value.
For arrays, the key name is the index value.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

112.3.38 IterateValues as JSONIteratorMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate about child values.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

For Each v As Variant In o.IterateValues
Break
```

```
// watch in debugger
// v has values like 1, 2 and 3
Next
```

Notes: The values are provided and converted to variant.

Warning: If you iterate while the JSONMBS is changed you may skip some entries or get duplicates, so please avoid editing it while iterating.

112.3.39 JSONObjectCount as Integer

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: For debugging, the plugin counts how many JSONMBS objects we have.

112.3.40 KeyAt(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

```
Var o As New JSONMBS

o.Value("Hello") = "World"

MessageBox o.KeyAt(0)
```

Notes: Raises an exception if index is out of range.

Same as Name or NameAt methods.
The order of keys can change if you add/remove values in the JSON object.

112.3.41 Keys as String()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the key names for an object.
Example:

```
Var o As New JSONMBS
```

```
o.Value("Hello") = "World"
o.Value("Test") = "Value"

Var Keys() As String = o.Keys
MessageBox string.FromArray(Keys)
```

Notes: The order is as stored in memory currently and that order changes if you edit the JSON object.
We cache the array so multiple calls would return the same array and you should not modify it.

Same as Names method.

112.3.42 Load(JSONString as String)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the given JSON String into the tree where this node is the root.
Example:

```
Var o As New JSONMBS
o.load(" { ""text"":""Hello World"" } ")
MsgBox o.toString
```

Notes: Text should be UTF-8.
Raises an exception in case of error.

112.3.43 Lookup(Key As String, defaultValue As Variant = nil) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the value for the key.
Notes: Variant is converted to JSONMBS if needed.
Returns default value if key is not found.

112.3.44 Merge(Other as JSONMBS)

MBS Util Plugin, Plugin Version: 24.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Merges two JSON objects or arrays.
Example:

```
// merge two arrays
```

```
Var j1 As New JSONMBS(" [ 1,2,3 ] ")
Var j2 As New JSONMBS(" [ 4,2,5 ] ")

j1.Merge(j2)

MessageBox j1.toString(False)

// merge two objects
Var j3 As New JSONMBS(" { ""a"": 1, ""b"": [ 1 ] } ")
Var j4 As New JSONMBS(" { ""c"": 3, ""b"": [ 2 ] } ")

j3.Merge(j4)

MessageBox j3.toString(True)
```

Notes: For arrays, we check if the value is already there and if not, we add it.
For objects, we check the values for each key. If it doesn't exist, we copy it over. If it exists, we check arrays and objects again, but other values just get replaced.

Raises exception if you try to merge object with array.

112.3.45 MergePatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Merge Patch from a diff of two json documents.
Example:

```
Var source As New JSONMBS(" { "+_
" ""title"": ""Goodbye!"","+_
" ""author"" : { "+_
" ""givenName"" : ""John"","+_
" ""familyName"" : ""Doe""""+_
" } ,"+_
" ""tags"": [ ""example"", ""sample"" ] ,"+_
" ""content"": ""This will be unchanged""""+_
" } ")

Var target As New JSONMBS(" { "+_
" ""title"": ""Hello!"","+_
" ""author"": { "+_
" ""givenName"": ""John""""+_
" } ,"+_
" ""tags"": [ "+_
```

```
" ""example""+_
" ] ,"+_
" ""content"": ""This will be unchanged"",+_
" ""phoneNumber"": ""\u002B01-123-456-7890""+_
" } ")

Var patch As JSONMBS = JSONMBS.MergePatchFromDiff(source, target)

Var sourceText As String = source.toString(True)
Var targetText As String = target.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: The mergepatch function implement the IETF standard JSON Merge Patch
Returns a JSON Merge Patch.

112.3.46 Name(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

```
Var o As New JSONMBS

o.Value("Hello") = "World"

MessageBox o.Name(0)
```

Notes: Raises an exception if index is out of range.

Same as NameAt or KeyAt methods.
See also:

- 112.3.110 Name as String 16372

112.3.47 NameAt(index As Integer) as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries key name at given index.
Example:

```
Var o As New JSONMBS
```

```
o.Value("Hello") = "World"

MessageBox o.NameAt(0)
```

Notes: Raises an exception if index is out of range.

Same as Name or KeyAt methods.

112.3.48 Names as String()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the key names for an object.
Example:

```
Var o As New JSONMBS

o.Value("Hello") = "World"
o.Value("Test") = "Value"

Var Names() As String = o.Names
MessageBox string.FromArray(Names)
```

Notes: The order is as stored in memory currently and that order changes if you edit the JSON object. We cache the array so multiple calls would return the same array and you should not modify it.

Same as Keys method.

112.3.49 NewArrayNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for an array.
Example:

```
Var n as JSONMBS = JSONMBS.NewArrayNode
MsgBox str(n.Type)+" = "+str(n.kTypeArray)
```

112.3.50 NewBooleanNode(value as Boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

112.3.51 NewBoolNode(value as boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new boolean node.
Example:

```
Var j as JSONMBS = JSONMBS.NewBoolNode(true)
MsgBox j.toString
```

112.3.52 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var m As MemoryBlock = "Hello World"
Var j As JSONMBS = JSONMBS.NewByteStringNode(m)

MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 112.3.53 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS 16346
- 112.3.54 NewByteStringNode(Bytes as String) as JSONMBS 16347

112.3.53 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var m As MemoryBlock = "Hello World"
Var p As ptr = m
Var size as integer = m.size
Var j As JSONMBS = JSONMBS.NewByteStringNode(p,size)

MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 112.3.52 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS 16346
- 112.3.54 NewByteStringNode(Bytes as String) as JSONMBS 16347

112.3.54 NewByteStringNode(Bytes as String) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for a byte string.
Example:

```
Var j As JSONMBS = JSONMBS.NewByteStringNode("Hello World")

MessageBox j.toString
// "SGVsbG8gV29ybGQ"
```

Notes: Creates a new JSONMBS object with type = kTypeByteString.
See also:

- 112.3.52 NewByteStringNode(Bytes as MemoryBlock) as JSONMBS 16346
- 112.3.53 NewByteStringNode(Bytes as ptr, Length as UInt64) as JSONMBS 16346

112.3.55 NewCurrencyNode(value as Currency) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new currency value node.
Example:

```
Var c As Currency = 152.5678

Var j As JSONMBS = JSONMBS.NewCurrencyNode(c)

MessageBox j.toString
```

Notes: Internally we store number as string with a tag marking it as big decimal, so we output it as number. If you ask for double value, we convert it of course.

112.3.56 NewDoubleArray(values() as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as Double = array(1.0,2,3)
Var j as JSONMBS = JSONMBS.NewDoubleArray(n)
MsgBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

112.3.57 NewFalseNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new false node.
Example:

```
Var n as JSONMBS = JSONMBS.NewFalseNode
MsgBox str(n.Type)+" = "+str(n.kTypeFalse)
```

Notes: This is a node which represents a boolean false value.

112.3.58 NewInt32Array(values() as Int32) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

112.3.59 NewInt64Array(values() as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

112.3.60 NewInt64Node(value as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on Int64 value.
Example:

```
Var x as int64 = 92233720368547758
Var n as JSONMBS = JSONMBS.NewInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

112.3.61 NewIntegerArray(values() as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as Integer = array(1,2,3)
Var j as JSONMBS = JSONMBS.NewIntegerArray(n)
MsgBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

112.3.62 NewNullNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new null node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNullNode
MsgBox str(n.Type)+" = "+str(n.kTypeNull)
```

Notes: This is a node which represents a nil value.

112.3.63 NewNumberNode(value as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNumberNode(123)
MsgBox str(n.Type)+" = "+str(n.kTypeNumber)
```

See also:

- 112.3.64 NewNumberNode(value as string) as JSONMBS 16350

112.3.64 NewNumberNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node with given number as text.
Example:

```
Var n as JSONMBS = JSONMBS.NewNumberNode("92233720368547758")

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

Notes: This allows you to control formatting of large integer and floating point values.
See also:

- 112.3.63 NewNumberNode(value as Double) as JSONMBS 16350

112.3.65 NewObjectNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object node.
Example:

```
Var n as JSONMBS = JSONMBS.NewObjectNode
MsgBox str(n.Type)+" = "+str(n.kTypeObject)
```

112.3.66 NewStringArray(values() as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
Var n() as string = array("Hello", "World")
Var j as JSONMBS = JSONMBS.NewStringArray(n)
MsgBox j.toString
```

Notes: This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

112.3.67 NewStringNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string node.
Example:

```
// some string with single/double quote and EndOfLine
Var s as string = "Hello'World"+EndOfLine+"this is "" a test."

// make string node
Var j as JSONMBS = JSONMBS.NewStringNode(s)

// get as JSON
Var d as string = j.toString
// show
MsgBox d

// parse again
j = new JSONMBS(d)

MsgBox j.ValueString
```

112.3.68 NewTrueNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new true node.
Example:

```
Var n as JSONMBS = JSONMBS.NewTrueNode
MsgBox str(n.Type)+" = "+str(n.kTypeTrue)
```

Notes: This is a node which represents a boolean true value.

112.3.69 NewUInt32Array(values() as UInt32) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

112.3.70 NewUInt64Array(values() as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Notes: This is a convenience method to quickly create an array.

112.3.71 NewUInt64Node(value as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on UInt64 value.
Example:

```
Var x as UInt64 = 92233720368547758
Var n as JSONMBS = JSONMBS.NewUInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

112.3.72 Operator_Compare(Other as JSONMBS) as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two JSONMBS objects.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

Var j As New JSONMBS

j.add 1
j.add 2

If j = o Then
MessageBox "equal"
Else
MessageBox "not equal"
End If
```

Notes: Called automatically by Xojo if you use =, >and <operators.
Same as Compare method.

112.3.73 Operator_Convert as Variant()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all values as an array.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2

// auto convert on assignment
Var values() As Variant = o
Break // see debugger
```

Notes: Convenience function to get all values.
Converts values to variants as needed.

Works for both objects and arrays.
Same as Values method.
See also:

- 112.3.74 Operator_Convert(dic As Dictionary) 16354

112.3.74 Operator_Convert(dic As Dictionary)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the content of the dictionary.
Example:

```
Var d As New Dictionary
d.Value(1) = 2
d.Value("Hello") = "World"

Var j as JSONMBS = d

MessageBox j.toString(False)
```

Notes: Converts all dictionary values to JSON objects internally.
See also:

- 112.3.73 Operator_Convert as Variant() 16353

112.3.75 PatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 24.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Patch from a diff of two json documents.
Example:

```
Var source As New JSONMBS(" { ""/"": 9, ""foo"": ""bar"" } ")
Var target As New JSONMBS(" { ""baz"":""qux"", ""foo"": [ ""bar"", ""baz"" ] } ")

Var Patch As JSONMBS = JSONMBS.PatchFromDiff(source, target)

Var sourceText As String = source.toString(True)
Var targetText As String = target.toString(True)
Var PatchText As String = Patch.toString(True)

Break
```

Notes: Returns a JSON Patch.

The jsonpatch functions implement the IETF standard JavaScript Object Notation (JSON) Patch.

The JSON Patch IETF standard requires that the JSON Patch method is atomic, so that if any JSON Patch operation results in an error, the target document is unchanged. The patch function implements this requirement by generating the inverse commands and building an undo stack, which is executed if any part of the patch fails.
See also:

- 112.3.76 PatchFromDiff(source as JSONMBS, target as JSONMBS, KeyToCopy as String) as JSONMBS 16355

112.3.76 PatchFromDiff(source as JSONMBS, target as JSONMBS, KeyToCopy as String) as JSONMBS

MBS Util Plugin, Plugin Version: 24.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a JSON Patch from a diff of two json documents.
Notes: Same as normal PatchFromDiff, but copies the given primary key field from JSON entries to the diff.
See also:

- 112.3.75 PatchFromDiff(source as JSONMBS, target as JSONMBS) as JSONMBS 16354

112.3.77 Query(Path as string, Options as Integer = 0) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a JSON Path query.
Example:

```
Var book1 As New JSONMBS
book1.Value("title") = "Sayings Of the Century"
book1.Value("price") = 8.95

Var book2 As New JSONMBS
book2.Value("title") = "Sword Of Honour"
book2.Value("price") = 12.99

Var bookArray As New JSONMBS
bookArray.Append book1
bookArray.Append book2

Var j As New JSONMBS
```

```
j.Value("book") = bookArray

MessageBox j.toString(True)
// shows
// {
// "book": [
// {
// "title": "Sayings Of the Century",
// "price": 8.95
// } ,
// {
// "title": "Sword Of Honour",
// "price": 12.99
// }
// ]
// }

Var r as JSONMBS = j.Query("$ .book [ ?(@.price <10) ] .title")
Var s As String = r.toString

MessageBox s
// shows [ "Sayings Of the Century" ]
```

Notes: Evaluates the root value against the JSONPath expression and returns an array of values or normalized path expressions.

Returns a JSON with an array containing either values or normalized path expressions matching the JSONPath expression, or an empty array if there is no match.

For options use kPathResultOptions* constants. Use OR to combine multiple flags.

kPathResultOptionsValue	Return values.
kPathResultOptionsNoDuplicates	Remove duplicates.
kPathResultOptionsSort	Sort results.
kPathResultOptionsPath	Return paths.

To learn more about JSONPath, please check this website:
https://goessner.net/articles/JsonPath/

Learn more about the JSONPath implementation here:
https://danielaparker.github.io/JsonCons.Net/articles/JsonPath/JsonConsJsonPath.html

See also Replace() to replace found values with new values.

112.3.78 Remove(Index as Integer)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes an entry by index.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

MessageBox o.toString(False)

// remove middle item
o.Remove 1

MessageBox o.toString(false)
```

Notes: Works for arrays or objects.
For objects, prefer to delete by key name since removing an entry changes the order.

Same as RemoveAt method.
See also:

- 112.3.79 Remove(Key as string) 16357

112.3.79 Remove(Key as string)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the node with the given name.
Notes: Only for JSONMBS of type object.
See also:

- 112.3.78 Remove(Index as Integer) 16357

112.3.80 RemoveAt(Index as Integer)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes an entry by index.
Example:

```
Var o As New JSONMBS
```

```
o.add 1
o.add 2
o.add 3

MessageBox o.toString(False)

// remove middle item
o.RemoveAt 1

MessageBox o.toString(false)
```

Notes: Works for arrays or objects.
For objects, prefer to delete by key name since removing an entry changes the order.

Same as Remove method.

112.3.81 Replace(Path as string, NewValue as Variant) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for all values that match the JSONPath expression and replaces them with the specified value.
Example:

```
Var json As String = " { " +_
" ""books"":" +_
" [ " +_
" { " +_
" ""category"": ""fiction"","  +_
" ""title"" : ""A Wild Sheep Chase"","  +_
" ""author"" : ""Haruki Murakami"","  +_
" ""price"" : 22.72" +_
" } ," +_
" { " +_
" ""category"": ""fiction"","  +_
" ""title"" : ""The Night Watch"","  +_
" ""author"" : ""Sergei Lukyanenko"","  +_
" ""price"" : 23.58" +_
" } ," +_
" { " +_
" ""category"": ""fiction"","  +_
" ""title"" : ""The Comedians"","  +_
" ""author"" : ""Graham Greene"","  +_
" ""price"" : 21.99" +_
" } ," +_
```

```
" { " +_
" ""category"": ""memoir"","" +_
" ""title"" : ""The Night Watch"","" +_
" ""author"" : ""Phillips, David Atlee""" +_
" } " +_
" ] " +_
" } "

Var j As New JSONMBS(json)
Var n As JSONMBS = j.Replace("$ .books [ ?(@.title == 'A Wild Sheep Chase') ] .price", 123.0)

MessageBox n.toString(True)
```

Notes: Throws a JSONExceptionMBS if JSONPath evaluation fails.
Returns the modified copy of the JSON.

See also Query() function to just search without replace.

112.3.82 Search(Path as string) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a JMESPath query.
Example:

```
Var json As String = " { ""locations"": [ "+EndOfLine+_
" { ""name"": ""Seattle"", ""state"": ""WA"" } ,"+EndOfLine+_
" { ""name"": ""New York"", ""state"": ""NY"" } ,"+EndOfLine+_
" { ""name"": ""Bellevue"", ""state"": ""WA"" } ,"+EndOfLine+_
" { ""name"": ""Olympia"", ""state"": ""WA"" } "+EndOfLine+_
" ] } "
Var query As String = "locations [ ?state == 'WA' ] .name | sort(@) | { WashingtonCities: join(', ', @) } "

Var j As New JSONMBS(json)
Var r As JSONMBS = j.Search(query)

MessageBox r.toString
// { "WashingtonCities": "Bellevue, Olympia, Seattle" }
```

Notes: The jmespath extension implements JMESPath. JMESPath is a query language for transforming JSON documents into other JSON documents. It's supported in both the AWS and Azure CLI and has libraries available in a number of languages.

To learn more about JMESPath, please check this website:

https://jmespath.org

See also Query() for queries with JSONPath expressions.

112.3.83 Sort(Reverse as boolean = false)

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts values in the array by values or objects by key names.
Example:

```
Var o As New JSONMBS

o.add 3
o.add 4
o.Add 1

o.Sort

MessageBox o.toString(False) // shows 1,3,4
```

Notes: Reverse can be set to true in order to reverse the order.

112.3.84 ToHTML(NoHeader as boolean = false, CSS as string = "") as String

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON to HTML.
Notes: We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.
If NoHeader is true, you get just the raw table without header/footer.
Anything in CSS parameter is inserted before the table.
Returns HTML, which can be loaded in htmlviewer.

Example for CSS to do even/odd line backgrounds:

```
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}
```

```
.odd
{
background-color: white;
}

.even
{
background-color: #DDD;
}
</style>"
```

112.3.85 toString(formatted as boolean) as string

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
See also:

- 112.3.116 toString as String 16374

112.3.86 Unflatten(value as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unflattens that object back to the original json.
Example:

```
Var t As String = " { ""$ [ 'Hello' ] "":""World"","$ [ 'test' ] "":123 } "

Var f As New JSONMBS(t)
Var j As JSONMBS = JSONMBS.Unflatten(f)

Var s As String = j.toString

MessageBox s
// shows: { "Hello":"World","test":123 }
```

Notes: The keys in the flattened object are normalized json paths. The values are primitive (string, number, boolean, or null), empty object ({ }) or empty array ([ ]).

112.3.87 Values as Variant()

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all values as an array.
Notes: Convenience function to get all values.
Converts values to variants as needed.

Works for both objects and arrays.
Same as Operator_Convert method.

112.3.88 Properties

112.3.89 ArraySize as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of array.
Notes: For objects returns number of keys.
Same as Count property.
(Read only property)

112.3.90 ByteStringEncoding as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which byte string encoding to use.
Example:

```
Var mem As MemoryBlock = "Hello World"

Var dic As New Dictionary
dic.Value("test") = mem

Var j As New JSONMBS(dic)
j.ByteStringEncoding = j.kByteStringEncodingBase64
MessageBox j.toString
```

```
// { "test":"SGVsbG8gV29ybGQ=" }
```

Notes: Mainly used for encoding MemoryBlocks included in Dictionaries.
Default is Base64.
(Read and Write property)

112.3.91 CaseSensitive as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to find keys with wrong case.
Example:

```
JSONMBS.CaseSensitive = False

Var f As New JSONMBS

f.value("Hello") = "World"

// finds match
Var b1 As Boolean = f.HasKey("hello")
Var v1 As Variant = f.Value("hello")

JSONMBS.CaseSensitive = True

Var b2 As Boolean = f.HasKey("Hello")
Var v2 As Variant = f.Value("Hello")

// now try with wrong case...
Var b3 As Boolean = f.HasKey("hello")
Var v3 As Variant = f.Value("hello") // ->exception

Break
```

Notes: By default JSON is case sensitive. You can have a key "a" and another key "A" with different values in an object.
If you set CaseSensitive to true, the plugin will look case insensitive to find a match.
(Read and Write property)

112.3.92 ChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first child node.

Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var n as JSONMBS = o.ChildNode // first child
MsgBox n.ValueString // shows 1
```

Notes: Please move to newer iterator functions instead.
(Read only property)

112.3.93 Compact as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to prefer compact output for toString property.
Example:

```
Var j As New JSONMBS
j.Value("Hello") = "World"

Var s As String = j.toString
j.compact = false
Var f As String = j.toString

Break // see difference?
```

Notes: Default is true.
Set to false to get formatted output.
Or call ToString method with parameter.
(Read and Write property)

112.3.94 Count as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of array.
Example:

```
Var o As New JSONMBS
```

```
o.add 1
o.add 2
o.add 3

MessageBox o.Count.ToString // shows 3
```

Notes: For objects returns number of keys.
Same as ArraySize property.
(Read only property)

112.3.95 Handle as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the JSON object.
Notes: It is possible to have two Xojo objects with the same handle pointing to the same JSON node.
(Read only property)

112.3.96 IndentSize as Integer

MBS Util Plugin, Plugin Version: 26.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The indent size.
Notes: Default to 4 for 4 spaces.
(Read and Write property)

112.3.97 IsArray as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents an array.
Notes: Returns true if type is kTypeArray.
(Read only property)

112.3.98 IsBoolean as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a boolean value.
Notes: Returns true if type is kTypeTrue or kTypeFalse.

(Read only property)

112.3.99 IsEmpty as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the value is empty.
Example:

```
Var j As New JSONMBS

Var empty1 As Boolean = j.IsEmpty // true

j.Value("hello") = "world"

Var empty2 As Boolean = j.IsEmpty // false

Break
```

Notes: Whether a string, array or object is empty and has no content.
Boolean or numerical values are not empty.
(Read only property)

112.3.100 IsInt32 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(12343456789435234523)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-6578904953445453)
Var j5 as JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsInt32 // okay
Var b2 As Boolean = j2.IsInt32 // has decimals
Var b3 As Boolean = j3.IsInt32 // too big
Var b4 As Boolean = j4.IsInt32 // too small
Var b5 As Boolean = j5.IsInt32 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for int32.
- it is not with decimal digits after the dot.

(Read only property)

112.3.101 IsInt64 as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(1234345673389435234523.0)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-657890493333353445453.0)
Var j5 As JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsInt64 // okay
Var b2 As Boolean = j2.IsInt64 // has decimals
Var b3 As Boolean = j3.IsInt64 // too big
Var b4 As Boolean = j4.IsInt64 // too small
Var b5 As Boolean = j5.IsInt64 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for int64.
- it is not with decimal digits after the dot.

(Read only property)

112.3.102 IsNull as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a NULL value.
Notes: Returns true if type is kTypeNull.
(Read only property)

112.3.103 IsNumber as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents a numberic value.
Notes: Returns true if type is int64, uint64, half or double.
If type is string, we check semantic tag and return true for big decimal, big int, big float ot float 128bit, so this is a numeric type.
(Read only property)

112.3.104 IsObject as Boolean

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this object represents an object.
Notes: Returns true if type is kTypeObject.
(Read only property)

112.3.105 IsUInt32 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 32-bit unsigned integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(12343456789435234523)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-6578904953445453)
Var j5 as JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsUInt32 // okay
Var b2 As Boolean = j2.IsUInt32 // has decimals
Var b3 As Boolean = j3.IsUInt32 // too big
Var b4 As Boolean = j4.IsUInt32 // too small
Var b5 As Boolean = j5.IsUInt32 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for uint32.
- it is not with decimal digits after the dot.

(Read only property)

112.3.106 IsUInt64 as Boolean

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit unsigned integer number.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewNumberNode(1234)
Var j2 As JSONMBS = JSONMBS.NewNumberNode(1234.4)
Var j3 As JSONMBS = JSONMBS.NewNumberNode(1234345673389435234523.0)
Var j4 As JSONMBS = JSONMBS.NewNumberNode(-657890493333353445453.0)
Var j5 As JSONMBS = JSONMBS.NewStringNode("Hello")

Var b1 As Boolean = j1.IsUInt64 // okay
Var b2 As Boolean = j2.IsUInt64 // has decimals
Var b3 As Boolean = j3.IsUInt64 // too big
Var b4 As Boolean = j4.IsUInt64 // too small
Var b5 As Boolean = j5.IsUInt64 // is string

Break
```

Notes: Returns true if

- it is type number
- it is in the range for uint64.
- it is not with decimal digits after the dot.

(Read only property)

112.3.107 LastChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last child node.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.LastChildNode
MsgBox k.ValueString // shows 4
```

Notes: (Read only property)

112.3.108 LastRowIndex as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries last row index.
Example:

```
Var j As New JSONMBS

j.add 1
j.add 2
j.add 3

MessageBox j.LastRowIndex.ToString // shows 2
```

Notes: Same as Count-1.
(Read only property)

112.3.109 LineLengthLimit as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line length limit.
Example:

```
Var jj As New JSONMBS
For i As Integer = 1 To 20
jj.Append i
next

Var j As New JSONMBS
j.Compact = False
j.Value("Hello") = jj
Var s1 As String = j.toString
j.LineLengthLimit = 60
Var s2 As String = j.toString

// second text has a line break after 14
MessageBox s1+EndOfLine+s2
```

Notes: By default is 120.
(Read and Write property)

112.3.110 Name as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)
See also:

- 112.3.46 Name(index As Integer) as String 16344

112.3.111 NewLineCharacters as String

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The new line character to use.
Example:

```
Var j As New JSONMBS
j.Compact = false
j.Value("Hello") = "World"
Var s1 As String = j.toString
j.NewLineCharacters = EndOfLine.Windows
Var s2 As String = j.toString

MessageBox s1.len.toString+EndOfLine+s2.len.toString // 24 vs 26
```

Notes: Default is EndOfLine.Unix which is Chr(10).
Can be set to others like EndOfLine.Windows if needed.
(Read and Write property)

112.3.112 NextNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node on the same level.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.ChildNode
while k<>nil
```

```
MsgBox k.ValueString // shows 1, 2, 3, 4

k=k.NextNode
wend
```

Notes: Please move to newer iterator functions instead.
(Read only property)

112.3.113 PreviousNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node on the same level.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

Var k as JSONMBS = o.LastChildNode
while k<>nil
MsgBox k.valuestring // shows 4, 3, 2, 1

k=k.PreviousNode
wend
```

Notes: Please move to newer iterator functions instead.
(Read only property)

112.3.114 Root as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The root object.
Notes: The root node owns the references to all children.
(Read only property)

112.3.115 Tag as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The semantic tag.
Notes: This can give a value as more detailed meaning on the usage.
e.g. we often have strings to hold numbers to preserve all digits.
(Read only property)

112.3.116 toString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
Var o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
(Read only property)
See also:

- 112.3.85 toString(formatted as boolean) as string 16361

112.3.117 Type as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the node.
Example:

```
Var n as JSONMBS = JSONMBS.NewNullNode

MsgBox str(n.Type)
```

Notes: (Read only property)

112.3.118 TypeName as String

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows type of this node as string.
Example:

```
Var o as JSONMBS = JSONMBS.NewArrayNode
MsgBox o.TypeName
```

Notes: This property was added for debugging so you can see type in debugger.
(Read only property)

112.3.119 Valid as Boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether node is valid.
Notes: The handle is not zero and there are no error nodes in JSON tree.
Returns true if valid, else false.
(Read only property)

112.3.120 Value as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of this JSON.
Example:

```
Var j1 As JSONMBS = JSONMBS.NewStringNode("Hello World")
Var v1 As Variant = j1.Value
Var j2 As JSONMBS = JSONMBS.NewNumberNode(123)
Var v2 As Variant = j2.Value
Var j3 As JSONMBS = JSONMBS.NewNumberNode("1234.567")
Var v3 As Variant = j3.Value
Var j4 As JSONMBS = JSONMBS.NewCurrencyNode(123.4567)
Var v4 As Variant = j4.Value

Break
```

Notes: Converts value to variant.
(Read only property)
See also:

- 112.3.132 Value(index As Integer) as Variant 16379
- 112.3.133 Value(Key As String) as Variant 16380

112.3.121 ValueBoolean as Boolean

MBS Util Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The boolean value of this json node.
Notes: Returns true if type is kTypeTrue, false if kTypeFalse or true if ValueInteger <>0.
(Read only property)

112.3.122 ValueByteString as MemoryBlock

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte string as MemoryBlock
Example:

```
Var mem As MemoryBlock = "Hello World"

// we send a MemoryBlock into our JSON
Var dic As New Dictionary
dic.Value("test") = mem

Var j As New JSONMBS(dic)
MessageBox j.toString // auto encodes it as base64

// let's query value from child()
Var jm As JSONMBS = j.Child("test")
Var m1 As MemoryBlock = jm.ValueByteString

// and query via value()
Var m2 As MemoryBlock = j.Value("test")

Break
```

Notes: Returns nil if type is not kTypeByteString.
(Read only property)

112.3.123 ValueDouble as Double

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

112.3.124 ValueInt64 as Int64

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Int64 value of the node.
Notes: If the node is an Int64, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

112.3.125 ValueInteger as Integer

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Integer value of the node.
Notes: If the node is an integer, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

112.3.126 ValueString as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

112.3.127 ValueUInt64 as UInt64

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The UInt64 value of the node.
Notes: If the node is an UInt64, we return it.
Otherwise we try to convert it.
May raise exception if value can't be converted.
(Read only property)

112.3.128 Child(index As Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set child node.
Example:

```
Var o As New JSONMBS

o.add 1
o.add 2
o.add 3

o.Child(1) = JSONMBS.NewNullNode

Var v As JSONMBS = o.Child(2) // see in debugger

MessageBox o.toString
```

Notes: If the self is an empty object, we replace it with an empty array and add the value.

Same as ChildAt method
Raises exception if index is out of range.
(Read and Write computed property)
See also:

- 112.3.129 Child(Key As String) as JSONMBS 16378

112.3.129 Child(Key As String) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the child node.
Notes: If the self is an empty array, we replace it with an empty object and add the value.
Raises an exception if the value is not found.
(Read and Write computed property)
See also:

- 112.3.128 Child(index As Integer) as JSONMBS 16377

112.3.130 ChildAt(index As Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set child node.
Example:

```
Var o As New JSONMBS

o.add 1
```

```
o.add 2
o.add 3

o.ChildAt(1) = JSONMBS.NewNullNode

Var v As JSONMBS = o.ChildAt(2) // see in debugger

MessageBox o.toString
```

Notes: If the self is an empty object, we replace it with an empty array and add the value.

Same as ChildAt method.
Raises exception if index is out of range.
(Read and Write computed property)

112.3.131 Operator_Subscript(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o(0) = "Hello"
o(1) = "World"
o(2) = "test"

MessageBox o.toString
MessageBox o(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and add the value.

Same as ValueAt or Operator_Subscript.
(Read and Write computed property)

112.3.132 Value(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o.value(0) = "Hello"
o.value(1) = "World"
o.value(2) = "test"

MessageBox o.toString
MessageBox o.Value(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and add the value.

Same as ValueAt or Operator_Subscript.
Raises exception if index is out of range.
(Read and Write computed property)
See also:

- 112.3.120 Value as Variant 16375
- 112.3.133 Value(Key As String) as Variant 16380

112.3.133 Value(Key As String) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a value in an object by key name.
Example:

```
Var c As Currency = 1.2345
Var d as Double = c

Var j As New JSONItem
j.Value("test") = d // can't use c here!

Var m As New JSONMBS
m.Value("test") = c

MessageBox j.ToString+EndOfLine+m.toString
// shows { "test":1.2344999999999999307 } vs { "test":1.2345 } since MBS stores currency exactly.
```

Notes: Variant is converted to or from JSONMBS if needed.

Return value as variant.
Raises an exception if the value is not found.
(Read and Write computed property)
See also:

- 112.3.120 Value as Variant 16375
- 112.3.132 Value(index As Integer) as Variant 16379

112.3.134 ValueAt(index As Integer) as Variant

MBS Util Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set value at given index.
Example:

```
Var o As New JSONMBS

o.ValueAt(0) = "Hello"
o.ValueAt(1) = "World"
o.ValueAt(2) = "test"

MessageBox o.toString
MessageBox o.ValueAt(1)
```

Notes: Variant is converted to JSONMBS if needed.
Index must be in range from 0 to Count. If index is equal to count, we append the value on setting.

If the self is an empty object, we replace it with an empty array and set the value.

Same as Value or Operator_Subscript.
Raises exception if index is out of range.
(Read and Write computed property)

112.3.135 Constants

Byte String Encoding

Constant	Value	Description
kByteStringEncodingBase64	2	Base64 encoding
kByteStringEncodingBase64URL	3	Base64 URL encoding
kByteStringEncodingHex	1	Hex encoding.
kByteStringEncodingNone	0	Fallback to default behavior.

Query Result Options

Constant	Value	Description
kPathResultOptionsNoDuplicates	1	Remove duplicates.
kPathResultOptionsPath	4	Return paths.
kPathResultOptionsSort	2	Sort results.
kPathResultOptionsValue	0	Return value.

Tags

Constant	Value	Description
kTagBase16	&h1a	Base16 (Hex)
kTagBase64	&h1b	base64
kTagBase64url	&h1c	base64 URL
kTagBigDec	7	Big decimal
kTagBigFloat	8	Big Float
kTagBigInt	6	Big Integer
kTagClamped	&h0e	clamped
kTagCode	&h14	code
kTagDateTime	2	DateTime
kTagEpochMilli	4	epoch-milli
kTagEpochNano	5	epoch-nano
kTagEpochSecond	3	epoch-second
kTagExt	&h11	ext
kTagFloat128	9	Float 128 bit
kTagId	&h12	id
kTagMultiDimColumnMajor	&h10	multi-dim-column-major
kTagMultiDimRowMajor	&h0f	multi-dim-row-major
kTagNone	0	n/a
kTagRegex	&h13	regex
kTagUndefined	1	undefined
kTagURI	&h0d	URI

Types

Constant	Value	Description
kTypeArray	8	For an array node.
kTypeBoolean	1	For a boolean node.
kTypeByteString	7	For a byte string node. Currently only used for MemoryBlocks passed via Variant.
kTypeDouble	5	For a double node.
kTypeInt64	2	For a Int64 node.
kTypeNull	0	For a null node.
kTypeObject	9	For a object node.
kTypeSingle	4	For a single node.
kTypeString	6	For a string node. Also applies to big numbers.
kTypeUInt64	3	For an uint64 node.

Chapter 113

JPEG

113.1 class JPEG2000MBS

113.1.1 class JPEG2000MBS

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for compress/decompress of JPEG 2000 images.
Example:

```
Var file as FolderItem = GetFolderItem("test.jp2")
Var stream as BinaryStream = BinaryStream.Open(file)
Var data as string = stream.Read(stream.Length)

Var jp2 as new JPEG2000MBS
if jp2.InitDecompress(data) then
MsgBox str(jp2.Width)+" x "+str(jp2.Height)
end if
```

Notes: Currently only supports RGB, RGBA and Grayscale images.

Please note that Jasper library used here is not very memory efficient and may run out of memory with huge images.
Blog Entries

- MBS Xojo Plugins, version 25.6pr2

- MBS Xojo / Real Studio Plugins, version 15.4pr4

113.1.2 Methods

113.1.3 Close

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs cleanup.
Notes: Called automatically by destructor for you.
You can call it after you are done to free memory now.

113.1.4 Compress as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses image.
Notes: Please use first InitCompress, than loop over rows and use SetRow to fill in data.
This method will compress image and set ImageData property.
Returns true on success and false on failure.

113.1.5 Decode(Data as MemoryBlock) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
Var p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes: Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 113.1.6 Decode(Data as string) as Picture

113.1.6 Decode(Data as string) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Notes: Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 113.1.5 Decode(Data as MemoryBlock) as Picture 16384

113.1.7 Encode(pic as picture, Quality as Integer = 80) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a picture as JPEG 2000 image.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
Var p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes: Returns image data on success or nil on failure.

113.1.8 GetRow(Index as Integer, Row as MemoryBlock = nil) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image data for a row.
Notes: If you pass in a memoryblock, we use it, else we create a new one.
So you can pass in memoryblock from last call to GetRow.
Returns nil in case of error.

113.1.9 InitCompress(Width as Integer, Height as Integer, BytesPerPixel as Integer, BytesPerRow as Integer = 0) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the compression for a new image.
Example:

```
Var p as Picture = LogoMBS(200)
Var pp as new PictureMBS(p)
```

```
// compress RGB in PictureMBS
Var je as new JPEG2000MBS
if je.InitCompress(pp.Width, pp.Height, 3, pp.RowSize) then
Var h as Integer = pp.Height-1

for i as Integer = 0 to h
Var rowData as MemoryBlock = pp.RowInFormat(i, pp.ImageFormatRGB)
if not je.SetRow(i, rowData) then
Break
exit
end if
next
if je.Compress then
Var ImageData as MemoryBlock = je.ImageData
if ImageData <>nil then
// and decode to show
Var pic as Picture = JPEG2000MBS.Decode(ImageData)
window1.Backdrop = pic
end if
end if
end if
```

Notes: Returns true on success or false on failure.
If BytesPerRow is zero, we calculate it based on BytesPerPixel and Width.
BytesPerPixel can be 1 for gray, 3 for RGB and 4 for RGBA.

113.1.10 InitDecompress(ImageData as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the decompression for given image data.
Example:

```
Var p as Picture = LogoMBS(200)

Var j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)

// decompress to PictureMBS
Var jd as new JPEG2000MBS

if jd.InitDecompress(j80) then
Var pi as new PictureMBS(jd.Width, jd.Height, PictureMBS.ImageFormatRGB)
Var h as Integer = pi.Height-1

Var r as MemoryBlock
for i as Integer = 0 to h
```

```
// get row. Recycle MemoryBlock, so we don't create new one each row.
r = jd.getRow(i, r)
pi.RowInFormat(i, pi.ImageFormatRGB) = r
next

// get picture
window1.Backdrop = pi.CopyPicture
end if
```

Notes: Returns true on success or false on failure.
BytesPerPixel is set to 1 for gray, 3 for RGB and 4 for RGBA.

113.1.11 SetRow(Index as Integer, Row as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets data for a row.
Notes: Returns true on success.

113.1.12 Properties

113.1.13 BytesPerPixel as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per pixel.
Notes: One for gray, 3 for RGB and 4 for RGBA.
Set by InitCompress or InitDecompress.
(Read only property)

113.1.14 BytesPerRow as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per row.
Notes: Only used to create memoryblock or check memoryblock size.
Set by InitCompress or InitDecompress.
(Read only property)

113.1.15 Height as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the image.
Notes: Set by InitCompress or InitDecompress.
(Read only property)

113.1.16 ImageData as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image data.
Notes: Set by Compress method on success.
(Read only property)

113.1.17 Options as String

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Options to pass to Jasper library for compression.
Notes: e.g. "rate=80"
(Read and Write property)

113.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the image.
Notes: Set by InitCompress or InitDecompress.
(Read only property)

113.2 class JPEGExporterMBS

113.2.1 class JPEGExporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Exporting.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

113.2.2 Methods

113.2.3 Export

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports the picture.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if
```

```
// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This methods saves 32bit pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

This method uses the YieldTicks property and may yield time to other threads.

113.2.4 ExportCMYK(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from CMYK data in a memoryblock.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
```

```
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: This methods saves 32bit CMYK pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

The picture must be in the format that one byte is used for each channel and the channels are ordered in memory in Cyan, Magenta, Yellow and Black.
If rowbytes is 0, the plugin uses width*4 for rowbytes.

This method uses the YieldTicks property and may yield time to other threads.

113.2.5 ExportGray

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture. The picture from picture property is converted to grayscale internally for this.
See also:

- 113.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32) 16392

113.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture using data in memoryblock.
If rowbytes is 0, the plugin uses width for rowbytes.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 113.2.5 ExportGray 16392

113.2.7 ExportRGB(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in a memoryblock.
Example:

```
Var f as FolderItem
Var ji as new JPEGImporterMBS
Var je as new JPEGExporterMBS
Var m as MemoryBlock
Var i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: The memoryblock data must be in the format with bytes in the order RGB.

113.2.8 ExportRGBwithRowDataEvent(width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in memoryblocks from the GetRowData event.
Notes: You need to implement the GetRowData event by subclassing this class.
The memoryblock data must be in the format with bytes in the order RGB.

113.2.9 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

113.2.10 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes: Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGExporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

113.2.11 Properties

113.2.12 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes: Either libjpeg or libjpeg-turbo.

(Read only property)

113.2.13 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination string.
Notes: If file is nil, the compressed data is saved in this property.

The returned string has the encoding set to MacRoman. If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.
(Read and Write property)

113.2.14 DCTMethod as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which DCT/IDCT algorithm to use.
Notes: Possible values:

-1	Plugin does not change setting
0	slow but accurate integer algorithm (default)
1	faster, less accurate integer method
2	floating-point: accurate, fast on fast Hardware

Default is Integer slow.
(Read and Write property)

113.2.15 ErrorCode as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code from the Export method.
Example:

```
Var j as new JPEGExporterMBS

// do something
```

```
MsgBox str(j.ErrorCode)+" "+j.ErrorMessage
```

Notes: The last function was successfull if ErrorCode is 0.
If the parameters are not valid, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

113.2.16 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Example:

```
Var j as new JPEGExporterMBS

// do something

MsgBox j.ErrorMessage
```

Notes: (Read and Write property)

113.2.17 EXIFData as String

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The EXIF data for this file.
Example:

```
// Read a picture file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var ji as new JPEGImporterMBS

ji.ReadExifData=true
ji.File=f
ji.Import

// Write a new picture file
Var o as FolderItem = SpecialFolder.Desktop.Child("out.jpg")
Var je as new JPEGExporterMBS

je.File=o
je.EXIFData = ji.ExifData
je.Picture = ji.Picture
```

```
je.Export
```

Notes: The export methods use this property.
(Read and Write property)

113.2.18 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
Var p as Picture = LogoMBS(500)

'Save the scan
Var je as new JPEGExporterMBS
je.file = SpecialFolder.Desktop.Child("just a test.jpg")
je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes: If file is nil and path is "", the destination is the data property.
(Read and Write property)

113.2.19 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Example:

```
Var j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

113.2.20 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should ask the compressor to optimize the huffman coding tables.
Example:

```
Var j as new JPEGExporterMBS
j.OptimizeCoding = true
```

Notes: This usually provides a small percentage decrease in file size.
(Read and Write property)

113.2.21 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
Var p As Picture = LogoMBS(500)

'Save the scan
Var je As New JPEGExporterMBS

// using file
'je.file = SpecialFolder.Desktop.Child("just a test via file.jpg")

// using path
Var f As folderitem = SpecialFolder.Desktop.Child("just a test via path.jpg")
Var pa As String = f.NativePath
je.path = pa

je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes: If file is nil and path is "", the destination is the data property.
(Read and Write property)

113.2.22 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture to use.
Example:

```
Var MyPic as Picture = LogoMBS(500)
Var j as JPEGExporterMBS // your exporter
j.picture=MyPic
```

Notes: Should be a bitmap picture without alpha channel or mask.
(Read and Write property)

113.2.23 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ICC profile to write to the file.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS
Var p as LCMS2ProfileMBS
Var e as JPEGExporterMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.CreatesRGBProfile

f=SpecialFolder.Desktop.Child("test3.jpg")
e=new JPEGExporterMBS
e.File=f
e.Picture=j.Picture
e.ProfileData=p.SaveProfileToString
```

```
e.Quality=75
e.Export
```

Notes: the string must contain the binary data of the profile. For example SaveProfileToString of the CMProfileMBS class returns such a string.
If the string is empty, no profile is written.
(Read and Write property)

113.2.24 Progressive as Boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to make a progressive compressed image.
Example:

```
Var j as new JPEGExporterMBS
j.Progressive = true
```

Notes: Default is true.
(Read and Write property)

113.2.25 Quality as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quality to use.
Example:

```
Var je as new JPEGExporterMBS
je.quality = 75
```

Notes: Range from 0 to 100. Default is 75.
(Read and Write property)

113.2.26 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Example:

```
Var j as new JPEGExporterMBS
```

```
// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

113.2.27 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Example:

```
Var j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

113.2.28 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Example:

```
Var j as new JPEGExporterMBS

// do something
```

MsgBox j.WarningMessage

Notes: (Read and Write property)

113.2.29 XMPData as String

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP data for this file.
Notes: The export methods use this property.
(Read and Write property)

113.2.30 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var j as JPEGExporterMBS // your exporter

j.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

113.2.31 Markers(Index as Integer) as string

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional markers.
Example:

```
Var j as new JPEGExporterMBS

j.Picture = LogoMBS(500)
j.Markers(5) = "Hello World"
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Export
```

// now open jpeg file in text editor and you see hello world near beginning

Notes: Index from 0 to 15.
Index zero is used for JFIF header.
Index one is normally used for EXIF or XMP.
Index 13 is often used for Photoshop.

see also
http://www.ozhiker.com/electronics/pjmt/jpeg_info/app_segments.html

You can use this markers to embed a given string in the file. You can encrypt data and store it next to the image as you like.
Of course this will not survive if image is loaded and saved again. But can work as a container to hide data and user sees only image.
(Read and Write computed property)

113.2.32 Events

113.2.33 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

113.2.34 GetRowData(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called to query for the next data block.
Notes: The memoryblock data must be in the format with bytes in the order RGB.
Index is from 0 to height-1.
Returning nil will result in an error on the JPEG compression.

113.2.35 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

113.2.36 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

113.2.37 Constants

Resolution Unit

Constant	Value	Description
ResolutionUnitDotsPerCentimeter	2	Dots per centimeter
ResolutionUnitDotsPerInch	1	Dots per inch
ResolutionUnitUnknown	0	Undefined

113.3 class JPEGImporterMarkerMBS

113.3.1 class JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a JPEG marker.

113.3.2 Properties

113.3.3 Data as String

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual data read as a binary string.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

Var data as string = j.MarkerItem(0).Data

// work with data
```

Notes: (Read and Write property)

113.3.4 DataLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data length in bytes of the data string.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
```

```
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).DataLength)

// work with data
```

Notes: (Read and Write property)

113.3.5 Marker as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this datablock.
Example:

```
Var j as JPEGImporterMBS
Var f as folderitem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).Marker)

// work with data
```

Notes: For example &hE0 for the first user defined block.
(Read and Write property)

113.3.6 OriginalLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original data length in the file.
Example:

```
Var j as JPEGImporterMBS
```

```
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).OriginalLength)

// work with data
```

Notes: Maybe smaller than datalength because of compression.
(Read and Write property)

113.4 class JPEGImporterMBS

113.4.1 class JPEGImporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Importing.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

Xojo Developer Magazine

- 18.3, page 10: News
- 17.5, page 40: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

113.4.2 Methods

113.4.3 BlueTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,0,255).
Notes: Just for testing how well the plugin picture code works.

113.4.4 CleanMarkers

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the marker list.

113.4.5 FinishJPEG

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases all memory buffers needed for the JPEG decompression.
Notes: This must be called if you used InitJPEG!
Else you have a memory leak.

113.4.6 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

113.4.7 GreenTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,255,0).
Notes: Just for testing how well the plugin picture code works.

113.4.8 Import

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the picture.
Example:

```
Var f as FolderItem
Var ji as new JPEGImporterMBS
Var je as new JPEGExporterMBS
Var m as MemoryBlock
Var i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData
```

```
// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

This method uses the YieldTicks property and may yield time to other threads.
Depending on the mode this method can read CMYK and RGB. RGB either to memoryblock or to a picture object.
The memoryblock data must be in the format with bytes in the order RGB.

113.4.9 ImportCMYK

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a CMYK picture.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
```

```
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

The read CMYK values are stored in the picturedata property.

This method uses the YieldTicks property and may yield time to other threads.

113.4.10 InitJPEG as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the JPEG decompressor for use with LoopJPEG.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
```

```
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes: Call FinishJPEG even if this failes.
Returns true if you can loop using LoopJPEG.

113.4.11 LoopJPEG as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses one line of the picture.
Example:

```
Var j as new JPEGImporterMBS
// fill properties...

if j.initJPEG then
do
loop until j.LoopJPEG<>0
end if
j.FinishJPEG

backdrop=j.Picture // nil if failed
```

Notes: Return values:

0	Decompression was okay
1	Finished decompression
2	if there was an error.
3	Not initialized
4	Header only was requested

113.4.12 MarkerCount as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of markers found in the JPEG data stream.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

113.4.13 MarkerItem(index as Integer) as JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the marker with the given index.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import
```

```
Var data as string = j.MarkerItem(0).Data

// work with data
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

113.4.14 ReadHeader as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read the header of the JPEG data in a file or a memoryblock.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS

f=SpecialFolder.Desktop.Child("Jaguar1600.jpg")
j=new JPEGImporterMBS
j.file=f
if j.ReadHeader then
MsgBox str(j.Width)+" x "+str(j.Height)
else
MsgBox "no JPEG"
end if
```

Notes: You can use this function to see if the file is a JPEG image and which dimension it has.
This function calls InitJPEG and FinishJPEG, so we get all the metadata, but no picture.

113.4.15 RedTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(255,0,0).
Notes: Just for testing how well the plugin picture code works.

113.4.16 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes: Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGImporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

113.4.17 Properties

113.4.18 AllowDamaged as boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether you want damaged pictures to be returned.
Notes: If AllowDamaged is false, nil will be returned if the picture is damaged.
Default value is false.
(Read and Write property)

113.4.19 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes: Either libjpeg or libjpeg-turbo.
(Read only property)

113.4.20 BlockSmoothing as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do interblock smoothing.
Notes: Default value is true.

This setting is relevant only when decoding a progressive JPEG image. During the first DC-only scan, block smoothing provides a very "fuzzy" look instead of the very "blocky" look seen without it; which is better seems a matter of personal taste. But block smoothing is nearly always a win during later stages, especially when decoding a successive-approximation image: smoothing helps to hide the slight blockiness that otherwise shows up on smooth gradients until the lowest coefficient bits are sent.

(Read and Write property)

113.4.21 CMYK as Boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the decompressor has imported the picture as a CMYK image into a memoryblock.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS

g=getFolderItem("a_auf")
ji=new JPEGImporterMBS
ji.File=g
if ji.InitJPEG then

if ji.CMYK then
MsgBox "CMYK"
else
MsgBox "not"
end if
end if
```

Notes: This property sets the Mode property to ModeCMYK.
(Read and Write property)

113.4.22 ColorComponentCount as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color components.
Notes:

1	Grayscale
3	RGB
4	CMYK

(Read and Write property)

113.4.23 ColorSpace as Integer

MBS Images Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space of the image.
Example:

```
Var j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes: See also the Colorspace constants.
(Read and Write property)

113.4.24 CurrentDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth of the picture property.
Notes: In the current implementation always 32bit.
0 if the loading of the picture failed.
(Read and Write property)

113.4.25 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source string.
Notes: If file is nil, the compressed data is taken from this property.

(Read and Write property)

113.4.26 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

113.4.27 ExifData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exif data stored in the file.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

Var data as string = j.ExifData

// work with data
```

Notes: Only used when ReadExifData is set to true before you import the image.
The string contains the binary content of a exif data on disc.
Value is "" if no data was found.
(Read and Write property)

113.4.28 ExifOrientation as Integer

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries orientation from EXIF data.
Notes: ReadExifData property must be set earlier to have the import process load EXIF data.
Returns -1 in case of error.

Valid values are in range of 1 to 8. See kOrientation* constants.

For new development, please use ExifTagsMBS class instead.
(Read only property)

113.4.29 ExifThumbnail as String

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Var g As New JPEGImporterMBS

g.File = SpecialFolder.Desktop.Child("test.jpg")
g.ReadExifData = True

// not load, but just read header & metadata
If g.ReadHeader Then

// get thumbnail
Var Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)

// if nil, use ScaleFactor and read scaled down version
End If
```

Notes: ReadExifData property must be set earlier to have the import process load EXIF data.
Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

113.4.30 FancyUpsampling as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do fancy upsampling.
Notes: Default value is true.

If true, use direct DCT scaling with DCT size >8 for downsampling of chroma components. If false, use only

DCT size <= 8 and simple separate downsampling. Default is true. For better image stability in multiple generation compression cycles it is preferable that this value matches the corresponding FancyUpsampling value in decompression.
(Read and Write property)

113.4.31 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Var ji As New JPEGImporterMBS

ji.file = SpecialFolder.Desktop.Child("test.jpg")
ji.Import

Backdrop = ji.Picture
```

Notes: If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

113.4.32 FileOffset as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset inside the file.
Notes: (Read and Write property)

113.4.33 Height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: 0 if the loading of the picture failed.
(Read and Write property)

113.4.34 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Notes: (Read and Write property)

113.4.35 Mode as Integer

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation mode.
Notes: Can be either ModePicture (Default), ModeRGB or ModeCMYK.
(Read and Write property)

113.4.36 OriginalDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original depth of the picture.
Notes: Value maybe 8 for grayscale pictures and 24 or 32 for colored pictures.
0 if the loading of the picture failed.
(Read and Write property)

113.4.37 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Var ji As New JPEGImporterMBS

// try with path
Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
ji.path = f.NativePath
ji.Import

Backdrop = ji.Picture
```

Notes: If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

113.4.38 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture as the result.
Notes: Set to nil on any error.
(Read and Write property)

113.4.39 PictureData as MemoryBlock

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cmyk picture data after importing.
Example:

```
Var g as FolderItem
Var ji as JPEGImporterMBS
Var je as JPEGExporterMBS
Var f as FolderItem
Var m as MemoryBlock

// import it
g=getFolderItem("CMYK Example.jpg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData
msgBox g.name
// export it
f=SpecialFolder.Desktop.child("CMYK Example2.jpg")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes: Basicly a memoryblock with one byte for each channel.
For ReadByRow methods this property contains memoryblock for a row of the image.
(Read and Write property)

113.4.40 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ICC profile stored in the file.
Example:

```
Var f as FolderItem
Var j as JPEGImporterMBS
Var p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.OpenProfileFromString(j.ProfileData)
MsgBox p.Name
```

Notes: Only used when ReadProfileData is set to true before you import the image.
The string contains the binary content of a profile file on disc. So you can pass it to the CMOpenProfileFromDataMBS function or write it to a file using the binarystream class.
Value is "" if no profile was found.
(Read and Write property)

113.4.41 ProgressiveMode as Boolean

MBS Images Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a progressive jpeg file.
Notes: Loading progressive files needs more memory.
(Read and Write property)

113.4.42 ReadExifData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the exif data.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

Var data as string = j.ExifData

// work with data
```

Notes: If there is exif data, it will be stored in the ExifData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

113.4.43 ReadMarkers as Boolean

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether importer should read markers.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: (Read and Write property)

113.4.44 ReadProfileData as Boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the icc profile.
Example:

```
Var j as JPEGImporterMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadProfileData=true // needed to fill ProfileData property

// do the import

Var Profile as string = j.ProfileData

// work with profile data
```

Notes: If there is a profile, it will be stored in the ProfileData property.
Setting this value to true will set ReadMarkers to true, too.
A profile is stored in one or more markers, so it is needed to read them before extracting the profile.
(Read and Write property)

113.4.45 ReadXMPData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the xmp data.
Notes: If there is xmp data, it will be stored in the XMPData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

113.4.46 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Notes: Values:

(Read and Write property)

0 unknown
1 dots per inch
2 dots per cm

113.4.47 ScaleFactor as Integer

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG Library can scale down the picture on the fly.
Notes: Allowed values: 0, 1, 2, 4, 8
0 and 1 disable scaling.
Default valus is 0 for no scaling.
(Read and Write property)

113.4.48 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Notes: (Read and Write property)

113.4.49 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

113.4.50 Width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: 0 if the loading of the picture failed.
(Read and Write property)

113.4.51 XMPData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP Data stored in the file.
Notes: Only used when ReadXMPData is set to true before you import the image.
The string contains the binary content of a xmp data on disc.
Value is "" if no data was found.
(Read and Write property)

113.4.52 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var j as JPEGImporterMBS // your importer
j.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

113.4.53 Events

113.4.54 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

113.4.55 HeadersRead as boolean

MBS Images Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event called when headers are read.
Notes: This allows you to set Mode, ScaleFactor, FancyUpsampling, BlockSmoothing properties.
Return true to cancel Import/InitJPEG methods early.

113.4.56 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

113.4.57 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

113.4.58 Constants

Color Spaces

Constant	Value	Description
ColorSpaceCMYK	4	C/M/Y/K
ColorSpaceGrayScale	1	Gray
ColorSpaceRGB	2	red/green/blue
ColorSpaceUnknown	0	Not set.
ColorSpaceYCbCr	3	Y/Cb/Cr (also known as YUV)
ColorSpaceYCCK	5	Y/Cb/Cr/K

Orientation Constants

Constant	Value	Description
kOrientationBottomLeft	4	row 0 bottom, col 0 lhs
kOrientationBottomRight	3	row 0 bottom, col 0 rhs
kOrientationLeftBottom	8	row 0 lhs, col 0 bottom
kOrientationLeftTop	5	row 0 lhs, col 0 top
kOrientationRightBottom	7	row 0 rhs, col 0 bottom
kOrientationRightTop	6	row 0 rhs, col 0 top
kOrientationTopLeft	1	row 0 top, col 0 lhs
kOrientationTopRight	2	row 0 top, col 0 rhs

Modes

Constant	Value	Description
ModeAuto	30	Load the image into the picturedata property. Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.
ModeAutoByRow	31	Load the image into the picturedata property. Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.
ModeCMYK	2	Load the image into the picturedata property. The PictureData Memoryblock uses 4 bytes per pixel.
ModeCMYKbyRow	12	Same as ModeCMYK, but PictureData contains only the current row The PictureData Memoryblock uses 4 bytes per pixel.
ModeGray	3	Load the image into the picturedata property. The PictureData Memoryblock uses one byte per pixel.
ModeGraybyRow	13	Same as ModeGray, but PictureData contains only the current row The PictureData Memoryblock uses one byte per pixel.
ModePicture	0	Load the image into the picture property.
ModeRaw	20	Load the image into the picturedata property. The PictureData Memoryblock uses 1 to 4 bytes per pixel. Check the colorspace property to know which color space is used.
ModeRGB	1	Load the image into the picturedata property. The PictureData Memoryblock uses 3 bytes per pixel.
ModeRGBbyRow	11	Same as ModeRGB, but PictureData contains only the current row The PictureData Memoryblock uses 3 bytes per pixel.

113.5 class JPEGMovieMBS

113.5.1 class JPEGMovieMBS

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to write a movie with JPEGs.
Example:

```
// get a picture
Var p as Picture = LogoMBS(500)

// start movie building
Var m as new JPEGMovieMBS

m.Width = 500
m.Height = 500
m.SecondsPerFrame = 0.5

// add frames where we count up
for i as integer = 1 to 20
Var c as new Picture(500, 500)
Var g as Graphics = c.Graphics
g.ForeColor = &c000000
g.TextSize = 50
g.DrawPicture p, 0, 0
g.DrawString str(i), 20, 50

Var j as string = c.GetData(c.FormatJPEG)
m.AddFrame j

next

// generate movie
Var MovieData as string = m.BuildMovie

// and write to file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
Var b as BinaryStream = BinaryStream.Create(f, true)
b.Write MovieData
```

Notes: This is a self written class to create a QuickTime Movie with one video track using JPEG images. You can use this to quickly write a slideshow video if needed.

Does play in Quicktime player and VLC, but not Windows Media Player.

Xojo Developer Magazine

- 15.4, page 9: News

113.5.2 Methods

113.5.3 AddFrame(Image as MemoryBlock)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 113.5.4 AddFrame(Image as String) 16432

113.5.4 AddFrame(Image as String)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 113.5.3 AddFrame(Image as MemoryBlock) 16432

113.5.5 BuildMovie as String

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds the movie.
Notes: Either you get an exception or you get a movie which you can write to a file on disk.

113.5.6 Properties

113.5.7 Duration as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duration of the video.
Notes: In Seconds.
(Read only property)

113.5.8 FrameCount as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of frames.
Notes: (Read only property)

113.5.9 Height as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the video.
Notes: Must match the JPEGs you use.
(Read and Write property)

113.5.10 SecondsPerFrame as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds to show a frame.
Notes: Default 1 second.
(Read and Write property)

113.5.11 TimeScale as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time scale to use.
Notes: Defines how fine granular you can define time.
Default is 600 units per second.

(Read and Write property)

113.5.12 Width as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target width of the video.
Notes: Must match the JPEGs you use.
(Read and Write property)

113.6 class JPEGTransformationMBS

113.6.1 class JPEGTransformationMBS

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap the jpegtran utility.
Notes: Although rotating and flipping data expressed as DCT coefficients is not hard, there is an asymmetry in the JPEG format specification for images whose dimensions aren't multiples of the iMCU size. The right and bottom image edges are padded out to the next iMCU boundary with junk data; but no padding is possible at the top and left edges. If we were to flip the whole image including the pad data, then pad garbage would become visible at the top and/or left, and real pixels would disappear into the pad margins — perhaps permanently, since encoders & decoders may not bother to preserve DCT blocks that appear to be completely outside the nominal image area. So, we have to exclude any partial iMCUs from the basic transformation.

Transpose is the only transformation that can handle partial iMCUs at the right and bottom edges completely cleanly. Mirror horizontal can flip partial iMCUs at the bottom, but leaves any partial iMCUs at the right edge untouched. Similarly mirror vertical leaves any partial iMCUs at the bottom edge untouched. The other transforms are defined as combinations of these basic transforms and process edge blocks in a way that preserves the equivalence.

The "trim" option causes untransformable partial iMCUs to be dropped; this is not strictly lossless, but it usually gives the best-looking result for odd-size images. Note that when this option is active, the expected mathematical equivalences between the transforms may not hold. (For example, -rot 270 -trim trims only the bottom edge, but -rot 90 -trim followed by -rot 180 -trim trims both edges.)

We also offer a "force to grayscale" option, which simply discards the chrominance channels of a YCbCr image. This is lossless in the sense that the luminance channel is preserved exactly. It's not the same kind of thing as the rotate/flip transformations, but it's convenient to handle it as part of this package, mainly because the transformation routines have to be aware of the option to know how many components to work on.

Bases on libjpeg.
Blog Entries

- MBS REALbasic Plugins, version 11.2pr1

113.6.2 Methods

113.6.3 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

113.6.4 Transform as boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the transformation.
Notes: Outputfile and Inputfile should never be identical, because this will corrupt the file.

Returns only false if the file specifications are invalid.
So after true is returned you still need to check the errorcode property.

113.6.5 Properties

113.6.6 CopyOption as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What to copy from the meta information.
Notes: Values:

JCOPYOPT_NONE	0	copy no optional markers
JCOPYOPT_COMMENTS	1	copy only comment (COM) markers
JCOPYOPT_ALL	2	copy all optional markers

(Read and Write property)

113.6.7 DebugLevel as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug level for the jpeg library.
Notes: (Read and Write property)

113.6.8 ErrorCode as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: (Read and Write property)

113.6.9 ErrorMessage as String

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

113.6.10 Grayscale as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to reduce to grayscale (omit color data).
Notes: If true the a color image is converted to grayscale.
(Read and Write property)

113.6.11 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input file.
Notes: Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

113.6.12 MaxMemoryToUse as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum memory to use.
Notes: Unit is bytes.
(Read and Write property)

113.6.13 MirrorHorizonal as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the left-right mirror transformation.
Notes: Only one transformation can be used.

(Read and Write property)

113.6.14 MirrorVertical as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the top-bottom mirror transformation.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.15 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimize Huffman table (smaller file, but slow compression)
Notes: (Read and Write property)

113.6.16 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes: On Mac OS X, this function uses the short file name (31 characters).
So you may consider to save to a temporary file and rename it after the transformation was successfull.

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

113.6.17 Progressive as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to create progressive JPEG file.
Notes: (Read and Write property)

113.6.18 Rotate180 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 180¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.19 Rotate270 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 270¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.20 Rotate90 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 90¬∞ clockwise rotation transformation.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.21 Transpose as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to transpose the image across UR-to-LL axis.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.22 Transverse as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to tanspose the image across UL-to-LR axis.
Notes: Only one transformation can be used.
(Read and Write property)

113.6.23 Trim as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to drop non-transformable edge blocks.
Notes: if true, trim partial MCUs as needed.
(Read and Write property)

113.6.24 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

113.6.25 Events

113.6.26 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all error messages from the jpeg library.

113.6.27 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all information messages from the jpeg library.
Notes: msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

113.6.28 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This events reports all warning messages from the jpeg library.

113.7 module JPEGTurboMBS

113.7.1 module JPEGTurboMBS

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to use libjpeg-turbo in Xojo.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Blog Entries

- MBS Xojo Plugins, version 19.5pr7
- libjpeg-turbo for Xojo

113.7.2 Methods

113.7.3 API as Ptr

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns API pointer.
Notes: This returns pointer to internal MBS data structure with function pointers to JPEG library functions.

113.7.4 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 8.0 for version 8.0.

113.7.5 Constants

Constants

Constant	Value	Description
Version	"2.0.3"	The version string for JPEG Turbo library.

113.8 Globals

113.8.1 JPEGStringToPictureMBS(buf as string) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
Var s as string
Var h as new HTTPSocket

s=h.Get("http://www.monkeybreadsoftware.de/xojo/images/rbplugin.jpg",90)

Backdrop=JPEGStringToPictureMBS(s)
```

Notes: Short version of the "JPEGStringToPicture(buf as string,allowdamaged as Boolean) as picture" method. allowdamaged is set to false.
See also:

- 113.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture 16442

113.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
Var p as Picture = LogoMBS(500)
Var s as string = PictureToJPEGStringMBS(p, 80)

s = leftb(s, lenb(s)-1000) // remove last 1000 bytes

Var q as Picture = JPEGStringToPictureMBS(s, true)

Backdrop = q
```

Notes: This methods should read all JPEG file data you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the "JPEGToString example", "jpeg load crashtest" and "SaveJPEG without QuickTime" examples.
Blog Entries

See also:

- 113.8.1 JPEGStringToPictureMBS(buf as string) as picture 16442

113.8.3 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture into a string using JPEG compression.
Example:

```
Var p as Picture = LogoMBS(500)
Var s as string = PictureToJPEGStringMBS(p, 80)
Var q as Picture = JPEGStringToPictureMBS(s)

Backdrop = q
```

Notes: This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

The picture should be a bitmap picture without alpha channel or mask.
Use the JPEGExporterMBS class for more options.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

The picture is always encoded with 72 dpi. If you want to set a different dpi value, please use the JPEGExporterMBS class.

Chapter 114

Keychain

114.1 class KeychainAccessControlMBS

114.1.1 class KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Defines access rights for items.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr5

114.1.2 Methods

114.1.3 Constructor

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

114.1.4 CreateWithFlags(protection as String, Flags as Integer, byref error as Variant) as KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates new access control object based on protection type and additional flags.
Notes: Created access control object should be used as a value for kSecAttrAccessControl attribute in AddItem or UpdateItem functions. Accessing keychain items or performing operations on keys which are protected by access control objects can block the execution because of UI which can appear to satisfy the access control conditions, therefore it is recommended to either move those potentially blocking operations out of the main application thread or use combination of kSecUseAuthenticationContext and kSecUseAuthenticationUI attributes to control where the UI interaction can appear.

protection: Protection class to be used for the item. One of kSecAttrAccessible constants.
flags: If no flags are set then all operations are allowed.
error: Additional error information filled in case of failure. a CFErrorMBS object.

Returns newly created access control object.

114.1.5 kSecAttrAccessibleAfterFirstUnlock as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

114.1.6 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.

114.1.7 kSecAttrAccessibleAlways as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.

114.1.8 kSecAttrAccessibleAlwaysThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

114.1.9 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.

114.1.10 kSecAttrAccessibleWhenUnlocked as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.

114.1.11 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

114.1.12 Properties

114.1.13 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

114.1.14 Constants

Control Flags

Constant	Value	Description
kSecAccessControlAnd	&h8000	Constraint logic operation: when using more than one constrain satisfied.
kSecAccessControlApplicationPassword	&h80000000	Application provided password for data encryption key generatio a constraint but additional item encryption mechanism.
kSecAccessControlBiometryAny	2	Touch ID (any finger) or Face ID. Touch ID or Face ID must With Touch ID at least one finger must be enrolled. With Face I be enrolled. Item is still accessible by Touch ID even if fingers removed. Item is still accessible by Face ID if user is re-enrolled.
kSecAccessControlBiometryCurrentSet	8	Touch ID from the set of currently enrolled fingers. Touch ID mus and at least one finger must be enrolled. When fingers are adde the item is invalidated. When Face ID is re-enrolled this item is
kSecAccessControlDevicePasscode	16	Device passcode
kSecAccessControlOr	&h4000	Constraint logic operation: when using more than one constraint of them must be satisfied.
kSecAccessControlPrivateKeyUsage	&h40000000	Create access control for private key operations (i.e. sign operati
kSecAccessControlTouchIDAny	2	Touch ID (any finger) or Face ID. Touch ID or Face ID must With Touch ID at least one finger must be enrolled. With Face I be enrolled. Item is still accessible by Touch ID even if fingers removed. Item is still accessible by Face ID if user is re-enrolled.
kSecAccessControlTouchIDCurrentSet	8	Touch ID from the set of currently enrolled fingers. Touch ID mus and at least one finger must be enrolled. When fingers are adde the item is invalidated. When Face ID is re-enrolled this item is
kSecAccessControlUserPresence	1	User presence policy using biometry or Passcode. Biometry doe be available or enrolled. Item is still accessible by Touch ID even added or removed. Item is still accessible by Face ID if user is re

114.2 class KeychainItemMBS

114.2.1 class KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain item.
Example:

```
Const kDomain = "koingosw.com"
Const kUsername = "koingosoftware"
Const kPath = ""
Const kProtocol = "http"

Var xPassword As MemoryBlock = "testpassword"
Var xAdded As KeychainItemMBS

Var dQuery as new Dictionary
dQuery.Value(KeychainManagerMBS.kSecAttrAuthenticationType) = KeychainManagerMBS.kSecAttrAuthen-
ticationTypeHTMLForm
dQuery.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassInternetPassword
If Len(kDomain) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrServer) = kDomain
If Len(kUsername) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrAccount) = kUsername
If Len(kProtocol) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrProtocol) = kProtocol
dQuery.Value(KeychainManagerMBS.kSecAttrComment) = "default"
dQuery.Value(KeychainManagerMBS.kSecAttrDescription) = "Web form password"
dQuery.Value(KeychainManagerMBS.kSecAttrLabel) = kDomain + " (" + kUsername + ")"
dQuery.Value(KeychainManagerMBS.kSecValueData) = xPassword

If Not KeychainManagerMBS.AddItem(KeychainManagerMBS.Default,dQuery) Then
Break
End If
```

- Keychain Plugin rewritten

114.2.2 Methods

114.2.3 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes a keychain item from the default keychain's permanent data store.
Notes: Lasterror is set.

114.2.4 ItemClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the item class for this item.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.itemclass // shows genp for generic password
```

Notes: Lasterror is set.

114.2.5 Keychain as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the keychain object of a given keychain item.
Notes: Lasterror is set.

114.2.6 PersistentReference as Memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a persistent reference for a keychain item.
Notes: Unlike normal references, a persistent reference may be stored on disk or passed between processes. You can convert a persistent reference into an ordinary keychain item reference (KeychainItemMBS) by calling the KeychainManagerMBS.ItemFromPersistentReference function.
Lasterror is set.

114.2.7 Properties

114.2.8 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

114.2.9 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

114.2.10 Account as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the account attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.11 AttributeData(attributeName as string) as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as raw data (memoryblock).
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default
```

```
Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var data as MemoryBlock = item.AttributeData(item.kSecCreationDateItemAttr)
Var text as string = DefineEncoding(data, encodings.UTF8)
MsgBox text
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.12 AttributeText(attributeName as string) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as an UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var text as string = item.AttributeText(item.kSecCreationDateItemAttr)
MsgBox text
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.13 Comment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the comment attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
```

```
MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.14 Description as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the description attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Description
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.15 Label as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the label attribute as UTF-8 text.
Example:

```
Var items() as KeychainItemMBS = KeychainManagerMBS.AllItems(nil, KeychainManagerMBS.kSecGenericPasswordItemClass)
Var labels() as string

for each item as KeychainItemMBS in items
labels.append item.label
next

break // see array of labels
```

Notes: Lasterror is set.

(Read and Write computed property)

114.2.16 Password as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the password or sets a new one.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

Var passwordData as MemoryBlock = item.Password
Var password as string = DefineEncoding(passwordData, encodings.UTF8)
MsgBox Password
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.17 Service as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the service attribute as UTF-8 text.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Service
```

Notes: Lasterror is set.
(Read and Write computed property)

114.2.18 Constants

Keychain Attribute Names

Constant	Value	Description
kSecAccountItemAttr	”acct”	Identifies the account attribute. You use this tag to set or get a string that represents the user account. It a applies to generic, Internet, and AppleShare password items. Keychain stri should use UTF-8 encoding.
kSecAddressItemAttr	”addr”	Identifies the address attribute. You use this tag to set or get a value of type string that represents the AppleT zone name, or the IP or domain name that represents the server address. Thi unique to AppleShare password attributes. Keychain strings should use UT encoding.
kSecAlias	”alis”	Indicates an alias.
kSecAuthenticationTypeItemAttr	”atyp”	Identifies the authentication type attribute. You use this tag to set or get a value of type SecAuthenticationType t represents the Internet authentication scheme. For possible authentication v ues, see ”Keychain Authentication Type Constants.” This is unique to Inter password attributes.
kSecCertificateEncoding	”cenc”	Indicates a CSSM_CERT_ENCODING type.
kSecCertificateType	”ctyp”	Indicates a CSSM_CERT_TYPE type.
kSecCommentItemAttr	”icmt”	Identifies the comment attribute. You use this tag to set or get a string value that represents a user-edita string containing comments for this item. Keychain strings should use UT encoding.
kSecCreationDateItemAttr	”cdat”	Identifies the creation date attribute. You use this tag to get a string value that represents the date the it was created, expressed in Zulu Time format (”YYYYMMDDhhmmssZ This is the native format for stored time values in the CDSA specifi tion (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in t CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). Wh specifying the creation date as input to a function (for example, SecKeycha SearchCreateFromAttributes), you may alternatively provide a numeric va of type UInt32 or SInt64, expressed as seconds since 01 January 1904.
kSecCreatorItemAttr	”crtr”	Identifies the creator attribute. You use this tag to set or get a value of type FourCharCode that represe the item’s creator.
kSecCrlEncoding	”crnc”	Indicates a CSSM_CRL_ENCODING type.
kSecCrlType	”crtp”	Indicates a CSSM_CRL_TYPE type.
kSecCustomIconItemAttr	”cusi”	Identifies the custom icon attribute. Use of this attribute is deprecated. Custom icons for keychains are not su ported in OS X.
kSecDescriptionItemAttr	”desc”	Identifies the description attribute. You use this tag to set or get a string value that represents a user-visible stri describing this particular kind of item, for example ”disk image passwor Keychain strings should use UTF-8 encoding.
kSecGenericItemAttr	”gena”	Identifies the generic attribute. You use this tag to set or get a value of untyped bytes that represents a us defined attribute. This is unique to generic password attributes.
kSecInvisibleItemAttr	”invi”	Identifies the invisible attribute. You use this tag to set or get a value of type Boolean that indicates whet the item is invisible (that is, should not be displayed).
kSecLabelItemAttr	”labl”	Identifies the label attribute. You use this tag to set or get a string value that represents a user-edita string containing the label for this item. Keychain strings should use UT encoding.
kSecModDateItemAttr	”mdat”	Identifies the modification date attribute. You use this tag to get a string value that represents the date the it was created, expressed in Zulu Time format (”YYYYMMDDhhmmssZ This is the native format for stored time values in the CDSA specifi tion (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in t CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). Wh

114.3 module KeychainManagerMBS

114.3.1 module KeychainManagerMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The module for global keychain functions.
Example:

```
// build query
Var query as new Dictionary

Var domain as string = "test.test"
Var username as string = "testuser"

query.value( KeychainManagerMBS.kSecAttrServer ) = Domain
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassInternetPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne

// Build Dictionary with new values
Var newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes: For iOS please define a keychain access group in Xojo build settings. Then prefix it with your developer ID as you can see it in the generated entitlement file inside your app. Pass the prefixed string to our functions with kSecAttrAccessGroup key.

114.3.2 Methods

114.3.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in MemoryBlock
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, PasswordData)

Var e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: keychain: A reference to the keychain in which to store a generic password. Pass nil to specify the default keychain.
serviceName: The service name.
accountName: The account name.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

The result code errSecNoDefaultKeychain indicates that no default keychain could be found. The result code errSecDuplicateItem indicates that you tried to add a password that already exists in the keychain. The result code errSecDataTooLarge indicates that you tried to add more data than is allowed for a structure of this type. Call ErrorMessageString function to get a human-readable string explaining the result.

This function adds a new generic password to the specified keychain. Required parameters to identify the password are serviceName and accountName, which are application-defined strings.

You can use this function to add passwords for accounts other than the Internet. For example, you might add AppleShare passwords, or passwords for your database or scheduling programs.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

- 114.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS 16459

114.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in string
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, Password)

Var e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: Takes UTF-8 text from password string for the password. Else the same as AddGenericPassword with memoryblock.
See also:

- 114.3.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 16458

114.3.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: keychain: A reference to the keychain in which to store an Internet password. Pass nil to specify the user's default keychain.

serverName: The server name.
securityDomain: The security domain. This parameter is optional. Pass "" if the protocol does not require it.
accountName: The account name.
path: The character string representing the path.
port: The TCP/IP port number. If no specific port number is associated with this password, pass 0.
protocol: The protocol associated with this password. See Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

This function adds a new Internet server password to the specified keychain. Required parameters to identify the password are serverName and accountName (you cannot pass "" for both parameters). In addition, some protocols may require an optional securityDomain when authentication is requested. This function optionally returns a reference to the newly added item.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.
See also:

- 114.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 16460

114.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Example:

```
// add password with password in string
Var serverName as string = "mytest.com"
```

```
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
Var keychain as KeychainMBS = nil // use default
Var securityDomain as string = "ftp://mytest.com"
Var accountName as string = "myusername"
Var path as string = "/test"
Var port as Integer = 22
Var protocol as string = KeychainManagerMBS.kSecAttrProtocolFTP
Var authenticationType as string = KeychainManagerMBS.kSecAttrAuthenticationTypeDefault

call KeychainManagerMBS.AddInternetPassword(keychain, serverName, securityDomain, accountName, path,
port, protocol, authenticationType, PasswordData)

Var e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: See KeychainManagerMBS.AddInternetPassword for details.
The password is stored as data with UTF-8 encoding.
See also:

- 114.3.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 16459

114.3.7 AddItem(attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 114.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16461
- 114.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16462
- 114.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16462

114.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 114.3.7 AddItem(attributesDictionary as dictionary) as boolean 16461
- 114.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16462
- 114.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16462

114.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
Var a as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

if KeychainManagerMBS.AddItem(nil, a) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes: See other method variant for details.
See also:

- 114.3.7 AddItem(attributesDictionary as dictionary) as boolean 16461
- 114.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16461
- 114.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 16462

114.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
Var a as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var Password as string = "mysecret"
Var PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

Var r as Variant
if KeychainManagerMBS.AddItem(nil, a, r) then
Var item as KeychainItemMBS = r
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes: attributesDictionary: A dictionary containing an item class key-value pair ("Keychain Item Class Keys and Values") and optional attribute key-value pairs ("Attribute Item Keys and Values") specifying the item's attribute values.
result: Optional. On return, a reference to the newly added items. The exact type of the result is based on the values supplied in attributes, as discussed below.

Lasterror is set.

You specify attributes defining an item by adding key-value pairs to the attributes dictionary. To add multiple items to a keychain at once use the kSecUseItemList key (see section "Item List Key") with an array of items as its value. This is currently only supported for non-password items.

If you want the new keychain item to be shared among multiple applications, include the kSecAttrAccessGroup key in the attributes dictionary. The value of this key must be the name of a keychain access group to which all of the programs that will share this item belong.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property

list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. If you add such a property-list file to the application bundle, then the access group corresponding to the application-identifier entitlement is treated as the last element in the access groups array. If you do not include the kSecAttrAccessGroup key in the attributes dictionary when you call the AddItem function to add an item to the keychain, the function uses the first access group in the array by default. If there is no kSecAttrAccessGroup key in the attributes dictionary and there is no keychain-access-groups entitlement in the application bundle, then the access group of a newly created item is the value of the application-identifier entitlement.

For example, a development group in Apple might have the ID:

659823F3DC53.com.apple

and the application identifiers of their two applications might be:

659823F3DC53.com.apple.oneappleapp and

659823F3DC53.com.apple.twoappleapp

If both applications add a keychain-access-groups entitlement with one value in the array of access groups:

659823F3DC53.com.apple.netaccount

then both applications would add new keychain items to the 659823F3DC53.com.apple.netaccount access group by default and both applications would have access to keychain items in that group. In addition, each application would still have access to its own private keychain items: OneAppleApp would have access to items in keychain access group 659823F3DC53.com.apple.oneappleapp and TwoAppleApp would have access to items in 659823F3DC53.com.apple.twoappleapp.

Return types (”Search Results Constants”) are specified as follows:

To obtain the data of the added item as an object of type Memoryblock, specify the return type key kSecReturnData with a value of true.
To obtain all the attributes of the added item as objects of type Dictionary, specify kSecReturnAttributes with a value of true.
To obtain a reference to the added item of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef), specify kSecReturnRef with a value of True. This is the default behavior if a return type is not explicitly specified.
To obtain a persistent reference to the added item (an object of type Memoryblock), specify kSecReturnPersistentRef with a value of True. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
If more than one of these return types is specified, the result is returned as an object of type Dictionary

containing all the requested data.

Available in OS X v10.6 and later.

- 114.3.7 AddItem(attributesDictionary as dictionary) as boolean 16461
- 114.3.8 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 16461
- 114.3.9 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 16462

114.3.11 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 114.3.12 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 16465

114.3.12 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 114.3.11 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 16465

114.3.13 AllItems(keychain as KeychainMBS, itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes: Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

114.3.14 CopyMatching(Query as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and show values from attribute dictionary
Var r as Variant
if KeychainManagerMBS.CopyMatching(query, r) then
if r isa Dictionary then
Var d as Dictionary = r

// show values
MsgBox "Creation Date: "+d.value(KeychainManagerMBS.kSecAttrCreationDate).dateValue.shortdate
MsgBox "Modification Date: "+d.value(KeychainManagerMBS.kSecAttrModificationDate).dateValue.short-
date
end if
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search. See
result: On return, a reference to the found items. The exact type of the result is based on the search attributes supplied in the query, as discussed below.

Lasterror is set.

You specify attributes defining a search by adding key-value pairs to the query dictionary.

A typical query consists of:

- The class key ("Item Class Key Constant") and a class value constant ("Item Class Value Constants"),

which specifies the class of items for which to search.

- One or more attribute key-value pairs ("Attribute Item Keys and Values"), which specify the attribute data to be matched.
- One or more search key-value pairs ("Search Keys"), which specify values that further refine the search.
- A return-type key-value pair ("Search Results Constants"), specifying the type of results you desire.

Return types ("Search Results Constants") are specified as follows:

- To obtain a reference (of type Memoryblock) to the data of a matching item, specify kSecReturnData with a value of true.
- To obtain a dictionary (of type Dictionary) containing the attributes of a matching item, specify kSecReturnAttributes with a value of true.
- To obtain a reference (of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef) to a matching item, specify kSecReturnRef with a value of true.
- To obtain a persistent reference (of type Memoryblock) to a matching item, specify kSecReturnPersistentRef with a value of true. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
- If more than one return type is specified (for example, kSecReturnRef and kSecReturnAttributes), the results are returned as a dictionary (that is, an object of type Dictionary) containing all the requested data.

By default, this function returns only the first match found. To obtain more than one matching item at a time, specify the search key kSecMatchLimit with a value greater than 1. The result will be an object of type Array containing up to that number of matching items.

Note: You cannot combine the kSecReturnData and kSecMatchLimitAll options when copying password items (items of class kSecInternetPasswordItemClass or kSecGenericPasswordItemClass), because copying each password item could require additional authentication. Instead, request a reference or persistent reference to the items, then request the data for only the specific passwords that you actually require.
By default, this function searches for items in the keychain. To instead provide your own set of items to be filtered by this search query, specify the search key kSecMatchItemList and provide as its value a Array containing items of type SecKeychainItemRef, SecKeyRef, SecCertificateRef, or SecIdentityRef. The objects in the provided array must all be of the same type.

To convert from persistent item references to normal item references, specify the search key kSecMatchItemList with a value that consists of an object of type array referencing an array containing one or more elements of type Memoryblock (the persistent references), and a return-type key of kSecReturnRef whose value is true. The objects in the provided array must all be of the same type.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. When you call the SecItemAdd function to add an item to the keychain, you can specify the access group to which that item should belong. By default, the SecItemCopyMatching function searches all the access groups to which the application belongs. However, you can add the kSecAttrAccessGroup key to the search dictionary to specify which access group to search for keychain items.

Availability
Available in OS X v10.6 and later.

114.3.15 CopyMatchingAsync(Query as dictionary, handler as CopyMatchingAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Asynchronous version of CopyMatching.
Notes: Work performs on a thread and the given delegate handler is called with result.

114.3.16 CopyMatchingDictionaries(Query as dictionary) as Dictionary()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll

// search all items
Var dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
Var dic as Dictionary = dics(0)
```

```
// and display
MsgBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: This is a variant of CopyMatching which uses kSecReturnAttributes to query array of dictionaries.

114.3.17 CopyMatchingItems(Query as dictionary) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecAttrAccount ) = "myusername"

// search all items
Var items() as KeychainItemMBS = KeychainManagerMBS.CopyMatchingItems(query)

if UBound(items) = -1 then
MsgBox "nothing found."
else

// pick first
Var item as KeychainItemMBS = items(0)

// and display
MsgBox "Service: "+item.Service+EndOfLine+"Account: "+item.Account
end if
```

Notes: This is a variant of CopyMatching which uses kSecReturnRef to query array of KeychainItemMBS.

114.3.18 Default as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain.
Example:

MsgBox KeychainManagerMBS.Default.Path

Notes: Lasterror is set.

114.3.19 DeleteItem(Query as Dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes items that match a search query.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and delete it

if KeychainManagerMBS.DeleteItem(query) then
MsgBox "Deleted"
else
MsgBox "Failed."
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search.
Lasterror is set.

See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

By default, this function deletes all items matching the specified query. You can change this behavior by specifying a key, as follows:

- To delete an item identified by a transient reference, specify the kSecMatchItemList search key with a reference returned by using the kSecReturnRef return type key in a previous call to the SecItemCopy-Matching or SecItemAdd functions.
- To delete an item identified by a persistent reference, specify the kSecMatchItemList search key with

a persistent reference returned by using the kSecReturnPersistentRef return type key to the SecItemCopyMatching or SecItemAdd functions.

- If more than one of these return keys is specified, the behavior is undefined.

Available in OS X v10.6 and later.

114.3.20 DomainDefault(domain as Integer) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain from a specified preference domain.
Example:

```
Var SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
msgbox SystemKeychain.name
```

Notes: domain: The preference domain from which you wish to retrieve the default keychain. See Preference Domain Constants for possible domain values.

Returns the keychain object of the default keychain in the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the default keychain for a specific preference domain. Use the KeychainManagerMBS.Default function if you want the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

114.3.21 DomainSearchList(domain as Integer) as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the keychain search list for a specified preference domain.
Example:

```
Var SearchList() as KeychainMBS = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)
Var names() as String

for each k as KeychainMBS in SearchList
names.Append k.Name
```

next

MsgBox Join(names, EndOfLine)

Notes: domain: The preference domain from which you wish to retrieve the keychain search list. See Preference Domain Constants for possible domain values.

Returns the keychain search list of the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the keychain search list for a specific preference domain. Use the SearchList function if you want the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

114.3.22 ErrorMessageString(error as Integer) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a string explaining the meaning of a security result code.
Notes: status: A result code of type OSStatus or CSSM_RETURN, returned by a security or CSSM function.

Returns a human-readable string describing the result, or empty string if no string is available for the specified result code.
Available in OS X v10.5 and later.

114.3.23 FindGenericItem(keychain as KeychainMBS, serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Example:

```
Var ServiceName as string = "mytest"
Var Username as string = "myusername"
Var keychain as KeychainMBS = nil // use default

Var item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
```

```
MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Same as KeychainManagerMBS.FindGenericPassword, but returns item instead of password.

114.3.24 FindGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.
Notes: keychain: A reference to a single keychain, or nil to search the user's default keychain search list.
serviceName: The service name.
accountName: The account name.
password: A memoryblock that holds the password data.

Returns the item object of the generic password.
Lasterror is set.

This function finds the first generic password item that matches the attributes you provide. Most attributes are optional; you should pass only as many as you need to narrow the search sufficiently for your application's intended use. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.

114.3.25 FindInternetItem(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

114.3.26 FindInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes: keychain: A single keychain or nil to search the user's default keychain search list.
serverName: The server name.
securityDomain: The security domain. This parameter is optional, as not all protocols require it. Pass "" if it is not required.
accountName: The account name.
path: The string representing the path.
port: The TCP/IP port number. Pass 0 to ignore the port number.
protocol: The protocol associated with this password. See Keychain Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: On return, a memoryblock containing the password data.

Returns the item object of the Internet password.
Lasterror is set.

This function finds the first Internet password item that matches the attributes you provide. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

114.3.27 GetPassword(Query as dictionary, byref result as Memoryblock) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one keychain item that match a search query.
Example:

```
// build query
Var query as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// query password
Var passwordData as MemoryBlock
if KeychainManagerMBS.GetPassword(query, passwordData) then
// and show it
Var password as string = DefineEncoding(passwordData, Encodings.utf8)
MsgBox "OK: "+password
else
MsgBox "Failed."
end if
```

Notes: This is a variant of CopyMatching which uses kSecReturnData to query the data of one keychain item.
Returns password of first item found in result parameter. If you expect text, be sure to use DefineEncoding to define as encodings.UTF8.

114.3.28 ItemFromPersistentReference(data as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides a keychain item reference, given a persistent reference.
Notes: Returns a keychain item reference for the item for which you provided a persistent reference.
Available in OS X v10.6 and later.

114.3.29 kSecAttrAccess as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: A SecAccessRef object describing the access control settings for this item.
Available in OS X v10.7 and later.

114.3.30 kSecAttrAccessControl as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value is KeychainAccessControlMBS instance which contains access control conditions for item.
Notes: Available on Mac OS X 10.10 and newer.
IMPORTANT: This attribute is mutually exclusive with kSecAttrAccess attribute.

See KeychainAccessControlMBS class.

114.3.31 kSecAttrAccessGroup as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value is a CFStringRef indicating which access group a item is in.
Notes: Available on Mac OS X 10.9 and newer.
The access groups that a particular application has membership in are determined by two entitlements for that application. The application-identifier entitlement contains the application's single access group, unless there is a keychain-access-groups entitlement present. The latter has as its value a list of access groups; the first item in this list is the default access group. Unless a specific access group is provided as the value of kSecAttrAccessGroup when SecItemAdd is called, new items are created in the application's default access group. Specifying this attribute in SecItemCopyMatching, SecItemUpdate, or SecItemDelete calls limits the search to the specified access group (of which the calling application must be a member to obtain matching results.) To share keychain items between multiple applications, each application must have a common group listed in its keychain-access-groups entitlement, and each must specify this shared access group name as the value for the kSecAttrAccessGroup key in the dictionary passed to SecItem functions.

For iOS please define a keychain access group in Xojo build settings. Then prefix it with your developer ID as you can see it in the generated entitlement file inside your app. Pass the prefixed string to our functions with kSecAttrAccessGroup key.

114.3.32 kSecAttrAccessible as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value indicates when your application needs access to an item's data.
Notes: You should choose the most restrictive option that meets your application's needs to allow the system to protect that item in the best way possible. See the kSecAttrAccessible* methods for a list of values which can be specified.

IMPORTANT: This attribute is currently not supported for OS X keychain items, unless the kSecAttrSynchronizable attribute is also present. If both attributes are specified on either OS X or iOS, the value for the kSecAttrAccessible key may only be one whose name does not end with "ThisDeviceOnly", as those cannot sync to another device.

114.3.33 kSecAttrAccessibleAfterFirstUnlock as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

114.3.34 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart.
This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.
Available on Mac OS X 10.9 and newer.

114.3.35 kSecAttrAccessibleAlways as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

114.3.36 kSecAttrAccessibleAlwaysThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not

recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

114.3.37 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.
Available on Mac OS X 10.9 and newer.

114.3.38 kSecAttrAccessibleWhenUnlocked as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

114.3.39 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

114.3.40 kSecAttrAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.

Notes: Account attribute key.
The corresponding value is of type String and contains an account name. Items of class kSecClassGenericPassword and kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

114.3.41 kSecAttrApplicationLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Application label attribute key.
The corresponding value is of type String and contains a label for this item. This attribute is different from the kSecAttrLabel attribute, which is intended to be human-readable. This attribute is used to look up a key programmatically; in particular, for keys of class kSecAttrKeyClassPublic and kSecAttrKeyClassPrivate, the value of this attribute is the hash of the public key.
Available in OS X v10.6 and later.

114.3.42 kSecAttrApplicationTag as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Private tag attribute key.
The corresponding value is of type Memoryblock and contains private tag data.
Available in OS X v10.6 and later.

114.3.43 kSecAttrAuthenticationType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Authentication type attribute key.
The corresponding value is of type integer and denotes the authentication scheme for this item (see "Authentication Type Values").
Available in OS X v10.6 and later.

114.3.44 kSecAttrAuthenticationTypeDefault as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.

Notes: The default authentication type.
Available in OS X v10.6 and later.

114.3.45 kSecAttrAuthenticationTypeDPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Distributed Password authentication.
Available in OS X v10.6 and later.

114.3.46 kSecAttrAuthenticationTypeHTMLForm as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTML form based authentication.
Available in OS X v10.6 and later.

114.3.47 kSecAttrAuthenticationTypeHTTPBasic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Basic authentication.
Available in OS X v10.6 and later.

114.3.48 kSecAttrAuthenticationTypeHTTPDigest as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Digest Access authentication.
Available in OS X v10.6 and later.

114.3.49 kSecAttrAuthenticationTypeMSN as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Microsoft Network default authentication.
Available in OS X v10.6 and later.

114.3.50 kSecAttrAuthenticationTypeNTLM as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Windows NT LAN Manager authentication.
Available in OS X v10.6 and later.

114.3.51 kSecAttrAuthenticationTypeRPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Remote Password authentication.
Available in OS X v10.6 and later.

114.3.52 kSecAttrCanDecrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Decryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to decrypt data.
Available in OS X v10.6 and later.

114.3.53 kSecAttrCanDerive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Derivation attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to derive another key.
Available in OS X v10.6 and later.

114.3.54 kSecAttrCanEncrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Encryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to encrypt data.
Available in OS X v10.6 and later.

114.3.55 kSecAttrCanSign as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Signature attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to create a digital signature.
Available in OS X v10.6 and later.

114.3.56 kSecAttrCanUnwrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Unwrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to unwrap another key.
Available in OS X v10.6 and later.

114.3.57 kSecAttrCanVerify as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Signature verification attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to verify a digital signature.
Available in OS X v10.6 and later.

114.3.58 kSecAttrCanWrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Wrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to wrap another key.
Available in OS X v10.6 and later.

114.3.59 kSecAttrCertificateEncoding as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Certificate encoding attribute key.
The corresponding value is of type integer and denotes the certificate encoding (see the CSSM_CERT_ENCODING enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.60 kSecAttrCertificateType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Certificate type attribute key.
The corresponding value is of type integer and denotes the certificate type (see the CSSM_CERT_TYPE enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.61 kSecAttrComment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Comment attribute key.
The corresponding value is of type string and contains the user-editable comment for this item.
Available in OS X v10.6 and later.

114.3.62 kSecAttrCreationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Creation date key.
The corresponding value is of type date and represents the date the item was created. Read only.
Available in OS X v10.6 and later.

114.3.63 kSecAttrCreator as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Creator attribute key.
The corresponding value is of type integer and represents the item's creator. This number is the unsigned integer representation of a four-character code (for example, 'aCrt').
Available in OS X v10.6 and later.

114.3.64 kSecAttrDescription as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Description attribute key.
The corresponding value is of type String and specifies a user-visible string describing this kind of item (for example, "Disk image password").
Available in OS X v10.6 and later.

114.3.65 kSecAttrEffectiveKeySize as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Effective number of bits attribute key.
The corresponding value is of type Integer and indicates the effective number of bits in this cryptographic key. For example, a DES key has a kSecAttrKeySizeInBits of 64, but a kSecAttrEffectiveKeySize of 56 bits.
Available in OS X v10.6 and later.

114.3.66 kSecAttrGeneric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Generic attribute key.
The corresponding value is of type Memoryblock and contains a user-defined attribute. Items of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

114.3.67 kSecAttrIsInvisible as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Invisible attribute key.
The corresponding value is of type boolean and is true if the item is invisible (that is, should not be displayed).
Available in OS X v10.6 and later.

114.3.68 kSecAttrIsNegative as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Negative attribute key.
The corresponding value is of type Boolean and indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn't want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user.
Available in OS X v10.6 and later.

114.3.69 kSecAttrIsPermanent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Permanence attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key is to be stored permanently.
Available in OS X v10.6 and later.

114.3.70 kSecAttrIssuer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Issuer attribute key.
The corresponding value is of type Date and contains the X.500 issuer name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.71 kSecAttrKeyClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Key class attribute key.
The corresponding value is of type CFTypeRef and specifies a type of cryptographic key. Possible values are listed in "Key Class Values." Read only.
Available in OS X v10.6 and later.

114.3.72 kSecAttrKeyClassPrivate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A private key of a public-private pair.
Available in OS X v10.6 and later.

114.3.73 kSecAttrKeyClassPublic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A public key of a public-private pair.
Available in OS X v10.6 and later.

114.3.74 kSecAttrKeyClassSymmetric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes: A private key used for symmetric-key encryption and decryption.

Available in OS X v10.6 and later.

114.3.75 kSecAttrKeySizeInBits as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Number of bits attribute key.
The corresponding value is of type Integer and indicates the total number of bits in this cryptographic key.
Compare with kSecAttrEffectiveKeySize.
Available in OS X v10.6 and later.

114.3.76 kSecAttrKeyType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Algorithm attribute key.
The corresponding value is of type integer and indicates the algorithm associated with this cryptographic key (see the CSSM_ALGORITHMS enumeration in cssmtype.h and "Key Type Values").
Available in OS X v10.6 and later.

114.3.77 kSecAttrKeyType3DES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.

114.3.78 kSecAttrKeyTypeAES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: AES algorithm.
Available in OS X v10.7 and later.

114.3.79 kSecAttrKeyTypeCAST as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: CAST algorithm.
Available in OS X v10.7 and later.

114.3.80 kSecAttrKeyTypeDES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: DES algorithm.
Available in OS X v10.7 and later.

114.3.81 kSecAttrKeyTypeDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: DSA algorithm.
Available in OS X v10.7 and later.

114.3.82 kSecAttrKeyTypeEC as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: Elliptic curve algorithm.
Available in OS X v10.9 and later.

114.3.83 kSecAttrKeyTypeECDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: Elliptic curve DSA algorithm.
Available in OS X v10.7 and later.

114.3.84 kSecAttrKeyTypeRC2 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RC2 algorithm.
Available in OS X v10.7 and later.

114.3.85 kSecAttrKeyTypeRC4 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RC4 algorithm.
Available in OS X v10.7 and later.

114.3.86 kSecAttrKeyTypeRSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes: RSA algorithm.
Available in OS X v10.6 and later.

114.3.87 kSecAttrLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Label attribute key.
The corresponding value is of type String and contains the user-visible label for this item.
Available in OS X v10.6 and later.

114.3.88 kSecAttrModificationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Modification date key.
The corresponding value is of type date and represents the last time the item was updated. Read only.
Available in OS X v10.6 and later.

114.3.89 kSecAttrPath as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Path attribute key.
The corresponding value is of type String and represents a path, typically the path component of the URL. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

114.3.90 kSecAttrPort as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Port attribute key.
The corresponding value is of type integer and represents an Internet port number. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

114.3.91 kSecAttrPRF as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Pseudorandom function attribute. Possible values are described in "kSecAttrPRF Value Constants."
Available in OS X v10.7 and later.

114.3.92 kSecAttrPRFHmacAlgSHA1 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA1 algorithm.
Available in OS X v10.7 and later.

114.3.93 kSecAttrPRFHmacAlgSHA224 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA224 algorithm.
Available in OS X v10.7 and later.

114.3.94 kSecAttrPRFHmacAlgSHA256 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA256 algorithm.
Available in OS X v10.7 and later.

114.3.95 kSecAttrPRFHmacAlgSHA384 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA384 algorithm.
Available in OS X v10.7 and later.

114.3.96 kSecAttrPRFHmacAlgSHA512 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes: Use the SHA512 algorithm.
Available in OS X v10.7 and later.

114.3.97 kSecAttrProtocol as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Protocol attribute key.
The corresponding value is of type integer and denotes the protocol for this item (see "Protocol Values").
Items of class kSecClassInternetPassword have this attribute.

Available in OS X v10.6 and later.

114.3.98 kSecAttrProtocolAFP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: AFP over TCP.
Available in OS X v10.6 and later.

114.3.99 kSecAttrProtocolAppleTalk as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: AFP over AppleTalk.
Available in OS X v10.6 and later.

114.3.100 kSecAttrProtocolDAAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: DAAP protocol.
Available in OS X v10.6 and later.

114.3.101 kSecAttrProtocolEPPC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Remote Apple Events.
Available in OS X v10.6 and later.

114.3.102 kSecAttrProtocolFTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP protocol.

Available in OS X v10.6 and later.

114.3.103 kSecAttrProtocolFTPAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: A client side FTP account.
Available in OS X v10.6 and later.

114.3.104 kSecAttrProtocolFTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP proxy.
Available in OS X v10.6 and later.

114.3.105 kSecAttrProtocolFTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: FTP over TLS/SSL.
Available in OS X v10.6 and later.

114.3.106 kSecAttrProtocolHTTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP protocol.
Available in OS X v10.6 and later.

114.3.107 kSecAttrProtocolHTTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP proxy.
Available in OS X v10.6 and later.

114.3.108 kSecAttrProtocolHTTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTP over TLS/SSL.
Available in OS X v10.6 and later.

114.3.109 kSecAttrProtocolHTTPSProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: HTTPS proxy.
Available in OS X v10.6 and later.

114.3.110 kSecAttrProtocolIMAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IMAP protocol.
Available in OS X v10.6 and later.

114.3.111 kSecAttrProtocolIMAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IMAP over TLS/SSL.
Available in OS X v10.6 and later.

114.3.112 kSecAttrProtocolIPP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IPP protocol.
Available in OS X v10.6 and later.

114.3.113 kSecAttrProtocolIRC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IRC protocol.
Available in OS X v10.6 and later.

114.3.114 kSecAttrProtocolIRCS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: IRC over TLS/SSL.
Available in OS X v10.6 and later.

114.3.115 kSecAttrProtocolLDAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: LDAP protocol.
Available in OS X v10.6 and later.

114.3.116 kSecAttrProtocolLDAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: LDAP over TLS/SSL.
Available in OS X v10.6 and later.

114.3.117 kSecAttrProtocolNNTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: NNTP protocol.
Available in OS X v10.6 and later.

114.3.118 kSecAttrProtocolNNTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: NNTP over TLS/SSL.
Available in OS X v10.6 and later.

114.3.119 kSecAttrProtocolPOP3 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: POP3 protocol.
Available in OS X v10.6 and later.

114.3.120 kSecAttrProtocolPOP3S as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: POP3 over TLS/SSL.
Available in OS X v10.6 and later.

114.3.121 kSecAttrProtocolRTSP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: RTSP protocol.
Available in OS X v10.6 and later.

114.3.122 kSecAttrProtocolRTSPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: RTSP proxy.
Available in OS X v10.6 and later.

114.3.123 kSecAttrProtocolSMB as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SMB protocol.
Available in OS X v10.6 and later.

114.3.124 kSecAttrProtocolSMTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SMTP protocol.
Available in OS X v10.6 and later.

114.3.125 kSecAttrProtocolSOCKS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SOCKS protocol.
Available in OS X v10.6 and later.

114.3.126 kSecAttrProtocolSSH as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: SSH protocol.
Available in OS X v10.6 and later.

114.3.127 kSecAttrProtocolTelnet as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Telnet protocol.
Available in OS X v10.6 and later.

114.3.128 kSecAttrProtocolTelnetS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes: Telnet over TLS/SSL.
Available in OS X v10.6 and later.

114.3.129 kSecAttrPublicKeyHash as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Public key hash attribute key.
The corresponding value is of type memoryblock and contains the hash of a certificate's public key. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.130 kSecAttrRounds as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: The number of rounds for the pseudorandom function specified by kSecAttrPRF.
Available in OS X v10.7 and later.

114.3.131 kSecAttrSalt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: A memoryblock object containing the salt to use for this key.
Available in OS X v10.7 and later.

114.3.132 kSecAttrSecurityDomain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Security domain attribute key.
The corresponding value is of type String and represents the Internet security domain. Items of class kSecClassInternetPassword have this attribute.

Available in OS X v10.6 and later.

114.3.133 kSecAttrSerialNumber as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Serial number attribute key.
The corresponding value is of type Date and contains the serial number data of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.134 kSecAttrServer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Server attribute key.
The corresponding value is of type String and contains the server's domain name or IP address. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

114.3.135 kSecAttrService as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Service attribute key.
The corresponding value is a string of type String that represents the service associated with this item. Items of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

114.3.136 kSecAttrSubject as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Subject attribute key.
The corresponding value is of type CFDataRef and contains the X.500 subject name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.

Available in OS X v10.6 and later.

114.3.137 kSecAttrSubjectKeyID as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Subject key ID attribute key.
The corresponding value is of type date and contains the subject key ID of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

114.3.138 kSecAttrSynchronizable as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value is a Boolean indicating whether the item in question can be synchronized.
Notes: To add a new item which can be synced to other devices, or to obtain synchronizable results from a query, supply this key with a value of true. If the key is not supplied, or has a value of false, then no synchronizable items will be added or returned. A predefined value, kSecAttrSynchronizableAny, may be provided instead of true if both synchronizable and non-synchronizable results are desired.

IMPORTANT: Specifying the kSecAttrSynchronizable key has several caveats:

- Updating or deleting items using the kSecAttrSynchronizable key will affect all copies of the item, not just the one on your local device. Be sure that it makes sense to use the same password on all devices before deciding to make a password synchronizable.
- Only password items can currently be synchronized. Keychain syncing is not supported for certificates or cryptographic keys.
- Items stored or obtained using the kSecAttrSynchronizable key cannot specify SecAccessRef-based access control with kSecAttrAccess. If a password is intended to be shared between multiple applications, the kSecAttrAccessGroup key must be specified, and each application using this password must have a 'keychain-access-groups' entitlement with the specified access group value.
- Items stored or obtained using the kSecAttrSynchronizable key may not also specify a kSecAttrAccessible value which is incompatible with syncing (namely, those whose names end with "ThisDeviceOnly".)
- Items stored or obtained using the kSecAttrSynchronizable key cannot be specified by reference. You must pass kSecReturnAttributes and/or kSecReturnData to retrieve results; kSecReturnRef is currently not supported for synchronizable items.

- Persistent references to synchronizable items should be avoided; while they may work locally, they cannot be moved between devices, and may not resolve if the item is modified on some other device.
- When specifying a query that uses the kSecAttrSynchronizable key, search keys are limited to the item's class and attributes. The only search constant which may be used is kSecMatchLimit; other constants using the kSecMatch prefix are not supported at this time.

Available on Mac OS X 10.9 and newer.

114.3.139 kSecAttrSynchronizableAny as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies that both synchronizable and non-synchronizable results should be returned from this query.
Notes: This may be used as a value for the kSecAttrSynchronizable dictionary key in a call to SecItemCopyMatching, SecItemUpdate, or SecItemDelete.
Available on Mac OS X 10.9 and newer.

114.3.140 kSecAttrType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keychain item attribute keys.
Notes: Type attribute key.
The corresponding value is of type integer and represents the item's type. This number is the unsigned integer representation of a four-character code (for example, 'aTyp').
Available in OS X v10.6 and later.

114.3.141 kSecClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key constant used to set the item class value in a search dictionary.
Notes: Dictionary key whose value is the item's class code.
Possible values for this key are listed in Item Class Value Constants.
Available in OS X v10.6 and later.

114.3.142 kSecClassCertificate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Certificate item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCertificateType
kSecAttrCertificateEncoding
kSecAttrLabel
kSecAttrSubject
kSecAttrIssuer
kSecAttrSerialNumber
kSecAttrSubjectKeyID
kSecAttrPublicKeyHash

Available in OS X v10.7 and later.

114.3.143 kSecClassGenericPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Generic password item.

The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrService
kSecAttrGeneric

Available in OS X v10.7 and later.

114.3.144 kSecClassIdentity as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Identity item.

An identity is a certificate together with its associated private key. Because an identity is the combination of a private key and a certificate, this class shares attributes of both kSecClassKey and kSecClassCertificate.

Available in OS X v10.7 and later.

114.3.145 kSecClassInternetPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Internet password item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrSecurityDomain
kSecAttrServer
kSecAttrProtocol
kSecAttrAuthenticationType
kSecAttrPort
kSecAttrPath

Available in OS X v10.6 and later.

114.3.146 kSecClassKey as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes: Cryptographic key item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrKeyClass
kSecAttrLabel
kSecAttrApplicationLabel
kSecAttrIsPermanent
kSecAttrApplicationTag
kSecAttrKeyType
kSecAttrKeySizeInBits
kSecAttrEffectiveKeySize
kSecAttrCanEncrypt
kSecAttrCanDecrypt
kSecAttrCanDerive
kSecAttrCanSign
kSecAttrCanVerify
kSecAttrCanWrap
kSecAttrCanUnwrap

Available in OS X v10.7 and later.

114.3.147 kSecMatchCaseInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then case-sensitive string matching is performed.
Available in OS X v10.6 and later.

114.3.148 kSecMatchDiacriticInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.

The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then diacritic-sensitive string matching is performed.
Available in OS X v10.7 and later.

114.3.149 kSecMatchEmailAddressIfPresent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Email address attribute key.
The corresponding value is of type string and contains an RFC822 email address. If provided, returned certificates or identities are limited to those that either contain the address or do not contain any email address.
Available in OS X v10.6 and later.

114.3.150 kSecMatchIssuers as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Issuers attribute key.
The corresponding value is of type array, where the array consists of X.500 names of type Memoryblock. If provided, returned certificates or identities are limited to those whose certificate chain contains one of the issuers provided in this list.
Available in OS X v10.6 and later.

114.3.151 kSecMatchItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Item list attribute key.
To provide your own set of items to be filtered by a search query rather than searching the keychain, specify this search key in a call to the SecItemCopyMatching function with a value that consists of an object of type array where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or memoryblock items. The objects in the provided array must all be of the same type.
To convert from persistent item references to normal item references, specify this search key in a call to the CopyMatching function with a value of type array where the array contains one or more CFDataRef elements (the persistent references), and a return-type key of kSecReturnRef whose value is True.
To delete an item identified by a transient reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a reference returned by using the kSecReturnRef return type key in a previous call to the CopyMatching or SecItemAdd functions.
To delete an item identified by a persistent reference, specify the kSecMatchItemList search key in a call

to the SecItemDelete function with a persistent reference returned by using the kSecReturnPersistentRef return type key to the CopyMatching or SecItemAdd functions.
Available in OS X v10.6 and later.

114.3.152 kSecMatchLimit as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Match limit attribute key.
The corresponding value is of type Integer. If provided, this value specifies the maximum number of results to return or otherwise act upon. For a single item, specify kSecMatchLimitOne. To specify all matching items, specify kSecMatchLimitAll. The default behavior is function-dependent.
Available in OS X v10.6 and later.

114.3.153 kSecMatchLimitAll as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: An unlimited number of results may be returned; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

114.3.154 kSecMatchLimitOne as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Results are limited to the first item found; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

114.3.155 kSecMatchPolicy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Match policy attribute key.
The corresponding value is of type SecPolicyRef. If provided, returned certificates or identities must verify with this policy.

Available in OS X v10.6 and later.

114.3.156 kSecMatchSearchList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Example:

```
// We pass a keychain for searching only in this keychain
Var keychains() as KeychainMBS = KeychainManagerMBS.SearchList
Var keychain as KeychainMBS = keychains(1) // we pick second keychain
Var keychainname as string = keychain.name

// Build query
Var query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecMatchSearchList ) = array(keychain)

// search all items
Var dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
Var dic as Dictionary = dics(0)

// and display
MsgBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: Available in OS X v10.6 and later.

114.3.157 kSecMatchSubjectContains as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type string. If provided, returned certificates or identities are limited to those whose subject contains this string.
Available in OS X v10.6 and later.

114.3.158 kSecMatchSubjectEndsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject ends with this string.
Available in OS X v10.7 and later.

114.3.159 kSecMatchSubjectStartsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject starts with this string.
Available in OS X v10.7 and later.

114.3.160 kSecMatchSubjectWholeString as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject is exactly equal to this string.
Available in OS X v10.7 and later.

114.3.161 kSecMatchTrustedOnly as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Trusted anchor attribute key.
The corresponding value is of type Boolean. If this attribute is provided with A value of True, only certificates that can be verified back to a trusted anchor are returned. If this value is False or the attribute is not provided, then both trusted and untrusted certificates may be returned.
Available in OS X v10.6 and later.

114.3.162 kSecMatchValidOnDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Valid-on-date attribute key.
The corresponding value is of type Date. If provided, returned keys, certificates or identities are limited to those that are valid for the given date. Pass a value of nil to indicate the current date.
Available in OS X v10.6 and later.

114.3.163 kSecMatchWidthInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes: Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then width-sensitive string matching is performed (for example, the ASCII character a does not match the UTF-8 full-width letter a (U+FF41).
Available in OS X v10.7 and later.

114.3.164 kSecReturnAttributes as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return attributes attribute key.
The corresponding value is of type Boolean. A value of True indicates that a dictionary of the (unencrypted) attributes of an item should be returned in the form of a Dictionary.
Available in OS X v10.6 and later.

114.3.165 kSecReturnData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return data attribute key.
The corresponding value is of type Boolean. A value of True indicates that the data of an item should be returned in the form of a Memoryblock. For keys and password items, data is secret (encrypted) and may require the user to enter a password for access.

Available in OS X v10.6 and later.

114.3.166 kSecReturnPersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return persistent reference attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type Boolean. A value of True indicates that a persistent reference to an item (Memoryblock) should be returned.
Available in OS X v10.6 and later.

114.3.167 kSecReturnRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes: Return reference attribute key.
The corresponding value is of type Boolean. A value of True indicates that a reference should be returned. Depending on the item class requested, the returned references may be of type KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or Memoryblock.
Available in OS X v10.6 and later.

114.3.168 kSecUseAuthenticationContext as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value is LAContextMBS to be used for keychain item authentication.
Notes: As LAContext is 64-bit only for Mac, this will do nothing in 32-bit.

- If the item requires authentication and this key is omitted, a new context will be created just for the purpose of the single call.
- If the specified context has been previously authenticated, the operation will succeed without asking user for authentication.
- If the specified context has not been previously authenticated, the new authentication will be started on this context, allowing caller to eventually reuse the sucessfully authenticated context in subsequent keychain operations.

114.3.169 kSecUseAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value to define whether UI is allowed.
Notes: Value can be one of kSecUseAuthenticationUIAllow, kSecUseAuthenticationUIFail, kSecUseAuthenticationUISkip.

114.3.170 kSecUseAuthenticationUIAllow as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecUseAuthenticationUI to allow user interface.

114.3.171 kSecUseAuthenticationUIFail as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and fail.

114.3.172 kSecUseAuthenticationUISkip as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and skip.

114.3.173 kSecUseItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key used to specify a list of items to search or add.
Notes: Item list key.
The corresponding value is of type CFArrayRef, where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or (for persistent item references) Memoryblock items. If provided, this array is treated as the set of all possible items to search (or to add if the function being called is AddItem). The items in the array must all be of the same type.
Available in OS X v10.6 and later.

114.3.174 kSecUseKeychain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key used to specify a list of items to search or add.
Notes: Keychain reference key.
Specifies a SecKeychainRef object that references the keychain to which AddItem should add the provided items.
Available in OS X v10.7 and later.

114.3.175 kSecUseNoAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether to show authentication user interface.
Notes: OS X only. Specifies a dictionary key whose value is a boolean. If provided with a value of true, the error errSecInteractionNotAllowed will be returned if the item is attempting to authenticate with UI.
Available in macOS 10.10 or newer and deprecated in 10.11 in favor of kSecUseAuthenticationUI.

114.3.176 kSecUseOperationPrompt as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies a dictionary key whose value is a string that represents a user-visible string describing the operation for which the application is attempting to authenticate.
Notes: The application is responsible for the text localization.

114.3.177 kSecValueData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Data attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type memoryblock. For keys and password items, the data is secret (encrypted) and may require the user to enter a password for access.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

114.3.178 kSecValuePersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Persistent reference attribute key.
The corresponding value is of type CFDataRef. The bytes in this memoryblock can be stored by the caller and used on a subsequent invocation of the application (or even a different application) to retrieve the item referenced by it.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

114.3.179 kSecValueRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes: Reference attribute key.
The corresponding value, depending on the item class requested, is of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

114.3.180 LockAll

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks all keychains belonging to the current user.
Notes: Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
Lasterror is set.

114.3.181 Open(file as folderitem) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
Var k as KeychainMBS = KeychainManagerMBS.Open(file)
```

MsgBox k.Name

Notes: You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

- 114.3.182 Open(path as string) as KeychainMBS 16515

114.3.182 Open(path as string) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
Var file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
Var k as KeychainMBS = KeychainManagerMBS.Open(file.NativePath)

MsgBox k.Name
```

Notes: You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

- 114.3.181 Open(file as folderitem) as KeychainMBS 16514

114.3.183 PreferenceDomain as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets or sets the current keychain preference domain.
Example:

```
Var n as Integer = KeychainManagerMBS.PreferenceDomain
Select case n
case KeychainManagerMBS.kSecPreferencesDomainCommon
MsgBox "common"
case KeychainManagerMBS.kSecPreferencesDomainDynamic
MsgBox "dynamic"
case KeychainManagerMBS.kSecPreferencesDomainSystem
MsgBox "system"
```

```
case KeychainManagerMBS.kSecPreferencesDomainUser
MsgBox "user"
else
MsgBox "unknown"
end Select
```

Notes: A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. The default preference domain for system daemons (that is, for daemons running in the root session) is the system domain. The default preference domain for all other programs is the user domain. Use the PreferenceDomain function to change the preference domain.

This function changes the preference domain for all subsequent function calls; for example, if you change from the system domain to the user domain and then call Lock specifying nil for the keychain, the function locks the default system keychain rather than the default user keychain. You might want to use this function, for example, when launching a system daemon from a user session so that the daemon uses system preferences rather than user
(Read and Write computed property)

114.3.184 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.
Example:

```
Var AttributeKeys() as string
Var AttributeValues() as string
Var keychain as KeychainMBS = nil // default

Var search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychain, "genp",
AttributeKeys, AttributeValues)
Var items() as KeychainItemMBS

Var item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Append item
item = search.NextItem
wend

MsgBox str(UBound(items)+1)+" items found."
```

Notes: keychains: An array of keychains to search, a single keychain, or nil to search the user's current

keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 114.3.185 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS 16517

114.3.185 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.
Example:

```
Var AttributeKeys() as string
Var AttributeValues() as string

Var keychains() as KeychainMBS

AttributeKeys.Append KeychainManagerMBS.kSecAttrAccount
AttributeValues.Append "myusername"
keychains = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)

Var search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychains, "genp",
AttributeKeys, AttributeValues)
Var items() as KeychainItemMBS

Var item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Append item
item = search.NextItem
```

```
wend

MsgBox str(UBound(items)+1)+" items found."
```

Notes: keychains: An array of keychains to search, a single keychain, or nil to search the user's current keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 114.3.184 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS 16516

114.3.186 SearchList as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves a keychain search list.
Example:

```
Var SearchList() as KeychainMBS = KeychainManagerMBS.SearchList
Var names() as String

for each k as KeychainMBS in SearchList
names.Append k.Name
next

MsgBox Join(names, EndOfLine)
```

Notes: Returns keychain search list.
Lasterror is set.

114.3.187 SetDomainDefault(domain as Integer, keychain as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain for a specified preference domain.
Notes: domain: The preference domain for which you wish to set the default keychain.
keychain: A reference to the keychain you wish to set as default in the specified preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the default keychain for a specific preference domain. Use the SetDefault function if you want to set the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

114.3.188 SetDomainSearchList(domain as Integer, list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the keychain search list for a specified preference domain.
Notes: domain: The preference domain for which you wish to set the default keychain search list. See "Keychain Preference Domain Constants"for possible domain values.
searchList: A keychain search list to set in the preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the keychain search list for a specific preference domain. Use the SetSearchList function if you want to set the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

114.3.189 SetSearchList(list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the list of keychains to use in the default keychain search list.
Notes: searchList: An array of keychain references specifying the list of keychains to use in the default keychain search list. Passing an empty array clears the search list.

Lasterror is set.
The default keychain search list is used by several functions; see for example SearchCreateFromAttributes, FindInternetPassword, or FindGenericPassword. To obtain the current default keychain search list, use the SearchList function.

The default keychain search list is displayed as the keychain list in the Keychain Access utility. If you use SetSearchList to change the keychain search list, the list displayed in Keychain Access changes accordingly.

114.3.190 UpdateItem(Query as Dictionary, attributesToUpdate as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Modifies items that match a search query.
Example:

```
// build query
Var query as new Dictionary

Var ServiceName as string = "mytest"
Var Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// Build Dictionary with new values
Var newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes: query: A dictionary containing an item class specification and optional attributes for controlling the search. Specify the items whose values you wish to change. See "Search Keys" for a description of currently defined search attributes.
attributesToUpdate: A dictionary containing the attributes whose values should be changed, along with the new values. Only real keychain attributes are permitted in this dictionary (no "meta" attributes are allowed.) See "Attribute Item Keys and Values" for a description of currently defined value attributes.

Lasterror is set.
See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

Available in OS X v10.6 and later.

114.3.191 UserInteractionAllowed as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether Keychain Services functions that normally display a user interaction are allowed to do so.
Example:

```
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)
KeychainManagerMBS.UserInteractionAllowed = false
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)
```

Notes: Lasterror is set.
A Boolean value indicating whether user interaction is permitted. If true, user interaction is allowed, and Keychain Services functions that display a user interface can do so as appropriate.
(Read and Write computed property)

114.3.192 Version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the version of Keychain Services installed on the user's system.
Example:

```
MsgBox str(KeychainManagerMBS.Version)
```

Notes: Your application can call the Version function to find out which version of Keychain Services is installed on the user's system.
Lasterror is set.

114.3.193 Properties

114.3.194 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read only property)

114.3.195 Constants

Constants

Constant	Value	Description
kSecAppleSharePasswordItemClass	"ashp"	Specifies a keychain item's class code. Indicates that the item is an AppleShare password.
kSecGenericPasswordItemClass	"genp"	Specifies a keychain item's class code. Indicates that the item is a generic password.
kSecInternetPasswordItemClass	"inet"	Specifies a keychain item's class code. Indicates that the item is an Internet password.

Error Codes

Constant	Value	Description
ErrorAuthorizationFailed	-25293	The user name or passphrase you entered is not correct.
ErrorDuplicatedItem	-25299	The specified item already exists in the keychain.
ErrorFailedToAllocated	-108	Failed to allocate memory.
ErrorFailedToDecode	-26275	Unable to decode the provided data.
ErrorInteractionNotAllowed	-25308	User interaction is not allowed.
ErrorInvalidParameter	-50	Invalid Parameters.
ErrorNone	0	No error.
ErrorNotAvailable	-25291	No keychain is available. You may need to restart your computer.
ErrorNotFound	-25300	The specified item could not be found in the keychain.

Keychain Preference Domain Constants

Constant	Value	Description
kSecPreferencesDomainCommon	2	Indicates the preferences are common to everyone. Available in OS X v10.3 and later.
kSecPreferencesDomainDynamic	3	Indicates a dynamic search list (typically provided by removable keychains such as smart cards). Available in OS X v10.4 and later.
kSecPreferencesDomainSystem	1	Indicates the system or daemon preference domain preferences. Available in OS X v10.3 and later.
kSecPreferencesDomainUser	0	Indicates the user preference domain preferences. Available in OS X v10.3 and later.

114.3.196 Delegates

114.3.197 AddItemAsyncCompletedMBS(Keychain as Variant, attributesDictionary as dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The delegate to be called when AddItemAsync is done.
Blog Entries

- MBS Xojo Plugins, version 20.6pr1

114.3.198 CopyMatchingAsyncCompletedMBS(Query as Dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The delegate to be called when CopyMatchingAsync is done.

114.4 class KeychainMBS

114.4.1 class KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain.
Blog Entries

- MBS Real Studio Plugins, version 13.1pr12
- Keychain Plugin rewritten

114.4.2 Methods

114.4.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 114.4.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS 16524

114.4.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 114.4.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 16524

114.4.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 114.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 16525

114.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 114.4.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 16524

114.4.7 AllItems(itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes: Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

114.4.8 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes one or more keychains from the default keychain search list, and removes the keychain itself if it is a file.
Notes: Lasterror is set.

The keychain may be a file stored locally, a smart card, or retrieved from a network server using non-file-based database protocols. This function deletes the keychain only if it is a local file.

114.4.9 FindGenericItem(serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericItem for details.

114.4.10 FindGenericPassword(serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericPassword for details.

114.4.11 FindInternetItem(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

114.4.12 FindInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

114.4.13 IsUnlocked as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if keychain is unlocked.
Example:

MsgBox str(KeychainManagerMBS.Default.IsUnlocked)

Notes: Lasterror is set.

114.4.14 Lock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks a keychain.
Notes: Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
Lasterror is set.

114.4.15 Name as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the file name of a keychain.
Example:

MsgBox KeychainManagerMBS.Default.Name

Notes: Similar to path, but name without file extension only.
Lasterror is set.

114.4.16 Path as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the path of a keychain.
Example:

MsgBox KeychainManagerMBS.Default.Path

Notes: Returns POSIX path of the keychain as a UTF-8 encoded string.
Lasterror is set.

114.4.17 SetDefault

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain.
Notes: Lasterror is set.
In most cases, your application should not need to set the default keychain, because this is a choice normally made by the user. You may call this function to change where a password or other keychain items are added, but since this is a user choice, you should set the default keychain back to the user specified keychain when you are done.

114.4.18 Status as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves status information of a keychain.
Example:

```
Var values() as string
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var status as Integer = DefaultKeychain.status

if BitwiseAnd(status, KeychainMBS.StatusUnlocked) = KeychainMBS.StatusUnlocked then
values.Append "unlocked"
else
values.Append "locked"
end if

if BitwiseAnd(status, KeychainMBS.StatusReadable) = KeychainMBS.StatusReadable then
values.Append "readable"
else
values.Append "not readable"
end if

if BitwiseAnd(status, KeychainMBS.StatusWritable) = KeychainMBS.StatusWritable then
values.Append "writable"
else
values.Append "not writable"
end if

MsgBox Join(values, ", ")
```

Notes: Lasterror is set.
This function retrieves the status of a specified keychain. You can use this function to determine if the keychain is unlocked, readable, or writable. Note that the lock status of a keychain can change at any time due to user or system activity. Because the system automatically prompts the user to unlock a keychain

when necessary, you do not usually have to worry about the lock status of a keychain.

114.4.19 Unlock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes: In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 114.4.20 Unlock(password as string) 16529

114.4.20 Unlock(password as string)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes: password: The password to use.
In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 114.4.19 Unlock 16529

114.4.21 Properties

114.4.22 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

114.4.23 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

114.4.24 Settings as KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains or sets a keychain's settings.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

Notes: Lasterror is set.
(Read and Write computed property)

114.4.25 Constants

Status Constants

Constant	Value	Description
StatusReadable	2	Indicates the keychain is readable.
StatusUnlocked	1	Indicates the keychain is unlocked.
StatusWritable	4	Indicates the keychain is writable.

114.5 class KeychainSearchMBS

114.5.1 class KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a running keychain search.

114.5.2 Methods

114.5.3 NextItem as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the next keychain item matching the given search criteria.
Notes: Returns object of the next matching keychain item, if any.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. Use the SearchCreateFromAttributes function to specify attributes to search for. If the NextItem function finds a match, you can use the methods and properties on the item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
Lasterror is set.

114.5.4 Properties

114.5.5 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

114.5.6 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes: You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.

(Read and Write property)

114.6 class KeychainSettingsMBS

114.6.1 class KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for information about keychain settings.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

114.6.2 Properties

114.6.3 lockInterval as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An unsigned 32-bit integer representing the number of seconds before the keychain locks. If you set useLockInterval to false, set lockInterval to INT_MAX to indicate that the keychain never locks.
Example:

```
Var SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
Var settings as KeychainSettingsMBS = SystemKeychain.Settings
MsgBox str(settings.lockInterval)
```

Notes: (Read and Write property)

114.6.4 lockOnSleep as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the keychain locks when the system sleeps.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.lockOnSleep)
```

Notes: (Read and Write property)

114.6.5 useLockInterval as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the keychain automatically locks after a certain period of time.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

Notes: (Read and Write property)

114.6.6 version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: An unsigned 32-bit integer representing the keychain version.
Example:

```
Var DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
Var settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.version)
```

Notes: Is always 1.
(Read and Write property)

Chapter 115

Large Picture

115.1 class PictureFactoryMBS

115.1.1 class PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The factory class for pictures.
Notes: This class gives you a global event where you can provide your own pictures.
Whenever the plugin needs a new PictureMBS object for the result of a function or for temporary storage, you can provide one.

This is mainly for the case where you use virtual memory or you want to reuse pictures.

Used for temporary or result pictures for BoxBlur, DitherFilter, EngraveFilter, GainFilter, GammaFilter, NeonFiltrer, OilFilter, PictureMatrix, Rotate, SolarizeFilter and TransferFilter.
Blog Entries

- MBS Xojo Plugins, version 19.3pr4

115.1.2 Methods

115.1.3 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture.
Notes: This may invoke the event.

If no factory is registered, we use our default implementation.
If the event or our implementation raises exception, you may need to catch it, e.g. OutOfMemoryException.
See also:

- 115.1.8 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS 16536

115.1.4 SetFactory(factory as PictureFactoryMBS)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global factory object.
Notes: You can set to nil to delete the existing factory.

115.1.5 Properties

115.1.6 currentFactory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current factory.
Notes: Use SetFactory method to change it.
(Read only property)

115.1.7 Events

115.1.8 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The factory event.
Example:

```
function NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

return new PictureMBS(width, height, ImageFormat)

end function
```

Notes: This event is called whenever a picture is requested.
Return an picture you created.

The plugin will check the Valid property for this picture and use it only if Valid is true.
See also:

- 115.1.3 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS 16535

115.2 class PictureMBS

115.2.1 class PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The MBS picture class for really large pictures.
Example:

```
Var fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
Var oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

Var imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

Var nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes: Using virtual memory you are only limited to hard disc space for swapping.

The Xojo picture class is limited to 2 GB and to width/height being in platform specific ranges. This class works with pictures up to 100 million pixels width and 2 billion pixels height.

115.2.2 Methods

115.2.3 AlphaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.AlphaChannel
r.fillrect(100) // fill only alpha channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.

Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix)
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

- 115.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 16541
- 115.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 16542

115.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix, 5)
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

- 115.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 16540
- 115.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 16542

115.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
Var matrix(24) as Integer
Var x,y as Integer
Var value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=1 // fill matrix
next
next

Var s,d as PictureMBS // make source and dest somewhere

s = new PictureMBS(LogoMBS(500))
d = new PictureMBS(500, 500, PictureMBS.ImageFormatRGB)

// Blur with 5x5 Matrix
d=s.ApplyMatrix(d, 5, matrix, 1, 1.0/25.0)

Backdrop = d.CopyPicture
```

Notes: MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

- 115.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 16540
- 115.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 16541

115.2.7 AutoLevel as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
call p.AutoLevel
window1.Backdrop = p.CopyPicture
```

Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 115.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean 16544

115.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
call p.AutoLevel(0,0,50,50)
window1.Backdrop = p.CopyPicture
```

Notes: The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 115.2.7 AutoLevel as boolean 16543

115.2.9 BlackChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes: Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 115.2.11 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean 16545

115.2.11 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes: Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 115.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean 16545

115.2.12 BlueChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.BlueChannel
```

```
r.fillrect(100) // fill only blue channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.13 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Example:

```
Var boxPic,tempObj As PictureMBS
Var logo as Picture = LogoMBS(500)
Var pictureObj as new PictureMBS(logo)

tempObj = New PictureMBS(pictureObj.Width, pictureObj.Height, pictureObj.ImageFormat)
boxPic = pictureObj.BoxBlurFilter(tempObj, 3.0, 3)

Backdrop=boxpic.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 16546

115.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.13 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 16546

115.2.15 BoxBlurFractionalFilter(dest as PictureMBS, Radius as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter for the radius fraction.
Notes: If you call BoxBlurFilter and BoxBlurFractionalFilter with a radius of 3.5 the BoxBlurFilter does the 3.0 and BoxBlurFractionalFilter does the 0.5.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

115.2.16 CalculateMemory(width as Integer, height as Integer, theImageFormat as Integer) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the memory needed for allocating the image.
Example:

```
Var n as int64 = PictureMBS.CalculateMemory(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
```

Notes: Returns number of bytes needed.

115.2.17 CanAllocateImage(width as Integer, height as Integer, theImageFormat as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can the image with this size be allocated?
Example:

```
Var n as Boolean = PictureMBS.CanAllocateImage(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
Var x as Boolean = PictureMBS.CanAllocateImage(100000, 100000, PictureMBS.ImageFormatRGB)
MsgBox str(x)
```

Notes: Retruns true if possible and false if the size is too big.
To figure out if allocation will work, we simply allocate and release memory and see if that worked.

115.2.18 Channel(index as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the channel with the given index as a new picture object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.Channel(0)
r.fillrect(100) // fill only red channel
```

Notes: Returns nil on any error. May raise an out of bounds exception on invalid index. Index is zero based.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.
See also:

- 115.2.146 Channel as String 16624

115.2.19 ChannelOffset(index as integer) as integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries channel offset within pixel.
Notes: For RGB the red channel has offset 0, the green channel has offset 1 and the blue channel has offset 2.

115.2.20 Channels as String()

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channels of an image.
Example:

```
Var p as new Picture(100,100,32)
Var q as new PictureMBS(p)

Var channels() as string = q.Channels

Var cr as PictureMBS = q.RedChannel
Var cg as PictureMBS = q.GreenChannel
Var cb as PictureMBS = q.BlueChannel
Var c0 as pictureMBS = q.Channel(0)
Var c1 as pictureMBS = q.Channel(1)
Var c2 as pictureMBS = q.Channel(2)

Var crn as string = cg.Channel
Var cgn as string = cg.Channel
Var cbn as string = cg.Channel
Var c0n as string = c0.Channel
Var c1n as string = c1.Channel
Var c2n as string = c2.Channel

Break // check in debugger
```

115.2.21 ClearCache

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears picture cache.
Notes: If target of this PictureMBS is a Xojo picture, this method clears the Xojo cache for the picture to make sure it recognizes changes.
Does nothing if there is no target picture or there is no cache.

115.2.22 ClearRect

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
```

```
p.ClearRect
window1.Backdrop = p.CopyPicture
```

Notes: Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.23 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer) 16550

115.2.23 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels in the given area.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.ClearRect(0,0,100,100)
window1.Backdrop = p.CopyPicture
```

Notes: Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.22 ClearRect 16549

115.2.24 ClipImage as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object for the same picture content.
Notes: This may be useful if you need a second PictureMBS object. For example if two threads work on different rows.
See also:

- 115.2.25 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS 16550

115.2.25 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws only into a portion of the existing image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

// clip it
Var c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
Var q as PictureMBS = c.Clone

// and see result in debugger
Var pic as Picture = q.CopyPicture

Break
```

Notes: This may be useful to apply an effect only on a portion of an existing image.
See also:

- 115.2.24 ClipImage as PictureMBS 16550

115.2.26 Clone as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of a picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

// clip it
Var c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
Var q as PictureMBS = c.Clone

// and see result in debugger
Var pic as Picture = q.CopyPicture

Break
```

Notes: Does not work for pictures using virtual memory.
(Fails if IsMapping=True)
Copies the whole picture even if you clone just one channel.

Returns nil on low memory.

115.2.27 Close

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the picture by releasing all memory.
Notes: This calls the destructor internally.

115.2.28 CMYKChannels as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK channels as a new PictureMBS object.
Notes: Returns nil if the image is not a CMYK picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the CMYK pixels directly without modifying an alpha channel
The resulting PictureMBS object is a CMYK picture.

115.2.29 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
```

```
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 115.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 16564
- 115.2.36 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 16566
- 115.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 16568
- 115.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16570
- 115.2.39 Combine(Mask As PictureMBS, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackColour As color) as boolean 16572

115.2.30 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)
```

```
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true, &cFF0000, &cFF0000)
then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500

// we create a little mask for a smooth fade
Var m as Picture = New Picture(500,500,32)
Var g as Graphics = m.Graphics

for y as Integer = 0 to 499
Var n as Integer = y*255/499
g.ForeColor = rgb(n, n, n)
g.DrawLine 0,y,499,y
next

// uncomment to see our mask:
'Backdrop = m
'return
```

```
image=new PictureMBS(LogoMBS(500))
Mask=new PictureMBS(m)
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
if DestImage.Combine(image,false,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

- 115.2.31 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 16556
- 115.2.32 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 16558
- 115.2.33 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer,

SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16560

- 115.2.34 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean 16562
- 115.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 16564
- 115.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 16568
- 115.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16570
- 115.2.39 Combine(Mask As PictureMBS, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackColour As color) as boolean 16572

115.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
Var DestImage As PictureMBS
Var Image As PictureMBS
Var Mask As PictureMBS
Var DestX as Integer=100
Var DestY as Integer=100
Var SourceX as Integer=0
Var SourceY as Integer=0
Var Width as Integer=500
Var Height as Integer=500
Var UseColours as Boolean = false
Var ForeColour as color = &cFF0000

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,UseColours,ForeColour) then
```

```
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes: Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 115.2.33 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16560
- 115.2.34 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean 16562
- 115.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 16564
- 115.2.36 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 16566
- 115.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 16568
- 115.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 16570

115.2.40 CompareImages(other as PictureMBS) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two pictures.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// fill random
p.FillRectRandom

Var q as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// copy pixels
call q.CopyPixels(p, 0, 0, 1000, 1000, 0, 0)
q.FillRect(0,0,10,10,0) // fill 100 pixels

// show image
Backdrop = q.CopyPicture

// and compare
Title = str(p.CompareImages(q)) // shows 100
```

Notes: Returns -1 if both pictures are not from the same structure. (e.g. compare gray with RGB)
Else returns the number of different pixels.

115.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object based on a memoryblock.
See also:

- 115.2.42 Constructor(pic as picture, UseAlpha as boolean=false) 16574
- 115.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 16575
- 115.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 16576

115.2.42 Constructor(pic as picture, UseAlpha as boolean=false)

MBS Images Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Creates a PictureMBS which shares memory with the given picture.
Example:

```
// Create a picture with mask:
Var p as Picture = LogoMBS(200)
Var g as Graphics = p.mask.Graphics

g.ForeColor = &cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = &c000000
g.Filloval 0,0,g.Width,g.Height

canvas1.Backdrop = p

// create PictureMBS
Var pic as new PictureMBS(p, true)
Var mask as new PictureMBS(p.mask)

// draw mask into alpha channel
call pic.AlphaChannel.CopyPixels(mask,0,0,mask.Width,mask.Height,0,0)

// and copy back to Xojo picture
canvas2.Backdrop = pic.CopyPictureWithMask
```

Notes: All drawings in the Picture and in the PictureMBS object will be visible in both objects.
This function works on Mac OS and Windows with both 24 bit and 32 bit pictures.
On Mac this function can fail if the picture is not a GWorld (Bitmap) picture.

The Valid property is set to true on success.

If you set UseAlpha=True, the 4th channel in a 32 bit picture is available for you as an alpha channel. Xojo does not use the 4th channel in the picture data and 24 bit pictures do not have one. So you can use 32 bit pictures, copy the pictures mask in the alpha channel (using PictureMBS.AlphaChannel. inverting may be needed), perform some operations and later make a copy of the of the image to a picture and extract the alpha channel back into the pictue's mask.

Added support for Console/Web targets in 12.2 plugins. Please be aware that alpha channel of pictures with alpha channel has only a range from 0 to 127 for the values.
See also:

- 115.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 16574
- 115.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 16575
- 115.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 16576

115.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object with the given size and Imageformat.
Notes: ImageFormat must be one of the ImageFormat constants.
The Valid property is set to true on success.

The constructor allocated address space for the image.
Physical memory is allocated based on write access to pixels.
See also:

- 115.2.41 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 16574
- 115.2.42 Constructor(pic as picture, UseAlpha as boolean=false) 16574
- 115.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 16576

115.2.44 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object using virtual memory.
Example:

```
Var mm as int64 = Picturembs.CalculateMemory(7000, 150000, PictureMBS.ImageFormatRGB)
// shows that this size needs 3 GB in memory

// create image
Var blocksize as Integer = 100*1024*1024
Var file as FolderItem = GetTemporaryFolderItem
Var pic as new PictureMBS(7000, 150000, PictureMBS.ImageFormatRGB, blocksize, file)

// draw dots on it
for x as Integer = 0 to pic.Width step 500
for y as Integer = 0 to pic.Height step 500
pic.FillRect(x, y, 100, 100, 175)
next
next

// write to tiff
Var f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
Var t as TiffPictureMBS

if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

const PLANARCONFIG_CONTIG = 1
const PHOTOMETRIC_RGB = 2
const FILLORDER_MSB2LSB = 1
const RESUNIT_INCH = 2
const ORIENTATION_TOPLEFT = 1
const COMPRESSION_LZW = 5

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = PLANARCONFIG_CONTIG
t.Photometric = PHOTOMETRIC_RGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = FILLORDER_MSB2LSB
```

```
t.Orientation = ORIENTATION_TOPLEFT
t.ResolutionUnit = RESUNIT_INCH
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = COMPRESSION_LZW

for i as Integer = 0 to t.Height - 1
Var m as MemoryBlock = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
t.Scanline(i) = m

next

t.Close
end if
else

end if

// cleanup
pic = nil
file.delete
```

Notes: The size of this image is limited to available hard disc space.
The system will cache this data in memory to avoid writing it to disc. Using picture sizes bigger than physical memory can result into slow processing.

FilePath points to the location where the file is created.
On Windows the FilePath can be nil in which space in the system swapfile is used.
On Mac/Linux with nil FilePath, we use automatically a temp file path.

BlockSize specifies how many bytes of memory should be used in application memory space. A typical value may be 100 mega bytes.

The Valid property is set to true on success.
File is deleted in destructor and folderitem is than invalid.

115.2.45 CopyMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the alpha channel into a mask picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 115.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 16578

115.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given area of the alpha channel into a mask picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 115.2.45 CopyMask as picture 16578

115.2.47 CopyPicture as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel into a picture.
Example:

```
// get some picture
Var logo as Picture = LogoMBS(500)

// create PictureMBS
Var rgb as new PictureMBS(logo)

// Create a gray picture and copy RGB to gray
Var g as new PictureMBS(500, 500, PictureMBS.ImageFormatG)
call g.CopyPixels(rgb)

// Create CMYK and fill cyan channel with grayscale image
Var cmyk as new PictureMBS(500, 500, PictureMBS.ImageFormatCMYK)
call cmyk.MagentaChannel.CopyPixels(g)
```

```
// display it
Backdrop = cmyk.CopyPicture
```

Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.48 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture 16579

115.2.48 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel in the given area into a picture.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.47 CopyPicture as picture 16578

115.2.49 CopyPictureWithAlpha as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 115.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture 16580

115.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture in rectangle with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 115.2.49 CopyPictureWithAlpha as picture 16579

115.2.51 CopyPictureWithMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 16580

115.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask in the given area.
Notes: Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 115.2.51 CopyPictureWithMask as picture 16580

115.2.53 CopyPixels(source as PictureMBS) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies all pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
// create new picture:
// can be any image format: ImageFormatRGB, ImageFormatG, ImageFormatBGR, etc.
Var d as new PictureMBS(l.Width, l.Height, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to CMYK
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 16581
- 115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 16582

115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)
```

```
if d.CopyPixels(p,100,100,500,500) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: DestWidth and DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 16582

115.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500,0,0) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes: SourceX/SourceY is the position in the source picture.
DestWidth/DestHeight specify how many pixels are copied.

DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.

- 115.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 16581

115.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the Factory on the current ImageMBS object (self) is asked to create the picture.
Second the global Factory object is asked.
Third the normal PictureMBS constructor is used.
See also:

- 115.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS 16583

115.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes: Returns nil if no factory can create a valid picture.

First the global factory object is asked to create the picture.
Second the normal PictureMBS constructor is used.
See also:

- 115.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS 16583

115.2.58 CyanChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cyan channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.59 DiffuseFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a diffuse filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Level must be between 0 and min(width,height).

115.2.60 DitherFilter(dest as PictureMBS, matrix as Integer, levels as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the dither filter to the picture.
Notes: Use for the matrix parameter one of the Dither* constants.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels is a number between 2 and 256 and specifies how many color levels are in the final picture.

Returns nil on any error.

115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 16585
- 115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 16586
- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16586

115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16585

- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16586

115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16585

- 115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 16586

115.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 16585
- 115.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 16585
- 115.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 16586

115.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

115.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.70 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16590

115.2.70 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.69 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16589

115.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16590

115.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16590

115.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16591

115.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes: If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 115.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16591

115.2.75 DrawPictureRGB(pic as picture)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 16592
- 115.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16592
- 115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16593

115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 115.2.75 DrawPictureRGB(pic as picture) 16591

- 115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16593

115.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red

Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 16592
- 115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 16593

115.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes: Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 115.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 16592
- 115.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 16592

115.2.79 EngraveFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an engrave filter to the image.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.

If dest is not nil, it must match the size of the original picture.

Level must be between 0 and min(width,height).

Returns nil on any error.

115.2.80 FillRect(value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(200)
window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16594
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16595
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16595

115.2.81 FillRect(Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16594
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16595
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16595

115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRect(10, 10, 20, 20, 200)
window1.Backdrop = p.CopyPicture
```

Notes: All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16594
- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16594
- 115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 16595

115.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes: All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.80 FillRect(value as Integer) 16594
- 115.2.81 FillRect(Value as integer, Alpha as Integer) 16594
- 115.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 16595

115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Example:

```
Var p as new PictureMBS(300, 300, PictureMBS.ImageFormatRGB)

p.FillRectRGB &cFF0000

call p.FillRectApply 0, 0, 50, 100, &c00FF00, 0
call p.FillRectApply 50, 0, 50, 100, &c00FF00, 255*1/5
call p.FillRectApply 100, 0, 50, 100, &c00FF00, 255*2/5
call p.FillRectApply 150, 0, 50, 100, &c00FF00, 255*3/5
call p.FillRectApply 200, 0, 50, 100, &c00FF00, 255*4/5
call p.FillRectApply 250, 0, 50, 100, &c00FF00, 255*5/5

Backdrop = p.CopyPicture
```

Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16596
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16597
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16597

115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16595
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16597
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16597

115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16595
- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16596
- 115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16597

115.2.87 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes: Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 115.2.84 FillRectApply(FillColor as color, alpha as Integer) as boolean 16595
- 115.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 16596
- 115.2.86 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 16597

115.2.88 FillRectRandom

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

p.FillRectRandom
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer) 16598

115.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
Var p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom(0,0,100,100)
Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.88 FillRectRandom 16597

115.2.90 FillRectRGB(FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
See also:

- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16599
- 115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 16600
- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16600

- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16601
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16602
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16602
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16603

115.2.91 FillRectRGB(FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(&cFF0000, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of aloha is 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16598
- 115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 16600
- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16600
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16601
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16602
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16602
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16603

115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
The ranges of red, green and blue are 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16598
- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16599

- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16601
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16602
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16602
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16603

115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.

The ranges of alpha, red, green and blue are 0 to 255.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16598
- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16599

- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16602
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16603

115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10,10,20,20,&cFF0000)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.

- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16600
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16601
- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16602
- 115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 16603

115.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.FillRectRGB(10, 10, 20, 20, 255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
See also:

- 115.2.90 FillRectRGB(FillColor as color) 16598
- 115.2.91 FillRectRGB(FillColor as color, alpha as Integer) 16599
- 115.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer) 16600
- 115.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 16600
- 115.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 16601

- 115.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 16602
- 115.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 16602

115.2.98 GainFilter(dest as PictureMBS, gain as Double, bias as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the gain filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
See also:

- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16604
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16605
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16606

115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16604
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16605
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16606

115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16604
- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16604
- 115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 16606

115.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes: If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 16604
- 115.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 16604
- 115.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 16605

115.2.103 GrayChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GrayChannel
r.fillrect(100) // fill only gray channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.104 GreenChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.GreenChannel
r.fillrect(100) // fill only green channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.105 HMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content horizontally (flip).
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.HMirror
```

```
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.106 Invert

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer) 16608

115.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data in the given area.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.106 Invert 16608

115.2.108 MagentaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magenta channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.109 MapInRows(FirstRow as Integer, LastRow as Integer) as boolean

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps in given row range.
Notes: This function does nothing if given rows are already mapped in.

Fails if range is invalid, image is invalid or mapping is not possible.
Returns true if not a mapped image.

Will resize memory buffer size to be big enough for those rows.

115.2.110 MirroredView as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws into the existing on, but has all rows vertically mirrored.
Notes: So if the new picture draws into the first row, the change will be in the last row of the original picture.

115.2.111 Multiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.112 Multiply(x as integer, y as integer, width as integer, height as integer) 16609

115.2.112 Multiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of a rectangle of the picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.111 Multiply 16609

115.2.113 NeonFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a neon filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.NeonFilter(nil)
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.114 OilFilter(dest as PictureMBS, levels as Integer, range as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a oil filter to the image.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.OilFilter(nil,5,5)
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels must be between 0 and 256.
Range must be between 0 and min(width,height).

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.115 RawRow(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RawRow(10)
// modify directly
m.FillBytesMBS(10,100,200)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: This memoryblock is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this memoryblock can become invalid for the next call to any PictureMBS method!

115.2.116 RawRowPtr(index as Integer) as Ptr

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Ptr pointing to the data of this row.
Notes: This ptr is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this ptr can become invalid for the next call to any PictureMBS method!

115.2.117 RedChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
Var r as PictureMBS = p.RedChannel
r.fillrect(100) // fill only red channel
```

Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

115.2.118 RGBChannels as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB channels as a new PictureMBS object.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBA)
Var r as PictureMBS = p.RGBChannels
r.fillrect(100) // fill only color channels
```

Notes: Returns nil if the image is not a RGB picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the RGB pixels directly without modifying an alpha channel
The resulting PictureMBS object is a RGB picture.

115.2.119 RGBToGray(mode as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Turns picture into grayscale.
Notes: Only for RGB pictures and picture stays RGB, but all channels have same color.
Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601
4	y = 0.300 * R + 0.588 * G + 0.112 * B	Faster version of 3

Mode 2 and 3 uses doubles and mode 0, 4 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

e.g. a red pixel (FF0000) will turn to 555555 in Mode 0, 5F5F5F in Mode 1, 363636 in Mode 2 and 4C4C4C in Mode 3 and 4.

115.2.120 Rotate(angle as Double, Red as Integer = 0, Green as Integer = 0, Blue as Integer = 0, Alpha as Integer = 0, Gray as Integer = 0, Cyan as Integer = 0, Magenta as Integer = 0, Yellow as Integer = 0, Black as Integer = 0) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by the given degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate(30, 255, 255, 255, 255, 255)
window1.Backdrop = p.CopyPicture
```

Notes: With Red, Blue, Green, Alpha and Gray specify the color of the fill color.

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.121 Rotate180

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes: Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does not make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS 16614

115.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 115.2.121 Rotate180 16613

115.2.123 Rotate270(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.124 Rotate270slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate270slow
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.125 Rotate90(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.126 Rotate90slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
p = p.Rotate90slow
window1.Backdrop = p.CopyPicture
```

Notes: If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

The Rotate90slow function is the older implementation. Please use Rotate90 unless you need the old behavior.

115.2.127 Scale(source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the given size.
Notes: The final image is stored in the PictureMBS object you call this method on.
On low memory this function can fail or the image may look bad. (e.g. all black)

The size of the temporary picture must have the size of the destination width and the source height. Use ImageFormatScaling when you create the temp image to give it the correct size. Temp picture may not be mapped.

For scaling with the same size as the picture already has, the scaling is still performed.

Returns true on success and false on any error. (e.g. width=0)

Use the constants for the mod:

ScaleTriangle	triangle
ScaleBox	box, nereast neighbor
ScaleLanczos3	lanczos 3
ScaleLanczos8	lanczos 8
ScaleMitchell	mitchell
ScalePoly3	poly 3
ScaleCubic	cubic

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

115.2.128 ScaleFast(source as PictureMBS, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size fast.
Notes: The final image is stored in the PictureMBS object you call this method on.

Returns true on success and false on failure.

This is a low quality algorithm, but it is fast.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

115.2.129 ScaleMT(threads as Integer, source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multithreaded variant of Scale function.
Notes: Same as Scale, but with additional multithreading.

Threads parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

If one of the pictures used has IsMapping = true, the plugin calls Scale() function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

115.2.130 SolarizeFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the solarize filter to the picture.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
```

```
Var p as new PictureMBS(l)
// add filter
p = p.SolarizeFilter(nil)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.131 StampFilter(dest as PictureMBS, radius as Double, threshold as Double, softness as Double, Black as Color, White as Color) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the stamp filter to the picture.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray and RGB pictures and supports alpha channel.

115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given array.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var gray(256) as Integer

for i as Integer = 0 to 255
gray(i)=255-i // invert
next
```

```
// inverts the picture
Var d as PictureMBS = p.TransferFilter(nil,gray)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The array for gray must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.

Returns nil on any error.
See also:

- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16619
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16620
- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16621

115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for gray and alpha must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16618
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16620

- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16621

115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

Var red(256) as Integer
Var green(256) as Integer
Var blue(256) as Integer

for i as Integer = 0 to 255
red(i)=i
green(i)=i
blue(i)=255-i // invert blue
next

Var d as PictureMBS = p.TransferFilter(nil,red,green,blue)

Backdrop = d.CopyPicture
```

Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green and blue must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16618
- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16619
- 115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 16621

115.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes: if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green, blue and alpha must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 115.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 16618
- 115.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 16619
- 115.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 16620

115.2.136 Unmultiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer) 16621

115.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for given rectangle in picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 115.2.136 Unmultiply 16621

115.2.138 UnsharpFilter(origpixels as PictureMBS, Amount as Double, Threshold as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the unsharp filter.
Notes: You may want to run the BoxBlur filter first before using the unsharp filter.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.139 VMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content vertically.
Example:

```
// get some picture
Var l as Picture = LogoMBS(500)
// create new image
Var p as new PictureMBS(l)
// mirror
p.VMirror
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

115.2.140 YellowChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The yellow channel of a CMYK picture as a new PictureMBS object.
Notes: Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.

The resulting PictureMBS object is a grayscale picture.

115.2.141 Properties

115.2.142 AlphaOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.AlphaOffset)
```

Notes: (Read and Write property)

115.2.143 BitsPerComponent as Integer

MBS Images Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits per component.
Notes: Value is 8 for most pictures except those with format ImageFormatGray16 which use 16.
(Read only property)

115.2.144 BlackOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the black channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.BlackOffset)
```

Notes: (Read only property)

115.2.145 BlueOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.BlueOffset)
```

Notes: (Read and Write property)

115.2.146 Channel as String

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channel.
Example:

```
Var p as new Picture(100,100,32)
Var q as new PictureMBS(p)

Var channels() as string = q.Channels

Var cr as PictureMBS = q.RedChannel
Var cg as PictureMBS = q.GreenChannel
Var cb as PictureMBS = q.BlueChannel
Var c0 as pictureMBS = q.Channel(0)
Var c1 as pictureMBS = q.Channel(1)
Var c2 as pictureMBS = q.Channel(2)

Var crn as string = cg.Channel
Var cgn as string = cg.Channel
Var cbn as string = cg.Channel
Var c0n as string = c0.Channel
Var c1n as string = c1.Channel
Var c2n as string = c2.Channel

Break // check in debugger
```

Notes: For pictures which represent a channel of a bigger picture.
(Read only property)
See also:

- 115.2.18 Channel(index as Integer) as PictureMBS 16548

115.2.147 ChannelCount as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels in this picture.
Notes: 1 for gray, 2 for gray+alpha, 3 for RGB, 4 for RGB+alpha or CMYK and 5 for CMYK+alpha.
(Read only property)

115.2.148 CyanOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the cyan channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.CyanOffset)
```

Notes: (Read only property)

115.2.149 DebugPicture as Picture

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture content to view in the debugger.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read only property)

115.2.150 DebugPictureEnabled as Boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want to use the DebugPicture property.
Notes: If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read and Write property)

115.2.151 Factory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local factory to be used for pictures created in this picture.
Notes: If one of the functions in this PictureMBS instance needs a new PictureMBS object, this factory is asked first.
(Read and Write property)

115.2.152 FilePath as String

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path to temporary file.
Notes: Only set when we have one, e.g. using mapped memory.
(Read only property)

115.2.153 GrayOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
MsgBox str(p.GrayOffset)
```

Notes: (Read and Write property)

115.2.154 GreenOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.GreenOffset)
```

Notes: (Read and Write property)

115.2.155 HasAlpha as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has an alpha channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasAlpha)
```

Notes: (Read only property)

115.2.156 HasBlack as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasBlack)
```

Notes: (Read only property)

115.2.157 HasBlue as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasBlue)
```

Notes: (Read only property)

115.2.158 HasCyan as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasCyan)
```

Notes: (Read only property)

115.2.159 HasGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a gray channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasGray)
```

Notes: (Read only property)

115.2.160 HasGreen as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a green channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasGreen)
```

Notes: (Read only property)

115.2.161 HasMagenta as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
```

MsgBox str(p.HasMagenta)

Notes: (Read only property)

115.2.162 HasRed as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasRed)
```

Notes: (Read only property)

115.2.163 HasYellow as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.HasYellow)
```

Notes: (Read only property)

115.2.164 Height as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Height)
```

Notes: (Read only property)

115.2.165 ImageFormat as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image format of this picture object.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.ImageFormat)
```

Notes: See the ImageFormat* constants.
(Read only property)

115.2.166 ImageFormatString as String

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of this picture as a string.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox p.ImageFormatString
```

Notes: Returns for example "RGB" for ImageFormatRGB.
(Read only property)

115.2.167 IsCMYK as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a CMYK picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.IsCMYK)
```

Notes: HasCyan, HasMagenta, HasYellow and HasBlack are true if IsRGB is true.
(Read only property)

115.2.168 IsGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture is a grayscale picture.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.IsGray)
```

Notes: HasGray is true if IsGray is true.
(Read only property)

115.2.169 IsMapping as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture uses virtual memory.
Notes: If IsMapping is true you should not use the Memory property or the Clone function.
(Read only property)

115.2.170 IsRGB as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a RGB picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.IsRGB)
```

Notes: HasRed, HasBlue and HasGreen are true if IsRGB is true.
(Read only property)

115.2.171 MagentaOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the magenta channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.MagentaOffset)
```

Notes: (Read only property)

115.2.172 MappingBlockSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The block size for a picture using virtual memory.
Notes: (Read and Write property)

115.2.173 MappingFirstRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

115.2.174 MappingLastRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last row mapped in memory.
Notes: Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

115.2.175 MappingRows as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rows for mapping.
Notes: For a mapped image how many rows fit in the mapping buffer.
(Read only property)

115.2.176 Memory as Memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock without size pointing to the current pixel buffer.
Notes: Use only if IsMapping is false.
If size is -1, it's a memoryblock referencing the pixel data.
If size is >0, you got the original memoryblock used to allocate the memory.
(Read only property)

115.2.177 MemoryTarget as Memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this picture stores its pixels in a memoryblock, you can access the memory block using this property.
Notes: (Read only property)

115.2.178 Parent as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent PictureMBS object.
Notes: One PictureMBS can reference the pixels of another PictureMBS. The parent is referenced in this property so it is not released.
(Read only property)

115.2.179 PixelSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of a pixel in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.PixelSize)
```

Notes: For example:
1 for Gray
2 for Gray with Alpha
3 for RGB
4 for RGB with Alpha

(Read only property)

115.2.180 RedOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the red channel.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.RedOffset)
```

Notes: (Read and Write property)

115.2.181 RowOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal row offset.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
Var q as PictureMBS = p.ClipImage(10,10,80,80)

MsgBox str(q.width)+" x "+str(q.height)+" with row offset: "+str(q.RowOffset)
```

Notes: Only used with clipping images.
(Read only property)

115.2.182 RowSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of one row in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.RowSize)
```

Notes: Additional bytes may be needed per row for better alignment of the data.
Also using virtual memory functions requires alignment.
(Read only property)

115.2.183 Target as Picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

window1.Backdrop = p.Target
```

Notes: if this PictureMBS references the pixels of a Xojo picture, this property keeps a reference to this target picture.
(Read only property)

115.2.184 TotalSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of this picture in bytes.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)

MsgBox str(p.TotalSize)
```

Notes: The result is Height*RowSize.
(Read only property)

115.2.185 UnclippedHeight as Integer

MBS Images Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: Without clipping, the full height of the image.
(Read only property)

115.2.186 Valid as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this instance is a valid picture.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Valid)
```

Notes: Valid is false if the constructor failed to create a picture.
(Read only property)

115.2.187 Width as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Example:

```
Var l as Picture = LogoMBS(500)
Var p as new PictureMBS(l)
MsgBox str(p.Width)
```

Notes: (Read only property)

115.2.188 YellowOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the yellow channel.
Example:

```
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.YellowOffset)
```

Notes: (Read only property)

115.2.189 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var p as PictureMBS // your picture

p.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

115.2.190 DataStringInFormat(ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this picture as a string.
Notes: Strings are limit to 2 GB, but the actual limit is certainly smaller.

You can get and set the image data with this method in the native format.
If you set the data, use a string with at least RowSize bytes.
If you query the data, you will get a copy of the data bytes in a string.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.

Version 18.1 or later will raise an out of memory exception for 32-bit applications if the memory needed will exceed 2 GB in memory. Allocating that many memory will be impossible.
(Read and Write computed property)

115.2.191 Row(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.Row(10)
// modify
m.FillBytesMBS(10,100,200)
```

```
// copy back
p.row(10)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

115.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRofRGB)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRofRGB)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
See also:

- 115.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

115.2.193 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
Var p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
Var m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB, true)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRGB, true)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
If InvertAlpha is true, the alpha values are inverted by using A=255-A.
(Read and Write computed property)
See also:

- 115.2.192 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock 16638

115.2.194 RowStringInFormat(index as Integer, ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The row as a string.
Notes: You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a string.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

115.2.195 Constants

Constants

Constant	Value	Description
Dither90Halftone6x6Matrix	5	One of the dither modes for the DitherFilter method.
DitherCluster3Matrix	8	One of the dither modes for the DitherFilter method.
DitherCluster4Matrix	9	One of the dither modes for the DitherFilter method.
DitherCluster8Matrix	10	One of the dither modes for the DitherFilter method.
DitherLines4x4Matrix	4	One of the dither modes for the DitherFilter method.
DitherMagic2x2Matrix	1	One of the dither modes for the DitherFilter method.
DitherMagic4x4Matrix	2	One of the dither modes for the DitherFilter method.
DitherOrdered4x4Matrix	3	One of the dither modes for the DitherFilter method.
DitherOrdered6x6Matrix	6	One of the dither modes for the DitherFilter method.
DitherOrdered8x8Matrix	7	One of the dither modes for the DitherFilter method.
ScaleBox	2	One of the scale modes for the Scale function.
ScaleCubic	7	One of the scale modes for the Scale function.
ScaleLanczos3	3	One of the scale modes for the Scale function.
ScaleLanczos8	4	One of the scale modes for the Scale function.
ScaleMitchell	5	One of the scale modes for the Scale function.
ScalePoly3	6	One of the scale modes for the Scale function.
ScaleTriangle	1	One of the scale modes for the Scale function.

Image Formats

Constant	Value	Description
ImageFormat1of3	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=3.
ImageFormat1of4	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the first byte with pixelsize=4.
ImageFormat2of3	16	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=3.
ImageFormat2of4	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=4.
ImageFormat3of3	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=3.
ImageFormat3of4	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=4.
ImageFormat4of4	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the forth byte with pixelsize=4.
ImageFormatABGR	9	
ImageFormatACMYK	25	
ImageFormatAG	13	
ImageFormatAKYMC	30	
ImageFormatAofABGR	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofARGB	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofBGRA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatAofRGBA	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatARGB	4	
ImageFormatBGR	6	
ImageFormatBGRA	7	
ImageFormatBGRX	8	
ImageFormatBofABGR	19	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofARGB	21	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGR	15	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofBGRA	18	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGB	17	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBofRGBA	20	This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
ImageFormatBuffer	22	This format is for PixelSize = 1 and no channels.
ImageFormatCMYK	23	
ImageFormatCMYKA	24	
ImageFormatCMYKX	26	
ImageFormatG	11	
ImageFormatG1	11	One gray channel.
ImageFormatG2	42	Two gray channels.
ImageFormatG3	43	Three gray channels.
ImageFormatG4	44	Four gray channels.

Chapter 116

Launch Services

116.1 class LaunchServicesApplicationListMBS

116.1.1 class LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a list of folderitems.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2

116.1.2 Methods

116.1.3 Constructor

MBS MacOSX Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The private constructor.

116.1.4 Item(index as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

116.1.5 Properties

116.1.6 Count as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

116.2 class LaunchServicesItemInfoMBS

116.2.1 class LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class to represent several details about an application folderitem.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.2.2 Methods

116.2.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

116.2.4 Properties

116.2.5 AppIsScriptable as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the application can be scripted.
Notes: (Read only property)

116.2.6 AppPrefersClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched in the Classic environment.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

116.2.7 AppPrefersNative as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched natively.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

116.2.8 Extension as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The extension for the folderitem.
Notes: You need to specify the kLSRequestExtension flag to get this information.
(Read only property)

116.2.9 ExtensionIsHidden as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem has a hidden extension.
Notes: (Read only property)

116.2.10 IconFilename as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The optional filename string for the icon of this application.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

116.2.11 IsAliasFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the folderitem is an alias file (includes sym links)
Notes: (Read only property)

116.2.12 IsApplication as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a Single-file or packaged application.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=ApplicationsFolderMBS(0).Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then
MsgBox "Is an application!"
end if
```

Notes: This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.13 IsClassicApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a CFM Classic application.
Notes: (Read only property)

116.2.14 IsContainer as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The fodleritem is a directory (includes packages) or a volume.
Notes: (Read only property)

116.2.15 IsInvisible as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is invisible.
Notes: Does not include '.' files or '.hidden' entries.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.16 IsNativeApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application is a Carbon or Cocoa native application.
Notes: (Read only property)

116.2.17 IsPackage as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem is an Application, document, or bundle package.
Example:

```
Var l as LaunchServicesItemInfoMBS
Var f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsPackage then
MsgBox "Is a package!"
end if
```

Notes: The item is a packaged directory.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.18 IsPlainFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: None of the other attributes is true.
Notes: The item is not a directory, volume, or symlink.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

116.2.19 IsSymlink as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is only an UNIX symbolic link.
Notes: (Read only property)

116.2.20 IsVolume as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a volume.
Notes: (Read only property)

116.2.21 KindID as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The kind ID of this folderitem.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

116.2.22 MacCreator as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS creator code.
Example:

```
Var f as FolderItem = SpecialFolder.Applications.Child("Firefox.app")

Var l As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(&h02)

if l <>nil Then
MsgBox l.MacCreator // shows "MOZB"
end
```

Notes: You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)

116.2.23 MacType as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS type code.
Notes: You need to specify the kLSRequestTypeCreator flag to get this information.

(Read only property)

116.3 class LaunchServicesLaunchParameterMBS

116.3.1 class LaunchServicesLaunchParameterMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for parameters which can be used to launch an application.
Example:

```
Var f(0) as FolderItem
Var a as FolderItem
Var p as LaunchServicesLaunchParameterMBS

p=new LaunchServicesLaunchParameterMBS

p.Defaults=true
p.Hide=true
f.Append SpecialFolder.Desktop.Child("picture.tiff")

a=LaunchServicesOpenXMBS(f,p)

MsgBox a.Name
```

116.3.2 Methods

116.3.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

116.3.4 Properties

116.3.5 Application as FolderItem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application to use to open documents.
Notes: (Read and Write property)

116.3.6 Defaults as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Default settings should be used.
Notes: default means: open, async, use Info.plist, start Classic.
(Read and Write property)

116.3.7 DontAddToRecents as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Do not add application or documents to recents menus.
Notes: (Read and Write property)

116.3.8 DontSwitch as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Don't bring new app to the foreground.
Example:

```
Var l as new LaunchServicesLaunchParameterMBS

l.DontSwitch=true

Var files(0) as FolderItem

files(0)=GetFolderItem("/Applications/iTunes.app", FolderItem.PathTypeShell)

call LaunchServicesOpenXMBS(files,l)
```

Notes: (Read and Write property)

116.3.9 Hide as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Send child a "hide" request as soon as it checks in.
Notes: (Read and Write property)

116.3.10 HideOthers as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Hide all other apps when child checks in.
Notes: (Read and Write property)

116.3.11 InClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Force app to launch in Classic environment.
Notes: (Read and Write property)

116.3.12 InhibitBGOnly as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Causes launch to fail if target is background-only.
Notes: (Read and Write property)

116.3.13 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The last error value from the LaunchServicesOpenXMBS function.
Notes: Values for errors:

kLSUnknownErr	= -10810	
kLSNotAnApplicationErr	= -10811	
kLSNotInitializedErr	= -10812	
kLSDataUnavailableErr	= -10813	e.g. no kind string
kLSApplicationNotFoundErr	= -10814	e.g. no application claims the file
kLSUnknownTypeErr	= -10815	
kLSDataTooOldErr	= -10816	
kLSDataErr	= -10817	
kLSLaunchInProgressErr	= -10818	e.g. opening an alreay opening application
kLSNotRegisteredErr	= -10819	
kLSAppDoesNotClaimTypeErr	= -10820	
kLSAppDoesNotSupportSchemeWarning	= -10821	not an error, just a warning
kLSServerCommunicationErr	= -10822	cannot set recent items
kLSCannotSetInfoErr	= -10823	you may not set item info for this item

(Read and Write property)

116.3.14 NewInstance as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Instantiate app even if it is already running.
Notes: (Read and Write property)

116.3.15 NoParams as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Use Info.plist to determine launch parameters.
Notes: (Read and Write property)

116.3.16 Print as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Print items instead of opening them.
Notes: (Read and Write property)

116.3.17 StartClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Start up Classic environment if required for this application.
Notes: (Read and Write property)

116.4 class LaunchServicesStringListMBS

116.4.1 class LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: A class for a list of strings.

116.4.2 Methods

116.4.3 Item(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

116.4.4 Properties

116.4.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

116.5 Globals

116.5.1 LaunchServicesAllHandlersForURLSchemeMBS(URLScheme as string) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified URL scheme.
Example:

```
Var l as LaunchServicesStringListMBS
Var s(-1) as string
Var i,c as Integer

l=LaunchServicesAllHandlersForURLSchemeMBS("http")
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes: URL handling capability is determined according to the kCFBundleURLTypes listed in an application's Info.plist).
Returns nil if no handlers are available.

Example output from the code above:
org.videolan.vlc, com.RealNetworks.RealPlayer, org.mozilla.firefox, com.apple.safari, de.icab.iCab, com.microsoft.explorer

Requires Mac OS X 10.4 to work correct. Returns always nil on older systems.

116.5.2 LaunchServicesAllRoleHandlersForContentTypeMBS(ContentType as string, role as Integer) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified content type (UTI) with the specified role(s).
Example:

```
Var l as LaunchServicesStringListMBS
```

```
Var s(-1) as string
Var i,c as Integer

const kLSRolesAll=-1

l=LaunchServicesAllRoleHandlersForContentTypeMBS("com.adobe.pdf",kLSRolesAll)
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes: Application content handling capabilities are determined according to the kCFBundleDocumentTypes listed in an application's Info.plist). For any role, specify kLSRolesAll.
Returns nil if no handlers are available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Example output for code above is:
com.adobe.Reader, com.apple.preview, com.adobe.acrobat.reader, com.apple.MDIimporter.PDF

116.5.3 LaunchServicesApplicationForInfoMBS(type as string, creator as string, extension as string, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open items with particular data.
Example:

```
MsgBox LaunchServicesApplicationForInfoMBS("","R*ch","txt",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("TEXT","","",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("","","txt",-1).name
```

Notes: Consults the binding tables to return the application that would be used to open items with type,

creator, and/or extension as provided if they were double-clicked in the Finder. This application will be the default for items like this if one has been set. If no application is known to LaunchServices suitable for opening such items, nil (kLSApplicationNotFoundErr) will be returned. Not all three input parameters can be "" at the same time nor can both output parameters be "" at the same time.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

116.5.4 LaunchServicesApplicationForItemMBS(file as folderitem, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open an item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var appfile As FolderItem = LaunchServicesApplicationForItemMBS(file, kLSRolesEditor)

// shows Xojo
MsgBox appfile.NativePath
```

Notes: Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

- MBS Xojo Plugins, version 19.5pr1

116.5.5 LaunchServicesCanApplicationAcceptItemMBS(item as folderitem, targetapp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Determine whether an item can accept another item.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Var accept As Boolean = LaunchServicesCanApplicationAcceptItemMBS(file, a, kLSRolesEditor, 0)

MsgBox "accept by Xojo: "+Str(accept)
```

Notes: Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Values for the flags:

```
kLSAcceptDefault        = 1
kLSAcceptAllowLoginUI   = 2   show UI to log in if necessary
```

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.6 LaunchServicesDefaultHandlerForURLSchemeMBS(URLScheme as string) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns the bundle identifier of the default handler for the specified URL scheme.
Example:

```
MsgBox LaunchServicesDefaultHandlerForURLSchemeMBS("http") // shows here: com.apple.safari
```

Notes: Returns "" if no handler is available.
Requires Mac OS X 10.4 to work correct. Returns always "" on older systems.

116.5.7 LaunchServicesDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns the application bundle identifier of the default handler for the specified content type (UTI), in the specified role(s).
Example:

```
const type="com.adobe.pdf"
msgbox LaunchServicesDefaultRoleHandlerForContentTypeMBS(type,-1)
```

Notes: For any role, specify kLSRolesAll. Returns "" if no handler is available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

116.5.8 LaunchServicesDisplayNameForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the display name for an url handle.
Notes: Return a copy of the display name for an url handle. Takes into consideration whether this item has a hidden extension or not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

116.5.9 LaunchServicesFindApplicationForInfoMBS(creator as string, bundleID as string, name as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Locate a specific application.
Example:

```
MsgBox LaunchServicesFindApplicationForInfoMBS("prvw","","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","com.apple.iTunes","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","","Safari.app").Name
```

Notes: Returns the application with the corresponding input information. The registry of applications is consulted first in order of bundleID, then creator, then name. All comparisons are case insensitive and 'ties' are decided first by version, then by native vs. Classic.

Parameters can be "". The name of the application must be the name with the extension.

- Tip of the day: How to launch Disc Utility?

116.5.10 LaunchServicesItemInfoForCFURLMBS(cfurlhandle as Integer, WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return information about an item.
Notes: Returns as much or as little information as requested about the url. Some information is available in a thread-safe manner, some is not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

Possible values you can combine for the WhichInfo parameter:

kLSRequestExtension	= &h01	Requests the item's filename extension.
kLSRequestTypeCreator	= &h02	Requests the item's file type and creator signature.
kLSRequestBasicFlagsOnly	= &h04	Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAppTypeFlags	= &h08	Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAllFlags	= &h10	Requests all item-information flags.
kLSRequestIconAndKind	= &h20	Not used.
kLSRequestExtensionFlagsOnly	= &h40	Requests only the kLSItemInfoExtensionIsHidden item-information flag.
kLSRequestAllInfo	= -1	

116.5.11 LaunchServicesKindStringForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the kind string for an item.
Notes: Returns the kind string as used in the Finder and elsewhere for the given folderitem.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

116.5.12 LaunchServicesOpenMBS(item as folderitem) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Open an application, document, or folder.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Var a As FolderItem = LaunchServicesOpenMBS(file)
```

MsgBox a.NativePath

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder. Use the more specific LaunchServicesOpenXMBS for more control over launching.

Returns a folderitem to the application which was launched.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.13 LaunchServicesOpenXMBS(documents() as folderitem, parameter as LaunchServicesLaunchParameterMBS) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Opens an application or one or more documents or folders.
Example:

```
// Open a file in Preview (Mac OS X).
Sub OpenWithPreview(f as folderitem)
Var p as FolderItem
Var d(0) as FolderItem
Var r as FolderItem
Var param as LaunchServicesLaunchParameterMBS

// Find preview
p=LaunchServicesFindApplicationForInfoMBS("prvw","com.apple.Preview","Preview.app")

if p<>Nil then
d(0)=f

param=new LaunchServicesLaunchParameterMBS
param.Application=p
param.Defaults=true // just default settings

r=LaunchServicesOpenXMBS(d, param)
if r<>nil then
Return //Success
end if
end if

// On failure, just launch normally:
```

```
f.Launch true
End Sub
```

Notes: Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder.

Returns a folderitem to the application which was launched.
Currently this function is not available to RB versions before 3.5.
Note that the documents parameter is an array of folderitem and not just one.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.
Blog Entries

- MBS Xojo Plugins, version 19.5pr1

116.5.14 LaunchServicesSetDefaultHandlerForURLSchemeMBS(URLScheme as string, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified URL scheme.
Example:

```
Var e as Integer
Var old as string

old=LaunchServicesDefaultHandlerForURLSchemeMBS("http")

MsgBox "Before: "+old

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http","com.microsoft.explorer")

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "Between: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http",old)

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "After: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")
```

Notes: Returns Mac OS error code with 0 for success.
The handler is specified as an application bundle identifier.

Requires Mac OS X 10.4 to work correct. Returns always -1 on older systems.

116.5.15 LaunchServicesSetDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified content type (UTI) in the specified role(s).
Example:

```
Var e as Integer

// makes Acrobat the default pdf reader
'e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.adobe.Reader")

// makes preview the default pdf reader
e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.apple.preview")

msgbox str(e)
```

Notes: For all roles, specify kLSRolesAll. The handler is specified as an application bundle identifier.
Returns a Mac OS error code or -1 if the function is not available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

116.6 module UTTypeMBS

116.6.1 module UTTypeMBS

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: The module to wrap all the Apple UTI functions.
Notes: See this webpage for a list of all the predefined types:

http://developer.apple.com/documentation/Carbon/Conceptual/understanding_utis/utilist/chapter_4_section_1.html

116.6.2 Methods

116.6.3 ConformsTo(UTI as string, ConformsToUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether a type is a subtype of the second type.
Example:

```
if UTTypeMBS.ConformsTo("public.jpeg","public.image") then
MsgBox "ConformsTo"
else
MsgBox "not ConformsTo"
end if
```

116.6.4 CreateAllIdentifiersForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string()

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates an array of all uniform type identifiers indicated by the specified tag.
Example:

```
MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "txt",
""))
// shows "public.plain-text"

MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "xml",
""))
// shows "public.xml com.apple.dashcode.xml"
```

Notes: An overloaded tag (e.g., an extension used by several applications for different file formats) may indicate multiple types. If no declared type identifiers have the specified tag, then a single dynamic type

identifier will be created for the tag. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type).

116.6.5 CreatePreferredIdentifierForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates a uniform type identifier for the type indicated by the specified tag.
Example:

```
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameExtension, "jpg", "")
// shows "public.jpeg"
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassOSType, "TIFF", "public.image")
// shows "public.tiff"
```

Notes: This is the primary function to use for going from tag (extension/MIMEType/OSType) to uniform type identifier. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type). If more than one type is indicated, preference is given to a public type over a non-public type on the theory that instances of public types are more common, and therefore more likely to be correct. When there a choice must be made between multiple public types or multiple non-public types, the selection rules are undefined. Clients needing finer control should use CreateAllIdentifiersWithTag. If no declared type is indicated, a dynamic type identifier is generated which satisfies the parameters.

116.6.6 DeclaringBundleURL(UTI as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the folderitem of the bundle containing the type declaration of the identified type.
Example:

```
MsgBox UTTypeMBS.DeclaringBundleURL("public.jpeg").NativePath
```

116.6.7 Description(UTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the localized, user-readable type description string.
Example:

```
MsgBox UTTypeMBS.Description("public.jpeg") // "JPEG-Bild" in German
```

116.6.8 Equal(UTI as string, SecondUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether two types are equal.
Example:

```
if UTTypeMBS.Equal("public.jpeg","public.jpeg") then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes: Returns true if both UTIs are equal.

116.6.9 kUTExportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTExportedTypeDeclarationsKey // "UTExportedTypeDeclarations"
```

116.6.10 kUTImportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTImportedTypeDeclarationsKey // "UTImportedTypeDeclarations"
```

116.6.11 kUTTagClassFilenameExtension as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassFilenameExtension // "public.filename-extension"

116.6.12 kUTTagClassMIMEType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassMIMEType // "public.mime-type"

116.6.13 kUTTagClassNSPboardType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassNSPboardType // "com.apple.nspboard-type"

116.6.14 kUTTagClassOSType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassOSType // "com.apple.ostype"

116.6.15 kUTTypeAliasFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.16 kUTTypeAliasRecord as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.17 kUTTypeAppleICNS as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.18 kUTTypeAppleProtectedMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.19 kUTTypeApplication as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.20 kUTTypeApplicationBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.21 kUTTypeApplicationFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.22 kUTTypeArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.23 kUTTypeAudio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.24 kUTTypeAudiovisualContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.25 kUTTypeBMP as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.26 kUTTypeBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.27 kUTTypeCHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.28 kUTTypeCompositeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.29 kUTTypeConformsToKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTTypeConformsToKey // "UTTypeConformsTo"

116.6.30 kUTTypeContact as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.31 kUTTypeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.32 kUTTypeCPlusPlusHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.33 kUTTypeCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.34 kUTTypeCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.35 kUTTypeData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.36 kUTTypeDescriptionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeDescriptionKey // "UTTypeDescription"
```

116.6.37 kUTTypeDirectory as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.38 kUTTypeDiskImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.39 kUTTypeFileURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.40 kUTTypeFlatRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.41 kUTTypeFolder as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.42 kUTTypeFramework as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.43 kUTTypeGIF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.44 kUTTypeHEIC as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image Coding images.
The identifier for this type is public.heic.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

116.6.45 kUTTypeHEIF as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A type that represents High Efficiency Image File Format images.

The identifier for this type is public.heif.
This type conforms to a base type identified by public.heif-standard, which in turn conforms to UTTypeImage.

116.6.46 kUTTypeHTML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.47 kUTTypeICO as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.48 kUTTypeIconFileKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTTypeIconFileKey // "UTTypeIconFile"

116.6.49 kUTTypeIdentifierKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTTypeIdentifierKey // "UTTypeIdentifier"

116.6.50 kUTTypeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.51 kUTTypeInkText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.52 kUTTypeItem as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.53 kUTTypeJavaSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.54 kUTTypeJPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.55 kUTTypeJPEG2000 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.56 kUTTypeJPEGXL as string

MBS MacOSX Plugin, Plugin Version: 25.0, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Notes: A JPEG-XL encoded image.
The UTI is public.jpeg-xl

116.6.57 kUTTypeMessage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.58 kUTTypeMountPoint as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.59 kUTTypeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.avi")
Var u as string = UTTypeMBS.UTI(f)

if UTTypeMBS.ConformsTo(u, UTTypeMBS.kUTTypeMovie) then
MsgBox u+" is movie"
else
MsgBox u+" is not movie."
end if
```

116.6.60 kUTTypeMP3 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.61 kUTTypeMPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.62 kUTTypeMPEG4 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.63 kUTTypeMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.64 kUTTypeObjectiveCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.65 kUTTypeObjectiveCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.66 kUTTypePackage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.67 kUTTypePDF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.68 kUTTypePICT as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.69 kUTTypePlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.70 kUTTypePNG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.71 kUTTypeQuickTimeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.72 kUTTypeQuickTimeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.73 kUTTypeReferenceURLKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeReferenceURLKey // "UTTypeReferenceURL"
```

116.6.74 kUTTypeResolvable as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.75 kUTTypeRTF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.76 kUTTypeRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.77 kUTTypeSourceCode as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.78 kUTTypeSymLink as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.79 kUTTypeTagSpecificationKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeTagSpecificationKey // "UTTypeTagSpecification"
```

116.6.80 kUTTypeText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.81 kUTTypeTIFF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.82 kUTTypeTXNTextAndMultimediaData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.83 kUTTypeURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.84 kUTTypeUTF16ExternalPlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.85 kUTTypeUTF16PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.86 kUTTypeUTF8PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.87 kUTTypeVCard as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.88 kUTTypeVersionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeVersionKey // "UTTypeVersion"
```

116.6.89 kUTTypeVideo as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.90 kUTTypeVolume as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.91 kUTTypeWebArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.92 kUTTypeXML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

116.6.93 PreferredTagWithClass(inUTI as string, inTagClass as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the identified type's preferred tag with the specified tag class as a String.
Example:

```
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassMIMEType)
// shows "image/jpeg"
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassFilenameExtension)
// shows "jpeg"
```

Notes: This is the primary function to use for going from uniform type identifier to tag. If the type declaration included more than one tag with the specified class, the first tag in the declared tag array is the preferred tag.

116.6.94 UTI(file as folderitem) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Queries the UTI for a given file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
MsgBox UTTypeMBS.UTI(f) // shows com.xojo.project.binary
```

Notes: Returns "" if no UTI is available.

Chapter 117

LCMS2

117.1 class LCMS2BitmapMBS

117.1.1 class LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap.
Notes: You can pass bitmap data as raw memoryblock or fill it using a Xojo picture.
In our LCMS 1.x plugin, the bitmap was always 16 bit. This plugin also can also use 8 bit or 32 bit.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr3

117.1.2 Methods

117.1.3 Constructor

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty bitmap object.
See also:

- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16686
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16686

- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16687
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16687
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16688

117.1.4 Constructor(p as picture, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert picture to bitmap
Var b as new LCMS2BitmapMBS(pic)
// convert to picture
Backdrop = b.Picture
```

Notes: Bits can be 8, 16 or 32 bit integers.
See also:

- 117.1.3 Constructor 16685
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16686
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16687
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16687
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16688

117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic, 50, 50, 100, 100)
// convert to picture
Backdrop = b.Picture
```

Notes: Picks only the provided area from the source picture.
Bits can be 8, 16 or 32 bit integers.
See also:

- 117.1.3 Constructor 16685
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16686
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16687
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16687
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16688

117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the color space signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16685
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16686
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16686
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16687
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16688

117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: Colorspace Type should be one of the colorspace signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16685

- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16686
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16686
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16687
- 117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 16688

117.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes: In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
Raises exception if colorspace is invalid.
See also:

- 117.1.3 Constructor 16685
- 117.1.4 Constructor(p as picture, bits as Integer = 8) 16686
- 117.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 16686
- 117.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 16687
- 117.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 16687

117.1.9 CopyToPicture(pic as picture, x as Integer = 0, y as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data into an existing picture.
Example:

```
// convert small part of picture to bitmap
Var b as new LCMS2BitmapMBS(pic)

// create destination picture
Var pic as new Picture(500, 500, 32)

// copy pixels and show
if b.CopyToPicture(pic, 50, 50) then
```

```
Backdrop = pic
end if
```

Notes: This may be more efficient for you if you process a lot of image data as you can avoid creating new picture objects with using Picture method in this class.
May not work for all pictures, especially may fail on Linux.
Returns true on success.

117.1.10 Invert

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the bitmap data.
Notes: Requires correct settings for rowbytes, height and data properties.

117.1.11 Picture(HasAlpha as Boolean = false) as picture

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the picture.
Example:

```
// get some picture
Var logo as Picture = LogoMBS(500)

// let us convert it to a 16 bit memory block
Var l as new LCMS2BitmapMBS(logo, 16)

// check bit depth
Title = str(l.Bits)

// convert back
Var p as Picture = l.Picture

// and display
Backdrop = p
```

Notes: This method works with 8, 16 and 32 bit integer pictures. Make sure bits property is set.

117.1.12 Properties

117.1.13 Bits as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits.
Notes: Can be 8, 16 or 32 and is used for conversion to and from Xojo picture objects.
(Read and Write property)

117.1.14 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space type.
Notes: Only used to let Picture function know what format the data is.
Typically kcmsSigRgbData.
(Read and Write property)

117.1.15 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the actual image data.
Notes: Data can be stored in 8, 16 or 32 bit Integers or 32bit Floats.
(Read and Write property)

117.1.16 Height as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the Bitmap in Pixels.
Notes: (Read and Write property)

117.1.17 RowBytes as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes: Normally: rowbytes=pixelsize*width+padding
Where padding is some extra bytes.

(Read and Write property)

117.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the Bitmap in Pixels.
Notes: (Read and Write property)

117.2 class LCMS2CIECAM02MBS

117.2.1 class LCMS2CIECAM02MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to evaluated viewing conditions.
Notes: Viewing conditions. Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming LCMS2ICCViewingConditionsMBS to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr5

117.2.2 Methods

117.2.3 Constructor(context as LCMS2ContextMBS, VC as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a CAM02 object based on given viewing conditions.
Notes: Such object may be used as a color appearance model and evaluated in forward and reverse directions. Viewing conditions is defined by LCMS2ViewingConditionsMBS class. The surround member has to be one of this values: kAVG_SURROUND, kDIM_SURROUND, kDARK_SURROUND or kCUTSHEET_SURROUND. Degree of chromatic adaptation (d), can be specified in 0...1.0 range, or the model can be instructed to calculate it by using D_CALCULATE constant (-1).

Context: user-defined context cargo.
VC: A structure holding viewing conditions.

117.2.4 Forward(value as LCMS2CIEXYZMBS) as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the forward direction: XYZ to JCh
Notes: value: the input XYZ value.
Returns the output JCh value.

117.2.5 Reverse(value as LCMS2JChMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the reverse direction: JCh to XYZ
Notes: Values: The input JCh value.
Returns the output XYZ value

117.2.6 Properties

117.2.7 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the conversion engine.
Notes: (Read and Write property)

117.3 class LCMS2CIELabMBS

117.3.1 class LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Lab color.

117.3.2 Methods

117.3.3 BFDdeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates BFD delta E metric.

117.3.4 CIE2000DeltaE(Other as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

117.3.5 CIE94DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

117.3.6 Clone as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.
Example:

```
Var l as new LCMS2CIELabMBS(0.1, 0.2, 0.3)
Var k as LCMS2CIELabMBS = l.Clone
MsgBox str(k.L)+" "+str(k.a)+" "+str(k.b)
```

117.3.7 CMCdeltaE(Other as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

117.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lab color with the given values.
See also:

- 117.3.9 Constructor(other as LCMS2CIELabMBS) 16695

117.3.9 Constructor(other as LCMS2CIELabMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the color value.
See also:

- 117.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0) 16695

117.3.10 DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes: You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

117.3.11 DesaturateLab(amax as Double, amin as Double, bmax as Double, bmin as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does poor man's gamut mapping.
Notes: See also cmsDesaturateLab in LCMS manual.

117.3.12 XYZ(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

117.3.13 Properties

117.3.14 A as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The a value.
Notes: (Read and Write property)

117.3.15 B as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The b value.
Notes: (Read and Write property)

117.3.16 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

117.3.17 LCh as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to LCh value.
Notes: (Read only property)

117.4 class LCMS2CIELChMBS

117.4.1 class LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class for CIE LCh values.
Example:

```
Var c as new LCMS2CIELChMBS(1,2,3)
MsgBox str(c.L)+" "+str(c.C)+" "+str(c.h)
```

117.4.2 Methods

117.4.3 Clone as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.

117.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.
See also:

- 117.4.5 Constructor(other as LCMS2CIELChMBS) 16698

117.4.5 Constructor(other as LCMS2CIELChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 117.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0) 16698

117.4.6 Properties

117.4.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

117.4.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

117.4.9 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

117.4.10 Lab as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the LCh value to a Lab value.
Example:

```
Var c as new LCMS2CIELChMBS(0.1, 0.2, 0.3)
Var lab as LCMS2CIELabMBS = c.Lab
MsgBox str(lab.L)+" "+str(lab.a)+" "+str(lab.b)
```

Notes: (Read only property)

117.5 class LCMS2CIExyYMBS

117.5.1 class LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE xyY value.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: As Xojo is case insensitive, we have to name the big Y as YY.

117.5.2 Methods

117.5.3 Clone as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color.

117.5.4 Constructor(other as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the object with values from other object.
See also:

- 117.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0) 16700

117.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new xyY object with the given values.
See also:

- 117.5.4 Constructor(other as LCMS2CIExyYMBS) 16700

117.5.6 TempFromWhitePoint as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the temperature from using this xyY point as the white point.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.TempFromWhitePoint)
```

117.5.7 Properties

117.5.8 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

117.5.9 XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the xyY value to XYZ.
Example:

```
Var c as new LCMS2CIExyYMBS(1,2,3)
Var n as LCMS2CIEXYZMBS = c.XYZ
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
Var x as LCMS2CIExyYMBS = n.xyY
MsgBox str(x.x)+" "+str(x.y)+" "+str(x.yy)
```

Notes: (Read only property)

117.5.10 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

117.5.11 YY as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes: As Xojo is case insensitive, we have to name the big Y as YY.
(Read and Write property)

117.6 class LCMS2CIExyYTripleMBS

117.6.1 class LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a xyY color triple.

117.6.2 Methods

117.6.3 Clone as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the xyY triple.

117.6.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with zero values.
See also:

- 117.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 16703
- 117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 16704

117.6.5 Constructor(other as LCMS2CIExyYTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with values from other object.
See also:

- 117.6.4 Constructor 16703
- 117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 16704

117.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with given values.
See also:

- 117.6.4 Constructor 16703
- 117.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 16703

117.6.7 Properties

117.6.8 Blue as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

117.6.9 Green as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

117.6.10 Red as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

117.7 class LCMS2CIEXYZMBS

117.7.1 class LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE XYZ values.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
```

117.7.2 Methods

117.7.3 Constructor(x as Double=0.0, y as Double=0.0, z as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.

117.7.4 Lab(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a lab value using the given whitepoint.
Notes: Setting WhitePoint to nil forces D50 as white point.

117.7.5 Properties

117.7.6 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

117.7.7 xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a xyY value.
Example:

```
Var n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
Var l as LCMS2CIExyYMBS = n.xyY
MsgBox str(l.x)+" "+str(l.y)+" "+str(l.yy)
```

Notes: (Read only property)

117.7.8 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

117.7.9 z as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The z value.
Notes: (Read and Write property)

117.8 class LCMS2CIEXYZTripleMBS

117.8.1 class LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XYZ color triple.

117.8.2 Methods

117.8.3 Clone as LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the XYZ triple.

117.8.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with zero values.
See also:

- 117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 16707
- 117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 16708

117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with values from other object.
See also:

- 117.8.4 Constructor 16707
- 117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 16708

117.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with given values.
See also:

- 117.8.4 Constructor 16707
- 117.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 16707

117.8.7 Properties

117.8.8 Blue as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

117.8.9 Green as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

117.8.10 Red as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

117.9 class LCMS2ContextMBS

117.9.1 class LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 context.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

117.9.2 Methods

117.9.3 Clone as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the context object.
Notes: You can assign a new tag to the copy.

117.9.4 Constructor(other as LCMS2ContextMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with a copy of the existing one.
See also:

- 117.9.5 Constructor(tag as Variant = nil) 16709

117.9.5 Constructor(tag as Variant = nil)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with given tag.
See also:

- 117.9.4 Constructor(other as LCMS2ContextMBS) 16709

117.9.6 Properties

117.9.7 Handle as Integer

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle value.
Notes: (Read and Write property)

117.9.8 Tag as Variant

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: (Read and Write property)

117.10 class LCMS2CurveSegmentMBS

117.10.1 class LCMS2CurveSegmentMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a curve segment.
Notes: Segmented curves are formed by several segments.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

117.10.2 Methods

117.10.3 Constructor(nGridPoints as Integer = 0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object and allocates sample points.
Notes: Pass number of sample points you want to fill.

117.10.4 Properties

117.10.5 nGridPoints as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of grid points if Type = 0.
Notes: (Read only property)

117.10.6 Type as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of curve segment.
Notes: Parametric type, Type = 0 means sampled segment.
Negative values are reserved.
(Read and Write property)

117.10.7 x0 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x0 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

117.10.8 x1 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value of the domain.
Notes: Domain; for x0 <x <= x1
(Read and Write property)

117.10.9 Params(index as Integer) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameters if Type != 0.
Notes: Index from 0 to 9.
(Read and Write computed property)

117.10.10 SampledPoints(index as Integer) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of floats if Type = 0.
Notes: Index from 0 to nGridPoints-1.
(Read and Write computed property)

117.11 class LCMS2DateMBS

117.11.1 class LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a date.

117.11.2 Properties

117.11.3 Date as Date

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date as a Xojo date object.
Notes: (Read only property)

117.11.4 DateTime as DateTime

MBS Images Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date as a Xojo dateTime object.
Notes: (Read only property)

117.11.5 Day as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: (Read only property)

117.11.6 Daylight as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether it is daylight saving time.
Notes: (Read only property)

117.11.7 DayOfWeek as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the week.
Notes: (Read only property)

117.11.8 DayOfYear as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the year.
Notes: (Read only property)

117.11.9 Hour as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour value.
Notes: (Read only property)

117.11.10 Minute as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minute value.
Notes: (Read only property)

117.11.11 Month as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: (Read only property)

117.11.12 Second as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read only property)

117.11.13 Year as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read only property)

117.12 class LCMS2DictionaryEntryMBS

117.12.1 class LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an entry of the dictionary.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.12.2 Methods

117.12.3 Constructor

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

117.12.4 NextEntry as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the next element in linked list.

117.12.5 Properties

117.12.6 DisplayName as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display name multi language unicode string.
Notes: (Read only property)

117.12.7 DisplayValue as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display value multi language unicode string.
Notes: (Read only property)

117.12.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

117.12.9 Name as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

117.12.10 Parent as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent dictionary.
Notes: (Read only property)

117.12.11 Value as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value string.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

117.13 class LCMS2DictionaryMBS

117.13.1 class LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The LCMS 2 class for a dictionary of values.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is a simple linked list used to store pairs Name,ÄêValue for the dictionary metatag, as described in http://www.color.org/ICCSpecRevision_25,Äê02,Äê10_dictType.pdf

117.13.2 Methods

117.13.3 AddEntry(Name as String, Value as String, DisplayName as LCMS2MLUMBS, DisplayValue as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to a dictionary linked list object.
Notes: No check for duplicity is made. Dictionary and Name parameters a required, rest is optional and nil may be used.

Name, Value: Strings. Value may be empty.
DisplayName, Display Value: Multilocalized Unicode objects. May be nil.
Returns true on success.

117.13.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty dictionary linked list object.

117.13.5 EntryList as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first element in linked list.
Example:

```
// create new dictionary
Var d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
Var e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

117.13.6 Properties

117.13.7 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.13.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.14 class LCMS2GamutBoundaryDescriptionMBS

117.14.1 class LCMS2GamutBoundaryDescriptionMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class allows you to create gamut boundary, add points, compute and check points.
Example:

```
Var n1,n2 as Integer
Var h as new LCMS2GamutBoundaryDescriptionMBS

// Fill all Lab gamut as valid

for L as Integer = 0 to 100 step 10
for a as Integer = -128 to 128 step 5
for b as Integer = -128 to 128 step 5

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.AddPoint(lab) then
n1 = n1 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
next
next

// Complete boundaries
call h.Compute

// All points should be inside gamut

for L as Integer = 10 to 90 step 25
for a as Integer = -120 to 120 step 25
for b as Integer = -120 to 120 step 25

Var lab as new LCMS2CIELabMBS(l, a, b)

if h.CheckPoint(lab) then
n2 = n2 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
```

next
next

MsgBox str(n1)+" points added and "+str(n2)+" other points found."

Notes: Please check LittleCMS API and tutorial documentation for more details.

- MBS Real Studio Plugins, version 12.1pr6

117.14.2 Methods

117.14.3 AddPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sample point for computing the gamut boundary descriptor.
Notes: This function can be called as many times as known points. No memory or other resurces are wasted by adding new points. The gamut boundary descriptor cannot be checked until Compute() is called.

Lab: Lab value.
Returns true on success, false on error.

117.14.4 CheckPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whatever a Lab value is inside a given gamut boundary descriptor.
Notes: Lab: Lab value.
Returns: True if point is inside gamut, false otherwise.

117.14.5 Compute(options as UInt32 = 0) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the gamut boundary descriptor using all know points and interpolating any missing sector(s).
Notes: Call this function after adding all know points with AddPoint() and before using CheckPoint().
Flags: reserved (unused). Set it to 0.
Returns true on success, false on error

117.14.6 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object.

117.14.7 Properties

117.14.8 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.14.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

117.15 class LCMS2ICCDataMBS

117.15.1 class LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC data.
Notes: This is used for some tags where no dedicated class is available. This way you can modify the data directly in the memoryblock.

117.15.2 Properties

117.15.3 Data as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the data.
Notes: (Read only property)

117.15.4 Flags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

117.15.5 Size as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data.
Notes: (Read and Write property)

117.16 class LCMS2ICCMeasurementConditionsMBS

117.16.1 class LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC measurement conditions.

117.16.2 Methods

117.16.3 Constructor(Observer as UInt32 = 0, Backing as LCMS2CIEXYZMBS = nil, Geometry as UInt32 = 0, Flare as Double = 0.0, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

117.16.4 Properties

117.16.5 Backing as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Backing value.
Notes: (Read and Write property)

117.16.6 Flare as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flare value.
Notes: Range 0..1.0.
(Read and Write property)

117.16.7 Geometry as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry value.
Notes: 0=unknown, 1=45/0, 0/45 2=0d, d/0.
(Read and Write property)

117.16.8 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant type.
Notes: (Read and Write property)

117.16.9 Observer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The observer value.
Notes: 0 = unknown, 1=CIE 1931, 2=CIE 1964
(Read and Write property)

117.17 class LCMS2ICCViewingConditionsMBS

117.17.1 class LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a ICC viewing conditions tag stored in the profile.

117.17.2 Methods

117.17.3 Constructor(IlluminantXYZ as LCMS2CIEXYZMBS = nil, Backing as LCMS2CIEXYZMBS = nil, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC viewing conditions object.

117.17.4 Properties

117.17.5 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

117.17.6 IlluminantXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

117.17.7 SurroundXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround.
Notes: (Read and Write property)

117.18 class LCMS2IT8MBS

117.18.1 class LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for IT8 handling.
Notes: ANSI CGATS.17 is THE standard text file format for exchanging color measurement data. This standard text format (the ASCII version is by far the most common) is the format accepted by most color measurement and profiling applications.
It consists of a Preamble section containing originator information, keyword definitions, etc and then one or more data sections, each consisting of header and data subsections. The header subsection is where the BEGIN_DATA_FORMAT and END_DATA_FORMAT delimiters define the actual data types / units contained in the following tables. The data subsection contains the BEGIN_DATA and END_DATA delimiters which contain the actual color information in tabular form.
CGATS.17 text files can contain device (RGB, CMYK, etc), colorimetric (Lab, XYZ, etc), densitometric, spectral, naming and other information so it is a fairly comprehensive storage and exchange format.

117.18.2 Methods

117.18.3 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty CGATS.17 object.

117.18.4 DefineDblFormat(Formatter as string)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the format string for float numbers.
Notes: It uses the "C" sprintf convention. The default format string is "%.10g".

117.18.5 EnumDataFormat as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with pointers to the column names in current table.
Notes: Return the column names in table.

117.18.6 EnumProperties as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all properties in current table.
Notes: Returns array of property name string.

117.18.7 EnumPropertyMulti(Prop as string) as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all the identifiers found in a multi,Äêvalue property in current table.
Notes: Prop: A string holding property name
Returns an array with property names.

117.18.8 FindDataFormat(Sample as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the position (column) of a given data sample name in current table.
Notes: First column is 0 (SAMPLE_ID).
Returns column number if found, ,Äê1 if not found

117.18.9 GetData(Patch as string, Sample as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell on success, "" on error.

117.18.10 GetDataAsDouble(Patch as string, Sample as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell interpreted as Double on success, 0 on error.

117.18.11 GetDataRowCol(Row as Integer, Col as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.

Returns the data for the intended cell on success, "" on error.

117.18.12 GetDataRowColAsDouble(Row as Integer, Col as Integer) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.
row, col: The position of the cell.

Returns the data for the intended cell interpreted as Double on success, 0 on error.

117.18.13 GetPatchByName(Patch as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lookups patch index by name.

117.18.14 GetPatchName(nPatch as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills buffer with the contents of SAMPLE_ID column for the set given in nPatch.
Notes: That usually corresponds to patch name. Buffer may be NULL to get the internal memory block

used by the CGATS.17 object. If specified, buffer gets a copy of such block. In this case it should have space for at least 1024 characters.

nPatch: set number to retrieve name

Returns the patch name. "" if error.

117.18.15 GetProperty(Prop as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a literal string in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property on success, "" on error.

117.18.16 GetPropertyAsDouble(Prop as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a double in current table.
Notes: Prop: A string holding property name.

Returns the data for the intended property interpreted as Double on success, 0 on error.

117.18.17 GetPropertyMulti(Key as string, SubKey as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries property.

117.18.18 GetSheetType as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the type of the IT8 object.

117.18.19 HeaderIsDictionary(HeaderName as string) as boolean

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a header entry has subkeys, so it has a dictionary with keys and values.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.20 HeaderList as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of header properties.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.21 HeadersAsDictionary as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header keys and values as dictionary.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

117.18.22 HeaderSubDictionary(HeaderName as string) as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with subkeys for a given header entry.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

117.18.23 HeaderValue(HeaderName as string) as string

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header value for the given header.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.24 LoadFromFile(context as LCMS2ContextMBS, file as folderitem) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function allocates a CGATS.17 object and fills it with the contents of file.
Notes: Used for reading existing CGATS files.

Context: The context value.
File: The CGATS.17 file name to read/parse

Returns a CGATS.17 object on success, nil on error.

117.18.25 LoadFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a memory block.
Notes: Returns nil on failure.

117.18.26 LoadFromString(context as LCMS2ContextMBS, data as string) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a string.
Notes: Returns nil on failure.

117.18.27 SaveToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a file.
Notes: File: Destination file. Existing file will be overwritten if possible.

Returns true on success, false on error

117.18.28 SaveToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

117.18.29 SaveToString as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

117.18.30 SetComment(comment as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is intended to provide a way automated IT8 creators can embed comments into the file.
Notes: Comments have no effect, and its only purpose is to document any of the file meaning. On this function the calling order is important; as successive calls to SetComment do embed comments in the same order the function is being called.

Comment: The comment to inserted

Returns true on success, false on error.

117.18.31 SetData(Patch as string, Sample as string, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a literal

Returns true on success, false on error.

117.18.32 SetDataAsDouble(Patch as string, Sample as string, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

117.18.33 SetDataFormat(n as Integer, Sample as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets column names in current table.
Notes: First column is 0 (SAMPLE_ID). Special property NUMBER_OF_FIELDS must be set before calling this function.

n: Column to set name
Sample: Name of data

Returns true on success, false on error.

117.18.34 SetDataRowCol(Row as Integer, Col as Integer, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [row, col] as a literal string in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a literal string.

Returns true on success, false on error.

117.18.35 SetDataRowColAsDouble(Row as Integer, Col as Integer, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes: This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

117.18.36 SetIndexColumn(Sample as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the index column.

117.18.37 SetPropertyDouble(Prop as string, Value as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a double in current table.
Notes: Prop: A string holding property name.
Value: The data for the intended property as Double.

Returns true on success, false on error.

117.18.38 SetPropertyHex(Prop as string, Value as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as an hexadecimal constant (appends 0x) in current table.
Notes: Prop: A string holding property name.
Value: The value to be set (32 bits max)

Returns true on success, false on error.

117.18.39 SetPropertyMulti(Key as string, SubKey as string, Value as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sub,Äêproperty to the property Key.
Notes: Value of buffer is interpreted literally.

Key: A string holding property name.
SubKey: A string holding the sub,Äêproperty name.
Buffer: A string holding the uncooked value of sub,Äêproperty.

Returns true on success, false on error.

117.18.40 SetPropertyString(Prop as string, Value as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a literal string in current table.
Notes: The string is enclosed in quotes "".
Returns true on success, false on error.

117.18.41 SetPropertyUncooked(Prop as string, Value as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property with no interpretation in current table.
Notes: No quotes "" are added. No checking is performed, and it is up to the programmer to make sure the string is valid.
Special prefixes:
0b: Binary
0x : Hexadecimal

Parameters:
cProp: A string holding property name.
Buffer: A string holding the uncooked value to place in the CGATS file.

Returns true on success, false on error.

117.18.42 SetSheetType(type as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets the type of a CGATS.17 object to the new type.
Notes: Returns true on success, false on error.

117.18.43 SetTable(nTable as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function positions the IT8 object in a given table, identified by its position.
Notes: Setting nTable to Table Count + 1 does allocate a new empty table.
Returns the current table number on success, ,Äê1 on error.

117.18.44 SetTableByLabel(Set as string, Field as string, ExpectedType as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets table by label.

117.18.45 TableCount as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the number of tables found in the current CGATS object.
Notes: Returns the number of tables on success, 0 on error.

117.18.46 ValidKeywords as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid keywords.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.47 ValidSampleIDs as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid sample IDs.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

117.18.48 Properties

117.18.49 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes: Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

117.18.50 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

117.19 class LCMS2JChMBS

117.19.1 class LCMS2JChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a JCh value.

117.19.2 Methods

117.19.3 Clone as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of this object.

117.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new JCh value.
See also:

- 117.19.5 Constructor(other as LCMS2JChMBS) 16740

117.19.5 Constructor(other as LCMS2JChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes new JCh color object with values from existing object.
See also:

- 117.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0) 16740

117.19.6 Properties

117.19.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

117.19.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

117.19.9 J as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The J value.
Notes: (Read and Write property)

117.20 class LCMS2Mat3MBS

117.20.1 class LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a 3 by 3 matrix.
Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

117.20.2 Methods

117.20.3 Clone as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the matrix.

117.20.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix.
See also:

- 117.20.5 Constructor(other as LCMS2Mat3MBS) 16742
- 117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 16743

117.20.5 Constructor(other as LCMS2Mat3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given matrix.
See also:

- 117.20.4 Constructor 16742
- 117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 16743

117.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix with the given three vectors.
See also:

- 117.20.4 Constructor 16742
- 117.20.5 Constructor(other as LCMS2Mat3MBS) 16742

117.20.7 Properties

117.20.8 V0 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for first vector.
Notes: (Read and Write property)

117.20.9 V1 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for second vector.
Notes: (Read and Write property)

117.20.10 V2 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for third vector.
Notes: (Read and Write property)

117.20.11 value(index as UInt32) as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the vector by index.
Notes: Index from 0 to 2.
(Read and Write computed property)

117.21 module LCMS2MBS

117.21.1 module LCMS2MBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central LCMS module with all the global methods and constants.

117.21.2 Methods

117.21.3 AdaptationMatrix(ConeMatrix as LCMS2Mat3MBS, FromIll as LCMS2CIEXYZM ToIll as LCMS2CIEXYZMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates adaptation matrix.
Notes: Returns the final chromatic adaptation from illuminant FromIll to Illuminant ToIll.
The cone matrix can be specified in ConeMatrix. If nil, Bradford is assumed.

ConeMatrix: the cone matrix.
FromIll: Source illuminant.
ToIll: Destination illuminant.

Returns matrix on success or nil on failure.

117.21.4 AdaptToIlluminant(SourceWhitePt as LCMS2CIEXYZMBS, Illuminant as LCMS2CIEXYZMBS, Value as LCMS2CIEXYZMBS) as LCMS2CIEXYZM

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromatic adaptation.
Notes: Adapts a color to a given illuminant. Original color is expected to have a SourceWhitePt white point.

117.21.5 BFDdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the dE between two Lab values.

117.21.6 BIT15_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Bit15 flag

117.21.7 BuildRGB2XYZtransferMatrix(WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds RGB to XYZ transfer matrix.
Notes: Build a White point, primary chromas transfer matrix from RGB to CIE XYZ.
This is just an approximation, I am not handling all the non-linear aspects of the RGB to XYZ process, and assumming that the gamma correction has transitive property in the tranformation chain.

The algorithm:

- First I build the absolute conversion matrix using primaries in XYZ. This matrix is next inverted
- Then I eval the source white point across this matrix obtaining the coeficients of the transformation
- Then, I apply these coeficients to the original matrix

WhitePoint: The white point.
Primaries: The primaries.
Returns matrix on success or nil on failure.

117.21.8 BYTES_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: bytes per sample

117.21.9 ChannelsOf(ColorSpaceSignature as Integer) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels in a color space signature.
Example:

MsgBox "RGB has "+str(LCMS2MBS.ChannelsOf(LCMS2MBS.kcmsSigRgbData))+" channels"

117.21.10 CHANNELS_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Channels (Samples per pixel)

117.21.11 CIE2000DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes: Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

117.21.12 CIE94DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes: A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

117.21.13 CMCdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes: In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

117.21.14 ColorSpaceICCtoLCMS(ICCColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from ICC color space notation to Little CMS color space notation.

117.21.15 ColorSpaceLCMStoICC(LCMSColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from Little CMS color space notation to ICC color space notation.

117.21.16 COLORSPACE_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Pixeltype.

117.21.17 CreateBitmapFromPicture(p as picture, bits as Integer = 8) as LCMS2BitmapMB

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Notes: Bits can be 8, 16 or 32 bit integers.

117.21.18 D50_xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as xyY color.

117.21.19 D50_XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.
