138.34.9 VerifyEmailMBS(email as string, NetworkCheck as boolean) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

Function: Checks if an email can be valid.
Example:

```
// should be okay
Var r1 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.de", true)

// should fail
Var r2 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.test", true)

MsgBox str(r1)+EndOfLine+str(r2)
```

Notes: If NetworkCheck is true, the DNS server is queries for whether an email service is available (MX Record).
Else we only do a syntax check.

Result is zero for scuccess or one of this error codes:

1	Invalid character in local part of email address.
2	Missing dot in local part of email address.
3	Invalid character in local part of email address.
4	Unescaped special character in local part of email address.
5	No local part in email address.
6	Dot found before @ character.
7	No domain in email address.
8	Domain starting with dot.
9	Domain is not allowed to have two dots.
10	Invalid character in domain of email address.
11	Special character in domain of email address.
12	No dot in domain in email address.
13	Domain longer than allowed in email address.
14	DNS failed to find mail server for the domain in email address. (Windows)
15	DNS failed to find mail server for the domain in email address. (Mac/Linux)
16	DNS did not find a mail server for the domain in email address.
17	DNS failed to find mail server for the domain in email address
18	DNS server answers try again too often.

IDN support is not included. You may need to preprocess email if you need that.

If you have a DNS server, which will redirect all mistyped domain names to a search website, this won,Äôt really work well and detect too many valid domain names.

138.34.10 ClearOptionsMBS(extends s as SocketCore)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all options.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.

138.34.11 OptionKeepAliveMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the keep alive.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Returns -1 on any error.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.
See also:

- 138.34.12 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer) 18234

138.34.12 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the keep alive.
Notes: Works only on BSD Sockets and if the socket handle value is valid.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.

138.34.13 OptionMaximumSegmentSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the maximum segment size.
Example:

```
Var s as new TCPSocket

s.Port = 0
s.listen

MsgBox str(s.OptionMaximumSegmentSizeMBS)
```

Notes: Only for TCP sockets.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.14 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer) 18235

138.34.14 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the maximum segment size.
Notes: Raises UnsupportedOperationException in case of failure.
Blog Entries

See also:

- 138.34.13 OptionMaximumSegmentSizeMBS(extends s as SocketCore) as Integer 18235

138.34.15 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the multicast time to live value.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.16 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer) 18236

138.34.16 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the multicast time to live value.
Example:

```
Var t as new UDPSocket

// create a socket
t.Port=80
t.Connect

// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionMutliCastTTLMBS)
t.OptionMutliCastTTLMBS=10

// shows new value
MsgBox str(t.OptionMutliCastTTLMBS)
```

Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.15 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer 18236

138.34.17 OptionReceiveBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.18 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer) 18237

138.34.18 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the receiving buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

138.34.19 OptionSendBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the sending buffer size.
Example:

```
Var s as new UDPSocket

s.Port = 0
s.Connect

MsgBox str(s.OptionSendBufferSizeMBS)
```

Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

138.34.21 OptionTOSMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the type of service value.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

• 138.34.22 OptionTOSMBS(extends s as SocketCore, assigns value as Integer) 18238

138.34.22 OptionTOSMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the type of service value.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

You may want to set it after connecting.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.21 OptionTOSMBS(extends s as SocketCore) as Integer 18238

138.34.23 OptionTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the time to live value.
Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.24 OptionTTLMBS(extends s as SocketCore, assigns value as Integer) 18239

138.34.24 OptionTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the time to live value.
Example:

```
Var t as new TCPSocket

// create a socket
t.Port=80
t.Address="www.apple.com"
t.Connect

// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionTTLMBS)
t.OptionTTLMBS=10

// shows new value
MsgBox str(t.OptionTTLMBS)
```

Notes: Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 138.34.23 OptionTTLMBS(extends s as SocketCore) as Integer 18239

138.34.25 OptionTypeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the type of socket.
Example:

```
Var u as new UDPSocket

u.Port = 9000
u.Connect

// shows 2 for UDP
MsgBox str(u.OptionTypeMBS)
```

Notes: Type is 1 for stream socket, 2 for datagram socket, 3 for raw socket, 4 for reliably-delivered message socket and 5 for a sequenced packet stream.
Raises UnsupportedOperationException in case of failure.

- MBS Real Studio Plugins, version 13.0pr6

138.35 class NetworkInterfaceMBS

138.35.1 class NetworkInterfaceMBS

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The class for unix network interfaces.
Example:

```
// show IPv4 addresses
Var interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes: For Windows, please use WindowsEthernetMBS class.
The values are not updated for this class. Just when you create the interface objects, you get a snapshot of the current state.

- Tip of the day: Find network interfaces by name
- MBS Real Studio Plugins, version 13.0pr2

138.35.2 Methods

138.35.3 AllInterfaces(Merge as boolean = true) as NetworkInterfaceMBS()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns array with all interfaces.
Example:

```
// show IPv4 addresses
Var interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes: By default we merge several records for the same interface.
You may see one record for each protocol (IPv4, IPv6, LINK layer).

138.35.4 IndexMap as Dictionary

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Builds a dictionary to map indexes to names.
Example:

```
Var d as Dictionary = NetworkInterfaceMBS.IndexMap
Var lines() as string

for each key as Variant in d.keys
lines.Append key+": "+d.Value(key)
next

MsgBox Join(lines,EndOfLine)
```

Notes: This is convenient method for the case you need to show list to user.
On Windows requires Windows Vista or newer.

138.35.5 IndexToName(Index as Integer) as string

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries name for network interface with index.
Example:

```
Var Name as string
Name = NetworkInterfaceMBS.IndexToName(1)
msgbox Name
```

Notes: On Windows requires Windows Vista or newer.

138.35.6 IPv4s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: All IPv4 addresses for this interface.

138.35.7 IPv6s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: All IPv6 addresses for this interface.

138.35.8 NameToIndex(Name as String) as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries index for network interface with given name..
Example:

```
Var index as Integer
index = NetworkInterfaceMBS.NameToIndex("en0")
```

Notes: On Windows requires Windows Vista or newer.

138.35.9 Properties

138.35.10 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether a broadcast address exists for this interface.
Notes: (Read and Write property)

138.35.11 BroadcastAddress as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The broadcast address.
Notes: (Read and Write property)

138.35.12 Flags as Integer

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

Function: The interface flags.
Notes: See if.h file in C system headers.
(Read and Write property)

138.35.13 Index as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The index of this interface.
Notes: (Read and Write property)

138.35.14 InterfaceIndex as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: The index of this interface.
Notes: Index counts by plugin from 0 on the interfaces.
But this is real index from operation system.
On Windows requires Windows Vista or newer.
(Read and Write property)

138.35.15 IPv4 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The IPv4 address for this interface.
Example:

```
// show IPv4 addresses
Var interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes: (Read and Write property)

138.35.16 IPv4count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns the number of IPv4 addresses for this interface.
Notes: (Read and Write property)

138.35.17 IPv6 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The IPv6 address for this interface.
Notes: (Read and Write property)

138.35.18 IPv6count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns the number of IPv6 addresses for this interface.
Notes: (Read and Write property)

138.35.19 Loopback as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether this interface is the loopback interface.
Notes: (Read and Write property)

138.35.20 MAC as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The ethernet hardware address (MAC).
Notes: (Read and Write property)

138.35.21 Multicast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether this interface supports multicast.
Notes: (Read and Write property)

138.35.22 Name as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The name of the network interface.
Notes: (Read and Write property)

138.35.23 Netmask as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The network mask.
Notes: Returns the IPv4 netmask.
if that one is undefined, returns the IPv6 netmask.
This property is just kept for compatibility.
(Read only property)

138.35.24 NetmaskIPv4 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

Function: The network mask for IPv4.
Notes: (Read and Write property)

138.35.25 NetmaskIPv6 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

Function: The network mask for IPv6.
Notes: (Read and Write property)

138.35.26 Running as Boolean

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

Function: Whether the interface is running (resources allocated).
Notes: (Read and Write property)

138.35.27 Up as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether the interface is up.
Notes: (Read and Write property)

138.36 class NWEndPointMBS

138.36.1 class NWEndPointMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The class for a network endpoint.
Notes: A Network Endpoint is an abstract static representation of a local or remote network entity. Endpoints indicate specific instances that connections may be created between, such as Hostname + Port pairs, IP Address + Port pairs, and named Bonjour Services.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.36.2 Methods

138.36.3 Constructor

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

138.36.4 Properties

138.36.5 AddressString as String

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Returns an allocated IP address string for a network endpoint with the type address.
Notes: Returns the IP address string for the endpoint, or "" if the endpoint is not of type address.
(Read only property)

138.36.6 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

138.36.7 HostName as String

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the hostname string for a network endpoint with the type host or URL.
Notes: (Read only property)

138.36.8 Port as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function:

Retrieves the port for a network endpoint with the type URL, Host, or address.

Notes:

The port will be returned in Host Byte Order.

Returns the port for the endpoint, or 0 if the endpoint is not of type host or address.
(Read only property)

138.36.9 PortString as String

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Returns an allocated port string for a network endpoint with the type host or address.
Notes: (Read only property)

138.36.10 Type as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the type of a network endpoint.
Notes: (Read only property)

138.36.11 URL as String

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the URL string from a network endpoint of type URL.

Notes: (Read only property)

138.36.12 Constants

EndPoint Types

Constant	Value	Description
kTypeAddress	1	An IP Address + Port
kTypeBonjourService	3	A Bonjour Service Name + Type + Domain
kTypeHost	2	A Hostname + Port
kTypeInvalid	0	An invalid endpoint
kTypeURL	4	A URL endpoint.

138.37 class NWInterfaceMBS

138.37.1 class NWInterfaceMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A network interface.
Notes: A Network Interface is an object that represents a static snapshot of an interface that provides network connectivity, such as a Wi-Fi link, an Ethernet connection, a Cellular service, a VPN, or the loopback interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.37.2 Methods

138.37.3 Constructor

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

138.37.4 Properties

138.37.5 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

138.37.6 Index as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the index of an interface, to be used for reference or logging purposes.
Notes: This is the same value as provided by if_nametoindex.
(Read only property)

138.37.7 Name as String

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the name of an interface, to be used for reference or logging purposes.
Notes: (Read only property)

138.37.8 Type as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the type of an interface.
Notes: This only accesses the type of the specific interface being queried, and will not take into account types used by interfaces that traffic will eventually be routed through. That is, if the interface is a virtual interface (such as a VPN) that eventually forwards traffic through Wi-Fi, the type will be of type other, not wifi.
(Read only property)

138.37.9 Constants

Interface Types

Constant	Value	Description
kInterfaceTypeCellular	2	The network interface type used for communication over cellular networks.
kInterfaceTypeLoopback	4	The network interface type used for communication over local loopback networks.
kInterfaceTypeOther	0	The network interface type used for communication over virtual networks or networks of unknown types.
kInterfaceTypeWifi	1	The network interface type used for communication over Wi-Fi networks.
kInterfaceTypeWired	3	The network interface type used for communication over wired Ethernet networks.

138.38 class NWPathMBS

138.38.1 class NWPathMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: A Network Path object represents a snapshot of network path state.
Notes: This state represents the known information about the local interface and routes that may be used to send and receive data. If the network path for a connection changes due to interface characteristics, addresses, or other attributes, a new path object will be generated. Note that the differences in the path attributes may not be visible through public accessors, and these changes should be treated merely as an indication that something about the network has changed.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.38.2 Methods

138.38.3 Constructor

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The private constructor.

138.38.4 Gateways as NWEndPointMBS()

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: List the IP addresses of the routers acting as the gateways for the path.

138.38.5 Interfaces as NWInterfaceMBS()

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: List all interfaces associated with the path.

138.38.6 IsEqual(other as NWPathMBS) as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Compares two network path objects and checks if their content is equal.
Notes: If they are not equal, they represent two different network states.

Returns true if the paths are equivalent, or false if there is any difference between the paths.

138.38.7 UsesInterfaceType(InterfaceType as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path uses a network interface with the specified type.
Notes: Returns true if the path uses any network interface with the specified type, false otherwise.

138.38.8 Properties

138.38.9 EffectiveLocalEndPoint as NWEndPointMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieve the local endpoint that is being used, if present.
Notes: If this path is the path from an connection, it represents the address that data is sent from.
(Read only property)

138.38.10 EffectiveRemoteEndPoint as NWEndPointMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieve the remote endpoint that is being used, if present.
Notes: If this path is the path from a connection, it represents the address that data is sent to.
(Read only property)

138.38.11 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

138.38.12 HasDNS as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path has a DNS server configuration set.
Notes: Returns true if the path has a DNS server configuration set, false otherwise.
(Read only property)

138.38.13 HasIPv4 as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path uses a network interface that supports IPv4 connectivity.
Notes: Returns true if the path uses a network interface that supports IPv4, false otherwise.
(Read only property)

138.38.14 HasIPv6 as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path uses a network interface that supports IPv6 connectivity.
Notes: Returns true if the path uses a network interface that supports IPv6, false otherwise.
(Read only property)

138.38.15 IsConstrained as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path uses any network interfaces that are considered constrained to the user.
Notes: Returns true if the path uses any network interface that is considered constrained, false otherwise.
(Read only property)

138.38.16 IsExpensive as Boolean

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Checks if the path uses any network interfaces that are considered expensive to the user, such as, but not limited to, a cellular network.
Notes: Returns true if the path uses any network interface that is considered expensive, false otherwise.
(Read only property)

138.38.17 Status as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves the status of a path.
Notes: The status of a specific path object will never change, as the path object itself is static. If there is a network change, the object that generated the path object will generate a new path object.
(Read only property)

138.38.18 UnsatisfiedReason as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Retrieves a reason the path is not satisfied.
Notes: In some cases, the reason helps to determine why the path is not satisfied. While the path may be unsatisfied for more than one reason, only the first reason will be given. In many cases, the path may be unsatisfied with no reason available.

Returns a reason the path is unsatisfied or kUnsatisfiedReasonNotAvailable if a reason is not available.
(Read only property)

138.38.19 Constants

Status

Constant	Value	Description
kStatusInvalid	0	The path is not valid
kStatusSatisfiable	3	The path does not currently have a usable route, but a connection attempt will trigger network attachment.
kStatusSatisfied	1	The path has a usable route upon which to send and receive data.
kStatusUnsatisfied	2	The path does not have a usable route. This may be due to a network interface being down, or due to system policy.

Unsatisfied Reason

Constant	Value	Description
kUnsatisfiedReasonCellularDenied	1	The user has disabled cellular
kUnsatisfiedReasonLocalNetworkDenied	3	The user has disabled local network access
kUnsatisfiedReasonNotAvailable	0	No reason is given
kUnsatisfiedReasonVPNInactive	4	A required VPN is not active
kUnsatisfiedReasonWifiDenied	2	The user has disabled Wi-Fi

138.39 class NWPathMonitorMBS

138.39.1 class NWPathMonitorMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An observer that you use to monitor and react to network changes.
Notes: The Network Path Monitor allows the caller to fetch the current global path (or a path restricted to a specific network interface type). The path is delivered in an event that is called every time the network path changes.

138.39.2 Methods

138.39.3 Cancel

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Stops receiving network path updates.
Notes: Cancel the path monitor.
Calls Cancel event when done.
See also:

- 138.39.13 Cancel 18258

138.39.4 Constructor

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Initializes a path monitor to observe all available interface types.
Notes: Create a default path monitor, that will allow the enumeration of all available interfaces on the

system.
See also:

- 138.39.5 Constructor(requiredInterfaceType as Integer) 18257

138.39.5 Constructor(requiredInterfaceType as Integer)

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Initializes a path monitor to observe a specific interface type.
Notes: Create a path monitor specific to an interface type, that will allow the enumeration of any interface that matches the type on the system.
See also:

- 138.39.4 Constructor 18256

138.39.6 CreateForEthernetChannel as NWPathMonitorMBS

MBS MacOSX Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a path monitor for the ethernet interface.
Notes: Create a path monitor that enumerates all interfaces that support Ethernet channel.

138.39.7 ProhibitInterfaceType(InterfaceType as Integer)

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Prohibit this path monitor from using the provided network interface type.
Notes: Call before calling Start.

138.39.8 Start

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: Starts monitoring path changes.
Notes: Starts the path monitor.

138.39.9 Properties

138.39.10 Current as NWPathMBS

MBS MacOSX Plugin, Plugin Version: 24.2, Platforms: macOS, iOS, Targets: All.

Function: THe current path.
Notes: We automatically set this property when a new path is found, so you can query the current path at any time.
(Read and Write property)

138.39.11 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

138.39.12 Events

138.39.13 Cancel

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: The event to be called on the queue provided once cancellation has completed.
Notes: Once the cancel handler has been called, the update event will not fire again.
See also:

- 138.39.3 Cancel 18256

138.39.14 Update(path as NWPathMBS)

MBS MacOSX Plugin, Plugin Version: 24.1, Platforms: macOS, iOS, Targets: All.

Function: An event to be called whenever a path monitor has a new snapshot.
Notes: This will be called one or more times after calling Start.

138.40 class PacketSocketMBS

138.40.1 class PacketSocketMBS

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An extension to the socket class for easy sending packets through the net.
Notes: A packet is made like this:
+0: Size of data block
+4: 4 byte code string
+8: 4 byte for ID
+12: variable data.

The numbers are send in low endian format so this is crossplatform.

This socket subclass can be easily made in Xojo code itself. I did it for several of my applications, so if you like it decide between making it yourself or using this one which may even be faster, because it is written in C?

This class is only available in RB 4.0 or newer, because it crashes on RB 3.5.

As the strings are transferred as binary data you need to take care that you send text e.g. as UTF8 and restore this encoding setting on receiving.

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.
Subclass of the TCPSocket class.

138.40.2 Methods

138.40.3 SendPacket(data as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a packet.
Notes: Uses ID=0 and code="" as a shortcut for the long SendPacket call.
See also:

- 138.40.4 SendPacket(data as string,code as string) 18260
- 138.40.5 SendPacket(data as string,code as string,ID as Integer) 18260

138.40.4 SendPacket(data as string,code as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a packet.
Notes: Uses ID=0 as a shortcut for the long SendPacket call.
See also:

- 138.40.3 SendPacket(data as string) 18259
- 138.40.5 SendPacket(data as string,code as string,ID as Integer) 18260

138.40.5 SendPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a packet.
Notes: code and ID are optional.
Code is a 4 byte string to identify the content.
(e.g. "mess" for a message or "link" for a link.)
See also:

- 138.40.3 SendPacket(data as string) 18259
- 138.40.4 SendPacket(data as string,code as string) 18260

138.40.6 Events

138.40.7 ReceivedPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A packet was received.

138.41 class RAWSocketMBS

138.41.1 class RAWSocketMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for low level and raw sockets.
Example:

```
Var sock as RAWSocketMBS

// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

Notes: Similar to Xojo's built in Socket class, but more low level and with more options.
Raw sockets for things like PING may need root permissions.

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.

- 15.6, page 9: News

138.41.2 Methods

138.41.3 Accept(byref RemoteAddress as String, byref RemotePort as Integer, NewSocket as RAWSocketMBS) as RAWSocketMBS

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Listens for connections on this socket.
Notes: Lasterror is set.

138.41.4 AddressFamilyINet6 as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the address family constants.
Notes: IPv6
This is a method as value is different.
Mac 30, Windows 23 and Linux 10.

138.41.5 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given destination address.
Notes: Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where to bind against.
Structure of DestAddress is OS and address family dependent.
See also:

- 138.41.6 Bind(Port as Integer, IP as string = "") 18262

138.41.6 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given port.
Notes: If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
See also:

- 138.41.5 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 18262

138.41.7 CalcChecksum(data as ptr, ByteCount as Integer) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates checksum for IP header.

138.41.8 Close

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes socket.
Notes: Same as destructor.

138.41.9 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience method to connect.
Notes: Will parse IPv4/IPv6 or query DNS server for IP and connect.
Returns true on success.
See also:

- 138.41.10 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 18263

138.41.10 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to destination address.
Notes: lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where package is sent to.
Structure of DestAddress is OS and address family dependent.
See also:

- 138.41.9 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean 18263

138.41.11 Constructor(AddressFamily as Integer, SocketType as Integer, Protocol as Integer)

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
Var sock as RAWSocketMBS

// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

Notes: Please pass valid combination of OS supported sockets.
Raises exception if creation is not possible.
Raw socket requires root access.

138.41.12 Destructor

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Closes the socket.

138.41.13 htonl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 32bit Integer from network to host byte order.

138.41.14 htons(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 16bit Integer from network to host byte order.

138.41.15 inet_addr(IPv4 as String) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts IPv4 to numerical representation.

138.41.16 inet_ntoa(IPv4 as UInt32) as String

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts IPv4 to string representation.

138.41.17 Listen(BackLog as Integer = 2)

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts a new incoming connection.
Notes: Sockets uses the accept function to enable incoming connection attempts on a socket.
RemoteAddress and RemotePort are set to address of remote peer.

If you like to pass in your own subclass object for NewSocket, we can use that socket object. Otherwise, we make a new RAWSocketMBS object.

Lasterror is set.

138.41.18 ntohl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 32bit Integer from host to network byte order.

138.41.19 ntohs(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 16bit Integer from host to network byte order.

138.41.20 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Polls for activity.
Notes: Calls events if needed.
This is called automatically via timer by the plugin.

138.41.21 Read(ByteSize as Integer, peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read at maximum the given number of bytes in buffer.
Notes: Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

138.41.22 ReadAll(peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read all bytes in buffer.
Example:

```
Var sock as RAWSocketMBS
Var data as MemoryBlock = sock.ReadAll
if data = nil then
// nothing read
else

end if
```

Notes: Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

138.41.23 ReadDatagram(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a datagram.
Notes: If peek is true, the data is not removed from read buffer.
On error returns nil.

138.41.24 Send(Data as Ptr, DataByteSize as Integer, Flags as Integer = 0) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data.
Notes: Data is sent to address passed with Connect method.
Returns number of bytes sent.
Lasterror is set.

For TCP sockets and similar, which have a stream of data.

138.41.25 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes: Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.

For UDP sockets and similar.
See also:

- 138.41.26 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 18267
- 138.41.27 SendMessage(Data as string, IP as String, Port as Integer) as Integer 18268

138.41.26 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes: Please specify with port and IP where package is sent to.

Returns number of bytes sent.
Lasterror is set.

For UDP sockets and similar.
See also:

- 138.41.25 SendMessage(Data as DatagramMBS) as Integer 18267
- 138.41.27 SendMessage(Data as string, IP as String, Port as Integer) as Integer 18268

138.41.27 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data to target.
Notes: Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.

For UDP sockets and similar.
See also:

- 138.41.25 SendMessage(Data as DatagramMBS) as Integer 18267
- 138.41.26 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 18267

138.41.28 SendTo(Data as Ptr, DataByteSize as Integer, Flags as Integer, DestAddr as Ptr, DestAddrByteSize as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data to dest address.
Example:

```
Var sock as RawSocketMBS
Var Flags as integer
Var r as Integer

// port
Var port as integer = val(iPort.Text)
if port <= 0 or port >= 65535 then
break
MsgBox "Wrong port: "+iPort.Text
Return
end if
```

```
// dest address

'/*
'* Socket address, internet style. C declaration for Mac
'*/
'struct sockaddr_in {
'__uint8_t sin_len; // 1 byte, Mac only
'sa_family_t sin_family; // 1 byte
'in_port_t sin_port; // 2 byte in Network byte order
'struct in_addr sin_addr; // 4 byte
'char sin_zero [ 8 ] ; // 8 bytes filler

' } ;

// convert IPv4 from text to numeric value
Var IP as Uint32 = RAWSocketMBS.inet_addr(iIP.Text)

// create destination address. This is for Mac! Windows and Linux have different structures
Var dest as new MemoryBlock(16)
dest.UInt8Value(0) = dest.size
dest.UInt8Value(1) = RAWSocketMBS.AddressFamilyINet
dest.UInt16Value(2) = RAWSocketMBS.htons(port)
dest.UInt32Value(4) = IP

// message
Var m as string = ConvertEncoding(iMessage.Text, encodings.UTF8)
Var data as MemoryBlock = m

// send
r = sock.SendTo(data, data.size, Flags, dest, dest.size)
```

Notes: Please specify with port and IP in destAddress where package is sent to.
Returns number of bytes sent. Structure of DestAddress is OS and address family dependent.
Lasterror is set.

For UDP sockets and similar.

138.41.29 Properties

138.41.30 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address family of the socket.
Notes: This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFami-

lyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

138.41.31 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of bytes available for reading.
Notes: Lasterror is set.
(Read only property)

138.41.32 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether broadcasts are allowed.
Notes: Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

138.41.33 Handle as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal socket handle.
Notes: (Read and Write property)

138.41.34 IPHeaderIncluded as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the OS provides IP header or you.
Notes: Default is false.
Set to true when you include IP header in data.
(Read and Write property)

138.41.35 Lasterror as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: Platform dependent.
(Read and Write property)

138.41.36 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Notes: Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.
(Read only property)

138.41.37 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local port.
Notes: Lasterror is set.
Can be -1 if unknown.
(Read only property)

138.41.38 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket protocol.
Notes: The value from constructor.
(Read and Write property)

138.41.39 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.

Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.
(Read and Write property)

138.41.40 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows reuse of same port.
Notes: Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

138.41.41 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow reuse of same port and IP.
Notes: Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

138.41.42 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sending buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

138.41.43 SocketError as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native socket error.
Notes: Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

138.41.44 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket type.
Notes: The value from constructor.
(Read and Write property)

138.41.45 Events

138.41.46 DataAvailable

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event is called when new data is available.
Notes: Requires the socket to be bound.

138.41.47 Error

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called if socket is in error state.

138.41.48 SendComplete

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last write operation is done.

138.41.49 Constants

Address Families

Constant	Value	Description
AddressFamilyINet	2	IPv4

Protocols

Constant	Value	Description
ProtocolICMP	1	ICMP
ProtocolIP	0	IPv4
ProtocolIPv6	41	IPv6
ProtocolRaw	255	Raw protocol
ProtocolTCP	6	TCP
ProtocolUDP	17	UDP

Socket Types

Constant	Value	Description
SocketTypeDatagram	2	Datagram, e.g. UDP.
SocketTypeRaw	3	Raw socket, requires root permissions.
SocketTypeStream	1	Stream socket, e.g. TCP/IP.

138.42 class SSH2ChannelMBS

138.42.1 class SSH2ChannelMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH2 channel.
Blog Entries

- MBS Xojo Plugins, version 20.5pr3
- SSH Terminal example for Xojo
- SSH tunnel in Xojo

138.42.2 Methods

138.42.3 Close(Wait as Boolean = true)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close a channel.
Notes: Lasterror is set.
Close an active data channel. In practice this means sending an SSH_MSG_CLOSE packet to the remote host which serves as instruction that no further data will be sent to it. The remote host may still send data back until it sends its own close message in response. To wait for the remote end to close its connection as well, follow this command with WaitClosed.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

If wait parameter is true, the plugin does a loop to try close until it receives an okay (and not EAGAIN).

138.42.4 Constructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
See also:

- 138.42.5 Constructor(session as SSH2SessionMBS) 18276

138.42.5 Constructor(session as SSH2SessionMBS)

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create new channel.
Notes: May raise UnsupportedOperationException if channel creation fails.
See also:

- 138.42.4 Constructor 18275

138.42.6 Destructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

138.42.7 EOF as boolean

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Check a channel's EOF status.
Example:

```
Var s as string
Var channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
Var r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
// done?
MsgBox "Result: " + s
exit
end if
else
exit
end if
```

loop

Notes: Check if the remote host has sent an EOF status for the selected stream.
Returns true if the remote host has sent EOF, otherwise false.
Lasterror is set. On error, this function returns true.

138.42.8 Execute(command as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes something on the server.
Notes: Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.9 Flush

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush stream for this channel.
Notes: Lasterror is set.

138.42.10 FlushAll

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush all streams for this channel.
Notes: Lasterror is set.

138.42.11 FlushExtendedData

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush extended data stream for this channel.
Notes: Lasterror is set.

138.42.12 FlushStdErr

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush stderr stream for this channel.
Notes: Lasterror is set.

138.42.13 Read(length as Integer = 65536) as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read data from a channel stream.
Example:

```
Var s as string
Var channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
Var r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
// done?
MsgBox "Result: " + s
exit
end if
else
exit
end if
loop
```

Notes: Lasterror is set.
Attempt to read data from a stdout channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.
Version up to 18.2 return text marked as UTF-8, but in 18.3 we change to return text without encoding marking. So if you expect UTF-8, you can apply UTF-8 encoding with DefineEncoding.

138.42.14 ReadStdErr(length as Integer = 65536) as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read data from a channel stream.
Notes: Lasterror is set.
Attempt to read data from a stderr channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.15 RequestPTY(term as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request a PTY on an established channel.
Notes: Lasterror is set.
Note that this does not make sense for all channel types and may be ignored by the server despite returning success.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.16 SendEOF

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send EOF to remote server.
Notes: Lasterror is set.
Tell the remote host that no further data will be sent on the specified channel. Processes typically interpret this as a closed stdin descriptor.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.17 SetBlocking(blocking as boolean)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or clear blocking mode on channel.

138.42.18 SetEnv(name as string, value as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set an environment variable on the channel.
Notes: Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.19 Shell

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request a shell on a channel.
Notes: Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.20 WaitClosed

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait for the remote to close the channel.
Notes: Lasterror is set.

Enter a temporary blocking state until the remote host closes the named channel. Typically sent after Close in order to examine the exit status.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

138.42.21 WaitEOF

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait for the remote end to acknowledge an EOF request.
Notes: Lasterror is set.
May give kErrorEAgain error which means you should try again later.

138.42.22 Write(data as MemoryBlock) as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stdout stream.
Notes: Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 138.42.23 Write(text as string) as Integer 18281

138.42.23 Write(text as string) as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stdout stream.
Notes: Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 138.42.22 Write(data as MemoryBlock) as Integer 18280

138.42.24 WriteStdErr(data as MemoryBlock) as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stderr stream.
Notes: Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least

32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 138.42.25 WriteStdErr(text as string) as Integer 18282

138.42.25 WriteStdErr(text as string) as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stderr stream.
Notes: Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 138.42.24 WriteStdErr(data as MemoryBlock) as Integer 18281

138.42.26 Properties

138.42.27 ExitStatus as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote exit code.
Notes: Returns the exit code raised by the process running on the remote host at the other end of the named channel. Note that the exit status may not be available if the remote end has not yet set its status to closed.
Returns 0 on failure, otherwise the Exit Status reported by remote host.
(Read only property)

138.42.28 Handle as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

138.42.29 LastError as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: See SSH2SessionMBS.kError* constants.
(Read and Write property)

138.42.30 Session as SSH2SessionMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The session this channel belongs to.
Notes: (Read and Write property)

138.42.31 Tag as Variant

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: A property where you can store any value you like.
(Read and Write property)

138.42.32 Events

138.42.33 DataAvailable(Data as string, ErrorChannel as boolean)

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event for new data coming in.
Notes: For console app with DoEvents loop or for GUI apps.
Works starting with running Execute as that initializes the DataAvailable event.

ErrorChannel is true, if we got data from the stderr channel instead of stdout channel.

138.43 class SSH2ConnectFailedExceptionMBS

138.43.1 class SSH2ConnectFailedExceptionMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception for an error in the SSH2SessionMBS.Constructor.
Notes: Subclass of the RuntimeException class.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr5

138.44 class SSH2SessionMBS

138.44.1 class SSH2SessionMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH2 session.
Notes: For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.

138.44.2 Methods

138.44.3 Banner as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote banner.
Notes: Once the session has been setup and Handshake has completed successfully, this function can be used to get the server id from the banner each server presents.

138.44.4 CipherNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = SSH2SessionMBS.CipherNames
Var DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

138.44.5 ConfigureKeepAlive(WantReply as Boolean = true, Interval as Integer = 2)

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configures keep alive probes.
Notes: Set how often keepalive messages should be sent.
WantReply indicates whether the keepalive messages should request a response from the server.
Interval is number of seconds that can pass without any I/O, use 0 to disable keepalives. To avoid some busy-loop corner-cases, if you specify an interval of 1 it will be treated as 2.

138.44.6 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using a new socket.
Notes: The plugin creates a new socket, connects to the given IP&Port and than creates a new session for it.
Lasterror is set.
Please check if Handle property is non zero after constructor finishes.

Timeout defines timeout for connection in seconds. While waiting, the plugin yields time to other threads.
If timeout is zero, the connection will not yield and take up to the default TCP/IP timeout.

IPv4, IPv6 address or domain name with version 18.3 or newer.
See also:

- 138.44.7 Constructor(socket as TCPSocket) 18288

- 138.44.8 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 18288

138.44.7 Constructor(socket as TCPSocket)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using an existing socket.
Notes: Initializes a new session.
socket: The socket to use. The plugin keeps reference to this socket in socket property.

You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
If you connect the xojo socket in a loop on a thread, be sure to call poll method of socket, so it processes events like connecting. In main thread with timer, you would get this automatically.
See also:

- 138.44.6 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 18287
- 138.44.8 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 18288

138.44.8 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using an existing socket.
Notes: Initializes a new session.
socketHandle: The socket to use. Can be TCPSocket's handle property for a Xojo socket. Or a socket connected via declares.
You can put the socket in the socket property to keep it alive as long as session is in memory.

Set CloseSocketLater = true if you pass a socket which can be closed in destructor. For Xojo socket, pass false as Xojo closes socket later.
You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
See also:

- 138.44.6 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 18287
- 138.44.7 Constructor(socket as TCPSocket) 18288

138.44.9 Destructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

138.44.10 DigestNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
Var CipherNames() as string = SSH2SessionMBS.CipherNames
Var DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

138.44.11 Disconnect(description as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate transport layer.
Notes: Lasterror is set.
description: Human readable reason for disconnection.
See also:

- 138.44.12 Disconnect(reason as Integer, description as string, lang as string = "") 18289

138.44.12 Disconnect(reason as Integer, description as string, lang as string = "")

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate transport layer.
Notes: Lasterror is set.

reason: One of the Disconnect Reason constants.
description: Human readable reason for disconnection.
lang: Localization string describing the langauge/encoding of the description provided.
See also:

- 138.44.11 Disconnect(description as string) 18289

138.44.13 HostKey(byref Type as Integer) as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote key.

138.44.14 HostKeyHash(HashType as Integer) as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return a hash of the remote host's key.
Notes: HashType: kHostKeyHashSHA1 or kHostKeyHashMD5.
Returns the computed digest of the remote system's hostkey. The length of the returned string is hash_type specific (e.g. 16 bytes for MD5, 20 bytes for SHA1).
Computed hostkey hash value, or empty string if the information is not available (either the session has not yet been started up, or the requested hash algorithm was not available). The hash consists of raw binary bytes, not hex digits, so it is not directly printable.

138.44.15 OpenDirectTCPIPChannel(host as string, port as integer, sourceHost as string = "127.0.0.1", sourcePort as Integer = 22) as SSH2ChannelMBS

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tunnel a TCP connection through an SSH session.
Notes: host: Third party host to connect to using the SSH host as a proxy.
port: Port on third party host to connect to.
SourceHost: Host to tell the SSH server the connection originated on.
SourcePort: Port to tell the SSH server the connection originated from.

Tunnel a TCP/IP connection through the SSH transport via the remote host to a third party. Communication from the client to the SSH server remains encrypted, communication from the server to the 3rd party host travels in cleartext.

This is not a replacement for ssh in command line with -L option.

Returns a newly allocated channel object, or nil on errors.

138.44.16 OpenSession as SSH2ChannelMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Establish a generic session channel.
Notes: Lasterror is set.
Returns nil if the session start fails.

138.44.17 SessionFlag(Flag as Integer, Value as boolean)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set a session flag.
Notes: See kFlag* constants.
Lasterror is set.

138.44.18 SessionHandshake

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform the SSH handshake.
Notes: Lasterror is set.

138.44.19 SetBanner(Banner as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the SSH prococol banner for the local client.
Notes: Set the banner that will be sent to the remote host when the SSH session is started with Handshake.
This is optional; a banner corresponding to the protocol and libssh2 version will be sent by default.
Lasterror is set.

138.44.20 SetMethodPreference(methodType as Integer, Pref as string) as Boolean

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set preferred key exchange method.
Example:

```
// set preferences for key exchange method:
Var r as Boolean = s.SetMethodPreference(SSH2SessionMBS.kMethodKEX, "diffie-hellman-group-exchange-sha256")
```

Notes: methodType: One of the Method Type constants.
Pref: Coma delimited list of preferred methods to use with the most preferred listed first and the least

preferred listed last. If a method is listed which is not supported by libssh2 it will be ignored and not sent to the remote host during protocol negotiation.

Set preferred methods to be negotiated. These preferences must be set prior to calling SessionHandshake, as they are used during the protocol initiation phase.

Return true on success or false on failure. Lasterror is set. Lasterror is set to LIBSSH2_ERROR_EAGAIN (-37) when it would otherwise block. While LIBSSH2_ERROR_EAGAIN is a negative number, it isn't really a failure per se.

138.44.21 SupportedAlgorithms(methodType as Integer) as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get list of supported algorithms.
Example:

```
Var s as new SSH2SessionMBS("localhost")

Var KeyExchange() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodKEX)
Var HostKey() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodHostKey)
Var CryptCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptCS)
Var CryptSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptSC)
Var MacCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacCS)
Var MacSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacSC)
Var CompCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompCS)
Var CompSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompSC)
Var LangCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangCS)
Var LangSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangSC)

Break
```

Notes: Method type: see kMethod* constants.

Get a list of supported algorithms for the given methodType. The methodType parameter is equivalent to methodType in SetMethodPreference.

In order to get a list of all supported compression algorithms, SessionFlag(SSH2SessionMBS.kFlagCompress, true) must be called before calling this function, otherwise only "none" will be returned.

On success, returns array with algorithms
Lasterror is set with error code.

138.44.22 UserAuthKeyboardInteractive(UserName as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session using keyboard-interactive authentication.
Notes: username: Name of user to attempt keyboard-interactive authentication for.
Lasterror is set.
Calls KeyboardCallback callback to query input from user.

138.44.23 UserAuthList(username as string) as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: List supported authentication methods.
Notes: username: Username which will be used while authenticating. Note that most server implementations do not permit attempting authentication with different usernames between requests. Therefore this must be the same username you will use on later userauth calls.

Send a SSH_USERAUTH_NONE request to the remote host. Unless the remote host is configured to accept none as a viable authentication scheme (unlikely), it will return SSH_USERAUTH_FAILURE along with a listing of what authentication schemes it does support. In the unlikely event that none authentication succeeds, this method with return NULL. This case may be distinguished from a failing case by examining Authenticated.

138.44.24 UserAuthPassword(UserName as string, Password as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with username and password.
Notes: username: Name of user to attempt plain password authentication for.
password: Password to use for authenticating username.

Attempt basic password authentication. Note that many SSH servers which appear to support ordinary password authentication actually have it disabled and use Keyboard Interactive authentication (routed via PAM or another authentication backed) instead.
Lasterror is set.

138.44.25 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from a file.
Notes: Lasterror is set.
username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 138.44.26 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string) 18294

138.44.26 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from a file.
Notes: Lasterror is set.
username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 138.44.25 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string) 18293

138.44.27 UserAuthPublicKeyFromMemory(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS CURL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from memory
Notes: This function allows to authenticate a session with a public key read from memory.
Lasterror is set.

username - Remote user name to authenticate as.
publickeydata - Buffer containing the contents of a public key file. Optional.

privatekeydata - Buffer containing the contents of a private key file.
passphrase - Passphrase to use when decoding private key file.

Keys must have LF as line ending, not CR.

Attempt public key authentication using a PEM encoded private key file stored in memory.

138.44.28 Version as string

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version for the SSH library.
Example:

MsgBox SSH2SessionMBS.Version

138.44.29 WaitSocket(TimeOut as Double = 0.1)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Waits on the socket for sending or receiving.
Notes: Default used to be 10 seconds, but that may be to much, so since v22.3 the value can be customized and is now 1/10th of a second.

138.44.30 Properties

138.44.31 Authenticated as Boolean

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return authentication status.
Notes: Indicates whether or not the named session has been successfully authenticated.
Returns true if authenticated and false if not.
(Read only property)

138.44.32 Blocking as Boolean

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blocking mode on session.

Notes: blocking: Set to a non-zero value to make the channel block, or zero to make it non-blocking.

Set or clear blocking mode on the selected on the session. This will instantly affect any channels associated with this session. If a read is performed on a session with no data currently available, a blocking session will wait for data to arrive and return what it receives. A non-blocking session will return immediately with an empty buffer. If a write is performed on a session with no room for more data, a blocking session will wait for room. A non-blocking session will return immediately without writing anything.
(Read and Write property)

138.44.33 Handle as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

138.44.34 LastErrNo as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the most recent error number.
Notes: Returns a numeric error code corresponding to the the Error Code constants.
(Read only property)

138.44.35 LastError as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

138.44.36 Socket as TCPSocket

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket value.
Notes: This is set by constructor if you base the session on an existing session.
But you can assign a socket here if you like.
(Read and Write property)

138.44.37 Tag as Variant

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: A property where you can store any value you like.
(Read and Write property)

138.44.38 TimeOut as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timeout for blocking functions.
Notes: In milliseconds.
(Read and Write property)

138.44.39 Events

138.44.40 KeyboardCallback(Name as string, Instruction as string, PromptCount as Integer, Prompts() as SSH2UserAuthKeyboardInteractivePromptMBS, responses() as SSH2UserAuthKeyboardInteractiveResponseMBS)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Event to ask for user input on a UserAuthKeyboardInteractive run.
Notes: You can ask user for password, e.g. with a modal dialog.
You find prompt text in SSH2UserAuthKeyboardInteractivePromptMBS object and place answer in SSH2UserAuthKeyboardInteractiveResponseMBS objects.

138.44.41 Constants

Error Codes

Constant	Value	Description
kErrorAgentProtocol	-42	Invalid agent protocol.
kErrorAlloc	-6	Out of memory.
kErrorAuthenticationFailed	-18	Authentication failed.
kErrorBadSocket	-45	Bad socket handle.
kErrorBadUse	-39	Bad use.
kErrorBannerRecv	-2	Failed to receive banner.
kErrorBannerSend	-3	Failed to send banner.
kErrorBufferTooSmall	-38	Memory buffer is too small.
kErrorChannelClosed	-26	Channel is already closed.
kErrorChannelEofSent	-27	Chanel sent EOF.
kErrorChannelFailure	-21	Generic error on a channel.
kErrorChannelOutoforder	-20	Channel commands out of order.
kErrorChannelPacketExceeded	-25	Channel packet exceeded.
kErrorChannelRequestDenied	-22	Channel request denied.
kErrorChannelUnknown	-23	Unknown channel.
kErrorChannelWindowExceeded	-24	Channel window exceeded.
kErrorChannelWindowFull	-47	Channel window is full.
kErrorCompress	-40	Compression error.
kErrorDecrypt	-12	Error with decryption.
kErrorEagain	-37	Please try again later.
kErrorEncrypt	-44	Error on encrypting.
kErrorFile	-16	File IO error.
kErrorHostkeyInit	-10	Failed to init host key.
kErrorHostkeySign	-11	Failed to sign host key.
kErrorInval	-34	Input value error.
kErrorInvalidMac	-4	Invalid MAC address.
kErrorInvalidPollType	-35	Invalid poll type.
kErrorKexFailure	-5	Key exchange failed.
kErrorKeyExchangeFailure	-8	Key exchange failed.
kErrorKeyfileAuthFailed	-48	Authorization with key file failed.
kErrorKnownHosts	-46	Unknown host.
kErrorMethodNone	-17	No method.
kErrorMethodNotSupported	-33	Method not supported.
kErrorNone	0	No error.
kErrorOutOfBoundary	-41	Out of Boundary.
kErrorPasswordExpired	-15	Password expired.
kErrorProto	-14	Protocol error.
kErrorPublickeyProtocol	-36	Publickey protocol failed.
kErrorPublickeyUnverified	-19	Publickey is not verified.
kErrorRequestDenied	-32	Request denied.
kErrorScpProtocol	-28	Error with SCP protocol.
kErrorSftpProtocol	-31	Error with SFTP protocol.
kErrorSocketDisconnect	-13	Socket got disconnected.
kErrorSocketNone	-1	No socket error.
kErrorSocketRecv	-43	Socket receive failed.
kErrorSocketSend	-7	Socket send failed.
kErrorSocketTimeout	-30	Socket timeout.
kErrorTimeout	-9	Timeout.
kErrorZlib	-29	Error with zlib (Compression).

Flags

Constant	Value	Description
kFlagCompress	2	Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option. If set - before the connection negotiation is performed - libssh2 will try to negotiate compression enabling for this connection. By default libssh2 will not attempt to use compression.
kFlagSigPipe	1	Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option. If set, libssh2 will not attempt to block SIGPIPEs but will let them trigger from the underlying socket layer.

Hash Type

Constant	Value	Description
kHostKeyHashMD5	1	MD5
kHostKeyHashSHA1	2	SHA1
kHostKeyHashSHA256	3	SHA256

Method Preferences

Constant	Value	Description
kMethodCompCS	6	Compression method. e.g. zlib, zlib@openssh.com, none
kMethodCompSC	7	Compression method. e.g. zlib, zlib@openssh.com, none
kMethodCryptCS	2	Crypt Method. e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc.
kMethodCryptSC	3	Crypt Method. e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc
kMethodHostKey	1	Host key method. e.g. ssh-rsa, ssh-dss
kMethodKEX	0	Key Exchange Method. e.g. diffie-hellman-group-exchange-sha256, diffie-hellman-group-exchange-sha1, diffie-hellman-group14-sha1 or diffie-hellman-group1-sha1.
kMethodLangCS	8	Language.
kMethodLangSC	9	Language.
kMethodMacCS	4	MAC method (hash) e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com
kMethodMacSC	5	MAC method (hash) e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com

138.45 class SSH2TunnelMBS

138.45.1 class SSH2TunnelMBS

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH tunnel.
Notes: The MBS Plugin can spin of a new preemptive thread to run a tunnel to forward a SSH connection from local socket to remote server via SSH tunnel.
This works well for database access with MySQL.
By using our own thread, we are not blocking or blocked by your Xojo code.

The tunnel allows currently one connection through it, e.g. run one tunnel per MySQL connection to go through the tunnel. If you need multiple tunnels, please create multiple SSH tunnels.

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client

entitlement.

- Presentation from Xojo Developer Conference 2019 in Miami.

138.45.2 Methods

138.45.3 Constructor(session as SSH2SessionMBS)

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Please pass connected SSH session.

138.45.4 Destructor

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

138.45.5 Run

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the thread with the tunnel.

138.45.6 Properties

138.45.7 BytesReceived as Int64

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes received.
Notes: (Read only property)

138.45.8 BytesSent as Int64

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes sent.
Notes: (Read only property)

138.45.9 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to cancel tunnel.
Notes: This property can be set to request end of the thread.
(Read and Write property)

138.45.10 Connected as Boolean

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether tunnel is connected and transfers data.
Notes: Returns true if connected or false if not.
(Read only property)

138.45.11 KeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to sent keep-alive packets.
Example:

```
Var tunnel as SSH2TunnelMBS // your tunnel

// avoid timeing out in Socket and SSH layers
```

tunnel.KeepAlive = True
session.ConfigureKeepAlive

Notes: If set to true, TCP keep alive probes will be sent to avoid TCP/IP timeouts.
Set to false (default behavior) to disable keep alive probes.

You may also need to use ConfigureKeepAlive on the SSH2SessionMBS class.
(Read and Write property)

138.45.12 LocalAddress as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local address to use.
Notes: Defines where we wait for a connection to forward.
IPv4 or IPv6 address.
(Read and Write property)

138.45.13 LocalPort as Integer

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local port to use.
Notes: (Read and Write property)

138.45.14 Messages as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Log messages.
Notes: Filled by thread to tell you about errors.
(Read only property)

138.45.15 RemoteAddress as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote address to use.
Notes: When connecting through tunnel this address is used from server to connect to.
IPv4 or IPv6 address.

(Read and Write property)

138.45.16 RemotePort as Integer

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote port to use.
Notes: When connecting through tunnel this port is used from server to connect to.
(Read and Write property)

138.45.17 Running as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether tunnel is running.
Notes: True if running, false if not.
(Read only property)

138.45.18 Session as SSH2SessionMBS

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The session used for the tunnel.
Notes: (Read only property)

138.46 class SSH2UserAuthKeyboardInteractivePromptMBS

138.46.1 class SSH2UserAuthKeyboardInteractivePromptMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an interactive keyboard authentication prompt.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.46.2 Methods

138.46.3 Constructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

138.46.4 Destructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

138.46.5 Properties

138.46.6 Echo as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The echo flag.
Notes: (not sure what this is)
(Read and Write property)

138.46.7 Length as Integer

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the text.
Notes: (Read and Write property)

138.46.8 Text as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text message.
Notes: (Read and Write property)

138.47 class SSH2UserAuthKeyboardInteractiveResponseMBS

138.47.1 class SSH2UserAuthKeyboardInteractiveResponseMBS

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a response with interactive keyboard login.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.47.2 Methods

138.47.3 Constructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

138.47.4 Destructor

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destrutor.

138.47.5 Properties

138.47.6 Text as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The response text.
Notes: Usually a password.
(Read and Write property)

138.48 class TCPSocket

138.48.1 class TCPSocket

Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The Socket class in Xojo which is the superclass of the PacketSocketMBS class.

138.49 class TXTRecordMBS

138.49.1 class TXTRecordMBS

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: The class to represent a DNS-SD TXT record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.Bytes // show complete record
MsgBox t.Value("Hello") // lookup value
```

Notes: The constructor creates an empty TXTRecord where you can add values using TXTRecordSetValue.

138.49.2 Methods

138.49.3 Bytes as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve a copy of to the raw bytes within a TXTRecord.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

Notes: Returns a string with the raw bytes inside the TXTRecord which you can pass directly to DNSServiceRegisterMBS.Register() or to DNSServiceRegisterMBS.UpdateRecord().

138.49.4 ContainsKey(key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine if a given TXT Record contains a specified key.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

```
if t.ContainsKey("Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if t.ContainsKey("hallo") then
MsgBox "hallo found ->bug."
else
MsgBox "hallo not found."
end if
```

Notes: key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 138.49.5 ContainsKey(txtRecord as string, key as string) as boolean 18310

138.49.5 ContainsKey(txtRecord as string, key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine if a given TXT Record contains a specified key.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

Var s as string = t.Bytes // copy record to string

// now search in that string:
if TXTRecordMBS.ContainsKey(s, "Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if TXTRecordMBS.ContainsKey(s, "hallo") then
MsgBox "hallo found ->bug."
else
MsgBox "hallo not found."
end if
```

Notes: txtRecord: The txt record to search in as a string.
key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 138.49.4 ContainsKey(key as string) as boolean 18309

138.49.6 Count as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the number of keys stored in the TXT Record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Count)
```

See also:

- 138.49.7 Count(txtRecord as string) as Integer 18311

138.49.7 Count(txtRecord as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the number of keys stored in the TXT Record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

Var s as string = t.Bytes // copy record

// now count in that record
MsgBox str(TXTRecordMBS.Count(s))
```

See also:

- 138.49.6 Count as Integer 18311

138.49.8 KeyAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

Notes: index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 138.49.9 KeyAtIndex(txtRecord as string, index as Integer) as string 18312

138.49.9 KeyAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

Var s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

Notes: txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

• 138.49.8 KeyAtIndex(index as Integer) as string 18312

138.49.10 Length as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine the length of the raw bytes within a TXTRecord.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Length) // shows 42
```

138.49.11 RemoveValue(key as string)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Removes a key from a TXTRecordRef. The "key" must be an ASCII string which exists in the TXTRecord.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

t.RemoveValue "Hello2"

MsgBox t.Bytes
```

Notes: key: A key name which exists in the TXTRecord.

Lasterror is kErrorNoError on success or kErrorNoSuchKey if the "key" does not exist in the TXTRecord.

138.49.12 SetValue(key as string, value as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Adds a key (optionally with value) to a TXTRecordRef.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"
```

Notes: If the "key" already exists in the TXTRecord, then the current value will be replaced with the new value.

Keys may exist in four states with respect to a given TXT record:

- Absent (key does not appear at all)
- Present with no value ("key" appears alone)
- Present with empty value ("key=" appears in TXT record)
- Present with non-empty value ("key=value" appears in TXT record)

For more details refer to "Data Syntax for DNS-SD TXT Records" in

http://files.dns-sd.org/draft-cheshire-dnsext-dns-sd.txt

key: A string which only contains printable ASCII values (&h20-&h7E), excluding '=' (&h3D). Keys should be 8 characters or less.
value: Any binary value. For values that represent textual data, UTF-8 is STRONGLY recommended.

Returns kErrorNoError on success. Returns kErrorInvalid if the "key" string contains illegal characters. Returns kErrorNoMemory if adding this key would exceed the available storage.

The plugin currently does not create keys with empty value. If you need that, please email us.

138.49.13 Value(key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve the value for a given key from a TXT Record.
Example:

```
Var t as new TXTRecordMBS
```

```
call t.SetValue "Hello", "World"
MsgBox t.Value("Hello") // lookup value
```

Notes: key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 138.49.14 Value(txtRecord as string, key as string) as string 18315

138.49.14 Value(txtRecord as string, key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve the value for a given key from a TXT Record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

Var s as string = t.bytes
MsgBox TXTRecordMBS.Value(s, "Hello") // lookup value
```

Notes: txtRecord: Pointer to the received TXT Record bytes.
key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 138.49.13 Value(key as string) as string 18314

138.49.15 ValueAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

```
MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

Notes: index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling ValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 138.49.16 ValueAtIndex(txtRecord as string, index as Integer) as string 18316

138.49.16 ValueAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
Var t as new TXTRecordMBS

call t.SetValue "Hello", "World"

Var s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

Notes: txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling GetValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 138.49.15 ValueAtIndex(index as Integer) as string 18315

138.50 class UDPSocketMBS

138.50.1 class UDPSocketMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for UDP sockets.
Notes: Similar to Xojo's built in UDPSocket class, but more low level and with more options.

For macOS and iOS, your application may need to have the NSLocalNetworkUsageDescription in info.plist for local network access and your sandboxed application may need need the com.apple.security.network.client entitlement.

138.50.2 Methods

138.50.3 AddMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds this socket to a multicast group.
Notes: Internally this uses IPPROTO_IP/IP_ADD_MEMBERSHIP option.

Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

138.50.4 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given port.
Notes: If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.

138.50.5 Constructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

138.50.6 Destructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Closes the socket.

138.50.7 DropMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes this socket from a multicast group.
Notes: Internally this uses IPPROTO_IP/IP_DROP_MEMBERSHIP option.
Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

138.50.8 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Polls for activity.
Notes: Calls events if needed.
This is called automatically via timer by the plugin.

138.50.9 Read(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a datagram.
Notes: If peek is true, the data is not removed from read buffer.
On error returns nil.

138.50.10 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes: Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 138.50.11 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 18319
- 138.50.12 SendMessage(Data as string, IP as String, Port as Integer) as Integer 18320

138.50.11 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes: Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 138.50.10 SendMessage(Data as DatagramMBS) as Integer 18319
- 138.50.12 SendMessage(Data as string, IP as String, Port as Integer) as Integer 18320

138.50.12 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes: Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 138.50.10 SendMessage(Data as DatagramMBS) as Integer 18319
- 138.50.11 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 18319

138.50.13 Properties

138.50.14 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address family of the socket.
Notes: This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFamilyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

138.50.15 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of bytes available for reading.
Notes: Lasterror is set.
(Read only property)

138.50.16 BindAddress as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The IP used for bind operation.
Notes: This is set by Bind on success.
(Read and Write property)

138.50.17 BindPort as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port used for bind operation.
Notes: This is set by Bind on success.
(Read and Write property)

138.50.18 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether broadcasts are allowed.
Notes: Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

138.50.19 Handle as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal socket handle.
Notes: (Read and Write property)

138.50.20 Lasterror as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: Platform dependent.
(Read and Write property)

138.50.21 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Notes: Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.

(Read only property)

138.50.22 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local port.
Notes: Lasterror is set.
Can be -1 if unknown.
(Read only property)

138.50.23 MulticastInterface as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interface to use for multicast.
Notes: Internally this uses IPPROTO_IP/IP_MULTICAST_IF option.
Lasterror is set.

Assign empty string to use all interfaces.
May return 0.0.0.0 to indicate all interfaces.
(Read and Write property)

138.50.24 MulticastLoop as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether multicast packets are also sent to the sending socket.
Notes: Internally this uses IPPROTO_IP/IP_MULTICAST_LOOP option.
Lasterror is set.
(Read and Write property)

138.50.25 MulticastTimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multicast time to live value.
Notes: Internally this uses IPPROTO_IP/IP_MULTICAST_TTL option.
Lasterror is set.
Range from 0 to 255.

(Read and Write property)

138.50.26 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket protocol.
Notes: Is ProtocolUDP (17) for UDP sockets.
(Read and Write property)

138.50.27 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.
(Read and Write property)

138.50.28 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows reuse of same port.
Notes: Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

138.50.29 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow reuse of same port and IP.

Notes: Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

138.50.30 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sending buffer size.
Notes: The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

138.50.31 SocketError as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native socket error.
Notes: Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

138.50.32 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket type.
Notes: Is SocketTypeDatagram (2) for UDP sockets.
(Read and Write property)

138.50.33 TimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time to live value.
Notes: Internally this uses IPPROTO_IP/IP_TTL option.
Lasterror is set.
Range from 0 to 255.

(Read and Write property)

138.50.34 Type as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Socket type.
Notes: Always 2 as this is a datagram socket.
Internally this uses SOL_SOCKET/SO_TYPE option.
Lasterror is set.
(Read only property)

138.50.35 TypeOfService as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of service value.
Notes: Works only on BSD Sockets.

Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

Internally this uses IPPROTO_IP/IP_TOS option.
(May not work on Windows.

Lasterror is set.
(Read and Write property)

138.50.36 Events

138.50.37 DataAvailable

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event is called when new data is available.
Notes: Requires the socket to be bound.

138.50.38 Error

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called if socket is in error state.

138.50.39 SendComplete

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last write operation is done.

138.51 class WindowsDNSRecordAAAAMBS

138.51.1 class WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS IPv6 (AAAA) record.
Notes: Be aware that IPv6 is not available on Windows XP and older.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.51.2 Methods

138.51.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordAAAAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.51.4 Properties

138.51.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address in a human readable format.
Notes: (Read and Write property)

138.51.6 RawAddress as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw address as a 16byte string.
Notes: (Read and Write property)

138.52 class WindowsDNSRecordAMBS

138.52.1 class WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS address (A) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.52.2 Methods

138.52.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.52.4 Properties

138.52.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IPv4 address as a string.
Notes: (Read and Write property)

138.52.6 IPAddress as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw address as an integer.
Notes: (Read and Write property)

138.53 class WindowsDNSRecordMBS

138.53.1 class WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for DNS query results on Windows.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.53.2 Methods

138.53.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.53.4 Query(name as string, type as Integer, options as Integer = 0) as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a DNS query on Windows.
Notes: The DnsQuery function type is the generic query interface to the DNS namespace, and provides application developers with a DNS query resolution interface.

name: a string that represents the name of the owner of the record set that is queried.
type: A value that represents the RR DNS Record Type that is queried.
Options: A value that contains a combination of kDNSQuery* constants.

Returns the record chain on success.

Applications that call the DnsQuery function build a query using a fully-qualified DNS name and Resource Record (RR) type, and set query options depending on the type of service desired. When the kDNSQuery-Standard option is set, DNS uses the resolver cache, queries first with UDP, then retries with TCP if the response is truncated, and requests that the server to perform recursive resolution on behalf of the client to resolve the query.

Note When calling one of the DnsQuery function types, be aware that a DNS server may return multiple records in response to a query. A computer that is multihomed, for example, will receive multiple A records for the same IP address. The caller must use as many of the returned records as necessary.

Consider the following scenario, in which multiple returned records require additional activity on behalf of the application: A Query function call is made for a multihomed computer and the application finds that the address associated with the first A record is not responding. The application should then attempt to use other IP addresses specified in the (additional) A records returned from the Query function call.

138.53.5 Properties

138.53.6 A as WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address record.
Notes: (Read and Write property)

138.53.7 AAAA as WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IPv6 address record.
Notes: (Read and Write property)

138.53.8 AFSDB as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.9 CharSet as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value specifies the character set used in the associated function call.
Notes: (Read and Write property)

138.53.10 CNAME as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.11 DataLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length, in bytes, of Data.
Notes: (Read and Write property)

138.53.12 HINFO as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.13 ISDN as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.14 MB as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.15 MD as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.16 MF as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.17 MG as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.18 MINFO as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.19 MR as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.20 MX as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.21 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A pointer to a string that represents the domain name of the record set.
Notes: (Read and Write property)

138.53.22 NextRecord as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The next record in the answer.
Notes: (Read and Write property)

138.53.23 NS as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.24 Null as WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.25 RawData as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: the RAW data of this record.
Notes: For debugging.
(Read and Write property)

138.53.26 RP as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.27 RT as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.28 Section as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value specifies the section of interest returned from the DnsQuery function call.
Notes: (Read and Write property)

138.53.29 SOA as WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.30 TTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DNS RR's Time To Live value (TTL), in seconds.
Notes: (Read and Write property)

138.53.31 TXT as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.32 Type as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DNS record type for this record.
Notes: If type is kDNSTypeA, the A property is filled.
(Read and Write property)

138.53.33 X25 as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

138.53.34 Constants

Constants

Constant	Value	Description
kCharSetAnsi	3	One of the constants for the CharSet property. The character set is ANSI.
kCharSetUnicode	1	One of the constants for the CharSet property. The character set is Unicode.
kCharSetUnknown	0	One of the constants for the CharSet property. The character set is unknown.
kCharSetUtf8	2	One of the constants for the CharSet property. The character set is UTF8.
kDNSClassAll	&h00ff	One of the DNS classes in native byte order (little endian on Win
kDNSClassAny	&h00ff	One of the DNS classes in native byte order (little endian on Win
kDNSClassCHAOS	&h0003	One of the DNS classes in native byte order (little endian on Win
kDNSClassCSNET	&h0002	One of the DNS classes in native byte order (little endian on Win
kDNSClassHESIOD	&h0004	One of the DNS classes in native byte order (little endian on Win
kDNSClassInternet	&h0001	One of the DNS classes in native byte order (little endian on Win
kDNSClassNone	&h00fe	One of the DNS classes in native byte order (little endian on Win
kDNSQueryAcceptTruncatedResponse	&h00000001	One of the possible flags for the Query function. Returns truncated results. Does not retry under TCP.
kDNSQueryBypassCache	&h00000008	One of the possible flags for the Query function. Bypasses the resolver cache on the lookup.
kDNSQueryDontResetTTLValues	&h00100000	One of the possible flags for the Query function. If set, and if the response contains multiple records, records are the TTL corresponding to the minimum value TTL from among When this option is set, "Do not change the TTL of individual rec returned record set is not modified.
kDNSQueryMulticastOnly	&h00000400	One of the possible flags for the Query function. Prevents the query from using DNS and uses only Local Link Mul Resolution (LLMNR). Windows Vista and Windows Server 2008 or later.: This value is
kDNSQueryNoHostsFile	&h00000040	One of the possible flags for the Query function. Prevents the DNS query from consulting the HOSTS file. Windows 2000 Server and Windows 2000 Professional: This valu ported.
kDNSQueryNoLocalName	&h00000020	One of the possible flags for the Query function. Directs DNS to ignore the local name. Windows 2000 Server and Windows 2000 Professional: This valu ported.
kDNSQueryNoMulticast	&h00000800	One of the possible flags for the Query function.
kDNSQueryNoNetBT	&h00000080	One of the possible flags for the Query function. Prevents the DNS query from using NetBT for resolution. Windows 2000 Server and Windows 2000 Professional: This valu ported.
kDNSQueryNoRecursion	&h00000004	One of the possible flags for the Query function. Directs the DNS server to perform an iterative query (specificall DNS server not to perform recursive resolution to resolve the que
kDNSQueryNoWireQuery	&h00000010	One of the possible flags for the Query function. Directs DNS to perform a query on the local cache only.
kDNSQueryReserved	&hff000000	One of the possible flags for the Query function. Reserved.
kDNSQueryReturnMessage	&h00000200	One of the possible flags for the Query function. Directs DNS to return the entire DNS response message. Windows 2000 Server and Windows 2000 Professional: This valu ported.
kDNSQueryStandard	&h00000000	One of the possible flags for the Query function. Standard query.
kDNSQueryTreatAsFQDN	&h00001000	One of the possible flags for the Query function. Prevents the DNS response from attaching suffixes to the submit a name resolution process
kDNSQueryUseTCPOnly	&h00000002	One of the possible flags for the Query function.

138.54 class WindowsDNSRecordMInfoMBS

138.54.1 class WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS mail information (MINFO) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.54.2 Methods

138.54.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordMInfoMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.54.4 Properties

138.54.5 NameErrorsMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the FQDN of the mailbox to receive error messages related to the mailing list.
Notes: (Read and Write property)

138.54.6 NameMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the fully qualified domain name (FQDN) of the mailbox responsible for the mailing list or mailbox specified in the record's owner name.
Notes: (Read and Write property)

138.55 class WindowsDNSRecordMXMBS

138.55.1 class WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS mail exchanger (MX) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.55.2 Methods

138.55.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordMXMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.55.4 Properties

138.55.5 NameExchange as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the fully qualified domain name (FQDN) of the host willing to act as a mail exchange.
Notes: (Read and Write property)

138.55.6 Preference as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A preference given to this resource record among others of the same owner. Lower values are preferred.
Notes: (Read and Write property)

138.56 class WindowsDNSRecordNullMBS

138.56.1 class WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a NULL data DNS resource record
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.56.2 Methods

138.56.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordNullMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.56.4 Properties

138.56.5 ByteCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes represented in Data.
Notes: (Read and Write property)

138.56.6 Data as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw data as a string.
Notes: (Read and Write property)

138.57 class WindowsDNSRecordPTRMBS

138.57.1 class WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS pointer (PTR) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.57.2 Methods

138.57.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordPTRMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.57.4 Properties

138.57.5 NameHost as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The named host.
Notes: (Read and Write property)

138.58 class WindowsDNSRecordSOAMBS

138.58.1 class WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS start of authority (SOA) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.58.2 Methods

138.58.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordSOAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.58.4 Properties

138.58.5 DefaultTTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower limit on the time, in seconds, that a DNS server or caching resolver are allowed to cache any resource records (RR) from the zone to which this record belongs.
Notes: (Read and Write property)

138.58.6 Expire as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before an unresponsive zone is no longer authoritative.
Notes: (Read and Write property)

138.58.7 NameAdministrator as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the name of the responsible party for the zone to which the record belongs.
Notes: (Read and Write property)

138.58.8 NamePrimaryServer as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the name of the authoritative DNS server for the zone to which the record belongs.
Notes: (Read and Write property)

138.58.9 Refresh as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before the zone containing this record should be refreshed.
Notes: (Read and Write property)

138.58.10 Retry as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before retrying a failed refresh of the zone to which this record belongs.
Notes: (Read and Write property)

138.58.11 SerialNo as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the SOA record.
Notes: (Read and Write property)

138.59 class WindowsDNSRecordTXTMBS

138.59.1 class WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS text (TXT) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.59.2 Methods

138.59.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: This constructor makes sure you don't create useless WindowsDNSRecordTXTMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

138.59.4 Strings as String()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of strings representing the descriptive text of the TXT resource record.

138.59.5 Properties

138.59.6 StringCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of strings represented in Strings array.
Notes: (Read and Write property)

138.60 class WindowsEthernetAdapterMBS

138.60.1 class WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: A class for the properties of an ethernet adapter.

138.60.2 Methods

138.60.3 Gateway(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns one of the IP address of the default gateway for this adapter.
Notes: Index goes from 0 to GatewayGount-1.

138.60.4 IP(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns one of the IP addresses associated with this adapter.
Notes: Index goes from 0 to IPcount-1.

138.60.5 Properties

138.60.6 AdapterName as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Name of the adapter.
Notes: (Read and Write property)

138.60.7 Address as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Hardware address for the adapter.
Notes: (Read and Write property)

138.60.8 CurrentIpAddress as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The current IP from within the IP list.
Notes: This field is currently normally nil, but in the future it may point to the current IP inside the IP list.
But currently on Windows 2000 it seems to be always nil.
(Read and Write property)

138.60.9 Description as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Description for the adapter.
Notes: (Read and Write property)

138.60.10 DhcpEnabled as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Specifies whether dynamic host configuration protocol (DHCP) is enabled for this adapter.
Notes: (Read and Write property)

138.60.11 DhcpServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the DHCP server for this adapter.
Notes: (Read and Write property)

138.60.12 Gatewaycount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How many gateway IPs are allocated for this adapter.
Notes: (Read and Write property)

138.60.13 HaveWins as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Specifies whether this adapter uses Windows Internet Name Service (WINS).
Notes: (Read and Write property)

138.60.14 Index as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Adapter index.
Notes: (Read and Write property)

138.60.15 IPcount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How many IPs are allocated for this adapter.
Notes: (Read and Write property)

138.60.16 LeaseExpires as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Time when the current DHCP lease expires.
Notes: (Read and Write property)

138.60.17 LeaseObtained as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Time when the current DHCP lease was obtained.
Notes: (Read and Write property)

138.60.18 PrimaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the primary WINS server.
Notes: (Read and Write property)

138.60.19 SecondaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the secondary WINS server.
Notes: (Read and Write property)

138.60.20 Type as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Adapter type.
Notes: The type must be of the following values:

MIB_IF_TYPE_OTHER	1
MIB_IF_TYPE_ETHERNET	6
MIB_IF_TYPE_TOKENRING	9
MIB_IF_TYPE_FDDI	15
MIB_IF_TYPE_PPP	23
MIB_IF_TYPE_LOOPBACK	24
MIB_IF_TYPE_SLIP	28

(Read and Write property)

138.61 class WindowsEthernetMBS

138.61.1 class WindowsEthernetMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: A list of the Windows Ethernet Interfaces.
Notes: Requires Windows 98 or 2000 or newer.
Reports count=0 on Windows 95 and NT 4.0.

Only activate adapters are listed.

138.61.2 Methods

138.61.3 Item(index as Integer) as WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns the Ethernet Adapter object for the given index.
Notes: Index goes from 0 to count-1.

138.61.4 Update

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Updates the list.
Notes: Calls the Destructor and than the Constructor so the list is completly rebuilt.

138.61.5 Properties

138.61.6 Count as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How much ethernet adapters are available.
Notes: Note that there may be dummy or virtual adapters.
(Read and Write property)

138.62 class WindowsIPAddressMBS

138.62.1 class WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: An IP address.

138.62.2 Properties

138.62.3 IP as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The IP as a string.
Notes: Maximum 15 bytes long.
e.g. "192.168.0.1"
(Read and Write property)

138.62.4 Mask as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The mask for the IP.
Notes: e.g. "255.255.255.0"
(Read and Write property)

138.63 class WindowsProxyMBS

138.63.1 class WindowsProxyMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to query the current windows proxy settings.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- Need Proxy Settings?

138.63.2 Properties

138.63.3 ByPass as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy
Notes: Example values:
"testserver:1234 apple.de <local>"
or
"testserver3:1234 testserver4:1234 testserver1:1234 testserver2:1234 apple.de <local>"
(Read and Write property)

138.63.4 Proxy as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current proxy setting.
Notes: Example values:
"testserver:1234"
or
"https=testserver2:1234 http=testserver1:1234 gopher=testserver4:1234 ftp=testserver3:1234"
(Read and Write property)

138.63.5 UsingProxy as Boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a proxy is in use.
Notes: (Read and Write property)

138.64 class WindowsQOSMBS

138.64.1 class WindowsQOSMBS

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Quality Windows Audio/Video Experience (qWAVE).
Notes: Quality Windows Audio/Video Experience (qWAVE) is the next generation Quality of Service (QOS) platform introduced in Windows Vista.
qWAVE provides new features focused on streaming multimedia and real-time content over variable bandwidth networks. These features include the following.

- Auto-discovery of end-to-end QOS compatibility.
- End-to-end bandwidth estimation of maximum link capacity (bottleneck bandwidth) and real-time available bandwidth.
- Intelligent packet prioritization.
- Congestion notification.
- Flow shaping.
- Distributed admission control, including caching to improve performance and minimize latency.

Requires Windows 6 (Vista).

138.64.2 Methods

138.64.3 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a socket to a flow.
Notes: Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.
After calling this function adaptive A/V applications should call the SetFlowRate function to affect network traffic.
A non-adaptive application either does not adapt to changing network characteristics or is sending traffic to an endpoint that does not support adaptive capabilities as indicated by ERROR_NOT_SUPPORTED.
Non-adaptive applications, or adaptive applications making non-adaptive flows, should call this function with the QOSNonAdaptiveFlow flag. After calling this function A/V applications should call the setOutgoingDSCPValue, setOutgoingRate or setTrafficType function with a Operation. They do not need to be called unless shaping is desired.

138.64.4 AddSocketToFlow(Socket as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a socket to a flow.
Notes: Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.

- 138.64.3 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean 18351

138.64.5 Constructor

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: This function initializes the QOS subsystem.
Notes: On success Handle property is not zero.
Lasterror is set.

Every process intending to use qWAVE must first call Constructor.
If a machine enters a power save mode that interrupts connectivity such as sleep or standby, existing and active network experiments such as QOSStartTrackingClient must be reinitiated. This recreation of the flow mirrors the cleanup and creation activities also necessary for existing sockets. A new handle must be created, and the flow must be recreated and readmitted.

138.64.6 getFlowFundamentals(FlowID as Integer, byref BottleneckBandwidthSet as boolean, byref BottleneckBandwidth as UInt64, byref AvailableBandwidthSet as boolean, byref AvailableBandwidth as UInt64, byref RTTSet as boolean, byref RTT as UInt32, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries flow fundamentals.
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.
BottleneckBandwidthSet: This Boolean value is set to true if the BottleneckBandwidth field contains a value.
BottleneckBandwidth: Indicates the maximum end-to-end link capacity between the source and sink device, in bits.
AvailableBandwidthSet: Set to true if the AvailableBandwidth field contains a value.
AvailableBandwidth: Indicates how much bandwidth is available for submitting traffic on the end-to-end network path between the source and sink device, in bits.
RTTSet: Set to true if the RTT field contains a value.
RTT: Measures the round-trip time between the source and sink device, in microseconds.

Lasterror is set. Returns true on success or false on failure.

138.64.7 getOutgoingRate(FlowID as Integer, byref Bandwidth as UInt64, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries flow rate.
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: will contain a UINT64 value that indicates the flow rate specified when requesting the contract, in bits per second.
Flags: Optional, can be QOSQueryFlowFresh.
Lasterror is set. Returns true on success or false on failure.

138.64.8 getPacketPriority(FlowID as Integer, byref ConformantDSCPValue as Integer, byref NonConformantDSCPValue as Integer, byref ConformantL2Value as Integer, byref NonConformantL2Value as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries packet priorities.
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.

ConformantDSCPValue: Differential Services Code Point (DSCP) mark used for flow traffic that conforms to the specified flow rate.
NonConformantDSCPValue: DSCP marking used for flow traffic that exceeds the specified flow rate. Non-conformant DSCP values are only applicable only if value is QOSUseNonConformantMarkings.
ConformantL2Value: Layer-2 (L2) tag used for flow traffic that conforms to the specified flow rate. L2 tags will not be added to packets if the end-to-end path between source and sink does not support them.
NonConformantL2Value: L2 tag used for flow traffic that exceeds the specified flow rate. Non-conformant L2 values are only applicable if value is QOSUseNonConformantMarkings.

Lasterror is set. Returns true on success or false on failure.

138.64.9 RemoveAllSocketsFromFlow(FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
Notes: FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

138.64.10 RemoveSocketFromFlow(socketHandle as Integer, FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
Notes: Socket: Socket to be removed from the flow.
Only flows created with the QOSNonAdaptiveFlow flag may have multiple sockets added to the same flow. By passing the Socket parameter in this call, each socket can be removed individually. If the Socket parameter is not passed, the entire flow will be destroyed. If only one socket was attached to the flow, passing this socket as a parameter to this function and passing 0 as a socket are equivalent calls.
FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

138.64.11 setOutgoingDSCPValue(FlowID as Integer, OutgoingDSCPValue as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the outgoing DSCP value.
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.

138.64.12 setOutgoingRate(FlowID as Integer, Bandwidth as UInt64, ShapingBehavior as Integer, Reason as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets a new outgoing rate.
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: The rate at which data should be sent, in units of bits per second.
Note Traffic on the network is measured at the IP level, and not at the application level. The rate that is specified should account for the IP and protocol headers.
ShapingBehavior: A shaping constant that defines the shaping behavior of the flow.
Reason: A QOSFlowRate* constant that indicates the reason for a flow rate change.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

138.64.13 setTrafficType(FlowID as Integer, TrafficType as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the type of traffic
Notes: FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
TrafficType: One of the traffic type constants.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

138.64.14 StartTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartTrackingClient function notifies the QOS subsystem of the existence of a new client.
Notes: Calling this function increases the likelihood that the QOS subsystem will have gathered sufficient information on the network path to assist when calling QOSSetFlow to set the flow.
Note This call is not required to add a flow with the QOSAddSocketToFlow function although it is highly recommended. Not calling this function may require network experiments to be started during the QOSSetFlow call and can result in QOSSetFlow failing with ERROR_NETWORK_BUSY on initial use.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. Any port number specified in the sockaddr structure will be ignored.
Flags: Reserved for future use. Must be set to 0.

On receipt of a QOSStartTrackingClient call the QoS subsystem begins gathering information about the client such as the QoS capabilities and available bandwidth on the end-to-end path.
An application should call this function as soon as it becomes aware of a client device that may need QoS flow. For example this function should be called when a media player device first connects to a media server application.
Network experiments performed by QOSStartTrackingClient do not introduce noteworthy load on the network even if no stream is started for a long period of time. The qWAVE service dynamically adjusts experiment traffic based on QoS subsystem activity.
Link Layer Topology Discovery (LLTD) must be implemented on the sink PC or device for this function to work.

Lasterror is set. Returns true on success or false on failure.

138.64.15 StopTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StopTrackingClient function notifies the QoS subsystem to stop tracking a client that has previously used the StartTrackingClient function.
Notes: If a flow is currently in progress, this function will not affect it.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. A port number is not required and will be ignored.
Flags: Reserved for future use.

Lasterror is set. Returns true on success or false on failure.

138.64.16 Properties

138.64.17 Handle as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

138.64.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

138.64.19 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The generic window error message for the error in lasterror property.
Notes: (Read and Write property)

138.64.20 Constants

Flow Reasons

Constant	Value	Description
QOSFlowRateCongestion	2	Indicates that the flow has changed due to congestion.
QOSFlowRateContentChange	1	Indicates that the content of a flow has changed.
QOSFlowRateHigherContentEncoding	3	Indicates that the user has caused the flow to change.
QOSFlowRateNotApplicable	0	Indicates that there has not been a change in the flow.
QOSFlowRateUserCaused	4	Indicates that the user has caused the flow to change.

Flags

Constant	Value	Description
QOSNonAdaptiveFlow	2	If specified, the QoS subsystem will not gather data about the network path for this flow. As a result, functions which rely on bandwidth estimation techniques will not be available. For example, this would block QOSQueryFlow with an Operation value of QOSQueryFlowFundamentals and QOSNotifyFlow with an Operation value of QOSNotifyCongested, QOSNotifyUncongested, and QOSNotifyAvailable.
QOSQueryFlowFresh	1	The QOS subsystem will only return fresh, not cached, data. If fresh data is unavailable, it will try to obtain such data, at the expense of possibly taking more time. If this is not possible, the call will fail with the error code ERROR_RETRY. This flag is only applicable when the Operation parameter is set to QOSQueryFlowFundamentals.

Shaping Behavior

Constant	Value	Description
QOSShapeAndMark	1	Indicates that the Windows Scheduler will be used to enforce the requeste flow rate. Data packets exceeding the rate are delayed accordingly. Packet receive conformant priority values.
QOSShapeOnly	0	Indicates that the Windows packet scheduler (Pacer) will be used to enforc the requested flow rate. Data packets that exceed the rate are delayed un til appropriate in order to maintain the specified flow rate. If the networ supports prioritization, packets will always receive conformant priority value when QOSShapeFlow is specified.
QOSUseNonConformantMarkings	2	Indicates that the flow rate requested will not be enforced. Data packets tha would exceed the flow rate will receive a priority that indicates they are non conformant. This may lead to lost and reordered packets.

Traffic Types

Constant	Value	Description
QOSTrafficTypeAudioVideo	3	Flow traffic has a network priority higher than QOSTrafficTypeExcellentEffort, yet lower than QOSTrafficTypeVoice. This traffic type should be used for A/V streaming scenarios such as MPEG2 streaming. Sent traffic will contain a DSCP mark with a value of 0x28 and an 802.1p tag with a value of 5.
QOSTrafficTypeBackground	1	Flow traffic has a network priority lower than that of QOSTrafficTypeBestEffort. This traffic type could be used for traffic of an application doing data backup. Sent traffic will contain a DSCP mark with a value of 0x08 and an 802.1p tag with a value of 2.
QOSTrafficTypeBestEffort	0	Flow traffic has the same network priority as regular traffic not associated with QOS. This traffic type is the same as not specifying priority, and as a result, the DSCP mark and 802.1p tag are not added to sent traffic.
QOSTrafficTypeControl	5	Flow traffic has the highest network priority. This traffic type should only be used for the most critical of data. For example, it may be used for data carrying user inputs. Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.
QOSTrafficTypeExcellentEffort	2	Flow traffic has a network priority higher than QOSTrafficTypeBestEffort, yet lower than QOSTrafficTypeAudioVideo. This traffic type should be used for data traffic that is more important than normal end-user scenarios, such as email. Sent traffic will contain a DSCP mark with value of 0x28 and 802.1p tag with a value of 5.
QOSTrafficTypeVoice	4	Flow traffic has a network priority higher than QOSTrafficTypeAudioVideo, yet lower than QOSTrafficTypeControl. This traffic type should be used for realtime voice streams such as VOIP. Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.

138.65 class WinHTTPClientAutoProxyOptionsMBS

138.65.1 class WinHTTPClientAutoProxyOptionsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WinHTTPClientAutoProxyOptionsMBS class is used to indicate to the WinHttpGetProxyForURL function whether to specify the URL of the Proxy Auto-Configuration (PAC) file or to automatically locate the URL with DHCP or DNS queries to the network.
Notes: see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384123(v=vs.85).aspx

138.65.2 Methods

138.65.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

138.65.4 Properties

138.65.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The URL for the config URL.
Notes: If Flags includes the kAutoProxyConfigURL flag, the AutoConfigUrl contains the URL of the proxy auto-configuration (PAC) file.
If Flags does not include the kAutoProxyConfigURL flag, then AutoConfigUrl must be "".
(Read and Write property)

138.65.6 AutoDetectFlags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags for auto detecting.
Notes: If Flags includes the kAutoProxyAutoDetect flag, then AutoDetectFlags specifies what protocols are to be used to locate the PAC file. If both the DHCP and DNS auto detect flags are specified, then DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.
If Flags does not include the kAutoProxyAutoDetect flag, then AutoDetectFlags must be zero.

Value	Meaning
kAutoDetectTypeDHCP	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

(Read and Write property)

138.65.7 AutoLogonIfChallenged as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether the client's domain credentials should be automatically sent in response to an NTLM or Negotiate Authentication challenge when WinHTTP requests the PAC file.
Notes: If this flag is true, credentials should automatically be sent in response to an authentication challenge. If this flag is false and authentication is required to download the PAC file, the WinHttpGetProxyForUrl function fails.
(Read and Write property)

138.65.8 Flags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for detecting proxy.
Notes: (Read and Write property)

138.65.9 Constants

Auto Detect Types

Constant	Value	Description
kAutoDetectTypeDHCP	1	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	2	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

Proxy Flags

Constant	Value	Description
kAutoProxyAutoDetect	1	Attempt to automatically discover the URL of the PAC file using both DHCP and DNS queries to the local network.
kAutoProxyConfigURL	2	Download the PAC file from the URL specified by AutoConfigUrl in the WinHTTPClientAutoProxyOptionsMBS class.

138.66 class WinHTTPClientCurrentUserIEProxyConfigMBS

138.66.1 class WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Internet Explorer proxy configuration information.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384250(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.66.2 Methods

138.66.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

138.66.4 Properties

138.66.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The auto-configuration URL.
Notes: The auto-configuration URL if the Internet Explorer proxy configuration for the current user specifies "Use automatic proxy configuration".
(Read and Write property)

138.66.6 AutoDetect as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to auto detect proxy settings.
Notes: If true, indicates that the Internet Explorer proxy configuration for the current user specifies "automatically detect settings".
(Read and Write property)

138.66.7 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains the proxy URL if the Internet Explorer proxy configuration for the current user specifies "use a proxy server".
Notes: (Read and Write property)

138.66.8 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Optional proxy by-pass server list.
Notes: (Read and Write property)

138.67 class WinHTTPClientMBS

138.67.1 class WinHTTPClientMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Windows to do http requests.
Notes: The plugin only implements proxy related functions.
But this class could be extended to work like HTTPSocket.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

138.67.2 Methods

138.67.3 Close as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Closes the session.

138.67.4 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

138.67.5 CrackUrl(URL as string, Flags as Integer = 0) as WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Separates a URL into its component parts such as host name and path.
Notes: URL: the canonical URL to separate. WinHttpCrackUrl does not check this URL for validity or correct format before attempting to crack it.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384092(v=vs.85).aspx

138.67.6 DetectAutoProxyConfigUrl(AutoDetectFlags as Integer, byref AutoConfigUrl as string) as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Finds the URL for the Proxy Auto-Configuration (PAC) file.
Notes: This function reports the URL of the PAC file, but it does not download the file.

AutoDetectFlags: A data type that specifies what protocols to use to locate the PAC file. If both the DHCP and DNS auto detect flags are set, DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.

Value	Meaning
kAutoDetectTypeDHCP	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

AutoConfigUrl: String that contains the configuration URL that receives the proxy data.

Returns true if successful, or false otherwise. For extended error information, call LastError. Among the error codes returned are the following.

WinHTTP implements the Web Proxy Auto-Discovery (WPAD) protocol, often referred to as autoproxy. For more information about well-known locations, see the Discovery Process section of the WPAD protocol document.
Note that because the DetectAutoProxyConfigUrl function takes time to complete its operation, it should not be called from a UI thread.

138.67.7 GetDefaultProxyConfiguration as WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the default WinHTTP proxy configuration from the registry.
Notes: Returns the default proxy configuration.

138.67.8 GetIEProxyConfigForCurrentUser as WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the Internet Explorer proxy configuration for the current user.

Notes: Queries the Internet Explorer proxy settings for the current active network connection (for example, LAN, dial-up, or VPN connection).

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384096(v=vs.85).aspx

138.67.9 GetProxyForHost(URL as string, Host as string, byref proxy as string, byref proxyPort as string, AutoConfigURL as string = "") as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Queries the proxy for a host.
Notes: This is an universal functions using InternetGetProxyInfo, DetectAutoProxyUrl and InternetQueryOption.

URL: The target URL.
Host: The hostname of the target server.

Returns true on success and sets proxy and port. Returns false on failure.
AutoConfigURL is only used on first call instead of a configured auto config URL in Internet Explorer.

138.67.10 GetProxyForUrl(URL as string, AutoProxyOptions as WinHTTPClientAutoProxyOptionsMBS, byref ProxyInfo as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the proxy data for the specified URL.
Notes: Url: Contains the URL of the HTTP request that the application is preparing to send.
AutoProxyOptions: Specifies the auto-proxy options to use.
ProxyInfo: Receives the proxy setting.

If the function succeeds, the function returns true.
If the function fails, it returns false. Lasterror is set.

This function implements the Web Proxy Auto-Discovery (WPAD) protocol for automatically configuring the proxy settings for an HTTP request. The WPAD protocol downloads a Proxy Auto-Configuration (PAC) file, which is a script that identifies the proxy server to use for a given target URL. PAC files are typically deployed by the IT department within a corporate network environment. The URL of the PAC file can either be specified explicitly or GetProxyForUrl can be instructed to automatically discover the location of the PAC file on the local network.

GetProxyForUrl supports only ECMAScript-based PAC files.
GetProxyForUrl must be called on a per-URL basis, because the PAC file can return a different proxy server for different URLs. This is useful because the PAC file enables an IT department to implement proxy server load balancing by mapping (hashing) the target URL (specified by the lpcwszUrl parameter) to a certain proxy in a proxy server array.
GetProxyForUrl caches the autoproxy URL and the autoproxy script when auto-discovery is specified in the dwFlags member of the pAutoProxyOptions structure. For more information, see Autoproxy Cache.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384097(v=vs.85).aspx

138.67.11 InternetGetProxyInfo(URL as string, Host as string) as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves proxy data for accessing specified resources.
Notes: This function can only be called by dynamically linking to "JSProxy.dll" (plugin loads this for you).
For better autoproxy support, use HTTP Services (WinHTTP) version 5.1 instead.

Url: Secifies the URL of the target HTTP resource.
HostName: Specifies the host name of the target URL.

Returns the URL of the proxy to use in an HTTP request for the specified resource.
Returns empty string on any error.

138.67.12 Open(UserAgent as string, AccessType as Integer, ProxyName as string = "", ProxyByPass as string = "") as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Initializes an application's use of the WinINet functions.
Notes: lUserAgent: Specifies the name of the application or entity calling the WinINet functions. This name is used as the user agent in the HTTP protocol.
AccessType: Type of access required. This parameter can be one of the following values.

ProxyName: String that specifies the name of the proxy server(s) to use when proxy access is specified by setting dwAccessType to INTERNET_OPEN_TYPE_PROXY. Do not use an empty string, because InternetOpen will use it as the proxy name. The WinINet functions recognize only CERN type proxies (HTTP only) and the TIS FTP gateway (FTP only). If Microsoft Internet Explorer is installed, these functions also support SOCKS proxies. FTP requests can be made through a CERN type proxy either by

Value	Meaning
INTERNET_OPEN_TYPE_DIRECT	Resolves all host names locally.
INTERNET_OPEN_TYPE_PRECONFIG	Retrieves the proxy or direct configuration from the registry.
INTERNET_OPEN_TYPE_PRECONFIG_WITH_NO_AUTOPROXY	Retrieves the proxy or direct configuration from the registry and prevents the use of a startup Microsoft JScript or Internet Setup (INS) file.
INTERNET_OPEN_TYPE_PROXY	Passes requests to the proxy unless a proxy bypass list is supplied and the name to be resolved bypasses the proxy. In this case, the function uses INTERNET_OPEN_TYPE_DIRECT.

changing them to an HTTP request or by using InternetOpenUrl. If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL. For more information about listing proxy servers, see the Listing Proxy Servers section of Enabling Internet Functionality.
ProxyBypass: Specifies an optional list of host names or IP addresses, or both, that should not be routed through the proxy when dwAccessType is set to INTERNET_OPEN_TYPE_PROXY. The list can contain wildcards. Do not use an empty string, because InternetOpen will use it as the proxy bypass list. If this parameter specifies the "<local>" macro, the function bypasses the proxy for any host name that does not contain a period.
By default, WinINet will bypass the proxy for requests that use the host names "localhost", "loopback", "127.0.0.1", or " [::1] ". This behavior exists because a remote proxy server typically will not resolve these addresses properly.
Internet Explorer 9: You can remove the local computer from the proxy bypass list using the "<-loopback>" macro.
If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL.
Flags: Options. This parameter can be a combination of the following values.

Value	Meaning
INTERNET_FLAG_ASYNC	Makes only asynchronous requests on handles descended from the handle returned from this function.
INTERNET_FLAG_FROM_CACHE	Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned.
INTERNET_FLAG_OFFLINE	Identical to INTERNET_FLAG_FROM_CACHE. Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned.

Returns a valid handle that the application passes to subsequent WinINet functions. If Open fails, it returns false. To retrieve a specific error message, call GetLastError.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa385096(v=vs.85).aspx

138.67.13 SetDefaultProxyConfiguration(info as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Sets the default WinHTTP proxy configuration in the registry.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384113(v=vs.85).aspx

SetDefaultProxyConfiguration changes the proxy configuration set by ProxyCfg.exe.
The default proxy configuration set by this function can be overridden for an existing WinHTTP session by calling SetOption and specifying the OptionProxy flag. The default proxy configuration can be overridden for a new session by specifying the configuration with the WinHttpOpen function.
The dwAccessType member of the WinHTTPClientProxyInfoMBS structure pointed to by pProxyInfo should be set to kAccessTypeNamedProxy if a proxy is specified. Otherwise, it should be set to kAccessTypeDefaultProxy.
Any new sessions created after calling this function use the new default proxy configuration.
Even when WinHTTP is used in asynchronous mode (that is, when WINHTTP_FLAG_ASYNC has been set in WinHttpOpen), this function operates synchronously. The return value indicates success or failure. To get extended error information, call GetLastError.
Note For Windows XP and Windows 2000, see the Run-Time Requirements section of the WinHTTP start page.

138.67.14 Properties

138.67.15 Handle as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference.
Notes: This is a HINTERNET type.
(Read and Write property)

138.67.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error.
Notes: see also error list:
http://msdn.microsoft.com/en-us/library/aa383770(VS.85).aspx
(Read and Write property)

138.67.17 LasterrorString as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

138.67.18 OptionConnectTimeOut as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the connect timeout.
Notes: Lasterror is set.

Sets or retrieves an unsigned long integer value that contains the time-out value, in milliseconds. Setting this option to infinite (-1) will disable this timer.
If a TCP connection request takes longer than this time-out value, the request is canceled. The default timeout is 60 seconds. When you are attempting to connect to multiple IP addresses for a single host (a multihomed host), the timeout limit is for each individual connection.
(Read and Write property)

138.67.19 OptionProxyPassword as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the proxy password.
Notes: Sets or retrieves a string value that contains the password used to access the proxy.
Lasterror is set.
(Read and Write property)

138.67.20 OptionProxyUsername as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the proxy user name.
Notes: Sets or retrieves a string value that contains the user name used to access the proxy.
Lasterror is set.
(Read and Write property)

138.67.21 Constants

Proxy Access Types

Constant	Value	Description
kAccessTypeDefaultProxy	0	Applies only when setting proxy information.
kAccessTypeNamedProxy	3	Internet accessed using a proxy.
kAccessTypeNoProxy	1	Internet accessed through a direct connection.

Autodetect Type Flags

Constant	Value	Description
kAutoDetectTypeDHCP	1	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	2	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

Scheme Types

Constant	Value	Description
kInternetSchemeHTTP	1	HTTP scheme.
kInternetSchemeHTTPS	2	HTTPS scheme.

138.68 class WinHTTPClientProxyInfoMBS

138.68.1 class WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the session or default proxy configuration.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa383912(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.68.2 Methods

138.68.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

138.68.4 Properties

138.68.5 AccessType as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The access type.
Notes: Can be kAccessTypeDefaultProxy, kAccessTypeNamedProxy or kAccessTypeNoProxy.
(Read and Write property)

138.68.6 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy server list.
Notes: (Read and Write property)

138.68.7 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy bypass list.
Notes: (Read and Write property)

138.68.8 Constants

Proxy Access Types

Constant	Value	Description
kAccessTypeDefaultProxy	0	Applies only when setting proxy information.
kAccessTypeNamedProxy	3	Internet accessed using a proxy.
kAccessTypeNoProxy	1	Internet accessed through a direct connection.

138.69 class WinHTTPClientURLComponentsMBS

138.69.1 class WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class containing the constituent parts of an URL.
Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384078(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.69.2 Methods

138.69.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

138.69.4 Properties

138.69.5 ExtraInfo as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The extra information, for example, ?something or #something.
Notes: (Read and Write property)

138.69.6 ExtraInfoLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the extra information, in characters.
Notes: (Read and Write property)

138.69.7 HostName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The host name.
Notes: (Read and Write property)

138.69.8 HostNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the host name, in characters.
Notes: (Read and Write property)

138.69.9 Password as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes: (Read and Write property)

138.69.10 PasswordLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the password, in characters.
Notes: (Read and Write property)

138.69.11 Port as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Port number.
Notes: (Read and Write property)

138.69.12 Scheme as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The scheme name.
Notes: (Read and Write property)

138.69.13 SchemeID as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internet protocol scheme.
Notes: Normally 1 for HTTP and 2 for HTTPS.
(Read and Write property)

138.69.14 SchemeLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the scheme name, in characters.
Notes: (Read and Write property)

138.69.15 UrlPath as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The URL path.
Notes: (Read and Write property)

138.69.16 UrlPathLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the URL path, in characters.
Notes: (Read and Write property)

138.69.17 UserName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes: (Read and Write property)

138.69.18 UserNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the user name, in characters.
Notes: (Read and Write property)

Chapter 139

Nikon Cameras

139.1 class NikonCapInfoMBS

139.1.1 class NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for Capability Information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

139.1.2 Methods

139.1.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

139.1.4 Properties

139.1.5 Description as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The description of this capability.
Notes: (Read only property)

139.1.6 ID as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The ID of this property.
Notes: See eNkMAIDCapability in Nikon's documentation.
(Read only property)

139.1.7 Operations as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The supported operations for this capability.
Notes: See eNkCapOperations in Nikon's documentation.
(Read only property)

139.1.8 OperationsString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The operation value as a string for displaying.
Notes: (Read only property)

139.1.9 Type as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The type of this capability.
Notes: See eNkMAIDCababilityType in Nikon's documentation.
(Read only property)

139.1.10 TypeString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The type value as a string for displaying.
Notes: (Read only property)

139.1.11 Visibility as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The visibility of this capability.
Notes: See eNkCapVisibility in Nikon's documentation.
(Read only property)

139.1.12 VisibilityString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The visibility value as a string for displaying.
Notes: (Read only property)

139.2 class NikonFileInfoMBS

139.2.1 class NikonFileInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the File Data Delivery Structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

139.2.2 Methods

139.2.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

139.2.4 Properties

139.2.5 DiskFile as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the file is delivered on disk.
Notes: (Read and Write property)

139.2.6 FileDataType as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: One of eNkMAIDFileDataTypes.
Notes: Possible values:

kNkMAIDFileDataType_NotSpecified	0
kNkMAIDFileDataType_JPEG	1
kNkMAIDFileDataType_TIFF	2
kNkMAIDFileDataType_FlashPix	3
kNkMAIDFileDataType_NIF	4
kNkMAIDFileDataType_QuickTime	5
kNkMAIDFileDataType_UserType	&h100

(Read and Write property)

139.2.7 Length as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bytes in this delivery.
Notes: (Read and Write property)

139.2.8 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the object should be removed.
Notes: (Read and Write property)

139.2.9 Start as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Index of starting byte (0-based)
Notes: (Read and Write property)

139.2.10 TotalLength as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Total number of bytes to be transferred.
Notes: (Read and Write property)

139.3 class NikonImageInfoMBS

139.3.1 class NikonImageInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the Image Data Delivery structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

139.3.2 Methods

139.3.3 Bits(index as Integer) as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bits per plane per pixel.
Notes: Index from 0 to 3.

139.3.4 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

139.3.5 Properties

139.3.6 ColorSpace as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The colorspace.
Notes: Possible values:

(Read and Write property)

139.3.7 Plane as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

kNkMAIDColorSpace_LineArt	0
kNkMAIDColorSpace_Grey	1
kNkMAIDColorSpace_RGB	2
kNkMAIDColorSpace_sRGB	3
kNkMAIDColorSpace_CMYK	4
kNkMAIDColorSpace_Lab	5
kNkMAIDColorSpace_LCH	6
kNkMAIDColorSpace_AppleRGB	7
kNkMAIDColorSpace_ColorMatchRGB	8
kNkMAIDColorSpace_NTSCRGB	9
kNkMAIDColorSpace_BruceRGB	10
kNkMAIDColorSpace_AdobeRGB	11
kNkMAIDColorSpace_CIERGB	12
kNkMAIDColorSpace_AdobeWideRGB	13
kNkMAIDColorSpace_AppleRGB_Compensated	14

Function: The plane configuration.
Notes: (Read and Write property)

139.3.8 Rect as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The rectangle.
Notes: (Read and Write property)

139.3.9 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the object should be removed.
Notes: (Read and Write property)

139.3.10 RowBytes as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bytes per row of pixels.
Notes: (Read and Write property)

139.3.11 TotalPixels as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Total size of image to be transfered.
Notes: (Read and Write property)

139.4 class NikonLiveImageMBS

139.4.1 class NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the live image data structure.
Notes: As there are 5 variants of the data structure for the different camera SDKs, some fields may not be filled for the camera you have.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr10

139.4.2 Methods

139.4.3 AFframes(index as UInt32) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The auto focus frames array.
Notes: Index from 0 to 34 (fixed to 0 for D5100)
Area of the AF frame size and the AF frame center coordinates for thirty-five persons

139.4.4 Properties

139.4.5 AFAreaIndex as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Autofocus area index.
Notes: From 0 to 34 (fixed to 0 for D5100)
(Read and Write property)

139.4.6 AFstate as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: AF mode status of the face detection system.
Notes: 0: The face detection system is not set to AF.
1: The face detection system is set to AF.
(Read and Write property)

139.4.7 Aperture as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The aperture value.
Notes: Aperture = F number*100
Only for type 2 and 3.
(Read only property)

139.4.8 AutoFocusHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the auto focus area.
Notes: (Read and Write property)

139.4.9 AutoFocusWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the auto focus area.
Notes: (Read and Write property)

139.4.10 AutoFocusX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate of the auto focus area.
Notes: (Read and Write property)

139.4.11 AutoFocusY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate of the auto focus area.
Notes: (Read and Write property)

139.4.12 CountDownTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Countdown time.
Notes: Countdown every one second starting from 3600 (one hour); countdown starting from thirty seconds with a rise in temperature.
(Read and Write property)

139.4.13 DirectionOfRotation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Rotation direction.
Notes: (Read and Write property)

139.4.14 DisplayCenterX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Display center coordinate.
Notes: (Read and Write property)

139.4.15 DisplayCenterY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Display center coordinate.
Notes: (Read and Write property)

139.4.16 DisplayHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the display area size.
Notes: (Read and Write property)

139.4.17 DisplayWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the display area size.
Notes: (Read and Write property)

139.4.18 FaceDetectionCount as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The number of persons whose faces are detected by the system.
Notes: From 0 to 35 (Thirty-five is the maximum number of persons for D5100.)
(Read and Write property)

139.4.19 FacePriorityAFMode as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Face priority AF mode.
Notes: 0: Face priority AF is not active.
1: Face priority AF is active.
(Read and Write property)

139.4.20 FocusDriveState as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Focus driving status.
Notes: 0: Not driving
1: Driving
(Read and Write property)

139.4.21 FocusResult as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Focusing judgment result.
Notes: 0: No information
1: Not focused
2: Focused
(Read and Write property)

139.4.22 Height as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Height of the JPEG image.
Notes: (Read and Write property)

139.4.23 JPEGData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The JPEG data of the live image.
Notes: You can use JPEGStringToPictureMBS to decode it.
(Read and Write property)

139.4.24 MovieRecordingInformation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Movie recording information.
Notes: 0: During LV execution
1: During movie recording
(Read and Write property)

139.4.25 RawData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The raw data used to build this image object and the fill the properties.
Notes: (Read and Write property)

139.4.26 RemainingMovieRecordingTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Remaining time of movie recording.
Notes: From 0 to 1200000 [msec] .
It is valid during the movie recording state.
(Read and Write property)

139.4.27 SelectedFocusPoint as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The number of the selected focus area.
Notes: Range from 0 to 11.

(Read and Write property)

139.4.28 ShutterSpeed as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The shutter speed.
Notes: Only for type 2 and 3.
(Read only property)

139.4.29 TotalHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The total size of the image.
Notes: (Read and Write property)

139.4.30 TotalWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The total size of the image.
Notes: (Read and Write property)

139.4.31 Width as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Width of the JPEG image.
Notes: (Read and Write property)

139.4.32 Constants

Constants

Constant	Value	Description
kAFStateDriveImpossibility	0	One of the values for state that AF can be driven. AF drive impossibility.
kAFStateDrivePossible	1	One of the values for state that AF can be driven. AF drive possible.

Rotation Direction

Constant	Value	Description
kDirectionClockWise	2	Rotate clockwise
kDirectionCounterClockWise	1	Rotate counterclockwise
kDirectionNone	0	No rotation

Auto Focus Mode

Constant	Value	Description
kFacePriorityAFModeActive	1	Active
kFacePriorityAFModeNotActive	0	Inactive

Focus Driving

Constant	Value	Description
kFocusDriveStateDriving	0	Driving
kFocusDriveStateNotDriving	1	Not driving.

Focus Result

Constant	Value	Description
kFocusResultInFocus	2	In Focus
kFocusResultNoInformation	0	Focused
kFocusResultOutOfFocus	1	Not focused.

139.5 class NikonMBS

139.5.1 class NikonMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class to talk to a Nikon camera.
Notes: You need to get the SDKs yourself for the various cameras, so you have the PDF manuals, the C header files and the shared libraries.
Blog Entries

- MBS Xojo Plugins, version 17.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr1

139.5.2 Methods

139.5.3 Acquire as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Acquires an image.

139.5.4 Async_ as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs an asynchronously operation.

139.5.5 AutoFocus as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs autofocus.
Notes: Performs operation kNkMAIDCapability_AutoFocus.

139.5.6 AvailableDatatypes as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns available data types.

139.5.7 Capabilities(what as Integer) as NikonCapInfoMBS()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the list of capabilities.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.8 CapabilitiesCount(what as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the number of capabilities.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.9 Capability(what as Integer, ID as Integer) as NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the capability with given ID.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.10 Capture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs a capture.
Notes: Performs operation kNkMAIDCapability_Capture.

139.5.11 CloseData

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current data object.

139.5.12 CloseItem

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current item.

139.5.13 CloseModule

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current module.

139.5.14 CloseSource

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current source.

139.5.15 GetCapBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.16 GetCapDefaultBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.17 GetCapDefaultDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.18 GetCapDefaultInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.19 GetCapDefaultPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.20 GetCapDefaultRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.21 GetCapDefaultSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.22 GetCapDefaultString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.23 GetCapDefaultUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.24 GetCapDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.25 GetCapEnumPacketString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a packet string enum value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.26 GetCapEnumString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a string enum value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.27 GetCapEnumUInt32(what as Integer, ID as Integer, byref current as UInt32) as UInt32()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an enum UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.28 GetCapInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.29 GetCapPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.30 GetCapRange(what as Integer, ID as Integer, byref Value as Double, byref DefaultValue as Double, byref ValueIndex as UInt32, byref DefaultIndex as UInt32, byref LowerValue as Double, byref UpperValue as Double, byref Steps as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a range value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.31 GetCapRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.32 GetCapSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.33 GetCapString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.34 GetCapUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.35 GetItemCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries number of items.

139.5.36 GetLiveViewImage(type as Integer) as NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a live image.
Notes: Performs kNkMAIDCapability_GetLiveViewImage and decodes data returned into a NikonLiveImageMBS object.
Type: Which type of device you have. Value from 1 to 5.

139.5.37 GetSourceCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the number of sources (cameras).

139.5.38 GetVideoImageData(Offset as UInt32, BlockSize as UInt32) as String

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries data of a video file.
Notes: Please use OpenData before to open the video.

139.5.39 GetVideoImageDataSize as UInt32

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries data size of a video.
Notes: Please use OpenData before to open the video.

139.5.40 LoadLibrary(file as folderitem) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Loads the Nikon shard library.
Notes: Returns true on success.
Please pass folderitem pointing to dll on Windows and dylib on Mac OS X.
See also:

- 139.5.41 LoadLibrary(path as string) as boolean 18403

139.5.41 LoadLibrary(path as string) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Loads the Nikon shard library.
Notes: Returns true on success.
Please pass string path pointing to dll on Windows and dylib on Mac OS X.
See also:

- 139.5.40 LoadLibrary(file as folderitem) as boolean 18403

139.5.42 OpenData(type as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens data of given type.

139.5.43 OpenItem(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the item with the given index.
Notes: Index is zero based.

139.5.44 OpenModule as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the module.

139.5.45 OpenSource(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the source with the given index.
Notes: Index is zero based.

139.5.46 PreCapture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Prepares a capture.
Notes: Performs operation kNkMAIDCapability_PreCapture.

139.5.47 SetCapBoolean(what as Integer, ID as Integer, value as Boolean)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.48 SetCapDouble(what as Integer, ID as Integer, value as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.49 SetCapEnumPackedString(what as Integer, ID as Integer, EnumIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an enum of PacketString values.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.
You first query the enum to get the list of options, than you can set a new one by passing index here.

139.5.50 SetCapEnumUInt32(what as Integer, ID as Integer, Value as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an enum UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.51 SetCapInt32(what as Integer, ID as Integer, value as Int32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.52 SetCapPoint(what as Integer, ID as Integer, value as NikonPointMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.53 SetCapRange(what as Integer, ID as Integer, Value as Double, ValueIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a range value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.54 SetCapRect(what as Integer, ID as Integer, value as NikonRectMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.55 SetCapSize(what as Integer, ID as Integer, value as NikonSizeMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.56 SetCapString(what as Integer, ID as Integer, value as String)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.57 SetCapUInt32(what as Integer, ID as Integer, value as UInt32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

139.5.58 Properties

139.5.59 FunctionPtr as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The main entry function pointer for the Nikon library.
Notes: (Read only property)

139.5.60 Lasterror as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read only property)

139.5.61 LoadErrorMessage as String

MBS Cameras Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The error message from loading library.
Notes: Set by LoadLibrary methods to help debugging.

Windows error 193 means that 64-bit Xojo app tried to load 32-bit library or 32-bit Xojo app tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.
(Read only property)

139.5.62 Events

139.5.63 FileDownloadComplete(info as NikonFileInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Informs you about a finished file download.

139.5.64 ImageDownloadComplete(info as NikonImageInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event informs you about a finished event.

139.5.65 Progress(Command as Integer, Param as Integer, Done as UInt32, Total as UInt32, Percent as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: This event informs you about progress of an ongoing operation.

139.5.66 Constants

Selector Constants

Constant	Value	Description
kData	8	Apply to data.
kDevice	2	Apply to device/source.
kItem	4	Apply to item.
kModule	1	Apply to module.
kSource	2	Apply to device/source.

Data Object Types

Constant	Value	Description
kDataObjTypeFile	16	Other file
kDataObjTypeImage	1	Image file
kDataObjTypeSound	2	Sound file
kDataObjTypeThumbnail	8	Picture thumbnail
kDataObjTypeVideo	4	Video file

139.6 class NikonPointMBS

139.6.1 class NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a point.

139.6.2 Methods

139.6.3 Constructor(x as Integer = 0, y as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

139.6.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the point to a string for displaying.

139.6.5 Properties

139.6.6 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate.
Notes: (Read and Write property)

139.6.7 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate.
Notes: (Read and Write property)

139.7 class NikonRectMBS

139.7.1 class NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a rectangle.

139.7.2 Methods

139.7.3 Constructor(x as Integer = 0, y as Integer = 0, w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

139.7.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the rectangle to a string for displaying.

139.7.5 Properties

139.7.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the rectangle.
Notes: (Read and Write property)

139.7.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the rectangle.
Notes: (Read and Write property)

139.7.8 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

139.7.9 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

139.8 class NikonSizeMBS

139.8.1 class NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a size.

139.8.2 Methods

139.8.3 Constructor(w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

139.8.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the size to a string for displaying.

139.8.5 Properties

139.8.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the size object.
Notes: (Read and Write property)

139.8.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the size object.
Notes: (Read and Write property)

Chapter 140

Notifications

140.1 class NotificationCenterMBS

140.1.1 class NotificationCenterMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for notifications sent on Mac OS X.
Notes: From Apple's help, but modified:

Distributed notifications allow an application to broadcast a message to any number of other applications without needing to know who those other applications are, or even if the other applications exist. Every application type —Cocoa, Carbon, BSD —can use distributed notifications.

An application, the target application in this case, expresses an interest in receiving a broadcasted message by registering itself with the system's distributed notification center, identifying exactly what message, or notification type, it wants to receive. The notification type is defined by an arbitrary string agreed upon by the sender and receiver of the notification. As an example, Cocoa's NSWindow class defines the notification type "NSWindowDidCloseNotification", which an NSWindow instance broadcasts when its window closes. Any other object can register to receive this notification. (This notification, however, is internal to a single application and is not distributed to the rest of the system.)

In addition to the message, the application can identify the particular object sending the message. When the sender and receiver are in the same application—in other words, using nondistributed notifications—the observed object can be anything. When using distributed notifications, though, the object must be a string. A useful choice for the observed string is the bundle identifier of the target application.

In registering for the notification, the application provides a class with an Receive event, which will later be called.

Next, the broadcasting application —your preference pane —sends the notification. It calls the system's notification center, tells the center what notification to send, and optionally passes a dictionary containing additional information. The dictionary can be used to pass the modified preferences directly to the application. Or, the preference pane can choose not to use the dictionary and instead write the changes out to disk. The notification is then used to tell the application to update its preferences from the disk.

The notification center looks up all the applications that registered to receive the given notification type from the particular instance. It then notifies each application's run loop of the notification and gives it a copy of the dictionary. The selected callback function or method is executed during the application's next pass through its run loop.

When using Preference Services, be certain to flush changes to the disk with the appropriate synchronize functions before sending notifications of changes. Otherwise, due to the caching performed by Preference Services, the disk may not accurately reflect the changes when the target receives the notification. Likewise, the target application must resynchronize its preferences after receiving the notification.

- MBS Xojo / Real Studio Plugins, version 15.0pr10

140.1.2 Methods

140.1.3 Add(name as CFStringMBS, obj as CFObjectMBS, flags as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new callback.
Notes: This function costs around 24 bytes of memory per call which are never released (needed for the callback between framework and RB).

Values for the flags:

CFNotificationSuspensionBehaviorDrop	1	The server will not queue any notifications with this name and object while the process/app is in the background.
CFNotificationSuspensionBehaviorCoalesce	2	The server will only queue the last notification of the specified name and object; earlier notifications are dropped.
CFNotificationSuspensionBehaviorHold	3	The server will hold all matching notifications until the queue has been filled (queue size determined by the server) at which point the server may flush queued notifications.
CFNotificationSuspensionBehaviorDeliverImmediately	4	The server will deliver notifications matching this registration whether or not the process is in the background. When a notification with this suspension behavior is matched, it has the effect of first flushing any queued notifications.

140.1.4 close(name as CFStringMBS, obj as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the given callback.

140.1.5 closeAll

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes all registered callbacks.
Notes: This is called by the destructor.

140.1.6 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Posts a new notification.
Notes: Obj and userinfo may be nil.
See also:

- 140.1.7 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer) 18415

140.1.7 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer)

MBS MacCF Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Posts a new notification.
Example:

```
Var n as new NotificationCenterMBS
n.Post(NewCFStringMBS("test"), nil, nil, n.kCFNotificationPostToAllSessions + n.kCFNotificationDeliverImmediately)
```

Notes: Obj and userinfo may be nil.
Requires Mac OS X 10.3.
For options you can use a combination with kCFNotificationDeliverImmediately=1 and kCFNotificationPostToAllSessions=2.
See also:

- 140.1.6 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean) 18415

140.1.8 Properties

140.1.9 Available as boolean

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the needed framework was successfull loaded.
Notes: (Read only property)

140.1.10 Events

140.1.11 Received(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: A notification was received.
Notes: All parameters may be for any reason nil.

140.1.12 Constants

Constants

Constant	Value	Description
kCFNotificationDeliverImmediately	1	One of the constant you can use for the Post Method.
kCFNotificationPostToAllSessions	2	One of the constant you can use for the Post Method.

140.2 class NotificationMBS

140.2.1 class NotificationMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an application internal notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

Notes: The point of notifications is to inform some other part of your application about something. For example a chart updating if the user enters data in textfields.

So you register for notifications in existing classes/windows with the NotificationReceiverMBS interface. Or you create a subclass of the NotificationObserverMBS class to receive notifications

All notifications are delivered on the same thread as the send method. If needed we could have an asyncron notification system. Please email for that.

Other notifications:

NSNotification: Notifications send from the Cocoa frameworks within your application over NSNotificationCenterMBS class or send across all applications with NSDistributedNotificationCenterMBS.

MacNotificationMBS: A notification message to the user which may have a sound, a message box and/or a jumping dock icon.

- MBS Xojo / Real Studio Plugins, version 15.2pr1
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr8

Xojo Developer Magazine

- 12.1, page 9: News

140.2.2 Methods

140.2.3 Constructor(name as string = ””, ref as Variant = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new notification with the given values.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

140.2.4 RegisterReceiver(target as NotificationReceiverMBS, name as string = ””, ref as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers a receiver.
Notes: You have a class/window and you add NotificationReceiverMBS to the interfaces. Xojo will add a ReceivedNotification method which looks like this:

```
ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)
```

Don't forget to call UnregisterReceiver later in the Close event or destructor.

If you register with name = ”” and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

140.2.5 Send(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
NotificationMBS.Send("DatabaseChangedNotification")
```

Notes: This is a convenience method which creates a new NSNotificationMBS object and sends it.

All registered receivers will get the ReceivedNotification method called as well as all registered observers will

get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 140.2.6 Send(notification as NotificationMBS) 18419

140.2.6 Send(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

Notes: All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 140.2.5 Send(name as string, ref as object = nil, tag as Variant = nil) 18418

140.2.7 SendDelayed(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
NotificationMBS.SendDelayed("DatabaseChangedNotification")
```

Notes: Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 140.2.8 SendDelayed(notification as NotificationMBS) 18419

140.2.8 SendDelayed(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
NotificationMBS.SendDelayed(n)
```

Notes: Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 140.2.7 SendDelayed(name as string, ref as object = nil, tag as Variant = nil) 18419

140.2.9 SendNotification

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends this notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotification
```

Notes: All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.

140.2.10 SendNotificationDelayed

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotificationDelayed
```

Notes: Same as SendNotification method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.

140.2.11 UnregisterReceiver(target as NotificationReceiverMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unregisters an receiver.

140.2.12 Properties

140.2.13 Name as String

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name for the notification.
Example:

```
Var n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
MsgBox n.Name
```

Notes: (Read and Write property)

140.2.14 Ref as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference object.
Notes: Defines which object the notification references. If nil, you target all objects.
(Read and Write property)

140.2.15 Tag as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attached value.
Example:

```
Var n as new NotificationMBS
n.Tag = "Hello World"
```

Notes: You can use this property as you like.
This value is sent to the receivers. It allows you to pass an additional value without needing to write a subclass of the NotificationMBS class.
(Read and Write property)

140.3 class NotificationObserverMBS

140.3.1 class NotificationObserverMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for receiving notifications.

140.3.2 Methods

140.3.3 Constructor(name as string = """, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new notification observer.
Notes: If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

140.3.4 Properties

140.3.5 Name as String

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the notification to listen for.
Notes: (Read only property)

140.3.6 Ref as Object

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target object to listen for.
Notes: (Read only property)

140.3.7 Events

140.3.8 ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called if a notification was received.
Notes: This event is registered automatically, so do not call RegisterReceiver with the NotificationObserverMBS object.

If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

140.4 class NSDistributedNotificationCenterMBS

140.4.1 class NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The NSDistributedNotificationCenter class provides a way to send notifications to objects in other tasks.
Notes: It takes NSNotification objects and broadcasts them to any objects in other tasks that have registered for the notification with their task's default distributed notification center.

The NSDistributedNotificationCenter class implements a notification center that can distribute notifications asynchronously to tasks other than the one in which the notification was posted. An instance of this class are known as a distributed notification center.

Each task has a default distributed notification center that you access with the defaultCenter class method. There may be different types of distributed notification centers. Currently there is a single type—NSLocalNotificationCenterType. This type of distributed notification center handles notifications that can be sent between tasks on a single computer. For communication between tasks on different computers, use Distributed Objects Programming Topics.

Posting a distributed notification is an expensive operation. The notification gets sent to a system-wide server that distributes it to all the tasks that have objects registered for distributed notifications. The latency between posting the notification and the notification's arrival in another task is unbounded. In fact, when too many notifications are posted and the server's queue fills up, notifications may be dropped.
Subclass of the NSNotificationCenterMBS class.

- MBS REALbasic Plugins, version 10.6pr6

140.4.2 Methods

140.4.3 addObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant, suspensionBehavior as Integer)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds an entry to the receiver's dispatch table with a specific observer and suspended-notifications behavior, and optional notification name and sender.
Notes: observer: Object registering as an observer. Must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. When nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.

theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. When nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.
suspensionBehavior: Notification posting behavior when notification delivery is suspended.

The receiver does not retain notificationObserver. Therefore, you should always send removeObserver to the receiver before releasing notificationObserver.

140.4.4 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new instance with the default distributed notification center, representing the local notification center for the computer.
Notes: Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

140.4.5 defaultCenter as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the default distributed notification center, representing the local notification center for the computer.
Notes: Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

140.4.6 notificationCenterForType(name as string) as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the distributed notification center for a particular notification center type.
Notes: name: Notification center type being inquired about.

Currently only one type, NSLocalNotificationCenterType, is supported.

140.4.7 NSLocalNotificationCenterType as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: This constant specifies the notification center type.
Notes: Distributes notifications to all tasks on the sender's computer.

140.4.8 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a notification with information and an immediate-delivery specifier, and posts it to the receiver.
Notes: name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
deliverImmediately: Specifies when to deliver the notification. When false, the receiver delivers notifications to their observers according to the suspended-notification behavior specified in the corresponding dispatch table entry. When true, the receiver delivers the notification immediately to its observers.

This is the preferred method for posting notifications.
The notificationInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 140.4.9 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32) 18426

140.4.9 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a notification with information, and posts it to the receiver.
Example:

```
Var notifyData as string = "Hello World"
Var notifyName as string = "Test"

Var notifyDict As New Dictionary
notifyDict.Value("nData")=notifyData
NSDistributedNotificationCenterMBS.DefaultCenter.postNotificationName(notifyName, "", notifyDict, 2)
```

Notes: name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
options: Specifies how the notification is posted to the task and when to deliver it to its observers.

The userInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 140.4.8 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean) 18426

140.4.10 Properties

140.4.11 suspended as boolean

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A boolean value that indicates whether notification delivery is suspended.
Notes: The NSApplication class automatically suspends distributed notification delivery when the application is not active. Applications based on the Application Kit framework should let AppKit manage the suspension of notification delivery. Foundation-only programs may have occasional need to use this method.
(Read and Write computed property)

140.4.12 Constants

Constants

Constant	Value	Description
NSNotificationDeliverImmediately	1	One of the option constants to specify the behavior of noti the postNotificationName method. When set, the notification is delivered immediately to all of their suspension behavior or suspension state. Whe normal suspension behavior of notification observers to t
NSNotificationPostToAllSessions	2	One of the option constants to specify the behavior of noti the postNotificationName method. When set, the notification is posted to all sessions. Wh cation is sent only to applications within the same login task.
NSNotificationSuspensionBehaviorCoalesce	2	One of the constants to specify the types of notificatio behaviors. The server only queues the last notification of the specif earlier notifications are dropped. In cover methods for havior is not an explicit argument, NSNotificationSuspen is the default.
NSNotificationSuspensionBehaviorDeliverImmediately	4	One of the constants to specify the types of notificatio behaviors. The server delivers notifications matching this registr whether Suspended is set to true. When a notification behavior is matched, it has the effect of first flushing any The effect is as if setSuspended: with an argument of fa the application is suspended, followed by the notification livered, followed by a transition back to the previous suspe state.
NSNotificationSuspensionBehaviorDrop	1	One of the constants to specify the types of notificatio behaviors. The server does not queue any notifications with this n Suspended is set to false.
NSNotificationSuspensionBehaviorHold	3	One of the constants to specify the types of notificatio behaviors. The server holds all matching notifications until the queue size determined by the server), at which point the serv notifications.

140.5 class NSNotificationCenterMBS

140.5.1 class NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: An NSNotificationCenter object (or simply, notification center) provides a mechanism for broadcasting information within a task.
Notes: An NSNotificationCenter object is essentially a notification dispatch table.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr11

140.5.2 Methods

140.5.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes: observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

140.5.4 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes: The current task's default notification center, which is used for system notifications.

140.5.5 defaultCenter as NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the task's default notification center.
Notes: The current task's default notification center, which is used for system notifications.

140.5.6 postNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Posts a given notification to the receiver.
Notes: notification: The notification to post. This value must not be nil.

140.5.7 postNotificationName(name as string)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name and sender and posts it to the receiver.
Notes: name: The name of the notification.
theObject: The object posting the notification.
See also:

- 140.5.8 postNotificationName(name as string, theObject as Variant) 18430
- 140.5.9 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 18430

140.5.8 postNotificationName(name as string, theObject as Variant)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name and sender and posts it to the receiver.
Notes: name: The name of the notification.
theObject: The object posting the notification.
See also:

- 140.5.7 postNotificationName(name as string) 18430
- 140.5.9 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 18430

140.5.9 postNotificationName(name as string, theObject as Variant, userInfo as dictionary)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name, sender, and information and posts it to the receiver.
Notes: name: The name of the notification.
theObject: The object posting the notification.
userInfo: Information about the the notification. May be nil.

This method is the preferred method for posting notifications.
See also:

- 140.5.7 postNotificationName(name as string) 18430
- 140.5.8 postNotificationName(name as string, theObject as Variant) 18430

140.5.10 removeObserver(observer as NSNotificationObserverMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Removes all the entries specifying a given observer from the receiver's dispatch table.
Notes: observer: The observer to remove. Must not be nil.

Be sure to invoke this method before notificationObserver or any object specified in addObserver is deallocated.
See also:

- 140.5.11 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil) 18431

140.5.11 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Removes matching entries from the receiver's dispatch table.
Notes: notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.
See also:

- 140.5.10 removeObserver(observer as NSNotificationObserverMBS) 18431

140.5.12 Properties

140.5.13 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal reference to the notification center.
Notes: (Read and Write property)

140.6 class NSNotificationMBS

140.6.1 class NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: NSNotification objects encapsulate information so that it can be broadcast to other objects by an NSNotificationCenter object.
Notes: An NSNotification object (referred to as a notification) contains a name, an object, and an optional dictionary. The name is a tag identifying the notification. The object is any object that the poster of the notification wants to send to observers of that notification (typically, it is the object that posted the notification). The dictionary stores other related objects, if any. NSNotification objects are immutable objects.

You can create a notification object with the class method notificationWithName. However, you don't usually create your own notifications directly. The NSNotificationCenter method postNotificationName allow you to conveniently post a notification without creating it first.

On Windows you can use WinNotificationMBS class for similar functionality.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.

140.6.2 Methods

140.6.3 Constructor(handle as Integer)

MBS MacBase Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a notification object with a NSNotification reference.
Notes: The object is retained and later in destructor it is released.
See also:

- 140.6.4 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil) 18434

140.6.4 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil)

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a notification object with a specified name, object, and user information.
Example:

```
Var n as new NSNotificationMBS("Hello")
MsgBox n.name
```

Notes: name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.
See also:

- 140.6.3 Constructor(handle as Integer) 18433

140.6.5 notificationWithName(name as string, theObject as Variant = nil, userInfo as dictionary = nil) as NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a notification object with a specified name, object, and user information.
Example:

```
Var n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.name
```

Notes: name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.

140.6.6 Print

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Writes description for this event descriptor to the console.
Notes: You can see result in Console.app.

140.6.7 Properties

140.6.8 description as string

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The descriptor for this notification.
Example:

```
Var n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.description
```

Notes: This is a text representation for debugging.
(Read only property)

140.6.9 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal reference to the NSNotification object.
Notes: (Read and Write property)

140.6.10 name as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the name of the notification.
Notes: The name of the notification. Typically you use this method to find out what kind of notification you are dealing with when you receive a notification.
Notification names can be any string. To avoid name collisions, you might want to use a prefix that's specific to your application.
(Read only property)

140.6.11 objectHandle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The reference to the object.
Notes: May be useful for declares.
(Read only property)

140.6.12 objectVariant as Variant

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the object associated with the notification.
Notes: The object associated with the notification. This is often the object that posted this notification. It may be nil.
Typically you use this method to find out what object a notification applies to when you receive a notification.

See the FAQ for the list of supported NSObject types for variant conversion.
(Read only property)

140.6.13 userInfo as dictionary

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the user information dictionary associated with the receiver.
Example:

```
// tests dictionary conversion:

Var d as new Dictionary

Var x as new Dictionary
x.Value("Hello") = "World"

Var b as Boolean = true
Var s as Single = 2.3
Var dd as Double = 3.4
Var h as int64 = 1234

d.Value(1) = 1
d.Value(2) = 2.0
d.Value(3) = x
d.Value(4) = "Hello"
d.Value(5) = b
d.Value(6) = s
d.Value(7) = dd
d.Value(8) = h

Var n as new NSNotificationMBS("test", nil, d)

Var nd as Dictionary = n.userInfo

// check nd object
break
```

Notes: Returns the user information dictionary associated with the receiver. May be nil.
The user information dictionary stores any additional objects that objects receiving the notification might use.
(Read only property)

140.7 class NSNotificationObserverMBS

140.7.1 class NSNotificationObserverMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The notification class which you use to receive notifications.
Notes: To use this class, please create a subclass. There you can put code in the event handler to do whatever you need in case your notification is received.

Than you create in code objects form this class. Normally only one. And you call addObserver on the NSNotificationCenterMBS or NSDistributedNotificationCenterMBS objects you have to tell the system which notifications you want to receive.

Do not forget to call removeObserver on the notification center for all your observers to avoid crashes.

140.7.2 Methods

140.7.3 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The constructor which creates the observer.
Notes: On success the handle property is not zero.

140.7.4 Destructor

MBS MacBase Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The Destructor.
Notes: Removes in plugin version 12.3 and newer the observer from the NSNotificationCenterMBS and NSDistributedNotificationCenterMBS to avoid crashes.

140.7.5 Properties

140.7.6 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal handle to the observer object.
Notes: (Read and Write property)

140.7.7 Events

140.7.8 GotNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The event called if a new notification is received.
Notes: The MBS Plugin makes sure you receive this event always on the main thread.

140.8 class WinNotificationMBS

140.8.1 class WinNotificationMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This is a class to send broadcast message to all windows applications listening for this notification.
Notes: If you have several applications, you can send notifications from one to another.

Windows Desktop application: Sending and receiving notification works.
Windows Console application: Sending works.
Windows Web application: Sending works. Receives notification of own application, but of others.

This class is useful to tell other instance of your application or other application about something. Like for example whether background process is done.

On Mac OS X you can use NSNotificationMBS class for similar functionality.

With 14.2 plugins we added possibility to listen for any windows broadcast message. Like for example for WM_TIMECHANGE.

140.8.2 Methods

140.8.3 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The default constructor.
Notes: Creates an invisible dummy window to listen for notifications.
See also:

- 140.8.4 Constructor(Control as DesktopUIControl) 18441
- 140.8.5 Constructor(control as RectControl) 18441
- 140.8.6 Constructor(Window as DesktopWindow) 18442
- 140.8.7 Constructor(Window as window) 18442
- 140.8.8 Constructor(WindowHandle as Integer) 18443

140.8.4 Constructor(Control as DesktopUIControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The control constructor.
Notes: Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 140.8.3 Constructor 18441
- 140.8.5 Constructor(control as RectControl) 18441
- 140.8.6 Constructor(Window as DesktopWindow) 18442
- 140.8.7 Constructor(Window as window) 18442
- 140.8.8 Constructor(WindowHandle as Integer) 18443

140.8.5 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: The control constructor.
Notes: Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 140.8.3 Constructor 18441
- 140.8.4 Constructor(Control as DesktopUIControl) 18441
- 140.8.6 Constructor(Window as DesktopWindow) 18442
- 140.8.7 Constructor(Window as window) 18442
- 140.8.8 Constructor(WindowHandle as Integer) 18443

140.8.6 Constructor(Window as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes: Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 140.8.3 Constructor 18441
- 140.8.4 Constructor(Control as DesktopUIControl) 18441
- 140.8.5 Constructor(control as RectControl) 18441
- 140.8.7 Constructor(Window as window) 18442
- 140.8.8 Constructor(WindowHandle as Integer) 18443

140.8.7 Constructor(Window as window)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes: Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 140.8.3 Constructor 18441
- 140.8.4 Constructor(Control as DesktopUIControl) 18441
- 140.8.5 Constructor(control as RectControl) 18441
- 140.8.6 Constructor(Window as DesktopWindow) 18442
- 140.8.8 Constructor(WindowHandle as Integer) 18443

140.8.8 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes: Takes an existing window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 140.8.3 Constructor 18441
- 140.8.4 Constructor(Control as DesktopUIControl) 18441
- 140.8.5 Constructor(control as RectControl) 18441
- 140.8.6 Constructor(Window as DesktopWindow) 18442
- 140.8.7 Constructor(Window as window) 18442

140.8.9 IsListeningFor(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this object is listening for the given message ID.
Example:

```
Var w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
MsgBox str(w.IsListeningFor(WM_TIMECHANGE))
end if
```

Notes: Returns true if we listen for this notification name or false if not.
See also:

- 140.8.10 IsListeningFor(name as string) as boolean 18443

140.8.10 IsListeningFor(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this object is listening for the given notification.
Example:

```
Var w as new WinNotificationMBS
```

```
if w.ListenForMessage("Hello") then
MsgBox str(w.IsListeningFor("Hello"))
end if
```

Notes: Returns true if we listen for this notification name or false if not.
See also:

- 140.8.9 IsListeningFor(MessageID as Integer) as boolean 18443

140.8.11 ListenForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Listens for given notification message id.
Notes: Returns true on success and false on failure.
See also:

- 140.8.12 ListenForMessage(name as string) as boolean 18444

140.8.12 ListenForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Listens for given notification name.
Notes: Returns true on success and false on failure.
See also:

- 140.8.11 ListenForMessage(MessageID as Integer) as boolean 18444

140.8.13 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Example:

```
Var w as new WinNotificationMBS
Var Result as Integer

// send a message and wait for result
if w.SendMessage(Result, 1234567, 123, 456) then
// okay
else
```

```
// failed
end if
```

Notes: Sends a message with given message ID.
You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.
Result returns the result code from the message.
See also:

- 140.8.14 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 18445

140.8.14 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Example:

```
Var w as new WinNotificationMBS

if w.SendMessage(Result, "Hello", 123, 456) then
// okay
else
// failed
end if
```

Notes: You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.
See also:

- 140.8.13 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 18444

140.8.15 SendMessageToWindow(WindowHandle as Integer, byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Notes: Like SendMessage, but with a target window.
You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.

140.8.16 StopListeningForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops listening for a given message ID.
Example:

```
Var w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
if w.StopListeningForMessage(WM_TIMECHANGE) then
MsgBox "OK"
end if
end if
```

See also:

- 140.8.17 StopListeningForMessage(name as string) as boolean 18446

140.8.17 StopListeningForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops listening for a given notification name.
Example:

```
Var w as new WinNotificationMBS

if w.ListenForMessage("Hello") then
if w.StopListeningForMessage("Hello") then
MsgBox "OK"
end if
end if
```

See also:

- 140.8.16 StopListeningForMessage(MessageID as Integer) as boolean 18446

140.8.18 Properties

140.8.19 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal window handle.
Notes: (Read only property)

140.8.20 Events

140.8.21 GotNotification(Message as Integer, Name as string, Value1 as Integer, Value2 as Integer, byref Result as Integer, byref Handled as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A notification was received.
Notes: Message: The message ID.
Name: If you registered by name, this is the name for the message ID.
Value1 and Value2 are parameters provided with message. (WPARAM and LPARAM)

If Handled is set to true, we pass back Result to the Windows system (LRESULT).
Else the default handler is called.

Chapter 141

OCR

141.1 class TessChoiceIteratorMBS

141.1.1 class TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Class to iterate over the classifier choices for a single symbol.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.1.2 Methods

141.1.3 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

141.1.4 MoveNext as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the next choice for the symbol and returns false if there are none left.

141.1.5 Properties

141.1.6 Confidence as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the confidence of the current choice depending on the used language data.
Notes: If only LSTM traineddata is used the value range is 0.0 - 1.0. All choices for one symbol should roughly add up to 1.0. If only traineddata of the legacy engine is used, the number should be interpreted as a percent probability. (0.0 - 100.0) In this case probabilities won't add up to 100. Each one stands on its own.
(Read only property)

141.1.7 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

141.1.8 Text as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the null terminated UTF-8 encoded text string for the current choice.
Notes: (Read only property)

141.2 class TessEngineMBS

141.2.1 class TessEngineMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for OCR recognition using tesseract library.
Example:

```
Var OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If

Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var p As Picture = f.OpenAsPicture
OCR.SetImage(p)

// get the text
Var OCRText As String = OCR.GetText
```

Notes: This replaces the older TesseractMBS class.

The new class is for Tesseract 4.x and 5.x versions.

141.2.2 Methods

141.2.3 AllWordConfidences as Integer()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns all word confidences (between 0 and 100) in an array.
Notes: The number of confidences should correspond to the number of space-delimited words in GetText.

141.2.4 AnalyseLayout as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Runs page layout analysis in the mode set by SetPageSegMode.
Notes: May optionally be called prior to Recognize to get access to just the page layout results. Returns an iterator to the results.

Returns nil on error or an empty page.

141.2.5 Clear

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Free up recognition results and any stored image data, without actually freeing any recognition data that would be time-consuming to reload.
Notes: Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

141.2.6 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Please call Initialize after this to get started.

141.2.7 GetAltoText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make an XML-formatted string with Alto markup from the internal data structures.

141.2.8 GetAvailableLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the available languages as array.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract
Var AvailableLanguages() As String = OCR.GetAvailableLanguages
```

141.2.9 GetBoolVariable(Name as String, byref value as boolean) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries boolean variable value.
Notes: Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

141.2.10 GetBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded in the same format as a box file used in training.
Notes: Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

141.2.11 GetDoubleVariable(Name as String, byref value as Double) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries double variable value.
Notes: Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

141.2.12 GetHOCRText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a HTML-formatted string with hOCR markup from the internal data structures.
Notes: PageNumber is 0-based but will appear in the output as 1-based.

141.2.13 GetIntVariable(Name as String, byref value as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries integer variable value.
Notes: Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

141.2.14 GetLoadedLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the loaded languages as array.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract
Var LoadedLanguages() As String = OCR.GetLoadedLanguages
```

Notes: Includes all languages loaded by the last Init, including those loaded as dependencies of other loaded languages.

141.2.15 GetLSTMBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a box file for LSTM training from the internal data structures.
Notes: Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

141.2.16 GetStringVariable(Name as String) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries string variable value.
Notes: Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

141.2.17 GetText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as UTF-text.

141.2.18 GetTsvText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a TSV-formatted string from the internal data structures.
Notes: PageNumber is 0-based but will appear in the output as 1-based.

141.2.19 GetUNLVText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded as UNLV format Latin-1 with specific reject and suspect codes.

141.2.20 GetWordStrBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded in the same format as a WordStr box file used in training.
Notes: PageNumber is a 0-based page index that will appear in the box file.

141.2.21 Initialize(dataPath as String, language as String, Mode as Integer = 3, configs() as String = nil) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes tesseract.
Example:

```
Var OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If
```

Notes: Returns true on success and false on failure.

The datapath must be the name of the tessdata directory.
The language is (usually) an ISO 639-3 string or "" will default to eng.
It is entirely safe (and eventually will be efficient too) to call Initialize multiple times on the same instance to change language, or just to reset the classifier.

The language may be a string of the form [
textasciitilde] <lang>[+ [
textasciitilde] <lang>] * indicating that multiple languages are to be loaded. Eg hin+eng will load Hindi and English. Languages may specify internally that they want to be loaded with one or more other languages, so the
textasciitilde sign is available to override that. Eg if hin were set to load eng by default, then hin+
textasciitilde eng would force loading only hin. The number of loaded languages is limited only by memory, with the caveat that loading additional languages will impact both speed and accuracy, as there is more work to do to decide on the applicable language, and there is more chance of hallucinating incorrect words.

Warning: On changing languages, all Tesseract parameters are reset back to their default values. (Which may vary between languages.)
If you have a rare need to set a Variable that controls initialization for a second call to Init you should explicitly call End() and then use SetVariable before Init. This is only a very rare use case, since there are very few uses that require any parameters to be set before Init.

141.2.22 IsValidWord(Word as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check whether a word is valid according to Tesseract's language model.
Notes: Return false if the word is invalid, true if valid.

141.2.23 LibraryLoaded as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the tesseract library was loaded.
Notes: Should be true after succesful call to LoadLibrary.

141.2.24 LibraryLoadError as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error from LoadLibrary as number.

141.2.25 LibraryLoadErrorMessage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error from LoadLibrary as text.

141.2.26 LoadLibrary(file as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the tesseract library.
Notes: Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.
See also:

- 141.2.27 LoadLibrary(path as string) as boolean 18457

141.2.27 LoadLibrary(path as string) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the tesseract library.
Example:

```
// first load image processing library
Call TessEngineMBS.LoadLibrary("libleptonica-6.dll")

// second load tesseract library
Call TessEngineMBS.LoadLibrary("tesseract-5.dll")
```

Notes: Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.

For Windows load the DLL, for Linux the tesseract.so file and for macOS the dylib file.
You may need to first load leptonica library and second the tesseract library.
See example project for sample code.
See also:

- 141.2.26 LoadLibrary(file as folderitem) as boolean 18457

141.2.28 PrintVariablesToFile(File as FolderItem) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print Tesseract parameters to the given file.
Notes: Returns true on success.
Fails if the file can't be created.

141.2.29 PrintVariablesToPath(Path as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print Tesseract parameters to the given file.
Notes: Returns true on success.
Fails if the file can't be created.

141.2.30 Recognize as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Recognize the image from SetAndThresholdImage, generating Tesseract internal structures.
Notes: Returns true on success.

Optional. The Get*Text functions below will call Recognize if needed.

After Recognize, the output is kept internally until the next SetImage.

141.2.31 ResultIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries a result iterator.
Notes: Loop over it to query details.
The result iterator is only valid until you end the engine.

141.2.32 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets current working directory.
Notes: Returns true on success.
See also:

- 141.2.33 SetCurrentWorkingDirectory(path as String) as boolean

141.2.33 SetCurrentWorkingDirectory(path as String) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets current working directory.
Notes: Returns true on success.
See also:

- 141.2.32 SetCurrentWorkingDirectory(path as folderitem) as boolean 18458

141.2.34 SetDllDirectory(path as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Adds a directory to the search path used to locate DLLs for the application.
Notes: The directory to be added to the search path. If this parameter is an empty string (""), the call removes the current directory from the default DLL search order. If this parameter is nil, the function restores the default search order.

If the function succeeds, the return value is true, otherwise false.

The SetDllDirectory function affects all subsequent calls to the LoadLibrary and LoadLibraryEx functions. It also effectively disables safe DLL search mode while the specified directory is in the search path.

After calling SetDllDirectory, the standard DLL search path is:

- The directory from which the application loaded.
- The directory specified by the SetDllDirectory function.
- The system directory. Use the GetSystemDirectory function to get the path of this directory. The name of this directory is System32.
- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.
- The directories that are listed in the PATH environment variable.

Each time the SetDllDirectory function is called, it replaces the directory specified in the previous SetDllDirectory call.

To revert to the standard search path used by LoadLibrary and LoadLibraryEx, call SetDllDirectory with nil. This also restores safe DLL search mode based on the SafeDllSearchMode registry value.
See also:

- 141.2.35 SetDllDirectory(path as String) as boolean 18460

141.2.35 SetDllDirectory(path as String) as boolean

MBS OCR Plugin, Plugin Version: 25.1, Platform: Windows, Targets: All.

Function: Adds a directory to the search path used to locate DLLs for the application.
Notes: The directory to be added to the search path. If this parameter is an empty string (""), the call removes the current directory from the default DLL search order. If this parameter is nil, the function restores the default search order.

If the function succeeds, the return value is true, otherwise false.

The SetDllDirectory function affects all subsequent calls to the LoadLibrary and LoadLibraryEx functions. It also effectively disables safe DLL search mode while the specified directory is in the search path.

After calling SetDllDirectory, the standard DLL search path is:

- The directory from which the application loaded.
- The directory specified by the SetDllDirectory function.
- The system directory. Use the GetSystemDirectory function to get the path of this directory. The name of this directory is System32.
- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.
- The directories that are listed in the PATH environment variable.

Each time the SetDllDirectory function is called, it replaces the directory specified in the previous SetDllDirectory call.

To revert to the standard search path used by LoadLibrary and LoadLibraryEx, call SetDllDirectory with nil. This also restores safe DLL search mode based on the SafeDllSearchMode registry value.
See also:

- 141.2.34 SetDllDirectory(path as folderitem) as boolean 18459

141.2.36 SetImage(pic as picture)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via picture.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract
```

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Var p As Picture = f.OpenAsPicture
OCR.SetImage(p)
```

Notes: Pass Xojo picture and we copy the pixels.
Mask or alpha channel is ignored.

141.2.37 SetImageData(Data as MemoryBlock)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via data.
Notes: Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 141.2.38 SetImageData(Data as String) 18461

141.2.38 SetImageData(Data as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via data.
Notes: Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 141.2.37 SetImageData(Data as MemoryBlock) 18461

141.2.39 SetImageFile(File as FolderItem)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via folderitem.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract

Var f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
OCR.SetImageFile(f)
```

Notes: Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 141.2.40 SetImageFile(Path as String) 18462

141.2.40 SetImageFile(Path as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via file path.
Notes: Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 141.2.39 SetImageFile(File as FolderItem) 18461

141.2.41 SetRectangle(Left as Integer, Top as Integer, Width as Integer, Height as Integer)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Restrict recognition to a sub-rectangle of the image.
Notes: Call after SetImage.
Each SetRectangle clears the recogntion results so multiple rectangles can be recognized with the same image.

141.2.42 SetVariable(Name as String, Value as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set the value of an internal "parameter."
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract

OCR.SetVariable("tessedit_char_blacklist", "xyz")
```

Notes: Supply the name of the parameter and the value as a string, just as you would in a config file.
Returns false if the name lookup failed.
e.g.
SetVariable("tessedit_char_blacklist", "xyz") to ignore x, y and z.
Or
SetVariable("classify_bln_numeric_mode", "1") to set numeric-only mode.

SetVariable may be used before Init, but settings will revert to defaults on End().

Note: Must be called after Initialize(). Only works for non-init variables (init variables should be passed to

Initialize()).

141.2.43 Properties

141.2.44 DeadlineMSecs as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The deadline in milliseconds.
Notes: (Read and Write property)

141.2.45 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

141.2.46 InitLanguagesAsString as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the languages string used in the last valid initialization.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract

MsgBox OCR.InitLanguagesAsString
```

Notes: If the last initialization specified "deu+hin" then that will be returned. If hin loaded eng automatically as well, then that will not be included in this list. To find the languages actually loaded use GetLoadedLanguages function.
(Read only property)

141.2.47 InputImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries input image for debugging.
Notes: (Read only property)

141.2.48 InputName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name of the input file.
Notes: Needed for training and reading a UNLV zone file, and for searchable PDF output.
(Read and Write property)

141.2.49 MeanTextConf as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the (average) confidence value between 0 and 100.
Notes: (Read only property)

141.2.50 PageSegMode as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The current page segmentation mode.
Example:

```
Var OCR As TessEngineMBS // your instance of tesseract

OCR.PageSegMode = OCR.kPageSegModeAuto
```

Notes: Defaults to kPageSegModeSingleBlock.
The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_pageseg_mode", mode as string).
(Read and Write property)

141.2.51 Resolution as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The resolution of the source image in pixels per inch so font size information can be calculated in results.
Notes: Call this after SetImage functions.
(Read and Write property)

141.2.52 ThresholdedImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get a copy of the internal thresholded image from Tesseract.
Notes: (Read only property)

141.2.53 Version as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries version of tesseract library.
Example:

MsgBox TessEngineMBS.Version

Notes: e.g. "4.1.1"
(Read only property)

141.2.54 Events

141.2.55 Cancel(words as integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Event called regularly to allow you to cancel.
Notes: Return true to cancel current job.

141.2.56 Progress(Left as integer, Right as Integer, Top as Integer, Bottom as Integer, Progress as Integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Event called regularly to allow you to monitor progress.
Notes: Return true to cancel current job.

141.2.57 Constants

OCR Engine Running Modes

Constant	Value	Description
kOcrEngineModeDefault	3	Specify this mode when calling init_*(), to indicate that any of t modes should be automatically inferred from the variables in the l specific config, command-line configs, or if not specified in any of t should be set to the default kOcrEngineModeTesseractOnly.
kOcrEngineModeLstmOnly	1	Run just the LSTM line recognizer.
kOcrEngineModeTesseractLstmCombined	2	Run the LSTM recognizer, but allow fallback to Tesseract when t difficult. deprecated
kOcrEngineModeTesseractOnly	0	Run Tesseract only - fastest; deprecated

Page Layout

Constant	Value	Description
kPageSegModeAuto	3	Fully automatic page segmentation, but no OSD.
kPageSegModeAutoOnly	2	Automatic page segmentation, but no OSD, or OCR.
kPageSegModeAutoOsd	1	Automatic page segmentation with orientation and script detection. (OSD)
kPageSegModeCircleWord	9	Treat the image as a single word in a circle.
kPageSegModeOsdOnly	0	Orientation and script detection only.
kPageSegModeRawLine	13	Treat the image as a single text line, bypassing hacks that are Tesseract-speci
kPageSegModeSingleBlock	6	Assume a single uniform block of text. (Default.)
kPageSegModeSingleBlockVertText	5	Assume a single uniform block of vertically aligned text.
kPageSegModeSingleChar	10	Treat the image as a single character.
kPageSegModeSingleColumn	4	Assume a single column of text of variable sizes.
kPageSegModeSingleLine	7	Treat the image as a single text line.
kPageSegModeSingleWord	8	Treat the image as a single word.
kPageSegModeSparseText	11	Find as much text as possible in no particular order.
kPageSegModeSparseTextOsd	12	Sparse text with orientation and script det.

141.3 class TessPageIteratorMBS

141.3.1 class TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The iterator to walk over page content.
Notes: Class to iterate over tesseract page structure, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.3.2 Methods

141.3.3 Baseline(Level as Integer, byref x1 as Integer, byref y1 as Integer, byref x2 as Integer, byref y2 as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the baseline of the current object at the given level.
Notes: The baseline is the line that passes through (x1, y1) and (x2, y2).

Warning: with vertical text, baselines may be vertical!

Returns false if there is no baseline at the current position.

141.3.4 Begin

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves the iterator to point to the start of the page to begin an iteration.

141.3.5 BinaryImage(Level as Integer) as PIcture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a binary image of the current object at the given level.
Notes: The position and size match the return from BoundingBoxInternal, and so this could be upscaled with respect to the original input image.

141.3.6 BoundingBox(Level as Integer, byref Left as Integer, byref Top as Integer, byref Right as Integer, byref Bottom as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the bounding rectangle of the current object at the given level.
Notes: Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See BinaryImage below.

141.3.7 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

141.3.8 CopyIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a copy of the iterator.

141.3.9 IsAtBeginningOf(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the iterator is at the start of an object at the given level.

141.3.10 IsAtFinalElement(Level as Integer, element as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns whether the iterator is positioned at the last element in a given level. (e.g. the last word in a line, the last line in a block)

141.3.11 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
Notes: NOTE that symbol will skip non-text blocks, but all other PageIteratorLevel level values will visit each non-text block once. Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word. Calls to Next with different levels may be freely intermixed. This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded into Tesseract.

141.3.12 Properties

141.3.13 BlockType as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the type of the current block.
Notes: (Read only property)

141.3.14 DeskewAngle as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The deskew angle.
Notes: After rotating the block so the text orientation is upright, how many radians does one have to rotate the block anti-clockwise for it to be level?
-Pi/4 <= deskew_angle <= Pi/4
(Read only property)

141.3.15 FirstLineIndent as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The first line indent.
Notes: For LEFT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the left edge of the rest of the paragraph.
for RIGHT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the right edge of the rest of the paragraph.

This value may be negative.

if IsCrown is true, the first line of this paragraph is actually flush, and first_line_indent is set to the "common" first line indent for subsequent paragraphs in this block of text.
(Read only property)

141.3.16 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

141.3.17 IsCrown as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the current item is a crown.
Notes: True if the first line of the paragraph is aligned with the other lines of the paragraph even though subsequent paragraphs have first line indents. This typically indicates that this is the continuation of a previous paragraph or that it is the very first paragraph in the chapter.
(Read only property)

141.3.18 IsListItem as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether current item is a list item.
Notes: True if we believe this is a member of an ordered or unordered list.
(Read only property)

141.3.19 Justification as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries justification for current block.
Notes: LEFT if ragged right, or fully justified and script is left-to-right.
RIGHT if ragged left, or fully justified and script is right-to-left.
unknown if it looks like source code or we have very few lines.
(Read only property)

141.3.20 Orientation as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The orientation of the current block.
Notes: (Read only property)

141.3.21 TextlineOrder as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The text orientation of the current block.
Notes: (Read only property)

141.3.22 WritingDirection as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The writing direction of the current block.
Notes: (Read only property)

141.3.23 Constants

Block Types

Constant	Value	Description
kBlockTypeCaptionText	8	Text that belongs to an image.
kBlockTypeEquation	4	Partition belonging to an equation region.
kBlockTypeFlowingImage	9	Image that lives inside a column.
kBlockTypeFlowingText	1	Text that lives inside a column.
kBlockTypeHeadingImage	10	Image that spans more than one column.
kBlockTypeHeadingText	2	Text that spans more than one column.
kBlockTypeHorzLine	12	Horizontal Line.
kBlockTypeInlineEquation	5	Partition has inline equation.
kBlockTypeNoise	14	Lies outside of any column.
kBlockTypePulloutImage	11	Image that is in a cross-column pull-out region.
kBlockTypePulloutText	3	Text that is in a cross-column pull-out region.
kBlockTypeTable	6	Partition belonging to a table region.
kBlockTypeUnknown	0	Type is not yet known. Keep as the first element.
kBlockTypeVerticalText	7	Text-line runs vertically.
kBlockTypeVertLine	13	Vertical Line.

Justifications

Constant	Value	Description
kJustificationCenter	2	The text lines of the paragraph are centered about a line going down through their middle of the text lines.
kJustificationLeft	1	Each line, except possibly the first, is flush to the same left tab stop.
kJustificationRight	3	Each line, except possibly the first, is flush to the same right tab stop.
kJustificationUnknown	0	Unknown.

Level

Constant	Value	Description
kLevelBlock	0	Block
kLevelParagraph	1	Paragraph
kLevelSymbol	4	Symbol
kLevelTextline	2	Textline
kLevelWord	3	Word

Orientations

Constant	Value	Description
kOrientationPageDown	2	Orientation is down.
kOrientationPageLeft	3	Orientation is left.
kOrientationPageRight	1	Orientation is right.
kOrientationPageUp	0	Orientation is up.

Text Line Order

Constant	Value	Description
kTextlineOrderLefttoRight	0	Mongolian is written in vertical columns top to bottom like Chinese, but the lines order left-to right.
kTextlineOrderRighttoLeft	1	In Chinese, vertical text lines are read right-to-left.
kTextlineOrderToptoBottom	2	In English, the order is top-to-bottom.

Writing Direction

Constant	Value	Description
kWritingDirectionLefttoRight	0	For English text, the writing direction is left-to-right.
kWritingDirectionRighttoLeft	1	For Arabic the text direction is right to left.
kWritingDirectionToptoBottom	2	For the Chinese text in the above example, the writing direction is top-to-bottom.

141.4 class TessResultIteratorMBS

141.4.1 class TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
Notes: WARNING! This class points to data held within the TessEngineMBS class, and therefore can only be used while the TessBaseAPI class still exists and has not been subjected to a call of Init, SetImage, Recognize, Clear, End DetectOS, or anything else that changes the internal PAGE_RES.

See also base class TessPageIteratorMBS class, which contains the bulk of the interface. TessResultIteratorMBS adds text-specific methods for access to OCR output.
Subclass of the TessPageIteratorMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.4.2 Methods

141.4.3 ChoiceIterator as TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries choice iterator for current object.

141.4.4 Confidence(Level as Integer) as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the mean confidence of the current object at the given level.
Notes: The number should be interpreted as a percent probability. (0.0 - 100.0)

141.4.5 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

141.4.6 CopyIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the result iterator.

141.4.7 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the next choice for the symbol and returns false if there are none left.

141.4.8 PageIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the page iterator for this result.

141.4.9 Text(Level as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the UTF-8 encoded text string for the current object at the given level.

141.4.10 Properties

141.4.11 FontID as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The font ID.
Notes: The font attributes of the current word.
(Read only property)

141.4.12 FontName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The font name.
Notes: The font attributes of the current word.

(Read only property)

141.4.13 IsBold as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bold font attribute.
Notes: The font attributes of the current word.
(Read only property)

141.4.14 IsItalic as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The italic font attribute.
Notes: The font attributes of the current word.
(Read only property)

141.4.15 IsMonoSpace as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The monospace font attribute.
Notes: The font attributes of the current word.
(Read only property)

141.4.16 IsSerif as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The serif font attribute.
Notes: The font attributes of the current word.
(Read only property)

141.4.17 IsSmallCaps as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The smallcaps font attribute.
Notes: The font attributes of the current word.

(Read only property)

141.4.18 IsUnderlined as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The underlined font attribute.
Notes: The font attributes of the current word.
(Read only property)

141.4.19 PointSize as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The point size font attribute.
Notes: The font attributes of the current word.
Pointsize is returned in printers points (1/72 inch.)
(Read only property)

141.4.20 SymbolIsDropcap as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a dropcap.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

141.4.21 SymbolIsSubscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a subscript.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

141.4.22 SymbolIsSuperscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a superscript.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

141.4.23 WordIsFromDictionary as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current word was found in a dictionary.
Notes: (Read only property)

141.4.24 WordIsNumeric as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current word is numeric.
Notes: (Read only property)

141.4.25 WordRecognitionLanguage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Return the name of the language used to recognize this word.
Notes: On error, this is empty.
(Read only property)

141.4.26 Constants

Level

Constant	Value	Description
kLevelBlock	0	Block
kLevelParagraph	1	Paragraph
kLevelSymbol	4	Symbol
kLevelTextline	2	Textline
kLevelWord	3	Word

Chapter 142

Open Directory

142.1 class ODNodeMBS

142.1.1 class ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

142.1.2 Methods

142.1.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

142.1.4 nodeDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary containing details about a node.
Notes: Error: An error reference for error details. Can be nil.

Returns a dictionary containing details.

142.1.5 nodeDetailsForKeys(keys() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary containing details about a node.
Notes: Keys: An array of keys corresponding to the values returned in the dictionary.
Error: An error reference for error details. Can be nil.

Returns a dictionary containing details about the node corresponding to keys specified by Keys.

142.1.6 nodeWithName(session as ODSessionMBS, name as string, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a node object with a specified session and name.
Notes: Session: The session.
Name: The name of the node.
Error: An error reference for error details. Can be nil.

Returns the created node object.

142.1.7 nodeWithType(session as ODSessionMBS, type as integer, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a node object with a specified session and type.
Notes: Session: The session.
Type: The node type.

Error: An error reference for error details.

Returns the created node object.

142.1.8 subnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the names of subnodes for the node.

142.1.9 supportedAttributesForRecordType(RecordType as String, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of attribute types supported by the node,Äôs records.
Notes: RecordType: The record type to list supported attribute types for. Can be nil.
Error: An error reference for error details. Can be nil.

Returns an array of supported attribute types.

142.1.10 supportedRecordTypes(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the record types supported by the node.
Notes: If the node does not support checking for supported record types, all possible record types are returned.

142.1.11 unreachableSubnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the subnodes of a given node that are currently unreachable.

142.1.12 Properties

142.1.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

142.1.14 nodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The node,Äôs name.
Notes: (Read only property)

142.1.15 Constants

Node Types

Constant	Value	Description
kODNodeTypeAuthentication	&h2201	A node used for authentication or record lookups.
kODNodeTypeConfigure	&h2202	A node that specifically refers to the Directory Services configuration.
kODNodeTypeContacts	&h2204	A node used for applications that handle contact data.
kODNodeTypeLocalNodes	&h2200	A node that specifically looks at the local directory.
kODNodeTypeNetwork	&h2205	A node used for looking up network resource type data.

142.2 class ODQueryMBS

142.2.1 class ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory query.
Notes: Currently only partially implemented for Xojo for reading values. If you need more, please contact Monkeybread Software.

142.2.2 Methods

142.2.3 Constructor(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an query object created with provided parameters.
Notes: Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

142.2.4 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

142.2.5 queryWithNode(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS) as ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an query object created with provided parameters.
Notes: Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

142.2.6 resultsAllowingPartial(AllowPartialResults as Boolean, byref error as NSErrorMBS) as ODRecordMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns results from a query synchronously.
Notes: AllowPartialResults: If true, only immediately available results are returned; otherwise, the function waits until all results are available.
Error: An error reference for error details. Can be nil.

Returns the results of the query in an array of ODRecordMBS objects.

142.2.7 start

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Starts asynchronous search.

142.2.8 synchronize

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Restarts a query, disposing of any results it has obtained.
Notes: If the query was originally started asynchronously, the event is called with inResults set to nil, error.code set to kODErrorQuerySynchronize, and error.domain set to kODErrorDomainFramework.

142.2.9 Properties

142.2.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

142.2.11 Constants

Match Types

Constant	Value	Description
kODMatchAny	1	is used to search for any records (typically passed with nil search value)
kODMatchBeginsWith	&h2002	is searching values that begin with the provided value
kODMatchContains	&h2004	is searching values that contain the provided value
kODMatchEndsWith	&h2003	is searching values that end with the provided value
kODMatchEqualTo	&h2001	is searching values that are equal to the provided value
kODMatchGreaterThan	&h2006	is searching values greater than the provided value
kODMatchLessThan	&h2007	is searching values less than the provided value

142.3 class ODRecordMBS

142.3.1 class ODRecordMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

142.3.2 Methods

142.3.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

142.3.4 kODAttributeTypeAccessControlEntry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type which stores directory access control directives.

142.3.5 kODAttributeTypeAddressLine1 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line one of multiple lines of address data for a user.

142.3.6 kODAttributeTypeAddressLine2 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line two of multiple lines of address data for a user.

142.3.7 kODAttributeTypeAddressLine3 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line three of multiple lines of address data for a user.

142.3.8 kODAttributeTypeAdminLimits as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: XML plist indicating what an admin user can edit. Found in kODRecordTypeUsers records.

142.3.9 kODAttributeTypeAdvertisedServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.10 kODAttributeTypeAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Alias attribute, contain pointer to another node/record/attribute.

142.3.11 kODAttributeTypeAllAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all attribute types in a search.

142.3.12 kODAttributeTypeAllTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to indicated recommended attribute types for a record type in the Config node.

142.3.13 kODAttributeTypeAltSecurityIdentities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to store alternate identities for the record. Values will have standardized form as specified by Microsoft LDAP schema (1.2.840.113556.1.4.867).

Kerberos:user\@REALM

142.3.14 kODAttributeTypeAreaCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Area code of a user's phone number.

142.3.15 kODAttributeTypeAttrListRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute List reference count for a process.

142.3.16 kODAttributeTypeAttrListRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the attribute list references for a process.

142.3.17 kODAttributeTypeAttrListValueRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attr List Value reference count for a process.

142.3.18 kODAttributeTypeAttrListValueRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the attribute list value references for a process.

142.3.19 kODAttributeTypeAuthCredential as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: An authentication credential, to be used to authenticate to a Directory.

142.3.20 kODAttributeTypeAuthenticationAuthority as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Determines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

Authentication authorities are a multi-part string separated by semi-colons.
One component is the "type" of authority, such as those listed below:

"basic"	- is a crypt password
"ShadowHash"	- is a hashed password stored in a secure location
"ApplePasswordServer"	- is a password server-based account
"Kerberosv5"	- is a Kerberosv5 based
"LocalCachedUser"	- is a cached account based on an account from another node, using a ShadowHash password
"DisabledUser"	- is an account that has been disabled

142.3.21 kODAttributeTypeAuthenticationHint as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to identify the authentication hint phrase.

142.3.22 kODAttributeTypeAuthMethod as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Authentication method for an authentication capable record.

142.3.23 kODAttributeTypeAuthorityRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of the authority revocation list.
A certificate revocation list that defines certificate authority certificates which are no longer trusted. No user certificates are included in this list.
Usually found in kODRecordTypeCertificateAuthorities records.

142.3.24 kODAttributeTypeAutomaticSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Automatic search path defined by the search node.

142.3.25 kODAttributeTypeAutomountInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: xDetermines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

142.3.26 kODAttributeTypeBirthday as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Single-valued attribute that defines the user's birthday.
Format is x.208 standard YYYYMMDDHHMMSSZ which we will require as GMT time.

142.3.27 kODAttributeTypeBootParams as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in host or machine records for storing boot params.

142.3.28 kODAttributeTypeBuilding as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the building name for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.29 kODAttributeTypeBuildVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Build version for reference.

142.3.30 kODAttributeTypeCACertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of the certificate of a certificate authority.
Its corresponding private key is used to sign certificates.
Usually found in kODRecordTypeCertificateAuthority records.

142.3.31 kODAttributeTypeCapacity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the capacity of a resource.
found in resource records (kODRecordTypeResources).
Example: 50

142.3.32 kODAttributeTypeCertificateRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of the certificate revocation list.
This is a list of certificates which are no longer trusted.
Usually found in kODRecordTypeCertificateAuthority records.

142.3.33 kODAttributeTypeCity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually, city for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.34 kODAttributeTypeComment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used for unformatted comment.

142.3.35 kODAttributeTypeCompany as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines the user's company.
Example: Apple Inc.

142.3.36 kODAttributeTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of computers.

142.3.37 kODAttributeTypeConfigAvailable as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Config avail tag.

142.3.38 kODAttributeTypeConfigFile as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Config file name.

142.3.39 kODAttributeTypeContactGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the contact GUID of a group.
Usually found in group records (kODRecordTypeGroups)

142.3.40 kODAttributeTypeContactPerson as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the contact person of the machine.
Found in host or machine records.

142.3.41 kODAttributeTypeCopyTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Timestamp used in local account caching.

142.3.42 kODAttributeTypeCoreFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Core FW version for reference.

142.3.43 kODAttributeTypeCountry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents country of a record entry.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.44 kODAttributeTypeCreationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute showing date/time of record creation.
Format is x.208 standard YYYYMMDDHHMMSSZ which should be GMT time.

142.3.45 kODAttributeTypeCrossCertificatePair as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of a pair of certificates which verify each other. Both certificates have the same level of authority.
Usually found in kODRecordTypeCertificateAuthority records.

142.3.46 kODAttributeTypeCustomSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Admin user configured custom search path defined by the search node.

142.3.47 kODAttributeTypeDataStamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for checksum/meta data

142.3.48 kODAttributeTypeDateRecordCreated as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Date of record creation.

142.3.49 kODAttributeTypeDepartment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the department name of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.50 kODAttributeTypeDirRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Directory reference count for a process.

142.3.51 kODAttributeTypeDirRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the directory references for a process.

142.3.52 kODAttributeTypeDNSDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver domain attribute.

142.3.53 kODAttributeTypeDNSName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

142.3.54 kODAttributeTypeDNSNameServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

142.3.55 kODAttributeTypeEMailAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Email address of usually a user record.

142.3.56 kODAttributeTypeEMailContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines a record's custom email addresses.
found in user records (kODRecordTypeUsers).
Example: home:johndoe\@mymail.com

142.3.57 kODAttributeTypeENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for hardware Ethernet address (MAC address).
Found in computer records (kODRecordTypeComputers).

142.3.58 kODAttributeTypeExpire as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for expiration date or time depending on association.

142.3.59 kODAttributeTypeFaxNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the FAX numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.60 kODAttributeTypeFirstName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for first name of user or person record.

142.3.61 kODAttributeTypeFullName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Full name of a record (e.g., "John Doe", "John Doe's Computer")

142.3.62 kODAttributeTypeFunctionalState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Functional state of plugin for example.

142.3.63 kODAttributeTypeFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Framework version for reference.

142.3.64 kODAttributeTypeGroup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of groups.

142.3.65 kODAttributeTypeGroupMembers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in group records containing lists of GUID values for members other than groups.

142.3.66 kODAttributeTypeGroupMembership as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually a list of users that below to a given group record.

142.3.67 kODAttributeTypeGroupServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: xml-plist attribute that defines a group's services.
Found in group records (kODRecordTypeGroups).

142.3.68 kODAttributeTypeGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for 36 character (128 bit) unique ID. An example value is "A579E95E-CDFE-4EBC-B7E7-F2158562170F". The standard format contains 32 uppercase hex characters and four hyphen characters.

142.3.69 kODAttributeTypeHardwareUUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to store hardware UUID in string form for a record. Typically found in kODRecordTypeComputers.

142.3.70 kODAttributeTypeHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Network home directory URL.

142.3.71 kODAttributeTypeHomeDirectoryQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the allowed usage for a user's home directory in bytes.
Found in user records (kODRecordTypeUsers).

142.3.72 kODAttributeTypeHomeDirectorySoftQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to define home directory size limit in bytes when user is notified that the hard limit is approaching.

142.3.73 kODAttributeTypeHomeLocOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the owner of a workgroup's shared home directory.
Typically found in kODRecordTypeGroups records.

142.3.74 kODAttributeTypeHomePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Home telephone number of a user or person.

142.3.75 kODAttributeTypeHTML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: HTML location.

142.3.76 kODAttributeTypeIMHandle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the Instant Messaging handles of a user.
Values should be prefixed with the appropriate IM type
(i.e., AIM:, Jabber:, MSN:, Yahoo:, or ICQ:).
Usually found in user records (kODRecordTypeUsers).

142.3.77 kODAttributeTypeInternetAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to track internet alias.

142.3.78 kODAttributeTypeIPAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: IP address expressed either as domain or IP notation.

142.3.79 kODAttributeTypeIPAddressAndENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: A pairing of IPv4 or IPv6 addresses with Ethernet addresses (e.g., "10.1.1.1/00:16:cb:92:56:41"). Usually found on kODRecordTypeComputers for use by services that need specific pairing of the two values. This should be in addition to kODAttributeTypeIPAddress, kODAttributeTypeIPv6Address and kODAttributeTypeENetAddress. This is necessary because not all directories return attribute values in a guaranteed order.

142.3.80 kODAttributeTypeIPv6Address as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: IPv6 address expressed in the standard notation (e.g., "fe80::236:caff:fcc2:5641")
Usually found on kODRecordTypeComputers and kODRecordTypeHosts.

142.3.81 kODAttributeTypeJobTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the job title of a user.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.82 kODAttributeTypeJPEGPhoto as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to store binary picture data in JPEG format.
Usually found in user, people or group records (kODRecordTypeUsers, kODRecordTypePeople, kODRecord-

TypeGroups).

142.3.83 kODAttributeTypeKDCAuthKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: KDC master key RSA encrypted with realm public key.

142.3.84 kODAttributeTypeKDCConfigData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contents of the kdc.conf file.

142.3.85 kODAttributeTypeKerberosRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

142.3.86 kODAttributeTypeKerberosServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: This is used to store the principals in host records (i.e., ”host”, ”vnc”, etc.)

142.3.87 kODAttributeTypeKeywords as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Keywords using for searching capability.

142.3.88 kODAttributeTypeLastName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for the last name of user or person record.

142.3.89 kODAttributeTypeLDAPReadReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to read directory data.

142.3.90 kODAttributeTypeLDAPSearchBaseSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search base suffix for a LDAP server.

142.3.91 kODAttributeTypeLDAPWriteReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to write directory data.

142.3.92 kODAttributeTypeLocaleRelay as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.93 kODAttributeTypeLocaleSubnets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.94 kODAttributeTypeLocalOnlySearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Local only search path defined by the search node.

142.3.95 kODAttributeTypeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the location a service is available from (usually domain name).
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

142.3.96 kODAttributeTypeMailAttribute as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds the mail account config data.

142.3.97 kODAttributeTypeMapCoordinates as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines coordinates for a user's location.
found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).
Example: 7.7,10.6

142.3.98 kODAttributeTypeMapGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the GUID for a record's map.

142.3.99 kODAttributeTypeMapURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines the URI of a user's location.
Usually found in user records (kODRecordTypeUsers).
Example: http://example.com/bldg1

142.3.100 kODAttributeTypeMCXFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by ManagedClient.

142.3.101 kODAttributeTypeMCXSettings as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by ManagedClient.

142.3.102 kODAttributeTypeMetaAmbiguousName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Searches a configured list of attributes; by default: RecordName, FullName, EMailAddress.

142.3.103 kODAttributeTypeMetaAugmentedAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attributes that have been augmented.

142.3.104 kODAttributeTypeMetaAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to query for kODRecordTypeAutomount entries associated with a specific kODRecordTypeAutomountMap.

142.3.105 kODAttributeTypeMetaNodeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Meta attribute returning registered node name by directory node plugin.

142.3.106 kODAttributeTypeMetaRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Native record name, e.g. LDAP DN

142.3.107 kODAttributeTypeMiddleName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for the middle name of user or person record.

142.3.108 kODAttributeTypeMIME as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Data contained in this attribute type is a fully qualified MIME Type.

142.3.109 kODAttributeTypeMobileNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the mobile numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.110 kODAttributeTypeModificationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute showing date/time of record modification.
Format is x.208 standard YYYYMMDDHHMMSSZ which is required as GMT time.

142.3.111 kODAttributeTypeNamePrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the title prefix of a user or person. ie. Mr., Ms., Mrs., Dr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.112 kODAttributeTypeNameSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the name suffix of a user or person.
i.e., Jr., Sr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.113 kODAttributeTypeNativeOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all native attribute types in a search.

142.3.114 kODAttributeTypeNestedGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in group records for the list of GUID values for nested groups.

142.3.115 kODAttributeTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type that indicates which netgroups its record is a member of.
Found in user and host records.

142.3.116 kODAttributeTypeNetGroupTriplet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines the host, user and domain triplet combinations to support NetGroups. Each attribute value is comma separated string to maintain the triplet (e.g., host,user,domain).

142.3.117 kODAttributeTypeNetworkInterfaces as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.118 kODAttributeTypeNetworkNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines a network number. Usually found in network records (kODRecordTypeNetworks)

142.3.119 kODAttributeTypeNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Defines a user's home directory mount point on the local machine.

142.3.120 kODAttributeTypeNickName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the nickname of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.121 kODAttributeTypeNodeOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Any extended options supported by the node during creation

142.3.122 kODAttributeTypeNodePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in Neighborhood records describing the DS Node to search while looking up aliases in this neighborhood.

142.3.123 kODAttributeTypeNodeRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Node reference count for a process.

142.3.124 kODAttributeTypeNodeRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the node references for a process.

142.3.125 kODAttributeTypeNodeSASLRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contains the SASL realm associated with this node (if any)

142.3.126 kODAttributeTypeNote as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Note attribute.

142.3.127 kODAttributeTypeNTDomainComputerAccount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

142.3.128 kODAttributeTypeNumTableList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Summary of the reference table entries presented as attribute values from the Configure node.

142.3.129 kODAttributeTypeOperatingSystem as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Returns the operating system type where the daemon is running, e.g., Mac OS X or Mac OS X Server

142.3.130 kODAttributeTypeOperatingSystemVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Returns the operating system version where the daemon is running, e.g., 10.6

142.3.131 kODAttributeTypeOrganizationInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually the organization info of a user.

142.3.132 kODAttributeTypeOrganizationName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually the organization of a user.

142.3.133 kODAttributeTypeOriginalHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Home directory URL used in local account caching.

142.3.134 kODAttributeTypeOriginalNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: NFS home directory used in local account caching.

142.3.135 kODAttributeTypeOriginalNodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Nodename used in local account caching.

142.3.136 kODAttributeTypeOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the owner of a record.
Typically the value is a LDAP distinguished name.

142.3.137 kODAttributeTypeOwnerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the owner GUID of a group.
Found in group records (kODRecordTypeGroups).

142.3.138 kODAttributeTypePagerNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the pager numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.139 kODAttributeTypeParentLocales as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.140 kODAttributeTypePassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds the password or credential value.

142.3.141 kODAttributeTypePasswordPlus as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds marker data to indicate possible authentication redirection.

142.3.142 kODAttributeTypePasswordPolicyOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Collection of password policy options in single attribute.
Used in user presets record.

142.3.143 kODAttributeTypePasswordServerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the attribute for storing the password server's replication information.

142.3.144 kODAttributeTypePasswordServerLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Specifies the IP address or domain name of the Password Server associated with a given directory node. Found in a config record named PasswordServer.

142.3.145 kODAttributeTypePGPPublicKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Pretty Good Privacy public encryption key.

142.3.146 kODAttributeTypePhoneContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines a record's custom phone numbers.
found in user or people records.
Example: home fax:408-555-4444

142.3.147 kODAttributeTypePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Telephone number of a user.

142.3.148 kODAttributeTypePicture as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the path of the picture for each user displayed in the login window.
Found in user records (kODRecordTypeUsers).

142.3.149 kODAttributeTypePIDValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: PID value.

142.3.150 kODAttributeTypePluginIndex as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Plugin index for reference.

142.3.151 kODAttributeTypePlugInInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Information (version, signature, about, credits, etc.) about the plug-in that is actually servicing a

particular directory node.
Has never been supported.

142.3.152 kODAttributeTypePort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the port number a service is available on.
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

142.3.153 kODAttributeTypePostalAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The postal address usually excluding postal code.

142.3.154 kODAttributeTypePostalAddressContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines a record's alternate postal addresses.
Found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).

142.3.155 kODAttributeTypePostalCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The postal code such as zip code in the USA.

142.3.156 kODAttributeTypePresetUserIsAdmin as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Flag to indicate whether users created from this preset are administrators by default. Found in

kODRecordTypePresetUsers records.

142.3.157 kODAttributeTypePrimaryComputerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: An attribute that defines a primary computer of the computer group.
Added to computer group record type (kODRecordTypeComputerGroups)

142.3.158 kODAttributeTypePrimaryComputerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The GUID of the computer list with which this computer record is associated.

142.3.159 kODAttributeTypePrimaryGroupID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: This is the 32 bit unique ID that represents the primary group a user is part of, or the ID of a group. Format is a signed 32 bit integer represented as a string.

142.3.160 kODAttributeTypePrimaryLocale as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.161 kODAttributeTypePrimaryNTDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

142.3.162 kODAttributeTypePrinter1284DeviceID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines the IEEE 1284 DeviceID of a printer.
This is used when configuring a printer.

142.3.163 kODAttributeTypePrinterLPRHost as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

142.3.164 kODAttributeTypePrinterLPRQueue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

142.3.165 kODAttributeTypePrinterMakeAndModel as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for definition of the Printer Make and Model. An example value would be "HP LaserJet 2200". This would be used to determine the proper PPD file to be used when configuring a printer from the Directory. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

142.3.166 kODAttributeTypePrinterType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

142.3.167 kODAttributeTypePrinterURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines the URI of a printer "ipp://address" or "smb://server/queue". This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

142.3.168 kODAttributeTypePrinterXRISupported as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines additional URIs supported by a printer.
This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

142.3.169 kODAttributeTypePrintServiceInfoText as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

142.3.170 kODAttributeTypePrintServiceInfoXML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

142.3.171 kODAttributeTypePrintServiceUserData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for print quota configuration or statistics (XML data).
Found in user records (kODRecordTypeUsers) or print service statistics records (kODRecordTypePrintServiceUser).

142.3.172 kODAttributeTypeProcessName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Process Name.

142.3.173 kODAttributeTypeProfiles as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Profiles associated with the record.

142.3.174 kODAttributeTypeProfilesTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Timestamp for the profiles associated with the record.

142.3.175 kODAttributeTypeProtocolNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines a protocol number. Usually found in protocol records (kODRecordTypeProtocols)

142.3.176 kODAttributeTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of protocols.

142.3.177 kODAttributeTypePwdAgingPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contains the password aging policy data for an authentication capable record.

142.3.178 kODAttributeTypeReadOnlyNode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Can be found using dsGetDirNodeInfo and will return one of
ReadOnly, ReadWrite, or WriteOnly strings.
Note that ReadWrite does not imply fully readable or writable

142.3.179 kODAttributeTypeRealUserID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by Managed Client

142.3.180 kODAttributeTypeRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of names/keys for this record.

142.3.181 kODAttributeTypeRecordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for a Record or a Directory Node.

142.3.182 kODAttributeTypeRecRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Record reference count for a process.

142.3.183 kODAttributeTypeRecRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the record references for a process.

142.3.184 kODAttributeTypeRelationships as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines the relationship to the record type.
found in user records (kODRecordTypeUsers).
Example: brother:John

142.3.185 kODAttributeTypeRelativeDNPrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to map the first native LDAP attribute type required in the building of the Relative Distinguished Name for LDAP record creation.

142.3.186 kODAttributeTypeResourceInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines a resource record's info.

142.3.187 kODAttributeTypeResourceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type for the kind of resource.
found in resource records (kODRecordTypeResources).
Example: ConferenceRoom

142.3.188 kODAttributeTypeRPCNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines an RPC number. Usually found in RPC records (kODRecordTypeRPC)

142.3.189 kODAttributeTypeSchema as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of attribute types.

142.3.190 kODAttributeTypeSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search path used by the search node.

142.3.191 kODAttributeTypeSearchPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search policy for the search node.

142.3.192 kODAttributeTypeServicesLocator as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: the URI for a record's calendar

142.3.193 kODAttributeTypeServiceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the service type for the service. This is the raw service type of the service. For example a service record type of kODRecordTypeWebServer might have a service type of "http" or "https".

142.3.194 kODAttributeTypeSetupAdvertising as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

142.3.195 kODAttributeTypeSetupAutoRegister as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

142.3.196 kODAttributeTypeSetupLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

142.3.197 kODAttributeTypeSetupOccupation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

142.3.198 kODAttributeTypeSMBAcctFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Account control flag.

142.3.199 kODAttributeTypeSMBGroupRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Constant for supporting PDC SMB interaction with DirectoryService.

142.3.200 kODAttributeTypeSMBHome as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: UNC address of Windows homedirectory mount point (\server\sharepoint).

142.3.201 kODAttributeTypeSMBHomeDrive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Drive letter for homedirectory mount point.

142.3.202 kODAttributeTypeSMBKickoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

142.3.203 kODAttributeTypeSMBLogoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

142.3.204 kODAttributeTypeSMBLogonTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: SMB Primary Group Security ID, stored as a string attribute of up to 64 bytes. Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

142.3.205 kODAttributeTypeSMBPrimaryGroupSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

142.3.206 kODAttributeTypeSMBProfilePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Desktop management info (dock, desktop links, etc).

142.3.207 kODAttributeTypeSMBPWDLastSet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

142.3.208 kODAttributeTypeSMBRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

142.3.209 kODAttributeTypeSMBScriptPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Login script path.

142.3.210 kODAttributeTypeSMBSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: SMB Security ID, stored as a string attribute of up to 64 bytes.
Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

142.3.211 kODAttributeTypeSMBUserWorkstations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of workstations user can login from (machine account names).

142.3.212 kODAttributeTypeStandardOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all standard attribute types in a query.

142.3.213 kODAttributeTypeState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The state or province of a country.

142.3.214 kODAttributeTypeStreet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the street address of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

142.3.215 kODAttributeTypeSubNodes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute of a node which lists the available subnodes of that node.

142.3.216 kODAttributeTypeTimePackage as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Data of Create, Modify, Backup time in UTC.

142.3.217 kODAttributeTypeTimeToLive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute recommending how long to cache the record's attribute values.
Format is an unsigned 32 bit representing seconds. ie. 300 is 5 minutes.

142.3.218 kODAttributeTypeTotalRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Total count of references for a process.

142.3.219 kODAttributeTypeTotalSize as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: checksum/meta data.

142.3.220 kODAttributeTypeTrustInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to describe a node's trust information.

142.3.221 kODAttributeTypeUniqueID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: This is the 32 bit unique ID that represents the user in the legacy manner.
Format is a signed integer represented as a string.

142.3.222 kODAttributeTypeURL as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of URLs.

142.3.223 kODAttributeTypeUserCertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of the user's certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party.

142.3.224 kODAttributeTypeUserPKCS12Data as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing binary data in PKCS #12 format.

Usually found in user records. The value can contain keys, certificates, and other related information and is encrypted with a passphrase.

142.3.225 kODAttributeTypeUserShell as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to represent the user's shell setting.

142.3.226 kODAttributeTypeUserSMIMECertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute containing the binary of the user's SMIME certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party. SMIME certificates are often used for signed or encrypted emails.

142.3.227 kODAttributeTypeVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Version label.

142.3.228 kODAttributeTypeVFSDumpFreq as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

142.3.229 kODAttributeTypeVFSLinkDir as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

142.3.230 kODAttributeTypeVFSOpts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in support of mount records.

142.3.231 kODAttributeTypeVFSPassNo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

142.3.232 kODAttributeTypeVFSType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

142.3.233 kODAttributeTypeWeblogURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines the URI of a user's weblog.
Usually found in user records (kODRecordTypeUsers).
Example: http://example.com/blog/jsmith

142.3.234 kODAttributeTypeXMLPlist as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: XML plist used.

142.3.235 kODRecordTypeAFPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type of AFP server records.

142.3.236 kODRecordTypeAliases as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to represent alias records.

142.3.237 kODRecordTypeAttributeTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies records that represent each possible attribute type.

142.3.238 kODRecordTypeAugments as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store augmented record data.

142.3.239 kODRecordTypeAutomount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store automount record data.

142.3.240 kODRecordTypeAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store automountMap record data.

142.3.241 kODRecordTypeAutoServerSetup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to discover automated server setup information.

142.3.242 kODRecordTypeBootp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing bootp info.

142.3.243 kODRecordTypeCertificateAuthorities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type that contains certificate authority informatio

142.3.244 kODRecordTypeComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer group records.

142.3.245 kODRecordTypeComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer list records.

142.3.246 kODRecordTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer records.

142.3.247 kODRecordTypeConfiguration as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies configuration records.

142.3.248 kODRecordTypeEthernets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the node for storing ethernets.

142.3.249 kODRecordTypeFileMakerServers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: FileMaker servers record type that describes available FileMaker servers, used for service discovery.

142.3.250 kODRecordTypeFTPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies ftp server records.

142.3.251 kODRecordTypeGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies group records.

142.3.252 kODRecordTypeHosts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies host records.

142.3.253 kODRecordTypeHostServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing host services.

142.3.254 kODRecordTypeLDAPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies LDAP server records.

142.3.255 kODRecordTypeLocations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Location record type.

142.3.256 kODRecordTypeMounts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies mount records.

142.3.257 kODRecordTypeNetDomains as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing net domains.

142.3.258 kODRecordTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing net groups.

142.3.259 kODRecordTypeNetworks as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies network records.

142.3.260 kODRecordTypeNFS as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies NFS records.

142.3.261 kODRecordTypePeople as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type that contains "People" records used for contact information.

142.3.262 kODRecordTypePresetComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer group record type used for presets in record creation.

142.3.263 kODRecordTypePresetComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer list record type used for presets in record creation.

142.3.264 kODRecordTypePresetComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer record type used for presets in record creation.

142.3.265 kODRecordTypePresetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The group record type used for presets in record creation.

142.3.266 kODRecordTypePresetUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The user record type used for presets in record creation.

142.3.267 kODRecordTypePrinters as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies printer records.

142.3.268 kODRecordTypePrintService as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies print service records.

142.3.269 kODRecordTypePrintServiceUser as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing quota usage for a user.

142.3.270 kODRecordTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies protocol records.

142.3.271 kODRecordTypeQTSServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies quicktime streaming server records.

142.3.272 kODRecordTypeQueryInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Specifically to return query information inline such as skipped nodes

142.3.273 kODRecordTypeRecordTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies records that represent each possible record type.

142.3.274 kODRecordTypeResources as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies resources used in group services.

142.3.275 kODRecordTypeRPC as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies remote procedure call records.

142.3.276 kODRecordTypeServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies generic server records.

142.3.277 kODRecordTypeServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies directory based service records.

142.3.278 kODRecordTypeSharePoints as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Share point record type.

142.3.279 kODRecordTypeSMBServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies SMB server records.

142.3.280 kODRecordTypeUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies user records.

142.3.281 kODRecordTypeWebServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies web server records.

142.3.282 recordDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary of attributes with their respective values.
Notes: Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

142.3.283 recordDetailsForAttributes(inAttributes() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary of attributes with their respective values.
Notes: inAttributes: An array of attributes. Can be nil.
Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

If inAttributes is nil, all currently retrieved attributes are returned.

142.3.284 synchronize(byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Synchronizes the record from the directory to get current data and commit changes.
Notes: Returns true if the record successfully synchronizes; otherwise, false.

This method only fetches those attributes that have been fetched before.

142.3.285 valuesForAttribute(inAttribute as String, byref error as NSErrorMBS) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the values of an attribute of the record.
Notes: inAttribute: The attribute.
Error: An error reference for error details. Can be nil.

Returns an array of attribute values. Elements are of type String or MemoryBlock.

142.3.286 Properties

142.3.287 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

142.3.288 recordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The official name of the record.
Notes: (Read only property)

142.3.289 recordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The record,Äôs type.
Notes: (Read only property)

142.4 class ODSessionMBS

142.4.1 class ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an Open Directory session.

142.4.2 Methods

142.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: gets default session.

142.4.4 defaultSession as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a shared instance of the local session.

142.4.5 nodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the node names that are registered with this session.

142.4.6 ODSessionProxyAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The address to connect to via proxy. The value is of type string.

142.4.7 ODSessionProxyPassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The password to connect with via proxy. The value is of type string.

142.4.8 ODSessionProxyPort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The port to connect to via proxy. The value is of type integer.

142.4.9 ODSessionProxyUsername as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The username to connect with via proxy. The value is of type string.

142.4.10 session(options as dictionary, byref Error as NSErrorMBS) as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a session object directed over proxy to another host.
Notes: Options: A dictionary of options to associate with the session. Can be nil.
Error: An error reference for error details. Can be nil.

Returns the initialized session object.

142.4.11 UserName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries user name.
Notes: Convenience function to query user name of current user.

142.4.12 Properties

142.4.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

Chapter 143

OpenCL

143.1 class CLCommandQueueMBS

143.1.1 class CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for an OpenCL command queue.
Example:

```
Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
Var device as CLDeviceMBS = devices(0) // we use first one

// Create a context
Var context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
Var queue as new CLCommandQueueMBS(context, device, 0)
```

143.1.2 Methods

143.1.3 Constructor(context as CLContextMBS, device as CLDeviceMBS, flags as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Create a command-queue on a specific device.
Example:

```
Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
Var device as CLDeviceMBS = devices(0) // we use first one

// Create a context
Var context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
Var queue as new CLCommandQueueMBS(context, device, 0)
```

Notes: context: Must be a valid OpenCL context.
device: Must be a device associated with context. It can either be in the list of devices specified when context is created using CLContextMBS Constructor or have the same device type as the device type specified when the context is created.
flags: Specifies a list of properties for the command-queue. This is a bit-field. Only command-queue properties specified in the table below can be set in properties; otherwise the value specified in properties is considered to be not valid.

Command-Queue Properties	Description
kQueueOutOfOrderExecModeEnable	Determines whether the commands queued in the command-queue are executed in-order or out-of-order. If set, the commands in the command-queue are executed out-of-order. Otherwise, commands are executed in-order.
kQueueProfilingEnable	Enable or disable profiling of commands in the command-queue. If set, the profiling of commands is enabled. Otherwise profiling of commands is disabled. See clGetEventProfilingInfo for more information.

The OpenCL functions that are submitted to a command-queue are enqueued in the order the calls are made but can be configured to execute in-order or out-of-order. The properties argument in clCreateCommandQueue can be used to specify the execution order.

If the kQueueOutOfOrderExecModeEnable property of a command-queue is not set, the commands enqueued to a command-queue execute in order. For example, if an application calls EnqueueNDRangeKernel to execute kernel A followed by a EnqueueNDRangeKernel to execute kernel B, the application can assume that kernel A finishes first and then kernel B is executed. If the memory objects output by kernel A are inputs to kernel B then kernel B will see the correct data in memory objects produced by execution of kernel A. If the kQueueOutOfOrderExecModeEnable property of a commandqueue is set, then there is no guarantee that kernel A will finish before kernel B starts execution.

Applications can configure the commands enqueued to a command-queue to execute out-of-order by setting the kQueueOutOfOrderExecModeEnable property of the command-queue. This can be specified when the command-queue is created or can be changed dynamically using this Constructor. In out-of-order execution mode there is no guarantee that the enqueued commands will finish execution in the order they were queued. As there is no guarantee that kernels will be executed in order, i.e. based on when the EnqueueNDRangeKernel calls are made within a command-queue, it is therefore possible that an earlier EnqueueNDRangeKernel

call to execute kernel A identified by event A may execute and/or finish later than a EnqueueNDRangeKernel call to execute kernel B which was called by the application at a later point in time. To guarantee a specific order of execution of kernels, a wait on a particular event (in this case event A) can be used. The wait for event A can be specified in the event_wait_list argument to EnqueueNDRangeKernel for kernel B.

In addition, a wait for events or a barrier command can be enqueued to the command-queue. The wait for events command ensures that previously enqueued commands identified by the list of events to wait for have finished before the next batch of commands is executed. The barrier command ensures that all previously enqueued commands in a command-queue have finished execution before the next batch of commands is executed.

Similarly, commands to read, write, copy or map memory objects that are enqueued after EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel commands are not guaranteed to wait for kernels scheduled for execution to have completed (if the kQueueOutOfOrderExecModeEnable property is set). To ensure correct ordering of commands, the event object returned by EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel can be used to enqueue a wait for event or a barrier command can be enqueued that must complete before reads or writes to the memory object(s) occur.

Lasterror is set.

143.1.4 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context specified when the command-queue is created.
Notes: Lasterror is set.

143.1.5 Device as CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the device specified when the command-queue is created.
Notes: Lasterror is set.

143.1.6 EnqueueBarrier

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A synchronization point that enqueues a barrier operation.
Notes: EnqueueBarrier is a synchronization point that ensures that all queued commands in command_queue

have finished execution before the next batch of commands can begin execution.

Lasterror is set.

143.1.7 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to another buffer object.
Notes: sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 143.1.8 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18548

143.1.8 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to another buffer object.
Notes: sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 143.1.7 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer) 18548

143.1.9 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to an image object.
Notes: SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18550

143.1.10 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to an image object.
Notes: SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.
See also:

- 143.1.9 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer) 18549

143.1.11 EnqueueCopyImage(sourceImage as CLMemMBS, destImage as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy image objects.
Notes: sourceImage: Source image.
destImage: Dest image.

sourceOrigin: Defines the starting (x, y, z) location in pixels in src_image from where to start the data copy. If src_image is a 2D image object, the z value given by sourceOriginZ must be 0.

sourceOrigin: Defines the starting (x, y, z) location in pixels in dst_image from where to start the data copy. If dst_image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If src_image or dst_image is a 2D image object, the depth value given by RegionDepth must be 1.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CommandQueue must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

It is currently a requirement that the sourceImage and destImage image memory objects for EnqueueCopyImage must have the exact same image format (i.e. the cl_image_format descriptor specified when sourceImage and destImage are created must match).

sourceImage and destImage can be 2D or 3D image objects allowing us to perform the following actions:

- Copy a 2D image object to a 2D image object.
- Copy a 2D image object to a 2D slice of a 3D image object.
- Copy a 2D slice of a 3D image object to a 2D image object.
- Copy a 3D image object to a 3D image object.

Lasterror is set.

- 143.1.13 EnqueueCopyImageToBuffer(sourceImage as CLMemMBS, destBuffer as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, Re-

gionHeight as Integer, RegionDepth as Integer, destOffset as Integer) 18553

143.1.15 EnqueueMapBuffer(buffer as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, offset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
Notes: BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.
buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

Lasterror is set.

143.1.17 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
Notes: image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

- 143.1.18 EnqueueMapImage(image as CLMemMBS, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer) as memoryblock 18558

143.1.18 EnqueueMapImage(image as CLMemMBS, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
Notes: image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing

are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

- 143.1.17 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock 18557

143.1.19 EnqueueMarker(byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a marker command.
Notes: Enqueues a marker command to the command queue. The marker command returns an event which can be used to queue a wait on this marker event i.e. wait for all commands queued before the marker command to complete.

Lasterror is set.

143.1.20 EnqueueNativeKernel(FunctionPtr as ptr, args as memoryblock, argsSize as Integer, NumberOfMemoryObjects as Integer, MemList as memoryblock, ArgsMemoryLocations as memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a native C/C++ function not compiled using the OpenCL compiler.
Notes: First a warning: Don't use this with Xojo methods. You can point to a function written in C which you made thread safe.

self: A valid command-queue. A native user function can only be executed on a command-queue created on a device that has kExceNativeKernel capability set in ExecutionCapabilities property.

FunctionPtr: A pointer to a host-callable user function.

args: A pointer to the args list that FunctionPtr should be called with.
argsSize: The size in bytes of the args list that args points to.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

NumberOfMemoryObjects: The number of buffer objects that are passed in args.

MemList: A list of valid buffer objects, if NumberOfMemoryObjects is greater than 0. The buffer object values specified in MemList are memory object handles (CLMemMBS.handle values) or nil.

ArgsMemoryLocations: A pointer to appropriate locations that args points to where memory object handles (CLMemMBS.handle values) are stored. Before the user function is executed, the memory object handles are replaced by pointers to global memory.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optionally, Returns an event object that identifies this particular kernel execution instance.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

Lasterror is set.

- 143.1.20 EnqueueNativeKernel(FunctionPtr as ptr, args as memoryblock, argsSize as Integer, NumberOfMemoryObjects as Integer, MemList as memoryblock, ArgsMemoryLocations as memoryblock) 18560

143.1.22 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes: kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

143.1.24 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to read from a buffer object to host memory.
Notes: buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.

143.1.26 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to read from a 2D or 3D image object to host memory.
Notes: image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

143.1.27 EnqueueReadImage(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to read from a 2D or 3D image object to host memory..
Notes: image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.

- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

143.1.28 EnqueueReadPicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enqueues a command to read from a 2D or 3D image object to a Xojo picture object.
Example:

```
const size = 500

// create test picture
Var pic1 as Picture = LogoMBS(size)
// create destination picture
Var pic2 as new Picture(size, size, 32)

// get device list
Var devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
Var device as CLDeviceMBS = devices(0)

// Create context for that device
Var c as new CLContextMBS(device)

// query what format Xojo uses for pictures
Var RowPitch as Integer
Var format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
Var m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
Var cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
```

```
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes: image: Refers to a valid 2D or 3D image object.

origin: Defines the (x, y) offset in pixels in the image from where to read.
region: Defines the (width, heigh) in pixels of the 2D or 3D rectangle being read.

pic: The Xojo picture object to write pixel data to.

This command is always blocking.
Lasterror is set.

143.1.29 EnqueueTask(kernel as CLKernelMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes: kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.

- 143.1.29 EnqueueTask(kernel as CLKernelMBS) 18571

143.1.31 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes: memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are

considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.

143.1.32 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes: memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object

being mapped.

- 143.1.31 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock) 18572

143.1.33 EnqueueWaitForEvents(EventWaitList() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a wait for a specific event or a list of events to complete before any future commands queued in the command-queue are executed.
Notes: EventWaitList: Events specified in EventWaitList act as synchronization points.

The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

Lasterror is set.

143.1.34 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to write to a buffer object from host memory.
Notes: buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

- 143.1.35 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock) 18575

143.1.35 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to write to a buffer object from host memory.
Notes: buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.
See also:

- 143.1.34 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18574

143.1.36 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes: image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row

pitch and slice pitch.

- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

143.1.37 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes: image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

143.1.38 EnqueueWritePicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enqueues a command to write from a 2D or 3D image object to a Xojo Picture.
Example:

```
const size = 500

// create test picture
Var pic1 as Picture = LogoMBS(size)
// create destination picture
Var pic2 as new Picture(size, size, 32)

// get device list
Var devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
Var device as CLDeviceMBS = devices(0)

// Create context for that device
Var c as new CLContextMBS(device)

// query what format Xojo uses for pictures
Var RowPitch as Integer
Var format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
Var m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
Var cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes: image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

origin: Defines the (x, y) offset in pixels in the image from where to write or write.

region: Defines the (width, height) in pixels of the 2D or 3D rectangle being write or written.

pic: The target Xojo picture object. This must match in the image format for the image object and the size you specified in region.

This operation is always performed blocked.
Lasterror is set.

143.1.39 Finish

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Blocks until all previously queued OpenCL commands in a command-queue are issued to the associated device and have completed.
Notes: Blocks until all previously queued OpenCL commands in command_queue are issued to the associated device and have completed.

Finish does not return until all queued commands in command_queue have been processed and completed. clFinish is also a synchronization point.

Lasterror is set.

143.1.40 Flush

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Issues all previously queued OpenCL commands in a command-queue to the device associated with the command-queue.
Notes: Issues all previously queued OpenCL commands in command_queue to the device associated with command_queue.

Flush only guarantees that all queued commands to command_queue get issued to the appropriate device. There is no guarantee that they will be complete after Flush returns.

Lasterror is set.

Any blocking commands queued in a command-queue such as EnqueueReadImage or EnqueueReadBuffer with BlockingRead set to true, EnqueueWriteImage or EnqueueWriteBuffer with BlockingWrite set to true, EnqueueMapImage or EnqueueMapBuffer with BlockingMap set to true or WaitForEvents perform an implicit flush of the command-queue.

To use event objects that refer to commands enqueued in a command-queue as event objects to wait on by commands enqueued in a different command-queue, the application must call a Flush or any blocking commands that perform an implicit flush of the command-queue where the commands that refer to these event objects are enqueued.
Lasterror is set.

143.1.41 Properties as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the currently specified properties for the command-queue.
Notes: Lasterror is set.

143.1.42 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command-queue reference count.
Notes: Lasterror is set.

143.1.43 Properties

143.1.44 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.1.45 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.2 class CLContextMBS

143.2.1 class CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The OpenCL class for a context.
Example:

```
Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
Var device as CLDeviceMBS = devices(0) // we use first one

// Create a context
Var context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes: Contexts are used by the OpenCL runtime for managing objects such as command-queues, memory, program and kernel objects and for executing kernels on one or more devices specified in the context.

143.2.2 Methods

143.2.3 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates an OpenCL context.
Example:

```
Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
Var device as CLDeviceMBS = devices(0) // we use first one

// Create a context
Var context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes: Platform: Optional, Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.

143.2.5 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Create an OpenCL context from a device type that identifies the specific device(s) to use.
Example:

Var co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

Notes: Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Constants	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

143.2.9 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the list of devices in context.
Example:

```
// create context for all devices
Var co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

// and query it for it's devices
for each d as CLDeviceMBS in co.Devices
MsgBox d.Name
next
```

143.2.10 GetSupportedImageFormats(flags as UInt64, type as UInt32) as CLImageFormatMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Get the list of image formats supported by an OpenCL implementation.
Example:

```
Var co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

Var formats(-1) as CLImageFormatMBS = co.GetSupportedImageFormats(CLMemMBS.kMemoryReadWrite,
CLMemMBS.kMemoryTypeImage2D)
Var lines(-1) as string

for each f as CLImageFormatMBS in formats
// see constants for what this values mean
lines.Append hex(f.ImageChannelOrder)+" - "+hex(f.ImageChannelDataType)
next

MsgBox Join(lines,EndOfLine)
```

Notes: self: A valid OpenCL context on which the image object(s) will be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created and is described in the List of supported cl_mem_flags values for clCreateBuffer
type: Describes the image type and must be either kMemoryTypeImage2D or kMemoryTypeImage3D.

Returns an array of imageformat objects.

143.2.11 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context reference count.
Example:

```
Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
Var device as CLDeviceMBS = devices(0) // we use first one

// Create a context
Var context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

MsgBox str(context.ReferenceCount) // 1

// Create a command queue
Var queue as new CLCommandQueueMBS(context, device, 0)
```

MsgBox str(context.ReferenceCount) // 2 as the command queue points to the context, too.

143.2.12 Properties

143.2.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.2.14 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.2.15 Constants

Error mode constants

Constant	Value	Description
kErrorModeIgnore	0	
kErrorModeLogMessagesToStderr	3	Sends all log messages to the file descriptor stderr.
kErrorModeLogMessagesToStdout	2	Sends all log messages to the file descriptor stdout.
kErrorModeLogMessagesToSystemLog	1	Fowards on all log messages to the Apple System Logger.

143.3 class CLDeviceMBS

143.3.1 class CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for an OpenCL Device.

143.3.2 Methods

143.3.3 AddressBits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The default compute device address space size specified as an unsigned integer value in bits.
Example:

```
Var Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name+": "+str(p.AddressBits)
next
```

Notes: Currently supported values are 32 or 64 bits.
Lasterror is set.

143.3.4 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the device is available and false if the device is not available.
Notes: Lasterror is set.

143.3.5 CompilerAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns false if the implementation does not have a compiler available to compile the program source.
Notes: Is true if the compiler is available. This can be false for the embedded platform profile only.

Lasterror is set.

143.3.6 DeviceType as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The OpenCL device type.
Notes: Currently supported values are one of or a combination of: kDeviceTypeCPU, kDeviceTypeGPU, kDeviceTypeAccelerator, or kDeviceTypeDefault.
Lasterror is set.

143.3.7 DeviceVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL version string.
Notes: Returns the OpenCL version supported by the device. This version string has the following format:

OpenCL<space><major_version.minor_version><space><vendor-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

143.3.8 DriverVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL software driver version string in the form major_number.minor_number.
Notes: Lasterror is set.

143.3.9 EndianLittle as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the OpenCL device is a little endian device and false otherwise.
Notes: Lasterror is set.

143.3.10 ErrorCorrectionSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the device implements error correction for the memories, caches, registers etc. in the device.
Notes: Returns false if the device does not implement error correction. This can be a requirement for certain clients of OpenCL.
Lasterror is set.

143.3.11 ExecutionCapabilities as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the execution capabilities of the device.
Notes: This is a bit-field that describes one or more of the following values:

kExecKernel - The OpenCL device can execute OpenCL kernels.
kExceNativeKernel - The OpenCL device can execute native kernels.

The mandated minimum capability is kExecKernel.
Lasterror is set.

143.3.12 Extensions as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns a space separated list of extension names.
Example:

```
// show msgbox with all extensions for first device

Var devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
Var device as CLDeviceMBS = devices(0)

Var extensions(-1) as string = split(device.Extensions," ")

Var lines(-1) as string

for each extension as string in extensions
lines.append extension
next

MsgBox Join(lines,EndOfLine)
```

Notes: (the extension names themselves do not contain any spaces).
The list of extension names returned currently can include one or more of the following approved extension names:

cl_khr_fp64
cl_khr_select_fprounding_mode
cl_khr_global_int32_base_atomics
cl_khr_global_int32_extended_atomics
cl_khr_local_int32_base_atomics
cl_khr_local_int32_extended_atomics
cl_khr_int64_base_atomics
cl_khr_int64_extended_atomics
cl_khr_3d_image_writes
cl_khr_byte_addressable_store
cl_khr_fp16

Lasterror is set.

143.3.13 GlobalMemoryCacheLineSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global memory cache line in bytes.
Notes: Lasterror is set.

143.3.14 GlobalMemoryCacheSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global memory cache in bytes.
Notes: Lasterror is set.

143.3.15 GlobalMemoryCacheType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Type of global memory cache supported.
Notes: See kCacheMemType* constants.
Lasterror is set.

143.3.16 GlobalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global device memory in bytes.
Notes: Lasterror is set.

143.3.17 Image2DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max height of 2D image in pixels.
Notes: The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

143.3.18 Image2DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max width of 2D image in pixels.
Notes: The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

143.3.19 Image3DMaxDepth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max depth of 3D image in pixels.
Notes: The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

143.3.20 Image3DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max height of 3D image in pixels.
Notes: The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

143.3.21 Image3DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max width of 3D image in pixels.
Notes: The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

143.3.22 ImageSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if images are supported by the OpenCL device and false otherwise.
Notes: Lasterror is set.

143.3.23 LocalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of local memory arena in bytes.
Notes: The minimum value is 16 KB.
Lasterror is set.

143.3.24 LocalMemType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Type of local memory supported.
Notes: This can be set to kMemTypeLocal implying dedicated local memory storage such as SRAM, or kMemTypeGlobal.
Lasterror is set.

143.3.25 MaxClockFrequency as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum configured clock frequency of the device in MHz.
Notes: Lasterror is set.

143.3.26 MaxComputeUnits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The number of parallel compute cores on the OpenCL device.
Notes: The minimum value is 1.
Lasterror is set.

143.3.27 MaxConstantArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of arguments declared with the __constant qualifier in a kernel.
Notes: The minimum value is 8.
Lasterror is set.

143.3.28 MaxConstantBufferSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size in bytes of a constant buffer allocation.
Notes: The minimum value is 64 KB.
Lasterror is set.

143.3.29 MaxMemoryAllocSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size of memory object allocation in bytes.
Notes: The minimum value is max (1/4th of GlobalMemorySize, 128*1024*1024)
Lasterror is set.

143.3.30 MaxParameterSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size in bytes of the arguments that can be passed to a kernel.
Notes: The minimum value is 256.
Lasterror is set.

143.3.31 MaxReadImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of simultaneous image objects that can be read by a kernel.
Notes: Lasterror is set.
The minimum value is 128 if ImageSupport is true.

143.3.32 MaxSamplers as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum number of samplers that can be used in a kernel.
Notes: The minimum value is 16 if ImageSupport is true.
Lasterror is set.

143.3.33 MaxWorkGroupSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum number of work-items in a work-group executing a kernel using the data parallel execution model.
Notes: (Refer to EnqueueNDRangeKernel). The minimum value is 1.
Lasterror is set.

143.3.34 MaxWorkItemDimensions as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum dimensions that specify the global and local work-item IDs used by the data parallel execution model.
Notes: (Refer to EnqueueNDRangeKernel). The minimum value is 3.
Lasterror is set.

143.3.35 MaxWriteImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of simultaneous image objects that can be written to by a kernel.
Notes: The minimum value is 8 if ImageSupport is true.
Lasterror is set.

143.3.36 MemoryBaseAddressAlign as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the alignment in bits of the base address of any allocated memory object.
Notes: Lasterror is set.

143.3.37 MinDataTypeAlignSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The smallest alignment in bytes which can be used for any data type.
Notes: Lasterror is set.

143.3.38 Name as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Device name string.
Example:

```
Var Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

Notes: Lasterror is set.

143.3.39 Platform as CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The platform associated with this device.
Notes: Lasterror is set.

143.3.40 PreferredVectorWidthChar as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.

Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

143.3.41 PreferredVectorWidthDouble as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.

If the cl_khr_fp64 extension is not supported, this function must return 0.
Lasterror is set.

143.3.42 PreferredVectorWidthFloat as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

143.3.43 PreferredVectorWidthInt as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

143.3.44 PreferredVectorWidthLong as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

143.3.45 PreferredVectorWidthShort as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes: The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

143.3.46 Profile as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL profile string.
Notes: Returns the profile name supported by the device (see note). The profile name returned can be one of the following strings:

FULL_PROFILE - if the device supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the device supports the OpenCL embedded profile.
Lasterror is set.

143.3.47 ProfilingTimerResolution as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the resolution of device timer. This is measured in nanoseconds.
Notes: Lasterror is set.

143.3.48 QueueProperties as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the command-queue properties supported by the device.
Notes: See kQueueOutOfOrderExecModeEnable and kQueueProfilingEnable.
Lasterror is set.

143.3.49 SingleFPConfig as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes single precision floating-point capability of the device.
Notes: The mandated minimum floating-point capability is kFPRoundToNearest+kFPInfNAN.
Lasterror is set.

143.3.50 Vendor as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Vendor name string.
Notes: Lasterror is set.

143.3.51 VendorID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A unique device vendor identifier.
Notes: An example of a unique device identifier could be the PCIe ID.
Lasterror is set.

143.3.52 Properties

143.3.53 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.3.54 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.3.55 Constants

Constants

Constant	Value	Description
kFPDenorm	1	One of the floating point capabilities constants. denorms are supported
kFPFMA	32	One of the floating point capabilities constants. IEEE754-2008 fused multiply-add is supported
kFPInfNAN	2	One of the floating point capabilities constants. INF and quiet NaNs are supported
kFPRoundToInf	16	One of the floating point capabilities constants. Round to +ve and -ve infinity rounding modes supported
kFPRoundToNearest	4	One of the floating point capabilities constants. Round to nearest even rounding mode supported
kFPRoundToZero	8	One of the floating point capabilities constants. Round to zero rounding mode supported

Cache memory type constants.

Constant	Value	Description
kCacheMemTypeNone	0	
kCacheMemTypeReadOnlyCache	1	Read Only Cache.
kCacheMemTypeReadWriteCache	2	Read/Write Cache.

Device Type Constants

Constant	Value	Description
kDeviceTypeAccelerator	8	Accelerator = some special acceleration device
kDeviceTypeAll	&Hffffffff	This is the bitmask to catch all possible types.
kDeviceTypeCPU	2	CPU = your processor
kDeviceTypeDefault	1	Default device.
kDeviceTypeGPU	4	GPU = your graphics card

Execution Capabilities Constants

Constant	Value	Description
kExceNativeKernel	2	The OpenCL device can execute native kernels.
kExecKernel	1	The OpenCL device can execute OpenCL kernels.

Memory Type Constants

Constant	Value	Description
kMemTypeGlobal	2	Dedicated local memory storage such as SRAM.
kMemTypeLocal	1	

Queue properties constants.

Constant	Value	Description
kQueueOutOfOrderExecModeEnable	1	Out of order execution mode enabled.
kQueueProfilingEnable	2	Profiling enabled.

143.4 class CLEventMBS

143.4.1 class CLEventMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for an OpenCL event.
Notes: You can chain several operations together inside a command queue. With events you can have an item execute after another item.

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

143.4.2 Methods

143.4.3 CommandExecutionStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the execution status of the command identified by event.
Notes: See kCommandExecutionStatus* constants.
Lasterror is set.

143.4.4 CommandQueue as CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command-queue associated with event.
Notes: Lasterror is set.

143.4.5 CommandType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command associated with event.
Notes: See kCommand* constants.
Lasterror is set.

143.4.6 ProfilingCommandEnd as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event has finished execution on the device.
Notes: Lasterror is set.

143.4.7 ProfilingCommandQueued as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event is enqueued in a command-queue by the host.
Notes: Lasterror is set.

143.4.8 ProfilingCommandStart as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event starts execution on the device.
Notes: Lasterror is set.

143.4.9 ProfilingCommandSubmit as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event that has been enqueued is submitted by the host to the device associated with the commandqueue.
Notes: Lasterror is set.

143.4.10 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the event reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

143.4.11 Properties

143.4.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.4.13 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.4.14 Constants

Command Type Constants

Constant	Value	Description
kCommandAcquireGLObjects	&h11FF	Acquire GL objects
kCommandCopyBuffer	&h11F5	Copy Buffer
kCommandCopyBufferToImage	&h11FA	Copy Buffer to Image
kCommandCopyImage	&h11F8	Copy Image
kCommandCopyImageToBuffer	&h11F9	Copy Image to Buffer
kCommandMapBuffer	&h11FB	Map Buffer
kCommandMapImage	&h11FC	Map Image
kCommandMarker	&h11FE	Marker
kCommandNativeKernel	&h11F2	Execute Native Kernel
kCommandNDRangeKernel	&h11F0	Execute a ND Range Kernel
kCommandReadBuffer	&h11F3	Read Buffer
kCommandReadImage	&h11F6	Read Image
kCommandReleaseGLObjects	&h1200	Release GL objects
kCommandTask	&h11F1	Execute task
kCommandUnmapMemObject	&h11FD	Unmap memory object
kCommandWriteBuffer	&h11F4	Write Buffer
kCommandWriteImage	&h11F7	Write Image

Command excecution status constants.

Constant	Value	Description
kCommandExecutionStatusComplete	0	The command has completed.
kCommandExecutionStatusQueued	3	command has been enqueued in the command-queue.
kCommandExecutionStatusRunning	1	Device is currently executing this command.
kCommandExecutionStatusSubmitted	2	enqueued command has been submitted by the host to the device assoc with the command-queue.

143.5 class CLImageFormatMBS

143.5.1 class CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** the OpenCL class for an image format.

143.5.2 Properties

143.5.3 ImageChannelDataType as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the size of the channel data type.
Notes: The number of bits per element determined by the ImageChannelDataType and ImageChannelOrder must be a power of two. The list of supported values is described in the table below.

Image Channel Data Type	Description
kChannelTypeSNormInt8	Each channel component is a normalized signed 8-bit integer value.
kChannelTypeSNormInt16	Each channel component is a normalized signed 16-bit integer value.
kChannelTypeUNormInt8	Each channel component is a normalized unsigned 8-bit integer value.
kChannelTypeUNormInt16	Each channel component is a normalized unsigned 16-bit integer value.
kChannelTypeUNormShort565	Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormShort555	Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormInt101010	Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeSignedInt8	Each channel component is an unnormalized signed 8-bit integer value.
kChannelTypeSignedInt16	Each channel component is an unnormalized signed 16-bit integer value.
kChannelTypeSignedInt32	Each channel component is an unnormalized signed 32-bit integer value.
kChannelTypeUnsignedInt8	Each channel component is an unnormalized unsigned 8-bit integer value.
kChannelTypeUnsignedInt16	Each channel component is an unnormalized unsigned 16-bit integer value.
kChannelTypeUnsignedInt32	Each channel component is an unnormalized unsigned 32-bit integer value.
kChannelTypeHalfFloat	Each channel component is a 16-bit half-float value.
kChannelTypeFloat	Each channel component is a single precision floating-point value.

(Read and Write property)

143.5.4 ImageChannelOrder as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Specifies the number of channels and the channel layout i.e. the memory layout in which channels are stored in the image.
Notes: Valid values are described in the table below.

Format	Description
kChannelOrderR, or kChannelOrderA	
kChannelOrderIntensity	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderLuminance	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderRG, or kChannelOrderRA	
kChannelOrderRGB	This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.
kChannelOrderRGBA	
kChannelOrderARGB, kChannelOrderBGRA.	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeSNormInt8, kChannelTypeSignedInt8 or kChannelTypeUnsignedInt8.

(Read and Write property)

143.5.5 Constants

Channel Order Constants

Constant	Value	Description
kChannelOrderA	&h10B1	
kChannelOrderARGB	&h10B7	
kChannelOrderBGRA	&h10B6	
kChannelOrderIntensity	&h10B8	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderLuminance	&h10B9	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderR	&h10B0	
kChannelOrderRA	&h10B3	
kChannelOrderRG	&h10B2	
kChannelOrderRGB	&h10B4	This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.
kChannelOrderRGBA	&h10B5	

Channel data type constants

Constant	Value	Description
kChannelTypeFloat	&h10DE	Each channel component is a single precision floating-point value.
kChannelTypeHalfFloat	&h10DD	Each channel component is a 16-bit half-float value.
kChannelTypeSignedInt16	&h10D8	Each channel component is an unnormalized signed 16-bit integer value.
kChannelTypeSignedInt32	&h10D9	Each channel component is an unnormalized signed 32-bit integer value.
kChannelTypeSignedInt8	&h10D7	Each channel component is an unnormalized signed 8-bit integer value.
kChannelTypeSNormInt16	&h10D1	Each channel component is a normalized signed 16-bit integer value.
kChannelTypeSNormInt8	&h10D0	Each channel component is a normalized signed 8-bit integer value.
kChannelTypeUNormInt101010	&h10D6	Represents a normalized x-10-10-10 4-channel xRGB image. The channel ord must be kChannelOrderRGB.
kChannelTypeUNormInt16	&h10D3	Each channel component is a normalized unsigned 16-bit integer value.
kChannelTypeUNormInt8	&h10D2	Each channel component is a normalized unsigned 8-bit integer value.
kChannelTypeUNormShort555	&h10D5	Represents a normalized x-5-5-5 4-channel xRGB image. The channel ord must be kChannelOrderRGB.
kChannelTypeUNormShort565	&h10D4	Represents a normalized 5-6-5 3-channel RGB image. The channel order mu be kChannelOrderRGB.
kChannelTypeUnsignedInt16	&h10DB	Each channel component is an unnormalized unsigned 16-bit integer value.
kChannelTypeUnsignedInt32	&h10DC	Each channel component is an unnormalized unsigned 32-bit integer value.
kChannelTypeUnsignedInt8	&h10DA	Each channel component is an unnormalized unsigned 8-bit integer value.

143.6 class CLKernelMBS

143.6.1 class CLKernelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for an OpenCL Kernel.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

143.6.2 Methods

143.6.3 Constructor(Program as CLProgramMBS, KernelName as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a kernal object.
Notes: Program: A program object with a successfully built executable.
KernelName: A function name in the program declared with the ___kernel qualifier

A kernel is a function declared in a program. A kernel is identified by the ___kernel qualifier applied to any function in a program. A kernel object encapsulates the specific ___kernel function declared in a program and the argument values to be used when executing this ___kernel function.
Lasterror is set.

143.6.4 FunctionName as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the kernel function name.
Notes: Lasterror is set.

143.6.5 GetKernelCompileWorkGroupSize(device as CLDeviceMBS, byref X as Int64, byref Y as Int64, byref Z as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the work-group size specified by the ___attribute___((reqd_work_gr oup_size(X, Y, Z))) qualifier.

Notes: device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

If the work-group size is not specified using the above attribute qualifier (0, 0, 0) is returned.
Lasterror is set.

143.6.6 GetKernelLocalMemorySize(device as CLDeviceMBS = nil) as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the amount of local memory in bytes being used by a kernel.
Notes: device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

This includes local memory that may be needed by an implementation to execute the kernel, variables declared inside the kernel with the __local address qualifier and local memory to be allocated for arguments to the kernel declared as pointers with the __local address qualifier and whose size is specified with clSetKernelArg.

If the local memory size, for any pointer argument to the kernel declared with the __local address qualifier, is not specified, its size is assumed to be 0.
Lasterror is set.

143.6.7 GetKernelWorkGroupSize(device as CLDeviceMBS = nil) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: This provides a mechanism for the application to query the work-group size that can be used to execute a kernel on a specific device given by device.
Notes: device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

The OpenCL implementation uses the resource requirements of the kernel (register usage etc.) to determine what this work-group size should be.
Lasterror is set.

143.6.8 NumberOfArguments as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the number of arguments to kernel.
Notes: Lasterror is set.

143.6.9 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the kernel reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

143.6.10 SetKernelArgDouble(index as Integer, value as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes: index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

143.6.11 SetKernelArgFloat(index as Integer, value as Single)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes: index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

143.6.12 SetKernelArgInt32(index as Integer, value as Int32)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes: index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

143.6.13 SetKernelArgInt64(index as Integer, value as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes: index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

143.6.14 SetKernelArgMem(index as Integer, mem as CLMemMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes: index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the memory object to set for argument.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

143.6.15 Properties

143.6.16 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context associated with kernel.
Notes: Lasterror is set.
(Read and Write property)

143.6.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.6.18 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.6.19 Program as CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program object associated with kernel.
Notes: Lasterror is set.
(Read and Write property)

143.7 class CLMemMBS

143.7.1 class CLMemMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for a OpenCL memory block.
Example:

```
const Size = 4096
Var context as CLContextMBS // your context
Var input as new CLMemMBS(context, CLMEMMBS.kMemoryReadOnly, 4096)
```

Blog Entries

143.7.2 Methods

143.7.3 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a 3D image object.
Notes: context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: the image format properties of the image to be allocated.
Width, Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
Depth: The depth of the image in pixels. This must be a value greater than 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
SlicePitch: The size in bytes of each 2D slice in the 3D image. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to RowPitch * Height if HostPtr is not nil. If HostPtr is not nil and SlicePitch equal to 0, SlicePitch is calculated as RowPitch * Height. If SlicePitch is not 0, it must be a multiple of the RowPitch.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the

buffer that HostPtr points to must be greater than or equal to SlicePitch * image_depth. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent 2D slices. Each 2D slice is a linear sequence of adjacent scanlines. Each scanline is a linear sequence of image elements.

Lasterror is set.

143.7.4 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a 2D image object.
Notes: context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: The format properties of the image to be allocated.
Width and Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to RowPitch * Height. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent scanlines. Each scanline is stored as a linear sequence of image elements.

Lasterror is set.

- 143.7.3 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 18616
- 143.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil) 18618

143.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a new buffer object.
Notes: context: A valid OpenCL context used to create the buffer object.
flags: A bit-field that is used to specify allocation and usage information such as the memory arena that should be used to allocate the buffer object and how it will be used. The following table describes the possible values for flags:
size: The size in bytes of the buffer memory object to be allocated.
HostPtr: A memoryblock that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to the size bytes.

Flags	Description
kMemoryReadWrite	This flag specifies that the memory object will be read and written by a kernel. This is the default.
kMemoryWriteOnly	This flags specifies that the memory object will be written but not read by a kernel. Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.
kMemoryReadOnly	This flag specifies that the memory object is a read-only memory object when used inside a kernel. Writing to a buffer or image object created with kMemoryReadOnly inside a kernel is undefined.
kMemoryUseHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to use memory referenced by HostPtr as the storage bits for the memory object. OpenCL implementations are allowed to cache the buffer contents pointed to by HostPtr in device memory. This cached copy can be used when kernels are executed on a device. The result of OpenCL commands that operate on multiple buffer objects created with the same HostPtr or overlapping host regions is considered to be undefined.
kMemoryAllocHostPtr	This flag specifies that the application wants the OpenCL implementation to allocate memory from host accessible memory. kMemoryAllocHostPtr and kMemoryUseHostPtr are mutually exclusive.
kMemoryCopyHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to allocate memory for the memory object and copy the data from memory referenced by HostPtr. kMemoryCopyHostPtr and kMemoryUseHostPtr are mutually exclusive. kMemoryCopyHostPtr can be used with kMemoryAllocHostPtr to initialize the contents of the cl_mem object allocated using host-accessible (e.g. PCIe) memory.

Lasterror is set.

- 143.7.3 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer,

HostPtr as Memoryblock = nil) 18616

- 143.7.4 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil) 18617

143.7.6 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return context specified when memory object is created.
Notes: Lasterror is set.

143.7.7 Flags as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the flags argument value specified with Constructor.
Notes: Lasterror is set.

143.7.8 ImageDepth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return depth of the image in pixels.
Notes: For a 2D image, depth equals 0.
Lasterror is set.

143.7.9 ImageElementSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size of each element of the image memory object given by image.
Notes: An element is made up of n channels. The value of n is given with image format descriptor.
Lasterror is set.

143.7.10 ImageFormat as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return image format descriptor.
Notes: Lasterror is set.

143.7.11 ImageHeight as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return height of image in pixels.
Notes: Lasterror is set.

143.7.12 ImageRowPitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size in bytes of a row of elements of the image object given by image.
Notes: Lasterror is set.

143.7.13 ImageSlicePitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size in bytes of a 2D slice for the 3D image object given by image.
Notes: For a 2D image object this value will be 0.
Lasterror is set.

143.7.14 ImageWidth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return width of image in pixels.
Notes: Lasterror is set.

143.7.15 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return memory object reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

143.7.16 Size as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return actual size of memory object in bytes.
Notes: Lasterror is set.

143.7.17 Type as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the memory type.
Notes: Either normal buffer, image 2D or image 3D.
Lasterror is set.

143.7.18 Properties

143.7.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.7.20 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.7.21 Target as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The reference to the memoryblock if you used kMemoryUseHostPtr to create this memory object.
Notes: (Read and Write property)

143.7.22 Constants

Mapping mode constants

Constant	Value	Description
kMapRead	1	
kMapWrite	2	

Constants for creating a memory block.

Constant	Value	Description
kMemoryAllocHostPtr	16	
kMemoryCopyHostPtr	32	
kMemoryReadOnly	4	
kMemoryReadWrite	1	
kMemoryUseHostPtr	8	
kMemoryWriteOnly	2	This flags specifies that the memory object will be written but not read by a kernel. Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.

Memory object types.

Constant	Value	Description
kMemoryTypeBuffer	&h10F0	A normal memory buffer.
kMemoryTypeImage2D	&h10F1	2D Image
kMemoryTypeImage3D	&h10F2	3D Image

143.8 class CLPlatformMBS

143.8.1 class CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The OpenCL class for a platform.
Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

143.8.2 Methods

143.8.3 DeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of devices with given types.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+str(p.DeviceCount(CLDeviceMBS.kDeviceTypeAll))+" devices"
next
```

Notes: types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

143.8.4 Devices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries devices with given types.
Example:

```
// check all platforms
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
Var lines(-1) as string

lines.Append p.Name
lines.Append ""

// and show device names
for each d as CLDeviceMBS in p.Devices(CLDeviceMBS.kDeviceTypeAll)
lines.Append d.name
next

MsgBox Join(lines,EndOfLine)
next
```

Notes: types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

143.8.5 Extensions as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns a space-separated list of extension names (the extension names themselves do not contain any spaces) supported by the platform.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Extensions
next
```

Notes: Extensions defined here must be supported by all devices associated with this platform.
Lasterror is set.

143.8.6 Name as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Platform name string.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

Notes: Lasterror is set.

143.8.7 Profile as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL profile string.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Profile
next
```

Notes: Returns the profile name supported by the implementation. The profile name returned can be one of the following strings:

FULL_PROFILE - if the implementation supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the implementation supports the OpenCL embedded profile. The embedded profile is defined to be a subset for each version of OpenCL.

Lasterror is set.

143.8.8 Vendor as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Platform vendor string.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Vendor
next
```

Notes: Lasterror is set.

143.8.9 Version as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL version string.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Version
next
```

Notes: Returns the OpenCL version supported by the implementation. This version string has the following format:

OpenCL<space><major_version.minor_version><space><platform-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

143.8.10 Properties

143.8.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.8.12 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.9 class CLProgramMBS

143.9.1 class CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The OpenCL class for a program.

143.9.2 Methods

143.9.3 Binaries as String()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program binaries for all devices associated with program.
Notes: For each device in program, the binary returned can be the binary specified for the device when program is created with Constructor or it can be the executable binary generated by BuildProgram. If program is created with Constructor (with Source code), the binary returned is the binary generated by BuildProgram. The bits returned can be an implementation-specific intermediate representation (a.k.a. IR) or device specific executable bits or both. The decision on which information is returned in the binary is up to the OpenCL implementation.

Each entry in this array is used by the implementation as the location in memory where to copy the program binary for a specific device, if there is a binary available.

Lasterror is set.

143.9.4 BinarySizes as UInt64()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns an array that contains the size in bytes of the program binary for each device associated with program.
Notes: The size of the array is the number of devices associated with program. If a binary is not available for a device(s), a size of zero is returned.

Lasterror is set.

143.9.5 BuildLog(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the build log when BuildProgram was called for device.
Notes: If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

143.9.6 BuildOptions(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the build options specified by the options argument in BuildProgram for device.
Notes: If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

143.9.7 BuildProgram(device as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes: See other BuildProgram method for details
See also:

- 143.9.8 BuildProgram(devices() as CLDeviceMBS, options as string = "") 18629
- 143.9.9 BuildProgram(options as string = "") 18632

143.9.8 BuildProgram(devices() as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes:

devices	Optional, a list of devices you want to build for. If you specify no device, you build for all devices.
device	Optional, the device you want to build for. If you specify no device, you build for all devices.
options	A string that describes the build options to be used for building the program executable. The list of supported options is described in "Build Options" below.

OpenCL allows program executables to be built using the source or the binary.

The build options are categorized as pre-processor options, options for math intrinsics, options that control optimization and miscellaneous options. This specification defines a standard set of options that must be supported by an OpenCL compiler when building program executables online or offline. These may be extended by a set of vendor- or platform-specific options.

Preprocessor Options

These options control the OpenCL preprocessor which is run on each program source before actual compilation. -D options are processed in the order they are given in the options argument to clBuildProgram.
-D name
Predefine name as a macro, with definition 1.

-D name=definition
The contents of definition are tokenized and processed as if they appeared during translation phase three in a '#define' directive. In particular, the definition will be truncated by embedded newline characters.

-I dir
Add the directory dir to the list of directories to be searched for header files.

Math Intrinsics Options

These options control compiler behavior regarding floating-point arithmetic. These options trade off between speed and correctness.

-cl-single-precision-constant
Treat double precision floating-point constant as single precision constant.

-cl-denorms-are-zero
This option controls how single precision and double precision denormalized numbers are handled. If specified as a build option, the single precision denormalized numbers may be flushed to zero and if the optional extension for double precision is supported, double precision denormalized numbers may also be flushed to zero. This is intended to be a performance hint and the OpenCL compiler can choose not to flush denorms to zero if the device supports single precision (or double precision) denormalized numbers.

This option is ignored for single precision numbers if the device does not support single precision denormalized numbers i.e. kFPDenorm bit is not set in SingleFPConfig.

This option is ignored for double precision numbers if the device does not support double precision or if it does support double precison but CL_FP_DENORM bit is not set in CL_DEVICE_DOUBLE_FP_CON-

FIG.

This flag only applies for scalar and vector single precision floating-point variables and computations on these floating-point variables inside a program. It does not apply to reading from or writing to image objects.

Optimization Options

These options control various sorts of optimizations. Turning on optimization flags makes the compiler attempt to improve the performance and/or code size at the expense of compilation time and possibly the ability to debug the program.
-cl-opt-disable
This option disables all optimizations. The default is optimizations are enabled.

-cl-strict-aliasing
This option allows the compiler to assume the strictest aliasing rules.

The following options control compiler behavior regarding floating-point arithmetic. These options trade off between performance and correctness and must be specifically enabled. These options are not turned on by default since it can result in incorrect output for programs which depend on an exact implementation of IEEE 754 rules/specifications for math functions.

-cl-mad-enable
Allow a * b + c to be replaced by a mad. The mad computes a * b + c with reduced accuracy. For example, some OpenCL devices implement mad as truncate the result of a * b before adding it to c.

-cl-no-signed-zeros
Allow optimizations for floating-point arithmetic that ignore the signedness of zero. IEEE 754 arithmetic specifies the behavior of distinct +0.0 and -0.0 values, which then prohibits simplification of expressions such as x+0.0 or 0.0*x (even with -clfinite-math only). This option implies that the sign of a zero result isn't significant.

-cl-unsafe-math-optimizations
Allow optimizations for floating-point arithmetic that (a) assume that arguments and results are valid, (b) may violate IEEE 754 standard and (c) may violate the OpenCL numerical compliance requirements as defined in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option includes the -cl-no-signed-zeros and -cl-mad-enable options.

-cl-finite-math-only
Allow optimizations for floating-point arithmetic that assume that arguments and results are not NaNs or ¬±,àû. This option may violate the OpenCL numerical compliance requirements defined in in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5.

-cl-fast-relaxed-math
Sets the optimization options -cl-finite-math-only and -cl-unsafe-math-optimizations. This allows optimizations for floating-point arithmetic that may violate the IEEE 754 standard and the OpenCL numerical compliance requirements defined in the specification in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option causes the preprocessor macro __FAST_RELAXED_MATH__ to be defined in the OpenCL program.

Options to Request or Suppress Warnings

Warnings are diagnostic messages that report constructions which are not inherently erroneous but which are risky or suggest there may have been an error. The following languageindependent options do not enable specific warnings but control the kinds of diagnostics produced by the OpenCL compiler.
-w
Inhibit all warning messages.

-Werror
Make all warnings into errors.

Lasterror is set.

- 143.9.7 BuildProgram(device as CLDeviceMBS, options as string = "") 18629
- 143.9.9 BuildProgram(options as string = "") 18632

143.9.9 BuildProgram(options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes: See other BuildProgram method for details
Lasterror is set.
See also:

- 143.9.7 BuildProgram(device as CLDeviceMBS, options as string = "") 18629
- 143.9.8 BuildProgram(devices() as CLDeviceMBS, options as string = "") 18629

143.9.10 BuildStatus(device as CLDeviceMBS) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the build status of program for a specific device as given by device.
Notes: See kBuild* constants.

Lasterror is set.

143.9.11 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads specified binary data into the program object.
Notes: context: Must be a valid OpenCL context.
devices: a list of devices that are in context. The binaries are loaded for devices specified in this list.

The devices associated with the program object will be the list of devices specified by devices. The list of devices specified by devices must be devices associated with context.

binaries: An array of strings containing the program binaries to be loaded for devices specified by devices. For each device given by devices(i), the string with the program binary for that device is given by binaries(i).

The program binaries specified by binaries contain the bits that describe the program executable that will be run on the device(s) associated with context. The program binary can consist of either or both of device-specific executable(s), and/or implementation-specific intermediate representation (IR) which will be converted to the device-specific executable.

sttaus: Returns whether the program binary for each device specified in devices was loaded successfully or not. It is an array of ubound -1 and is filled by the plugin.

Lasterror is set.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.
See also:

- 143.9.12 Constructor(context as CLContextMBS, line as string) 18634
- 143.9.13 Constructor(context as CLContextMBS, lines() as string) 18634

143.9.12 Constructor(context as CLContextMBS, line as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads the source code specified by the line string into the program object.
Notes: context: Must be a valid OpenCL context.
line: A string with all the lines of the program.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.
See also:

- 143.9.11 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 18633
- 143.9.13 Constructor(context as CLContextMBS, lines() as string) 18634

143.9.13 Constructor(context as CLContextMBS, lines() as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads the source code specified by the text strings in the lines array into the program object.
Notes: context: Must be a valid OpenCL context.
lines: An array of strings that make up the source code.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the ___kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by ___kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.

- 143.9.11 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 18633
- 143.9.12 Constructor(context as CLContextMBS, line as string) 18634

143.9.14 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The context for this program.
Notes: Lasterror is set.

143.9.15 CreateKernelsInProgram(maxKernels as Integer = 100) as CLKernelMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates kernel objects for all kernel functions in program.
Notes: maxKernels: maximum number of kernels to return.

Kernel objects are not created for any ___kernel functions in program that do not have the same function definition across all devices for which a program executable has been successfully built.

Kernel objects can only be created once you have a program object with a valid program source or binary loaded into the program object and the program executable has been successfully built for one or more devices associated with program. No changes to the program executable are allowed while there are kernel

objects associated with a program object. This means that calls to BuildProgram return kInvalidOperation (in lasterror) if there are kernel objects attached to a program object. The OpenCL context associated with program will be the context associated with kernel. The list of devices associated with program are the devices associated with kernel. Devices associated with a program object for which a valid program executable has been built can be used to execute kernels declared in the program object.

Lasterror is set.

143.9.16 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the list of devices associated with the program object.
Notes: This can be the devices associated with context on which the program object has been created or can be a subset of devices that are specified when a progam object is created.

143.9.17 NumDevices as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the number of devices associated with program.
Notes: Lasterror is set.

143.9.18 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program reference count.
Notes: Lasterror is set.

143.9.19 Source as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program source code specified in the Constructor.
Notes: The source string returned is a concatenation of all source strings specified to Constructor.

143.9.20 Properties

143.9.21 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.
(Read and Write property)

143.9.22 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.9.23 Constants

Build Status constants

Constant	Value	Description
kBuildError	-2	The build status returned if the last call to BuildProgram on the specified program object for device generated an error.
kBuildInProgress	-3	The build status returned if the last call to BuildProgram on the specified program object for device has not finished.
kBuildNone	-1	The build status returned if no build has been performed on the specified program object for device.
kBuildSuccess	0	The build status returned if the last call to BuildProgram on the specified program object for device was successful.

143.10 class CLSamplerMBS

143.10.1 class CLSamplerMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The class for a Sampler.
Blog Entries

- MBS Real Studio Plugins, version 11.2pr9
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

143.10.2 Methods

143.10.3 AddressingMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by addressingmode argument to Constructor.

143.10.4 Constructor(Context as CLContextMBS, NormalizedCoords as Boolean, AddressingMode as UInt32, FilterMode as UInt32)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a sampler object.
Notes: context: Must be a valid OpenCL context.

NormalizedCoords: Determines if the image coordinates specified are normalized (if normalized_coords is true) or not (if normalized_coords is false).

AddressingMode: Specifies how out-of-range image coordinates are handled when reading from an image. This can be set to kAddressRepeat, kAddressClampToEdge, kAddressClamp, and kAddressNone.

FilterMode: Specifies the type of filter that must be applied when reading an image. This can be kFilterNearest or kFilterLinear.

Lasterror is set.

A sampler object describes how to sample an image when the image is read in the kernel. The built-in functions to read from an image in a kernel take a sampler as an argument. The sampler arguments to the image read function can be sampler objects created using OpenCL functions and passed as argument values to the kernel or can be samplers declared inside a kernel. In this section we discuss how sampler objects are created using OpenCL functions.

143.10.5 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the context specified when the sampler is created.

143.10.6 FilterMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by filterMode argument to Constructor.

143.10.7 NormalizedCoords as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by normalizedCoords argument to Constructor.

143.10.8 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the sampler reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.

143.10.9 Properties

143.10.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes: Not zero if this object is valid.

(Read and Write property)

143.10.11 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes: See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

143.10.12 Constants

Address mode constants

Constant	Value	Description
kAddressClamp	&h1132	
kAddressClampToEdge	&h1131	
kAddressNone	&h1130	
kAddressRepeat	&h1133	

Filter mode constants

Constant	Value	Description
kFilterLinear	&h1141	
kFilterNearest	&h1140	

143.11 module OpenCLMBS

143.11.1 module OpenCLMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The module for OpenCL.
Notes: from wikipedia:

OpenCL (Open Computing Language) is a framework for writing programs that execute across heterogeneous platforms consisting of CPUs, GPUs, and other processors. OpenCL includes a language (based on C99) for writing kernels (functions that execute on OpenCL devices), plus APIs that are used to define and then control the platforms. OpenCL provides parallel computing using task-based and data-based parallelism.

143.11.2 Methods

143.11.3 AllDeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of devices with given types.
Example:

```
Var c as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeCPU)
Var g as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeGPU)
MsgBox str(c)+" CPU and "+str(g)+" GPU"
```

Notes: types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

143.11.4 AllDevices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries devices with given types.
Example:

```
Var Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

Notes: types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

143.11.5 GetExtensionFunctionAddress(name as string) as ptr

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the address of the extension function named by funcname.
Notes: The function GetExtensionFunctionAddress returns the address of the extension function named by funcname. The pointer returned should be cast to a function pointer type matching the extension function's definition defined in the appropriate extension specification and header file. A return value of nil indicates that the specified function does not exist for the implementation. A non-nil return value for GetExtensionFunctionAddress does not guarantee that an extension function is actually supported. The application must also make a corresponding query using CLPlatformMBS.Extensions or CLDeviceMBS.Extensions to determine if an extension is supported by the OpenCL implementation.

GetExtensionFunctionAddress may not be queried for core (non-extension) functions in OpenCL. For functions that are queryable with clGetExtensionFunctionAddress, implementations may choose to also export those functions statically from the object libraries implementing those functions. However, portable applications cannot rely on this behavior.

Since there is no way to qualify the query with a device, the function pointer returned must work for all implementations of that extension on different devices. The behavior of calling a device extension function on a device not supporting that extension is undefined.

143.11.6 GetPictureImageFormat(pic as picture, byref RowPitch as Integer) as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries the image format this picture would need when creating a storage object with CLMemMBS.
Example:

```
Var p as new Picture(100,100,32)
Var rowbytes as Integer
Var format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(p, rowbytes)

MsgBox hex(format.ImageChannelOrder)+" "+hex(format.ImageChannelDataType)+" "+str(rowbytes)
// shows 10B7 and 10D2 and 416 on Mac OS X Carbon
```

Notes: As Xojo uses 4 bytes per pixel on Mac and Windows, the plugin returns ARGB (or other byte order). The alpha channel is not used as Xojo stores

143.11.7 isAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Whether OpenCL is available.
Example:

```
if not OpenCLMBS.isAvailable then
if TargetMachO and TargetX86 then
MsgBox "OpenCL not available. Please install Mac OS X 10.6 to use it."
else
MsgBox "OpenCL not available. You need a Mac with Intel processor running Mac OS X 10.6."
end if
end if
```

Notes: Should return true on Mac OS X 10.6 and false everywhere else.

143.11.8 PlatformCount as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of platforms available.
Example:

```
MsgBox str(OpenCLMBS.PlatformCount)
```

Notes: Typically you have two with modern Macs as you get both CPU and GPU listed.
Lasterror is set.

143.11.9 Platforms as CLPlatformMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Obtain the list of platforms available.
Example:

```
Var Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

Notes: Lasterror is set.

143.11.10 UnloadCompiler

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Allows the implementation to release the resources allocated by the OpenCL compiler.
Example:

OpenCLMBS.UnloadCompiler
MsgBox OpenCLMBS.LastErrorMessage

Notes: This is a hint from the application and does not guarantee that the compiler will not be used in the future or that the compiler will actually be unloaded by the implementation. Calls to BuildProgram after UnloadCompiler will reload the compiler, if necessary, to build the appropriate program executable.
Lasterror is set.

143.11.11 WaitForEvents(events() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Waits on the host thread for commands identified by event objects to complete.
Notes: events: The events specified in event_list act as synchronization points.

Waits on the host thread for commands identified by event objects in event_list to complete. A command is considered complete if its execution status is kCommandExecutionStatusComplete or a negative value.

Lasterror is set.

143.11.12 Properties

143.11.13 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Example:

MsgBox str(OpenCLMBS.LastError)

Notes: All the functions in all the OpenCL classes set this property, too.
(Read only property)

143.11.14 LastErrorMessage as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The text message for the last error code.
Example:

MsgBox OpenCLMBS.LastErrorMessage

Notes: (Read only property)

143.11.15 Constants

Constants

Constant	Value	Description
kBuildProgramFailure	-11	One of the constants for OpenCL errors.
kCompilerNotAvailable	-3	One of the constants for OpenCL errors.
kDeviceNotAvailable	-2	One of the constants for OpenCL errors.
kDeviceNotFound	-1	One of the constants for OpenCL errors.
kImageFormatMismatch	-9	One of the constants for OpenCL errors.
kImageFormatNotSupported	-10	One of the constants for OpenCL errors.
kInvalidArgIndex	-49	One of the constants for OpenCL errors.
kInvalidArgSize	-51	One of the constants for OpenCL errors.
kInvalidArgValue	-50	One of the constants for OpenCL errors.
kInvalidBinary	-42	One of the constants for OpenCL errors.
kInvalidBufferSize	-61	One of the constants for OpenCL errors.
kInvalidBuildOptions	-43	One of the constants for OpenCL errors.
kInvalidCommandQueue	-36	One of the constants for OpenCL errors.
kInvalidContext	-34	One of the constants for OpenCL errors.
kInvalidDevice	-33	One of the constants for OpenCL errors.
kInvalidDeviceType	-31	One of the constants for OpenCL errors.
kInvalidEvent	-58	One of the constants for OpenCL errors.
kInvalidEventWaitList	-57	One of the constants for OpenCL errors.
kInvalidGlobalOffset	-56	One of the constants for OpenCL errors.
kInvalidGlObject	-60	One of the constants for OpenCL errors.
kInvalidHostPtr	-37	One of the constants for OpenCL errors.
kInvalidImageFormatDescriptor	-39	One of the constants for OpenCL errors.
kInvalidImageSize	-40	One of the constants for OpenCL errors.
kInvalidKernel	-48	One of the constants for OpenCL errors.
kInvalidKernelArgs	-52	One of the constants for OpenCL errors.
kInvalidKernelDefinition	-47	One of the constants for OpenCL errors.
kInvalidKernelName	-46	One of the constants for OpenCL errors.
kInvalidMemObject	-38	One of the constants for OpenCL errors.
kInvalidMipLevel	-62	One of the constants for OpenCL errors.
kInvalidOperation	-59	One of the constants for OpenCL errors.
kInvalidPlatform	-32	One of the constants for OpenCL errors.
kInvalidProgram	-44	One of the constants for OpenCL errors.
kInvalidProgramExecutable	-45	One of the constants for OpenCL errors.
kInvalidQueueProperties	-35	One of the constants for OpenCL errors.
kInvalidSampler	-41	One of the constants for OpenCL errors.
kInvalidValue	-30	One of the constants for OpenCL errors.
kInvalidWorkDimension	-53	One of the constants for OpenCL errors.
kInvalidWorkGroupSize	-54	One of the constants for OpenCL errors.
kInvalidWorkItemSize	-55	One of the constants for OpenCL errors.
kMapFailure	-12	One of the constants for OpenCL errors.
kMemCopyOverlap	-8	One of the constants for OpenCL errors.
kMemObjectAllocationFailure	-4	One of the constants for OpenCL errors.
kOutOfHostMemory	-6	One of the constants for OpenCL errors.
kOutOfResources	-5	One of the constants for OpenCL errors.
kProfilingInfoNotAvailable	-7	One of the constants for OpenCL errors.
kSuccess	0	One of the constants for OpenCL errors.

Chapter 144

PDFKit

144.1 class CustomPDFViewMBS

144.1.1 class CustomPDFViewMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The class for a custom PDFView.
Notes: Subclass of the PDFViewMBS class.
Blog Entries

- MBS Xojo Plugins, version 17.5pr2
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 12.5pr5

144.1.2 Methods

144.1.3 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes: Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.1.4 ClearOverlays

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.1.5 Constructor

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new custom PDFView object.
See also:

- 144.1.6 Constructor(Handle as Integer) 18650
- 144.1.7 Constructor(left as Double, top as Double, width as Double, height as Double) 18650

144.1.6 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The constructor.
See also:

- 144.1.5 Constructor 18650
- 144.1.7 Constructor(left as Double, top as Double, width as Double, height as Double) 18650

144.1.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new custom PDFView object.
See also:

- 144.1.5 Constructor 18650
- 144.1.6 Constructor(Handle as Integer) 18650

144.1.8 Destructor

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The destructor.

144.1.9 Properties

144.1.10 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes: MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

144.1.11 Events

144.1.12 acceptsFirstMouse(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Overridden by subclasses to return true if the receiver should be sent a mouseDown event for an initial mouse-down event, false if not.
Notes: The receiver can either return a value unconditionally or use the location of event e to determine whether or not it wants the event. The default implementation ignores the event and returns false.

Implement this event in a subclass to allow instances to respond to click-through. This allows the user to click on a view in an inactive window, activating the view with one click, instead of clicking first to make the window active and then clicking the view. Most view objects refuse a click-through attempt, so the event simply activates the window. Many control objects, however, such as instances of NSButton and NSSlider, do accept them, so the user can immediately manipulate the control without having to release the mouse button.

144.1.13 acceptsFirstResponder as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Whether to accept first responder.
Notes: Return true if your control can have the focus and false if not.

144.1.14 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page was drawn.
Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.15 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page annotations were drawn.
Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.16 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called after something was drawn.
Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.17 becomeFirstResponder as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Called when the object gets focus.
Notes: Return true to accept.

144.1.18 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page was drawn.

Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.19 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page annotations were drawn.
Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.20 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a something was drawn.
Notes: This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.1.21 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a touch gesture.
Notes: e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

144.1.22 canBecomeKeyView as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Returns whether the receiver can become key view.
Notes: Returns true if the receiver can become key view, false otherwise.

144.1.23 Close

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The event called when the custom NSView is destroyed.

144.1.24 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

144.1.25 draggingEnded(sender as NSDraggingInfoMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

144.1.26 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.

Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated and draggingExited even if NSDragOperationNone is returned by this method.

144.1.27 draggingExited(sender as NSDraggingInfoMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

144.1.28 draggingSessionEndedAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS, operation as Integer)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging session has completed.
Notes: session: The dragging session.
screenPoint: The point where the drag ended, in screen coordinates.
operation: The drag operation. See constants for drag operation types.

Available in OS X v10.7 and later.

144.1.29 draggingSessionMovedToPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the drag moves on the screen.
Notes: session: The dragging session.
screenPoint: The point where the drag moved to, in screen coordinates.

Available in OS X v10.7 and later.

144.1.30 draggingSessionSourceOperationMaskForDraggingContext(session as NSDraggingSessionMBS, context as Integer) as Integer

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Declares the types of operations the source allows to be performed. (required)
Notes: session: The dragging session.
context: The dragging context. See NSDraggingContext constants for the supported values.

Return the appropriate dragging operation as defined in constants.

In the future Apple may provide more specific "within" values in the future. To account for this, for unrecognized localities, return the operation mask for the most specific context that you are concerned with.

144.1.31 draggingSessionWillBeginAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the drag will begin.
Notes: session: The dragging session.
screenPoint: The point where the drag will begin, in screen coordinates.

Available in OS X v10.7 and later.

144.1.32 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

144.1.33 endGestureWithEvent(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has ended a touch gesture.
Notes: e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

144.1.34 ignoreModifierKeysForDraggingSession(session as NSDraggingSession-MBS) as boolean

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns whether the modifier keys will be ignored for this dragging session.
Notes: session: The dragging session.

Return true if the modifier keys will be ignored, false otherwise.
Available in OS X v10.7 and later.

144.1.35 isOpaque as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Whether this view is opaque.

144.1.36 keyDown(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the key events.
Notes: Return true if you handled this event.

144.1.37 keyUp(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the key events.
Notes: Return true if you handled this event.

144.1.38 magnifyWithEvent(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a pinch gesture.
Notes: e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

144.1.39 menuForEvent(e as NSEventMBS, defaultMenu as NSMenuMBS) as NSMenuMBS

MBS PDFKit Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Overridden by subclasses to return a context-sensitive pop-up menu for a given mouse-down event.

Notes: theEvent: An object representing a mouse-down event.
defaultMenu: The menu as constructed by super class.

The receiver can use information in the mouse event, such as its location over a particular element of the receiver, to determine what kind of menu to return. For example, a text object might display a text-editing menu when the cursor lies over text and a menu for changing graphics attributes when the cursor lies over an embedded image.

The default implementation returns the default menu.

144.1.40 mouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.41 mouseDownCanMoveWindow as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: This event is called so you can decide what happens with mouse down.
Notes: Return true if you do not need to handle a mouse down and it can pass through to superviews; False if you need to handle the mouse down.

This allows iApp-type applications to determine the region by which a window can be moved. By default, this method returns false if the view is opaque; otherwise, it returns true. Subclasses can override this method to return a different value.

144.1.42 mouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.43 mouseEntered(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.44 mouseExited(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.45 mouseMoved(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.46 mouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.47 Open

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The event called when the custom NSView is created.

144.1.48 otherMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.
Third mouse button.

144.1.49 otherMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.
Third mouse button.

144.1.50 otherMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.
Third mouse button.

144.1.51 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes: sender: The object sending the message; use it to get details about the dragging operation.

Return if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

144.1.52 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.

Notes: sender: The object sending the message; use it to get details about the dragging operation.
Returns true if the receiver agrees to perform the drag operation and false if not.
This method is invoked only if the most recent draggingEntered or draggingUpdated message returned an acceptable drag-operation value.
If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this method.

144.1.53 pressureChange(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes: This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

144.1.54 resignFirstResponder as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Focus is going away.
Notes: Return true to accept.

144.1.55 rightMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.56 rightMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.57 rightMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the mouse events.
Notes: Return true if you handled this event.

144.1.58 rotateWithEvent(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a rotation gesture.
Notes: e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

144.1.59 scrollWheel(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.0, Platform: macOS, Targets: Desktop only.

Function: Informs the subclass that the mouse's scroll wheel has moved.
Notes: e: An object encapsulating information about the wheel-scrolling event.

The default implementation simply passes this message to the next responder.
Return true to not pass the event.

144.1.60 swipeWithEvent(e as NSEventMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that the user has begun a swipe gesture.
Notes: e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

144.1.61 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Invoked when the dragging images should be changed.
Notes: sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

144.1.62 viewDidMoveToWindow

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Informs the receiver that it has been added to a new view hierarchy.
Notes: The default implementation does nothing; subclasses can implement this event to perform whatever actions are necessary.

window may return nil when this method is invoked, indicating that the receiver does not currently reside in any window. This occurs when the receiver has just been removed from its superview or when the receiver has just been added to a superview that does not itself have a window. Overrides of this method may choose to ignore such cases if they are not of interest.

144.1.63 wantsPeriodicDraggingUpdates as boolean

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Asks the destination object whether it wants to receive periodic draggingUpdated messages.
Notes: Return true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated messages even if nothing changes.

144.2 control DesktopPDFThumbnailViewControlMBS

144.2.1 control DesktopPDFThumbnailViewControlMBS

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFThumbnailView.
Notes: This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

- New desktop controls
- MBS Xojo / Real Studio Plugins, version 13.4pr7

144.2.2 Properties

144.2.3 View as PDFThumbnailViewMBS

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.2.4 Events

144.2.5 BoundsChanged

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

144.2.6 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

144.2.7 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

144.2.8 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

144.2.9 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

144.2.10 FocusLost

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.2.11 FocusReceived

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

144.2.12 FrameChanged

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

144.2.13 MenuBarSelected

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

144.2.14 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

144.2.15 MouseDrag(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

144.2.16 MouseUp(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

144.2.17 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

144.2.18 ScaleFactorChanged(NewFactor as Double)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

144.2.19 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

144.3 control DesktopPDFViewControlMBS

144.3.1 control DesktopPDFViewControlMBS

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFView.
Notes: This control embeds a special PDFView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

144.3.2 Methods

144.3.3 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes: Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.3.4 ClearOverlays

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.3.5 Properties

144.3.6 View as PDFViewMBS

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.3.7 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes: MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

144.3.8 Events

144.3.9 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called after something was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.3.10 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.3.11 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.3.12 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.3.13 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.3.14 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a something was drawn.

144.3.15 BoundsChanged

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

144.3.16 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

144.3.17 CocoaMouseDown(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

144.3.18 CocoaMouseDrag(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

144.3.19 CocoaMouseUp(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

144.3.20 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

144.3.21 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

144.3.22 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

144.3.23 FocusLost

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.3.24 FocusReceived

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

144.3.25 FrameChanged

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

144.3.26 MenuBarSelected

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

144.3.27 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

144.3.28 MouseDrag(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

144.3.29 MouseUp(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

144.3.30 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

144.3.31 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Opens a specified page.
Notes: This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

144.3.32 PerformFind

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs a find operation.
Notes: Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

144.3.33 PerformGoToPage

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Performs a go-to operation.
Notes: Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the

user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

144.3.34 PerformPrint

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Prints the current document.
Notes: Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

144.3.35 PrintJobTitle as String

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Overrides the job title used when the PDFView is printed.
Notes: Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

144.3.36 ScaleFactorChanged(NewFactor as Double)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

144.3.37 WillChangeScaleFactor(scale as Double) as Double

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Overrides changes to the scale factor.
Notes: Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

144.3.38 WillClickOnLink(URL as String)

MBS PDFKit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Handle clicks on URL links in a view.
Notes: If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

144.3.39 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

144.4 class PDFActionGoToMBS

144.4.1 class PDFActionGoToMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFActionGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action.
Notes: A PDFActionGoTo object represents the action of going to a specific location within the PDF document.
Subclass of the PDFActionMBS class.
Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

144.4.2 Methods

144.4.3 Constructor(destination as PDFDestinationMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes the go-to action.
Notes: destination: The destination with which to initialize the go-to action.
Available in Mac OS X v10.5 and later.

144.4.4 Properties

144.4.5 destination as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The destination associated with the action.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.5 class PDFActionMBS

144.5.1 class PDFActionMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFAction represents an action that is performed when, for example, a PDF annotation is activated or an outline item is clicked.
Notes: A PDFAction object represents an action associated with a PDF element, such as an annotation or a link, that the viewer application can perform. See the Adobe PDF Specification for more about actions and action types.

PDFAction is an abstract superclass of the following concrete classes:

- PDFActionGoToMBS
- PDFActionNamedMBS
- PDFActionRemoteGoToMBS
- PDFActionResetFormMBS
- PDFActionURLMBS

Blog Entries

- MBS Xojo Plugins, version 20.2pr3

144.5.2 Methods

144.5.3 Constructor

MBS PDFKit Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes: This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFActionMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.
See also:

- 144.5.4 Constructor(Handle as Integer) 18680

144.5.4 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFAction handle.
Notes: Please pass in a non zero handle which points to a PDFAction object.
For use with declares.
See also:

- 144.5.3 Constructor 18679

144.5.5 copy as PDFActionMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the action object.

144.5.6 Properties

144.5.7 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The internal reference to the PDF action object.
Notes: (Read and Write property)

144.5.8 type as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the type of the action.
Notes: The PDF action type returned by this method may not correspond precisely to the name of a PDFAction subclass. For example, a PDFActionURL object might return "URI" or "Launch," depending on the original action as defined by the Adobe PDF Specification. In the PDF Kit, these two actions are handled in the single PDFActionURL subclass, and the more familiar term "URL" is used instead.

Available in Mac OS X v10.5 and later.
(Read only property)

144.6 class PDFActionNamedMBS

144.6.1 class PDFActionNamedMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFActionNamed defines methods used to work with actions in PDF documents, some of which are named in the Adobe PDF Specification.
Notes: A PDFActionNamed object represents an action with a defined name, such as "Go back" or "Zoom in."
Subclass of the PDFActionMBS class.

144.6.2 Methods

144.6.3 Constructor(name as Integer)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes the PDFActionName object with the specified named action.
Notes: Available in Mac OS X v10.5 and later.

144.6.4 Properties

144.6.5 name as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The name of the named action.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.6.6 Constants

Constants

Constant	Value	Description
kPDFActionNamedFind	8	One of the name constants for the action. The Find action. Available in Mac OS X v10.5 and later.
kPDFActionNamedFirstPage	3	One of the name constants for the action. The First Page action. Available in Mac OS X v10.5 and later.
kPDFActionNamedGoBack	5	One of the name constants for the action. The Go Back action. Available in Mac OS X v10.5 and later.
kPDFActionNamedGoForward	6	One of the name constants for the action. The Go Forward action. Available in Mac OS X v10.5 and later.
kPDFActionNamedGoToPage	7	One of the name constants for the action. The Go to Page action. Available in Mac OS X v10.5 and later.
kPDFActionNamedLastPage	4	One of the name constants for the action. The Last Page action. Available in Mac OS X v10.5 and later.
kPDFActionNamedNextPage	1	One of the name constants for the action. The Next Page action. Available in Mac OS X v10.5 and later.
kPDFActionNamedNone	0	One of the name constants for the action. The action has no name. Available in Mac OS X v10.5 and later.
kPDFActionNamedPreviousPage	2	One of the name constants for the action. The Previous Page action. Available in Mac OS X v10.5 and later.
kPDFActionNamedPrint	9	One of the name constants for the action. The Print action. Available in Mac OS X v10.5 and later.
kPDFActionNamedZoomIn	10	One of the name constants for the action. The Zoom In action. Available in Mac OS X v10.5 and later.
kPDFActionNamedZoomOut	11	One of the name constants for the action. The Zoom Out action. Available in Mac OS X v10.5 and later.

144.7 class PDFActionRemoteGoToMBS

144.7.1 class PDFActionRemoteGoToMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFActionRemoteGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action that targets another document.
Notes: Available in Mac OS X v10.5 and later.
Subclass of the PDFActionMBS class.

144.7.2 Methods

144.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes: pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
file: The file of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 144.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string) 18683

144.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes: pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
url: The URL of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 144.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem) 18683

144.7.5 Properties

144.7.6 pageIndex as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The zero-based page index referenced by the remote go-to action.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.7.7 point as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The point, in page space, on the page referenced by the remote go-to action.
Notes: The point on the page of the remote document referenced by the action. If either the x value or the y value of the point is kPDFDestinationUnspecifiedValue, no position on the page is specified.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.7.8 URL as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The URL of the document referenced by the remote go-to action.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.8 class PDFActionResetFormMBS

144.8.1 class PDFActionResetFormMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFActionResetForm, a subclass of PDFAction, defines methods for getting and clearing fields in a PDF form.
Notes: A PDFActionResetForm object represents an action associated with a PDF form.
Subclass of the PDFActionMBS class.

144.8.2 Methods

144.8.3 Constructor

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes a reset form action.
Notes: Initially, there are no fields and fieldsIncludedAreCleared returns true.

Available in Mac OS X v10.5 and later.

144.8.4 fields as string()

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array of fields associated with the reset action.
Notes: An array of strings that corresponds to the fieldNames property of widget annotations (such as PDFAnnotationButtonWidget) on the PDF page. This method can return an empty array.

Available in Mac OS X v10.5 and later.

144.8.5 setFields(fields() as string)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Sets the array of fields associated with the reset action.
Notes: Available in Mac OS X v10.5 and later.

144.8.6 Properties

144.8.7 fieldsIncludedAreCleared as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Whether the fields associated with the reset action are cleared when the action is performed.
Notes: If true, the reset action's fields are cleared when the action is performed. If false, the fields are excluded from the reset action; that is, they are not cleared, but all other fields in the document are cleared.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.9 class PDFActionURLMBS

144.9.1 class PDFActionURLMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: PDFActionURL, a subclass of PDFAction, defines methods for getting and setting the URL associated with a URL action.
Notes: Subclass of the PDFActionMBS class.

144.9.2 Methods

144.9.3 Constructor(url as string)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes a URL action with the specified URL.
Notes: Available in Mac OS X v10.5 and later.

144.9.4 Properties

144.9.5 URL as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The URL associated with the URL action.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10 class PDFAnnotationButtonWidgetMBS

144.10.1 class PDFAnnotationButtonWidgetMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an annotation button widget.
Notes: Subclass of the PDFAnnotationMBS class.

144.10.2 Methods

144.10.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor which creates a new annotation widget.
See also:

- 144.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18688

144.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor which creates a new annotation widget.
See also:

- 144.10.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18688

144.10.5 Properties

144.10.6 allowsToggleToOff as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether a radio button behaves in a toggling manner.
Notes: True if clicking a radio button control that is already in the on state toggles it to the off state; otherwise false.

Available in Mac OS X v10.5 and later.
(Read only property)

144.10.7 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The background color.
Notes: (Read and Write property)

144.10.8 caption as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The text of the label on a push button control.
Notes: This method applies only to the label drawn on a control of type kPDFWidgetPushButtonControl.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.9 controlType as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The control type of this widget.
Notes: Value is one of the following constants:

kPDFWidgetUnknownControl
kPDFWidgetPushButtonControl
kPDFWidgetRadioButtonControl
kPDFWidgetCheckBoxControl
(Read and Write property)

144.10.10 fieldName as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal name of a field (used for reset-form actions).
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.11 font as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font used in the control's label.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.12 fontColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used in the control's label.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.13 Highlighted as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value that indicates whether the control is highlighted when it is drawn.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.14 onStateValue as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string associated with the on state of a radio button or checkbox control.
Notes: This is a required string for controls of types kPDFWidgetRadioButtonControl and kPDFWidgetCheckBoxControl. The off state is always labeled "Off".

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.10.15 state as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The state value.
Notes: (Read and Write property)

144.10.16 Events

144.10.17 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.10.18 Constants

Constants

Constant	Value	Description
kPDFWidgetCheckBoxControl	2	One of the control types for this widget.
kPDFWidgetPushButtonControl	0	One of the control types for this widget.
kPDFWidgetRadioButtonControl	1	One of the control types for this widget.
kPDFWidgetUnknownControl	-1	One of the control types for this widget.
NSOffState	0	One of the state constants. The corresponding feature is in effect nowhere.
NSOnState	1	One of the state constants. The corresponding feature is in effect everywhere.

States

Constant	Value	Description
kPDFWidgetMixedState	-1	The corresponding feature is in mixed state.
kPDFWidgetOffState	0	The corresponding feature is in effect nowhere.
kPDFWidgetOnState	1	The corresponding feature is in effect everywhere.

144.11 class PDFAnnotationChoiceWidgetMBS

144.11.1 class PDFAnnotationChoiceWidgetMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationChoiceWidget object provides user interactivity on a page of a PDF document, in the form of pop-up menus and lists.
Notes: PDFAnnotationChoiceWidget inherits general annotation behavior from the PDFAnnotation class. If you use a PDFAnnotationChoiceWidget object, your application must handle hit testing, unless you are simply using PDFView to display content. This is because PDFView automatically handles hit testing for you.
Subclass of the PDFAnnotationMBS class.

144.11.2 Methods

144.11.3 choices as string()

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of strings that represent the items available in the list or pop-up menu of the choice widget annotation.
Notes: Available in Mac OS X v10.5 and later.

144.11.4 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a PDF annotation object.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. Available in Mac OS X v10.4 and later.
See also:

- 144.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18692

144.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a PDF annotation object.
See also:

- 144.11.4 Constructor(left as Double, top as Double, width as Double, height as Double) 18692

144.11.6 setChoices(choices() as string)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the items available in the list or pop-up menu of the choice widget annotation.
Notes: choices: Send an array of strings, each of which represents an item in the list or pop-up menu of the choice annotation widget.

Available in Mac OS X v10.5 and later.

144.11.7 Properties

144.11.8 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The color of the widget annotation background.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.9 fieldName as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal field name associated with the widget annotation's value.
Notes: If the widget annotation is backed by PDF form data, it can associate an optional field name with a value or other data.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.10 font as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font used to display the text in the widget annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.11 fontColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used to display the text in the widget annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.12 isListChoice as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the widget annotation is a list.
Notes: A choice widget annotation can be either a list or a pop-up menu.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.13 stringValue as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The selection in the widget annotation.
Notes: If the widget annotation object is backed by PDF form data, this method returns the value associated with the appropriate field in the form object, if possible.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.11.14 Events

144.11.15 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.12 class PDFAnnotationCircleMBS

144.12.1 class PDFAnnotationCircleMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an annotation circle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationCircleMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

144.12.2 Methods

144.12.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation circle.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationCircleMBS(100,100,100,100)

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

See also:

- 144.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18697

144.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation circle.
See also:

- 144.12.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18696

144.12.5 Properties

144.12.6 interiorColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fill color used for drawing annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationCircleMBS(100,100,100,100)
a.interiorColor = NSColorMBS.magentaColor

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

144.12.7 Events

144.12.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.13 class PDFAnnotationFreeTextMBS

144.13.1 class PDFAnnotationFreeTextMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a free text annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var annotations(-1) as PDFAnnotationMBS = page.annotations

for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationFreeTextMBS then
Var ft as PDFAnnotationFreeTextMBS = PDFAnnotationFreeTextMBS(a)
MsgBox ft.contents
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.
Blog Entries

- MBS Xojo Plugins, version 22.1pr3

144.13.2 Methods

144.13.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new free text annotation.
See also:

- 144.13.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18699

144.13.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new free text annotation.
See also:

• 144.13.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18699

144.13.5 NSCenterTextAlignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for center.

144.13.6 NSRightTextAlignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for right.

144.13.7 Properties

144.13.8 alignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alignment of text within annotation bounds.
Example:

```
Var a as PDFAnnotationFreeTextMBS // an annotation

if a.alignment=a.NSLeftTextAlignment then
// left aligned
end if
```

Notes: Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

144.13.9 font as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Font associated with the text field.
Notes: (Read and Write property)

144.13.10 fontColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used in the text field of the annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.13.11 Events

144.13.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.13.13 Constants

Constants

Constant	Value	Description
NSJustifiedTextAlignment	3	The Cocoa text alignment constant for justified.
NSLeftTextAlignment	0	The Cocoa text alignment constant for left.
NSNaturalTextAlignment	4	The Cocoa text alignment constant for natural.

144.14 class PDFAnnotationInkMBS

144.14.1 class PDFAnnotationInkMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an ink annotation.
Notes: Subclass of the PDFAnnotationMBS class.
Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

144.14.2 Methods

144.14.3 addBezierPath(path as NSBezierPathMBS)

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a Bezier path to an annotation.

144.14.4 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new ink annotation.
See also:

- 144.14.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18702

144.14.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new ink annotation.
See also:

- 144.14.4 Constructor(left as Double, top as Double, width as Double, height as Double) 18702

144.14.6 paths as NSBezierPathMBS()

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing the Bezier paths that make up an annotation.
Example:

```
Var a as new PDFAnnotationInkMBS(0, 0, 100, 100)

Var b1 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(10, 10, 10, 10))
a.addBezierPath b1

Var b2 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(50, 50, 20, 30))
a.addBezierPath b2

Var paths() as NSBezierPathMBS = a.paths
break
```

144.14.7 removeBezierPath(path as NSBezierPathMBS)

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a Bezier path from an annotation.

144.14.8 Events

144.14.9 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.15 class PDFAnnotationLineMBS

144.15.1 class PDFAnnotationLineMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a line annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
Var l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.

144.15.2 Methods

144.15.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation line.
Example:

```
Var a as new PDFAnnotationLineMBS(100,100,100,100)
```

See also:

- 144.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

144.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation line.
See also:

- 144.15.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18704

144.15.5 Properties

144.15.6 endLineStyle as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the line end.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes: (Read and Write property)

144.15.7 endPoint as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A point specifying the end point for line annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
```

```
Var annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
Var l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

144.15.8 interiorColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The color used to fill the ornament at the ends of the line.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.15.9 startLineStyle as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the line start.
Example:

```
Var a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleSquare
```

Notes: (Read and Write property)

144.15.10 startPoint as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A point specifying the start pointfor line annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var annotations(-1) as PDFAnnotationMBS = page.annotations
```

```
// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
Var l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

144.15.11 Events

144.15.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.15.13 Constants

Line Styles

Constant	Value	Description
kPDFLineStyleCircle	2	
kPDFLineStyleClosedArrow	5	
kPDFLineStyleDiamond	3	
kPDFLineStyleNone	0	
kPDFLineStyleOpenArrow	4	
kPDFLineStyleSquare	1	

144.16 class PDFAnnotationLinkMBS

144.16.1 class PDFAnnotationLinkMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a link annotation.
Example:

```
// load a PDF
Var sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var p as new PDFDocumentMBS(sourceFile)

// get 4th page
Var page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
Var dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
Var LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
Var SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
Var destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

144.16.2 Methods

144.16.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation link.
See also:

- 144.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18709

144.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation link.
See also:

- 144.16.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18708

144.16.5 setHighlighted(value as boolean)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The highlight state dictates how the annotation is drawn.
Notes: If a user has clicked on a "Link" annotation, you should set highlighted to true and redraw it. When the user lets up, set highlighted to false and redraw again.

144.16.6 Properties

144.16.7 destination as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Destination for the link.
Notes: (Read and Write property)

144.16.8 URL as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: URL for the link.
Notes: (Read and Write property)

144.16.9 Events

144.16.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.17 class PDFAnnotationMarkupMBS

144.17.1 class PDFAnnotationMarkupMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a markup annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationMarkupMBS(100,100,100,100)

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

144.17.2 Methods

144.17.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new markup annotation.
Example:

```
Var a as new PDFAnnotationMarkupMBS(100,100,100,100)
```

See also:

- 144.17.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18712

144.17.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new markup annotation.
See also:

- 144.17.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18711

144.17.5 quadrilateralPoints as NSPointMBS()

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get the quadrilateral points.
Example:

```
Var m as new PDFAnnotationMarkupMBS(10, 20, 30, 40)
Var points() as NSPointMBS = m.quadrilateralPoints
break // see points in debugger
```

Notes: Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points.
The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

144.17.6 setQuadrilateralPoints(points() as NSPointMBS)

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Set the quadrilateral points.
Notes: Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points.
The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

144.17.7 Properties

144.17.8 markupType as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Type of mark-up (highlight, strike-out or underline).
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Changing the markup type also changes the annotations type to one of: "Highlight", "Strikeout", or "Underline" (these are three seperate annotation types treated here as three seperate flavors of the one PDFAnnotationMarkup class).
(Read and Write property)

144.17.9 Events

144.17.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.17.11 Constants

Markup Types

Constant	Value	Description
kPDFMarkupTypeHighlight	0	Highlight
kPDFMarkupTypeRedact	3	Redact
kPDFMarkupTypeStrikeOut	1	StrikeOut
kPDFMarkupTypeUnderline	2	Underline

144.18 class PDFAnnotationMBS

144.18.1 class PDFAnnotationMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: This is the base class for all annotations.
Notes: A PDFAnnotation object by itself is not useful, only the subclasses (like PDFAnnotationCircle, PDFAnnotationText) are interesting. In parsing a PDF however, any unknown or unsupported annotations will be represented as this base class. Its drawRect method merely frames the bounds of the annotation and prints the annotation type (like "TrapNet") within the box.

144.18.2 Methods

144.18.3 addBezierPath(path as NSBezierPathMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Add paths from the annotation.
Notes: Path points are specified in annotation space.
Used by annotations type(s): /Ink.

144.18.4 choices as string()

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

144.18.5 Constructor

MBS PDFKit Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes: This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFAnnotationMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

- 144.18.6 Constructor(Handle as Integer) 18716
- 144.18.7 Constructor(left as Double, top as Double, width as Double, height as Double) 18716
- 144.18.8 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18717

144.18.6 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFAnnotation handle.
Notes: Please pass in a non zero handle which points to a PDFAnnotation object.
For use with declares.
See also:

- 144.18.5 Constructor 18715
- 144.18.7 Constructor(left as Double, top as Double, width as Double, height as Double) 18716

144.18.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation.
Notes: You need to set type once.
See also:

- 144.18.5 Constructor 18715
- 144.18.6 Constructor(Handle as Integer) 18716
- 144.18.8 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18717

144.18.8 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Creates a new annotation of given type.
See also:

- 144.18.5 Constructor 18715
- 144.18.6 Constructor(Handle as Integer) 18716
- 144.18.7 Constructor(left as Double, top as Double, width as Double, height as Double) 18716

144.18.9 copy as PDFAnnotationMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the annotation object.
Notes: For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the annotation.

144.18.10 Destructor

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The destructor.

144.18.11 drawWithBox(box as Integer)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the annotation on its associated page.
Notes: The annotation is drawn relative to the origin of box in page space.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

For additional information see the "Constants" section in the PDFPage class.

Available in Mac OS X v10.4 and later.

144.18.12 lineStyleFromName(Name as String) as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Queries line style for given name.
Notes: Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

144.18.13 nameForLineStyle(LineStyle as Integer) as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Queries name for line style.
Notes: Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

144.18.14 paths as NSBezierPathMBS()

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Array of NSBezierPathsMBS that comprise the annotation.
Notes: Paths are specified in annotation space.
Used by annotations type(s): /Ink.

144.18.15 PDFAnnotationHighlightingModeInvert as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the highlighting mode constants.
Notes: Invert

144.18.16 PDFAnnotationHighlightingModeNone as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the highlighting mode constants.
Notes: No

144.18.17 PDFAnnotationHighlightingModeOutline as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the highlighting mode constants.
Notes: Outline

144.18.18 PDFAnnotationHighlightingModePush as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the highlighting mode constants.
Notes: Push

144.18.19 PDFAnnotationKeyAction as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.20 PDFAnnotationKeyAdditionalActions as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.21 PDFAnnotationKeyAppearanceDictionary as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.22 PDFAnnotationKeyAppearanceState as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.23 PDFAnnotationKeyBorder as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.24 PDFAnnotationKeyBorderStyle as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.25 PDFAnnotationKeyColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.26 PDFAnnotationKeyContents as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.27 PDFAnnotationKeyDate as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.28 PDFAnnotationKeyDefaultAppearance as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.29 PDFAnnotationKeyDestination as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.30 PDFAnnotationKeyFlags as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.31 PDFAnnotationKeyHighlightingMode as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.32 PDFAnnotationKeyIconName as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.33 PDFAnnotationKeyInklist as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.34 PDFAnnotationKeyInteriorColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.35 PDFAnnotationKeyLineEndingStyles as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.36 PDFAnnotationKeyLinePoints as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.37 PDFAnnotationKeyName as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.38 PDFAnnotationKeyOpen as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.39 PDFAnnotationKeyPage as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.40 PDFAnnotationKeyParent as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.41 PDFAnnotationKeyPopup as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.42 PDFAnnotationKeyQuadding as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.43 PDFAnnotationKeyQuadPoints as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.44 PDFAnnotationKeyRect as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.45 PDFAnnotationKeySubtype as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.46 PDFAnnotationKeyTextLabel as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the annotation property keys.

144.18.47 PDFAnnotationKeyWidgetAppearanceDictionary as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.48 PDFAnnotationKeyWidgetBackgroundColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.49 PDFAnnotationKeyWidgetBorderColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.50 PDFAnnotationKeyWidgetCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.51 PDFAnnotationKeyWidgetDefaultValue as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.52 PDFAnnotationKeyWidgetDownCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.53 PDFAnnotationKeyWidgetFieldFlags as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.54 PDFAnnotationKeyWidgetFieldType as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.55 PDFAnnotationKeyWidgetMaxLen as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.56 PDFAnnotationKeyWidgetOptions as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.57 PDFAnnotationKeyWidgetRolloverCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.58 PDFAnnotationKeyWidgetRotation as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.59 PDFAnnotationKeyWidgetTextLabelUI as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.60 PDFAnnotationKeyWidgetValue as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the key widget property keys.

144.18.61 PDFAnnotationLineEndingStyleCircle as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: Circle

144.18.62 PDFAnnotationLineEndingStyleClosedArrow as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: Closed Arrow

144.18.63 PDFAnnotationLineEndingStyleDiamond as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: Diamond

144.18.64 PDFAnnotationLineEndingStyleNone as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: No

144.18.65 PDFAnnotationLineEndingStyleOpenArrow as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: Open Arrow

144.18.66 PDFAnnotationLineEndingStyleSquare as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the line ending style constants.
Notes: Square

144.18.67 PDFAnnotationSubtypeCircle as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Circle

144.18.68 PDFAnnotationSubtypeFreeText as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Freetext

144.18.69 PDFAnnotationSubtypeHighlight as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Highlight

144.18.70 PDFAnnotationSubtypeInk as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Ink

144.18.71 PDFAnnotationSubtypeLine as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Line

144.18.72 PDFAnnotationSubtypeLink as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Link

144.18.73 PDFAnnotationSubtypePopup as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Popup

144.18.74 PDFAnnotationSubtypeSquare as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Square

144.18.75 PDFAnnotationSubtypeStamp as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Stamp

144.18.76 PDFAnnotationSubtypeStrikeOut as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Strike out

144.18.77 PDFAnnotationSubtypeText as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Text

144.18.78 PDFAnnotationSubtypeUnderline as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Underline

144.18.79 PDFAnnotationSubtypeWidget as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the subtypes.
Notes: Widget

144.18.80 PDFAnnotationTextIconTypeComment as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Comment

144.18.81 PDFAnnotationTextIconTypeHelp as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Help

144.18.82 PDFAnnotationTextIconTypeInsert as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Insert

144.18.83 PDFAnnotationTextIconTypeKey as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Key

144.18.84 PDFAnnotationTextIconTypeNewParagraph as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: New Paragraph

144.18.85 PDFAnnotationTextIconTypeNote as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Note

144.18.86 PDFAnnotationTextIconTypeParagraph as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the icon type constants.
Notes: Paragraph

144.18.87 PDFAnnotationWidgetSubtypeButton as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget subtypes.
Notes: Button

144.18.88 PDFAnnotationWidgetSubtypeChoice as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget subtypes.
Notes: Choice

144.18.89 PDFAnnotationWidgetSubtypeSignature as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget subtypes.
Notes: Signature

144.18.90 PDFAnnotationWidgetSubtypeText as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget subtypes.
Notes: Text

144.18.91 quadrilateralPoints as NSPointMBS()

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
Notes: The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

144.18.92 removeAllAppearanceStreams

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: All appearance streams for the target annotation are removed.
Notes: Without an appearance stream, annotations are drawn strictly according to their parameters (color, border, font, etc.). When a PDF is saved, PDF Kit will always write out an appearance stream(s) for each annotation. If the PDF is reloaded, you will need to remove the appearance streams in order to continue to edit the annotations parameters.

Requires Mac OS X 10.5.

144.18.93 removeBezierPath(path as NSBezierPathMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Remove paths from the annotation.

144.18.94 removeValueForAnnotationKey(Key as String)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Remove the key-value pair from the annotation dictionary. Returns true on successful removal.

144.18.95 setBooleanValue(Key as String, value as Boolean) as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Sets a boolean value.
Notes: See also setValue.

144.18.96 setChoices(choices() as string)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

144.18.97 setQuadrilateralPoints(points() as NSPointMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
Notes: The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

144.18.98 setRectValue(Key as String, value as NSRectMBS) as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Sets a rectangle value.
Notes: See also setValue.

144.18.99 setValue(Key as String, value as Variant) as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Allows you to set a key-value pair in this annotation's dictionary.
Notes: Returns true on successful assignment, false on error. Key must be valid for a PDF annotation's object type, and must have a value that is acceptable for the key type. These values can either be a string, number, array of strings or numbers, or an dictionary of the previously listed types. Some keys expect a complex type, for example the key "/C" expects a color in the format of an array of 0, 1, 3, or 4 elements, with each element being a floating-point number in the range of 0.0 - 1.0). As a convenience, these kind of keys will directly accept NSColorMBS values. Other convenience functions provide similar support can be found in PDFAnnotationUtilities header file. Note that you can set the environment variable "PDFKIT_LOG_ANNOTATIONS" to log any key-value assignment failures.

144.18.100 setValues(values() as string)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The choices are an array of strings indicating the option,Äôs export values in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

144.18.101 valueForAnnotationKey(Key as String) as Variant

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Retrieves a deep copy of the key-value pair based on the given key; key can either be from the keys PDFAnnotationKey, or an appropriate string from the PDF specification.

144.18.102 values as string()

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The choices are an array of strings indicating the option,Äôs export values in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

144.18.103 Properties

144.18.104 Action as PDFActionMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Optional action performed when a user clicks / taps an annotation.
Notes: PDF readers ignore actions except for those associated with Link or button Widget annotations.

Available in macOS 10.5 or newer
(Read and Write property)

144.18.105 alignment as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Alignment of text within annotation bounds. Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
Notes: Used by annotations type(s): /FreeText, /Widget (field type(s): /Tx).
(Read and Write property)

144.18.106 allowsToggleToOff as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: For radio buttons, indicates whether clicking on widget whose state is already On toggles it Off.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.107 annotationKeyValues as Dictionary

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: List all key-value pairs for this annotation; returns a deep copy of all pairs.
Notes: Note that this method will not include a copy of the value for /Parent. This is by design as to avoid introducing a memory cycle. If you would like to get the /Parent propery, use valueForAnnotationKey with key PDFAnnotationKeyParent.
(Read only property)

144.18.108 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Background color characteristics.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.18.109 border as PDFBorderMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Optional border or border style that describes how to draw the annotation border (if any).
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

144.18.110 bounds as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The bounding box for the annotation in page space.
Notes: Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
(Read and Write property)

144.18.111 buttonWidgetState as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The current state of a button widget annotation.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.112 buttonWidgetStateString as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The string that represents the ON state of a button widget annotation.
Notes: This should be set when trying to, for example, group together a set of radio buttons with the same field name.
When buttons share the same field name, their individual state strings set them apart from one another.
Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.113 caption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Label for the button. Applies to kPDFWidgetPushButtonControl only.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.114 colorValue as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: For many annotations ("Circle", "Square") the stroke color.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)
```

```
Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes: Used for other annotations as well.
(Read and Write property)

144.18.115 comb as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Used to configure combing for PDF text fields.
Notes: If set, the field is automatically divided into as many equally spaced positions, or combs, as the value of the maximum length of the field. To get the maximum length, use annotaiton key: PDFAnnotationKeyWidgetMaxLen.
Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

144.18.116 contents as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A string of text associated with an annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationTextMBS(100,100,100,100)

a.contents="Hello"
a.colorValue = NSColorMBS.redColor

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Often to be displayed in a pop-up when the annotation is clicked on ("FreeText" and "Text" especially).
(Read and Write property)

144.18.117 destination as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Destination for the link. May be nil if no destination associated with link; in this case the URL may be valid.
Notes: The preferred way though is to use action property.
Used by annotations type(s): /Link.
(Read and Write property)

144.18.118 endLineStyle as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Style used for ornaments at the lines end (optional, PDF 1.4).
Notes: Used by annotations type(s): /Line.
(Read and Write property)

144.18.119 endPoint as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Points specifying end points for line annotation (required).
Notes: Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

144.18.120 fieldName as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Widget annotations backed by form data have (internal) field names with which to associate a value or data.
Notes: Can also be used for ResetForm actions.
Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.18.121 font as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Font and font color associated with the text field.
Notes: Used by annotations type(s): /FreeText, /Popup, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

144.18.122 fontColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Width of line used to stroke border.
Notes: Used by annotations type(s): /FreeText, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

144.18.123 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The handle used internally for the object reference.
Notes: (Read and Write property)

144.18.124 hasAppearanceStream as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns true if the annotation has an appearance stream.
Notes: Annotations with appearance streams are drawn using their stream. As a result, setting many parameters (like 'setColor' above), will have no visible effect.
(Read only property)

144.18.125 iconType as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The type of icon displayed in the PDF. Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
Notes: Used by annotations type(s): /Text.
(Read and Write property)

144.18.126 interiorColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Interior color of the annotation.
Notes: Used by annotations type(s): /Circle, /Line, /Square.
(Read and Write property)

144.18.127 isHighlighted as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The highlight state dictates how the annotation is drawn.
Notes: For example, if a user has clicked on a "Link" annotation, you should set highlighted to YES and redraw it. When the user lets up, set highlighted to false and redraw again.

Available in macOS 10.13 or newer or iOS 11.0 or newer.
(Read and Write property)

144.18.128 isPasswordField as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Used to determine if a PDF text field is a password field.
Notes: Used by annotations type(s): /Widget (field type(s): /Tx).
(Read only property)

144.18.129 ListChoice as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: There are two flavors of Choice widget annotations, lists and pop-up menus. This method allow you to differentiate.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).
(Read and Write property)

144.18.130 markupType as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Type of mark-up (highlight, strike-out or underline). Changing the markup type also changes the annotations type.
Notes: Used by annotations type(s): /Highlight, /StrikeOut, /Underline.
(Read and Write property)

144.18.131 maximumLength as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Maximum characters allowed (optional, zero indicates no specified maximum).
Notes: Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

144.18.132 modificationDate as date

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The modification date of the annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.18.133 modificationDateTime as DateTime

MBS PDFKit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The modification date of the annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.18.134 mouseUpAction as PDFActionMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The action performed when a user releases the mouse button within an annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.18.135 multiline as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Used to configure multiline PDF text fields.
Notes: Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

144.18.136 Open as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Used to tell if an annotation is open or closed.
Notes: Used by annotations type(s): /Popup.
(Read and Write property)

144.18.137 page as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns the page the annotation is associated with.
Notes: (Read only property)

144.18.138 popup as Variant

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The pop-up annotation associated with an annotation.
Notes: The variant is a PDFAnnotationPopupMBS.

Pop-up annotations are not used with links or widgets. The bounds and open state of the pop-up annotation indicate the placement and open state of the pop-up window.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.18.139 radiosInUnison as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: For radio buttons, indicates whether a group of radio buttons will turn on and off in unison; that is if one is checked, they are all checked. If clear, the buttons are mutually exclusive.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.140 ReadOnly as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Determines if a text field should be editable or not.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.18.141 shouldDisplay as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Specifies whether it should be drawn to the display or not.
Notes: (Read and Write property)

144.18.142 shouldPrint as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Specifies whether it should be printed or not.
Notes: (Read and Write property)

144.18.143 stampName as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Name of stamp annotation.
Notes: Standard stamps include names like, "Approved", "Draft", "TopSecret", etc.
The name must be representable as ASCII. Very little is rendered if the annotation has no appearance stream.
Used by annotations type(s): /Stamp
(Read and Write property)

144.18.144 startLineStyle as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Style used for ornaments at the lines start (optional, PDF 1.4).
Notes: Used by annotations type(s): /Line.
(Read and Write property)

144.18.145 startPoint as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Points specifying start points for line annotation (required).
Notes: Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

144.18.146 toolTip as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String used for tooltips.
Notes: The base class returns contents, sub-classes may override as appropriate.
(Read only property)

144.18.147 type as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns the annotation type (called "Subtype" in the PDF specification since "Annot" is the type).
Example:

```
Var a as new PDFAnnotationTextMBS(100,100,100,100)
MsgBox a.type // Text
```

Notes: Examples include: "Text", "Link", "Line", etc.
(Read and Write property)

144.18.148 URL as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: URL for the link. May be nil if no URL action associated with link; in this case the destination may be valid.
Notes: The preferred way though is to via action property.
Used by annotations type(s): /Link.
(Read and Write property)

144.18.149 userName as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The name of the user who created the annotation.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.18.150 widgetControlType as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The type of button widget control type (radio button, push button, or checkbox).
Notes: Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

144.18.151 widgetDefaultStringValue as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The string value for a widget annotation.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.18.152 widgetFieldType as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The specific field type of a widget annotation (button, choice, or text).
Notes: Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.18.153 widgetStringValue as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The string value for a widget annotation.
Notes: Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

144.19 class PDFAnnotationPopupMBS

144.19.1 class PDFAnnotationPopupMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationPopup object provides user interactivity on a PDF page in the form of a pop-up menu.
Notes: Subclass of the PDFAnnotationMBS class.

144.19.2 Methods

144.19.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation popup annotation with the given size.
See also:

- 144.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18748

144.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation popup annotation with the given size.
See also:

- 144.19.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18748

144.19.5 Properties

144.19.6 isOpen as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the pop-up is open.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.19.7 Events

144.19.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.20 class PDFAnnotationSquareMBS

144.20.1 class PDFAnnotationSquareMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a square annotation.
Example:

```
// load a PDF
Var sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var p as new PDFDocumentMBS(sourceFile)

// get 4th page
Var page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
Var dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
Var LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
Var SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
Var destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

144.20.2 Methods

144.20.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a square annotation.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

See also:

- 144.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18751

144.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a square annotation.
See also:

- 144.20.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18750

144.20.5 Properties

144.20.6 interiorColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fill color used for drawing annotation.
Example:

```
Var a as new PDFAnnotationSquareMBS(100,100,100,100)
a.interiorColor = NSColorMBS.greenColor
```

Notes: (Read and Write property)

144.20.7 Events

144.20.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.21 class PDFAnnotationStampMBS

144.21.1 class PDFAnnotationStampMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationStamp object allows you to display a word or phrase, such as "Confidential," in a PDF page.
Example:

```
// create new document with blank page
Var doc as new PDFDocumentMBS
Var page as new PDFPageMBS
doc.appendPage page

// make new stamp annotation
Var stamp as new PDFAnnotationStampMBS(100, 100, 100, 100)

// Name of stamp annotation.  Standard stamps include names like, "Approved", "Draft", "TopSecret",
etc.
// The name must be representable as ASCII.
// Very little is rendered if the annotation has no appearance stream.
stamp.name = "Approved"

page.addAnnotation stamp

// save to file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.Launch
else
MsgBox "write failed"
end if
```

Notes: A PDFAnnotationStamp object should have an appearance stream associated with it; otherwise, nothing useful is rendered.
Subclass of the PDFAnnotationMBS class.

144.21.2 Methods

144.21.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation stamp with the given size.
See also:

- 144.21.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18754

144.21.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation stamp with the given size.
See also:

- 144.21.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18754

144.21.5 Properties

144.21.6 name as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name associated with the stamp annotation.
Notes: The name must be representable in ASCII. You can set a stamp annotation's name to help you identify it, but that name is not displayed on the PDF page. You must provide the string you want displayed on the page, such as "Draft" or "Top Secret", in the appearance stream for the annotation.

Note that the name value of the stamp annotation is not necessarily identical to the user-visible appearance of the stamp annotation. For example, a stamp annotation that displays "Confidential" on a PDF page may not have a name value of "Confidential".

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.21.7 Events

144.21.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.22 class PDFAnnotationTextMBS

144.22.1 class PDFAnnotationTextMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an annotation text.
Notes: Subclass of the PDFAnnotationMBS class.

144.22.2 Methods

144.22.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation text.
See also:

- 144.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18756

144.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation text.
See also:

- 144.22.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18756

144.22.5 Properties

144.22.6 iconType as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of icon displayed in the PDF.
Notes: Supported icons: ”Comment”, ”Key”, ”Note”, ”Help”, ”NewParagraph”, ”Paragraph” and ”Insert”. (Read and Write property)

144.22.7 Events

144.22.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.22.9 Constants

Constants

Constant	Value	Description
kPDFTextAnnotationIconComment	0	One of the constants for use with the icontype property.
kPDFTextAnnotationIconHelp	3	One of the constants for use with the icontype property.
kPDFTextAnnotationIconInsert	6	One of the constants for use with the icontype property.
kPDFTextAnnotationIconKey	1	One of the constants for use with the icontype property.
kPDFTextAnnotationIconNewParagraph	4	One of the constants for use with the icontype property.
kPDFTextAnnotationIconNote	2	One of the constants for use with the icontype property.
kPDFTextAnnotationIconParagraph	5	One of the constants for use with the icontype property.

144.23 class PDFAnnotationTextWidgetMBS

144.23.1 class PDFAnnotationTextWidgetMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a text widget annotation.
Notes: Subclass of the PDFAnnotationMBS class.
Blog Entries

- MBS Xojo Plugins, version 22.1pr3

144.23.2 Methods

144.23.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation.
See also:

- 144.23.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 18758

144.23.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation.
See also:

- 144.23.3 Constructor(left as Double, top as Double, width as Double, height as Double) 18758

144.23.5 NSCenterTextAlignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for center.

144.23.6 NSRightTextAlignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for right.

144.23.7 Properties

144.23.8 alignment as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alignment of text.
Notes: Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

144.23.9 attributedStringValue as NSAttributedStringMBS

MBS PDFKit Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attributed string associated with text field (font / fontColor).
Notes: Available on Mac OS X 10.8 or newer.
(Read and Write property)

144.23.10 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The background color of the annotation text field.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.23.11 fieldName as string

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal name for the annotation text field.
Notes: Field names are optional, internal names that identify text fields in a PDF form. You use field names with the PDFActionResetForm action.
Note that multiple PDFAnnotationTextWidget objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that

field name is changed in all objects. If you need to ensure unique text for a PDFAnnotationTextWidget object, you must give it a unique field name.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.23.12 font as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Font associated with the text field.
Notes: (Read and Write property)

144.23.13 fontColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used for the annotation's text field.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.23.14 isMultiline as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Configuring multiline PDF text fields.
Notes: (Read and Write property)

144.23.15 maximumLength as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of characters allowed in the annotations string.
Notes: A value of 0 means that there is no specified maximum.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.23.16 rotation as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The rotation angle of the annotation text field in degrees.
Notes: The rotation angle to be applied to the annotation text field, in degrees. The rotation angle must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example -90 is changed to 270).
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.23.17 stringValue as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String value associated with text field.
Notes: (Read and Write property)

144.23.18 Events

144.23.19 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The event called for a custom drawing.
Notes: You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

144.23.20 Constants

Constants

Constant	Value	Description
NSJustifiedTextAlignment	3	The Cocoa text alignment constant for justified.
NSLeftTextAlignment	0	The Cocoa text alignment constant for left.
NSNaturalTextAlignment	4	The Cocoa text alignment constant for natural.

144.24 class PDFAppearanceCharacteristicsMBS

144.24.1 class PDFAppearanceCharacteristicsMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: PDFAppearanceCharacteristics represents a dictionary that is specific to widget annotation types, containing additional information for constructing the annotation,Äôs appearance.
Notes: It is designed to be a representation of the /MK appearance characteristics entry in the annotation dictionary. Because the /MK entry is optional, all properties of PDFAppearanceCharacteristics are optional as well.

144.24.2 Methods

144.24.3 Constructor

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The constructor.
See also:

- 144.24.4 Constructor(Handle as Integer) 18762

144.24.4 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The constructor.
Notes: Handle must point to an existing PDFAppearanceCharacteristics object.
See also:

- 144.24.3 Constructor 18762

144.24.5 copy as PDFAppearanceCharacteristicsMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

144.24.6 PDFAppearanceCharacteristicsKeyBackgroundColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.7 PDFAppearanceCharacteristicsKeyBorderColor as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.8 PDFAppearanceCharacteristicsKeyCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.9 PDFAppearanceCharacteristicsKeyDownCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.10 PDFAppearanceCharacteristicsKeyRolloverCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.11 PDFAppearanceCharacteristicsKeyRotation as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: One of the widget appearance characteristics keys.

144.24.12 Properties

144.24.13 appearanceCharacteristicsKeyValues as Dictionary

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: List all appearance characteristics properties as key-value pairs; returns a deep copy of all pairs.
Notes: Helpful for debugging.
(Read only property)

144.24.14 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The background color of the widget annotation.
Notes: (Read and Write property)

144.24.15 borderColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The border color of the widget annotation.
Notes: (Read and Write property)

144.24.16 caption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The widget annotation,Äôs normal caption, displayed when it is not interacting with the user.
Notes: (Read and Write property)

144.24.17 controlType as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: For button widget annotations, need to specify the control type for PDFAppearanceCharacteristicsMBS as certain attributes, i.e. captions, are only available for certain flavors.
Notes: Control type does not need to be set for text or choice widget annotations.
(Read and Write property)

144.24.18 downCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The widget's caption displayed when the user holds the mouse button while over the annotation.
Notes: Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

144.24.19 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

144.24.20 rolloverCaption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The widget's caption displayed when the user moves the mouse over the annotation.
Notes: Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

144.24.21 rotation as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The number of *degrees* by which the widget annotation is rotated counterclockwise relative to the page.
Notes: The value must be a multiple of 90. Default value: 0.
(Read and Write property)

144.25 class PDFBorderMBS

144.25.1 class PDFBorderMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The class for PDFKit borders.

144.25.3 Constructor

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The constructor.
Notes: Updated for version 21.1 to be public. Used to be private.
See also:

- 144.25.4 Constructor(Handle as Integer) 18766

144.25.4 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFBorder handle.
Notes: Please pass in a non zero handle which points to a PDFBorder object.
For use with declares.
See also:

- 144.25.3 Constructor 18766

144.25.5 copy as PDFBorderMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the border object.
Notes: Not available in Mac OS X 10.6.

144.25.6 dashPattern as Double()

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Gets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

144.25.7 PDFBorderKeyDashPattern as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Key for the dash pattern property.

144.25.8 PDFBorderKeyLineWidth as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Key for the line width property.

144.25.9 PDFBorderKeyStyle as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Key for the style property.

144.25.10 setDashPattern(values() as Double)

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Sets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

144.25.11 Properties

144.25.12 borderKeyValues as Dictionary

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: List all border properties as key-value pairs; returns a deep copy of all pairs.
Notes: Helpful for debugging.

(Read only property)

144.25.13 horizontalCornerRadius as single

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: For rounded-rect borders, the corner radius.
Notes: Deprecated in Mac OS X 10.7.
(Read and Write property)

144.25.14 lineWidth as Double

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Width of line used to strok border.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

144.25.15 style as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Whether border is drawn solid, dashed etc.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
```

```
Var doc as new PDFDocumentMBS(f)

Var page as PDFPageMBS = doc.pageAtIndex(0)
Var a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Use this constants:

```
kPDFBorderStyleSolid      = 0
kPDFBorderStyleDashed     = 1
kPDFBorderStyleBeveled    = 2
kPDFBorderStyleInset      = 3
kPDFBorderStyleUnderline  = 4
```

(Read and Write property)

144.25.16 verticalCornerRadius as single

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: For rounded-rect borders, the corner radius.
Notes: Deprecated in Mac OS X 10.7.
(Read and Write property)

144.25.17 Constants

Constants

Constant	Value	Description
kPDFBorderStyleBeveled	2	One of the constants for the border style.
kPDFBorderStyleDashed	1	One of the constants for the border style.
kPDFBorderStyleInset	3	One of the constants for the border style.
kPDFBorderStyleSolid	0	One of the constants for the border style.
kPDFBorderStyleUnderline	4	One of the constants for the border style.

144.26 class PDFDestinationMBS

144.26.1 class PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The class for a pdf destination.
Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

144.26.2 Methods

144.26.3 compare(dest as PDFDestinationMBS) as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a comparison result that indicates the location of the destination in the document, relative to the current position.
Notes: A comparison result, indicating the position of the passed-in destination relative to the current position.

If destination is between the receiver's position and the end of the document, compare returns NSOrderedAscending; if it is between the receiver's position and the beginning of the document, compare returns NSOrderedDescending. Otherwise, if destination matches the receiver's position, compare returns NSOrderedSame.

This method ignores the horizontal component of the destination point (the x value). If the destination's vertical component (or y value) is kPDFDestinationUnspecifiedValue, compare treats the destination as if its y value is the top point on the destination page.

An exception is raised if destination does not have a page associated with it or if its page is associated with a document other than the receiver's document.

Available in Mac OS X v10.5 and later.

144.26.4 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFDestination handle.
Notes: Please pass in a non zero handle which points to a PDFDestination object.
For use with declares.
See also:

- 144.26.5 Constructor(page as PDFPageMBS, point as NSPointMBS) 18771

144.26.5 Constructor(page as PDFPageMBS, point as NSPointMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes the destination.
Notes: page: The page of the destination.
point: The point of the destination, in page space.

Specify point in page space. Typically, there's no need to initialize destinations. Instead, you get them from PDFAnnotationLink, PDFOutline, or PDFView objects.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
See also:

- 144.26.4 Constructor(Handle as Integer) 18770

144.26.6 copy as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the destination object.

144.26.7 kPDFDestinationUnspecifiedValue as Double

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Value used for unspecified destination.
Example:

MsgBox str(PDFDestinationMBS.kPDFDestinationUnspecifiedValue)

Notes: Unspecified value used when a destination's actual x or y value is unimportant.
Available in Mac OS X v10.5 and later.

144.26.8 point as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the point, in page space, that the destination refers to.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.

144.26.9 Properties

144.26.10 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

144.26.11 page as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Page the destination refers to (destination page).
Notes: (Read only property)

144.26.12 Zoom as Double

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Specify the scale factor the PDF viewer should assume for this destination.
Notes: kPDFDestinationUnspecifiedValue indicates the scale factor is unaffected.
Available in Mac OS X 10.7 and later.
(Read and Write property)

144.27 class PDFDocumentDelegateMBS

144.27.1 class PDFDocumentDelegateMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: A class for a document delegate.
Notes: Subclass this class to handle document events.

144.27.2 Events

144.27.3 Close

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Called when the delegate is destroyed.

144.27.4 didMatchString(selection as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The event for an item found.
Notes: If implemented by the delegate, called for every search instance found during a find. PDFDocument's implentation accumulates each PDFSelection in an array.

144.27.5 documentDidBeginDocumentFind

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The search started on the document.

144.27.6 documentDidBeginPageFind(PageIndex as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The page search started on this page.
Notes: PageIndex is zero based.

144.27.7 documentDidEndDocumentFind

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The search finished on this document.

144.27.8 documentDidEndPageFind(PageIndex as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The page search finished on this page.
Notes: PageIndex is zero based.

144.27.9 documentDidFindMatch(selection as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The search found an item.

144.27.10 documentDidUnlock

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The document has been unlocked.

144.27.11 Open

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Called when the delegate is installed.

144.28 class PDFDocumentMBS

144.28.1 class PDFDocumentMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The PDFKit class for a PDF document.
Notes: Basicly this is the code used by Preview.app by Apple.

Destructor is dispatched to main thread to avoid bugs in OS X 10.12.

144.28.2 Methods

144.28.3 appendPage(page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Appends a page to the document.

144.28.4 beginFindString(text as string, options as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Begins a find, searching the document for string.
Notes: Search results are handled via a DidFindMatch event in the delegate. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

144.28.5 beginFindStrings(texts() as string, options as integer)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Like beginFindString but it accepts an array of strings to search for.

144.28.6 cancelFindString

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Method to cancel a search.
Notes: Can be called from a user method being serviced by a find notification.

144.28.7 Constructor

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The constructor to create a new pdf document in memory.
Example:

```
Var doc as new PDFDocumentMBS // new empty document
Var page as new PDFPageMBS // new empty page

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

Var f as FolderItem=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

- 144.28.9 Constructor(data as String) 18777
- 144.28.10 Constructor(file as folderitem) 18778
- 144.28.11 Constructor(Handle as Integer) 18778

144.28.8 Constructor(data as memoryblock)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The constructor to create a new pdf document based on a string.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var b as BinaryStream = f.OpenAsBinaryFile(false)
Var s as string = b.Read(b.Length)

Var doc as new PDFDocumentMBS(s)

MsgBox doc.Title
```

- 144.28.10 Constructor(file as folderitem) 18778
- 144.28.11 Constructor(Handle as Integer) 18778

144.28.9 Constructor(data as String)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: The constructor to create a new pdf document based on a string.
See also:

- 144.28.7 Constructor 18776
- 144.28.8 Constructor(data as memoryblock) 18777
- 144.28.10 Constructor(file as folderitem) 18778
- 144.28.11 Constructor(Handle as Integer) 18778

144.28.10 Constructor(file as folderitem)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The constructor to create a new pdf document based on a file.
Example:

```
Var p as PDFDocumentMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

See also:

- 144.28.7 Constructor 18776
- 144.28.8 Constructor(data as memoryblock) 18777
- 144.28.9 Constructor(data as String) 18777
- 144.28.11 Constructor(Handle as Integer) 18778

144.28.11 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFDocument handle.
Notes: Please pass in a non zero handle which points to a PDFDocument object.
For use with declares.
See also:

- 144.28.7 Constructor 18776
- 144.28.8 Constructor(data as memoryblock) 18777
- 144.28.9 Constructor(data as String) 18777
- 144.28.10 Constructor(file as folderitem) 18778

144.28.12 copy as PDFDocumentMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the document object.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var p as new PDFDocumentMBS(f)

// make a copy
Var c as PDFDocumentMBS = p.copy

// remove second page
c.removePageAtIndex 1

// c has one page less
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

Notes: For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the document.

144.28.13 dataRepresentation(QuartzFilter as Variant = nil) as memoryblock

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Methods to record the current state of the PDFDocument as data string.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

Var o as FolderItem = SpecialFolder.Desktop.Child("out.pdf")
Var b as BinaryStream = o.CreateBinaryFile("")

b.Write doc.dataRepresentation
```

Notes: Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

144.28.14 exchangePageAtIndexWithPageAtIndex(indexA as Integer, indexB as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Exchanges the two pages with the given index.
Notes: Index is zero based.

144.28.15 findString(text as string, options as Integer) as PDFSelectionMBS()

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Searches entire document for string and returns an array of PDFSelections representing all instances found.
Example:

```
Var p as PDFDocumentMBS
Var f as FolderItem
Var sa() as PDFSelectionMBS
Var i,c as Integer
Var s as PDFSelectionMBS

const NSCaseInsensitiveSearch=1

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

if p.pageCount=0 then
MsgBox "Failed to load the PDF."
Return
end if

sa=p.findString("Plugin",NSCaseInsensitiveSearch)

if ubound(sa)<0 then
MsgBox "no item found."
else
MsgBox str(ubound(sa)+1)+" items found."
end if

s=sa(0)
s.extendSelectionAtEnd(50)
s.extendSelectionAtStart(50)

MsgBox s.stringValue // shows a bit more text before and after the location found
```

Notes: May return an empty array if nothing is found.
Returns nil on any error.

Supported options are:
NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

144.28.16 findStringFromSelection(text as string, selection as PDFSelectionMBS, options as Integer) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Searches for only the next instance of string beginning after the last character of selection with options (or preceding the first character of the selection if NSBackwardsSearch is specified as a search option).
Notes: Returns next instance as a PDFSelection or nil if the end of the document is reached. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch. Passing in nil for selection will start the search from the beginning of the document (or end if NSBackwardsSearch is specified).

144.28.17 indexForPage(page as PDFPageMBS) as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a PDFPage, returns the pages index within the document.
Notes: Indicees are zero-based.

144.28.18 insertPage(page as PDFPageMBS, index as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Inserts a page in the pdf on the given index.
Example:

```
Var file1,file2,file3,destfile as FolderItem
Var page1,page2,page3 as PDFPageMBS
Var doc1,doc2 as PDFDocumentMBS
Var img as NSImageMBS
Var doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture
```

```
page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

Notes: Index is zero based.

144.28.19 Keywords as string()

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Array of Strings containing document keywords.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox join(doc.Keywords)
```

144.28.20 outlineItemForSelection(selection as PDFSelectionMBS) as PDFOutlineMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a PDFSelection, this method returns the child outline item the selection most closely falls beneath.
Notes: Since a selection may span multiple outline items, only the point representing the first character of the PDFSelection is considered. Typically, outline's indicate things like chapters for the PDF. Therefore, this method would help you identify the chapter the selection falls within.

For some PDFs this method returns nil.

144.28.21 pageAtIndex(index as Integer) as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns a PDFPage object representing the page at index.
Example:

```
Var p as PDFDocumentMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes: Will raise an exception if index is out of bounds. Indicees are zero-based.

144.28.22 PDFDocumentAuthorAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the author of the document.

144.28.23 PDFDocumentCreationDateAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the document,Äôs creation date.

144.28.24 PDFDocumentCreatorAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the application that created the document content.

144.28.25 PDFDocumentDidBeginFindNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that the beginFindString or findString method begins finding.
Notes: The notification object is the PDFDocument object itself.

Use with NSNotificationObserverMBS class.

144.28.26 PDFDocumentDidBeginPageFindNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a find operation begins working on a new page of a document.
Notes: You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocument-PageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

144.28.27 PDFDocumentDidBeginPageWriteNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation begins working on a page in a document.
Notes: The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

144.28.28 PDFDocumentDidBeginWriteNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation begins working on a document.
Notes: The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

144.28.29 PDFDocumentDidEndFindNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that the beginFindString or findString method returns.
Notes: The beginFindString method returns immediately, so this notification is posted when the ,Äúfind,Äù operation is finished.

You can use this notification to know when to close or hide a progress bar.
The notification object is the PDFDocument object itself.

Use with NSNotificationObserverMBS class.

144.28.30 PDFDocumentDidEndPageFindNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a find operation finishes working on a page in a document.
Notes: You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocument-PageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

144.28.31 PDFDocumentDidEndPageWriteNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation finishes working on a page in a document.
Notes: The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

144.28.32 PDFDocumentDidEndWriteNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation finishes working on a document.
Notes: The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

144.28.33 PDFDocumentDidFindMatchNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a string match is found in a document.
Notes: The notification object is the PDFDocumentMBS object itself. To determine the string selection found, use the PDFDocumentFoundSelection key to obtain userinfo of type PDFSelectionMBS.

Use with NSNotificationObserverMBS class.

144.28.34 PDFDocumentDidUnlockNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a document unlocks after a unlockWithPassword message.
Notes: Use with NSNotificationObserverMBS class.
The notification object is the PDFDocument object itself.

144.28.35 PDFDocumentKeywordsAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional array of text strings containing keywords for the document.

144.28.36 PDFDocumentModificationDateAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the document,Äôs last-modified date.

144.28.37 PDFDocumentOwnerPasswordOption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the options for writing a PDF.
Notes: A string object for the owner's password which is required for encryption.

144.28.38 PDFDocumentProducerAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the application that produced the PDF data for the document.

144.28.39 PDFDocumentSubjectAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Example:

```
// read a file
Var f As New FolderItem("Installation.pdf")
Var p As New PDFDocumentMBS(f)

// change an attribute
Var d As Dictionary = p.documentAttributes
d.Value(PDFDocumentMBS.PDFDocumentSubjectAttribute) = "Hello World"
p.documentAttributes = d

// and write back to disk
Var f2 As New FolderItem("Installation2.pdf")
Call p.write(f2)
```

Notes: An optional text string containing a description of the subject of the document.

144.28.40 PDFDocumentTitleAttribute as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the title of the document.

144.28.41 PDFDocumentUserPasswordOption as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the options for writing a PDF.
Notes: A string for the user's password which is optional for encryption.

144.28.42 PrintOperation(PrintInfo as Variant, AutoRotate as boolean = true, scalingMode as Integer = 0) as Variant

MBS PDFKit Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates print operation for PDF document.
Example:

```
// select a PDF
Var f as FolderItem = GetOpenFolderItem("")
if f = nil then Return

// open PDF
Var doc as new PDFDocumentMBS(f)

// define some print setting via PrintInfo
Var PrintInfo as new NSPrintInfoMBS

// start print operation
Var printOperation as NSPrintOperationMBS = doc.PrintOperation(printinfo)

printOperation.showsPrintPanel = true
printOperation.showsProgressPanel = true

call printOperation.runOperation
```

Notes: Returns NSPrintOperationMBS object.

144.28.43 removePageAtIndex(index as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Removes a page in the pdf on the given index.
Notes: Index is zero based.

144.28.44 selectionForEntireDocument as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns a selection representing text for the entire document.

144.28.45 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns a selection representing text from page startPage and point StartCharacterIndex to page endPage and to point EndCharacterIndex on that page.
Notes: Start and end page can be the same.
See also:

- 144.28.46 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS 18789

144.28.46 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns a selection representing text from page startPage and point startPt to page endPage and to point endPt on that page.
Notes: Points are in page-space and relative to their respective pages. Start and end page can be the same (and are then equivalent to calling selectionFromPointToPoint).
See also:

- 144.28.45 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS 18789

144.28.47 SetDelegate(d as PDFDocumentDelegateMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: If a PDFDocument has a delegate, delegate methods may be called for this document.

144.28.48 SetKeywords(keywords() as string)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Sets the array of strings containing document keywords.

144.28.49 unlockWithPassword(password as string) as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Unlocks an encrypted PDF with the given password.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

if doc.unlockWithPassword("mypassword") then
MsgBox "OK"
end if
```

Notes: Means of passing in a password to unlock encrypted PDF's. Calling unlockWithPassword will attempt to unlock the PDF. If successful, a DidUnlockDocument event is sent to the delegate. You cannot "re-lock" a PDF by passing in a bogus password. Returns true if the document is now unlocked, false otherwise (isLocked = false).

144.28.50 write(file as folderitem, QuartzFilter as Variant = nil) as boolean

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Methods to record the current state of the PDFDocument as a file.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)

// modify here

Var o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes: Returns true on success and false on failure.

There is a bug known in Mac OS X 10.4 that this function may return true even if the saving failed. So you may prefer to check the file whether it exists after write.

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

144.28.51 writeWithOptions(file as folderitem, options as dictionary) as boolean

MBS PDFKit Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Writes PDF to file with options.
Notes: Returns true on success and false on failure.

Some keys to use include:
CGPDFContextMBS.kCGPDFContextUserPassword
CGPDFContextMBS.kCGPDFContextTitle
CGPDFContextMBS.kCGPDFContextSubject
CGPDFContextMBS.kCGPDFContextOwnerPassword
CGPDFContextMBS.kCGPDFContextOutputIntents
CGPDFContextMBS.kCGPDFContextOutputIntent
CGPDFContextMBS.kCGPDFContextKeywords
CGPDFContextMBS.kCGPDFContextEncryptionKeyLength
CGPDFContextMBS.kCGPDFContextCreator
CGPDFContextMBS.kCGPDFContextAuthor
CGPDFContextMBS.kCGPDFContextAllowsPrinting
CGPDFContextMBS.kCGPDFContextAllowsCopying

144.28.52 Properties

144.28.53 allowsCommenting as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether you can create or modify document annotations, including form field entries.
Notes: Available in macOS 10.13 or newer.
(Read only property)

144.28.54 allowsContentAccessibility as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether you can extract content from the document, but only for the purpose of accessibility.
Notes: Available in macOS 10.13 or newer.
(Read only property)

144.28.55 allowsCopying as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Whether copying is allowed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsCopying)
```

Notes: Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

144.28.56 allowsDocumentAssembly as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether you can manage a document by inserting, deleting, and rotating pages.
Notes: Available in macOS 10.13 or newer.
(Read only property)

144.28.57 allowsDocumentChanges as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether you can modify the document contents except for document attributes.
Notes: Available in macOS 10.13 or newer.
(Read only property)

144.28.58 allowsFormFieldEntry as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether you can modify form field entries even if you can't edit document annotations.
Notes: Available in macOS 10.13 or newer.
(Read only property)

144.28.59 allowsPrinting as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Whether printing is allowed.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsPrinting)
```

Notes: Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

144.28.60 Author as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String containing document author.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.Author
```

Notes: (Read and Write property)

144.28.61 CreationDate as Date

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing document creation date.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.CreationDate.LongDate
```

Notes: (Read and Write property)

144.28.62 CreationDateTime as DateTime

MBS PDFKit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Date representing document creation date.
Notes: (Read and Write property)

144.28.63 Creator as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String containing name of app that created document content.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.Creator
```

Notes: (Read and Write property)

144.28.64 documentRef as Integer

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a CGPDFDocumentRef value for this document.
Notes: This is the CGPDFDocument associated with the PDFDocument object. With this object you can call many CoreGraphics API. May return 0 if the document was not created from an existing PDF file or data.

Use CGPDFDocumentMBS with Constructor taking a handle to call functions on this CGPDFDocument object.
(Read only property)

144.28.65 documentURL as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The document location.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.documentURL
```

Notes: May return nil if the document was created from data.
(Read only property)

144.28.66 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The internal reference to the PDF Document.
Notes: (Read and Write property)

144.28.67 isEncrypted as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Whether the PDF is encrypted.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(doc.isEncrypted)
```

Notes: With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string. These are unlocked automatically.
(Read only property)

144.28.68 isFinding as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns true if document is currently searching for a string.
Notes: (Read only property)

144.28.69 isLocked as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Whether the PDF is locked.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
```

MsgBox str(doc.isLocked)

Notes: With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string. These are unlocked automatically.
(Read only property)

144.28.70 majorVersion as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

144.28.71 minorVersion as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

144.28.72 ModificationDate as Date

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing last document modification date.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
```

MsgBox doc.ModificationDate.LongDate

Notes: (Read and Write property)

144.28.73 ModificationDateTime as DateTime

MBS PDFKit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Date representing last document modification date.
Notes: (Read and Write property)

144.28.74 outlineRoot as PDFOutlineMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns the root outline object for the PDF (or nil if none).
Notes: (Read and Write property)

144.28.75 pageCount as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The number of pages in the document.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox str(Doc.pageCount)
```

Notes: (Read only property)

144.28.76 permissionsStatus as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the permissions status of the PDF document.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
```

```
Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

Notes: You have kPDFDocumentPermissionsNone status for an encrypted document that you have not supplied either a valid user or owner password. For a document with no encryption, you automatically have kPDFDocumentPermissionsOwner status.

Requires Mac OS X 10.6.
(Read only property)

144.28.77 Producer as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String containing name of app that produced PDF data.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.Producer
```

Notes: (Read and Write property)

144.28.78 stringValue as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The text of the document.
Example:

```
Var p as PDFDocumentMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from PDF Document:"+EndOfLine+EndOfLine+p.stringValue
```

Notes: Convenience method. Returns a string representing the entire document (each page's string concatenated with line feeds between pages).

If you need to extract the text of a PDF document cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

144.28.79 Subject as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String containing document subject.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.Subject
```

Notes: (Read and Write property)

144.28.80 Title as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String containing document title.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
MsgBox doc.Title
```

Notes: (Read and Write property)

144.28.81 documentAttributes as Dictionary

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The PDF meta data as a Xojo Dictionary object.
Example:

```
// read a file
Var f As New FolderItem("Installation.pdf")
Var p As New PDFDocumentMBS(f)

// change an attribute
Var d As Dictionary = p.documentAttributes
d.Value(PDFDocumentMBS.PDFDocumentSubjectAttribute) = "Hello World"
p.documentAttributes = d

// and write back to disk
Var f2 As New FolderItem("Installation2.pdf")
Call p.write(f2)
```

Notes: Returns a dictionary with PDF metadata. Metadata is optional for PDF's and so some of the keys may be missing or the entire dictionary may be empty.
(Read and Write computed property)

144.28.82 Constants

Document Permissions

Constant	Value	Description
kPDFDocumentPermissionsNone	0	Document permissions status. For encrypted PDF's, supplying the owner pas word will enable owner permission status.
kPDFDocumentPermissionsOwner	2	
kPDFDocumentPermissionsUser	1	

Page Scaling Modes

Constant	Value	Description
kPDFPrintPageScaleDownToFit	2	
kPDFPrintPageScaleNone	0	
kPDFPrintPageScaleToFit	1	

Search Flags

Constant	Value	Description
NSBackwardsSearch	4	Performs searching from the end of the range toward the beginning.
NSCaseInsensitiveSearch	1	Ignores case distinctions among characters.
NSLiteralSearch	2	Performs a byte-for-byte comparison. Differing literal sequences (such as composed character sequences) that would otherwise be considered equivalent are considered not to match. Using this option can speed some operations dramatically.

144.29 class PDFOutlineMBS

144.29.1 class PDFOutlineMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The class for a pdf outine object.
Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

144.29.2 Methods

144.29.3 childAtIndex(index as Integer) as PDFOutlineMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: PDFOutline child at index.
Notes: Will throw exception if index is out of range.

144.29.4 Constructor

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes a PDFOutline object.
Notes: If you want the PDFOutline object returned by this method to be the outline root, you must add additional PDFOutline objects to create the outline hierarchy you desire. Then, you must add the root outline object to your PDF document by assigning it to the PDFDocument OutlineRoot.

If you want the PDFOutline object returned by this method to be a child of an existing outline, you must use setLabel: to give it a label and give it either a destination or action using setDestination: or setAction:, respectively. In addition, you must add this outline object to the existing PDFOutline object as a new child, using insertChild.

Available in Mac OS X v10.4 and later.
See also:

- 144.29.5 Constructor(Handle as Integer)

144.29.5 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFOutline handle.
Notes: Please pass in a non zero handle which points to a PDFOutline object.
For use with declares.
See also:

- 144.29.4 Constructor 18802

144.29.6 insertChild(child as PDFOutlineMBS, index as Integer)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Inserts the specified outline object at the specified index.
Notes: To build a PDF outline hierarchy, use this method to add child outline objects. Before you call this method on a PDFOutline object that already has a parent, you should retain the object and call removeFromParent on it first.

Available in Mac OS X v10.5 and later.

144.29.7 removeFromParent

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Removes the outline object from its parent (does nothing if outline object is the root outline object).
Notes: Available in Mac OS X v10.5 and later.

144.29.8 Properties

144.29.9 action as PDFActionMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The action performed when users click the outline.
Notes: The root outline serves only as a container for the outlines it owns; it does not have an action. Note that a PDFOutline object can have either an action or a destination, not both.

If the PDFOutline object has a destination, instead of an action, action returns a PDFActionGoTo object (this is equivalent to calling destination on the PDFOutline object). For other action types, action returns

the appropriate PDF Kit action type object, such as PDFActionURL.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.29.10 destination as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The destination asscoiated with the outline item.
Notes: The root PDFOutline has no destination.
(Read and Write property)

144.29.11 document as PDFDocumentMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The PDFDocument the outline is asscoiated with.
Notes: (Read only property)

144.29.12 index as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the index of the outline.
Notes: The index of the outline object is relative to its siblings and from the perspective of the parent of the outline object. The root outline object, and any outline object without a parent, has an index value of 0.

Available in Mac OS X v10.5 and later.
(Read only property)

144.29.13 isOpen as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Whether the outline object is initially disclosed.
Notes: Calling isOpen on an outline object that has no children always returns false. Calling isOpen on the root outline object always returns true.

Available in Mac OS X v10.5 and later.
(Read and Write property)

144.29.14 label as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The label for the outline.
Notes: The root PDFOutline has no label and is only a container for children PDFOutlines.
(Read and Write property)

144.29.15 numberOfChildren as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Number of PDFOutline children this PDFOutline has.
Notes: (Read only property)

144.29.16 parent as PDFOutlineMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The parent outline object of the outline.
Notes: Can be nil for the root object.
Available in Mac OS X v10.5 and later.
(Read only property)

144.30 class PDFPageMBS

144.30.1 class PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The PDFKit class for a page in a pdf document.
Example:

```
Var file1,file2,file3,destfile as FolderItem
Var page1,page2,page3 as PDFPageMBS
Var doc1,doc2 as PDFDocumentMBS
Var img as NSImageMBS
Var doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture

page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

144.30.2 Methods

144.30.3 addAnnotation(annotation as PDFAnnotationMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Methods allowing annotations to be added.

144.30.4 annotationAtPoint(x as single, y as single) as PDFAnnotationMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Hit-testing method returns the annotation at point (or nil if none).
Notes: The point is in page-space.

144.30.5 annotations as PDFAnnotationMBS()

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array containing the page's annotations.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
```

```
Var annotations(-1) as PDFAnnotationMBS = page.annotations

// show a msgbox with the types of all annotations
Var types(-1) as string

for each a as PDFAnnotationMBS in annotations
types.Append a.type
next

MsgBox Join(types)
```

Notes: The elements of the array will most likely be typed to subclasses of the PDFAnnotation class.

Available in Mac OS X v10.4 and later.

144.30.6 CalcTransformForBox(box as Integer) as Variant

MBS PDFKit Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: An utility function to calculate the transform needed to draw into a page.
Notes: Returns NSAffineTransformMBS object.

144.30.7 characterBoundsAtIndex(index as Integer) as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns the bounds in page-space of the character at index.
Notes: In the unlikely event that more than one character are at the specified point, only the first character encountered is returned.

144.30.8 characterIndexAtPoint(x as single, y as single) as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns the index of the character at point (in page space).
Notes: Returns -1 if no character at point.

144.30.9 Constructor

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a custom PDF page.
Example:

```
Var doc as new PDFDocumentMBS
Var page as PDFPageMBS
Var f as FolderItem

page=new MyPDFPageMBS

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

f=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

Notes: You draw the content using drawRect event.

- 144.30.10 Constructor(Handle as Integer) 18809
- 144.30.11 Constructor(image as NSImageMBS) 18809

144.30.10 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFPage handle.
Notes: Please pass in a non zero handle which points to a PDFPage object.
For use with declares.
See also:

- 144.30.9 Constructor 18808
- 144.30.11 Constructor(image as NSImageMBS) 18809

144.30.11 Constructor(image as NSImageMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Creates a PDFPage for the NSImage passed in.
Notes: An easy way to create a PDFPage from an image to add to a PDFDocument.

Mac OS X 10.5 only.
See also:

- 144.30.9 Constructor 18808
- 144.30.10 Constructor(Handle as Integer) 18809

144.30.12 copy as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the page object.
Example:

```
Var f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
Var p as new PDFDocumentMBS(f)

// make a new PDF
Var c as new PDFDocumentMBS

// get first page
Var page as PDFPageMBS = p.pageAtIndex(0)

// add copy of page to new pdf
c.insertPage page.copy, 0

// c now has one page
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

144.30.13 Destructor

MBS PDFKit Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The destructor.

144.30.14 Draw(g as NSGraphicsMBS, box as Integer = 0)

MBS PDFKit Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws PDF page into graphics environment.
Notes: Use kPDFDisplay*Box constants for box parameter.

144.30.15 drawWithBox(box as Integer)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the page within the specified box.
Notes: This method takes into account the page rotation and draws clipped to the specified box. If the page is set to display annotations, this method also draws them. This method does not clear the background. To clear the background before drawing, use NSRectFill with NSColor set (typically) to white.

144.30.16 removeAnnotation(annotation as PDFAnnotationMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Methods allowing annotations to be removed.

144.30.17 Render(dpi as Double = 72.0, box as Integer = 0, background as NSColorMBS = nil) as NSImageMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Renders a PDF Page into an image.
Example:

```
Var f as FolderItem = GetFolderItem("Castles.pdf")
Var doc as new PDFDocumentMBS(f)
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var image as NSImageMBS = page.Render

Backdrop = image.CopyPicture
```

Notes: dpi: The resolution you want to have on the image. Default 72.0. To get a scaled image with factor x, pass 72.0*x.
box: The display box. Use one of the kPDFDisplayBox* constants.
background: optional NSColorMBS object to fill the background before drawing the PDF. This will affect only PDFs with transparent background.

Returns nil on any error.

Version 11.1pr8 adds code here to handle rotation better.
Due to bugs in Apple,Äôs PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

144.30.18 selectionForLineAtPoint(left as single, top as single) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a point in page-space, returns a selection representing a whole line at that point.
Notes: May return nil if no character (and by extension no line) under point.

144.30.19 selectionForRange(position as Integer, length as Integer) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a range, returns a selection representing text within that range.
Example:

```
Var MyPDFView as PDFViewMBS // your view

Var doc as PDFDocumentMBS = MyPDFView.document
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes: Will raise an exception if the range length is zero or if the range is outside the range of the characters on the page.

144.30.20 selectionForRect(left as single, top as single, width as single, height as single) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a rect in page-space, returns a selection representing enclosed text on page.

144.30.21 selectionForWordAtPoint(left as single, top as single) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Given a point in page-space, returns a selection representing a whole word at that point.
Notes: May return nil if no character (and by extension no word) under point.

144.30.22 selectionFromPointToPoint(startleft as single, starttop as single, endleft as single, endtop as single) as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns a selection representing text between startPt and endPt.
Notes: Point are sorted first top to bottom, left to right.

144.30.23 thumbnailOfSize(size as NSSizeMBS, box as integer) as NSImageMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Convenience function that returns an image of this page, with annotations, that fits the given size.
Notes: Note that the produced image is "size to fit": it retains the original page aspect-ratio. The size you give may not match the size of the returned image, but the returned image is guaranteed to be equal or less.

Available in macOS 10.13 or newer.

144.30.24 transformContextForBox(box as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a display box, will transform the current context to take into account the rotation of the page as well as the origin of the box with repect to the page's base coordinates system.
Notes: This is a convenient method to call from within drawPage or from within the draw method a PDFAnnotation subclass.

Mac OS X 10.5 only.

144.30.25 transformForBox(box as integer) as variant

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: This transform correctly rotates and offsets based on the given page's rotation property and the display box type.
Notes: Available in macOS 10.13 or newer.

144.30.26 Properties

144.30.27 attributedString as NSAttributedStringMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Notes: (Read only property)

144.30.28 CGPDFPageHandle as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The CoreGraphics PDFPage handle.
Notes: (Read only property)

144.30.29 dataRepresentation as memoryblock

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Returns PDF data (a proper PDF document) consisting of a single page (this page).
Notes: Note, external page links are not preserved.
(Read only property)

144.30.30 displaysAnnotations as boolean

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Method to turn on or off the display of annotations when the page is drawn.
Notes: (Read and Write property)

144.30.31 document as PDFDocumentMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The PDFDocument the page is associated with.
Notes: (Read only property)

144.30.32 label as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The page label. Usually "1" for the first page, "2" for the second, etc.
Notes: (Read only property)

144.30.33 numberOfCharacters as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Number of characters on the page (including linefeeds and spaces inserted).
Notes: (Read only property)

144.30.34 rotation as Integer

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Rotation on a page.
Notes: Must be 0, 90, 180 or 270 (negative rotations will be "normalized" to one of 0, 90, 180 or 270). Some PDF's have an inherent rotation and so rotation may be non-zero when a PDF is first opened. (Read and Write property)

144.30.35 stringValue as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Example:

```
Var p as PDFDocumentMBS
Var f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes: If you need to extract the text of a PDF document page cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc

file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

144.30.36 boundsForBox(box as Integer) as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the bounds for the specified PDF display box.
Notes: The PDFDisplayBox enumeration defines the various box types.

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

boundsForBox throws a range exception if box is not in range.
(Read and Write computed property)

144.30.37 Events

144.30.38 drawRect(box as Integer, g as NSGraphicsMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The event called when the PDFPage needs to be drawn.
Example:

```
Sub drawRect(box as Integer, g as NSGraphicsMBS)

if g.Valid then
System.DebugLog "is valid"
else
System.DebugLog "not valid"
end if

g.SetColorRGB 0,1,0

g.drawRect 200,200,200,200

g.SetColorRGB 1,0,0
```

```
g.fillRect 100,100,100,100
End Sub
```

Notes: Do not store the graphics reference as it is only valid in this event.
Use the kPDFDisplayBox* constants for the box value.
You can draw another PDF page here with Draw command.

To avoid drawRect causing StackOverflowException when showing in a control, please have PDF produced as file or MemoryBlock, then read it back to a new PDFDocumentMBS object and show that in a control.

144.30.39 Constants

Constants

Constant	Value	Description
kPDFDisplayBoxArtBox	4	One of the constants to use for page boxes.

Boxes

Constant	Value	Description
kPDFDisplayBoxBleedBox	2	
kPDFDisplayBoxCropBox	1	
kPDFDisplayBoxMediaBox	0	
kPDFDisplayBoxTrimBox	3	

144.31 class PDFSelectionMBS

144.31.1 class PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The PDFKit class for selections.
Example:

```
Var MyPDFView as PDFViewMBS // your view

Var doc as PDFDocumentMBS = MyPDFView.document
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

- MBS Xojo Plugins, version 20.2pr3

144.31.2 Methods

144.31.3 addSelection(selection as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Add a selection to this selection.
Notes: Selections do not have to be contiguous. If the selection added overlaps with this selection, overlaps are removed.

144.31.4 addSelections(selection() as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Adds the specified array of selections to the receiving selection.
Notes: This method provides better performance than multiple calls to addSelection if you need to add several selections to an existing selection. This is because the normalization of the selection (the removal of any overlaps between selections) occurs only once, after all selections have been added.
Available in Mac OS X v10.5 and later.

144.31.5 boundsForPage(page as PDFPageMBS) as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the bounds of the selection on the specified page.
Notes: The selection rectangle is given in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

144.31.6 Constructor(doc as PDFDocumentMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Creates an empty PDFSelection object.
Notes: Typically, you don't need to create a PDFSelection object, but you can use an empty PDFSelection object as a container into which you can place selections, using addSelection: and addSelections.
Available in Mac OS X v10.5 and later.
See also:

- 144.31.7 Constructor(Handle as Integer) 18819

144.31.7 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Creates a new object based on a given PDFSelection handle.
Notes: Please pass in a non zero handle which points to a PDFSelection object.
For use with declares.
See also:

- 144.31.6 Constructor(doc as PDFDocumentMBS) 18819

144.31.8 copy as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a copy of the selection object.

144.31.9 drawForPage(page as PDFPageMBS, active as boolean)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Calls drawForPage with a default value for box parameter.
Notes: The default value is kPDFDisplayBoxCropBox. If active is true, drawing uses selectedTextBack-

groundColor. If false, it uses secondarySelectedControlColor.
See also:

- 144.31.10 drawForPage(page as PDFPageMBS, box as Integer, active as boolean) 18820

144.31.10 drawForPage(page as PDFPageMBS, box as Integer, active as boolean)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Draws the selection relative to the origin of the specified box in page space.
Notes: The selection is drawn using the current highlight color. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor. Refer to the PDFPage class for the list of available box types.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
See also:

- 144.31.9 drawForPage(page as PDFPageMBS, active as boolean) 18819

144.31.11 extendSelectionAtEnd(chars as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Extends the selection at either end.
Example:

```
Var s as PDFSelectionMBS // your selection

s.extendSelectionAtEnd(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

144.31.12 extendSelectionAtStart(chars as Integer)

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Extends the selection at either end.
Example:

```
Var s as PDFSelectionMBS // your selection

s.extendSelectionAtStart(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

144.31.13 extendSelectionForLineBoundaries

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: All.

Function: Extend to the selection to the beginning and end of the currently selected lines of text.
Notes: If the current selection is on a single line, then this will extend it to the entire line width. If the selection is across multiple lines, then the first and last lines are expected to wholly contain their respective rows of text.

Available in macOS 10.13 or newer or iOS 11.0 or newer.

144.31.14 numberOfTextRangesOnPage(page as PDFPageMBS) as UInt32

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the number of contiguous ranges of text on the specified page.
Notes: Returns zero if page is not in selection.
A typical, simple selection will contain a single range of text.

Available in Mac OS X 10.7 and later.

144.31.15 pages as PDFPageMBS()

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: Array of pages covered by the selection.
Notes: These are sorted by page index.
Returns nil on any error.

144.31.16 rangeAtIndex(page as PDFPageMBS, index as Integer) as NSRangeMBS

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a range of contiguous text at index on the specified page.
Notes: A simple selection. A typical, simple selection will contain a single range of text.
Available in Mac OS X 10.7 and later.

144.31.17 selectionsByLine as PDFSelectionMBS()

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array of selections, one for each line of text covered by the receiver.
Notes: If you call this method on a PDFSelection object that represents a paragraph, for example, selectionsByLine returns an array that contains one PDFSelection object for each line of text in the paragraph. Available in Mac OS X v10.5 and later.

144.31.18 Properties

144.31.19 attributedString as NSAttributedStringMBS

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String representing the text covered by the selection.
Notes: May contain line-feeds.
(Read only property)

144.31.20 colorValue as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The color used to draw the selection.
Notes: Note that when no color has been specified for the PDFSelection objects in a document, the selections are drawn using NSColorMBS.selectedTextBackgroundColor for the active state and NSColorMBS.secondarySelectedControlColor for the inactive state.
(Read and Write property)

144.31.21 Handle as Integer

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The handle used internally for the object reference.
Notes: (Read and Write property)

144.31.22 stringValue as string

MBS PDFKit Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: String representing the text covered by the selection.

Notes: May contain line-feeds.
(Read only property)

144.32 control PDFThumbnailViewControlMBS

144.32.1 control PDFThumbnailViewControlMBS

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFThumbnailView.
Notes: This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

See PDFThumbnailViewIOSControlMBS for iOS projects.

144.32.2 Properties

144.32.3 View as PDFThumbnailViewMBS

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.32.4 Events

144.32.5 BoundsChanged

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

144.32.6 Close

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

144.32.7 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

144.32.8 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS PDFKit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

144.32.9 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

144.32.10 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

144.32.11 EnableMenuItems

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

144.32.12 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.32.13 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

144.32.14 FrameChanged

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

144.32.15 GotFocus

MBS PDFKit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.

Notes:

This only fires if the control itself got focus and not a sub control.

144.32.16 LostFocus

MBS PDFKit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.32.17 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

144.32.18 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

144.32.19 MouseDrag(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

144.32.20 MouseUp(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

144.32.21 Open

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

144.32.22 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

144.32.23 ScaleFactorChanged(NewFactor as Double)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

144.32.24 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

144.33 control PDFThumbnailViewIOSControlMBS

144.33.1 control PDFThumbnailViewIOSControlMBS

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The Xojo control for a PDFThumbnailView.
Notes: This control embeds a special PDFThumbnailView subclass.
Please use view property to access the underlaying object and set properties.

See PDFThumbnailViewControlMBS for desktop projects.

144.33.2 Properties

144.33.3 View as PDFThumbnailViewMBS

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.33.4 Events

144.33.5 Close

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to close.

144.33.6 GotFocus

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

144.33.7 LostFocus

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

144.33.8 Open

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to was created and you can initialize it.

144.34 class PDFThumbnailViewMBS

144.34.1 class PDFThumbnailViewMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: A PDFThumbnailView object contains a set of thumbnails, each of which represents a page in a PDF document.
Notes: You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.
Blog Entries

- PDF Viewer controls for iOS

144.34.2 Methods

144.34.3 Constructor

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new PDF thumbnail view with size 100/100 and position 0/0
Example:

```
Var t as new PDFThumbnailViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 144.34.4 Constructor(Handle as Integer) 18832
- 144.34.5 Constructor(left as Double, top as Double, width as Double, height as Double) 18833

144.34.4 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given PDFThumbnailView handle.
Example:

```
Var t as new PDFThumbnailViewMBS(0, 0, 100, 100)
Var v as new PDFThumbnailViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a PDFThumbnailView and the plugin retains this handle.
See also:

- 144.34.3 Constructor 18832
- 144.34.5 Constructor(left as Double, top as Double, width as Double, height as Double) 18833

144.34.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new PDF thumbnail view with the given size and position.
Example:

```
Var x as new PDFThumbnailViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 144.34.3 Constructor 18832
- 144.34.4 Constructor(Handle as Integer) 18832

144.34.6 PDFThumbnailViewDocumentEditedNotification as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: The Notification when PDFDocument is modified.
Notes: Use NSNotificationObserverMBS class to listen for this one.

144.34.7 selectedPages as PDFPageMBS()

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array of PDF pages that correspond to the selected thumbnails in the thumbnail view.
Notes: If the thumbnail view allows multiple selections (if allowsMultipleSelection returns true), you can use this method to get the PDF pages that correspond to the selected thumbnails.
Available in Mac OS X v10.5 and later.

144.34.8 Properties

144.34.9 allowsDragging as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether users can drag thumbnails within the thumbnail view; that is, re-order pages in the document.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.10 allowsMultipleSelection as boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether the thumbnail view allows users to select more than one thumbnail at a time.
Notes: By default, PDFThumbnailView allows only a single thumbnail to be selected at one time. When this is the case, you can get the PDF page that corresponds to the selected thumbnail using the PDFView method currentPage.

If you use setAllowsMultipleSelection to enable multiple selections, however, you must use selectedPages to get the pages that correspond to the set of selected thumbnails.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.11 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The color used in the background of the thumbnail view.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.12 Bezeled as Boolean

MBS PDFKit Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Whether to use bezel for control.
Notes: (Read and Write property)

144.34.13 labelFont as NSFontMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The font used to label the thumbnails.
Notes: Typically, the label of a thumbnail is the page number of the page it represents.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.14 maximumNumberOfColumns as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum number of columns of thumbnails the thumbnail view can display.
Notes: The thumbnail displays as many columns of thumbnails as fit in its size.
Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.15 PDFView as PDFViewMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The PDFView object associated with the thumbnail view.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.34.16 thumbnailSize as NSSizeMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum width and height of the thumbnails in the thumbnail view.
Notes: Available in Mac OS X v10.5 and later.
(Read and Write property)

144.35 control PDFViewControlMBS

144.35.1 control PDFViewControlMBS

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFView.
Notes: This control embeds a special PDFView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

Can be linked to a PDFThumbnailViewControlMBS control to show the thumbnails for the pages.

See PDFViewIOSControlMBS control for iOS projects.
See WinPreviewControlMBS control for Windows targets.

144.35.2 Methods

144.35.3 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes: Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.35.4 ClearOverlays

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

144.35.5 Properties

144.35.6 View as PDFViewMBS

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.35.7 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS PDFKit Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes: MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

144.35.8 Events

144.35.9 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called after something was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.35.10 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.35.11 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called after a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.35.12 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.35.13 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

144.35.14 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The draw event called before a something was drawn.

144.35.15 BoundsChanged

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

144.35.16 Close

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

144.35.17 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

144.35.18 CocoaMouseDown(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

144.35.19 CocoaMouseDrag(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

144.35.20 CocoaMouseUp(e as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

144.35.21 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS PDFKit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

144.35.22 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

144.35.23 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

144.35.24 EnableMenuItems

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

144.35.25 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.35.26 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

144.35.27 FrameChanged

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

144.35.28 GotFocus

MBS PDFKit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

144.35.29 LostFocus

MBS PDFKit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

144.35.30 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

144.35.31 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

144.35.32 MouseDrag(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.

As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

144.35.33 MouseUp(x as Integer, y as Integer)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

144.35.34 Open

MBS PDFKit Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

144.35.35 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

144.35.36 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Opens a specified page.
Notes: This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

144.35.37 PerformFind

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Performs a find operation.
Notes: Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

144.35.38 PerformGoToPage

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Performs a go-to operation.
Notes: Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

144.35.39 PerformPrint

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Prints the current document.
Notes: Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

144.35.40 PrintJobTitle as String

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Overrides the job title used when the PDFView is printed.
Notes: Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

144.35.41 ScaleFactorChanged(NewFactor as Double)

MBS PDFKit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

144.35.42 WillChangeScaleFactor(scale as Double) as Double

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Overrides changes to the scale factor.
Notes: Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

144.35.43 WillClickOnLink(URL as String)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Handle clicks on URL links in a view.
Notes: If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

144.35.44 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS PDFKit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

144.36 control PDFViewIOSControlMBS

144.36.1 control PDFViewIOSControlMBS

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The Xojo control for a PDFView.
Notes: This control embeds a special PDFView subclass.
Please use view property to access the underlaying object and set properties.

Can be linked to a PDFThumbnailViewIOSControlMBS control to show the thumbnails for the pages.

See PDFViewControlMBS control for desktop projects.
See WinPreviewControlMBS control for Windows targets.

144.36.2 Properties

144.36.3 View as PDFViewMBS

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: iOS only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

144.36.4 Events

144.36.5 Close

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to close.

144.36.6 GotFocus

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

144.36.7 LostFocus

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

144.36.8 Open

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: The control is about to was created and you can initialize it.

144.36.9 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: Opens a specified page.
Notes: This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

144.36.10 PerformFind

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: Performs a find operation.
Notes: Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

144.36.11 PerformGoToPage

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: Performs a go-to operation.
Notes: Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

144.36.12 WillClickOnLink(URL as String)

MBS PDFKit Plugin, Plugin Version: 23.3, Platform: iOS, Targets: Desktop & iOS.

Function: Handle clicks on URL links in a view.
Notes: If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

144.37 class PDFViewMBS

144.37.1 class PDFViewMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: A PDFView object encapsulates the functionality of PDF Kit into a single widget that you can add to your application.
Notes: PDFView may be the only class you need to deal with for adding PDF functionality to your application. It lets you display PDF data and allows users to select content, navigate through a document, set zoom level, and copy textual content to the Pasteboard. PDFView also keeps track of page history.

You can subclass PDFView to create a custom PDF viewer or better use our CustomPDFViewMBS class.

You can also create a custom PDF viewer by using the PDF Kit utility classes directly and not using PDFView at all.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

144.37.2 Methods

144.37.3 annotationsChangedOnPage(page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Tells the PDF view that an annotation on the specified page has changed.
Notes: When the PDFView object receives this message, it rescans for tool tips and pop-ups and informs the PDFThumbailView objects so the thumbnail images can be redrawn.
Available in Mac OS X v10.5 and later.

144.37.4 areaOfInterestForMouse(e as NSEventMBS) as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the type of area the mouse cursor is over.
Notes: The PDFAreaOfInterest enumeration defines the various area types. This method is for custom subclasses of the PDFView class. Use it if you override the NSResponder class's mouseMoved: method or related methods.

144.37.5 areaOfInterestForPoint(p as NSPointMBS) as integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Returns type of area (see defines above) mouse is over.

144.37.6 clearSelection

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Clears the selection.
Notes: The view redraws as necessary but does not scroll. This call is equivalent to setting CurrentSelection=nil.

144.37.7 Constructor

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new PDF view with size 100/100 and position 0/0
Example:

```
Var t as new PDFViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 144.37.8 Constructor(Handle as Integer) 18850
- 144.37.9 Constructor(left as Double, top as Double, width as Double, height as Double) 18851

144.37.8 Constructor(Handle as Integer)

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given PDFView handle.
Example:

```
Var t as new PDFViewMBS(0, 0, 100, 100)
Var v as new PDFViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a NSButton and the plugin retains this handle.
See also:

- 144.37.7 Constructor 18850
- 144.37.9 Constructor(left as Double, top as Double, width as Double, height as Double) 18851

144.37.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new PDF view with the given size and position.
Example:

```
Var x as new PDFViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 144.37.7 Constructor 18850
- 144.37.8 Constructor(Handle as Integer) 18850

144.37.10 convertPointFromPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a point from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

144.37.11 convertPointToPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a point from view space to page space.
Example:

```
// convert point from mouse event to page coordinates
Function MouseDown(x as Integer, y as Integer, Modifiers as Integer) Handles MouseDown as Boolean
Var a As NSApplicationMBS = NSApplicationMBS.sharedApplication
Var n As NSEventMBS = a.currentEvent
Var v As PDFViewMBS = Me.View
Var w As NSWindowMBS = Self.NSWindowMBS
Var p As NSPointMBS = n.locationInWindow

System.DebugLog "p: "+str(p.x)+"/"+str(p.y)

Var doc As PDFDocumentMBS = v.document
Var page As PDFPageMBS = doc.pageAtIndex(0)
Var r As NSPointMBS = v.convertPointFromView(p, Nil)

System.DebugLog "r: "+Str(r.x)+"/"+Str(r.y)

Var d As NSPointMBS = v.convertPointToPage(r, page)

System.DebugLog "d: "+Str(d.x)+"/"+Str(d.y)
End Function
```

Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

144.37.12 convertRectFromPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a rectangle from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

144.37.13 convertRectToPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a rectangle from view space to page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

144.37.14 copy

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Copies the text in the selection, if any, to the Pasteboard.

144.37.15 drawPage(page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: For use by subclasses of PDFView for custom rendering of pages.
Notes: Do not invoke this method, except by invoking it on super from a subclass.

The PDFView class calls drawPage: as necessary for each visible page that requires rendering. In the PDFView class, this method erases page to white, calls page.drawInRect(pageRect,self.displayBox), and then draws the selection, if any.

You can override this method to draw on top of a PDF page or to control how pages are drawn. In these cases, invoke this method on super and then perform custom drawing on top of the PDF page.

Changed in v22.5 to work on macOS Ventura.
But if the drawPage is called by macOS on the wrong thread, we ignore that to prevent StackOverflowException from Xojo runtime.

144.37.16 drawPagePost(page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: For use by subclasses of PDFView for post-page rendering.
Notes: The default implementation of this method draws the text highlighting (if any) for the page. This method does not apply scaling or rotating to the current context to map to page space; instead, the context is in view-space coordinates (in which the origin is at the lower-left corner of the current PDF view).
Available in Mac OS X v10.5 and later.

144.37.17 goBack

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates back one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

144.37.18 goForward

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates forward one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

144.37.19 goToDestination(page as PDFDestinationMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the specified destination.
Notes: Destinations include a page and a point on the page specified in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

144.37.20 goToFirstPage

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the first page of the document.
Notes: PDF Kit records the move in its page history.

144.37.21 goToLastPage

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the last page of the document.
Notes: PDF Kit records the move in its page history.

144.37.22 goToNextPage

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the next page of the document.
Notes: PDF Kit records the move in its page history.

144.37.23 goToPage(page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Scrolls to the specified page.
Notes: PDF Kit records the move in its page history.

144.37.24 goToPreviousPage

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the previous page of the document.
Notes: PDF Kit records the move in its page history.

144.37.25 goToRect(rect as NSRectMBS, page as PDFPageMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the specified rectangle on the specified page.
Notes: If the specified rectangle is already visible, this method does nothing. This allows you to scroll the PDFView object to a specific PDFAnnotation or PDFSelection object, because both of these objects have bounds methods that return an annotation or selection position in page space.

Note that rect is specified in page-space coordinates. Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.5 and later.

144.37.26 goToSelection(page as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Scrolls to the first character of the specified selection.
Notes: PDF Kit records the move in its page history.

144.37.27 highlightedSelections as PDFSelectionMBS()

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries highlighted selections.
Notes: Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

144.37.28 layoutDocumentView

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Performs layout of the inner views.
Notes: The PDFView actually contains several subviews, such as the document view (where the PDF is actually drawn) and a "matte view" (which may appear as a gray area around the PDF content, depending on the scaling). Changes to the PDF content may require changes to these inner views, so you must call this method explicitly if you use PDF Kit utility classes to add or remove a page, rotate a page, or perform other operations affecting visible layout.

This method is called automatically from PDFView methods that affect the visible layout (such as setDocument, setDisplayBox or zoomIn).

144.37.29 pageForPoint(point as NSPointMBS, nearest as boolean) as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the page containing a point specified in view coordinates.
Notes: Returns nil if there's no page at the specified point and nearest is set to false.

144.37.30 PDFViewAnnotationHitNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the user clicks on an annotation.

Use the "PDFAnnotationHit" key to obtain userinfo of type PDFAnnotation.

144.37.31 PDFViewAnnotationWillHitNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted before the user clicks an annotation.
Available in Mac OS X v10.5 and later.

144.37.32 PDFViewChangedHistoryNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the page history changes.

144.37.33 PDFViewCopyPermissionNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to copy to the pasteboard without the appropriate permissions.

144.37.34 PDFViewDisplayBoxChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the display box has changed.
Available in Mac OS X v10.5 and later.

144.37.35 PDFViewDisplayModeChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the display mode has changed.
Available in Mac OS X v10.5 and later.

144.37.36 PDFViewDocumentChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when a new document is associated with the view.

144.37.37 PDFViewPageChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when a new page becomes the current page.

144.37.38 PDFViewPrintPermissionNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to print without the appropriate permissions.

144.37.39 PDFViewScaleChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the scale factor changes.

144.37.40 PDFViewSelectionChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: One of the notification names used with the PDF view.
Notes: Posted when the current selection has changed.
Available in Mac OS X v10.5 and later.

144.37.41 PDFViewVisiblePagesChangedNotification as string

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Notification when the scroll view has scrolled into the bounds of a new page.

144.37.42 performAction(action as PDFActionMBS)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Performs the specified action.
Notes: Available in Mac OS X v10.5 and later.

144.37.43 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Print the PDF document.
Notes: If autoRotate is true, will ignore the orientation attribute in printInfo and rather choose the orientation on a page by page basis that best fits the page to the paper size.
See also:

- 144.37.44 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer) 18859

144.37.44 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Like the above method but allows an additional parameter to describe page scaling (see PDFDocument.h for types).
Notes: If pageScaling is equal to kPDFPrintPageScaleToFit each page is scaled up or down in order to best fit the paper size. Specifying kPDFPrintPageScaleDownToFit for pageScaling will only scale large pages down to fit the paper, smaller pages will not be scaled up. Passing pageScaling equal to kPDFPrintPageScaleNone is the equivalent of calling printWithInfo above.
See also:

- 144.37.43 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean) 18859

144.37.45 rowSizeForPage(page as PDFPageMBS) as NSSizeMBS

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the size needed to display a row of the current document page.
Notes: The size is dependent on the current scale factor and display attributes.

144.37.46 scrollSelectionToVisible

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Scrolls the view until the selection is visible.

144.37.47 selectAll

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Selects all text in the document.

144.37.48 setCurrentSelection(selection as PDFSelectionMBS, animate as boolean)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the selection, in an animated way, if desired.
Notes: This method behaves as setCurrentSelection, but with the addition of animation, if animate is true. The animation serves to draw the user's attention to the new selection, which can be useful when implementing search.
Available in Mac OS X v10.5 and later.

144.37.49 setCursorForAreaOfInterest(area as Integer)

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Sets the type of mouse cursor according to the type of area the mouse cursor is over.
Notes: This method is especially useful for custom subclasses of the PDFView class.

144.37.50 setHighlightedSelections(selections() as PDFSelectionMBS)

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Sets highlighted selections.
Notes: Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

144.37.51 visiblePages as PDFPageMBS()

MBS PDFKit Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array of PDFPageMBS objects that represent the currently visible pages.
Notes: Available in Mac OS X v10.5 and later.

144.37.52 zoomIn

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Zooms in by increasing the scaling factor.
Notes: Each invocation of zoomIn muliplies the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

144.37.53 zoomOut

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Zooms out by decreasing the scaling factor.
Notes: Each invocation of zoomOut divides the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

144.37.54 Properties

144.37.55 acceptsDraggedFiles as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Indicate whether dragging a file into PDFView is allowed.
Notes: If false (default), dragging events are not supported.
If true, a user can drag and drop a PDF file into the view and have it loaded & set as the visible document (the old document is released).

Available in macOS 10.13 or newer.
(Read and Write property)

144.37.56 allowsDragging as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Determines whether the view can accept new PDF documents dragged into it by the user.
Notes: (Read and Write property)

144.37.57 autoScales as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether autoscaling is set.
Notes: (Read and Write property)

144.37.58 backgroundColor as NSColorMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the view's background color.
Notes: A view's background is the area displayed to either side of a PDF document's pages. The background also appears between pages when page breaks are enabled. The default color is a 50% gray.
(Read and Write property)

144.37.59 canGoBack as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the previous page in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

144.37.60 canGoForward as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the next page in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

144.37.61 canGoToFirstPage as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the first page of the document.
Notes: The return value will be true unless the view is already displaying the first page.
(Read only property)

144.37.62 canGoToLastPage as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the last page of the document.
Notes: The return value will be true unless the view is already displaying the last page.
(Read only property)

144.37.63 canGoToNextPage as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the next page of the document.
Notes: The return value will be true unless the view is displaying the last page.
(Read only property)

144.37.64 canGoToPreviousPage as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can navigate to the previous page of the document.
Notes: The return value will be true unless the view is displaying the first page.
(Read only property)

144.37.65 canZoomIn as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can magnify the view—that is, zoom in.
Notes: (Read only property)

144.37.66 canZoomOut as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the user can view an expanded area—that is, zoom out.
Notes: (Read only property)

144.37.67 currentDestination as PDFDestinationMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a PDFDestination object representing the current page and the current point in the view specified in page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
(Read only property)

144.37.68 currentPage as PDFPageMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the current page.
Notes: When there are two pages in the view in a two-up mode, "current page" is the left page. For continuous modes, returns the page crossing a horizontal line halfway between the view's top and bottom bounds.
(Read only property)

144.37.69 currentSelection as PDFSelectionMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the current selection.
Example:

```
Var MyPDFView as PDFViewMBS // your view

Var doc as PDFDocumentMBS = MyPDFView.document
Var page as PDFPageMBS = doc.pageAtIndex(0)
Var sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes: Returns NULL if no selection exists.

Note that this method returns the actual instance of the current PDFSelectionMBS object. Therefore, if you want to modify it, you should make a copy of the returned selection and modify that, instead.
(Read and Write property)

144.37.70 displayBox as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The current style of display box.
Notes: The available values for display boxes are defined in the Constants section in the PDFPageMBS class.
(Read and Write property)

144.37.71 displayDirection as Integer

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Set the layout direction, either vertical or horizontal, for the given display mode.
Notes: Defaults to vertical layout (kPDFDisplayDirectionVertical).
Available in macOS 10.13 or newer.
(Read and Write property)

144.37.72 displayMode as Integer

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The current display mode.
Notes: Value can be kPDFDisplaySinglePage, kPDFDisplaySinglePageContinuous, kPDFDisplayTwoUp and kPDFDisplayTwoUpContinuous.
(Read and Write property)

144.37.73 displaysAsBook as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the view will display the first page as a book cover (meaningful only when the document is in two-up or two-up continuous display mode).
Notes: (Read and Write property)

144.37.74 displaysPageBreaks as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the view is displaying page breaks.
Notes: (Read and Write property)

144.37.75 displaysRTL as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies presentation of pages from right-to-left.
Notes: Defaults to false.
(Read and Write property)

144.37.76 document as PDFDocumentMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the document associated with a PDFView object.
Notes: (Read and Write property)

144.37.77 documentView as NSViewMBS

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the innermost view used by PDFView or by your PDFView subclass.
Notes: The innermost view is the one displaying the visible document pages. This method is useful when converting coordinates from one view to another.
(Read only property)

144.37.78 enableDataDetectors as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: Whether data detection is enabled.
Notes: If enabled, page text will be scanned for URL's as the page becomes visible. Where
// URL's are found, Link annotations are created in place. These are temporary annotations and are not saved.

Requires Mac OS X 10.6.
(Read and Write property)

144.37.79 greekingThreshold as Double

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The greeking threshold to use for displaying text.
Notes: The default threshold is 3.0.
(Read and Write property)

144.37.80 interpolationQuality as Integer

MBS PDFKit Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The interpolation quality for images drawn into the PDFView context.
Notes: Available in Mac OS X 10.7 or later.
(Read and Write property)

144.37.81 maxScaleFactor as Double

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Set the maximum scaling factor for the PDF document.
Notes: Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

144.37.82 minScaleFactor as Double

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Set the minimum scaling factor for the PDF document.
Notes: Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

144.37.83 pageBreakMargins as NSEdgeInsetsMBS

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: The page break margins.
Notes: If displaysPageBreaks is enabled, you may customize the spacing between pages by defining margins for the top, bottom, left, and right of each page. Note that pageBreakMargins only allows positive values and will clamp any negative value to 0.0. By default, if displaysPageBreaks is enabled, pageBreakMargins is { 4.75, 4.0, 4.75, 4.0 } (with respect to top, left, bottom, right), otherwise it is { 0.0, 0.0, 0.0, 0.0 }
(Read and Write property)

144.37.84 pageShadowsEnabled as Boolean

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies if shadows should be drawn around page borders in a PDFView.
Notes: Defaults to true.
Available in macOS 10.14 or newer.
(Read and Write property)

144.37.85 scaleFactor as Double

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor for the view.
Notes: The default value is 1.0, corresponding to actual size.
(Read and Write property)

144.37.86 scaleFactorForSizeToFit as Double

MBS PDFKit Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop & iOS.

Function: Regardless of current autoScales mode, this returns the "size to fit" scale factor that autoScales would use for scaling the current document and layout.
Notes: For continuous modes this is a "fit width" scale, for non-continuous modes it is a "best fit" scale.
Available in macOS 10.13 or newer.
(Read only property)

144.37.87 shouldAntiAlias as Boolean

MBS PDFKit Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether to use anti-aliasing in the view.
Notes: (Read and Write property)

144.37.88 Constants

PDF Area Of Interest

Constant	Value	Description
kPDFAnnotationArea	4	The mouse is over an annotation.
kPDFControlArea	16	The mouse is over a control.
kPDFIconArea	64	The mouse is over an icon. Available in Mac OS X v10.5 and later.
kPDFImageArea	256	Over an image.
kPDFLinkArea	8	The mouse is over a link.
kPDFNoArea	0	The mouse is over an undefined area.
kPDFPageArea	1	The mouse is over a page.
kPDFPopupArea	128	The mouse is over a popup menu.
kPDFTableArea	512	The mouse is over a table area.
kPDFTableResizeArea	1024	The mouse is over a resize area.
kPDFTextArea	2	The mouse is over text.
kPDFTextFieldArea	32	The mouse is over a text field.

Display Directions

Constant	Value	Description
kPDFDisplayDirectionHorizontal	1	Horizontal
kPDFDisplayDirectionVertical	0	Vertical

Display Mode

Constant	Value	Description
kPDFDisplaySinglePage	0	The document displays one page at a time horizontally and vertically. Verti and horizontal scrolling apply only to the current page.
kPDFDisplaySinglePageContinuous	1	he document displays in continuous mode vertically, with single-page wi horizontally. Vertical scrolling applies to the entire document.
kPDFDisplayTwoUp	2	The document displays two pages side-by-side. Vertical and horizontal scroll apply only to the pair of displayed pages.
kPDFDisplayTwoUpContinuous	3	The document displays in continuous mode vertically and displays two pa side-by-side horizontally. Vertical scrolling applies to the entire document.

Interpolation Quality Constants

Constant	Value	Description
kPDFInterpolationQualityHigh	2	high
kPDFInterpolationQualityLow	1	low
kPDFInterpolationQualityNone	0	

Chapter 145

Phidgets

145.1 class PhidgetAccelerometerMBS

145.1.1 class PhidgetAccelerometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Accelerometer class is used to gather acceleration data from Phidget accelerometer boards.
Notes: Phidget accelerometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of acceleration can be recorded.

If the Phidget you're using also has a gyroscope and a magnetometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.1.2 Methods

145.1.3 Acceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent acceleration value that the channel has reported.

145.1.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.1.5 MaxAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the AccelerationChange event will report.

145.1.6 MinAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the AccelerationChange event will report.

145.1.7 Properties

145.1.8 AccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a AccelerationChange event until the acceleration value has changed by the amount specified by the AccelerationChangeTrigger.
Notes: Setting the AccelerationChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.1.9 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure acceleration on.
Notes: (Read only property)

145.1.10 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another AccelerationChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between AccelerationChange events can also affected by the AccelerationChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.1.11 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes: Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

145.1.12 MaxAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that AccelerationChangeTrigger can be set to.
Notes: (Read only property)

145.1.13 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)

(Read only property)

145.1.14 MinAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that AccelerationChangeTrigger can be set to.
Notes: (Read only property)

145.1.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.1.16 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported.
Notes: This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

145.1.17 Events

145.1.18 AccelerationChanged(acceleration() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent acceleration values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a AccelerationChangeTrigger has been set to a non-zero value, the AccelerationChange event will not occur until the acceleration has changed by at least the AccelerationChangeTrigger value.

acceleration: The acceleration values.
timestamp: The timestamp value.

145.2 class PhidgetBLDCMotorMBS

145.2.1 class PhidgetBLDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The BLDC Motor class controls the power applied to attached brushless DC motors to affect its speed and direction.
Notes: It can also contain various other control and monitoring functions that aid in the control of brushless DC motors.
Subclass of the PhidgetMBS class.

- MBS Xojo Plugins, version 25.0pr8
- Rewritten Phidgets Plugin

145.2.2 Methods

145.2.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position.
Notes: This can be especially useful for zeroing position.

145.2.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.2.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to

enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For BLDC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.2.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.2.7 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes: The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.

Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later.

145.2.8 Properties

145.2.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes: The acceleration is bounded by MinAccleration and MaxAcceleration.
Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

145.2.10 ActiveCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current limit that the controller is actively following.
Notes: The SurgeCurrentLimit, CurrentLimit, and temperature will impact this value.
(Read only property)

145.2.11 BrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether braking is enabled.
Notes: This setting allows you to choose whether the motor will resist being turned when it is not being driven forward or reverse (Velocity = 0).

- Setting BrakingEnabled to FALSE corresponds to free-wheeling. This means: The motor will continue to rotate after the controller is no longer driving the motor (Velocity = 0), due to its momentum. The motor shaft will provide little resistance to being turned when it is stopped.

- Setting BrakingEnabled to TRUE will engage electrical braking of the DC motor. This means: The motor will stop more quickly if it is in motion when braking is requested. The motor shaft will resist rotation by outside forces.

- Braking will be added gradually, according to the Acceleration setting, once the motor controller's Velocity reaches 0.0

- Braking will be immediately stopped when a new (non-zero) TargetVelocity is set, and the motor will accelerate to the requested velocity.

- Braking mode is enabled by setting the Velocity to 0.0

(Read and Write property)

145.2.12 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent braking strength value that the controller has reported.
Notes: (Read only property)

145.2.13 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The controller will limit the current through the motor to the CurrentLimit value.
Notes: (Read and Write property)

145.2.14 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another update event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)
(Read and Write property)

145.2.15 DriveMode as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting impacts how your motor decelerates and the amount of current that is available to your motor at any given moment.
Notes: (Read and Write property)

145.2.16 FailsafeBrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to enable failsafe braking.
Notes: This setting allows you to choose whether motor will forcibly stop once it enters a FAILSAFE state.

A setting of FALSE will simply stop applying power to the motor, allowing it to spin down naturally.
A setting of TRUE will apply braking up to the FailsafeCurrentLimit, actively stopping the motor
(Read and Write property)

145.2.17 FailsafeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When the controller enters a FAILSAFE state, the controller will limit the current through the motor to the FailsafeCurrentLimit value.
Notes: (Read and Write property)

145.2.18 Inductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Inductance value.
Notes: The controller will attempt to measure the inductance of your motor when opened. This value is used to improve control of the motor.

Set this value during the Attach event to skip motor characterization (including the audible beeps). You can use a previously saved Inductance value, or information from your motor's datasheet.

(Read and Write property)

145.2.19 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes: Unit: duty cycle per second (duty cycle/s)
(Read only property)

145.2.20 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetBrakingStrength can be set to.
Notes: (Read only property)

145.2.21 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentLimit can be set to.
Notes: (Read only property)

145.2.22 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.2.23 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.2.24 MaxInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Inductance can be set to.
Notes: See Inductance for details.
(Read only property)

145.2.25 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of Position.
Notes: (Read only property)

145.2.26 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of StallVelocity.
Notes: (Read only property)

145.2.27 MaxSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.2.28 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetVelocity can be set to.
Notes: TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
(Read only property)

145.2.29 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: Unit: duty cycle per second (duty cycle/s)
(Read only property)

145.2.30 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetBrakingStrength can be set to.
Notes: (Read only property)

145.2.31 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentLimit can be set to.
Notes: (Read only property)

145.2.32 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)

(Read only property)

145.2.33 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.2.34 MinInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Inductance can be set to.
Notes: See Inductance for details.
(Read only property)

145.2.35 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of Position.
Notes: (Read only property)

145.2.36 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of StallVelocity.
Notes: (Read only property)

145.2.37 MinSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.2.38 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetVelocity can be set to.
Notes: Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
(Read only property)

145.2.39 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes: Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

(Read only property)

145.2.40 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Change the units of your parameters so that your application is more intuitive.
Notes: Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.
(Read and Write property)

145.2.41 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The stall velocity.
Notes: Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.

- Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
- StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately reduce the Velocity (i.e. average voltage) to 0 and an error will be reported to your program.

- A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
- A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger .

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

145.2.42 SurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The SurgeCurrentLimit allows for increased performance from your motor.
Notes: The controller will limit the current through your motor to the SurgeCurrentLimit briefly, then scale current down to the CurrentLimit.
View ActiveCurrentLimit for information about what current limit the controller is actively following.
(Read and Write property)

145.2.43 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The braking value.
Notes: When a motor is not being actively driven forward or reverse, you can choose if the motor will be allowed to freely turn, or will resist being turned.
A low TargetBrakingStrength value corresponds to free wheeling, this will have the following effects:
The motor will continue to rotate after the controller is no longer driving the motor (i.e. Velocity is 0), due to inertia.
The motor shaft will provide little resistance to being turned when it is stopped.
A higher TargetBrakingStrength value will resist being turned, this will have the following effects:
The motor will more stop more quickly if it is in motion and braking has been requested. It will fight against the rotation of the shaft.
Braking mode is enabled by setting the Velocity to MinVelocity

(Read and Write property)

145.2.44 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average voltage across the motor is based on the TargetVelocity value.
Notes: At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

145.2.45 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes: (Read only property)

145.2.46 Events

145.2.47 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent braking strength value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: Regardless of the DataInterval, this event will occur only when the braking strength value has changed from the previous value reported.
Braking mode is enabled by setting the Velocity to MinVelocity.

145.2.48 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
Notes: Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

145.2.49 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Event called when setTargetVelocityAsync finished.

145.2.50 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date

access to all properties.

145.2.51 Constants

Drive Mode

Constant	Value	Description
kDriveModeCoast	1	Coast
kDriveModeForced	2	Forced

145.3 class PhidgetCapacitiveTouchMBS

145.3.1 class PhidgetCapacitiveTouchMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Capacitive Touch class gathers input data from capacitive buttons and sliders on Phidget boards.
Notes: Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.3.2 Methods

145.3.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.3.4 Properties

145.3.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another Touch event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between Touch events can also affected by the TouchValueChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.3.6 IsTouched as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent touch state that the channel has reported.
Notes: This will be false or true.
false is not touched
true is touched
(Read only property)

145.3.7 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.3.8 MaxSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Sensitivity can be set to.
Notes: (Read only property)

145.3.9 MaxTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the Touch event will report.
Notes: (Read only property)

145.3.10 MaxTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TouchValueChangeTrigger can be set to.
Notes: (Read only property)

145.3.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.3.12 MinSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Sensitivity can be set to.
Notes: (Read only property)

145.3.13 MinTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the Touch event will report.
Notes: (Read only property)

145.3.14 MinTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TouchValueChangeTrigger can be set to.
Notes: (Read only property)

145.3.15 Sensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines the sensitivity of all capacitive regions on the device.
Notes: Higher values result in greater touch sensitivity.
The sensitivity value is bounded by MinSensitivity and MaxSensitivity.

(Read and Write property)

145.3.16 TouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent touch value that the channel has reported.
Notes: This will be 0 or 1 for button-type inputs, or a ratio between 0-1 for axis-type inputs.
This value is bounded by MinTouchValue and MaxTouchValue.
The value is not reset when the touch ends.
(Read only property)

145.3.17 TouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a Touch event until the touch value has changed by the amount specified by the TouchValueChangeTrigger.
Notes: Setting the TouchValueChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.3.18 Events

145.3.19 Touched(touchValue as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent touch value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a TouchValueChangeTrigger has been set to a non-zero value, the Touch event will not occur until the touch value has changed by at least the TouchValueChangeTrigger value.

touchValue:Value of the touch input axis.

145.3.20 TouchEnded

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will report a TouchEnd event to signify that it is no longer detecting a touch.

145.4 class PhidgetCurrentInputMBS

145.4.1 class PhidgetCurrentInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Current Input class is used to measure current flowing through the Phidget from outside sources..
Notes: This class may be used on a simple current sensor, or sometimes on a more complex Phidget that measures the amount of current flowing through an attached device, such as a motor controller, for diagnostic or control purposes.
Subclass of the PhidgetMBS class.

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.4.4 Properties

145.4.5 Current as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent current value that the channel has reported.
Notes: This value will always be between MinCurrent and MaxCurrent.
In amperes.
(Read only property)

145.4.6 CurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a CurrentChange event until the current value has changed by the amount specified by the CurrentChangeTrigger.
Notes: Setting the CurrentChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
in amperes.
(Read and Write property)

145.4.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another CurrentChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.4.8 MaxCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the CurrentChange event will report.
Notes: (Read only property)

145.4.9 MaxCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentChangeTrigger can be set to.
Notes: (Read only property)

145.4.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.4.11 MinCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the CurrentChange event will report.
Notes: (Read only property)

145.4.12 MinCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentChangeTrigger can be set to.
Notes: (Read only property)

145.4.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.4.14 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes: Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.
(Read and Write property)

145.4.15 Events

145.4.16 CurrentChanged(current as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent current value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a CurrentChangeTrigger has been set to a non-zero value, the CurrentChange event will not occur until the current value has changed by at least the CurrentChangeTrigger value.

145.5 class PhidgetDCMotorMBS

145.5.1 class PhidgetDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DC Motor class controls the power applied to attached DC motors to affect its speed and direction.
Notes: It can also contain various other control and monitoring functions that aid in the control of DC motors.
Subclass of the PhidgetMBS class.

145.5.2 Methods

145.5.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.5.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For DC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.5.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.5.6 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes: The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later when done.

145.5.7 Properties

145.5.8 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes: The acceleration is bounded by MinAccleration and MaxAcceleration.

Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

145.5.9 ActiveCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current limit that the controller is actively following.
Notes: The SurgeCurrentLimit, CurrentLimit, and temperature will impact this value.
(Read only property)

145.5.10 BackEMF as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent BackEMF value that the controller has reported.
Notes: (Read only property)

145.5.11 BackEMFSensingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When BackEMFSensingState is enabled, the controller will measure and report the BackEMF.
Notes: The motor will coast (freewheel) 5% of the time while the back EMF is being measured (800ŒºÊs every 16ms). Therefore, at a DutyCycle of 100%, the motor will only be driven for 95% of the time.
(Read and Write property)

145.5.12 BrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether braking is enabled.
Notes: This setting allows you to choose whether the motor will resist being turned when it is not being driven forward or reverse (Velocity = 0).

- Setting BrakingEnabled to FALSE corresponds to free-wheeling. This means: The motor will continue to rotate after the controller is no longer driving the motor (Velocity = 0), due to its momentum. The motor shaft will provide little resistance to being turned when it is stopped.
- Setting BrakingEnabled to TRUE will engage electrical braking of the DC motor. This means: The motor will stop more quickly if it is in motion when braking is requested. The motor shaft will resist rotation by outside forces.
- Braking will be added gradually, according to the Acceleration setting, once the motor controller's Velocity reaches 0.0
- Braking will be immediately stopped when a new (non-zero) TargetVelocity is set, and the motor will accelerate to the requested velocity.
- Braking mode is enabled by setting the Velocity to 0.0

(Read and Write property)

145.5.13 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent braking strength value that the controller has reported.
Notes: See TargetBrakingStrength for details.
(Read only property)

145.5.14 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The controller will limit the current through the motor to the CurrentLimit value.
Notes: Unit: amperes (A)
(Read and Write property)

145.5.15 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current regulator gain.
Notes: Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions.

As a rule of thumb, we recommend setting this value as follows:
(Read and Write property)

145.5.16 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another VelocityUpdate/BrakingStrengthChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
Note: BrakingStrengthChange events will only fire if a change in braking has occurred.

Unit: milliseconds (ms)
(Read and Write property)

145.5.17 DriveMode as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting impacts how your motor decelerates and the amount of current that is available to your motor at any given moment.
Notes: (Read and Write property)

145.5.18 FailsafeBrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to enable failsafe braking.
Notes: This setting allows you to choose whether motor will forcibly stop once it enters a FAILSAFE state.

A setting of FALSE will simply stop applying power to the motor, allowing it to spin down naturally.
A setting of TRUE will apply braking up to the FailsafeCurrentLimit, actively stopping the motor
(Read and Write property)

145.5.19 FailsafeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When the controller enters a FAILSAFE state, the controller will limit the current through the motor to the FailsafeCurrentLimit value.
Notes: (Read and Write property)

145.5.20 Inductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The inductance value.
Notes: The controller will attempt to measure the inductance of your motor when opened. This value is used to improve control of the motor.

Set this value during the Attach Event to skip motor characterization (including the audible beeps). You can use a previously saved Inductance value, or information from your motor's datasheet.
(Read and Write property)

145.5.21 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes: Unit: duty cycle per second (duty cycle/s)

(Read only property)

145.5.22 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetBrakingStrength can be set to.
Notes: See TargetBrakingStrength for details.
(Read only property)

145.5.23 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentLimit can be set to.
Notes: Unit: amperes (A)
(Read only property)

145.5.24 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentRegulatorGain can be set to.
Notes: (Read only property)

145.5.25 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.5.26 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.5.27 MaxInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Inductance can be set to. See Inductance for details.
Notes: (Read only property)

145.5.28 MaxSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.5.29 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetVelocity can be set to.
Notes: TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

145.5.30 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: Unit: duty cycle per second (duty cycle/s)
(Read only property)

145.5.31 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetBrakingStrength can be set to.
Notes: See TargetBrakingStrength for details.
(Read only property)

145.5.32 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentLimit can be set to.
Notes: Unit: amperes (A)
(Read only property)

145.5.33 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentRegulatorGain can be set to.
Notes: (Read only property)

145.5.34 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.5.35 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.5.36 MinInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Inductance can be set to. See Inductance for details.
Notes: (Read only property)

145.5.37 MinSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.5.38 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetVelocity can be set to
Notes: Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

145.5.39 SurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The SurgeCurrentLimit allows for increased performance from your motor.
Notes: The controller will limit the current through your motor to the SurgeCurrentLimit briefly, then scale current down to the CurrentLimit.
View ActiveCurrentLimit for information about what current limit the controller is actively following.
(Read and Write property)

145.5.40 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting allows you to choose how hard the motor will resist being turned when it is not being driven forward or reverse (Velocity = 0).
Notes: The TargetBrakingStrength sets the relative amount of electrical braking to be applied to the DC motor, with MinBrakingStrength corresponding to no braking (free-wheeling), and MaxBrakingStrength indicating full braking.

A low TargetBrakingStrength value corresponds to free-wheeling. This means:
The motor will continue to rotate after the controller is no longer driving the motor (Velocity = 0), due to its momentum.
The motor shaft will provide little resistance to being turned when it is stopped.
As TargetBrakingStrength increases, this will engage electrical braking of the DC motor. This means:
The motor will stop more quickly if it is in motion when braking is requested.
The motor shaft will resist rotation by oustide forces.
Braking will be added gradually, according to the Acceleration setting, once the motor controller's Velocity reaches 0.0
Braking will be immediately stopped when a new (non-zero) TargetVelocity is set, and the motor will accelerate to the requested velocity.
Braking mode is enabled by setting the Velocity to 0.0
(Read and Write property)

145.5.41 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target velocity.
Notes: The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.

TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

145.5.42 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes: Unit: duty cycle (duty cycle)
(Read only property)

145.5.43 Events

145.5.44 BackEMFChanged(backEMF as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent back emf value will be reported in this event.
Notes: backEMF: The back EMF voltage from the motor

145.5.45 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the motor braking strength changes.
Notes: brakingStrength:The most recent braking strength value will be reported in this event.
This event will occur only when the value of braking strength has changed
See TargetBrakingStrength for details about what this number represents.

145.5.46 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setTargetVelocityAsync completed.

145.5.47 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs at a rate defined by the DataInterval.
Notes: velocity:The most recent velocity value will be reported in this event.

145.5.48 Constants

Drive Mode

Constant	Value	Description
kDriveModeCoast	1	Coast
kDriveModeForced	2	Forced

145.6 class PhidgetDictionaryMBS

145.6.1 class PhidgetDictionaryMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Dictionaries are useful for passing information between multiple programs using Phidgets. #
Notes: A common example would be to have one program controlling your application that receives commands sent via a Phidget dictionary from a web interface, as outlined in many of our articles.

Keys can be thought of as being similar to variable names, with their values as their associated value. Phidget dictionaries contain groups of related key-value pairs, and are stored on a central Phigdet Network Server. Dictionaries, and the key-value pairs within may be accessed from programs that have access to the Phigdet Network Server.

The Dictionary API supports connecting to a dictionary on the server, managing key-value pairs, and monitoring changes made to the dictionary.

More information on Phidget Dictionaries can be found on the Phidget Dictionary support page.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.6.2 Methods

145.6.3 add(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new key value pair to the dictionary.
Notes: It is an error if the key already exits.

145.6.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: creates an instance of a Phidget channel.

145.6.5 Keys as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries all keys in a dictionary.
Notes: The list might not contain all of the keys in the dictionary if it is modified while you query keys. Keys added during the scan may be missed, and keys deleted during the scan may be included.

145.6.6 remove(key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes the key from the dictionary.

145.6.7 removeAll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes every key from the dictionary.

145.6.8 update(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a key value pair in the dictionary.
Notes: It is an error if the key does not exist.

145.6.9 validDictionaryKey(key as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether this is a valid key to use.
Notes: Returns true on success or false on failure.

145.6.10 Properties

145.6.11 Value(key as String) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set or get the value associated with the given key from the dictionary.
Notes: (Read and Write computed property)

145.6.12 Events

145.6.13 Added(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a new key value pair is added to the dictionary.
Notes: key: The key that was added
value: The value of the new key

145.6.14 Removed(Key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a key is removed from the dictionary.

145.6.15 Updated(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a change is made to a key value pair in the dictionary.

145.7 class PhidgetDigitalInputMBS

145.7.1 class PhidgetDigitalInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Digital Input class is used to monitor the state of Phidget digital inputs.
Notes: Use digital inputs to monitor the state of buttons, switches, or switch-to-ground sensors.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.7.2 Methods

145.7.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.7.4 Properties

145.7.5 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input polarity mode for your channel.
Notes: See your device's User Guide for more information about what value to chooose for the InputMode.
(Read and Write property)

145.7.6 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes: Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.

(Read and Write property)

145.7.7 State as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent state value that the channel has reported.
Notes: (Read only property)

145.7.8 Events

145.7.9 StateChanged(state as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event will occur when the state of the digital input has changed.
Notes: The value will either be 0 or 1 (true or false).

145.7.10 Constants

Input Modes

Constant	Value	Description
kInputModeNPN	1	For interfacing NPN digital sensors.
kInputModePNP	2	For interfacing PNP digital sensors.

Power Supply

Constant	Value	Description
kPowerSupply12V	2	The sensor is provided with 12 volts.
kPowerSupply24V	3	The sensor is provided with 24 volts.
kPowerSupplyOff	1	Switch the sensor power supply off.

145.8 class PhidgetDigitalOutputMBS

145.8.1 class PhidgetDigitalOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Digital Output class is used to control digital logic outputs and LED outputs on Phidgets boards.
Notes: Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.8.2 Methods

145.8.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.8.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Digital Output channels, this will set the output state to FALSE. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.8.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.8.6 setDutyCycleAsync(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the duty cycle asynchronously.
Notes: The DutyCycle represents the fraction of time the output is on (high).
This will override the State setting on the channel.
A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
This is equivalent to setting a State of TRUE and FALSE respectively.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.
If the DigitalOutput channel you are using does not support PWM, then this value may only be set to 1.0 or 0.0
You can check if your device supports PWM by checking the ChannelSubclass property, viewable by selecting Phidget API above. Your DigitalOutput channel supports PWM if it is any subclass other than NONE.

calls setDutyCycleAsyncCompleted later.

145.8.7 setLEDCurrentLimitAsync(LEDCurrentLimit as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes: Reference the data sheet of the LED you are using before setting this value.

Calls setLEDCurrentLimitAsyncCompleted event later.

145.8.8 setStateAsync(state as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state asynchronously.
Notes: The State will dictate whether the output is constantly high (true) or low (false).
This will override any DutyCycle that may have been set on the channel.
Setting the State to true is the same as setting DutyCycle to 1.0, and setting the State to false is the same as setting a DutyCycle of 0.0.

Calls setStateAsyncCompleted event later.

145.8.9 Properties

145.8.10 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DutyCycle represents the fraction of time the output is on (high).
Notes: A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.

Unit: duty cycle (duty cycle)
(Read and Write property)

145.8.11 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Frequency parameter sets the PWM frequency for all frequency-settable PWM outputs on the board.
Notes: in hertz (Hz)
(Read and Write property)

145.8.12 LEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes: Reference the data sheet of the LED you are using before setting this value.
n amperes.
(Read and Write property)

145.8.13 LEDForwardVoltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes: Reference the data sheet of the LED you are using before setting this value.
(Read and Write property)

145.8.14 MaxDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DutyCycle can be set to.
Notes: Unit: duty cycle (duty cycle)
(Read only property)

145.8.15 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.8.16 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DutyCycle can be set to.
Notes: in hertz (Hz)
(Read only property)

145.8.17 MaxLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that LEDCurrentLimit can be set to.
Notes: in amperes.
(Read only property)

145.8.18 MinDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DutyCycle can be set to.
Notes: Unit: duty cycle (duty cycle)
(Read only property)

145.8.19 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.8.20 MinFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DutyCycle can be set to.
Notes: in hertz (Hz)
(Read only property)

145.8.21 MinLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that LEDCurrentLimit can be set to.
Notes: in amperes.
(Read only property)

145.8.22 State as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The State will indicate whether the output is high (true) or low (false).
Notes: If a DutyCycle has been set, the state will return as true if the DutyCycle is above 0.5, or false otherwise.
(Read and Write property)

145.8.23 Events

145.8.24 setDutyCycleAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setDutyCycleAsync is done.

145.8.25 setLEDCurrentLimitAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setLEDCurrentLimitAsync completed.

145.8.26 setStateAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setStateAsync completed.

145.8.27 Constants

LED Forward Voltage Setting

Constant	Value	Description
kLEDForwardVoltage_1_7V	1	1.7V
kLEDForwardVoltage_2_75V	2	2.75V
kLEDForwardVoltage_3_2V	3	3.2V
kLEDForwardVoltage_3_9V	4	3.9V
kLEDForwardVoltage_4_0V	5	4.0V
kLEDForwardVoltage_4_8V	6	4.8V
kLEDForwardVoltage_5_0V	7	5.0V
kLEDForwardVoltage_5_6V	8	5.6V

145.9 class PhidgetDistanceSensorMBS

145.9.1 class PhidgetDistanceSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Distance Sensor class gathers data from the distance sensor on a Phidget board.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.
Blog Entries

- MBS Xojo Plugins, version 23.4pr1
- Rewritten Phidgets Plugin

145.9.2 Methods

145.9.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.9.4 SonarReflectionsAmplitudes as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent reflection values that the channel has reported.
Notes: The amplitude values are relative amplitudes of the reflections that are normalized to an arbitrary scale.

145.9.5 SonarReflectionsDistances as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent reflection values that the channel has reported.
Notes: The distance values will always be between MinDistance and MaxDistance.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7

145.9.6 Properties

145.9.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

145.9.8 Distance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent distance value that the channel has reported.
Notes: This value will always be between MinDistance and MaxDistance.
in milliseconds.
(Read only property)

145.9.9 DistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue an event until the distance value has changed by the amount specified by the DistanceChangeTrigger.
Notes: Setting the DistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.

in milliseconds.
(Read and Write property)

145.9.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.9.11 MaxDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum distance that a event will report.
Notes: in milliseconds.
(Read only property)

145.9.12 MaxDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DistanceChangeTrigger can be set to.
Notes: in milliseconds.
(Read only property)

145.9.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.9.14 MinDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum distance that a event will report.
Notes: in milliseconds.
(Read only property)

145.9.15 MinDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DistanceChangeTrigger can be set to.
Notes: in milliseconds.
(Read only property)

145.9.16 SonarQuietMode as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When set to true, the device will operate more quietly.
Notes: The measurable range is reduced when operating in quiet mode.
(Read and Write property)

145.9.17 Events

145.9.18 DistanceChanged(distance as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent distance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a DistanceChangeTrigger has been set to a non-zero value, the DistanceChange event will not occur until the distance has changed by at least the DistanceChangeTrigger value.

145.9.19 SonarReflectionsUpdated(distances() as UInt32, amplitudes() as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent reflections the channel has detected will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a DistanceChangeTrigger has been set to a non-zero value, the SonarReflectionsUpdate event will not occur until the distance has changed by at least the DistanceChangeTrigger value.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7.
If you are only interested in the closest reflection, you can simply use the DistanceChange event.
The values reported as amplitudes are relative amplitudes of the reflections that are normalized to an arbitrary scale.

distances: The reflection values
amplitudes: The amplitude values
count: The number of reflections detected

145.10 class PhidgetEncoderMBS

145.10.1 class PhidgetEncoderMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Encoder class is used to read position data from quadrature encoders in order to track linear or rotary movement.
Notes: If the device supports an index pin as a reference point, you can also access it through this class.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.10.2 Methods

145.10.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.10.4 Properties

145.10.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PositionChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PositionChange events can also affected by the PositionChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.10.6 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The enabled state of the encoder.
Notes: (Read and Write property)

145.10.7 IndexPosition as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position of the index channel calculated by the Phidgets library.
Notes: The index channel will usually pulse once per rotation.
Setting the encoder position will move the index position the same amount so their relative position stays the same.
Index position is tracked locally as the last position at which the index was triggered. Setting position will only affect the local copy of the index position value. This means that index positions seen by multiple network applications may not agree.
(Read only property)

145.10.8 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The encoder interface mode. Match the mode to the type of encoder you have attached.
Notes: It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

145.10.9 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.10.10 MaxPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PositionChangeTrigger can be set to.
Notes: (Read only property)

145.10.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.10.12 MinPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PositionChangeTrigger can be set to.
Notes: (Read only property)

145.10.13 Position as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value calculated by the Phidgets library.
Notes: Position counts quadrature edges within a quadrature cycle. This means there are four counts per full quadrature cycle.
Position is tracked locally as the total position change from the time the channel is opened. Setting position will only affect the local copy of the position value. This means that positions seen by multiple network applications may not agree.
(Read and Write property)

145.10.14 PositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PositionChange event until the position value has changed by the amount specified by the PositionChangeTrigger.
Notes: Setting the PositionChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.10.15 Events

145.10.16 PositionChanged(positionChange as Integer, timeChange as double, indexTriggered as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a PositionChangeTrigger has been set to a non-zero value, the PositionChange event will not occur until the position has changed by at least the PositionChangeTrigger value.

positionChange: The amount the position changed since the last change event
timeChange: The time elapsed since the last change event in milliseconds
indexTriggered: True if the index was passed since the last change event

145.10.17 Constants

Encoder Interface Modes

Constant	Value	Description
kEncoderIOModeCollector10K	5	Line Driver 10K, 10kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModeCollector2K2	4	Open Collector 2.2K, 2.2kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeLineDriver10K	3	Open Collector 10K, 10kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeLineDriver2K2	2	Line Driver 2.2K, 2.2kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModePushPull	1	Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

145.11 class PhidgetErrorExceptionMBS

145.11.1 class PhidgetErrorExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error exception.
Notes: Whenever a Phidget function returns an error, we raise an exception and put the error number into the exceptions.
Subclass of the RuntimeException class.
Blog Entries

- Rewritten Phidgets Plugin

145.12 class PhidgetFrequencyCounterMBS

145.12.1 class PhidgetFrequencyCounterMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Frequency Counter class is used to measure the frequency of pulses in an electronic signal, or to count the pulses in the signal.
Notes: Such signals can come from other electronics, or certain sensors that have a pulse output.
Subclass of the PhidgetMBS class.
Blog Entries

145.12.2 Methods

145.12.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.12.4 reset

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the Count and TimeElapsed.
Notes: For best results, reset should be called when the channel is disabled.

145.12.5 Properties

145.12.6 Count as UInt64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent count value the channel has reported.
Notes: The count represents the total number of pulses since the the channel was opened, or last reset.
(Read only property)

145.12.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another CountChange/FrequencyChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

145.12.8 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables or disables the channel.
Notes: When a channel is disabled, it will not longer register counts, therefore the TimeElapsed and Count will not be updated until the channel is re-enabled.
(Read and Write property)

145.12.9 FilterType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines the signal type that the channel responds to.
Notes: The filter type is chosen based on the type of input signal. See the PhidgetFrequencyCounter_FilterType entry under Enumerations for more information.

(Read and Write property)

145.12.10 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent frequency value that the channel has reported.
Notes: This value will always be between 0 Hz and MaxFrequency.
in Hertz.
(Read only property)

145.12.11 FrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The frequency at which zero hertz is assumed.
Notes: This means any frequency at or below the FrequencyCutoff value will be reported as 0 Hz.
This property is stored locally, so other users who have this Phidget open over a network connection won't see the effects of your selected cutoff.
(Read and Write property)

145.12.12 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input polarity mode for your channel.
Notes: See your device's User Guide for more information about what value to chooose for the InputMode
(Read and Write property)

145.12.13 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.12.14 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the FrequencyChange event will report.
Notes: (Read only property)

145.12.15 MaxFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that FrequencyCutoff can be set to.
Notes: (Read only property)

145.12.16 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.12.17 MinFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that FrequencyCutoff can be set to.
Notes: (Read only property)

145.12.18 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes: Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.

(Read and Write property)

145.12.19 TimeElapsed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The amount of time the frequency counter has been enabled for.
Notes: This property complements Count, the total number of pulses detected since the channel was opened, or last reset.
(Read only property)

145.12.20 Events

145.12.21 CountChanged(counts as UInt64, timeChange as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: counts: The pulse count of the signal
timeChange: The change in elapsed time since the last change

145.12.22 FrequencyChanged(frequency as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent frequency value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: frequency: The calculated frequency of the signal.

145.12.23 Constants

Filter Types

Constant	Value	Description
kFilterTypeLogicLevel	2	Logic level
kFilterTypeZeroCrossing	1	Zero crossing

Input Modes

Constant	Value	Description
kInputModeNPN	1	For interfacing NPN digital sensors.
kInputModePNP	2	For interfacing PNP digital sensors.

Power Supply

Constant	Value	Description
kPowerSupply12V	2	The sensor is provided with 12 volts
kPowerSupply24V	3	The sensor is provided with 24 volts
kPowerSupplyOff	1	Switch the sensor power supply off.

145.13 class PhidgetGPGGAMBS

145.13.1 class PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GGA Sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

145.13.4 Properties

145.13.5 altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mean sea level altitude.
Notes: (Read and Write property)

145.13.6 fixQuality as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS quality indicator.
Notes: (Read and Write property)

145.13.7 heightOfGeoid as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Geoidal separation.
Notes: (Read and Write property)

145.13.8 horizontalDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Horizontal dilution of precision.
Notes: (Read and Write property)

145.13.9 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Latitude.
Notes: (Read and Write property)

145.13.10 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Longitude.
Notes: (Read and Write property)

145.13.11 numSatellites as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of satellites in use.
Notes: (Read and Write property)

145.14 class PhidgetGPGSAMBS

145.14.1 class PhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GSA sentence
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Function: Vertical dilution of precision.
Notes: (Read and Write property)

145.14.10 satUsed(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Satellite IDs.
Notes: Index in range of 0 to 11.
(Read and Write computed property)

145.15 class PhidgetGPRMCMBS

145.15.1 class PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA RMC sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

145.15.2 Methods

145.15.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

145.15.4 Properties

145.15.5 heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Heading over ground in degrees.
Notes: (Read and Write property)

145.15.6 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Latitude.
Notes: (Read and Write property)

145.15.7 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Longitude.
Notes: (Read and Write property)

145.15.8 magneticVariation as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic variation.
Notes: (Read and Write property)

145.15.9 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mode indicator.
Notes: (Read and Write property)

145.15.10 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in knots.
Notes: (Read and Write property)

145.15.11 status as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Status of the data
Notes: (Read and Write property)

145.16 class PhidgetGPSMBS

145.16.1 class PhidgetGPSMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The GPS class is used to configure and gather data from Phidgets GPS sensors, and gives you access to variables from GPS data packets.
Notes: Subclass of the PhidgetMBS class.

145.16.2 Methods

145.16.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.16.4 NMEAData as PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the NMEA data structure.

145.16.5 Properties

145.16.6 Altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The altitude above mean sea level in meters.
Notes: (Read only property)

145.16.7 Date as Date

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The UTC date of the last received position.
Notes: Returns time and date as date object.
(Read only property)

145.16.8 DateTime as DateTime

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The UTC date of the last received position.
Notes: Returns time and date as datetime object.
(Read only property)

145.16.9 Heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current true course over ground of the GPS.
Notes: Heading over ground in degrees.
(Read only property)

145.16.10 Latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude of the GPS in degrees.
Notes: (Read only property)

145.16.11 Longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude of the GPS.
Notes: (Read only property)

145.16.12 PositionFixState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status of the position fix.
Notes: True if a fix is available and latitude, longitude, and altitude can be read. False if the fix is not available.
(Read only property)

145.16.13 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current speed over ground of the GPS.
Notes: (Read only property)

145.16.14 Events

145.16.15 HeadingChanged(heading as double, velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when a heading change occurs.
Notes: heading: The current heading.
velocity: The current velocity.

145.16.16 PositionChanged(latitude as double, longitude as double, altitude as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent values the channel has measured will be reported in this event, which occurs when the GPS position changes.
Notes: latitude: The current latitude.
longitude: The current longitude.
altitude: The current altitude.

145.16.17 PositionFixStateChanged(positionFixState as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a position fix is obtained or lost.
Notes: positionFixState:The state of the position fix.
True indicates a fix is obtained. False indicates no fix found.

145.17 class PhidgetGPSNMEAMBS

145.17.1 class PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA Data structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

145.17.2 Methods

145.17.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

145.17.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.17.5 Properties

145.17.6 GGA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GGA Sentence.
Notes: (Read and Write property)

145.17.7 GSA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GSA Sentence.
Notes: (Read and Write property)

145.17.8 RMC as PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA RMC Sentence.
Notes: (Read and Write property)

145.17.9 VTG as PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA VTG Sentence.
Notes: (Read and Write property)

145.18 class PhidgetGPVTGMBS

145.18.1 class PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA VTG sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- New Phidgets supported

145.18.2 Methods

145.18.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

145.18.4 Properties

145.18.5 magneticHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic heading.
Notes: (Read and Write property)

145.18.6 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mode indicator.
Notes: (Read and Write property)

145.18.7 speed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in km/h.
Notes: (Read and Write property)

145.18.8 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in knots.
Notes: (Read and Write property)

145.18.9 trueHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True heading over ground.
Notes: (Read and Write property)

145.19 class PhidgetGyroscopeMBS

145.19.1 class PhidgetGyroscopeMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Gyroscope class reports rotational data from the Phidget containing a gyroscope chip for use in your code.
Notes: Phidget gyroscopes usually have multiple sensors, each oriented in a different axis, so multiple dimensions of heading can be recorded.

If the Phidget you're using also has an accelerometer and a magnetometer, you may want to use the Spatial classin order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.19.2 Methods

145.19.3 AngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent angular rate value that the channel has reported.
Notes: This value will always be between MinAngularRate and MaxAngularRate.

145.19.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.19.5 MaxAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the AngularRateUpdate event will report.

145.19.6 MinAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the AngularRateUpdate event will report.

145.19.7 zero

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-zeros the gyroscope in 1-2 seconds.
Notes: The device must be stationary when zeroing.
The angular rate will be reported as 0.0¬∞/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

145.19.8 Properties

145.19.9 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure angular rate on.
Notes: See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

145.19.10 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another AngularRateUpdate event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)
(Read and Write property)

145.19.11 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable the temperature stabilization feature of this device.
Notes: This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)

HeatingEnabled: Whether self-heating temperature stabilization is enabled
(Read and Write property)

145.19.12 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.19.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.19.14 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported.
Notes: This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

145.19.15 Events

145.19.16 AngularRateUpdated(angularRate() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent angular rate and timestamp values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: angularRate: The angular rate values
timestamp: The timestamp value

145.20 class PhidgetHubMBS

145.20.1 class PhidgetHubMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hub class allows you to control power to VINT hub ports.
Notes: Subclass of the PhidgetMBS class.

145.20.2 Methods

145.20.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.20.4 PortMaxSpeed(Port as Integer) as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The max communication speed of a high-speed capable VINT Port.

145.20.5 setPortAutoSetSpeed(Port as Integer, State as Integer)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables / disables Auto Set Speed on the hub port.
Notes: When enabled, and a supported VINT device is attached, the HubPortSpeed will automatically be set to the fastest reliable speed. This is enabled by default on supported VINT Hubs.

145.20.6 setPortPower(Port as Integer, State as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls power to the VINT Hub Ports.
Notes: port: The Hub port
state: The power state

145.20.7 Properties

145.20.8 PortMode(Port as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode of the selected port.
Notes: This could be used to set a port back to VINT mode if it was left in digital/analog mode.
(Read and Write computed property)

145.20.9 PortPower(Port as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets and sets the VINT Hub Port power state
Notes: (Read and Write computed property)

145.21 class PhidgetHumiditySensorMBS

145.21.1 class PhidgetHumiditySensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Humidity Sensor class gathers relative humidity data from the Phidget and makes it available to your code.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.21.2 Methods

145.21.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.21.4 Properties

145.21.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another HumidityChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between HumidityChange events can also affected by the HumidityChangeTrigger.
Unit: milliseconds (ms)
(Read and Write property)

145.21.6 Humidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent humidity value that the channel has reported.
Notes: This value will always be between MinHumidity and MaxHumidity.
(Read only property)

145.21.7 HumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a HumidityChange event until the humidity value has changed by the amount specified by the HumidityChangeTrigger.
Notes: Setting the HumidityChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

145.21.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.21.9 MaxHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that the HumidityChange event will report.
Notes: (Read only property)

145.21.10 MaxHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that HumidityChangeTrigger can be set to.
Notes: (Read only property)

145.21.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.21.12 MinHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that the HumidityChange event will report.
Notes: (Read only property)

145.21.13 MinHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that HumidityChangeTrigger can be set to.
Notes: (Read only property)

145.21.14 Events

145.21.15 HumidityChanged(humidity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent humidity value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a HumidityChangeTrigger has been set to a non-zero value, the HumidityChange event will not occur until the humidity has changed by at least the HumidityChangeTrigger value.

humidity: The ambient relative humidity

145.22 class PhidgetIRCodeInfoMBS

145.22.1 class PhidgetIRCodeInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Notes: Some values can be set to null to select defaults.
Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

145.22.2 Properties

145.22.3 bitCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bits in the code.
Notes: (Read only property)

145.22.4 carrierFrequency as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Carrier frequency in Hz - defaults to 38kHz
Notes: (Read only property)

145.22.5 dutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duty Cycle in percent (0.1-0.5).
Notes: Defaults to 0.33

Unit: duty cycle (duty cycle)
(Read and Write property)

145.22.6 encoding as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encoding technique used to encode the data.
Notes: (Read only property)

145.22.7 gap as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gap time in microseconds.
Notes: (Read only property)

145.22.8 length as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constant or Variable length encoding.
Notes: (Read only property)

145.22.9 minRepeat as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Minium number of times to repeat a code on transmit.
Notes: (Read only property)

145.22.10 trail as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Trail time in microseconds.
Notes: Can be zero for no trail.
(Read only property)

145.22.11 header(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Header pulse and space.
Notes: Can be zero for no header.
Index in range of 0 to 1.
(Read and Write computed property)

145.22.12 one(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pulse and Space times to represent a '1' bit, in microseconds
Notes: Index in range of 0 to 1.
(Read and Write computed property)

145.22.13 repeat(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A series or pulse and space times to represent the repeat code.
Notes: Start and end with pulses and null terminate. Set to 0 for none.
Index in range of 0 to 25.
(Read and Write computed property)

145.22.14 toggleMask(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bit toggles, which are applied to the code after each transmit.
Notes: index from 0 to 32.
(Read and Write computed property)

145.22.15 zero(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pulse and Space times to represent a '0' bit, in microseconds
Notes: Index in range of 0 to 1.
(Read and Write computed property)

145.22.16 Constants

Encoding

Constant	Value	Description
kEncodingBiPhase	4	Bi-Phase, or Manchester encoding
kEncodingPulse	3	Pulse encoding, or Pulse Width Modulation
kEncodingRC5	5	RC5 - a type of Bi-Phase encoding
kEncodingRC6	6	RC6 - a type of Bi-Phase encoding
kEncodingSpace	2	Space encoding, or Pulse Distance Modulation
kEncodingUnknown	1	Unknown - the default value

Length Types

Constant	Value	Description
kLengthConstant	2	Constant - the bitstream and gap length is constant
kLengthUnknown	1	Unknown - the default value
kLengthVariable	3	Variable - the bitstream has a variable length with a constant gap

145.23 class PhidgetIRMBS

145.23.1 class PhidgetIRMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Infrared Remote class lets you read and transmit command codes from infrared remotes that the majority of household appliances use.
Notes: You can use this class to construct and transmit commands from scratch, or learn and retransmit codes from the remote controller of your appliance.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin
- MBS REALbasic Plugins, version 10.6pr7

145.23.2 Methods

145.23.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.23.4 getLastCode(byref bitCount as UInt32) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last code the channel has received.
Notes: The code is represented by a hexadecimal string (array of bytes).

145.23.5 getLastLearnedCode(byref codeInfo as PhidgetIRCodeInfoMBS) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last code the channel has learned.
Notes: The code is represented by a hexadecimal string (array of bytes).

The codeInfo structure holds data that describes the learned code.

145.23.6 transmit(code as String, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a code
Notes: code data is transmitted MSBit first.
MSByte is in array index 0 of code
LSBit is right justified, therefore, MSBit may be in bit position 0-7 (of array index 0) depending on the bit count.

code:code data
codeInfo:contains the data for characterizing the code.

145.23.7 transmitRaw(data as MemoryBlock, carrierFrequency as UInt32, dutyCycle as double, gap as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits raw data as a series of pulses and spaces.
Notes: data: data to send.
dataLen: length of the data array
carrierFrequency: carrier frequency in Hz
dutyCycle: the duty cycle
gap: the gap time.

data must start and end with a pulse.
Each element is a positive time in Œºs
dataLength has a maximum length of 200, however, streams should be kept must shorter than this (less than 100ms between gaps).
dataLength must be an odd number
Leave carrierFrequency as 0 for default.
carrierFrequency has a range of 10kHz - 1MHz
Leave dutyCycle as 0 for default
dutyCycle can have a value between 0.1 and 0.5
Specifying a gap will guarantee a gap time (no transmitting) after data is sent.
gap time is in Œºs
gap time can be set to 0

145.23.8 transmitRepeat

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a repeat of the last transmited code.
Notes: Depending on the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

145.23.9 Events

145.23.10 CodeReceived(code as string, bitCount as Integer, isRepeat as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event is fired every time a code is received and correctly decoded.
Notes: code: The code string
bitCount: The length of the received code in bits
isRepeat: true if a repeat is detected

The code is represented by a hexadecimal string (array of bytes) with a length of 1/4 of bitCount.
The MSBit is considered to be the first bit received and will be in array index 0 of code
Repeat will be true if a repeat is detected (either timing wise or via a repeat code)
False repeasts can happen if two separate button presses happen close together

145.23.11 Learned(code as string, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event fires when a button has been held down long enough for the channel to have learned the CodeInfo values.
Notes: A code is usually learned after 1 second, or after 4 repeats.

145.23.12 RawDataReceived(data as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event will fire every time the channel gets more data.
Notes: This will happen at most once every 8ms.

145.24 class PhidgetLCDMBS

145.24.1 class PhidgetLCDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LCD class allows you to control various liquid crystal displays.
Notes: It offers control of displayed text as well as screen settings and custom character creation.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.24.2 Methods

145.24.3 Clear

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all pixels in the current frame buffer.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

145.24.4 ClearAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all pixels in the current frame buffer.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

Calls ClearAsyncCompleted event later.

145.24.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.24.6 copy(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies all pixels from a specified rectangular region to another.
Notes: sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle
inverted: If true, copied pixels are inverted

145.24.7 copyAsync(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies all pixels from a specified rectangular region to another.
Notes: sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle
inverted: If true, copied pixels are inverted

Calls copyAsyncCompleted event later.

145.24.8 drawLine(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a straight line in the current frame buffer between two specified points.

Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

145.24.9 drawLineAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a straight line in the current frame buffer between two specified points.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

CallsdrawLineAsyncCompleted event later.

145.24.10 drawPixel(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws, erases, or inverts a single specified pixel.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel
y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

145.24.11 drawPixelAsync(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws, erases, or inverts a single specified pixel.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel
y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

Calls drawPixelAsyncCompleted event later.

145.24.12 drawRect(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a rectangle in the current frame buffer using the specified points.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

145.24.13 drawRectAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a rectangle in the current frame buffer using the specified points.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

Calls drawRectAsyncCompleted event later.

145.24.14 Flush

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flushes the buffered LCD contents to the LCD screen.

145.24.15 FlushAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flushes the buffered LCD contents to the LCD screen.
Notes: Calls FlushAsyncCompleted event later.

145.24.16 getFontSize(Font as Integer, byref Width as Integer, byref Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the size of the specified font.
Notes: font: The specified font
width: The width of the font
height: The height of the font

145.24.17 Initialize

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the Text LCD display.

145.24.18 MaxCharacters(font as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of characters that can fit on the frame buffer for the specified font.
Notes: font: The specified font
maxCharacters: The maximum number of characters for the font

145.24.19 saveFrameBuffer(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the specified frame buffer to flash memory
Notes: Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

145.24.20 saveFrameBufferAsync(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the specified frame buffer to flash memory
Notes: Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

Calls saveFrameBufferAsyncCompleted event later.

145.24.21 setCharacterBitmap(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a bitmap and select a character to represent it.
Notes: Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

145.24.22 setCharacterBitmapAsync(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a bitmap and select a character to represent it.
Notes: Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

Calls setCharacterBitmapAsyncCompleted event later.

145.24.23 setFontSize(Font as Integer, Width as Integer, Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the size of the specified font.
Notes: font: The specified font
width: The width of the font
height: The height of the font

145.24.24 writeBitmap(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a bitmap to the current frame buffer at the given location.
Notes: Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

145.24.25 writeBitmapAsync(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a bitmap to the current frame buffer at the given location.
Notes: Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

Calls writeTextAsyncCompleted event later.

145.24.26 writeText(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes text to the current frame buffer at the specified location.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

145.24.27 writeTextAsync(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write text asynchronously.
Notes: Writes text to the current frame buffer at the specified location.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

Calls writeTextAsyncCompleted event later.

145.24.28 Properties

145.24.29 AutoFlush as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allows setting the LCD to flush the screen automatically
Notes: Set to true to automatically flush the LCD screen after every message that writes to the LCD.
(Read and Write property)

145.24.30 Backlight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Backlight affects the brightness of the LCD screen.
Notes: Backlight is bounded by MinBackLight and MaxBacklight.
(Read and Write property)

145.24.31 Contrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Contrast level of the text or graphic pixels.
Notes: A higher contrast will make the image darker.
Contrast is bounded by MinContrast and MaxContrast.
(Read and Write property)

145.24.32 CursorBlink as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When CursorBlink is true, the device will cause the cursor to periodically blink.
Notes: (Read and Write property)

145.24.33 CursorOn as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When CursorOn is true, the device will underline to the cursor position.
Notes: (Read and Write property)

145.24.34 FrameBuffer as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The frame buffer that is currently being used.
Notes: Commands sent to the device are performed on this buffer.
(Read and Write property)

145.24.35 Height as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of the LCD screen attached to the channel.
Notes: (Read only property)

145.24.36 MaxBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Backlight can be set to.
Notes: (Read only property)

145.24.37 MaxContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Contrast can be set to.
Notes: (Read only property)

145.24.38 MinBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Backlight can be set to.
Notes: (Read only property)

145.24.39 MinContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Contrast can be set to.
Notes: (Read only property)

145.24.40 ScreenSize as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the LCD screen attached to the channel.
Notes: (Read and Write property)

145.24.41 Sleeping as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The on/off state of Sleeping.
Notes: Putting the device to sleep turns off the display and backlight in order to save power.
The device will still take commands while asleep, and will wake up if the screen is flushed, or if the contrast or backlight are changed.
When the device wakes up, it will return to its last known state, taking into account any changes that

happened while asleep.
(Read and Write property)

145.24.42 Width as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width of the LCD screen attached to the channel.
Notes: (Read only property)

145.24.43 Events

145.24.44 clearAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when clearAsync completes.

145.24.45 copyAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when copyAsync completes.

145.24.46 drawLineAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when drawLineAsync completes.

145.24.47 drawPixelAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when drawPixelAsync completes.

145.24.48 drawRectAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when drawRectAsync completes.

145.24.49 flushAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when flushAsync completes.

145.24.50 saveFrameBufferAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when saveFrameBufferAsync completes.

145.24.51 setCharacterBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setCharacterBitmapAsync completes.

145.24.52 writeBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when writeBitmapAsync completes.

145.24.53 writeTextAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when writeTextAsync completes.

145.24.54 Constants

Fonts

Constant	Value	Description
kFont5x8	4	5px by 8px font
kFont6x10	3	6px by 10px font
kFont6x12	5	6px by 12px font
kFontUser1	1	User-defined font #1
kFontUser2	2	User-defined font #2

Pixel States

Constant	Value	Description
kPixelStateInvert	2	Invert the pixel state
kPixelStateOff	0	Pixel off state
kPixelStateOn	1	Pixel on state

Screen Sizes

Constant	Value	Description
kScreenSize1x16	4	1x16, One row, 16 column text screen
kScreenSize1x40	&ha	1x40, One row, 40 column text screen
kScreenSize1x8	2	1x8, One row, eight column text screen
kScreenSize2x16	5	2x16, Two row, 16 column text screen
kScreenSize2x20	7	2x20, Two row, 20 column text screen
kScreenSize2x24	9	2x24, Two row, 24 column text screen
kScreenSize2x40	&hb	2x40, Two row, 40 column text screen
kScreenSize2x8	3	2x8, Two row, eight column text screen
kScreenSize4x16	6	4x16, Four row, 16 column text screen
kScreenSize4x20	8	4x20, Four row, 20 column text screen.
kScreenSize4x40	&hc	4x40, Four row, 40 column text screen
kScreenSize64x128	&hd	64x128, 64px by 128px graphic screen
kScreenSizeNone	1	No Screen, Screen size unknown.

145.25 class PhidgetLightSensorMBS

145.25.1 class PhidgetLightSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Light Sensor class gathers data from the light sensor on a Phidget board.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

Xojo Developer Magazine

- 22.3, page 93: Phidgets, What are they and how to use them by Stefanie Juchmes-Simonis

145.25.2 Methods

145.25.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.25.4 Properties

145.25.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another IlluminanceChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between IlluminanceChange events can also affected by the IlluminanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.25.6 Illuminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent illuminance value that the channel has reported.
Notes: This value will always be between MinIlluminance and MaxIlluminance.
(Read only property)

145.25.7 IlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a IlluminanceChange event until the illuminance value has changed by the amount specified by the IlluminanceChangeTrigger.
Notes: Setting the IlluminanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

145.25.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.25.9 MaxIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the IlluminanceChange event will report.
Notes: (Read only property)

145.25.10 MaxIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that IlluminanceChangeTrigger can be set to.
Notes: In lux.
(Read only property)

145.25.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.25.12 MinIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the IlluminanceChange event will report.
Notes: (Read only property)

145.25.13 MinIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that IlluminanceChangeTrigger can be set to.
Notes: (Read only property)

145.25.14 Events

145.25.15 IlluminanceChanged(illuminance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent illuminance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a IlluminanceChangeTrigger has been set to a non-zero value, the IlluminanceChange event will not occur until the illuminance has changed by at least the IlluminanceChangeTrigger value.

illuminance: The current illuminance

145.26 class PhidgetLogMBS

145.26.1 class PhidgetLogMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class hosting the log facilities.

145.26.2 Methods

145.26.3 addSource(source as String, LogLevel as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a source to the Phidget logging system.
Notes: This is useful for declaring a source and setting its log level before sending any messages.

source: The source name
level: The log level of the source

145.26.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.26.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.26.6 disable

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables logging within the Phidget library.

145.26.7 disableNetwork

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disable networking.

145.26.8 disableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables automatic rotation of the log file.

145.26.9 enable(LogLevel as Integer, destination as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables logging within the Phidget library.
Notes: LogLevel: The logging level
destination: The log file path, or "" for STDOUT

145.26.10 enableNetwork(address as string, port as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable networking.

145.26.11 enableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables automatic rotation of the log file (the default).

145.26.12 getRotating(byref size as UInt64, byref keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current log rotation parameters.
Notes: size: The file size above which the log file should be rotated.
keepCount: The number of log files that will be kept after rotation.

145.26.13 Log(LogLevel as Integer, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a message to the Phidget library log.
See also:

- 145.26.14 Log(LogLevel as Integer, Source as String, Message as String) 18993

145.26.14 Log(LogLevel as Integer, Source as String, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a message to the Phidget library log.
See also:

- 145.26.13 Log(LogLevel as Integer, Message as String) 18993

145.26.15 rotate

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually rotate the log file.
Notes: This will only have an effect if automatic rotation is disabled and the log file is larger than the specified maximum file size.

145.26.16 setRotating(size as UInt64, keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets log rotation parameters.
Notes: size: The file size above which the file should be rotated in bytes. Min: 32768 (32 KiB) Def: 10485760 (10 MiB)
keepCount: The number of log files that should be kept after rotation. Min: 0 Def: 1 Max: 64

145.26.17 Sources as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current list of log sources.

145.26.18 Properties

145.26.19 isRotating as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the library is automatically rotating the log file.
Notes: (Read only property)

145.26.20 Level as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the log level for the phidget22 source..
Notes: (Read and Write property)

145.26.21 SourceLevel(source as String) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the log level of the specified log source.
Notes: (Read and Write computed property)

145.26.22 Constants

Log Levels

Constant	Value	Description
LogLevelCritical	1	Critical
LogLevelDebug	5	Debug
LogLevelError	2	Errors
LogLevelInfo	4	Information
LogLevelVerbose	6	Verbose
LogLevelWarning	3	Warnings

145.27 class PhidgetMagnetometerMBS

145.27.1 class PhidgetMagnetometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Magnetometer class gathers magnetic compass data from Phidget boards.
Notes: Phidget magnetometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of compass bearing can be recorded.

If the Phidget you're using also has a gyroscope and an accelerometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.27.2 Methods

145.27.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.27.4 MagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent field strength value that the channel has reported.
Notes: This value will always be between MinMagneticField and MaxMagneticField.

145.27.5 MaxMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
Notes: This check is done after calibration values have been applied, which will affect your magnetometer's

range accordingly.

145.27.6 MinMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
Notes: This check is done after calibration values have been applied, which will affect your magnetometer's range accordingly.

145.27.7 resetCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the CompassCorrectionParameters to their default values.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

145.27.8 saveCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Saves the CalibrationParameters.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

145.27.9 setCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.
T5: Provided by calibration program.

145.27.10 Properties

145.27.11 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure field strength on.
Notes: See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

145.27.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another MagneticFieldChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between MagneticFieldChange events can also affected by the MagneticFieldChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.27.13 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes: Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

145.27.14 MagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a MagneticFieldChange event until the field strength value has changed by the amount specified by the MagneticFieldChangeTrigger.
Notes: Setting the MagneticFieldChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.27.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.27.16 MaxMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that MagneticFieldChangeTrigger can be set to.
Notes: (Read only property)

145.27.17 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.27.18 MinMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that MagneticFieldChangeTrigger can be set to.
Notes: (Read only property)

145.27.19 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported. This is an extremely accurate time measurement streamed from the device.
Notes: If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

145.27.20 Events

145.27.21 MagneticFieldChanged(magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent magnetic field values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a MagneticFieldChangeTrigger has been set to a non-zero value, the MagneticFieldChange event will not occur until the field strength has changed by at least the MagneticFieldChangeTrigger value.

magneticField: The magnetic field values. Index from 0 to 2.

timestamp: The timestamp value

145.28 class PhidgetManagerMBS

145.28.1 class PhidgetManagerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget Manager allows tracking of which Phidgets are available to be controlled from the current program.
Notes: This is useful for listing all available Phidgets so you can select which ones to use at runtime.

You do not need to use a Phidget Manager if you know what Phidgets will be required for your application in advance.

Phidget channels that become available will each send an Attach event, and Phidgets that are removed from the system will send corresponding Detach events. If you are using a Phidget Manager, your program is responsible for keeping track of available Phidgets using these events.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes.

- 22.3, page 93: Phidgets, What are they and how to use them by Stefanie Juchmes-Simonis

145.28.2 Methods

145.28.3 Close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes a Phidget Manager that has been opened.

145.28.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.28.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.28.6 LoadLibrary(file as FolderItem) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets library from given location.
Notes: Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 145.28.7 LoadLibrary(path as String) as Boolean 19003

145.28.7 LoadLibrary(path as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets library from given file path.
Example:

```
// where is the library?

#If TargetWindows
Const path = "Phidget22.dll"
#Else TargetMacOS Then
Const path = "/Library/Frameworks/Phidget22.framework"
#EndIf

If PhidgetManagerMBS.LoadLibrary(path) Then
```

```
MessageBox "OK"

Else

MessageBox PhidgetManagerMBS.LibraryLoadError
Return

End If
```

Notes: Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 145.28.6 LoadLibrary(file as FolderItem) as Boolean 19003

145.28.8 Open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget Manager.
Notes: Be sure to register Attach and Detach event handlers for the Manager before opening it, to ensure you program doesn't miss the events reported for devices already connected to your system.

145.28.9 Properties

145.28.10 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

145.28.11 LibraryLoaded as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the phidgets library was loaded.
Notes: (Read only property)

145.28.12 LibraryLoadError as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message from LoadLibrary call.
Notes: (Read only property)

145.28.13 Events

145.28.14 Attached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a channel is attached.
Notes: Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

145.28.15 Detached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a channel is detached.
Notes: Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

145.28.16 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An error occurred.

145.29 class PhidgetMBS

145.29.1 class PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The core Phidget class deals with functionality common to all Phidgets, such as opening and closing them, or setting Attach, Detach and Event handlers.
Notes: This class is also used to specify the associations between the Phidget software objects and their corresponding physical devices, and makes it possible to determine which Phidget is which in cases where it might otherwise be ambiguous.

This class contains various functions such as Release, Retain, and getParent designed to be used with the Phidget Manager. These specialized functions may be safely ignored if your application does not require a Manager. You can check the Manager API for more information.

All errors are reported as exceptions.
And MBS Plugin schedules all events to raise on main thread, so you can easily update GUI.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 22.3, page 93: Phidgets, What are they and how to use them by Stefanie Juchmes-Simonis

145.29.2 Methods

145.29.3 ChildDevices as PhidgetMBS()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries child devices for hub.

145.29.4 close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes a Phidget channel that has been opened.
Notes: Close will release the channel on the Phidget device, and should be called prior to delete.

145.29.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes: Overwritten by subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

145.29.6 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.29.7 DeviceChannelCount(ChannelClass as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of channels of the specified channel class on the device.
Notes: Pass kChannelClassNothing to get the total number of channels.

145.29.8 finalize(flags as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release memory and threads used by the Phidget library. Should be called prior to unloading the library from the address space.
Example:

```
Var InstanceCount As Integer = PhidgetMBS.InstanceCount // shows 0
If InstanceCount >0 Then
// something wrong. Still objects around!
Else
// explicit shutdown library
PhidgetMBS.finalize(0)
End If
```

Notes: This function is intended for use in special cases where it is desired for the Phidget library to be unloaded before a program's termination. All other API calls are unsafe after calling this.

flags: Reserved for future use. Pass 0.

Please do not call if you have Xojo Phidget objects around. Check InstanceCount please.

145.29.9 open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget channel.
Notes: The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName
IsLocal
IsRemote

Open will return immediately, with the attachment process proceeding asynchronously. Use the Attach event or Attached property to determine when the channel is ready to use.

145.29.10 openWaitForAttachment(timeoutMs as UInt32 = 1000)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget channel and waits a defined amount of time for the device to attach.
Notes: The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName
IsLocal
IsRemote

OpenWaitForAttachment() will block until the channel is attached or a timeout occurs. A timeout value of 0 will wait forever.

145.29.11 Poll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for pending events to dispatch.
Notes: Our plugin dispatches events in two ways. If the event is raised on main thread, it will be raised directly. But if it arrives on other threads, it's queued and then dispatched via a timer on the main thread when there is idle time.
This poll method allows you to dispatch queued events now.

145.29.12 resetLibrary

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes all channels, and stops all threads.
Notes: The library is reset to a newly loaded state. All channel handles have been freed.
This function is intended for use in special cases where the library cannot be unloaded between program runs, such as LabVIEW and Unity Editor.

145.29.13 writeDeviceLabel(deviceLabel as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a label to the device in the form of a string in the device flash memory.
Notes: This label can then be used to identify the device, and will persist across power cycles.

The label can be at most 10 UTF-16 code units. Most unicode characters take up a single code unit, but some, such as emoji, can take several.

Some older devices can not have their labels set from Windows. For these devices the label should be set from Linux or macOS.

Note: You should be careful when writing labels in your code, because the label is stored in flash which can only be re-written around 10,000 times before it will no longer write. If your program is complex, be sure to test it thoroughly before using WriteLabel to avoid accidentally burning out the flash.

145.29.14 Properties

145.29.15 Attached as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the attached status of channel.
Notes: A Phidget is attached after it has been opened and the Phidget library finds and connects to the corresponding hardware device.
Most API calls are only valid on attached Phidgets.
(Read only property)
See also:

- 145.29.62 Attached 19022

145.29.16 Channel as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel index of the channel on the device.
Notes: Specifies the channel index to be opened. The default channel is 0. Set to kChannelAny to open any channel on the specified device.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.17 ChannelClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the channel class of the channel.
Notes: (Read only property)

145.29.18 ChannelClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the channel class the channel belongs to.
Notes: (Read only property)

145.29.19 ChannelName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the channel's name.
Notes: This name serves as a description of the specific nature of the channel.
(Read only property)

145.29.20 ChannelSubclass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the subclass for this channel.
Notes: Allows for identifying channels with specific characteristics without needing to know the exact device and channel index.
(Read only property)

145.29.21 ClientVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The major version of the client.
Notes: (Read only property)

145.29.22 ClientVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minor version of the client.
Notes: (Read only property)

145.29.23 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another change event.
Notes: Unit: milliseconds (ms)
(Read and Write property)

145.29.24 DataRate as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataRate is the frequency of events from the device.
Notes: The data rate is bounded by MinDataRate and MaxDataRate.
Changing DataRate will change the channel's DataInterval to a corresponding value, rounded to the nearest integer number of milliseconds.
The timing between events can also affected by the change trigger.
(Read and Write property)

145.29.25 DeviceClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the device class for the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.26 DeviceClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the device class for the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.27 DeviceID as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the DeviceID for the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.28 DeviceLabel as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device channel.
Notes: Gets the label of the Phidget which this channel is a part of. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using writeDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

Specifies the label of the Phidget to be opened. Leave un-set to open any label. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using Phidget_writeDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.29 DeviceName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.30 DeviceSerialNumber as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the Phidget which this channel is a part of.
Notes: If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

Specifies the serial number of the Phidget to be opened. Leave un-set, or set to kSerialNumberAny to open any serial number.
If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.31 DeviceSKU as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the SKU (part number) of the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.32 DeviceVersion as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the firmware version of the Phidget which this channel is a part of.
Notes: (Read only property)

145.29.33 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

145.29.34 Hub as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hub that this channel is attached to.
Notes: (Read only property)

145.29.35 HubPort as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hub port index of the VINT Hub port that the channel is attached to.
Notes: Specifies the hub port index of the VINT Hub port to open this channel on. Leave un-set, or set to kHubPortAny to open the channel on any VINT Hub port

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.36 HubPortCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of VINT ports present on the VINT Hub that the channel is attached to.
Notes: (Read only property)

145.29.37 HubPortSpeed as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configures the communication speed for this VINT device.
Notes: Both the HubPortSupportsSetSpeed and VINTDeviceSupportsSetSpeed must be true in order to set the hub port speed.Available speeds are: 100000, 160000, 250000, 400000, 500000, 800000 and 1000000. Setting any other speed will select the nearest lower supported speed. The upper speed is bound by the lesser of MaxHubPortSpeed and MaxVINTDeviceSpeed. Set the speed to PHIDGET_HUBPORTSPEED_AUTO to enable Auto Set Speed on Hubs that support it (enabled by default).
(Read and Write property)

145.29.38 HubPortSupportsAutoSetSpeed as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the communication speed of this VINT port can be set automatically.
Notes: (Read only property)

145.29.39 HubPortSupportsSetSpeed as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Indicates that the communication speed of this VINT port can be set.
Notes: (Read only property)

145.29.40 InstanceCount as Integer

MBS Phidgets Plugin, Plugin Version: 24.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries number of Xojo Phidget instances.
Example:

```
Var InstanceCount1 As Integer = PhidgetMBS.InstanceCount // shows 0

Var p As New PhidgetGyroscopeMBS

Var InstanceCount2 As Integer = PhidgetMBS.InstanceCount // shows 1

p = Nil

Var InstanceCount3 As Integer = PhidgetMBS.InstanceCount // shows 0

Break
```

Notes: The plugin has a counter to make sure we initialize automatically on the first object creation and track how many there are.
(Read only property)

145.29.41 IsChannel as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if the handle is for a channel.
Notes: Returns true if the PhidgetHandle is for a channel. Mostly for use alongside Phidget_getParent() to distinguish channel handles from device handles.
(Read only property)

145.29.42 IsHubPortDevice as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this channel is a VINT Hub port channel, or part of a VINT device attached to a hub port.
Notes: Specifies whether this channel should be opened on a VINT Hub port directly, or on a VINT device attached to a hub port.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.43 IsLocal as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True when this channel is attached directly on the local machine, or false otherwise.
Notes: Set to True if the channel is to be opened locally, and not over a network. If both this and IsRemote are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.

(Read and Write property)

145.29.44 IsOpen as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if Phidget_open() has been called on this channel.
Notes: (Read only property)

145.29.45 IsRemote as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True when this channel is attached via a Phidget network server, or false otherwise.
Notes: Set to True if the channel is to be opened remotely, rather than locally. If both this and IsLocal are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

In order for your program to have access to remote Phidgets, you must use the Networking API to EnableServerDiscovery or AddServer.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

145.29.46 LibraryVersion as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the version of the Phidget library being used by the program in human readable form.
Notes: (Read only property)

145.29.47 LibraryVersionNumber as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the version of the Phidget library being used by the program as a version number string.
Notes: (Read only property)

145.29.48 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: (Read only property)

145.29.49 MaxDataRate as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataRate can be set to.
Notes: (Read only property)

145.29.50 MaxHubPortSpeed as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The max communication speed of a high-speed capable VINT Port.
Notes: (Read only property)

145.29.51 MeshMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mesh mode.
Notes: (Read and Write property)

145.29.52 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataRate can be set to.
Notes: (Read only property)

145.29.53 MinDataRate as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataRate can be set to.
Notes: (Read only property)

145.29.54 Parent as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the handle of the parent device of the given Phidget handle.
Notes: For example, this would refer to the device the channel is a part of, or the Hub that a device is plugged into.

This is useful when used alongside a Phidget Manager to create device trees like the one in the Phidget Control Panel.

Phidget_release() must be called on the handle returned by this function to release the reference created by this call.

This can be used to travel up the device tree and get device information at each step.
The root device will return a null handle
Parent handles always refer to devices. See IsChannel()
(Read only property)

145.29.55 ServerHostname as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hostname of the Phidget network server for network attached Phidgets.
Notes: Fails if the channel is not connected to a Phidget network server.
(Read only property)

145.29.56 ServerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Phidget network server the channel is attached to, if any.
Notes: Fails if the channel is not connected to a Phidget network server.
(Read and Write property)

145.29.57 ServerPeerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the peer name of the channel's server.
Notes: Gets the peer name (address and port) of the Phidget server for network attached Phidgets, formatted as: address:port
Fails if the channel is not connected to a Phidget network server.
(Read only property)

145.29.58 ServerUniqueName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the unique name for the server the channel is attached to, if any.
Notes: This is either a unique mDNS name, or the name specified in addServer
Fails if the channel is not connected to a Phidget network server.
(Read only property)

145.29.59 ServerVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The major version of the server.
Notes: (Read only property)

145.29.60 ServerVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minor version of the server.
Notes: (Read only property)

145.29.61 Events

145.29.62 Attached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the channel is attached to a physical channel on a Phidget.
Notes: This event is the recommended place to configuration properties of the channel such as the data interval or change trigger.
See also:

- 145.29.15 Attached as Boolean 19010

145.29.63 Detached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the channel is detached from a Phidget device channel.
Notes: This typically occurs when the Phidget device is removed from the system.

145.29.64 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This event is called when an error condition has been detected.
Notes: See the documentation for your specific channel class to see what error events it might throw.

145.29.65 PropertyChanged(propertyName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when a property is changed externally from the user channel, usually from a network client attached to the same channel.

145.29.66 Constants

Constants

Constant	Value	Description
kChannelAny	-1	The constant for any channel. Pass to Channel to open any channel.
kHubPortAny	-1	The constant for any port. Pass to HubPort to open any hub port.
kIRMaxCodeBitCount	&h80	One of the constants for IR sender/receiver.
kIRMaxCodeStrLength	&h21	One of the constants for IR sender/receiver.
kIRRawDataLongSpace	&hffffffff	One of the constants for IR sender/receiver.
kLabelAny	""	The constant to pick any label. Pass to DeviceLabel to open any label.
kSerialNumberAny	-1	The constant for any serial number. Pass to DeviceSerialNumber to open any serial number.
kServerAuthRequired	1	A flag constant for server.

Channel Class

Constant	Value	Description
kChannelClassAccelerometer	1	Accelerometer channel
kChannelClassBLDCMotor	&H23	BLDC motor channel
kChannelClassCapacitiveTouch	&He	Capacitive Touch channel
kChannelClassCurrentinput	2	Current input channel
kChannelClassCurrentoutput	&H26	Current output channel
kChannelClassDataAdapter	3	Data Adapter
kChannelClassDcmotor	4	DC motor channel
kChannelClassDictionary	&H24	Dictionary
kChannelClassDigitalInput	5	Digital input channel
kChannelClassDigitalOutput	6	Digital output channel
kChannelClassDistanceSensor	7	Distance sensor channel
kChannelClassEncoder	8	Encoder channel
kChannelClassFirmwareUpgrade	&H20	Firmware Upgrade
kChannelClassFrequencyCounter	9	Frequency counter channel
kChannelClassGeneric	&H21	Generic channel
kChannelClassGps	&Ha	GPS channel
kChannelClassGyroscope	&Hc	Gyroscope channel
kChannelClassHub	&Hd	VINT Hub channel
kChannelClassHumiditySensor	&Hf	Humidity sensor channel
kChannelClassIR	&H10	IR channel
kChannelClassLcd	&Hb	LCD channel
kChannelClassLEDArray	&H28	LED Array
kChannelClassLightSensor	&H11	Light sensor channel
kChannelClassMagnetometer	&H12	Magnetometer channel
kChannelClassMeshdongle	&H13	Mesh Dongle
kChannelClassMotorPositionController	&H22	Motor position control channel.
kChannelClassMotorVelocityController	&H27	Motor Velocity Controller
kChannelClassNothing	0	Unknown
kChannelClassPhSensor	&H25	pH sensor channel
kChannelClassPowerguard	&H14	Power guard channel
kChannelClassPressureSensor	&H15	Pressure sensor channel
kChannelClassRCServo	&H16	RC Servo channel
kChannelClassResistanceInput	&H17	Resistance input channel
kChannelClassRFID	&H18	RFID channel
kChannelClassSoundSensor	&H19	Sound sensor channel
kChannelClassSpatial	&H1A	Spatial channel
kChannelClassStepper	&H1B	Stepper channel
kChannelClassTemperatureSensor	&H1C	Temperature sensor channel
kChannelClassVoltageInput	&H1D	Voltage input channel
kChannelClassVoltageOutput	&H1E	Voltage output channel
kChannelClassVoltageRatioInput	&H1F	Voltage ratio input channel

Channel Sub Class

Constant	Value	Description
kChannelSubClassDigitaloutputDutyCycle	&H10	Digital output duty cycle
kChannelSubClassDigitaloutputFrequency	&H12	Digital output frequency
kChannelSubClassDigitaloutputLedDriver	&H11	Digital output LED driver
kChannelSubClassEncoderModeSettable	&H60	Encoder IO mode settable
kChannelSubClassLCDGraphic	&H50	Graphic LCD
kChannelSubClassLCDText	&H51	Text LCD
kChannelSubClassNone	1	No subclass
kChannelSubClassSpatialAhrs	&H70	Spatial AHRS/IMU
kChannelSubClassTemperaturesensorRtd	&H20	Temperature sensor RTD
kChannelSubClassTemperaturesensorThermocouple	&H21	Temperature sensor thermocouple
kChannelSubClassVoltageInputSensorPort	&H30	Voltage sensor port
kChannelSubClassVoltageRatioInputBridge	&H41	Voltage ratio bridge input
kChannelSubClassVoltageRatioInputSensorPort	&H40	Voltage ratio sensor port

Device Class

Constant	Value	Description
kDeviceClassAccelerometer	1	PhidgetAccelerometer device
kDeviceClassAdvancedServo	2	PhidgetAdvancedServo device
kDeviceClassAnalog	3	PhidgetAnalog device
kDeviceClassBridge	4	PhidgetBridge device
kDeviceClassDataAdapter	&H19	PhidgetDataAdapter device
kDeviceClassDictionary	&H18	Dictionary device
kDeviceClassEncoder	5	PhidgetEncoder device
kDeviceClassFirmwareUpgrade	&H17	Firmware Upgrade
kDeviceClassFrequencyCounter	6	PhidgetFrequencyCounter device
kDeviceClassGeneric	&H16	Generic class.
kDeviceClassGPS	7	PhidgetGPS device
kDeviceClassHub	8	Phidget VINT Hub device
kDeviceClassInterfaceKit	9	PhidgetInterfaceKit device
kDeviceClassIR	&Ha	PhidgetIR device
kDeviceClassLed	&Hb	PhidgetLED device
kDeviceClassLEDArray	&H1A	LED Array
kDeviceClassMeshDongle	&Hc	Mesh Dongle
kDeviceClassMotorControl	&Hd	PhidgetMotorControl device
kDeviceClassNothing	0	Unknown device.
kDeviceClassPhsensor	&He	PhidgetPHSensor device
kDeviceClassRFID	&Hf	PhidgetRFID device
kDeviceClassServo	&H10	PhidgetServo device
kDeviceClassSpatial	&H11	PhidgetSpatial device
kDeviceClassStepper	&H12	PhidgetStepper device
kDeviceClassTemperatureSensor	&H13	PhidgetTemperatureSensor device
kDeviceClassTextLCD	&H14	PhidgetTextLCD device
kDeviceClassVint	&H15	Phidget VINT Hub device

Error Codes

Constant	Value	Description
kError2Big	&H36	
kErrorAccess	7	Access (Permission) Issue: Access to the resource (file) is denied. This can happen when enabling logging.
kErrorAgain	&H16	
kErrorBadConnection	&H42	Bad Connection
kErrorBadCurrentReading	&H41	Bad Current Readings
kErrorBadPassword	&H25	
kErrorBadPowerSupply	&H3E	Bad Power Supply
kErrorBadVersion	&H37	
kErrorBusy	9	Resource Busy: Specified resource is in use. This error code is not normally used.
kErrorClosed	&H38	Closed: Channel was closed. This can happen if a channel is closed while openWaitForAttachment is waiting.
kErrorConnRef	&H23	
kErrorConnReset	&H2E	
kErrorDuplicate	&H1B	Duplicate: Duplicated request. Can happen with some Net API calls, such as trying to add the same server twice.
kErrorEof	&H1F	
kErrorEventBadConnection	&H1011	
kErrorEventBadPower	&H1008	
kErrorEventBadVersion	1	
kErrorEventBusy	2	
kErrorEventDispatch	4	
kErrorEventEnergyDump	&H100E	
kErrorEventEStop	&H1015	External Stop Condition
kErrorEventFailSafe	&H100C	
kErrorEventFailure	5	
kErrorEventFault	&H1014	Fault Condition
kErrorEventInvalidState	&H1010	
kErrorEventMotorStall	&H100F	
kErrorEventNetwork	3	
kErrorEventOk	&H1000	
kErrorEventOutOfRange	&H1007	
kErrorEventOutOfRangeHigh	&H1012	Out of Range High
kErrorEventOutOfRangeLow	&H1013	Out of Range Low
kErrorEventOverCurrent	&H1006	
kErrorEventOverrun	&H1002	
kErrorEventOverTemp	&H1005	
kErrorEventOverVoltage	&H100B	
kErrorEventPacketLost	&H1003	
kErrorEventSaturation	&H1009	
kErrorEventVoltageError	&H100D	
kErrorEventWrap	&H1004	
kErrorExist	&Ha	
kErrorFailSafe	&H3B	
kErrorFault	8	
kErrorFBig	&H11	
kErrorHallSensorError	&H40	Hall Sensor Error
kErrorHostUnreach	&H30	
kErrorInterrupted	4	Op Interrupted: The operation was interrupted; either from an error, or because the device was closed.
kErrorInvalid	&Hd	Invalid: Invalid or malformed command. This can be caused by sending a command to a device which is not supported in it's current configuration.
kErrorInvalidArg	&H15	Invalid Argument: One or more of the parameters passed to the function is not accepted by the channel in its current configuration. This may also be an indication that a NULL pointer was passed where a valid pointer is required.
kErrorInvalidPacket	&H35	
kErrorIO	5	

Hub Port Speed

Constant	Value	Description
kHubPortSpeedAuto	0	The value for auto speed.

Device IDs

Constant	Value	Description
kID1000	2	PhidgetServo 1-Motor (1000)
kID1001	3	PhidgetServo 4-Motor (1001)
kID1002	4	PhidgetAnalog 4-Output (1002)
kID1008	5	PhidgetAccelerometer 2-Axis (1008)
kID1010_1013_1018_1019	6	PhidgetInterfaceKit 8/8/8 (1010, 1013, 1018, 1019)
kID1011	7	PhidgetInterfaceKit 2/2/2 (1011)
kID1012	8	PhidgetInterfaceKit 0/16/16 (1012)
kID1014	9	PhidgetInterfaceKit 0/0/4 (1014)
kID1015	&ha	PhidgetLinearTouch (1015)
kID1016	&hb	PhidgetCircularTouch (1016)
kID1017	&hc	PhidgetInterfaceKit 0/0/8 (1017)
kID1023	&hd	PhidgetRFID (1023)
kID1024	&he	PhidgetRFID Read-Write (1024)
kID1030	&hf	PhidgetLED-64 (1030)
kID1031	&h10	PhidgetLED-64 Advanced (1031)
kID1032	&h11	PhidgetLED-64 Advanced (1032)
kID1040	&h12	PhidgetGPS (1040)
kID1041	&h13	PhidgetSpatial 0/0/3 Basic (1041)
kID1042	&h14	PhidgetSpatial 3/3/3 Basic (1042)
kID1043	&h15	PhidgetSpatial Precision 0/0/3 High Resolution (1043)
kID1044	&h16	PhidgetSpatial Precision 3/3/3 High Resolution (1044)
kID1045	&h17	PhidgetTemperatureSensor IR (1045)
kID1046	&h18	PhidgetBridge 4-Input (1046)
kID1047	&h19	PhidgetEncoder HighSpeed 4-Input (1047)
kID1048	&h1a	PhidgetTemperatureSensor 4-input (1048)
kID1049	&h1b	PhidgetSpatial 0/0/3 (1049)
kID1051	&h1c	PhidgetTemperatureSensor 1-Input (1051)
kID1052	&h1d	PhidgetEncoder Mechanical (1052)
kID1053	&h1e	PhidgetAccelerometer 2-Axis (1053)
kID1054	&h1f	PhidgetFrequencyCounter (1054)
kID1055	&h20	PhidgetIR (1055)
kID1056	&h21	PhidgetSpatial 3/3/3 (1056)
kID1057	&h22	PhidgetEncoder HighSpeed (1057)
kID1058	&h23	PhidgetPHSensor (1058)
kID1059	&h24	PhidgetAccelerometer 3-Axis (1059)
kID1060	&h25	PhidgetMotorControl LV (1060)
kID1061	&h26	PhidgetAdvancedServo 8-Motor (1061)
kID1062	&h27	PhidgetStepper Unipolar 4-Motor (1062)
kID1063	&h28	PhidgetStepper Bipolar 1-Motor (1063)
kID1064	&h29	PhidgetMotorControl HC (1064)
kID1065	&h2a	PhidgetMotorControl 1-Motor (1065)
kID1066	&h2b	PhidgetAdvancedServo 1-Motor (1066)
kID1067	&h2c	PhidgetStepper Bipolar HC (1067)
kID1202_1203	&h2d	PhidgetTextLCD 20x2 with PhidgetInterfaceKit 8/8/8 (1201, 1202, 1203)
kID1204	&h2e	PhidgetTextLCD Adapter (1204)
kID1215_1218	&h2f	PhidgetTextLCD 20x2 (1215/1216/1217/1218)
kID1219_1222	&h30	PhidgetTextLCD 20x2 with PhidgetInterfaceKit 0/8/8 (1219, 1220, 1221, 1222)
kIDADP1000	&h31	pH Adapter
kIDADP1001	&h84	RS232 Adapter
kIDADPRS485_422	&h85	RS485/422 Prototype
kIDADPSerial	&h86	Serial Prototype
kIDCURLOOP	&h7a	4-20mA Output
kIDDAQ1000	&h33	Analog Input Module x8
kIDDAQ1200	&h34	Digital Input 4
kIDDAQ1300	&h35	Digital Input 4 Isolated
kIDDAQ1301	&h36	Digital Input 16
kIDDAQ1400	&h37	Versatile Input
kIDDAQ1500	&h38	Bridge

Mesh Modes

Constant	Value	Description
kMeshModeRouter	1	Router mode
kMeshModeSleepyEndDevice	2	Sleepy end device mode

Timeouts

Constant	Value	Description
kTimeoutDefault	300000000	Pass to OpenWaitForAttachment() for the default timeout.
kTimeoutInfinite	0	Pass to OpenWaitForAttachment() for an infinite timeout.

145.30 class PhidgetMissingFunctionExceptionMBS

145.30.1 class PhidgetMissingFunctionExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception to report a missing function.
Notes: This exception type is raised when a library function should be called, but is not available.
Subclass of the RuntimeException class.
Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

145.31 class PhidgetMotorPositionControllerMBS

145.31.1 class PhidgetMotorPositionControllerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Motor Position Controller class controlls the position, velocity and acceleration of the attached motor.
Notes: It also contains various other control and monitoring functions that aid in the control of the motor.

For specifics on how to use this class, we recommend watching our video on the Phidget Motor Position Controller class.
Subclass of the PhidgetMBS class.
Blog Entries

- News from the MBS Xojo Plugins Version 25.0
- MBS Xojo Plugins, version 25.0pr8
- Rewritten Phidgets Plugin

145.31.2 Methods

145.31.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position.
Notes: Useful for zeroing position.

145.31.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.31.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Motor Position Controller channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.31.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.31.7 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes: Calls setTargetVelocityAsyncCompleted later.

145.31.8 Properties

145.31.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's velocity.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.31.10 ActiveCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current limit that the controller is actively following.
Notes: The SurgeCurrentLimit, CurrentLimit, and temperature will impact this value.
(Read only property)

145.31.11 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Motor current limit
Notes: The controller will limit the current through the motor to this value.

Unit: amperes (A)
(Read and Write property)

145.31.12 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current Regulator Gain.
Notes: Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is

too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions. Each DC Motor we sell specifies a suitable current regulator gain.
(Read and Write property)

145.31.13 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another CurrentChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.31.14 DeadBand as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Depending on your system, it may not be possible to bring the position error (TargetPosition - Position) to zero.
Notes: A small error can lead to the motor continually 'hunting' for a target position, which can cause unwanted effects. By setting a non-zero DeadBand, the position controller will relax control of the motor within the deadband, preventing the 'hunting' behavior.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.31.15 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent duty cycle value that the controller has reported.
Notes: This value will be between -1 and 1 where a sign change (¬±) is indicitave of a direction change.
Note that DutyCycle is merely an indication of the average voltage across the motor. At a constant load, an increase in DutyCycle indicates an increase in motor speed.

The units of DutyCycle refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Unit: duty cycle (duty cycle)
(Read only property)

145.31.16 EnableExpectedPosition as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, the ExpectedPosition will be sent back from the controller.
Notes: (Read and Write property)

145.31.17 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When engaged, a motor has the ability to be positioned. When disengaged, no commands are sent to the motor.
Notes: This function is useful for completely relaxing a motor once it has reached the target position.
(Read and Write property)

145.31.18 ExpectedPosition as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ExpectedPosition represents the current position the controller is tracking along the trapezoidal motion curve.
Notes: This controller uses trapezoidal motion profiling combined with a PID loop to accurately track position. The ExpectedPosition represents the current position the controller is tracking along the trapezoidal motion curve. The error of your PID loop is calculated by taking the difference of Position and ExpectedPosition. You can use this value to verify your controller is working as expected.

- Set EnableExpectedPosition to TRUE to enable the change event for this property.
- Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.

(Read only property)

145.31.19 FailsafeBrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting allows you to choose whether motor will forcibly stop once it enters a FAILSAFE state.
Notes:

- A setting of FALSE will simply stop applying power to the motor, allowing it to spin down naturally.
- A setting of TRUE will apply braking up to the FailsafeCurrentLimit, actively stopping the motor

(Read and Write property)

145.31.20 FailsafeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When the controller enters a FAILSAFE state, the controller will limit the current through the motor to the FailsafeCurrentLimit value.
Notes: (Read and Write property)

145.31.21 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FanMode dictates the operating condition of the fan.
Notes: Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70¬∞C and it will remain on until the temperature falls below 55¬∞C.
If the FanMode is off, the controller will still turn on the fan if the temperature reaches 85¬∞C and it will remain on until it falls below 70¬∞C.
(Read and Write property)

145.31.22 Inductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The controller will attempt to measure the inductance of your motor when opened.
Notes: This value is used to improve control of the motor.

Set this value during the Attach event to skip motor characterization (including the audible beeps). You can use a previously saved Inductance value, or information from your motor's datasheet.
(Read and Write property)

145.31.23 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The encoder interface mode. Match the mode to the type of encoder you have attached.
Notes: It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

145.31.24 Kd as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Derivative gain constant.
Notes: A higher Kd will help reduce oscillations.
(Read and Write property)

145.31.25 Ki as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Integral gain constant.
Notes: The integral term will help eliminate steady-state error.
(Read and Write property)

145.31.26 Kp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proportional gain constant.
Notes: A small Kp value will result in a less responsive controller, however, if Kp is too high, the system can become unstable.
(Read and Write property)

145.31.27 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.28 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum current limit that can be set for the device.
Notes: Unit: amperes (A)
(Read only property)

145.31.29 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum current regulator gain for the device.
Notes: (Read only property)

145.31.30 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.31.31 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.31.32 MaxInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Inductance can be set to.
Notes: See Inductance for details.
(Read only property)

145.31.33 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetPosition can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.34 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of StallVelocity.
Notes: (Read only property)

145.31.35 MaxSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.31.36 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VelocityLimit can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.37 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.38 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum current limit that can be set for the device.
Notes: Unit: amperes (A)
(Read only property)

145.31.39 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum current regulator gain for the device.
Notes: (Read only property)

145.31.40 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.31.41 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.31.42 MinInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Inductance can be set to.
Notes: See Inductance for details.
(Read only property)

145.31.43 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetPosition can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.44 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of StallVelocity.
Notes: (Read only property)

145.31.45 MinSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.31.46 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VelocityLimit can be set to.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.47 NormalizePID as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set this parameter to true to adjust PID math to standardized units.
Notes: (Read and Write property)

145.31.48 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes: This value will always be between MinPosition and MaxPosition.

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

145.31.49 PositionType as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines whether the controller uses the hall effect sensors or an encoder for position information.
Notes: This setting is locked in once the channel is Engaged and cannot be changed until the channel is reset.
(Read and Write property)

145.31.50 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Change the units of your parameters so that your application is more intuitive.
Notes: Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.31.51 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.
Notes: Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will

then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately disengage the motor (i.e. Engaged will be set to false) and an error will be reported to your program.

A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger.

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

145.31.52 SurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The SurgeCurrentLimit allows for increased performance from your motor.
Notes: The controller will limit the current through your motor to the SurgeCurrentLimit briefly, then scale current down to the CurrentLimit.
View ActiveCurrentLimit for information about what current limit the controller is actively following.
(Read and Write property)

145.31.53 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the controller is configured and the TargetPosition is set, the motor will try to reach the TargetPostiion.
Notes: If the DeadBand is non-zero, the final position of the motor may not match the TargetPosition
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.31.54 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the motor velocity will be limited by this value.
Notes: VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.31.55 Events

145.31.56 DutyCycleUpdated(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent duty cycle value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date access to all properties.

145.31.57 ExpectedPositionChanged(expectedPosition as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The expected position changed.
Notes: The most recent position being tracked by the Position Control loop, which occurs when the DataInterval has elapsed.

- Regardless of the DataInterval, this event will occur only when the expected position value has changed from the previous value reported.
- Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.

145.31.58 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use

more intuitive units such as rotations, or degrees.

position: The position value

145.31.59 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Called by setTargetVelocityAsync when completed.

145.31.60 Constants

Encoder interface mode

Constant	Value	Description
kEncoderIOModeCollector10K	5	Open Collector 10K, 10kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeCollector2K2	4	Open Collector 2.2K, 2.2kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeLineDriver10K	3	Line Driver 10K, 10kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModeLineDriver2K2	2	Line Driver 2.2K, 2.2kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModePushPull	1	Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

Fan Modes

Constant	Value	Description
kFanModeAuto	3	The fan will be automatically controlled based on temperature.
kFanModeOff	1	Turns the fan off.
kFanModeOn	2	Turns the fan on.

Position Types

Constant	Value	Description
kPositionTypeEncoder	1	Encoder.
kPositionTypeHallSensor	2	Hall sensor.

145.32 class PhidgetMotorVelocityControllerMBS

145.32.1 class PhidgetMotorVelocityControllerMBS

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Motor Velocity Controller class controls the velocity and acceleration of the attached motor.
Notes: It also contains various other control and monitoring functions that aid in the control of the motor. Subclass of the PhidgetMBS class.
Blog Entries

- News from the MBS Xojo Plugins Version 25.0
- MonkeyBread Software Releases the MBS Xojo Plugins in version 25.0
- MBS Xojo Plugins, version 25.0pr8

145.32.2 Methods

145.32.3 Constructor

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates an instance of a Phidget channel.
Notes: Once created the channel may need to be configured to match the physical device and channel index you want to attach to, and then be opened by calling Open().

145.32.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with the specified failsafe time.
Notes: Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe is enabled, the timer must be reset within the specified time or the channel will enter a failsafe state. For Motor Velocity Controller channels, this will disengage the motor. The failsafe timer can be reset by using any API call except for the following:

- PhidgetMotorVelocityController_setRescaleFactor()
- 'get' API calls

145.32.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See PhidgetMotorVelocityController_enableFailsafe() for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.32.6 Properties

145.32.7 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's velocity.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read and Write property)

145.32.8 ActiveCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current limit that the controller is actively following.
Notes: The SurgeCurrentLimit, CurrentLimit, and temperature will impact this value.
(Read only property)

145.32.9 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The controller will limit the current through the motor to the CurrentLimit value.
Notes: View ActiveCurrentLimit for information about what current limit the controller is actively following.
(Read and Write property)

145.32.10 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another VelocityChange / DutyCycleUpdate event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
(Read and Write property)

145.32.11 DeadBand as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This parameter specifies a minimum Velocity below which your system will relax if the TargetVelocity is set to 0, to prevent unwanted jitter.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read and Write property)

145.32.12 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent DutyCycle value that the controller has reported.
Notes: This value will be between -1 and 1 where a sign change (¬±) is indicitave of a direction change.

DutyCycle is an indication of the average voltage across the motor. At a constant load, an increase in DutyCycle indicates an increase in motor speed.
(Read only property)

145.32.13 EnableExpectedVelocity as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, the ExpectedVelocity will be sent back from the controller.
Notes: (Read and Write property)

145.32.14 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When engaged, the controller has the ability to be controlled.
Notes: When disengaged, the controller will stop powering to your motor, it will instead be in a freewheel state.
(Read and Write property)

145.32.15 ExpectedVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This controller uses trapezoidal motion profiling combined with a PID loop to accurately track velocity.
Notes: The ExpectedVelocity represents the current velocity the controller is tracking along the trapezoidal motion curve. The error of your PID loop is calculated by taking the difference of Velocity and ExpectedVelocity. You can use this value to verify your controller is working as expected.

- Set EnableExpectedVelocity to TRUE to enable the change event for this property.
- Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.

(Read only property)

145.32.16 FailsafeBrakingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting allows you to choose whether motor will forcibly stop once it enters a FAILSAFE state.
Notes:

- A setting of FALSE will simply stop applying power to the motor, allowing it to spin down naturally.
- A setting of TRUE will apply braking up to the FailsafeCurrentLimit, actively stopping the motor

(Read and Write property)

145.32.17 FailsafeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When the controller enters a FAILSAFE state, the controller will limit the current through the motor to the FailsafeCurrentLimit value.
Notes: (Read and Write property)

145.32.18 Inductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Inductance value.
Notes: The controller will attempt to measure the inductance of your motor when opened. This value is used to improve control of the motor.

Set this value during the Attach event to skip motor characterization (including the audible beeps). You can use a previously saved Inductance value, or information from your motor's datasheet.
(Read and Write property)

145.32.19 Kd as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Derivative gain constant.
Notes: A higher Kd will help reduce oscillations.
(Read and Write property)

145.32.20 Ki as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Integral gain constant.
Notes: The integral term will help eliminate steady-state error.
(Read and Write property)

145.32.21 Kp as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proportional gain constant.
Notes: A small Kp value will result in a less responsive controller, however, if Kp is too high, the system can become unstable.
(Read and Write property)

145.32.22 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read only property)

145.32.23 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum current limit that can be set for the device.
Notes: (Read only property)

145.32.24 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: (Read only property)

145.32.25 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling enableFailsafe().
Notes: (Read only property)

145.32.26 MaxInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Inductance can be set to.
Notes: See Inductance for details.
(Read only property)

145.32.27 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of StallVelocity.
Notes: (Read only property)

145.32.28 MaxSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.32.29 MaxTargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetVelocity can be set to.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read only property)

145.32.30 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read only property)

145.32.31 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum current limit that can be set for the device.
Notes: (Read only property)

145.32.32 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: (Read only property)

145.32.33 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling enableFailsafe().
Notes: (Read only property)

145.32.34 MinInductance as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Inductance can be set to.
Notes: See Inductance for details.

(Read only property)

145.32.35 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of StallVelocity.
Notes: (Read only property)

145.32.36 MinSurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SurgeCurrentLimit can be set to.
Notes: (Read only property)

145.32.37 MinTargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetVelocity can be set to.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read only property)

145.32.38 PositionType as Integer

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines whether the controller uses the hall effect sensors or an encoder for velocity information.
Notes: This setting is locked in once the channel is Engaged and cannot be changed until the channel is reset.
(Read and Write property)

145.32.39 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Change the units of your parameters so that your application is more intuitive.
Notes: Units for Acceleration, DeadBand, ExpectedVelocity, TargetVelocity, and Velocity can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

145.32.40 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lowest velocity you would expect from your motor.
Notes: Before reading this description, it is important to note the difference between the units of StallVelocity and DutyCycle.

- DutyCycle is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
- StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the DutyCycle, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately disengage the motor (i.e. Engaged will be set to false) and an error will be reported to your program.

- A 'dangerous stall' will occur faster when the DutyCycle is higher (i.e. when the average voltage across the motor is higher)
- A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger .

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

145.32.41 SurgeCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The SurgeCurrentLimit allows for increased performance from your motor. The controller will limit the current through your motor to the SurgeCurrentLimit briefly, then scale current down to the CurrentLimit.
Notes: View ActiveCurrentLimit for information about what current limit the controller is actively following.
(Read and Write property)

145.32.42 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the motor velocity will be limited by this value.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read and Write property)

145.32.43 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.
(Read only property)

145.32.44 Events

145.32.45 DutyCycleUpdated(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent duty cycle value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date

access to all properties.

145.32.46 ExpectedVelocityChanged(expectedVelocity as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity being tracked by the Velocity Control loop, which occurs when the DataInterval has elapsed.
Notes: Regardless of the DataInterval, this event will occur only when the velocity value has changed from the previous value reported.
Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.

145.32.47 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: Use the RescaleFactor to convert the units of this property to more intuitive units, such as rotations or degrees.

145.32.48 Constants

Encoder interface mode

Constant	Value	Description
kEncoderIOModeCollector10K	5	Open Collector 10K, 10kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeCollector2K2	4	Open Collector 2.2K, 2.2kŒ© pull-up resistors will be applied to the input lines.
kEncoderIOModeLineDriver10K	3	Line Driver 10K, 10kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModeLineDriver2K2	2	Line Driver 2.2K, 2.2kŒ© pull-down resistors will be applied to the input lines.
kEncoderIOModePushPull	1	Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

Fan Modes

Constant	Value	Description
kFanModeAuto	3	The fan will be automatically controlled based on temperature.
kFanModeOff	1	Turns the fan off.
kFanModeOn	2	Turns the fan on.

Position Types

Constant	Value	Description
kPositionTypeEncoder	1	Encoder.
kPositionTypeHallSensor	2	Hall sensor.

145.33 class PhidgetNetMBS

145.33.1 class PhidgetNetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for managing servers.
Notes: The Phidget NET class controls all network functionality of a Phidget program, and allows for the use of remote Phidgets in your program. It can be used to enable automated Phidget server discovery over the local network, and to connect to or reject specific servers.

For basic use of the Net class, the only functions you need to worry about are EnableServerDiscovery and AddServer. In most cases, you can use EnableServerDiscovery with server type kServerTypeDeviceRemote to automatically connect to Phidget servers on your local network. You can use AddServer to connect to servers that aren't discoverable on your local network.

To connect to a password-protected discoverable server on your local network, you can use SetServerPassword to specify the password to connect to that server.

If for some reason you need to prevent your program from discovering a non-password-protected server on your local network, you can call DisableServer directly after calling EnableServerDiscovery.

You must enable server discovery or add at least one server before setting other properties of this class, such as disabling servers, or setting server passwords. Similarly, server discovery must remain enabled, or at least one server must remain added, to maintain memory of those preferences.

145.33.2 Methods

145.33.3 addServer(serverName as String, address as String, port as Integer, password as String, Flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers a server that the client (your program) will try to connect to.
Notes: The client will continually try to connect to the server, increasing the time between each attempt to a maximum interval of 16 seconds.

This call is intended for use when server discovery is not enabled, or to connect to a server that is not discoverable.

The server name used by this function does not have to match the name of the server running on the host machine. Only the address, port, and password need to match.

This call will fail if a server with the same name has already been discovered.

This call will fail if SetServerPassword() has already been called with the same server name, as SetServerPassword() registers the server entry anticipating the discovery of the server.

145.33.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.33.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.33.6 disableServer(serverName as String, flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Prevents attempts to automatically connect to a server.
Notes: By default the client (your program) will continually attempt to connect to added or discovered servers.This call will disable those attempts, but will not close an already established connection.

145.33.7 disableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables the dynamic discovery of servers that publish their identity.
Example:

PhidgetNetMBS.disableServerDiscovery PhidgetNetMBS.kServerTypeDeviceRemote

Notes: DisableServerDiscovery() does not disconnect already established connections.

145.33.8 enableServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables attempts to connect to a discovered server, if attempts were previously disabled by DisableServer().
Notes: All servers are enabled by default.

This call will fail if the server was not previously added, disabled or discovered.

145.33.9 enableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the dynamic discovery of servers that publish their identity to the network.
Example:

```
// start looking for remote devices
PhidgetNetMBS.enableServerDiscovery PhidgetNetMBS.kServerTypeDeviceRemote
```

Notes: Currently Multicast DNS is used to discover and publish Phidget servers.
To connect to remote Phidgets, call this function with server type kServerTypeDeviceRemote.

EnableServerDiscovery must be called once for each server type your program requires. Multiple calls for the same server type are ignored

This call will fail with the error code EPHIDGET_UNSUPPORTED if your computer does not have the required mDNS support. We recommend using Bonjour Print Services on Windows and Mac, or Avahi on Linux.

145.33.10 removeAllServers

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes all servers.
Example:

PhidgetNetMBS.removeAllServers

145.33.11 removeServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a registration for a server that the client (your program) is trying to connect to.
Notes: If the client is currently connected to the server, the connection will be closed.

If the server was discovered (not added by AddServer()), the connection may be reestablished if and when the server is rediscovered. DisableServer() should be used to prevent the reconnection of a discovered server

145.33.12 setServerPassword(serverName as String, password as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the password that will be used to attempt to connect to the server.
Notes: If the server has not already been added or discovered, a placeholder server entry will be registered to use this password on the server once it is discovered.

serverName: The name of the server
password: The password to use for the server (empty string if no password)

145.33.13 Events

145.33.14 ServerAdded(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Subscribe to this event if you would like to know when a server has been added.

145.33.15 ServerRemoved(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Subscribe to this event if you would like to know when a server has been removed.

145.33.16 Constants

Server Types

Constant	Value	Description
kServerTypeDevice	2	Device
kServerTypeDeviceListener	1	Device Listener
kServerTypeDeviceRemote	3	Phidget22 Server Server discovery with this server type allows discovery of servers hosting Phidget devices. Enabling server discovery with this server type allows automated connection to these servers, and the Phidgets connected to them. Enabling server discovery with this server type will also enable ServerAdded and ServerRemoved events for this server type.
kServerTypeNone	0	
kServerTypeSBC	7	Phidget SBC Server discovery with this server type detects the presence of Phidget SBCs on the network. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.
kServerTypeWww	5	WWW
kServerTypeWwwListener	4	WWW Listener
kServerTypeWwwRemote	6	Phidget22 Web server Server discovery with this server type detects the presence of Phidget web servers used to communicate with in-browser JavaScript. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.

145.34 class PhidgetNotInitialzedExceptionMBS

145.34.1 class PhidgetNotInitialzedExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception to report an access of a not initialized object.
Notes: We raise this exception if handle is zero, so the object was not properly initialized.
Subclass of the RuntimeException class.

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

145.35 class PhidgetPHSensorMBS

145.35.1 class PhidgetPHSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The PH Sensor class gathers data from a pH sensor type Phidget board.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.35.2 Methods

145.35.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.35.4 Properties

145.35.5 CorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set this property to the measured temperature of the solution to correct the slope of the pH conversion for temperature.
Notes: Unit: degrees celsius (¬∞C)
(Read and Write property)

145.35.6 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PHChange event.

Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PHChange events can also affected by the PHChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.35.7 MaxCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CorrectionTemperature can be set to.
Notes: Unit: degrees celsius (¬∞C)
(Read only property)

145.35.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.35.9 MaxPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the PHChange event will report.
Notes: (Read only property)

145.35.10 MaxPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PHChangeTrigger can be set to.
Notes: Unit: pH (pH)
(Read only property)

145.35.11 MinCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CorrectionTemperature can be set to.
Notes: Unit: degrees celsius (¬∞C)
(Read only property)

145.35.12 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.35.13 MinPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the PHChange event will report.
Notes: (Read only property)

145.35.14 MinPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PHChangeTrigger can be set to.
Notes: Unit: pH (pH)
(Read only property)

145.35.15 PH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pH value that the channel has reported.
Notes: This value will always be between MinPH and MaxPH.

(Read only property)

145.35.16 PHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PHChange event until the pH value has changed by the amount specified by the PHChangeTrigger.
Notes: Setting the PHChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
Unit: pH (pH)
(Read and Write property)

145.35.17 Events

145.35.18 PHChanged(PH as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pH value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a PHChangeTrigger has been set to a non-zero value, the PHChange event will not occur until the pH has changed by at least the PHChangeTrigger value.

PH: The current pH.

145.36 class PhidgetPowerGuardMBS

145.36.1 class PhidgetPowerGuardMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Power Guard class controls the safety features and thresholds of a programmable power guard Phidget board.
Notes: Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.36.2 Methods

145.36.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.36.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For PowerGuard channels, this will disable the output. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.36.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.36.6 Properties

145.36.7 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FanMode dictates the operating condition of the fan.
Notes: Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70¬∞C and it will remain on until the temperature falls below 55¬∞C.
If the FanMode is off, the device will still turn on the fan if the temperature reaches 85¬∞C and it will remain on until it falls below 70¬∞C.
(Read and Write property)

145.36.8 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.36.9 MaxOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that OverVoltage can be set to.
Notes: Unit: volts (V)
(Read only property)

145.36.10 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.36.11 MinOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that OverVoltage can be set to.
Notes: Unit: volts (V)
(Read only property)

145.36.12 OverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device constantly monitors the output voltage, and if it exceeds the OverVoltage value, it will disconnect the input from the output.
Notes: This functionality is critical for protecting power supplies from regenerated voltage coming from motors. Many power supplies assume that a higher than output expected voltage is related to an internal failure to the power supply, and will permanently disable themselves to protect the system. A typical safe value is to set OverVoltage to 1-2 volts higher than the output voltage of the supply. For instance, a 12V supply would be protected by setting OverVoltage to 13V.
The device will connect the input to the output again when the voltage drops to (OverVoltage - 1V)
Unit: volts (V)
(Read and Write property)

145.36.13 PowerEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When PowerEnabled is true, the device will connect the input to the output and begin monitoring.
Notes: The output voltage is constantly monitored and will be automatically disconnected from the input when the output exceeds the OverVoltage value.
PowerEnabled allows the device to operate as a Solid State Relay, powering on or off all devices connected to the output.
(Read and Write property)

145.36.14 Constants

Fan Modes

Constant	Value	Description
kFanModeAuto	3	The fan will be automatically controlled based on temperature.
kFanModeOff	1	Turns the fan off.
kFanModeOn	2	Turns the fan on.

145.37 class PhidgetPressureSensorMBS

145.37.1 class PhidgetPressureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Pressure Sensor class gathers data from the pressure sensor on a Phidget board.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

145.37.2 Methods

145.37.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.37.4 Properties

145.37.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PressureChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PressureChange events can also affected by the PressureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.37.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.37.7 MaxPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the PressureChange event will report.
Notes: Unit: kilopascals (kPa)
(Read only property)

145.37.8 MaxPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PressureChangeTrigger can be set to.
Notes: Unit: kilopascals (kPa)
(Read only property)

145.37.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.37.10 MinPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the PressureChange event will report.
Notes: Unit: kilopascals (kPa)
(Read only property)

145.37.11 MinPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PressureChangeTrigger can be set to.
Notes: Unit: kilopascals (kPa)
(Read only property)

145.37.12 Pressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pressure value that the channel has reported.
Notes: This value will always be between MinPressure and MaxPressure.
Unit: kilopascals (kPa)
(Read only property)

145.37.13 PressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PressureChange event until the pressure value has changed by the amount specified by the PressureChangeTrigger.
Notes: Setting the PressureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
Unit: kilopascals (kPa)
(Read and Write property)

145.37.14 Events

145.37.15 PressureChanged(pressure as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pressure value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a PressureChangeTrigger has been set to a non-zero value, the PressureChange event will not occur until the pressure has changed by at least the PressureChangeTrigger value.

145.38 class PhidgetRCServoMBS

145.38.1 class PhidgetRCServoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RC Servo class controls the signal being sent to the servo motors from the Phidget controller in order to control their position.
Notes: This class provides control of the position, velocity, acceleration, and supply voltage of the attached servo.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.38.2 Methods

145.38.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.38.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe

again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For RC Servo channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.38.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.38.6 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the target position asynchronously.
Notes: Calls the setTargetPositionAsyncCompleted event later.

145.38.7 Properties

145.38.8 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function:

When changing velocity, the RC servo motor will accelerate/decelerate at this rate.
The acceleration is bounded by MaxAcceleration and MinAcceleration.
Notes:

Using the default settings this acceleration will correspond acceleration of servo arm in degrees/s2, for many standard RC servos.
SpeedRampingState controls whether or not the acceleration value is actually applied when trying to reach a target position.
There is a practical limit on how fast your RC servo motor can accelerate. This is based on the load and physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another PositionChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

145.38.10 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget return code.
Notes: When engaged, a RC servo motor has the ability to be positioned. When disengaged, no commands are sent to the RC servo motor.

There is no position feedback to the controller, so the RC servo motor will immediately snap to the TargetPosition after being engaged from a disengaged state.
This property is useful for relaxing a servo once it has reached a given position.
If you are concerned about tracking position accurately, you should not disengage the motor while IsMoving is true.
(Read and Write property)

145.38.11 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IsMoving returns true if the RC servo motor is currently in motion.
Notes: The controller cannot know if the RC servo motor is physically moving. When <code >IsMoving is false, it simply means there are no commands in the pipeline to the RC servo motor.
(Read only property)

145.38.12 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum acceleration that Acceleration can be set to.
Notes: This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.13 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.38.14 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.38.15 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum position TargetPosition can be set to.
Notes: The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.16 MaxPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MaxPulseWidth represents the maximum pulse width that your RC servo motor specifies.
Notes: This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.17 MaxPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum pulse width that MaxPulseWidth can be set to.
Notes: See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.18 MaxTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Torque can be set to.
Notes: Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

145.38.19 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum velocity VelocityLimit can be set to.
Notes: This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.
See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.20 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.21 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.38.22 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

145.38.23 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum position that TargetPosition can be set to.
Notes: The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.24 MinPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MinPulseWidth represents the minimum pulse width that your RC servo motor specifies.
Notes: This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.25 MinPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum pulse width that MinPulseWidth can be set to.
Notes: See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact

to move your servo.
(Read only property)

145.38.26 MinTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Torque can be set to.
Notes: Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

145.38.27 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum velocity VelocityLimit can be set to.
Notes: See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.28 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position of the RC servo motor that the controller has reported.
Notes: This value will always be between MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.29 SpeedRampingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed ramping state value
Notes: When speed ramping state is enabled, the controller will take the Acceleration and Velocity properties into account when moving the RC servo motor, usually resulting in smooth motion. If speed ramping state is not enabled, the controller will simply set the RC servo motor to the requested position.
(Read and Write property)

145.38.30 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target position.
Notes: If the RC servo motor is configured and TargetPosition is set, the controller will continuously try to reach targeted position.

The target position is bounded by MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.
If the RC servo motor is not engaged, then the position cannot be read.
The position can still be set while the RC servo motor is not engaged. Once engaged, the RC servo motor will snap to position, assuming it is not there already.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

Position and Pulse Width

An RC servo motor's position is controlled using a type of Pulse Width Modulation, sending voltage pulses of a given time span, or Pulse Width to the servo.
The servo translates the Pulse Width of the control signal to a corresponding position of the servo arm.
Knowing this, a servo's range of motion can be thought of in terms of a MinPulseWidth and a MaxPulseWidth corresponding to range of pulse widths that produce the servo arm's full range of movement.
In Phidget22, you can adjust the MinPulseWidth and MaxPulseWidth stored by the library to match the desired range of movement you expect from your servo.
Since directly setting the timing of RC servo pulse widths is not very intuitive for most purpses, we map these pulse widths to a user-defied Minimum and Maximum Position.This allows you to define the servo's position in terms best suited to your application, such as degrees, fractions of a rotation, or even some measure of speed for a continuous-rotation servo.
By setting the servo's Target Position to MaxPosition, the controller will send pulses of MaxPulseWidth to the servo.
Similarly, MinPosition will send pulses of MinPulseWidth to the servo

MaxPosition can be set smaller than MinPosition to invert movement of the servo, if it helps your application.
Setting a TargetPosition will transate the position between MinPosition and MaxPosition to a corresponding Pulse Width between MinPulseWidth and MaxPulseWidth, in turn sending the servo arm to the desired position.
Setting VelocityLimit and Acceleration for your servo will limit the rate of change of the servo's position in terms of one UserUnit per second (or /s2). Here, a UserUnit is whatever distance is maked by the change of the TargetPosition by 1.0

Adjusting the Servo's Limits

To tune your program to a specific servo:
First adjust the servo's range of motion by setting the MaxPulseWidth and MinPulseWidth. You can use the default values for these (or the ones on your servo's datasheet) as a starting point.
Send the servo to MaxPosition and MinPosition to check the results. Repeat steps 1 and 2 as nessesarry.
Set the MaxPosition and MinPosition to match whatever numbers you find best suited to your application.
(Read and Write property)

145.38.31 Torque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Torque is a ratio of the maximum available torque.
Notes: The torque is bounded by MinTorque and MaxTorque
Increasing the torque will increase the speed and power consumption of the RC servo motor.
(Read and Write property)

145.38.32 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The velocity that the RC servo motor is being driven at.
Notes: A negative value means the RC servo motor is moving towards a lower position.
The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
This is not the actual physical velocity of the RC servo motor.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

145.38.33 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the RC servo motor velocity will be limited by this value.
Notes: The velocity limit is bounded by MinVelocityLimit and MaxVelocityLimit.
Using the default settings this velocity will correspond to the maximum speed of rotation of servo arm in degrees/s, for many standard RC servos.
SpeedRampingState controls whether or not the velocity limit value is actually applied when trying to reach a target position.
The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
Note that when this value is set to 0, the RC servo motor will not move.
There is a practical limit on how fast your servo can rotate, based on the physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

145.38.34 Voltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The supply voltage for the RC servo motor.
Notes: If your controller supports multiple RC servo motors, every motor will have the same supply voltage. It is not possible to set individual supply voltages.
(Read and Write property)

145.38.35 Events

145.38.36 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An event that occurs when the position changes on a RC servo motor.
Notes: position: The position value

145.38.37 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when setTargetPositionAsync completes.

145.38.38 TargetPositionReached(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the RC servo motor has reached the TargetPosition.
Notes: The controller cannot know if the RC servo motor has physically reached the target position. When TargetPosition is reached, it simply means the controller pulse width output is matching its target.

145.38.39 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An event that occurs when the velocity changes on a RC servo motor.
Notes: velocity: The velocity value

145.38.40 Constants

Voltages

Constant	Value	Description
kVoltage5V	1	Run all servos on 5V DC
kVoltage6V	2	Run all servos on 6V DC
kVoltage7_4V	3	Run all servos on 7.4V DC

145.39 class PhidgetResistanceInputMBS

145.39.1 class PhidgetResistanceInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Resistance Input class measures the resistance of a circuit connected to the Phidget, which is used to read resistance-based sensors such as platinum RTDs.
Notes: Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.39.2 Methods

145.39.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.39.4 Properties

145.39.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another ResistanceChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between ResistanceChange events can also affected by the ResistanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.39.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.39.7 MaxResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the ResistanceChange event will report.
Notes: Unit: ohms (Œ©)
(Read only property)

145.39.8 MaxResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that ResistanceChangeTrigger can be set to.
Notes: Unit: ohms (Œ©)
(Read only property)

145.39.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.39.10 MinResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the ResistanceChange event will report.
Notes: When the device is also being used as a TemperatureSensor the MinResistance and MaxResistance will not represent the true input range. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Œ©)

(Read only property)

145.39.11 MinResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that the ResistanceChangeTrigger can be set to.
Notes: Unit: ohms (Œ©)
(Read only property)

145.39.12 Resistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent resistance value that the channel has reported.
Notes: This value will always be between MinResistance and MaxResistance.
The Resistance value will change when the device is also being used as a temperature sensor. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Œ©)
(Read only property)

145.39.13 ResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a ResistanceChange event until the resistance value has changed by the amount specified by the ResistanceChangeTrigger.
Notes: Setting the ResistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering

Unit: ohms (Œ©)
(Read and Write property)

145.39.14 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Select the RTD wiring configuration.
Notes: More information about RTD wiring can be found in the user guide.
(Read and Write property)

145.39.15 Events

145.39.16 ResistanceChanged(resistance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent resistance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a ResistanceChangeTrigger has been set to a non-zero value, the ResistanceChange event will not occur until the resistance has changed by at least the ResistanceChangeTrigger value.

resistance: The resistance value

145.39.17 Constants

RTD wiring configuration

Constant	Value	Description
RTD_WIRE_SETUP_2WIRE	1	Configures the device to make resistance calculations based on a 2-wire RTD setup.
RTD_WIRE_SETUP_3WIRE	2	Configures the device to make resistance calculations based on a 3-wire RTD setup.
RTD_WIRE_SETUP_4WIRE	3	Configures the device to make resistance calculations based on a 4-wire RTD setup.

145.40 class PhidgetRFIDMBS

145.40.1 class PhidgetRFIDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RFID class provides methods for Phidget RFID boards to read and write (if writing is supported) to RFID tags.
Notes: Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.40.2 Methods

145.40.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.40.4 LastTag(byref tagString as String, byref protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the most recently read tag's data, even if that tag is no longer within read range.
Notes: Only valid after at least one tag has been read.

tagString: The data stored on the most recently read tag
protocol: Protocol of the most recently read tag

145.40.5 Write(tagString as String, protocol as Integer, lockTag as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data to the tag being currently read by the reader.
Notes: You cannot write to a read-only or locked tag.

tagString: The data to write to the tag
protocol: The communication protocol to use
lockTag: If true, permanently locks the tag so that it cannot be re-written after this write.

145.40.6 Properties

145.40.7 AntennaEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The on/off state of the antenna.
Notes: You can turn the antenna off to save power.
You must turn the antenna on in order to detect and read RFID tags.
(Read and Write property)

145.40.8 TagPresent as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property is true if a compatibile RFID tag is being read by the reader.
Notes: TagPresent will remain true until the tag is out of range and can no longer be read.
(Read only property)

145.40.9 Events

145.40.10 TagFound(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when an RFID tag is read.
Notes: Tag: Data from the tag
Protocol: Communication protocol of the tag

145.40.11 TagLost(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when an RFID tag that was being read is removed from the read range.
Notes: Tag: Data from the lost tag
Protocol: Communication protocol of the lost tag

145.40.12 Constants

Protocols

Constant	Value	Description
kProtocolEM4100	1	EM4100
kProtocolISO11785_FDX_B	2	ISO11785 FDX B
kProtocolPhidgets	3	PhidgetTAG

145.41 class PhidgetServerMBS

145.41.1 class PhidgetServerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to describe a known server.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 22.4pr1

145.41.2 Methods

145.41.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

145.41.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.41.5 Properties

145.41.6 Address as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The address of the server.
Notes: (Read only property)

145.41.7 Flags as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flags describing the server state.
Notes: Flag is 1, if the server requires a password to authenticate.
(Read only property)

145.41.8 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

145.41.9 Host as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hostname of the server.
Notes: (Read only property)

145.41.10 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the server.
Notes: (Read only property)

145.41.11 Port as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port number of the server.
Notes: (Read only property)

145.41.12 ServerType as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the server type.
Notes: (Read only property)

145.41.13 Type as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The server type.
Notes: (Read only property)

145.41.14 Constants

Server Types

Constant	Value	Description
kServerTypeDevice	2	Device
kServerTypeDeviceListener	1	Device Listener
kServerTypeDeviceRemote	3	Phidget22 Server Server discovery with this server type allows discovery of servers hosting Phidget devices. Enabling server discovery with this server type allows automated connection to these servers, and the Phidgets connected to them. Enabling server discovery with this server type will also enable ServerAdded and ServerRemoved events for this server type.
kServerTypeNone	0	
kServerTypeSBC	7	Phidget SBC Server discovery with this server type detects the presence of Phidget SBCs on the network. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.
kServerTypeWww	5	WWW
kServerTypeWwwListener	4	WWW Listener
kServerTypeWwwRemote	6	Phidget22 Web server Server discovery with this server type detects the presence of Phidget web servers used to communicate with in-browser JavaScript. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.

145.42 class PhidgetSoundSensorMBS

145.42.1 class PhidgetSoundSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Sound Sensor class gathers data from the sound sensor on a Phidget board.
Notes: If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.42.2 Methods

145.42.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.42.4 Octaves as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unweighted value of each frequency band.
Notes: The following frequency bands are represented:
octaves [0] = 31.5 Hz
octaves [1] = 63 Hz
octaves [2] = 125 Hz
octaves [3] = 250 Hz
octaves [4] = 500 Hz
octaves [5] = 1 kHz
octaves [6] = 2 kHz
octaves [7] = 4 kHz
octaves [8] = 8 kHz
octaves [9] = 16 kHz

145.42.5 Properties

145.42.6 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another SPLChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between SPLChange events can also affected by the SPLChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.42.7 dB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dB SPL value that has been calculated.
Notes: This value is bounded by MaxdB.
(Read only property)

145.42.8 dBA as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dBA SPL value that has been calculated.
Notes: The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
(Read only property)

145.42.9 dBC as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dBC SPL value that has been calculated.
Notes: The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
(Read only property)

145.42.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.42.11 MaxdB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the SPLChange event will report.
Notes: (Read only property)

145.42.12 MaxSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SPLChangeTrigger can be set to.
Notes: (Read only property)

145.42.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.42.14 MinSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SPLChangeTrigger can be set to.
Notes: (Read only property)

145.42.15 NoiseFloor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum SPL value that the channel can accurately measure.
Notes: Input SPLs below this level will not produce an output from the microphone.
(Read only property)

145.42.16 SPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SPLChange event until the dB value has changed by the amount specified by the SPLChangeTrigger.
Notes: Setting the SPLChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.42.17 SPLRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When selecting a range, first decide how sensitive you want the microphone to be.
Notes: Select a smaller range when you want more sensitivity from the microphone.
If a Saturation event occurrs, increase the range.
(Read and Write property)

145.42.18 Events

145.42.19 SPLChanged(dB as Double, dBA as Double, dBC as Double, octaves() as Double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent SPL values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a SPLChangeTrigger has been set to a non-zero value, the SPLChange event will not occur until the dB SPL value has changed by at least the SPLChangeTrigger value.
The dB SPL value is calculated from the Octaves data.

The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
The following frequency bands are represented:

octaves [0] = 31.5 Hz
octaves [1] = 63 Hz
octaves [2] = 125 Hz
octaves [3] = 250 Hz
octaves [4] = 500 Hz
octaves [5] = 1 kHz
octaves [6] = 2 kHz
octaves [7] = 4 kHz
octaves [8] = 8 kHz
octaves [9] = 16 kHz

dB: The dB SPL value.
dBA: The dBA SPL value.
dBC: The dBC SPL value.
Octaves: The dB SPL value for each band.

145.42.20 Constants

The measurement range.

Constant	Value	Description
SPLRange102dB	1	Range 102dB
SPLRange82dB	2	Range 82dB

145.43 class PhidgetSpatialMBS

145.43.1 class PhidgetSpatialMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Spatial class simultaneously gathers data from the accelerometer, gyroscope and magnetometer on a Phidget board.
Notes: You can also use the individual classes for these sensors if you want to handle the data in separate events.
Subclass of the PhidgetMBS class.

- MBS REALbasic Plugins, version 10.6pr7

145.43.2 Methods

145.43.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.43.4 getEulerAngles(byref pitch as double, byref roll as double, byref heading as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the latest device orientation in the form of Euler angles.
Notes: Pitch, roll, and yaw.

145.43.5 getQuaternion(byref x as double, byref y as double, byref z as double, byref w as double)

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the latest AHRS/IMU quaternion sent from the device.

145.43.6 MaxAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum acceleration the sensor will measure.
Notes: Returns an array with 3 double values.

145.43.7 MaxAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum angular rate the sensor will measure.
Notes: Returns an array with 3 double values.

145.43.8 MaxMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum field strength the sensor will measure.
Notes: Returns an array with 3 double values.

145.43.9 MinAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum acceleration the sensor will measure.

145.43.10 MinAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum angular rate the sensor will measure.

145.43.11 MinMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum field strength the sensor will measure.
Notes: Returns an array with 3 double values.

145.43.12 resetMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the MagnetometerCorrectionParameters to their default values.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

145.43.13 saveMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Saves the MagnetometerCorrectionParameters.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

145.43.14 setAHRSParameters(angularVelocityThreshold as double, AngularVelocityDeltaThreshold as double, accelerationThreshold as double, magTime as double, accelTime as double, biasTime as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes: Setting these parameters will allow you to tune the AHRS algorithm on the device to your specific application.

angularVelocityThreshold: The maximum angular velocity reading where the device is assumed to be "at rest"
AngularVelocityDeltaThreshold: The acceptable amount of change in angular velocity between measurements before movement is assumed.
accelerationThreshold: The maximum acceleration applied to the device (minus gravity) where it is assumed to be "at rest". This is also the maximum acceleration allowable before the device stops correcting to the acceleration vector.
magTime: The time it will take to correct the heading 95% of the way to aligning with the compass (in seconds),up to 15 degrees of error. Beyond 15 degrees, this is the time it will take for the bearing to move 45 degrees towards the compass reading. Remember you can zero the algorithm at any time to instantly realign the spatial with acceleration and magnetic field vectors regardless of magnitude.
accelTime: The time it will take to correct the pitch and roll 95% of the way to aligning with the accelerometer (in seconds).
biasTime: The time it will take to have the gyro biases settle to within 95% of the measured steady state (in seconds).

145.43.15 setMagnetometerCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.

T5: Provided by calibration program.

145.43.16 zeroAlgorithm

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Zeros the AHRS algorithm.

145.43.17 zeroGyro

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-zeros the gyroscope in 1-2 seconds.
Notes: The device must be stationary when zeroing.
The angular rate will be reported as 0.0¬∞/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

145.43.18 Properties

145.43.19 Algorithm as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Selects the IMU/AHRS algorithm.
Notes: (Read and Write property)

145.43.20 AlgorithmMagnetometerGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The gain for the magnetometer in the AHRS algorithm.
Notes: Lower gains reduce sensor noise while slowing response time.
(Read and Write property)

145.43.21 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another SpatialData event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

145.43.22 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes: Set to true to enable the temperature stabilization feature of this device.
This enables on-board heating elements to bring the board up to a known temperature to minimize ambient temperature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

145.43.23 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.43.24 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.43.25 Events

145.43.26 AlgorithmData(quaternion() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent IMU/AHRS Quaternion will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: quaternion: The quaternion value - [x, y, z, w]
timestamp: The timestamp value

145.43.27 SpatialData(acceleration() as double, angularRate() as double, magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent values that your channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: acceleration: The acceleration vaulues
angularRate: The angular rate values
magneticField: The field strength values
timestamp: The timestamp value

145.43.28 Constants

Filter Types

Constant	Value	Description
kFilterTypeLogicLevel	2	Logic level
kFilterTypeZeroCrossing	1	Zero crossing

Input Modes

Constant	Value	Description
kInputModeNPN	1	For interfacing NPN digital sensors.
kInputModePNP	2	For interfacing PNP digital sensors.

Power Supply

Constant	Value	Description
kPowerSupply12V	2	The sensor is provided with 12 volts
kPowerSupply24V	3	The sensor is provided with 24 volts
kPowerSupplyOff	1	Switch the sensor power supply off.

Spatial Algorithm

Constant	Value	Description
kSpatialAlgorithmAHRS	1	AHRS algorithm, incorporating magnetometer data for yaw correction.
kSpatialAlgorithmIMU	2	IMU algorithm, using gyro and accelerometer, but not magnetometer.
kSpatialAlgorithmNone	0	No AHRS algorithm is used.

145.44 class PhidgetStepperMBS

145.44.1 class PhidgetStepperMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Stepper class powers and controls the stepper motor connected to the Phidget controller, allowing you to change the position, velocity, acceleration, and current limit.
Notes: Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.44.2 Methods

145.44.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position and target position.
Notes: This is especially useful for zeroing position.

145.44.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.44.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe

timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Stepper channels, this will disengage the motor. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.44.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

145.44.7 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target position asynchronously.
Notes: If the controller is configured and the TargetPosition is set, the Stepper motor will move towards the TargetPosition at the specified Acceleration and Velocity.

TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.

Calls setTargetPositionAsyncCompleted event later when done.

145.44.8 Properties

145.44.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
Changing the acceleration value while the stepper is in motion (especially at speeds higher than 1000 1/16th steps/s) can cause unpredictable results due to the inability of the processor tocalculate a new acceleration curve quickly enough. Generally you should wait until the motor is stationary until calling this function.
(Read and Write property)

145.44.10 ControlMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Use step mode when you want to set a TargetPosition for the Stepper motor.
Notes: Use run mode when you simply want the Stepper motor to rotate continuously in a specific direction.Changing the control mode while the motor is running will result in the following behaviour:
Step ->Run : The motor will keep moving in the direction it's currently going, and will accelerate to max velocity.
Run ->Step : The motor will set the target position to infinity in the direction it's currently going, at the current velocity.
(Read and Write property)

145.44.11 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current through the motor will be limited by the CurrentLimit.
Notes: See your Stepper motor's data sheet for more information about what value the CurrentLimit should be.

Unit: amperes (A)

(Read and Write property)

145.44.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another PositionChange/VelocityChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

145.44.13 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When this property is true, the controller will supply power to the motor coils.
Notes: The controller must be Engaged in order to move the Stepper motor, or have it hold position.
(Read and Write property)

145.44.14 HoldingCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The HoldingCurrentLimit will activate when the TargetPosition has been reached.
Notes: It will limit current through the motor.
When the motor is not stopped, the current through the motor is limited by the CurrentLimit.
If no HoldingCurrentLimit is specified, the CurrentLimit value will persist when the motor is stopped.
Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.
(Read and Write property)

145.44.15 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IsMoving returns true while the controller is sending commands to the motor.
Notes: Note: there is no feedback to the controller, so it does not know whether the motor shaft is actually moving or not.
(Read only property)

145.44.16 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.17 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentLimit and HoldingCurrentLimit can be set to.
Notes: Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

145.44.18 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.44.19 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.44.20 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetPosition can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.21 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VelocityLimit can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.22 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.23 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentLimit and HoldingCurrentLimit can be set to.
Notes: Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

145.44.24 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.44.25 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: in milliseconds.
(Read only property)

145.44.26 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetPosition can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.27 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VelocityLimit can be set to.
Notes: Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.28 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes: This value will always be between MinPosition and MaxPosition.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.29 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Applies a factor to the [user units] per step to all movement parameters to make the units in your application is more intuitive.
Notes: For example, starting from position 0 and setting a new position with a rescale factor, the stepper will move Position / RescaleFactor steps.
In this way, units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

145.44.30 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the controller is configured and the TargetPosition is set, the Stepper motor will move towards

the TargetPosition at the specified Acceleration and Velocity.
Notes: TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

145.44.31 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes: This value is bounded by MinVelocityLimit and MaxVelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

145.44.32 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the Stepper motor velocity will be limited by this value.
Notes: The VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.
When in step mode, the MinVelocityLimit has a value of 0. This is because the sign (¬±) of the TargetPosition will indicate the direction.
When in run mode, the MinVelocityLimit has a value of -MaxVelocityLimit. This is because there is no target position, so the direction is defined by the sign (¬±) of the VelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

145.44.33 Events

145.44.34 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the controller updates the stepper motor position.

Notes: This event will still fire even if the motor is blocked from physically moving or misses steps.

145.44.35 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called when target position is set asynchronously.

145.44.36 Stopped

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the motor controller stops.
Notes: The motor may still be physically moving if the inertia is great enough to make it misstep.

145.44.37 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Occurs when the stepper motor velocity changes.
Notes: velocity: Velocity of the stepper. Sign indicates direction.

145.44.38 Constants

Control Modes

Constant	Value	Description
kControlModeRun	1	Control the motor by selecting a target velocity (sign indicates direction). The motor will rotate continously in the chosen direction.
kControlModeStep	0	Control the motor by setting a target position.

145.45 class PhidgetTemperatureSensorMBS

145.45.1 class PhidgetTemperatureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Temperature Sensor class gathers data from the temperature sensor on a Phidget board. #
Notes: This includes on-board ambient temperature sensors, connected thermocouples or platinum RTDs, and IR temperature sensors. This class is also used to measure the temperature on some high-power Phidget boards such as motor controllers for safety reasons.

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

145.45.2 Methods

145.45.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.45.4 Properties

145.45.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another TemperatureChange event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between TemperatureChange events can also affected by the TemperatureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

145.45.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.45.7 MaxTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the TemperatureChange event will report.
Notes: In degrees celsius.
(Read only property)

145.45.8 MaxTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TemperatureChangeTrigger can be set to.
Notes: (Read only property)

145.45.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.45.10 MinTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the TemperatureChange event will report.
Notes: In degrees celsius.
(Read only property)

145.45.11 MinTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TemperatureChangeTrigger can be set to.
Notes: (Read only property)

145.45.12 RTDType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTDType must correspond to the RTD type you are using in your application.
Notes: If you are unsure which RTDType to use, visit your device's User Guide for more information.
(Read and Write property)

145.45.13 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTDWireSetup must correspond to the wire configuration you are using in your application.
Notes: If you are unsure which RTDWireSetup to use, visit your device's User Guide for more information.
(Read and Write property)

145.45.14 Temperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent temperature value that the channel has reported.
Notes: This value will always be between MinTemperature and MaxTemperature.

in degrees celsius.
(Read only property)

145.45.15 TemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a TemperatureChange event until the temperature value has changed by the amount specified by the TemperatureChangeTrigger.
Notes: Setting the TemperatureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In degrees celsius.
(Read and Write property)

145.45.16 ThermocoupleType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ThermocoupleType must correspond to the thermocouple type you are using in your application.
Notes: If you are unsure which ThermocoupleType to use, visit the Thermocouple Primer for more information.
(Read and Write property)

145.45.17 Events

145.45.18 TemperatureChanged(temperature as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent temperature value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a TemperatureChangeTrigger has been set to a non-zero value, the TemperatureChange event will not occur until the temperature has changed by at least the TemperatureChangeTrigger value.

145.45.19 Constants

RTD Sensor Types

Constant	Value	Description
kRTDTypePT1000_3850	2	Configures the RTD type as a PT1000 with a 3850ppm curve.
kRTDTypePT1000_3920	4	Configures the RTD type as a PT100 with a 3920ppm curve.
kRTDTypePT100_3850	1	Configures the RTD type as a PT100 with a 3850ppm curve.
kRTDTypePT100_3920	3	Configures the RTD type as a PT100 with a 3920ppm curve.

RTD wiring configuration

Constant	Value	Description
kRTDWireSetup2Wire	1	Configures the device to make resistance calculations based on a 2-wire RTD setup.
kRTDWireSetup3Wire	2	Configures the device to make resistance calculations based on a 3-wire RTD setup.
kRTDWireSetup4Wire	3	Configures the device to make resistance calculations based on a 4-wire RTD setup.

Thermocouple Types

Constant	Value	Description
kThermoCoupleTypeE	3	Configures the thermocouple input as a E-Type thermocouple.
kThermoCoupleTypeJ	1	Configures the thermocouple input as a J-Type thermocouple.
kThermoCoupleTypeK	2	Configures the thermocouple input as a K-Type thermocouple.
kThermoCoupleTypeT	4	Configures the thermocouple input as a T-Type thermocouple.

145.46 class PhidgetUnitInfoMBS

145.46.1 class PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name, symbol, and Phidgets enumeration of the units of the sensor value calculated from the analog sensor's measurements.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

145.46.2 Methods

145.46.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

145.46.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

145.46.5 Properties

145.46.6 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name.
Notes: (Read only property)

145.46.7 Symbol as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The symbol.
Notes: (Read only property)

145.46.8 Unit as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit.
Notes: (Read only property)

145.46.9 Constants

Units

Constant	Value	Description
kUnitAmpere	10	Ampere
kUnitBoolean	1	Boolean
kUnitCentimeter	5	Centimeter
kUnitDecibel	3	Decibel
kUnitDegreeCelcius	13	Degree Celcius
kUnitGauss	15	Gauss
kUnitGram	7	gram
kUnitKilogram	8	Kilogram
kUnitKiloPascal	11	Kilo Pascal
kUnitLux	14	Lux
kUnitMeter	6	Meter
kUnitMilliampere	9	Milliampere
kUnitMillimeter	4	Millimeter
kUnitNone	0	Unitless
kUnitPercent	2	Percent
kUnitPH	16	pH
kUnitVolt	12	Volt
kUnitWatt	17	Watt

145.47 class PhidgetVoltageInputMBS

145.47.1 class PhidgetVoltageInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Input class measures the voltage across the input of a Phidget with a voltage input.
Notes: This may be a sensor designed to measure voltage directly, or it could be an input designed to interface with 0-5V sensors.

For 0-5V sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

145.47.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.47.4 Properties

145.47.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger values.

Unit: milliseconds (ms)
(Read and Write property)

145.47.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.47.7 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the VoltageChange event will report.
Notes: In volts.
(Read only property)

145.47.8 MaxVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VoltageChangeTrigger can be set to.
Notes: In volts.
(Read only property)

145.47.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.47.10 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the VoltageChange event will report.
Notes: In volts.
(Read only property)

145.47.11 MinVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VoltageChangeTrigger can be set to.
Notes: In volts.
(Read only property)

145.47.12 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes: Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.
(Read and Write property)

145.47.13 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula.
Notes: By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

- The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.
- Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

145.47.14 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit of measurement that applies to the sensor values of the SensorType that has been selected.
Notes: Helps keep track of the type of information being calculated from the voltage input.
(Read only property)

145.47.15 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value that the channel has reported.
Notes: Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

145.47.16 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
Notes: Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.47.17 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage value that the channel has reported.
Notes: This value will always be between MinVoltage and MaxVoltage.

In volts.
(Read only property)

145.47.18 VoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a VoltageChange event until the voltage value has changed by the amount specified by the VoltageChangeTrigger.
Notes: Setting the VoltageChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In volts.
(Read and Write property)

145.47.19 VoltageRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The voltage range you choose should allow you to measure the full range of your input signal.
Notes: A larger VoltageRange equates to less resolution.
If a Saturation event occurs, increase the voltage range.
(Read and Write property)

145.47.20 Events

145.47.21 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to kSensorTypeVoltage.

145.47.22 VoltageChanged(voltage as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a VoltageChangeTrigger has been set to a non-zero value, the VoltageChange event will not occur until the voltage has changed by at least the VoltageChangeTrigger value.
If SensorType is supported and set to anything other then kSensorTypeVoltage, this event will not fire.
In volts.

145.47.23 Constants

Power Supply

Constant	Value	Description
kPowerSupply12V	2	The sensor is provided with 12 volts
kPowerSupply24V	3	The sensor is provided with 24 volts
kPowerSupplyOff	1	Switch the sensor power supply off.

Sensor Types

Constant	Value	Description
kSensorType1114	&h2b84	1114 - Temperature Sensor
kSensorType1117	&h2ba2	1117 - Voltage Sensor
kSensorType1123	&h2bde	1123 - Precision Voltage Sensor
kSensorType1127	&h2c06	1127 - Precision Light Sensor
kSensorType1130ORP	&h2c26	1130 - ORP Adapter
kSensorType1130PH	&h2c25	1130 - pH Adapter
kSensorType1132	&h2c38	1132 - 4-20mA Adapter
kSensorType1133	&h2c42	1133 - Sound Sensor
kSensorType1135	&h2c56	1135 - Precision Voltage Sensor
kSensorType1142	&h2c9c	1142 - Light Sensor 1000 lux
kSensorType1143	&h2ca6	1143 - Light Sensor 70000 lux
kSensorType3500	&h88b8	3500 - AC Current Sensor 10Amp
kSensorType3501	&h88c2	3501 - AC Current Sensor 25Amp
kSensorType3502	&h88cc	3502 - AC Current Sensor 50Amp
kSensorType3503	&h88d6	3503 - AC Current Sensor 100Amp
kSensorType3507	&h88fe	3507 - AC Voltage Sensor 0-250V (50Hz)
kSensorType3508	&h8908	3508 - AC Voltage Sensor 0-250V (60Hz)
kSensorType3509	&h8912	3509 - DC Voltage Sensor 0-200V
kSensorType3510	&h891c	3510 - DC Voltage Sensor 0-75V
kSensorType3511	&h8926	3511 - DC Current Sensor 0-10mA
kSensorType3512	&h8930	3512 - DC Current Sensor 0-100mA
kSensorType3513	&h893a	3513 - DC Current Sensor 0-1A
kSensorType3514	&h8944	3514 - AC Active Power Sensor 0-250V*0-30A (50Hz)
kSensorType3515	&h894e	3515 - AC Active Power Sensor 0-250V*0-30A (60Hz)
kSensorType3516	&h8958	3516 - AC Active Power Sensor 0-250V*0-5A (50Hz)
kSensorType3517	&h8962	3517 - AC Active Power Sensor 0-250V*0-5A (60Hz)
kSensorType3518	&h896c	3518 - AC Active Power Sensor 0-110V*0-5A (60Hz)
kSensorType3519	&h8976	3519 - AC Active Power Sensor 0-110V*0-15A (60Hz)
kSensorType3584	&h8c00	3584 - 0-50A DC Current Transducer
kSensorType3585	&h8c0a	3585 - 0-100A DC Current Transducer
kSensorType3586	&h8c14	3586 - 0-250A DC Current Transducer
kSensorType3587	&h8c1e	3587 - +-50A DC Current Transducer
kSensorType3588	&h8c28	3588 - +-100A DC Current Transducer
kSensorType3589	&h8c32	3589 - +-250A DC Current Transducer
kSensorTypeMOT2002High	&h4e36	MOT2002 - Motion Sensor High Sensitivity
kSensorTypeMOT2002Low	&h4e34	MOT2002 - Motion Sensor Low Sensitivity
kSensorTypeMOT2002Med	&h4e35	MOT2002 - Motion Sensor Medium Sensitivity
kSensorTypeVCP4114	&ha0b4	VCP4114 - +-25A DC Current Transducer
kSensorTypeVoltage	0	Generic voltage sensor, Default. Configures the channel to be a generic voltage sensor. Unit is volts.

Voltage Ranges

Constant	Value	Description
kVoltageRange1000mV	6	Range ¬±1000mV DC
kVoltageRange10mV	1	Range ¬±10mV DC
kVoltageRange15V	9	Range ¬±15V DC
kVoltageRange200mV	3	Range ¬±200mV DC
kVoltageRange2V	7	Range ¬±2V DC
kVoltageRange312_5mV	4	Range ¬±312.5mV DC
kVoltageRange400mV	5	Range ¬±400mV DC
kVoltageRange40mV	2	Range ¬±40mV DC
kVoltageRange40V	10	Range ¬±40V DC
kVoltageRange5V	8	Range ¬±5V DC
kVoltageRangeAUTO	11	Auto-range mode changes based on the present voltage measurements.

145.48 class PhidgetVoltageOutputMBS

145.48.1 class PhidgetVoltageOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Output class controls the variable DC voltage output on a Phidget board.
Notes: This class provides settings for the output voltage as well as various safety controls.
Subclass of the PhidgetMBS class.
Blog Entries

- Rewritten Phidgets Plugin

145.48.2 Methods

145.48.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.48.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes: The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Voltage Output channels, this will set the output voltage to 0V. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

145.48.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set.
Notes: See EnableFailsafe for details.
This function will fail if no failsafe timer has been set for the channel.

145.48.6 setVoltageAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the voltage value that the channel will output.
Notes: The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.

Run asynchronously in the background and calls setVoltageAsyncCompleted event when done.

145.48.7 Properties

145.48.8 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable the output voltage by setting Enabled to true.
Notes: Disable the output by seting Enabled to false to save power.

(Read and Write property)

145.48.9 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: In milliseconds.
(Read only property)

145.48.10 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Voltage can be set to.
Notes: In volts.
(Read only property)

145.48.11 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: In milliseconds.
(Read only property)

145.48.12 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Voltage can be set to.
Notes: In volts.
(Read only property)

145.48.13 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The voltage value that the channel will output.
Notes: The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.
(Read and Write property)

145.48.14 VoltageOutputRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose a VoltageOutputRange that best suits your application.
Notes: Changing the VoltageOutputRange will also affect the MinVoltage and MaxVoltage values.
(Read and Write property)

145.48.15 Events

145.48.16 setVoltageAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The event called by setVoltageAsync.

145.48.17 Constants

Output Voltage Range

Constant	Value	Description
kVoltageOutputRange10V	1	¬±10V DC
kVoltageOutputRange5V	2	0-5V DC

145.49 class PhidgetVoltageRatioInputMBS

145.49.1 class PhidgetVoltageRatioInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Ratio Input class is used for measuring the ratio between the voltage supplied to and the voltage returned from an attached sensor or device.
Notes: This is useful for interfacing with ratiometric sensors or wheatstone bridge based sensors.

For ratiometric sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

145.49.2 Methods

145.49.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

145.49.4 Properties

145.49.5 BridgeEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable power to and data from the input by setting BridgeEnabled to true.
Notes: (Read and Write property)

145.49.6 BridgeGain as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose a BridgeGain that best suits your application.
Notes: For more information about the range and accuracy of each BridgeGain to decide which best suits your application, see your device's User Guide.
(Read and Write property)

145.49.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes: The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

145.49.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.49.9 MaxVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the VoltageRatioChange event will report.
Notes: (Read only property)

145.49.10 MaxVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VoltageRatioChangeTrigger can be set to.
Notes: (Read only property)

145.49.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes: Unit: milliseconds (ms)
(Read only property)

145.49.12 MinVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the VoltageRatioChange event will report.
Notes: (Read only property)

145.49.13 MinVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VoltageRatioChangeTrigger can be set to.
Notes: (Read only property)

145.49.14 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries sensor type.
Notes: We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula. By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.

Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit

associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

145.49.15 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit of measurement that applies to the sensor values of the SensorType that has been selected.
Notes: Helps keep track of the type of information being calculated from the voltage ratio input.
(Read only property)

145.49.16 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value that the channel has reported.
Notes: Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

145.49.17 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
Notes: Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.49.18 VoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage ratio value that the channel has reported.
Notes: This value will always be between MinVoltageRatio and MaxVoltageRatio.
(Read only property)

145.49.19 VoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a VoltageRatioChange event until the voltage ratio value has changed by the amount specified by the VoltageRatioChangeTrigger.
Notes: Setting the VoltageRatioChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

145.49.20 Events

145.49.21 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to SENSOR_TYPE_VOLTAGERATIO

sensorValue: The sensor value
sensorUnit: The sensor unit information corresponding to the SensorValue.
Helps keep track of the type of information being calculated from the voltage ratio input.

145.49.22 VoltageRatioChanged(voltageRatio as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage ratio value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a VoltageRatioChangeTrigger has been set to a non-zero value, the VoltageRatioChange event will not occur until the voltage has changed by at least the VoltageRatioChangeTrigger value.

If SensorType is supported and set to anything other then SENSOR_TYPE_VOLTAGERATIO, this event will not fire.

145.49.23 Constants

Bridge gain amplification

Constant	Value	Description
kBridgeGain1	1	1x Amplification
kBridgeGain128	8	128x Amplification
kBridgeGain16	5	16x Amplification
kBridgeGain2	2	2x Amplification
kBridgeGain32	6	32x Amplification
kBridgeGain4	3	4x Amplification
kBridgeGain64	7	64x Amplification
kBridgeGain8	4	8x Amplification

Sensor Types

Constant	Value	Description
kSensorType1101_Sharp_2D120X	&h2b03	1101 - IR Distance Adapter, with Sharp Distance Sensor 2D120X (4-30cm
kSensorType1101_Sharp_2Y0A02	&h2b05	1101 - IR Distance Adapter, with Sharp Distance Sensor 2Y0A02 (20-150

kSensorType1134	&h2c4c	1134 - Switchable Voltage Divider
kSensorType1136	&h2c60	1136 - Differential Air Pressure Sensor +-2 kPa
kSensorType1137	&h2c6a	1137 - Differential Air Pressure Sensor +-7 kPa
kSensorType1138	&h2c74	1138 - Differential Air Pressure Sensor 50 kPa
kSensorType1139	&h2c7e	1139 - Differential Air Pressure Sensor 100 kPa
kSensorType1140	&h2c88	1140 - Absolute Air Pressure Sensor 20-400 kPa
kSensorType1141	&h2c92	1141 - Absolute Air Pressure Sensor 15-115 kPa
kSensorType1146	&h2cc4	1146 - IR Reflective Sensor 1-4mm
kSensorType3120	&h79e0	3120 - Compression Load Cell (0-4.5 kg)
kSensorType3121	&h79ea	3121 - Compression Load Cell (0-11.3 kg)
kSensorType3122	&h79f4	3122 - Compression Load Cell (0-22.7 kg)
kSensorType3123	&h79fe	3123 - Compression Load Cell (0-45.3 kg)
kSensorType3130	&h7a44	3130 - Relative Humidity Sensor
kSensorType3520	&h8980	3520 - Sharp Distance Sensor (4-30cm)
kSensorType3521	&h898a	3521 - Sharp Distance Sensor (10-80cm)
kSensorType3522	&h8994	3522 - Sharp Distance Sensor (20-150cm)
kSensorTypeVoltageRatio	0	Generic ratiometric sensor, Default. Configures the channel to be a ge ratiometric sensor. Unit is volts/volt.

Chapter 146

Photos

146.1 control DesktopPHLivePhotoControlMBS

146.1.1 control DesktopPHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A view that displays a Live Photo—a picture that also includes motion and sound from the moments just before and after its capture.
Notes: Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app—see the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer—for example, to install it on a different view for proper event handling in your app,Äôs view hierarchy—use the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

146.1.2 Methods

146.1.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this control is available.

146.1.4 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Begins playback of Live Photo content in the view.
Notes: style: An option for how much of the Live Photo,Äôs motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate—for example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

146.1.5 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 146.1.6 stopPlayback(animated as boolean) 19150

146.1.6 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 146.1.5 stopPlayback 19150

146.1.7 Properties

146.1.8 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The audio gain to apply to the Live Photo,Äôs movie content during playback.
Notes: Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

146.1.9 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The content mode.
Notes: (Read and Write property)

146.1.10 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Live Photo displayed in the view.
Notes: (Read and Write property)

146.1.11 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A view for displaying Live Photo status.
Notes: The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don,Äôt need to do anything with view,Äôs content—instead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.

(Read only property)

146.1.12 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view plays the audio content of its Live Photo.
Notes: The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

146.1.13 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

146.1.14 Events

146.1.15 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

146.1.16 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

146.1.17 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

146.1.18 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

146.1.19 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

146.1.20 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Notifies the delegate that Live Photo playback has ended.
Notes: playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

146.1.21 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.1.22 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

146.1.23 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

146.1.24 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

146.1.25 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

146.1.26 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

146.1.27 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

146.1.28 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

146.1.29 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

146.1.30 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Notifies the control that Live Photo playback is about to begin.
Notes: playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

146.1.31 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

146.1.32 Constants

Content Modes

Constant	Value	Description
ContentModeAspectFill	1	Aspect Fill.
ContentModeAspectFit	0	Aspect Fit.

Playback Styles

Constant	Value	Description
PlaybackStyleFull	1	Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.
PlaybackStyleHint	2	Plays back only a brief section of the motion content of the Live Photo, without sound.
PlaybackStyleUndefined	0	This value is invalid for use.

146.2 control DesktopPHPickerControlMBS

146.2.1 control DesktopPHPickerControlMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The Xojo control to host a PHPickerViewController on a Xojo window.
Notes: Please implement Configure event to provide the PHPickerConfigurationMBS object to use.

Since the PHPicker view is running in a different process and only shown inside your application, the events for contextual menus, focus and mouse events don't fire.

- MBS Xojo Plugins, version 25.1pr1

Xojo Developer Magazine

- 23.4, page 11: News
- 23.3, page 10: News

146.2.2 Properties

146.2.3 Controller as PHPickerViewControllerMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The reference to the underlaying PHPickerViewController.
Notes: (Read only property)

146.2.4 View as NSViewMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The view used.
Notes: Access properties of the view hosted in the control via this variable.
(Read only property)

146.2.5 Events

146.2.6 BoundsChanged

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

146.2.7 Closing

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

146.2.8 Configure as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Queries the configuration to use.
Notes: Please return the PHPickerConfigurationMBS object to use for the control.
This is called before the open event.

146.2.9 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 25.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

146.2.10 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 25.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

146.2.11 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

146.2.12 didFinishPicking(Result() as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Notifies the delegate that the user completed a selection or dismissed the picker using the cancel button.
Notes: picker: The currently presented picker view controller.
results: The results of the user,Äôs selections.

The system doesn,Äôt automatically dismiss the picker after calling this method, but the plugin does.

It may happen that the user manages to dismiss the dialog without this event running. Seems to be a bug in iOS. So you can catch the viewDidDisappear event and do any cleanup there, if the didFinishPicking event did not fire before.

146.2.13 FocusLost

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.2.14 FocusReceived

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.

Notes:

This only fires if the control itself got focus and not a sub control.

146.2.15 FrameChanged

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

146.2.16 MenuBarSelected

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

146.2.17 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

146.2.18 MouseDrag(x as Integer, y as Integer)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.

As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

146.2.19 MouseUp(x As Integer, y As Integer)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

146.2.20 Opening

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

146.2.21 ScaleFactorChanged(NewFactor as double)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

146.2.22 viewDidAppear

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The view appeared.

146.2.23 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

146.3 class PHAdjustmentDataMBS

146.3.1 class PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the edits made to an asset's photo, video, or Live Photo content, which allows your app to reconstruct or revert the effects of prior editing sessions.
Notes: When a user edits an asset, Photos saves a PHAdjustmentData object along with the modified image or video data. This object provides an application-defined ,Äúrecipe,Äù you can use to reconstruct the edit. For example, if your app applies filters to a photo, you might might create adjustment data that identifies which filters the user picked, the parameters for each, and the order to apply the filters in. Later, the user can resume working with those filters and parameters by using your app or another app that understands your adjustment data format. When iCloud Photos is enabled, a user can revert or resume edits made on a different device.

You work with adjustment data when editing an asset, using either the requestContentEditingInputWithOptions method or a photo extension view controller that implements the PHContentEditingController protocol.

- When you begin an edit (through a PHContentEditingInputMBS object), examine the editing input,Äôs adjustmentData property to decide whether the last edit made to the asset is compatible with your app. If so, you can allow the user to resume working with that edit. If not, you can make further edits to the last saved version of the photo.

- When you commit an edit (through a PHContentEditingOutputMBS object), provide a new adjustment whose data represents the changes your app made.

For each asset, Photos stores only one PHAdjustmentDataMBS object, representing the most recent edit made to the asset,Äôs content.

146.3.2 Methods

146.3.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

146.3.4 Constructor(formatIdentifier as string, formatVersion as string, data as Memoryblock)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes an adjustment object with the specified format and data.
Notes: formatIdentifier: A string that uniquely identifies the format of the adjustment data.
formatVersion: A version number for the adjustment data format.
data: A serialized form of whatever information is needed to reconstruct the adjustment.

Returns an initialized adjustment object.

To uniquely identify the adjustments your app makes, use the the formatIdentifier and formatVersion parameters. These parameters help you determine whether and how to interpret the adjustment data when working with an edited asset later. For best results, use reverse-DNS-style identifiers and monotonically increasing version numbers.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.

Use the data parameter to store whatever information is useful to your app for reconstructing an edit. For example, if your app applies Core Image filters to photos, you can use this parameter to store a serialized property list that describes the filters and their parameters.

Because Photos limits the size of adjustment data, you should keep your edit information short and descriptive. Don,Äôt use image data to describe an edit—instead, save only the minimal information that is needed to recreate the edit.
Your app must provide a non-empty Memoryblock for the data parameter. If you cannot provide relevant data to describe an edit, you may pass data that encodes an NSUUID object.

146.3.5 Properties

146.3.6 data as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Data that contains the information necessary to reconstruct the adjustment.
Notes: Use this property to resume working with the last edit that was made to an asset. For example, if your app applies Core Image filters to photos, this property may hold a serialized property list that describes the filters and their parameters. Use the formatIdentifier and formatVersion properties to determine whether the adjustment data saved with an asset is in a format that your app can understand.
(Read only property)

146.3.7 formatIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string uniquely identifying the format of the adjustment data.
Notes: Set this identifier when you create an adjustment object with the constructor. For best results, identify your organization or product using a reverse-DNS-style name, such as com.example.myApp.

Read this property, and the formatVersion property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
(Read only property)

146.3.8 formatVersion as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A version number for the adjustment data format.
Notes: Set this identifier when creating an adjustment object with the constructor.
Read this property, and the formatIdentifier property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.
(Read only property)

146.3.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.4 class PHAssetChangeRequestMBS

146.4.1 class PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change block.
Notes: You use the PHAssetChangeRequest class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset,Äôs content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request,Äôs properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset,Äôs state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.

146.4.2 Methods

146.4.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.4.4 changeRequestForAsset(asset as PHAssetMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset.
Notes: asset: The asset to be modified.

Returns an asset change request.

Before editing an asset, use its canPerformEditOperation method to see if the asset allows editing.

After you create a change request within a photo library change block, propose changes to the original asset,Äôs properties by setting the corresponding properties of the change request. After Photos runs your change block, the asset,Äôs properties reflect your changes. For details on change blocks, see PHPhotoLibraryMBS.

To edit an asset,Äôs image or video content, first begin a content editing session with the asset,Äôs requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.

146.4.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.4.6 creationRequestForAssetFromImage(image as NSImageMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library.
Notes: image: An image.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.
To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

146.4.7 creationRequestForAssetFromImageAtFile(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library, using the image file at the specified URL.
Notes: file: A URL for an image file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

146.4.8 creationRequestForAssetFromVideoAtFileURL(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new video asset to the Photos library, using the video file at the specified URL.
Notes: file: A folderitem for a video file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

146.4.9 deleteAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified assets be deleted.
Notes: assets: An array of PHAssetMBS objects to be deleted.

Call this method within a photo library change block to delete assets. For details on change blocks, see PHPhotoLibraryMBS.

146.4.10 revertAssetContentToOriginal

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Request to revert any edits made to the asset,Äôs content.
Notes: When an asset has been edited, Photos stores multiple versions of the asset: the original version of the asset as it was first captured or imported, and the input and output of the most recent edit. (You work with asset versions when requesting to edit an asset,Äôs content—see PHContentEditingInputRequestOptions.) Call this method to revert to the original version of the asset, discarding all edits.

This request fails if original content for the asset is not available on the current device (for example, if iCloud Photo Library is enabled and the user has edited the asset on a different device). Use PHAssetResourceManagerMBS to ensure that original asset content is downloaded to the current device before making this request.

146.4.11 Properties

146.4.12 contentEditingOutput as PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The output of an asset content editing session.
Notes: To edit an asset,Äôs image or video content, you must first begin a content editing session with the asset,Äôs requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.
(Read and Write property)

146.4.13 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset claims to have been originally created.
Notes: Set this property to change the creation date of an asset.
(Read and Write property)

146.4.14 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset claims to have been originally created.
Notes: Set this property to change the creation date of an asset.
(Read and Write property)

146.4.15 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is marked as one of the user,Äôs favorites.
Notes: (Read and Write property)

146.4.16 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is hidden in collections.
Notes: Hidden assets do not appear in the Moments interface in the Photos app.
(Read and Write property)

146.4.17 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes: Typically, an asset,Äôs location metadata identifies the place where the asset was captured. Use this property to provide a different location.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read and Write property)

146.4.18 placeholderForCreatedAsset as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset that the change request creates.
Notes: Use this property if you need to reference the asset created by a change request within the same change block.
(Read only property)

146.5 class PHAssetCollectionChangeRequestMBS

146.5.1 class PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos asset collection, for use in a photo library change block.
Notes: You use the PHAssetCollectionChangeRequestMBS class to request changes for PHAssetCollectionMBS objects. To make changes to asset collections (such as user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForAssetCollectionWithTitle: method to create a new asset collection.
- Call the deleteAssetCollections: method to delete existing asset collections.
- Call the changeRequestForAssetCollection: or changeRequestForAssetCollection:assets: method to modify a collection,Äôs metadata or list of member assets.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you,Äôre requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying an asset collection works like a mutable version of the asset collection object. Use the change request,Äôs properties and instance methods to request changes to the asset collection itself.

After Photos runs the change block and calls your completion handler, the asset collection,Äôs state reflects the changes you requested in the block.
If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

146.5.2 Methods

146.5.3 addAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified asset to the asset collection.
Notes: asset: The PHAsset object to be added to the asset collection.

If you created the change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection.

Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAsset-CollectionWithAssets method) do not support adding or removing content.

146.5.4 addAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified assets to the asset collection.
Notes: assets: An array of PHAsset objects to be added to the asset collection.

If you created the change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAsset-CollectionWithAssets method) do not support adding or removing content.

146.5.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.5.6 changeRequestForAssetCollection(assetCollection as PHAssetCollection-MBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection.
Notes: assetCollection: The asset collection to be modified.

Returns an asset collection change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of member assets with the properties and instance methods of the change request. After Photos

runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when modifying an asset collection,Äôs metadata or when adding or removing assets without regard to their arrangement. To work with indexes in the list of member assets, use the changeRequestForAssetCollection method instead.
See also:

- 146.5.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS 19173

146.5.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection, with a fetch result for tracking changes.
Notes: assetCollection: The asset collection to be modified.
assets: A fetch result listing the assets in the collection.

Returns an asset collection change request.

After you create a change request within a photo library change block, you propose changes to the collection,Äôs title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange assets at specified indexes in the asset collection,Äôs list of member assets. By passing in a fetch result reflecting what your app sees as the current state of the collection,Äôs membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don,Äôt need to work with indexes in the list of member assets, you can use the changeRequestForAssetCollection method instead.
See also:

- 146.5.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS 19172

146.5.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.5.9 creationRequestForAssetCollectionWithTitle(title as string) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset collection to the Photos library.
Notes: image: A name for the new asset collection.

Returns an asset collection creation request.

Call this method within a photo library change block to create a new asset collection. For details on change blocks, see PHPhotoLibraryMBS.
To add assets to the newly created asset collection or change its title, use the methods listed in Modifying Asset Collections. To reference the newly created asset collection later in the same change block or after the change block completes, use the placeholderForCreatedAssetCollection property to retrieve a placeholder object.

146.5.10 deleteAssetCollections(Collections() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified asset collections be deleted.
Notes: assetCollections: An array of PHAssetCollectionMBS objects to be deleted.

Call this method within a photo library change block to delete asset collections. For details on change blocks, see PHPhotoLibraryMBS.

146.5.11 insertAsset(asset as PHAssetMBS, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Insert the specified asset into the collection at the specified indexes.
Notes: asset: A PHAssetMBS object to be inserted into the asset collection.
index: The index at which the asset should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

146.5.12 insertAssets(assets() as PHAssetMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified assets into the collection at the specified indexes.
Notes: assets: An array of PHAssetMBS objects to be inserted into the asset collection.
indexes: The indexes at which the assets should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

146.5.13 moveAsset(fromIndex as Integer, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Move the asset at the specified index in the asset collection to a new index.
Notes: fromIndex: The indexes of the asset to be moved in the asset collection.
toIndex: The index at which to place the moved asset, relative to the collection,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

146.5.14 moveAssets(fromIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the assets at the specified indexes in the asset collection to a new index.
Notes: fromIndexes: The indexes of the assets to be moved in the asset collection.
toIndex: The index at which to place the moved assets, relative to the collection,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

146.5.15 removeAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified asset from the asset collection.
Notes: asset: A PHAssetMBS object to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 146.5.16 removeAsset(AtIndex as Integer) 19176

146.5.16 removeAsset(AtIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the asset at the specified index from the asset collection.
Notes: index: The index of the asset to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 146.5.15 removeAsset(asset as PHAssetMBS) 19176

146.5.17 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified assets from the asset collection.
Notes: assets: An array of PHAssetMBS objects to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 146.5.18 removeAssets(AtIndexes as NSIndexSetMBS) 19177

146.5.18 removeAssets(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the assets at the specified indexes from the asset collection.
Notes: indexes: The indexes of the assets to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 146.5.17 removeAssets(assets() as PHAssetMBS) 19177

146.5.19 replaceAsset(AtIndex as Integer, asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the asset at the specified index in the asset collection with the specified asset.
Notes: index: The index of the asset to be replaced in the asset collection.
asset: A PHAssetMBS object to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

146.5.20 replaceAssets(AtIndexes as NSIndexSetMBS, assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the assets at the specified indexes in the asset collection with the specified assets.
Notes: indexes: The indexes of the assets to be replaced in the asset collection.
assets: An array of PHAssetMBS objects to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

146.5.21 Properties

146.5.22 placeholderForCreatedAssetCollection as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset collection that the change request creates.
Notes: Use this property if you need to reference the asset collection created by a change request within the same change block.
(Read only property)

146.5.23 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the asset collection.
Notes: Set this property to change the asset collection,Äôs title.
(Read and Write property)

146.6 class PHAssetCollectionMBS

146.6.1 class PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a Photos asset grouping, such as a moment, user-created album, or smart album.
Notes: In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of an asset collection, fetch them with a PHAsset class method such as fetchAssetsInAssetCollection. To find asset collections, use one of the methods listed in Fetching Asset Collections.

Important
Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Asset Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS.requestAuthorization method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and collection lists, asset collections are immutable. To create, rename, or delete asset collections, or to add, remove, or rearrange members in an asset collection, create a PHAssetCollectionChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

- MBS Xojo Plugins, version 25.1pr7
- Show Live Photos in your Xojo application

146.6.2 Methods

146.6.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.6.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.6.5 fetchAssetCollectionsContainingAsset(asset as PHAssetMBS, type as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type containing the specified asset.
Notes: asset: A Photos asset.
type: An asset collection type, such as an album or a moment. See Type constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

146.6.6 fetchAssetCollectionsWithALAssetGroupURLs(assetGroupURLs() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections using URLs provided by the Assets Library framework.
Notes: assetGroupURLs: An array of URLs, each an asset group URL that was previously retrieved from an ALAssetsGroupMBS object.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

The Assets Library framework is deprecated in iOS 8.0 and later, replaced by the Photos framework. Use this method if your app has previously stored URLs from ALAssetsGroupMBS objects and you need to retrieve the corresponding Photos framework objects.

146.6.7 fetchAssetCollectionsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections with the specified unique identifiers.
Notes: identifiers: An array of strings, each the localIdentifier string of an asset collection.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

146.6.8 fetchAssetCollectionsWithType(type as Integer, subType as integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type and subtype.
Notes: type: A type of asset collection, such as an album or a moment. See Type constants.
subtype: A subtype of asset collection. See Subtype constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all asset collections with the specified type and subtype. To retrieve a more specific set of asset collections, provide a PHFetchOptionsMBS object containing a filter predicate.

146.6.9 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: This property applies only to asset collections whose type is PHAssetCollectionTypeMoment. The Photos app automatically creates moments to group assets by time and location. A moment might group assets captured in multiple locations, so this array can contain multiple names. For other asset collection types, this property,Äôs value is nil.

146.6.10 transientAssetCollectionWithAssetFetchResult(fetchResult as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the assets from the specified fetch result.
Notes: fetchResult: A fetch result containing one or more PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

146.6.11 transientAssetCollectionWithAssets(assets() as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the specified assets.
Notes: assets: An array of PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos app or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

146.6.12 Properties

146.6.13 approximateLocation as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A location representing those of all assets in the collection.
Notes: The Photos app automatically creates moments to group assets by time and location. A moment can contain photos from several locations in close proximity. In such cases, this property describes the general area containing the locations of all assets in the moment.
This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

146.6.14 assetCollectionSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtype of the asset collection.
Notes: Use subtypes to make minor distinctions between collections of the same type. For albums, for example, you might distinguish user-created albums from those synced from iPhoto. See Subtype constants for possible values.
(Read only property)

146.6.15 assetCollectionType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset collection, such as an album or a moment.
Notes: (Read only property)

146.6.16 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the asset collection.
Notes: This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

146.6.17 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the asset collection.
Notes: This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

146.6.18 estimatedAssetCount as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The estimated number of assets in the asset collection.
Notes: This count may not match the current number of assets in the collection. To get the most recent count, fetch the collection,Äôs assets with the fetchAssetsInAssetCollection method and read the count property of the fetch result.
If asset count information is not available for the collection, this property,Äôs value is NSNotFound.
(Read only property)

146.6.19 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the asset collection.
Notes: This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

146.6.20 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the asset collection.
Notes: This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

146.6.21 Constants

SubTypes

Constant	Value	Description
SubtypeAlbumCloudShared	101	An iCloud Shared Photo Stream.
SubtypeAlbumImported	6	An album imported from a camera or external storage.
SubtypeAlbumMyPhotoStream	100	The user,Äôs personal iCloud Photo Stream.
SubtypeAlbumRegular	2	An album created in the Photos app.
SubtypeAlbumSyncedAlbum	5	An album synced to the device from iPhoto.
SubtypeAlbumSyncedEvent	3	An Event synced to the device from iPhoto.
SubtypeAlbumSyncedFaces	4	A Faces group synced to the device from iPhoto.
SubtypeAny	-1	A bit mask representing all possible subtypes.
SubtypeSmartAlbumAllHidden	205	A smart album that groups all assets hidden from the Moments view i Photos app.
SubtypeSmartAlbumAnimated	214	A smart album that groups all image animation assets.
SubtypeSmartAlbumBursts	207	A smart album that groups all burst photo sequences in the photo librar
SubtypeSmartAlbumCinematic	218	A Smart Album that groups all cinematic photo assets.
SubtypeSmartAlbumDepthEffect	212	A smart album that groups all images captured using the Depth Effect ca mode on compatible devices.
SubtypeSmartAlbumFavorites	203	A smart album that groups all assets that the user has marked as favorit
SubtypeSmartAlbumGeneric	200	A smart album of no more specific subtype.
SubtypeSmartAlbumLivePhotos	213	A smart album that groups all Live Photo assets.
SubtypeSmartAlbumLongExposures	215	A smart album that groups all Live Photo assets where the Long Exp variation is enabled.
SubtypeSmartAlbumPanoramas	201	A smart album that groups all panorama photos in the photo library.
SubtypeSmartAlbumRAW	217	A Smart Album that groups all RAW assets in the photo library.
SubtypeSmartAlbumRecentlyAdded	206	A smart album that groups assets that were recently added to the photo lib
SubtypeSmartAlbumScreenshots	211	A smart album that groups all images captured using the device,Äôs scree function.
SubtypeSmartAlbumSelfPortraits	210	A smart album that groups all photos and videos captured using the devic front-facing camera.
SubtypeSmartAlbumSlomoVideos	208	A smart album that groups all Slow-Mo videos in the photo library.
SubtypeSmartAlbumSpatial	219	A Smart Album that groups spatial videos in the photo library.
SubtypeSmartAlbumTimelapses	204	A smart album that groups all time-lapse videos in the photo library.
SubtypeSmartAlbumUnableToUpload	216	Unable to upload album.
SubtypeSmartAlbumUserLibrary	209	A smart album that groups all assets that originate in the user,Äôs own li (as opposed to assets from iCloud Shared Albums).
SubtypeSmartAlbumVideos	202	A smart album that groups all video assets in the photo library.

Types

Constant	Value	Description
TypeAlbum	1	An album in the Photos app.
TypeMoment	3	A moment in the Photos app. Deprecated by Apple.
TypeSmartAlbum	2	A smart album whose contents update dynamically.

146.7 class PHAssetCreationRequestMBS

146.7.1 class PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create a new Photos asset from underlying data resources, for use in a photo library change block.
Notes: A PHAssetCreationRequestMBS object, used within a photo library change block, constructs a new photo or video asset from data resources, and adds it to the Photos library. This class works in terms of the raw data resources that together form an asset, so you can use it together with the PHAssetResource class to perform a complete copy (or backup and restore) of an asset,Ăôs underlying resources. To instead simply create a new asset from an image object, image file, or video file, see the superclass PHAssetChangeRequestMBS.

To create a new asset from data resources, first start a change block using the shared PHPhotoLibraryMBS method performChanges or performChangesAndWait. Then, within the change block:

1. Within the change block, create a new asset creation request with the creationRequestForAsset method.
2. Add image, video, or data resources using the methods listed in Providing Data Resources for the New Asset.
3. (Optional.) Set metadata for the new asset using methods and properties of the superclass PHAssetChangeRequestMBS.

After Photos runs the change block and calls your completion handler, the new asset is created in the Photos library.
If you instantiate or use this class outside a photo library change block, Photos throws an exception. For details on change blocks, see PHPhotoLibrary.
Subclass of the PHAssetChangeRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 25.1pr7

146.7.2 Methods

146.7.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes: type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos

library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 146.7.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 19188

146.7.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes: type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 146.7.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 19188

146.7.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the file at the specified URL.
Notes: type: The role of this data resource in constructing an asset. For details, see type constants.
file: The URL to a local file containing data for the asset resource.

options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS.

Photos imports the asset resource data only when it executes the PHPhotoLibrary change block in which you create a PHAssetCreationRequestMBS object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 146.7.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 19188

146.7.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.7.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.7.8 creationRequestForAsset as PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset to the Photos library using asset resources.
Notes: Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS. After calling this method, and before returning from the change block use the methods listed in Providing Data Resources for the New Asset to specify one or more data resources for the asset.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (provided by the superclass PHAssetChangeRequestMBS and listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

146.7.9 supportsAssetResourceTypes(types() as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether Photos supports creating an asset with the specified combination of resource types.
Notes: types: An array of numbers, each the raw value of a PHAssetResourceType identifier.
Return true if Photos supports the specified combination of resource types; otherwise, false.

When you request creation of an asset from resource data, Photos does not validate that the resources can construct a complete asset until the complete PHPhotoLibrary performChanges change block executes. (If an asset cannot be constructed from the provided resources, Photos calls the completionHandler you provide in that method with an error describing the failure.) To perform preflight validation before executing an asset creation request, use this method to verify that the set of resource types from which you want to create an asset are correct.

This method verifies only that the collection of asset resource types is valid (for example, ensuring that you do not attempt to construct a photo asset without image data), so it is still possible for an asset creation request to fail if the data itself is incomplete or invalid. However, calling by using this method you can avoid some kinds of asset creation failure before performing the expensive operation of reading (and potentially downloading or transmitting) asset resource data.

146.7.10 Constants

Resource Types

Constant	Value	Description
TypeAdjustmentBasePairedVideo	11	The resource provides an unaltered version of the video data for a Live Phot asset for use in reconstructing recent edits. Requires MacOS 10.15 or newer.
TypeAdjustmentBasePhoto	8	The resource provides an unaltered version of its photo asset for use in for us in reconstructing recent edits.
TypeAdjustmentBaseVideo	12	The resource provides an unaltered version of the video data for video asset fo use in reconstructing recent edits. Requires MacOS 10.15 or newer.
TypeAdjustmentData	7	The resource provides data for use in reconstructing recent edits to its asset.
TypeAlternatePhoto	4	The resource provides photo data that is not the primary form of its asset.
TypeAudio	3	The resource provides original audio data for its asset.
TypeFullSizePairedVideo	10	The resource provides the current video data component of a Live Photo asset Requires MacOS 10.15 or newer.
TypeFullSizePhoto	5	The resource provides photo data at the highest available size and quality fo its asset.
TypeFullSizeVideo	6	The resource provides video data at the highest available size and quality fo its asset.
TypePairedVideo	9	The resource provides the original video data component of a Live Photo asset
TypePhoto	1	The resource provides original photo data for its asset.
TypePhotoProxy	19	This is a photo proxy.
TypeVideo	2	The resource provides original video data for its asset.

146.8 class PHAssetMBS

146.8.1 class PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class representating of an image, video, or Live Photo in the Photos library.
Notes: You fetch assets to begin working with them. Use the class methods listed in Fetching Assets to retrieve one or more PHAsset instances representing the assets you want to display or edit.

Assets contain only metadata. The underlying image or video data for any given asset might not be stored on the local device. However, depending on how you plan to use this data, you may not need to download all of it. If you need to populate a collection view with thumbnail images, the Photos framework can manage downloading, generating, and caching thumbnails for each asset. For details, see PHImageManagerMBS.

Asset objects are immutable. To edit an asset,Äôs metadata (such as marking it as a favorite photo), create a PHAssetChangeRequestMBS object within a photo library change block. For more details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 25.1pr7
- Show Live Photos in your Xojo application

146.8.2 Methods

146.8.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.8.4 cancelContentEditingInputRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a request for editing the asset,Äôs content.
Notes: requestID: The numeric identifier of the request to be canceled.

When you request asset editing information with the requestContentEditingInputWithOptions method, the asset returns a numeric identifier for the request. To cancel the request before it completes, provide this

identifier when calling the cancelContentEditingInputRequest method.

146.8.5 canPerformEditOperation(editOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the asset supports the specified editing operation.
Notes: editOperation: The operation to be tested.

Returns true if the asset supports the the specified editing operation; otherwise, false.

If an asset supports editing, you can create a PHAssetChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

146.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.8.7 fetchAssets(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves all assets matching the specified options.
Notes: options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

146.8.8 fetchAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets from the specified asset collection.
Notes: assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets in the specified collection. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

146.8.9 fetchAssetsWithBurstIdentifier(burstIdentifier as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified burst photo sequence identifier.
Notes: burstIdentifier: A burst identifier string, as provided by the burstIdentifier property of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

A burst photo sequence, as seen in the Photos app, corresponds to a group of Photos assets that share the same burstIdentifier string.

By default, the returned PHFetchResultMBS object contains only the representative asset and any user-picked photos from the burst sequence. To retrieve all photos in the burst sequence, provide a PHFetchOptionsMBS object containing a filter predicate.

146.8.10 fetchAssetsWithLocalIdentifiers(identifiers() as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified local-device-specific unique identifiers.
Notes: identifiers: An array of strings, each the localIdentifier string of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

146.8.11 fetchAssetsWithMediaType(mediaType as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified media type.
Notes: mediaType: A media type, such as image or video. See type constants.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets with the specified type. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

146.8.12 fetchKeyAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets marked as key assets in the specified asset collection.
Notes: assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result or nil if no objects match the request.

Most asset collections contain a key asset, which the Photos app displays as a proxy for the collection. Different types of asset collections have different ways of specifying one or more key assets. For example, in the Camera Roll collection, the most recently captured photo or video is the key asset.

This method returns nil if the assetCollection parameter references a transient asset collection (such as one created with the transientAssetCollectionWithAssets method).

146.8.13 PHContentEditingInputCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes: A Boolean value indicating whether the image request was canceled. (boolean)

If you call the cancelContentEditingInputRequest method to cancel a request, Photos calls your result handler delegate with the value true for this key.

146.8.14 PHContentEditingInputErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes: An error that occurred while attempting to load the asset data, NSErrorMBS.

Photos provides an error object for this key if it cannot provide asset data for your handler block,Äôs contentEditingInput parameter. Examine the error object for information about the cause of the error.

146.8.15 PHContentEditingInputResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes: A Boolean value indicating whether the asset data is stored on the local device or must be downloaded from iCloud.

If true, no asset data was provided because the asset data must be downloaded from iCloud. To do this, submit another request, specifying true for the networkAccessAllowed option.

146.8.16 requestContentEditingInputWithOptions(options as PHContentEditingInputRequestOptionsMBS, CompletionDelegate as RequestContentEditingInputWithOptionsCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests asset information for beginning a content editing session.
Notes: options: Options affecting how Photos handles an edit session request.

Returns a numeric identifier for the request. Pass this identifier to the cancelContentEditingInputRequest method if you need to cancel the request before it completes.

When you call this method, Photos downloads the asset,Äôs image or video data (if necessary) and prepares it for editing, then calls your completionHandler ddelegate to provide a PHContentEditingInputMBS object you use for editing.

To complete the edit, create a PHContentEditingOutputMBS object from the editing input to provide the edited asset data. Then, commit the edit by posting a change block to the shared PHPhotoLibrary object. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output you created.

146.8.17 Properties

146.8.18 adjustmentFormatIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier that describes the adjustment format.
Notes: Requires macOS 12.0 or iOS 15.0.
(Read only property)

146.8.19 burstIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier shared by photo assets from the same burst sequence.
Notes: When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. The Photos framework identifies a burst sequence as a group of assets sharing the same burst identifier string.
(Read only property)

146.8.20 burstSelectionTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The selection type of the asset in a burst photo sequence.
Notes: When the user takes a sequence of photos in burst mode with the Camera app (on supported

devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites. See PHAssetBurstSelectionType for possible values.

Because an asset may have more than one selection type, you use bit masks to identify an asset.
(Read only property)

146.8.21 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

146.8.22 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

146.8.23 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the video asset.
Notes: For photo assets, the duration is always zero.
(Read only property)

146.8.24 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has marked the asset as a favorite.
Notes: (Read only property)

146.8.25 hasAdjustments as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset contains adjustment data.
Notes: Requires macOS 12.0 and iOS 15.0.
(Read only property)

146.8.26 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has hidden the asset.
Notes: Hidden assets do not appear in the Moments interface in the Photos app and are not returned when fetching the contents of a moment collection.
(Read only property)

146.8.27 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes: Typically, an asset,Äôs location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

146.8.28 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as panoramic photo or high-framerate video.
Notes: See subtype constants for possible values.
Because an asset may have more than one subtype, you use these values as bit masks to identify an asset.
(Read only property)

146.8.29 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes: See Type constants.
(Read only property)

146.8.30 modificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was last modified.
Notes: Photos updates the modification date when an asset,Äôs image or video content or metadata changes.
(Read only property)

146.8.31 modificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was last modified.
Notes: Photos updates the modification date when an asset,Äôs image or video content or metadata changes.
(Read only property)

146.8.32 pixelHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The height, in pixels, of the asset,Äôs image or video data.
Notes: If the asset,Äôs content has been edited, this property describes the size of the current version of the asset.
(Read only property)

146.8.33 pixelWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The width, in pixels, of the asset,Äôs image or video data.
Notes: If the asset,Äôs content has been edited, this property describes the size of the current version of the asset.
(Read only property)

146.8.34 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

146.8.35 RepresentsBurst as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is the representative photo from a burst photo sequence.
Notes: When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. One asset represents the entire sequence in displayed collections.
(Read only property)

146.8.36 sourceType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The means by which the asset entered the user,Äôs Photos library.
Notes: Assets from some sources can be edited, deleted, or added to collections; assets from other sources do not support these operations. For details, see SourceType constants.
(Read only property)

146.8.37 Constants

Burst Selection Type

Constant	Value	Description
BurstSelectionTypeAutoPick	1	Photos has automatically identified the asset as a potential user favorite.
BurstSelectionTypeNone	0	The asset is not marked as a favorite member of its burst sequence or is not a member of a burst sequence.
BurstSelectionTypeUserPick	2	The user has marked the asset as a favorite member of its burst sequence.

Edit Operations

Constant	Value	Description
EditOperationContent	2	The asset,Äôs photo or video content can be edited.
EditOperationDelete	1	The asset can be deleted from the photo library.
EditOperationProperties	3	The asset,Äôs metadata properties can be edited.

Media Subtypes

Constant	Value	Description
MediaSubtypeNone	0	The asset has no subtype. This is the default subtype for most photo and video assets.
MediaSubtypePhotoDepthEffect	16	The asset is a photo captured with the Camera app's Portrait mode effect.
MediaSubtypePhotoHDR	2	The asset is a High Dynamic Range photo.
MediaSubtypePhotoLive	8	The asset is a Live Photo that includes movement and sounds from the m just before and after its capture. To display a Live Photo asset with its associated video content, ret PHLivePhotoMBS object using the PHImageManagerMBS class and a to a PHLivePhotoViewMBS object.
MediaSubtypePhotoPanorama	1	The asset is a large-format panorama photo.
MediaSubtypePhotoScreenshot	4	The asset is an image captured with the device,Äôs screenshot feature.
MediaSubtypeSpatialMedia	1024	The asset is a spatial video.
MediaSubtypeVideoCinematic	&h200000	The asset is a cinematic video.
MediaSubtypeVideoHighFrameRate	&h20000	The asset is a high-frame-rate video. High-frame-rate videos are created by the Slow-Mo feature in the Cam on an iOS device.
MediaSubtypeVideoStreamed	&h10000	The asset is a video whose contents are always streamed over a netwo nection. This subtype identifies video assets that are never stored on the local such as shared videos in a subscribed iCloud Photo Stream.
MediaSubtypeVideoTimelapse	&h40000	The asset is a time-lapse video.

Media Types

Constant	Value	Description
MediaTypeAudio	3	The asset is an audio file.
MediaTypeImage	1	The asset is a photo or other static image.
MediaTypeUnknown	0	The asset,Äôs type is unknown.
MediaTypeVideo	2	The asset is a video file.

Asset Playback Styles

Constant	Value	Description
PlaybackStyleImage	1	The asset should be displayed as a still image.
PlaybackStyleImageAnimated	2	The asset should be displayed as an animated image.
PlaybackStyleLivePhoto	3	The asset should be displayed as a Live Photo.
PlaybackStyleUnsupported	0	The asset has an unsupported or undefined media playback type.
PlaybackStyleVideo	4	The asset should be displayed as a video.
PlaybackStyleVideoLooping	5	The asset should be displayed as a looping video.

Source Types

Constant	Value	Description
SourceTypeCloudShared	2	The asset originates from an iCloud Shared Album. Assets from shared albums cannot be edited and do not appear in Moments collections.
SourceTypeiTunesSynced	4	The asset originates from a Mac or PC and is present on the device through iTunes sync. iTunes-synced assets cannot be edited or deleted.
SourceTypeNone	0	Source information is not available for the asset.
SourceTypeUserLibrary	1	The asset is part of the user,Äôs main Photos library. The main library contains both assets that originate on the device (such as photos and videos captured with the Camera app or screenshots) and assets synchronized through iCloud Photo Library or My Photo Stream. These assets appear in Moments collections and can be edited or deleted.

146.8.38 Delegates

146.8.39 RequestContentEditingInputWithOptionsCompletedMBS(Asset as PHAssetMBS, Options as PHContentEditingInputRequestOptionsMBS, tag as variant, contentEditingInput as PHContentEditingInputMBS, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls when the requested asset editing information is ready.
Notes: contentEditingInput: An object that describes the asset for editing and provides methods for loading the image or video content to be edited.
info: A dictionary providing information about the status of the request. See Editing Request Info Keys for possible keys and values.

146.9 class PHAssetResourceCreationOptionsMBS

146.9.1 class PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the creation of a new Photos asset from underlying resources.
Notes: You use this class when creating an asset for addition to the Photos library with a PHAssetCreationRequestMBS object.

146.9.2 Methods

146.9.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.9.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.9.5 copy as PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Copies the options object.

146.9.6 Properties

146.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.9.8 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The filename for the asset resource being created.
Notes: You can use this property to track the original name of the file from which you import an asset resource even if you use the addResourceWithType method to create a resource from data instead of from a file. After creating the asset, this information is available in the originalFilename property of the corresponding PHAssetResourceMBS object.

If you do not specify a value for this property and are using the addResourceWithType method to create a resource, Photos infers the filename from that method,Äôs fileURL parameter. Otherwise, Photos automatically generates a filename.
(Read and Write property)

146.9.9 shouldMoveFile as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos moves or duplicates files when creating an asset resource.
Notes: This property applies only when creating an asset resource with the addResourceWithType method. If this value is true, Photos moves the specified file into the Photos library to create the asset resource, removing the original file after the asset has been successfully created. When using this option, Photos does not make an intermediary copy of the resource data, so no additional storage space is required.

If this value is false (the default), Photos copies the contents of the original file into the Photos library.

Attempting to move a file that is currently open or has hard links fails.
(Read and Write property)

146.9.10 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the resource.
Notes: If you do not specify a value for this property, Photos infers the data type from the type value you specify when adding the resource to a creation request.
For details in uniform type identifiers, see Uniform Type Identifiers Overview.
(Read and Write property)

146.10 class PHAssetResourceManagerMBS

146.10.1 class PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A resource manager for the data storage underlying a Photos asset.
Notes: An asset can have multiple underlying data resources—for example, both original and edited versions—each of which is represented by a PHAssetResourceMBS object. Unlike the PHImageManagerMBS class, which provides and caches the primary representations of assets as thumbnails, image objects, or video objects, the asset resource manager provides direct access to these underlying data resources.

Available in MacOS 10.15 or newer.

146.10.2 Methods

146.10.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.10.4 cancelDataRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes: requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for asset resource data using the requestDataForAssetResource method, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelDataRequest method.

146.10.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.10.6 defaultManager as PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared asset resource manager object.
Notes: This method always returns the same asset resource manager object, which is shared for all uses in your app.

146.10.7 requestDataForAssetResource(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, DataReceivedHandler as RequestDataForAssetResourceDataReceivedMBS, CompleteHandler as RequestDataForAssetResourceCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be delivered asynchronously.
Notes: resource: The asset resource for which to request data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelDataRequest: method.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos calls your handler block at least once, progressively providing chunks of data. After reading all of the data, Photos calls your completionHandler block to indicate that the data is complete. (At this point, the complete data for the asset is the concatenation of the data parameters from all calls to your handler block.) If Photos cannot finish reading or downloading asset resource data, it calls your completionHandler block with a description of the error. Photos can also call the completionHandler block with a non-nil error when the data is complete if the user cancels downloading.

146.10.8 writeDataForAssetResource(resource as PHAssetResourceMBS, file as FolderItem, options as PHAssetResourceRequestOptionsMBS, CompleteHandler as WriteDataForAssetResourceCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be asynchronously written to a local file.
Notes: resource: The asset resource for which to request data.
fileURL: A URL identifying the local filename at which to write the asset resource,Äôs data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos progressively writes the data into the specified file. After writing all of the data, or if an error prevents reading all of the data, Photos calls your delegate.

146.10.9 Properties

146.10.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.10.11 Constants

Constants

Constant	Value	Description
PHInvalidAssetResourceDataRequestID	0	The invalid request ID.

146.10.12 Delegates

146.10.13 RequestDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

146.10.14 RequestDataForAssetResourceDataReceivedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Data as MemoryBlock, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls to provide the requested data.
Notes: data: The requested asset resource data.

146.10.15 WriteDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, File as FolderItem, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

146.11 class PHAssetResourceMBS

146.11.1 class PHAssetResourceMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An underlying data resource associated with a photo, video, or Live Photo asset in the Photos library.
Notes: Each PHAssetMBS object references one or more resources. Use these objects to work with those resources directly, like when backing up or restoring assets.

- A photo asset can contain both JPEG and RAW files representing the same photo.
- A Live Photo asset contains both still photo and video resources.
- An edited asset contains resources representing asset content before and after the edit, as well as a resource corresponding to the PHAdjustmentDataMBS object that describes the edit.

To work with the data contained in an asset resource, fetch it using the PHAssetResourceManagerMBS class. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MBS Xojo Plugins, version 25.1pr7

146.11.2 Methods

146.11.3 assetResourcesForAsset(asset as PHAssetMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with an asset.
Notes: asset: A photo or video asset in the Photos library.

Returns the asset,Äôs resources.

Asset resource objects describe the data files that an asset represents. An asset can contain multiple resources—for example, an edited photo asset contains resources for both the original and edited images, as well as for the PHAdjustmentDataMBS object describing the edit. To work with one of these files, fetch the underlying data using the PHAssetResourceManagerMBS class.

146.11.4 assetResourcesForLivePhoto(livePhoto as PHLivePhotoMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with a Live Photo object.
Notes: livePhoto: A Live Photo object.

Returns the underlying resources that constitute the Live Photo.

A Live Photo is a picture, taken with a compatible device, that includes movement and sound from the moments just before and after its capture. A PHLivePhoto object represents the displayable combination of image, motion, and sound data. You can obtain such objects from the Photos library using the PHImageManagerMBS class or construct them from asset resources exported from a Photos library using the PHLivePhotoMBS class.

Use this method to export the underlying resources that constitute a Live Photo. For example, a social networking app can retrieve those data files and upload them to a server. Then, on another user,Äôs device, the app downloads those data files and uses the PHLivePhoto class to re-create a Live Photo object for display using the PHLivePhotoViewMBS class.

146.11.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.11.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.11.7 Properties

146.11.8 assetLocalIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for the asset object this resource is associated with.

Notes: This property,Äôs value corresponds to the localIdentifier property of the PHAssetMBS object that owns this asset resource. If you,Äôve obtained an asset resource without a reference to its owning asset, use the fetchAssetsWithLocalIdentifiers method with this identifier to retrieve the correct PHAssetMBS object.
(Read only property)

146.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.11.10 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original filename of the asset resource from when it was created or imported.
Notes: (Read only property)

146.11.11 pixelHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the resource, in pixels.
Notes: Requires macOS 13.0 or iOS 16.0.
(Read only property)

146.11.12 pixelWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the resource, in pixels.
Notes: Requires macOS 13.0 or iOS 16.0.
(Read only property)

146.11.13 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The relationship of this asset resource to its owning asset.
Notes: An asset can contain multiple resources, and different resources contribute to the asset in different ways. For details and examples, see resource types.
(Read only property)

146.11.14 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset resource,Äôs image or video data.
Notes: For more information, see Uniform Type Identifiers Overview in Apple's documentation.
(Read only property)

146.12 class PHAssetResourceRequestOptionsMBS

146.12.1 class PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of underlying asset data that you request from the asset resource manager.
Notes: You use this class when requesting the underlying data for photo, video, and Live Photo asset resources from a PHAssetResourceManagerMBS object.

Requires MacOS 10.15 or newer.

146.12.2 Methods

146.12.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.12.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.12.5 copy as PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request options.

146.12.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.12.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the asset resource data.
Notes: If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

146.12.8 Properties

146.12.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.12.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset resource data from iCloud.
Notes: If true, and the requested resource data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a block that Photos calls periodically while downloading the resource data. If false (the default), and the resource data is not on the local device, Photos calls the completionHandler block you provided in your request, with an NSErrorMBS object indicating that the resource requires network access.
(Read and Write property)

146.12.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the asset resource data.
Notes: If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.
(Read and Write property)

146.12.12 Delegates

146.12.13 ProgressHandlerMBS(progress as double, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset resource data from iCloud. Used by the progressHandler property.
Notes: If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.

146.13 class PHCachingImageManagerMBS

146.13.1 class PHCachingImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails, optimized for batch preloading large numbers of assets.
Notes: For quick performance when you are working with many assets, a caching image manager can prepare asset images in the background in order to eliminate delays when you later request individual images. For example, use a caching image manager when you want to populate a collection view or similar UI with thumbnails of photo or video assets.

Much of the key functionality of the PHCachingImageManager class is defined by its superclass, PHImageManagerMBS. For details, see PHImageManagerMBS.

To use a caching image manager:
1. Create a PHCachingImageManager instance. (This step replaces using the shared PHImageManager instance.)
2. Use PHAsset class methods to fetch the assets you,Äôre interested in.
3. To prepare images for those assets, call the startCachingImagesForAssets:targetSize:contentMode:options: method with the target size, content mode, and options you plan to use when later requesting images for each individual asset.
4. When you need an image for an individual asset, call the requestImageForAsset:targetSize:contentMode:options:resultHandler: method, and pass the same parameters you used when preparing that asset.

If the image you request is among those already prepared, the PHCachingImageManager object immediately returns that image. Otherwise, Photos prepares the image on demand and caches it for later use.
Subclass of the PHImageManagerMBS class.

146.13.2 Methods

146.13.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.13.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.13.5 startCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function:

Prepares image representations of the specified assets for later use.

Notes:

assets: An array of PHAssetMBS objects for which to prepare image representations.
targetSize: The size of the images to be prepared.
contentMode: An option for how to fit the images to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested images, and notify your app of progress or errors. For details, see PHImageRequestOptions.

When you call this method, Photos begins to fetch image data and generates thumbnail images on a background thread. At any time afterward, you can use the requestImageForAsset:targetSize method to request individual images from the cache. If Photos has finished preparing a requested image, that method provides the image immediately.

Photos caches images with the exact target size, content mode, and options you specify in this method. If you later request an image with, for example, a different target size than you passed when calling this method, Photos cannot make use of the cache and so it must fetch or generate a new image.

146.13.6 stopCachingImagesForAllAssets

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels all image preparation that is currently in progress.

146.13.7 stopCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels image preparation for the specified assets and options.
Notes: assets: The array of specific PHAssetMBS objects for which image preparation is in progress but is no longer needed.
targetSize: The target size with which you requested image preparation.
contentMode: The content mode with which you requested image preparation.
options: The options with which you requested image preparation.

This method cancels image preparation for the specified assets with the specified options. Use it when image preparation that might be in progress is no longer needed. For example, if you prepare images for a collection view filled with photo thumbnails and then the user chooses a different thumbnail size for your collection view, call this method to cancel generating thumbnail images at the old size.

146.13.8 Properties

146.13.9 allowsCachingHighQualityImages as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the image manager prepares high-quality images.
Notes: If true (the default), the image manager prepares images at high quality. This option produces better images, at a high performance cost.
For faster performance when preparing large numbers of images—such as while the user is scrolling quickly through a collection of thumbnails—set this property to false.
(Read and Write property)

146.14 class PHChangeMBS

146.14.1 class PHChangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of a change that occurred in the photo library.
Notes: Photos provides PHChangeMBS objects to notify your app of changes to the assets and collections managed by the Photos app. To receive change information, implement the DidChange event in your PHPhotoLibraryMBS subclass.

After Photos provides you with a change object, you use its methods to get a change details object. Call the changeDetailsForObject or changeDetailsForFetchResult method, passing an asset or collection object you,Äôve previously fetched or a fetch result containing several such objects. The resulting PHObjectChangeDetailsMBS or PHFetchResultChangeDetailsMBS object describes any changes that have happened to the object or fetch result since you last fetched it.

146.14.2 Methods

146.14.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.14.4 changeDetailsForFetchResult(FetchResult as PHFetchResultMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for a fetch result.
Notes: object: A fetch result.

Returns a change details object, or nil if there have been no changes affecting the fetch result,Äôs contents.

When Photos calls your change observer,Äôs photoLibraryDidChange method, call the changeDetailsForObject method to get detailed change information about the results of a fetch you,Äôve previously performed. If there have been any changes in the Photos library affecting the fetch, the resulting PHFetchResultChangeDetailsMBS object tells you if any contents in the fetch result have been added, removed, or changed since you fetched it. If there have been no changes since you performed the fetch, this method returns nil.

Typically, if your app displays the members of a collection (such as an album or moment), you use a method such as fetchAssetsInAssetCollection to retrieve those members and then keep the resulting PHFetchResultMBS object. You can then pass that fetch result to this method to learn about changes to the collection, such as whether new members have been added to it (and which indexes to insert them at in your UI).

To find out about changes to an object,Äôs properties, such as a collection,Äôs title or an asset,Äôs metadata, use the changeDetailsForObject: method.

146.14.5 changeDetailsForObject(PHObject as PHObjectMBS) as PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for the specified asset or collection.
Notes: object: A PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS object.

Returns a change details object, or nil if there have been no changes to the specified asset or collection.

When Photos calls your change observer,Äôs photoLibraryDidChange: method, call the changeDetailsForObject method to get detailed change information about an asset or collection you,Äôve previously fetched. If the asset or collection has changed since you last fetched it, the resulting PHObjectChangeDetailsMBS object describes the changes. If there are no changes between the fetched object and the current state of the asset or collection it represents in the Photos library, this method returns nil.
For an asset collection or collection list, this method and the PHObjectChangeDetailsMBS object it returns describe changes only to the collection,Äôs properties. If you are instead interested in changes to the collection,Äôs membership, use the changeDetailsForFetchResult method.

146.14.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.14.7 Properties

146.14.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.15 class PHChangeRequestMBS

146.15.1 class PHChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change delegate.
Notes: You use the PHAssetChangeRequestMBS class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset,Äôs content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request,Äôs properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset,Äôs state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.15.2 Methods

146.15.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.15.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.15.5 Properties

146.15.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.16 class PHCloudIdentifierMBS

146.16.1 class PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A cloud identifier for a Photos project extension.
Notes: The user can choose to store Photos project extensions in iCloud. The cloud identifier uniquely references project extensions in the cloud by string serialization. When a project's global identifier can't be determined from its local identifier, the notFoundIdentifier identifier is provided in that array slot.

146.16.2 Methods

146.16.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.16.4 Constructor(stringValue as String)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Deserializes a cloud identifier from its string value.

146.16.5 notFoundIdentifier as PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The global identifier used in an array slot for items that couldn't be found.

146.16.6 Properties

146.16.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.16.8 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string version of the cloud identifier to use in serialization.
Notes: (Read only property)

146.17 class PHCollectionListChangeRequestMBS

146.17.1 class PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos collection list, for use in a photo library change block.
Notes: You use the PHCollectionListChangeRequest class to request changes for PHCollectionList objects. To make changes to collection lists (such as folders containing user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForCollectionListWithTitle method to create a new asset collection.
- Call the deleteCollectionLists: method to delete existing asset collections.
- Call the changeRequestForCollectionList: or changeRequestForCollectionList method to modify a collection,Äôs metadata or its list of child collections.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you,Äôre requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying a collection list works like a mutable version of the collection list object. Use the change request,Äôs properties and instance methods to request changes to the collection list itself.

After Photos runs the change delegate and calls your completion handler, the collection list,Äôs state reflects the changes you requested in the delegate.

If you create or use a change request object outside a photo library change delegate, Photos raises an Objective-C exception. For details on change delegates, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

146.17.2 Methods

146.17.3 addChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified collections as children of the collection list.
Notes: collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be added to the collection list.

If you created the change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method, Photos inserts the new children after the existing child collections in the collection list. Otherwise, the arrangement of the new children relative to others in the collection is undefined.

146.17.4 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.17.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list.
Notes: collectionList: The collection list to be modified.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.
Use this method when modifying a collection list,Äôs metadata or when adding or removing child collections without regard to their arrangement. To work with indexes in the list of child collections, use the changeRequestForCollectionList method instead.
See also:

- 146.17.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS 19228

146.17.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list, with a fetch result for tracking changes.
Notes: collectionList: The collection list to be modified.

childCollections: A fetch result listing the child collections in the collection.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange collections at specified indexes in the collection list. By passing in a fetch result reflecting what your app sees as the current state of the collection,Äôs membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don,Äôt need to work with indexes in the list of child collections, you can use the changeRequestForCollectionList method instead.
See also:

- 146.17.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS 19228

146.17.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.17.8 creationRequestForCollectionListWithTitle(title as string) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new collection list to the Photos library.
Notes: title: A name for the new collection list.

Returns a collection list creation request.

Call this method within a photo library change block to create a new collection list. For details on change blocks, see PHPhotoLibraryMBS.
To add collections to the newly created collection list or to change its title, use the methods listed in Modifying Collection Lists. To reference the newly created collection collection list later in the same change delegate or after the change delegate completes, use the placeholderForCreatedCollectionListMBS property to retrieve a placeholder object.

146.17.9 deleteCollectionLists(collectionLists() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests to delete the specified asset collections.
Notes: collectionLists: An array of PHCollectionListMBS objects to be deleted.

Call this method within a photo library change block to delete collection lists. For details on change blocks, see PHPhotoLibraryMBS.

Deleting a collection list also deletes any child collections it contains. To preserve those collections, remove them from the collection list (with the removeChildCollections or removeChildCollectionsAtIndexes method) before deleting it. Deleting a collection list does not delete assets contained in its child collections.

146.17.10 insertChildCollections(collections() as PHCollectionMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified collections into the collection list at the specified indexes.
Notes: collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into the collection list.
indexes: The indexes at which the collections should be inserted. The count of locations in this index set must equal the count of collections.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before inserting child collections.
For a detailed discussion of how the index set you specify maps to insertions in the collection list, see the similar NSMutableArray method insertObjects.

146.17.11 moveChildCollections(AtIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the child collections at the specified indexes in the collection list to a new index.
Notes: indexes: The indexes of the child collections to be moved in the collection list.
toIndex: The index at which to place the moved child collections, relative to the collection list,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and

then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before rearranging child collections.

146.17.12 removeChildCollections(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the child collections at the specified indexes from the collection list.
Notes: indexes: The indexes of the child collections to be removed from the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before removing child collections. To remove objects based on their identities (without regard to their indexes in the collection), use the removeChildCollections method.
See also:

- 146.17.13 removeChildCollections(collections() as PHCollectionMBS) 19231

146.17.13 removeChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified child collections from the collection list.
Notes: collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be removed from the collection list.

This method removes child collections from the collection list based on their identity (determined by the localIdentifier property of each collection). To remove objects at specified indexes, use the removeChildCollections method.
See also:

- 146.17.12 removeChildCollections(AtIndexes as NSIndexSetMBS) 19231

146.17.14 replaceChildCollections(AtIndexes as NSIndexSetMBS, ChildCollections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the child collections at the specified indexes in the collection list with the specified collections.
Notes: indexes: The indexes of the child collections to be replaced in the collection list.

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into (or moved within) the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before rearranging child collections.

146.17.15 Properties

146.17.16 placeholderForCreatedCollectionList as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the collection list that the change request creates.
Notes: Use this property if you need to reference the collection created by a change request within the same change block. For details on change blocks, see PHPhotoLibraryMBS.
(Read only property)

146.17.17 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the collection list.
Notes: Set this property to change the collection list,Äôs title.
(Read and Write property)

146.18 class PHCollectionListMBS

146.18.1 class PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A group containing Photos asset collections, such as Moments, Years, or folders of user-created albums.
Notes: In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of a collection list, fetch them with a PHCollectionMBS class method such as fetchCollectionsInCollectionList. To find objects at the root of the collection list hierarchy (such as album folders with no parent folders), use the fetchTopLevelUserCollectionsWithOptions method.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collection Lists, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization: method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and asset collections, collection lists are immutable. To create, rename, or delete collection lists, or to add, remove, or rearrange members in a collection list, create a PHCollectionListChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

146.18.2 Methods

146.18.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.18.5 fetchCollectionListsContainingCollection(collection as PHCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists that contain the specified collection.
Notes: collection: An asset collection or another collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHCollectionList objects, or an empty fetch result if no objects match the request.

Different kinds of collections have different containment possibilities. For example, an asset collection whose type is TypeAlbum may be contained in a folder, or have no containing collection list. A folder, in turn, may be contained in another folder. An asset collection whose type is TypeMoment is always contained by two collection lists: a moment cluster and a moment year.

146.18.6 fetchCollectionListsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists with the specified local-device-specific unique identifiers.
Notes: identifiers: An array of strings, each the localIdentifier string of a collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

146.18.7 fetchCollectionListsWithType(collectionListType as Integer, subtype as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists of the specified type.
Notes: collectionListType: A type of collection list. See PHCollectionListType.

subtype: A subtype of collection list. See PHCollectionListSubtype.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResult object contains all collection lists with the specified type and subtype. To retrieve a more specific set of collection lists, provide a PHFetchOptionsMBS object containing a filter predicate.

146.18.8 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: For a collection list representing a group of moments, as seen in the Collections view in the Photos app, this property lists the location names associated with each moment in the group. For other types of collection list, this property,Äôs value is nil.

146.18.9 transientCollectionListWithCollections(collections() as PHCollectionMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list that contains the specified asset collections.
Notes: collections: An array of PHAssetCollectionMBS objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

146.18.10 transientCollectionListWithCollectionsFetchResult(fetchResult as PHFetchResultMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list containing the asset collections in the specified fetch result.
Notes: fetchResult: A fetch result that contains one or more PHAssetCollection objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

146.18.11 Properties

146.18.12 collectionListSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection grouping the collection list represents.
Notes: Use subtypes to make minor distinctions between collection lists of the same type, such as moment clusters and moment years. See Subtype constants.
(Read only property)

146.18.13 collectionListType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection group that the collection list represents.
Notes: A collection list may represent an upper level of the Moments hierarchy shown in the Photos app, a folder that contains albums, or a smart folder synced from iPhoto.
(Read only property)

146.18.14 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the collection list.
Notes: This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

146.18.15 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the collection list.
Notes: This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

146.18.16 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the collection list.
Notes: This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

146.18.17 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the collection list.
Notes: This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

146.18.18 Constants

Sub Types

Constant	Value	Description
SubtypeAny	-1	Use this value to fetch collection lists of all possible subtypes.
SubtypeMomentListCluster	1	The collection list is a moment cluster, grouping several related moments.
SubtypeMomentListYear	2	The collection list is a moment year, grouping all moments from one or more calendar years.
SubtypeRegularFolder	100	The collection list is a folder containing albums or other folders.
SubtypeSmartFolderEvents	200	The collection list is a smart folder containing one or more Events synced from iPhoto.
SubtypeSmartFolderFaces	201	The collection list is a smart folder containing one or more Faces synced from iPhoto.

Types

Constant	Value	Description
TypeFolder	2	A folder containing asset collections of type PHAssetCollectionTypeAlbum or PHAssetCollectionTypeSmartAlbum.
TypeMomentList	1	A group of asset collections of type PHAssetCollectionTypeMoment. Moment lists include both moment clusters and moment years. Moment clusters appear as ,ÄúCollections,Äù in the Photos app, grouping individual moments. Years group all moments containing assets created in the same calendar year.
TypeSmartFolder	3	A smart folder synced to the device.

146.19 class PHCollectionMBS

146.19.1 class PHCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos asset collections and collection lists.
Notes: You do not create or work with instances of this class directly. Instead, use one of its two concrete subclasses, PHAssetCollectionMBS or PHCollectionListMBS.

- A PHAssetCollectionMBS object represents a collection of photo or video assets, such as an album, moment, or Shared Photo Stream.
- A PHCollectionListMBS object represents a collection that contains other collections, such as a a folder containing albums or the set of all moments in a calendar year.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.
Subclass of the PHObjectMBS class.

146.19.2 Methods

146.19.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.19.4 canPerformEditOperation(anOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the collection supports the specified editing operation.
Notes: anOperation: A bit mask of editing operations to be tested.

Returns true if the asset supports the specified editing operation; otherwise, false.

If an asset collection or collection list supports editing, you can create a PHAssetCollectionChangeRequestMBS or PHCollectionListChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

146.19.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.19.6 fetchCollectionsInCollectionList(collectionList as PHCollectionListMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the specified collection list.
Notes: collectionList: The collection list from which to fetch collections.
options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all collections in the specified collection list. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object that contains a filter predicate.

146.19.7 fetchTopLevelUserCollections(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the root of the photo library,Äôs hierarchy of user-created albums and folders.
Notes: options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollection objects, or an empty fetch result if no objects match the request.

146.19.8 Properties

146.19.9 canContainAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain assets.
Notes: If this value is true, the collection is a PHAssetCollection object; otherwise, false. For details on asset collections, see PHAssetCollectionMBS.
(Read only property)

146.19.10 canContainCollections as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain other collections.
Notes: If this value is true, the collection is a PHCollectionList object; otherwise, false. For details on collection lists, see PHCollectionListMBS.
(Read only property)

146.19.11 localizedTitle as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The localized name of the collection.
Notes: This property,Äôs value can be either a user-supplied name for a user-created collection, or the localized name of a collection built into the Photos app.
(Read only property)

146.19.12 Constants

Edit Operations

Constant	Value	Description
EditOperationAddContent	3	The collection supports adding items that already exist elsewhere in the photo library.
EditOperationCreateContent	4	The collection supports creating new items.
EditOperationDelete	6	The collection itself can be deleted.
EditOperationDeleteContent	1	The collection supports deleting the items it contains.
EditOperationRearrangeContent	5	The collection supports reordering the arrangement of items it contains.
EditOperationRemoveContent	2	The collection supports removing the items it contains.
EditOperationRename	7	The collection itself can be renamed.

146.20 class PHContentEditingInputMBS

146.20.1 class PHContentEditingInputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides information about and access to the image, video, or Live Photo content of an asset to be edited.
Notes: To edit an asset,Äôs photo or video content:

1. Fetch a PHAsset object that represents the photo or video to be edited.
2. Call the asset,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutputMBS object. For photo- or video-only assets, use the editing output,Äôs properties to provide edited asset data. For Live Photo assets, create a PHLivePhotoEditingContextMBS object to edit the Live Photo content.
5. Use a photo library change block to commit the edit. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created. For more details, see PHPhotoLibraryMBS.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAsset object, you implement methods in the PHContentEditingControllerMBS protocol. Photos provides a PHContentEditingInputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

146.20.2 Methods

146.20.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

146.20.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.20.5 Properties

146.20.6 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that describes the most recent edit to the asset,Äôs content.
Notes: Adjustment data describes the ,Äúrecipe,Äù for the last edit made to an asset,Äôs photo or video content. For example, a photo editing app can use this property to read information about a set of filters applied to a photo. With this information, your app can later allow a user to change the filter parameters.
(Read only property)

146.20.7 audiovisualAsset as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The video asset, as an AVAssetMBS object.
Notes: This object provides access to the video asset as a collection of tracks and metadata. For details on working with AVAssetMBS objects.

We pass result, the AVAssetMBS object, as variant to avoid plugin dependencies.
(Read only property)

146.20.8 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

146.20.9 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

146.20.10 displaySizeImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An image of the asset,Äôs contents, appropriately sized for display.
Notes: This property does not provide the full-sized image for a photo asset but rather a scaled-down image appropriate for use in a photo editing user interface. To load the full-sized asset image, use the fullSizeImageURL property.
(Read only property)

146.20.11 fullSizeImageOrientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The Exif display orientation of the full-size image file.
Notes: This property's value is a raw numeric value describing the encoded image orientation according to the TIFF and Exif specifications. To more easily work with such values, convert this value to the CGImagePropertyOrientation type.
(Read only property)

146.20.12 fullSizeImageURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL to a file that contains the full-sized image data.
Notes: Typically, your app or extension does not need to load a full-sized image for use in an editing UI. Instead, use the displaySizeImage property to retrieve an image suitable for screen display. You can then load the full-sized image on a background queue so that it will be ready by the time the user finishes editing the display-size image. At that time, apply the user,Äôs adjustments to the full-sized image and then use the PHContentEditingOutputMBS class to commit the edit to the photo library.
(Read only property)

146.20.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.20.14 livePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited Live Photo content of the editing input.
Notes: To edit the video and photo content of the Live Photo, create a PHLivePhotoEditingContextMBS

object using this PHContentEditingInputMBS object.
If the editing input does not represent a Live Photo, this property,Äôs value is nil, indicating that you cannot use this PHContentEditingInputMBS object to create a Live Photo editing context.
(Read only property)

146.20.15 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information that was saved with the asset.
Notes: Typically, an asset,Äôs location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

146.20.16 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as a panoramic photo or a high-frame-rate video.
Notes: See MediaSubtype* constants for possible values.
Because an asset can have more than one subtype, use these values as bit masks to identify an asset.
(Read only property)

146.20.17 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes: See MediaType* constants.
(Read only property)

146.20.18 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

146.20.19 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset,Äôs image or video data.
Notes: (Read only property)

146.20.20 Constants

Asset Playback Styles

Constant	Value	Description
PlaybackStyleImage	1	The asset should be displayed as a still image.
PlaybackStyleImageAnimated	2	The asset should be displayed as an animated image.
PlaybackStyleLivePhoto	3	The asset should be displayed as a Live Photo.
PlaybackStyleUnsupported	0	The asset has an unsupported or undefined media playback type.
PlaybackStyleVideo	4	The asset should be displayed as a video.
PlaybackStyleVideoLooping	5	The asset should be displayed as a looping video.

146.21 class PHContentEditingInputRequestOptionsMBS

146.21.1 class PHContentEditingInputRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of image or video data when you request to edit the content of a Photos asset.
Notes: You use the PHContentEditingInputRequestOptionsMBS class with the requestContentEditingInputWithOptions method for editing the contents of a PHAssetMBS object.
This class does not affect photo editing extensions.

146.21.2 Methods

146.21.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.21.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.21.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.21.6 SetCanHandleAdjustmentData(CanHandleAdjustmentData as CanHandleAdjustmentDataMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets delegate to be called when Photos needs to determine whether your app can continue previous edits made to an asset.

Notes: When an asset is edited, Photos stores a PHAdjustmentDataMBS object provided by the app or extension that edited the asset. This object provides all information necessary to reconstruct the edited asset using the original asset data. When your app requests to edit an asset, Photos calls this block to inquire whether your app can handle the asset,Äôs past adjustments.

146.21.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate Photos calls periodically while downloading the asset.
Notes: If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.

146.21.8 Properties

146.21.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.21.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset from iCloud if needed.
Notes: If true (the default), Photos downloads the asset requested for editing if it is not stored on the local device. To be notified of the download,Äôs progress, use the PHContentEditingInputRequestOptionsMBS property to provide a delegate that Photos calls periodically while downloading the asset.
(Read and Write property)

146.21.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate Photos calls periodically while downloading the asset.
Notes: If you request an asset whose data is not on the local device, and have enabled downloading with the

networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.
(Read and Write property)

146.21.12 Delegates

146.21.13 CanHandleAdjustmentDataMBS(adjustmentData as PHAdjustmentDataMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameter.
Notes: adjustmentData: A PHAdjustmentDataMBS object you can use to determine whether your app can work with past edits made to the asset. Typically, you make this decision based on the adjustment data,Äôs formatIdentifier and formatVersion properties.

If your method returns true, Photos provides the original asset data for editing. Your app uses the adjustment data to alter, add to, or reapply previous edits. (For example, an adjustment data may describe filters applied to a photo. Your app reapplies those filters and allows the user to change filter parameters, add new filters, or remove filters.)
If your method returns false, Photos provides the most recent asset data—the rendered output of all previous edits—for editing.

146.21.14 ProgressHandlerMBS(progress as double, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameters.
Notes: progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
stop: Set stop to true inside the block to cancel the download.

146.22 class PHContentEditingOutputMBS

146.22.1 class PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container to which you provide the results of editing the photo, video, or Live Photo content of a Photos asset.
Notes: To edit an asset,Äôs photo or video content:

1. Fetch a PHAssetMBS object that represents the photo or video to be edited.
2. Call the asset,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object. This object provides information about the asset, the asset data to be edited, and a preview image for display.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutput object. For photo- or video-only assets, provide the edited content with the renderedContentURL property. For Live Photo assets, create a PHLivePhotoEditingContext object to edit the Live Photo content and pass your content editing output to the saveLivePhotoToOutput method. For all asset types, provide your adjustment data with the adjustmentData property of the content editing output.
5. Use a photo library change block to commit the edit. (For details, see PHPhotoLibraryMBS.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.

Each PHPhotoLibraryperformChanges call prompts the user for permission to edit the contents of the photo library—to edit multiple assets in one batch, create multiple PHAssetChangeRequest objects within the same change block, each with its own corresponding PHContentEditingOutput object.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAssetMBS object, you implement methods in the PHContentEditingController protocol. Photos provides a PHContentEditingOutputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

Requires MacOS 10.11 or newer.

146.22.2 Methods

146.22.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

146.22.4 Constructor(contentEditingInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output from the specified editing input.
Notes: contentEditingInput: An object providing information about the asset to be edited.

Returns an initialized content editing output.

To complete the edit, use the renderedContentURL property to provide the edited asset content. Then, use the PHAssetChangeRequestMBS class or PHContentEditingController protocol to commit the edit to storage.
See also:

- 146.22.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS) 19252

146.22.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output for use in adding a new asset to the photo library.
Notes: placeholderForCreatedAsset: A placeholder object that ties the editing output to a PHAssetChangeRequest object for creating a new asset.

Returns an initialized content editing output.

Use this method if you want to add a new asset to the Photos library with edited content, as opposed to editing the content of an asset after adding it to the library. For example, you might use this option if your app applies filters to photos it captures with the device camera—instead of saving only the filtered image to the Photos library, your app can save both the filtered and the original image, allowing the user to revert to the original image or apply different filters later.
See also:

- 146.22.4 Constructor(contentEditingInput as PHContentEditingInputMBS) 19252

146.22.6 Properties

146.22.7 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the changes made to the asset.
Notes: You use adjustment data to describe the ,Äúrecipe,Äù for an edit that later edits can make use of. For example, a photo editing app can use this property to save information about the filters applied to a

photo. Later, the same app (or another app that understands its adjustment data format) can load the filter information, change the filter parameters, and reapply the filters to the original photo.

If you write new asset content to the URL specified by the renderedContentURL property, you must also provide a new, distinct PHAdjustmentDataMBS object describing your edit. Passing a preexisting adjustment data object (that describes an earlier edit) results in undefined behavior.
(Read only property)

146.22.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.22.9 renderedContentURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL at which to write a file containing edited asset content.
Notes: Read this property to find a URL for writing edited asset content. Then, if editing a photo asset, write the altered photo image to a file in JPEG format at this URL. If editing a video asset, export the video to a QuickTime (.mov) file at this URL.

Edited asset content must incorporate (or ,Äúbake in,Äù) the intended orientation of the asset. That is, the orientation metadata (if any) that you write in the output image or video file must declare the ,Äúup,Äù orientation, and the image or video data must appear right-side up when presented without orientation metadata.

For Live Photo content, you don,Äôt write output to this URL. Instead, pass the editing output object to the saveLivePhotoToOutput method.
(Read only property)

146.23 class PHFetchOptionsMBS

146.23.1 class PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options that affect the filtering, sorting, and management of results that Photos returns when you fetch asset or collection objects.
Notes: Using class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to fetch assets or collections produces a PHFetchResultMBS object containing the requested objects. The options you specify control which objects the fetch result includes, how those objects are arranged in the fetch result, and how Photos should notify your app of changes to the fetch result.

Photos supports only a restricted set of keys for the predicate and sortDescriptors properties. The set of available keys depends on which class you,Äôre using to fetch assets or collections—see Table 1 for the list of keys supported by each class.

Supported predicate and sort descriptor keys

Class for Fetch Method	Supported Keys
PHAsset	SELF, localIdentifier, creationDate, modificationDate, mediaType, mediaSubtypes, duration, pixelWidth, pixelHeight, favorite (or isFavorite), hidden (or isHidden), burstIdentifier
PHAssetCollection	SELF, localIdentifier, localizedTitle (or title), startDate, endDate, estimatedAssetCount
PHCollectionList	SELF, localIdentifier, localizedTitle (or title), startDate, endDate
PHCollection (can fetch a mix of PHCollectionList and PHAssetCollection objects)	SELF, localIdentifier, localizedTitle (or title), startDate, endDate

Available in MacOS 10.13 or newer.

146.23.2 Methods

146.23.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.23.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.23.5 copy as PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

146.23.6 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the list of sort descriptors, specifying an order for the fetched objects.

146.23.7 sortDescriptors as NSSortDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A list of sort descriptors, specifying an order for the fetched objects.

146.23.8 Properties

146.23.9 fetchLimit as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum number of objects to include in the fetch result.
Notes: With the default fetch limit of zero, Photos returns all requested assets or collections in a fetch result. Change this value to fetch more efficiently in situations where a potentially very large result is not needed. For example, to fetch only the most recently captured asset, call the fetchAssetsWithOptions method, using the sortDescriptors property to sort in descending date order, and setting a fetch limit of one.
(Read and Write property)

146.23.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.23.11 includeAllBurstAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes all assets from burst photo sequences.
Notes: When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites.

If the value is false (the default), fetches that include burst photo sequences return only the user-picked members and representative asset of each sequence. If the value is true, such fetches include all assets in each sequence.
(Read and Write property)

146.23.12 includeAssetSourceTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The set of source types for which to include assets in the fetch result.
Notes: Asset source types identify the means by which an asset enters the Photos library, and affect the possible actions you can perform on an asset. For example, assets synced from iTunes cannot be edited or deleted.

The SourceType type is an option set—to include multiple source types in the same query, combine type constants with the bitwise OR operator. See SourceType constants in PHAssetMBS class.
(Read and Write property)

146.23.13 includeHiddenAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes assets marked as hidden.
Notes: If the value is false (the default), fetches exclude assets whose hidden property is true. If the value is true, fetches include all assets regardless of their hidden state.
(Read and Write property)

146.23.14 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A predicate that specifies which properties to select results by and that also specifies any constraints on selection.
Notes: Construct a predicate with the properties of the class of objects that you want to fetch
(Read and Write property)

146.23.15 wantsIncrementalChangeDetails as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether your app receives detailed change information for the objects in the fetch result.
Notes: If you have registered a change observer with the shared PHPhotoLibraryMBS object, fetching assets or collections automatically registers your observer to receive information about later changes to the fetch result and about the objects it contains. For a fetch result, change information (a PHFetchResultChangeDetailsMBS object) can include a detailed list of incremental differences from the previous state of the fetch result, such as new photos captured since the original fetch.

If true (the default), Photos sends detailed incremental changes when such information is available. If false, Photos tells your app only when the fetch result has changed (in which case you can perform the fetch again to receive updated results).
(Read and Write property)

146.24 class PHFetchResultChangeDetailsMBS

146.24.1 class PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in the set of asset or collection objects listed in a fetch result.
Notes: A PHFetchResultChangeDetailsMBS object provides detailed information about the differences between two fetch results—one that you previously obtained and an updated one that would result if you performed the same fetch again. The change details object provides information useful for updating a UI that lists the contents of a fetch result, such as the indexes of added, removed, and rearranged objects.

146.24.2 Methods

146.24.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.24.4 changeDetailsFromFetchResult(fromResult as PHFetchResultMBS, toFetchResult as PHFetchResultMBS, changedObjects() as PHObjectMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a change details object that summarizes the differences between two fetch results.
Notes: fromResult: A fetch result to be treated as the ‚Äúbefore‚Äù state in the resulting change details object.
toResult: A fetch result to be treated as the ‚Äúafter‚Äù state in the resulting change details object.
changedObjects: An collection of objects to manually note as changed between the two fetch results.

Typically, you use the PHChangeMBS class to retrieve PHFetchResultChangeDetailsMBS objects describing any changes that have occurred since you performed a fetch, but you can also use this method to get a change details object that summarizes the difference between two arbitrary PHFetchResultMBS objects. In this case, Photos cannot automatically determine when the same objects are present in both fetch results but those objects‚Äô content has changed, so the changedIndexes and changedObjects properties are empty.

However, you can use the changedObjects parameter to manually note objects as changed. For example, consider a view controller that maintains a base fetch result representing a list of albums, and a transient

collection that filters the list according to the user,Äôs search terms.

146.24.5 changedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The objects in the fetch result whose content or metadata have been updated.
Notes: An array of PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

146.24.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.24.7 enumerateMoves(theDelegate as enumerateMovesHandlerMBS, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Runs the specified block for each case where an object has moved from one index to another in the fetch result.
Notes: The toIndex parameter in the handler block is relative to the state of the fetch result after you,Äôve applied the changes described by the removedIndexes, insertedIndexes and changedIndexes properties. Therefore, if you use this method to update a collection view or similar user interface displaying the contents of the fetch result, update your UI to reflect insertions, removals, and changes before you process moves.

146.24.8 insertedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The new items that have been inserted in the fetch result.
Notes: This array can contain PHAssetMBS, PHAssetCollectionMBS or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

146.24.9 removedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The items that have been removed from the fetch result.
Notes: This array can contain PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

146.24.10 Properties

146.24.11 changedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes of objects in the fetch result whose content or metadata have been updated.
Notes: Use this index set to update elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you,Äôve applied the changes described by the removedIndexes and insertedIndexes properties; when updating your app,Äôs interface, apply changes after removals and insertions and before moves.

If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

146.24.12 fetchResultAfterChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current fetch result, incorporating recent changes.
Notes: You can use this object to inspect the current state of the fetched objects even if the hasIncrementalChanges property,Äôs value is false. Using this fetch result is equivalent to performing once more the same fetch that returned the original fetch result.
(Read only property)

146.24.13 fetchResultBeforeChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original fetch result, without recent changes.
Notes: This property,Äôs value is the same object you passed to the changeDetailsForFetchResult method to request change details.

(Read only property)

146.24.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.24.15 hasIncrementalChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether changes to the fetch result can be described incrementally.
Notes: If this value is true, use the insertedIndexes, removedIndexes, and changedIndexes properties (or the insertedObjects, removedObjects, and changedObjects properties) to find out which objects in the fetch result have been added, removed, or updated. You can also use the hasMoves property and enumerateMoves method to find out which objects in the fetch result have been rearranged. These properties can be useful for updating a collection view or similar interface that displays the fetch result,Äôs contents.

If this value is false, the fetch result is too different from its original state for incremental change information to be meaningful. Use the fetchResultAfterChanges property to get the fetch result,Äôs current membership. (If displaying the fetch result,Äôs contents, reload your user interface to match the new fetch result.)
(Read only property)

146.24.16 hasMoves as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether objects have been rearranged in the fetch result.
Notes: If this value is true, use the enumerateMoves method to find out which elements have been moved and what their new indexes are.
(Read only property)

146.24.17 insertedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes where new objects have been inserted in the fetch result.
Notes: Use this index set can to insert elements in a collection view or similar user interface that displays

the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you,Äôve applied the changes described by the removedIndexes property; when updating your app,Äôs interface, apply insertions after removals and before changes and moves.

If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

146.24.18 removedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes from which objects have been removed from the fetch result.
Notes: Use this index set to remove elements from a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property); when updating your app,Äôs interface, apply removals before insertions, changes, and moves.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

146.24.19 Delegates

146.24.20 enumerateMovesHandlerMBS(fromIndex as Integer, toIndex as Integer, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls to provide details about which objects in the fetch result have moved to which indexes.
Notes: fromIndex: The index of an object in the original fetch result.
toIndex: The index to which the object has moved in the new fetch result.

146.25 class PHFetchResultMBS

146.25.1 class PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An ordered list of assets or collections returned from a Photos fetch method.
Notes: When you use class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to retrieve objects, Photos provides the resulting objects in a fetch result. You access the contents of a fetch result with various methods. Unlike an array, however, a PHFetchResult object dynamically loads its contents from the Photos library as needed, providing optimal performance even when handling a large number of results.

A fetch result provides thread-safe access to its contents. After a fetch, the fetch result,Äôs count value is constant, and all objects in the fetch result keep the same localIdentifier value. (To get updated content for a fetch, register a change observer with the shared PHPhotoLibraryMBS object.)

A fetch result caches its contents, keeping a batch of objects around the most recently accessed index. Because objects outside of the batch are no longer cached, accessing these objects results in refetching those objects. This process can result in changes to values previously read from those objects.

146.25.2 Methods

146.25.3 allObjects as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries all objects as array.

146.25.4 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.25.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.25.6 containsObject(anObject as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the specified object is present in the fetch result.
Notes: anObject: An object.

Returns true if anObject is present in the fetch result, otherwise false.

This method determines whether anObject is present in the fetch result by sending an isEqual: message to each of the fetch result,Äôs objects (and passing anObject as the parameter to each isEqual message).

146.25.7 copy as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the result set.

146.25.8 countOfAssetsWithMediaType(MediaType as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of assets in the fetch result of a specified type.
Notes: mediaType: The type of assets to count, such as image or video. See MediaType constants.

Returns the number of assets in the fetch result of the specified type.

The first time you call this method, Photos enumerates the contents of the fetch result to count those of the specified type, then caches the result. Subsequent calls with the same mediaType parameter return the cached value.
This method counts only the PHAssetMBS objects in a fetch result. If a fetch result contains only PHAssetCollectionMBS or PHCollectionListMBS objects, the return value is 0.

146.25.9 indexOfObject(anObject as Variant) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index whose corresponding object in the fetch result is equal to the specified object.
Notes: anObject: An object.

Returns the lowest index whose corresponding object in the fetch result is equal to anObject, or NSNotFound if no such object is in the fetch result.

Starting at index 0, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
See also:

- 146.25.10 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer 19265

146.25.10 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index within the specified range whose corresponding object in the fetch result is equal to the specified object.
Notes: anObject: An object.
range: The range of indexes in the fetch result within which to search for anObject.

Returns the lowest index within range whose corresponding object in the fetch result is equal to anObject, or NSNotFound if no such object is in the fetch result.

Starting at range.location, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
Raises an exception (NSExceptionMBS class) if the range parameter represents a range that doesn,Äôt exist in the fetch result.
See also:

- 146.25.9 indexOfObject(anObject as Variant) as Integer 19264

146.25.11 objectAtIndex(index as Integer) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the object located at the specified index.
Notes: index: An index within the bounds of the fetch result.

Returns the object located at index in the fetch result.

Raises an exception (NSExceptionMBS class) if index is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

146.25.12 objectsAtIndexes(indexes as NSIndexSetMBS) as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array containing the objects in the fetch result at the indexes in the specified index set.
Notes: indexes: An index set containing indexes within the bounds of the fetch result.

Returns an array containing the objects in the fetch result at the indexes specified by indexes.

The ordering of the returned array follows the index set. That is, in the returned array, an object with a higher index in the index set comes after any object with a smaller index in the index set.
Raises an exception (NSExceptionMBS) if any index in the index set is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

146.25.13 Properties

146.25.14 count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of objects in the fetch result.
Notes: (Read only property)

146.25.15 firstObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first object in the fetch result.
Notes: You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

146.25.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.25.17 lastObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The last object in the fetch result.
Notes: You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

146.25.18 Constants

Edit Operation

Constant	Value	Description
EditOperationContent	2	The asset,Äôs photo or video content can be edited. To begin the process of editing an asset, use the requestContentEditingInputWithOptions method.
EditOperationDelete	1	The asset can be deleted from the photo library. To delete one or more assets, create a change request with the deleteAssets method inside a PHPhotoLibrary change block.
EditOperationProperties	3	The asset,Äôs metadata properties can be edited. To change an asset,Äôs properties, create a change request with the changeRequestForAsset method inside a PHPhotoLibraryMBS change block.

Media Types

Constant	Value	Description
MediaTypeAudio	3	The asset is an audio file.
MediaTypeImage	1	The asset is a photo or other static image.
MediaTypeUnknown	0	The asset,Äôs type is unknown.
MediaTypeVideo	2	The asset is a video file.

Asset Playback Styles

Constant	Value	Description
PlaybackStyleImage	1	The asset should be displayed as a still image.
PlaybackStyleImageAnimated	2	The asset should be displayed as an animated image.
PlaybackStyleLivePhoto	3	The asset should be displayed as a Live Photo.
PlaybackStyleUnsupported	0	The asset has an unsupported or undefined media playback type.
PlaybackStyleVideo	4	The asset should be displayed as a video.
PlaybackStyleVideoLooping	5	The asset should be displayed as a looping video.

146.26 class PHImageManagerMBS

146.26.1 class PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails and asset data.
Notes: Use these methods to fetch full-size photo assets or thumbnail images, or to retrieve AVFoundation objects for playing, exporting, and manipulating video assets.

To load image or video data:
1. Use the PHAsset class to fetch the asset you,Äôre interested in.
2. Call the defaultManager method to retrieve the shared image manager object.
3. Use one of the methods listed in Requesting Images and Requesting Video Objects to load the asset,Äôs image or video data.

The image manager caches the asset images and data it provides, so later requests for the same assets with similar parameters will return results more quickly.

If you need to load image data for many assets together, use the PHCachingImageManagerMBS class to ,Äúpreheat,Äù the cache by loading images you expect to need soon. For example, when populating a collection view with photo asset thumbnails, you can cache images ahead of the current scroll position.

Available in MacOS 10.13 or later.

- Show Live Photos in your Xojo application

146.26.2 Methods

146.26.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.26.4 cancelImageRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.

Notes: requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for image data using the requestImageForAsset method, or for a video object using one of the methods listed in Requesting Video Objects, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelImageRequest method.

146.26.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.26.6 defaultManager as PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared image manager object.
Notes: This method always returns the same image manager object, which is shared for all uses in your app.

146.26.7 MaximumSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A special value for requesting original image data or the largest rendered image available.
Notes: When you use the PHImageManagerMaximumSize option, Photos provides the largest image available for the asset without scaling or cropping. (That is, it ignores the resizeMode option.)

146.26.8 PHImageCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes: A key whose value indicates whether the image request was canceled.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value.If you call the cancelImageRequest method to cancel a request, Photos calls your result handler block with the value true for this key.

146.26.9 PHImageErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes: A key whose value is an error that occurred when Photos attempted to load the image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an NSErrorMBS object.Photos provides an error object for this key if it cannot provide an image for your handler block,Äôs result parameter. Examine the error object for information about the cause of the error.

146.26.10 PHImageResultIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes: A key whose value indicates whether the result image is a low-quality substitute for the requested image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value. If true, the result parameter of your resultHandler block contains a low-quality image because Photos could not yet provide a higher-quality image. Depending on your settings in the PHImageRequestOptions object that you provided with the request, Photos may call your result handler delegate again to provide a higher-quality image.

146.26.11 PHImageResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes: A key whose value indicates whether photo asset data is stored on the local device or must be downloaded from iCloud.

This key provides information about an image loading result in the resultHandler delegate for methods listed in Requesting Images. The corresponding value is a Boolean value.

If true, no image was provided, because the asset data must be downloaded from iCloud. To download the data, submit another request, and specify true for the networkAccessAllowed option.

146.26.12 PHImageResultRequestIDKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes: A key whose value is a unique identifier for the image request.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an integer value. This identifier matches that returned when making a request. You can use it with the cancelImageRequest method to cancel requests with pending results that are no longer needed.

146.26.13 RequestAVAssetForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestAVAssetForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests AVFoundation objects representing the video asset,Äôs content and state, to be loaded asynchronously.
Notes: asset: The video asset for which video objects are to be loaded.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates AVFoundation objects. It then calls your resultHandler block to provide the requested video.

Use this method when you want to work with the arrangement of audio and video tracks that an asset contains. If you plan to use the asset only for playback, call the requestPlayerItemForVideo method. If you plan to export the asset data, call the requestExportSessionForVideo method.

146.26.14 RequestExportSessionForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestExportSessionForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an export session for writing the video asset,Äôs data to a file, to be loaded asynchronously.
Notes: asset: The video asset for which an export session is to be created.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.
exportPreset: The export preset name for exporting the asset. For available presets, see AVAssetExportSessionMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates an export session. It then calls your resultHandler delegate to provide the requested video.
For additional export options, use the requestAVAssetForVideo method and then create AVAssetReader and AVAssetWriterMBS objects to transcode and output the video asset,Äôs data.

146.26.15 RequestImageDataAndOrientationForAsset(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the largest represented image as data bytes and EXIF orientation for the specified asset.
Notes: asset: The asset for which to load image data.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors.

If PHImageRequestOptionsMBS.VersionCurrent is requested and the asset has adjustments, the largest rendered image data is returned. In all other cases, the original image data is returned.
For further details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads the largest available representation of the image asset, then calls your resultHandler block to provide the requested data. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread, you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler. This method

ignores the deliveryMode option—Photos calls your result handler block exactly once.

If the version option is set to PHImageRequestOptionsMBS.VersionCurrent, Photos provides rendered image data, including the results of any edits that have been made to the asset content. Otherwise, Photos provides the originally captured image data for the asset.

146.26.16 RequestImageForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset.
Notes: asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads or generates an image of the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler.

For an asynchronous request, Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler,Äôs info parameter indicates when Photos is providing a temporary low-quality image.

You can use this method for both photo and video assets —for a video asset, an image request provides a thumbnail image or poster frame.

146.26.17 RequestImageForAssetSync(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, byref Info as Dictionary) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset synchronously.
Notes: asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns the image.

146.26.18 RequestLivePhotoForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHLivePhotoRequestOptionsMBS, CompletionHandler as RequestLivePhotoForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a Live Photo representation for the specified asset.
Notes: asset: The asset whose Live Photo data is to be loaded.
targetSize: The target size of Live Photo to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHLivePhotoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

A Live Photo is a picture, taken with a supported device, that includes movement and sound from the moments just before and after its capture. Much like how a UIImage object represents a ready-to-use form of an image, a PHLivePhotoMBS object represents a Live Photo whose image, motion, and sound data are prepared for display. Use this method to request an asset,Äôs Live Photo form; after Photos calls your resultHandler delegate to provide the Live Photo, you can display it using the PHLivePhotoViewMBS class.

Use this method only when you plan to display the motion and sound content associated with a Live Photo. In contexts where you need only a still image for a Live Photo asset—for example, when loading thumbnails to display in a photo chooser interface—use the requestImageForAsset method instead.

When you call this method, Photos loads or generates a PHLivePhotoMBS object for the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network. This method always executes asynchronously.

Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegraded-Key key in the result handler,Äôs info parameter indicates when Photos is providing a temporary low-quality image.

146.26.19 RequestPlayerItemForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, CompletionHandler as RequestPlayerItemForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a representation of the video asset for playback, to be loaded asynchronously.
Notes: asset: The video asset to be played back.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates a player item. It then calls your resultHandler block to provide the requested video.

Use this method when you want to simply play back the video asset as it currently exists. For more detailed options or to work with the asset,Äôs audio and video tracks, use the requestAVAssetForVideo method instead.

146.26.20 Properties

146.26.21 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.26.22 Constants

Constants

Constant	Value	Description
PHInvalidImageRequestID	0	A special value provided for asynchronous image requests that cannot be canceled.

Content Modes

Constant	Value	Description
ContentModeAspectFill	1	Scales the image so that it completely fills the target size.
ContentModeAspectFit	0	Scales the image so that its larger dimension fits the target size.
ContentModeDefault	0	Fits the image to the requested size using the default option, PHImageContentModeAspectFit. Use this content mode when requesting a full-sized image using the PHImageManagerMBS.MaximumSize value for the target size. In this case, the image manager does not scale or crop the image.

146.26.23 Delegates

146.26.24 RequestAVAssetForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, AVAsset as Variant, AVAudioMix as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls after loading the asset,Äôs data.
Notes: asset: An object that provides access to the video asset as a collection of tracks and metadata. For details on working with AVAsset objects, see AVFoundation Programming Guide.
audioMix: Use this object to rearrange the asset,Äôs audio tracks, edit additional audio into the mix, or configure an AVAssetReaderOutput object for exporting the asset,Äôs audio data. If nil, the asset uses a default audio mix.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass AVAsset, the AVAssetMBS object, as variant to avoid plugin dependencies.
Same for AVAudioMix with AVAudioMixMBS object.

146.26.25 RequestExportSessionForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as string, exportSession as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls after loading the asset,Äôs data and preparing the export session.
Notes: exportSession: An AVAssetExportSessionMBS object that you can use for writing the video asset,Äôs data to a file.
info: A dictionary that provides information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass AVAsset, the AVAssetExportSessionMBS object, as variant to avoid plugin dependencies.

146.26.26 RequestImageDataAndOrientationForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, imageData as MemoryBlock, dataUTI as String, orientation as Integer, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate called, exactly once, when image loading is complete, providing the requested image or information about the status of the request.
Notes: imageData: The requested image.
dataUTI: The uniform type identifier for the image.
orientation: The EXIF orientation for the image, as a CGImagePropertyOrientation.
info: A dictionary providing information about the status of the request.

146.26.27 RequestImageForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, result as NSImageMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes: result: The requested image.

info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

146.26.28 RequestLivePhotoForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, livePhoto as PHLivePhotoMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes: result: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

146.26.29 RequestPlayerItemForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, playerItem as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate Photos calls after loading the asset,Äôs data and preparing the player item.
Notes: playerItem: An AVPlayerItemMBS object that you can use for playing back the video asset.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass playerItem, the AVPlayerItemMBS object, as variant to avoid plugin dependencies.

146.27 class PHImageRequestOptionsMBS

146.27.1 class PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of still image representations of Photos assets you request from an image manager.
Notes: Available on macOS 10.13 or newer.
Blog Entries

- MBS Xojo Plugins, version 25.1pr7

146.27.2 Methods

146.27.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.27.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.27.5 copy as PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

146.27.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.27.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the image.
Notes: If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

146.27.8 Properties

146.27.9 allowSecondaryDegradedImage as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: In addition to the initial degraded result, an additional degraded result will be returned if conditions permit.
Notes: (Read and Write property)

146.27.10 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested image quality and delivery priority.
Notes: Use this property to tell Photos to provide an image quickly (possibly sacrificing image quality), to provide a high-quality image (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

146.27.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.27.12 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested image from iCloud.
Notes: If true, and the requested image is not stored on the local device, Photos downloads the image from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the image. If false (the default), and the image is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the image is not available unless you enable network access.
(Read and Write property)

146.27.13 normalizedCropRect as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A rectangle for requesting a cropped version of the original image.
Notes: To request a cropped image, specify the crop rectangle in a unit coordinate space relative to the image. In this coordinate system, the point { 0.0,0.0 } refers to the upper left corner of the image, and the point { 1.0,1.0 } refers to the opposite corner regardless of the image,Äôs aspect ratio.
This property defaults to zero rectangle, which specifies no cropping.
If you specify a crop rectangle, you must also specify the PHImageRequestOptionsResizeModeExact option for the resizeMode property.
(Read and Write property)

146.27.14 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the image.
Notes: If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

146.27.15 ResizeMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode that specifies how to resize the requested image.
Notes: Use this property to choose how to fit the image to the target size you specified when requesting image data. See PHImageRequestOptionsResizeMode.
(Read and Write property)

146.27.16 Synchronous as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos processes the image request synchronously.
Notes: If false (the default), the requestImageForAsset method returns immediately. Depending on the deliveryMode property, Photos may call your resultHandler delegate before the method returns, at some later time, or both.
If true, the requestImageForAsset method blocks the calling thread until image data is ready or an error occurs. Photos calls your result handler delegate exactly once.

Perform synchronous requests from a background thread only.
(Read and Write property)

146.27.17 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the image to be requested.
Notes: Use this property to request a version of the image with or without adjustments, or to request high-quality original data (for example, a RAW file) if such is available. See Version constants.
(Read and Write property)

146.27.18 Constants

Delivery Modes

Constant	Value	Description
DeliveryModeFastFormat	2	Photos provides only a fast-loading image, possibly sacrificing image quality.
DeliveryModeHighQualityFormat	1	Photos provides only the highest-quality image available, regardless of how much time it takes to load.
DeliveryModeOpportunistic	0	Photos automatically provides one or more results in order to balance image quality and responsiveness.

Resize Mode

Constant	Value	Description
ResizeModeExact	2	Photos resizes the image to match the target size exactly. Resizing to exactly match a target size is less efficient than using the fast resizing option. You must choose this option if you use the normalizedCropRect property to request a cropped image.
ResizeModeFast	1	Photos efficiently resizes the image to a size similar to, or slightly larger than, the target size. With this option, Photos can use image subsampling to quickly provide an image at a size roughly matching the target size.
ResizeModeNone	0	Photos does not resize the image asset.

Version Modes

Constant	Value	Description
VersionCurrent	0	Request the most recent version of the image asset (the one that reflects all edits).
VersionOriginal	2	Request the original, highest-fidelity version of the image asset.
VersionUnadjusted	1	Request a version of the image asset without adjustments.

146.27.19 Delegates

146.27.20 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud. Used by the progressHandler property.
Notes: If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and to allow you to cancel the download.

Photos calls this block in an arbitrary serial queue. Dispatch to the main thread if your handler needs to update the user interface.

The method takes the following parameters:
progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the block.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the

image request,Äôs deliveryMode property.

If the method call is asynchronously dispatched to main thread, the stop property does not work.

146.28 control PHLivePhotoControlMBS

146.28.1 control PHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view that displays a Live Photo—a picture that also includes motion and sound from the moments just before and after its capture.
Notes: Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app—see the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer—for example, to install it on a different view for proper event handling in your app,Äôs view hierarchy—use the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

146.28.2 Methods

146.28.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether this control is available.

146.28.4 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Begins playback of Live Photo content in the view.
Notes: style: An option for how much of the Live Photo,Äôs motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate—for example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

146.28.5 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 146.28.6 stopPlayback(animated as boolean) 19287

146.28.6 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 146.28.5 stopPlayback 19287

146.28.7 Properties

146.28.8 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The audio gain to apply to the Live Photo,Äôs movie content during playback.
Notes: Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.

(Read and Write property)

146.28.9 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The content mode.
Notes: (Read and Write property)

146.28.10 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The Live Photo displayed in the view.
Notes: (Read and Write property)

146.28.11 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view for displaying Live Photo status.
Notes: The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don,Äôt need to do anything with view,Äôs content—instead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

146.28.12 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view plays the audio content of its Live Photo.
Notes: The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

146.28.13 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes: Use this object to set more options on the control.
(Read only property)

146.28.14 Events

146.28.15 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

146.28.16 Close

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

146.28.17 Closing

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

146.28.18 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

146.28.19 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

146.28.20 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

146.28.21 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Notifies the delegate that Live Photo playback has ended.
Notes: playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

146.28.22 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

146.28.23 FocusLost

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.28.24 FocusReceived

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

146.28.25 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

146.28.26 GotFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

146.28.27 LostFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.28.28 MenuBarSelected

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

146.28.29 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

146.28.30 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

146.28.31 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

146.28.32 Open

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

146.28.33 Opening

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

146.28.34 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

146.28.35 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Notifies the control that Live Photo playback is about to begin.
Notes: playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

146.28.36 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 24.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

146.28.37 Constants

Content Modes

Constant	Value	Description
ContentModeAspectFill	1	Aspect Fill.
ContentModeAspectFit	0	Aspect Fit.

Playback Styles

Constant	Value	Description
PlaybackStyleFull	1	Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.
PlaybackStyleHint	2	Plays back only a brief section of the motion content of the Live Photo, without sound.
PlaybackStyleUndefined	0	This value is invalid for use.

146.29 class PHLivePhotoEditingContextMBS

146.29.1 class PHLivePhotoEditingContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An editing session for modifying the photo, video, and audio content of a Live Photo.
Notes: A Live Photo is a picture, captured by a supported iOS device, that includes motion and sound from the moments just before and after it was taken. Editing the content of a Live Photo works much like editing other asset types:

1. In an app using the Photos framework, fetch a PHAsset object that represents the Live Photo to edit, and use that object,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
In a photo editing extension that runs within the Photos app, your extension,Äôs main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.
2. Create a Live Photo editing context with the initWithLivePhotoEditingInput initializer.
You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.
3. Use the frameProcessor property to define a block to be used in processing the Live Photo,Äôs visual content. Photos will call this block repeatedly to process each frame of the Live Photo,Äôs video and still photo content.
4. Create a PHContentEditingOutputMBS object to store the results of your edit, then call the saveLivePhotoToOutput:options to process the Live Photo and save it to your editing output object. This method applies your frameProcessor to each frame.
Note
You can also use the prepareLivePhotoForPlaybackWithTargetSize method to process a preview-quality version of the Live Photo to display in your app,Äôs UI during editing.
5. To allow a user to continue working with the edit later (for example, to adjust the parameters of a filter), create a PHAdjustmentDataMBS object describing your changes, and store it in the adjustmentData property of your editing output.
6. In an app using the Photos framework, use a photo library change block to commit the edit. (For details, see PHPhotoLibrary.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.
In a photo editing extension, provide the PHContentEditingOutputMBS object that you created in your main view controller,Äôs finishContentEditing method.

When you use either of the methods listed in Processing an Editing Context,Äôs Live Photo, Photos calls your frameProcessor delegate repeatedly to process each frame of the Live Photo,Äôs video and still photo content. In that block, a PHLivePhotoFrameMBS object provides the Live Photo,Äôs existing content as a CIImageMBS object. You use Core Image to modify the image, then provide the result of your edits by returning a CIImageMBS object representing the result of processing the input image.

Core Image provides several ways to process the Live Photo,Äôs visual content. You can use the built-in filters listed in Core Image Filter Reference or create CIFilterMBS subclasses using custom graphics kernel

code. Or, to use other image processing technologies, you can directly access and modify image content in pixel buffers, Metal textures, or IOSurfaceRef objects with a custom CIImageProcessorKernel subclass.

146.29.2 Methods

146.29.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

146.29.4 cancel

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Aborts any Live Photo processing in progress.
Notes: This method applies only after you,Äôve begun processing a Live Photo for display or output with the initWithLivePhotoEditingInput or saveLivePhotoToOutput method. After you call this method, Photos calls your completion handler and provides an error with the PHLivePhotoEditingErrorCodeAborted error code.

146.29.5 Constructor(livePhotoInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a Live Photo editing context for the specified editing input.
Notes: livePhotoInput: A content editing input object representing the Live Photo for which to perform editing.

Returns a new Live Photo editing context, or nil if the provided content editing input does not represent a Live Photo.

In an app using the Photos framework, you obtain a PHContentEditingInputMBS object by calling requestContentEditingInputWithOptions method of a PHAssetMBS object that you,Äôve previously fetched.
In a photo editing extension that runs within the Photos app, your extension,Äôs main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.

You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.

146.29.6 PHLivePhotoShouldRenderAtPlaybackTime as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies whether processing should occur during or before playback.
Notes: The value for this key is an NSNumber object with a Boolean value. With the default value of false, Photos always renders your edits immediately when you call the Constructor, calling your frameProcessor block for each frame in the Live Photo,Äôs video and still photo content.

When you specify a value of true, Photos can defer rendering until playback time, calling your frameProcessor block only for photo and video frames that need to be displayed. However, in this case Photos may still choose to pre-render your edits if needed.

This option does not apply when rendering for output with the saveLivePhotoToOutput method.

146.29.7 prepareLivePhotoForPlayback(targetSize as CGSizeMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes a Live Photo with your edits for viewing.
Notes: targetSize: The size of the view in which you plan to preview the edited Live Photo output.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method to generate preview versions of the edited Live Photo—for example, to display in your editing UI.

146.29.8 saveLivePhotoToOutput(ContentEditingOutput as PHContentEditingOutputMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes and saves a full-quality Live Photo as the output of your editing session.
Notes: output: The photo editing output to receive the rendered Live Photo, created from the same PHContentEditingInputMBS object you used to begin this Live Photo editing context.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method when you have finished an editing session and need to provide rendered output in a PHContentEditingOutputMBS object. Unlike when rendering output for a photo or video asset, you don,Äôt need to provide rendered output using the renderedContentURL property of the editing output object. Instead, create a PHContentEditingOutputMBS object using the Constructor initializer, passing the same PHContentEditingInputMBS object you used in the FrameProcessing delegate initializer to start this Live Photo editing context. Then pass that editing output object to this method, and Photos renders the Live Photo and provides it to the editing output.

Don,Äôt forget to describe your edits in a PHAdjustmentDataMBS object and provide that to the adjustmentData property of your content editing output. Providing adjustment data allows your app (or photo editing extension) to non-destructively resume working with an edit later, whether on the same device or on another Mac or iOS device using iCloud Photo Library.

After this method,Äôs completion handler signals successful rendering, you use the content editing output to complete the edit. In an app using the Photos framework, create a PHAssetChangeRequestMBS object inside a changes, and set its contentEditingOutput property to your editing output. In a photo editing extension running in the Photos app, your main view controller provides content editing output when requested by the finishContentEditing method.

146.29.9 SetFrameProcessor(FrameProcessor as FrameProcessorMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets a delegate to be called by Photos for processing each frame of the Live Photo,Äôs visual content.
Notes: Use this property to define the image processing to be performed on each frame of the Live Photo. Setting this property does not begin processing; instead, after you call one of the methods listed in Processing an Editing Context,Äôs Live Photo, Photos executes your block repeatedly to process each frame of the Live Photo,Äôs video and still photo content.

In your frame processor block, use the image property of the provided PHLivePhotoFrameMBS object to access the image to be processed, and return a CIImageMBS object representing the result of your processing. For example, the following code sets up a processor block to apply a simple sepia-tone filter, then calls the saveLivePhotoToOutput method to begin processing the Live Photo for output.

146.29.10 Properties

146.29.11 audioVolume as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The audio gain to apply to the processed Live Photo.
Notes: Values must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) leaves the audio content of the Live Photo unchanged. A value of 0.0 mutes all audio in the output Live Photo.
Setting this property does not process the Live Photo content; instead, it sets the audio gain to be applied when you later process the Live Photo using one of the methods listed in Processing an Editing Context,Äôs Live Photo.
(Read and Write property)

146.29.12 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the Live Photo.
Notes: (Read only property)

146.29.13 fullSizeImage as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited still photo content of the Live Photo.
Notes: Value is CIImageMBS.
Use this property to display the unedited Live Photo,Äôs photo content, or to provide still-image previews in your editing UI.

For the best interactive editing performance, use a Metal, OpenGL, or OpenGL ES view and corresponding Core Image context to render editing results. See Processing Images in Core Image Programming Guide for details and examples.

This image does not reflect the Live Photo,Äôs orientation metadata. Adjust your rendering based on the orientation property to ensure that the image appears to the user in the correct orientation.
(Read only property)

146.29.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.29.15 orientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image orientation of the Live Photo.
Notes: This fullSizeImage object does not reflect the Live Photo,Äôs orientation metadata. Use this property when displaying that image to ensure that it appears to the user in the correct orientation.
(Read only property)

146.29.16 photoTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The offset, in seconds, from the beginning of the Live Photo,Äôs duration to the time corresponding to its still photo.
Notes: To create time-based effects in your frameProcessor block, use this property together with the duration property.
(Read only property)

146.29.17 Delegates

146.29.18 FrameProcessorMBS(frame as PHLivePhotoFrameMBS, byref error as NSErrorMBS, tag as Variant) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate for a block Photos calls to process Live Photo frames.
Notes: Result of delegate method must be a CIImageMBS object.

To apply edits to a Live Photo, define a block with this signature and assign it to the frameProcessor property of a Live Photo editing context. Then call the initWithLivePhotoEditingInput: to prepare a preview-quality version of your edits for display, or the saveLivePhotoToOutput method to produce full-quality final output. When you call one of those methods, Photos calls your frame processor block repeatedly—processing each frame of the Live Photo,Äôs video content as well as its still photo content—to render the output.

This delegates takes the following parameters:

frame: A PHLivePhotoFrameMBS object describing the frame image to be processed.
error: If your delegate cannot successfully process the frame, set this to an error object describing the failure.

Your block should return a CIImageMBS object representing the result of your edits, or nil to indicate that your image processing has failed and the Live Photo edit should be aborted. Use the frame parameter,Äôs

image property to access the image to be edited.

146.29.19 PrepareLivePhotoForPlaybackCompletedMBS(options as Dictionary, livePhoto as PHLivePhotoMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after processing is complete.
Notes: livePhoto: The rendered Live Photo, suitable for displaying in a PHLivePhotoViewMBS object.
error: If preparing the edited Live Photo for display succeeds, this parameter is nil. If processing fails, the livePhoto parameter is nil, and this parameter contains an error object describing the failure.

146.29.20 SaveLivePhotoToOutputCompletedMBS(output as PHContentEditingOutputMBS, options as Dictionary, success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after rendering is complete.
Notes: success: True if rendering succeeds; otherwise false.
error: If rendering succeeds, this parameter is nil. If rendering fails, this parameter contains an error object describing the failure.

146.30 class PHLivePhotoFrameMBS

146.30.1 class PHLivePhotoFrameMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides image content for a single frame of a Live Photo in an editing context.
Notes: You don,Äôt create classes that implement this protocol. Instead, you provide a frameProcessor block when editing a Live Photo with the PHLivePhotoEditingContextMBS class. When you process your edits for output or display, Photos calls your block repeatedly to process each frame of the Live Photo,Äôs video and still photo content. On each call, Photos provides the frame,Äôs image content and associated information in an object that adopts this protocol. In that block, you use that object,Äôs image property to access the image to be edited, then perform your edits and return another CIImageMBS object representing the result of processing the input image.

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.30.2 Methods

146.30.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

146.30.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.30.5 Properties

146.30.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.30.7 Image as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image content of the frame to be processed.
Notes: Value is CIImageMBS object.
Core Image provides several ways to perform your adjustments to this image:

- Create a single CIFilterMBS object, or a chain of filters. Set this image as the kCIInputImageKey parameter of the first filter in the chain, and use the last filter,Äôs outputImage property to access the result. Each CIFilter object can be a built-in filter or a custom filter subclass that you create.
- Use the imageByApplyingFilter method to conveniently apply one of the many built-in Core Image filters.
- Access pixel buffers directly and apply custom image processing using a custom CIImageProcessorKernelMBS subclass.

In all cases, you obtain another CIImageMBS object representing the result of your adjustments. Return that image from your frameProcessor block. (See the frameProcessor description for example code.)
(Read only property)

146.30.8 renderScale as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor of the frame image relative to the Live Photo,Äôs photo content.
Notes: Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo,Äôs video content and to process the Live Photo,Äôs still photo content. Video frames can be a different size than still photo content—use this value to scale any of your image processing parameters that depend on the image,Äôs size.
(Read only property)

146.30.9 time as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The time offset, in seconds, of this frame relative to the start of the Live Photo.
Notes: You can use this value to vary your image processing over time, creating animated effects.
(Read only property)

146.30.10 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of image content in this frame.
Notes: Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo,Äôs video content and to process the Live Photo,Äôs still photo content. Use this property to distinguish photo content from video frames—for example, to add a watermark only to still photo content.
(Read only property)

146.30.11 Constants

Types

Constant	Value	Description
TypePhoto	0	The image is a still photo.
TypeVideo	1	The image is a single frame from the Live Photo,Äôs video content.

146.31 class PHLivePhotoMBS

146.31.1 class PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A displayable representation of a Live Photo—a picture that includes motion and sound from the moments just before and after its capture.
Notes: In macOS, you can use this class to display edits in progress for Live Photo content in a photo editing extension.

For guidance on how to integrate Live Photos with your app,Äôs user experience, see Live Photos in iOS Human Interface Guidelines.

The PHLivePhotoMBS class serves in much the same role for Live Photos as the NSImageMBS class serves for static images. A NSImageMBS object represents not the data file an image is loaded from, but instead a ready-to-use image that can be displayed in a view—similarly, a PHLivePhotoMBS object represents a Live Photo ready to display with motion and sound using a PHLivePhotoViewMBS object, not an entry in the Photos library or the data resources that constitute a Live Photo. (To work with Live Photos as elements of the Photos library, use the PHAsset class. To work with the data files that constitute a Live Photo, use the PHAssetResourceMBS class.)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5

146.31.2 Methods

146.31.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

146.31.4 cancelLivePhotoRequestWithRequestID(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes: requestID: The numeric identifier of the request to be canceled.

When you use the requestLivePhotoWithResourceFileURLs method to asynchronously load a Live Photo from resource files, the method returns a numeric identifier for the request. To cancel the request before it completes, provide the identifier when calling the cancelLivePhotoRequestWithRequestID method.

146.31.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.31.6 copy as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

146.31.7 PHLivePhotoInfoCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: A Boolean value indicating whether the Live Photo loading request was canceled.

146.31.8 PHLivePhotoInfoErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: An error that occurred while attempting to load the requested Live Photo.

146.31.9 PHLivePhotoInfoIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.

Notes: A Boolean value indicating whether the result Live Photo is a low-quality substitute for the requested Live Photo.

If true, the result parameter of your resultHandler block contains a still or low-quality Live Photo, and Photos will call your result delegate method again to provide the full motion and sound content of the Live Photo. If false, Photos has provided all possible data and will not call your result handler again.

146.31.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes: fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 146.31.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 19307

146.31.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes: fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 146.31.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 19307

146.31.12 Properties

146.31.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.31.14 Height as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

146.31.15 Width as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

146.31.16 Constants

Constants

Constant	Value	Description
RequestIDInvalid	0	The value for an invalid request ID.

Content Modes

Constant	Value	Description
ContentModeAspectFill	1	Scales the image so that it completely fills the target size.
ContentModeAspectFit	0	Scales the image so that its larger dimension fits the target size.
ContentModeDefault	0	Fits the image to the requested size using the default option, ContentModeAspectFit.

146.31.17 Delegates

146.31.18 RequestLivePhotoWithResourceFileURLsMBS(LivePhoto as PHLivePhotoMBS, placeholderImage as NSImageMBS, targetSize as CGSizeMBS, contentMode as Integer, tag as variant, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The method called when live photo is loaded.
Notes: LivePhoto: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See PHLivePhotoMBS class for possible keys and values.

Method may be called twice if there is a low res and high res version.

146.32 class PHLivePhotoRequestOptionsMBS

146.32.1 class PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of Live Photo assets you request from an image manager.
Notes: A Live Photo is a picture that includes movement and sound from the moments just before and after its capture.
Available in MacOS 10.15 or newer.

146.32.2 Methods

146.32.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.32.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.32.5 copy as PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options object.

146.32.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.32.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate which Photos calls periodically while downloading the Live Photo.
Notes: If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.

146.32.8 Properties

146.32.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested Live Photo quality and delivery priority.
Notes: Use this property to tell Photos to provide a Live Photo quickly (possibly sacrificing image quality), to provide a high-quality Live Photo (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

146.32.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.32.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested Live Photo data from iCloud.
Notes: If true, and the requested Live Photo data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a block that Photos calls periodically while downloading. If false (the default), and the Live Photo data is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the data is not available unless you enable network access.
(Read and Write property)

146.32.12 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate which Photos calls periodically while downloading the Live Photo.
Notes: If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.
(Read and Write property)

146.32.13 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the Live Photo to be requested.
Notes: Use this property to request a version of the Live Photo with or without adjustments. See Version constants.
(Read and Write property)

146.32.14 Constants

Delivery Modes

Constant	Value	Description
DeliveryModeFastFormat	2	Photos provides only a fast-loading image, possibly sacrificing image quality.
DeliveryModeHighQualityFormat	1	Photos provides only the highest-quality image available, regardless of how much time it takes to load.
DeliveryModeOpportunistic	0	Photos automatically provides one or more results in order to balance image quality and responsiveness.

Version Type

Constant	Value	Description
VersionCurrent	0	Request the most recent version of the image asset (the one that reflects all edits).
VersionOriginal	2	Request the original, highest-fidelity version of the image asset.
VersionUnadjusted	1	Request a version of the image asset without adjustments.

146.32.15 Delegates

146.32.16 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls periodically while downloading the Live Photo..
Notes: If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the progressHandler property in PHLivePhotoRequestOptionsMBS class, Photos calls your block periodically to report progress and to allow you to cancel the download.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request,Äôs deliveryMode property.

If this method is dispatched asynchronously to the main thread, the stop property doesn't work.

146.33 class PHObjectChangeDetailsMBS

146.33.1 class PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in an asset or collection object.
Notes: A PHObjectChangeDetailsMBS object provides detailed information about differences between two states of an asset or collection object—one that you previously obtained and an updated state that would result if you fetched that entity again. You observe changes via events in PHPhotoLibraryMBS object. When Photos notifies your observer of a change, you get change details by passing the object you,Äôre interested in to the changeDetailsForObject method.

For an asset collection or collection list, a PHObjectChangeDetailsMBS object describe changes only to the collection,Äôs properties. If you are instead interested in changes to the collection,Äôs membership, fetch the collection,Äôs contents and use the changeDetailsForFetchResult: method to track changes to the fetch result.

Needs macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.33.2 Methods

146.33.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.33.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.33.5 Properties

146.33.6 assetContentChanged as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset,Äôs photo or video content has changed.
Notes: If this value true, you can use the PHImageManagerMBS class to retrieve updated content.
This value is false if the asset has not changed or if the change details do not refer to a PHAssetMBS object.
(Read only property)

146.33.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.33.8 objectAfterChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the current state of the asset or collection it represents.
Notes: Read this object,Äôs properties to retrieve updated metadata for the asset or collection. Using this object is equivalent to repeating the same fetch that returned the original object.
(Read only property)

146.33.9 objectBeforeChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the original state of the asset or collection it represents.
Notes: This property,Äôs value is the same object you passed to the changeDetailsForObject to request change details.
(Read only property)

146.33.10 objectWasDeleted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the object has been deleted from the Photos library.

Notes: If this value is true, the asset or collection has been permanently deleted from the Photos library.

To instead track the removal of assets from collections (or collections from collection lists), fetch the collection,Äôs contents and use the changeDetailsForFetchResult method to track changes to the fetch result. (Read only property)

146.34 class PHObjectMBS

146.34.1 class PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos model objects (assets and collections).
Notes: You do not create or use instances of this class directly. Instead, work with instances of its concrete subclasses —PHAssetMBS, PHAssetCollectionMBS, PHCollectionListMBS, and PHObjectPlaceholderMBS.

Because the PHObjectMBS class implements the isEqual and hash methods in terms of its localIdentifier property, you can use techniques that depend on these methods to keep track of asset and collection objects. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.34.2 Methods

146.34.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.34.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.34.5 copy as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

146.34.6 Properties

146.34.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.34.8 localIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A unique string that persistently identifies the object.
Notes: Use this string to find the object by using the fetchAssetsWithLocalIdentifiers, fetchAssetCollectionsWithLocalIdentifiers, or fetchCollectionListsWithLocalIdentifiers method.
(Read only property)

146.35 class PHObjectPlaceholderMBS

146.35.1 class PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A read-only proxy representing a Photos asset or collection object yet to be created by a change request.
Notes: You obtain object placeholders when you use change requests to create assets, collections, or collection lists. After the change request completes, you can use the object placeholder to fetch the newly created object. You can also use an object placeholder to make additional change requests involving the object to be created.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

146.35.2 Methods

146.35.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.35.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

146.35.5 Properties

146.35.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.36 class PHPhotoLibraryMBS

146.36.1 class PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A shared object that manages access and changes to the user,Äôs shared photo library.
Notes: The shared PHPhotoLibraryMBS object represents the entire set of assets and collections managed by the Photos app, including both assets stored on the local device and (if enabled) those stored in iCloud Photos. You use this object for the following tasks:

- Getting or verifying the user's permission for your app to access Photos content.
- Making changes to assets and collections; for example, editing asset metadata or content, inserting new assets, or rearranging the members of a collection.
- Registering for update messages sent when changes are made to the library.

Requires MacOS 10.13 or newer.

146.36.2 Methods

146.36.3 authorizationStatus as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns information about your app,Äôs authorization to access the user,Äôs photo library.
Notes: Returns the current authorization status.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization.

Important
Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Tip
Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

If this method returns PHAuthorizationStatusNotDetermined, you can call the requestAuthorization method to prompt the user for photo library access permission.

146.36.4 authorizationStatusForAccessLevel(accessLevel as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns information about your app,Äôs authorization to access the user,Äôs photo library.
Notes: You may have the possibility that you may not be allowed to read & write, but be allowed to add only.

Returns one of the PHAuthorizationStatus* constants.

146.36.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.36.6 cloudIdentifiersForLocalIdentifiers(localIdentifiers() as String) as PHCloudIdentifierMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries cloud identifiers for local identifiers.

146.36.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.36.8 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.36.9 localIdentifiersForCloudIdentifiers(cloudIdentifiers() as PHCloudIdentifierMBS) as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries local identifiers for cloud identifiers.

146.36.10 performChanges(ChangeBlock as ChangeBlockMBS, CompletionHandler as ChangeCompletionHandlerMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously runs a block that requests changes to be performed in the photo library.
Notes: We call back to main thread for the completion delegate, so please keep main thread available.

Please use #Pragma StackOverflowChecking false and #Pragma BackgroundTasks false in the change block method to disable stack checking and background activities.

Otherwise you may have a stack overflow exception before any code runs.

146.36.11 performChangesAndWait(ChangeBlock as ChangeBlockMBS, byref Error as NSErrorMBS, tag as Variant = nil) as Boolean

MBS Mac64bit Plugin, Plugin Version: 25.4, Platform: macOS, Targets: Desktop & iOS.

Function: Synchronously runs a block that requests changes to be performed in the photo library.
Notes: Returns true on success.

Please use #Pragma StackOverflowChecking false and #Pragma BackgroundTasks false in the change block method to disable stack checking and background activities.

Otherwise you may have a stack overflow exception before any code runs.

146.36.12 PHLocalIdentifierNotFound as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the error constants.
Notes: The local identifier was not found.

146.36.13 PHPhotosErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Photos errors.

146.36.14 requestAuthorization(CompletionHandler as RequestAuthorizationCompletedMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the user,Äôs permission, if needed, to access the photo library.
Notes: CompletionHandler: Photos calls this delegate upon determining your app,Äôs authorization to access the photo library.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization. Alternatively, you can call this method to prompt the user at a time of your choosing.

Important:
Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

This method always returns immediately. If the user has previously granted or denied photo library access permission, it executes the delegate when called; otherwise, it displays an alert and executes the block only after the user has responded to the alert.

146.36.15 requestAuthorizationForAccessLevel(accessLevel as Integer, CompletionHandler as RequestAuthorizationCompletedMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the user,Äôs permission, if needed, to access the photo library.
Notes: Like requestAuthorization, but can ask for either read & write or for add-only mode.
Please pass PHAccessLevelReadWrite or PHAccessLevelAddOnly constants.

146.36.16 sharedPhotoLibrary as PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves the shared photo library object.
Notes: The singleton photo library object.

146.36.17 Properties

146.36.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.36.19 unavailabilityReason as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error object to give reason for unavailability.
Notes: (Read only property)

146.36.20 Events

146.36.21 DidBecomeUnavailable

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The Photos library did become unavailable.

146.36.22 DidChange(changes as PHChangeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function:

Tells you that a set of changes has occurred in the Photos library.
Required.
Notes:

change: An object representing the changes.

Use the provided PHChangeMBS object to find out which, if any, of the albums or collections you,Äôre interested in have changed and get detailed change information. Call the change object,Äôs changeDetailsForObject method to get information about changes to an asset,Äôs contents or metadata properties or about a collection,Äôs metadata properties. Call the change object,Äôs changeDetailsForFetchResult to get information about changes to a collection,Äôs list of members (or to any other fetch result).

146.36.23 Constants

Access Levels

Constant	Value	Description
PHAccessLevelAddOnly	1	You can only add photos.
PHAccessLevelReadWrite	2	You can read and write.

Authorization Status

Constant	Value	Description
PHAuthorizationStatusAuthorized	3	The user has explicitly granted your app access to the photo library.
PHAuthorizationStatusDenied	2	The user has explicitly denied your app access to the photo library.
PHAuthorizationStatusNotDetermined	0	Explicit user permission is required for photo library access, but the us not yet granted or denied such permission.
PHAuthorizationStatusRestricted	1	Your app is not authorized to access the photo library, and the user c grant such permission.

Errors

Constant	Value	Description
PHPhotosErrorInvalid	-1	Invalid error?
PHPhotosErrorLibraryVolumeOffline	3114	Library volume offline.
PHPhotosErrorRelinquishingLibraryBundleToWriter	3142	Relinquishing library bundle to writer
PHPhotosErrorSwitchingSystemPhotoLibrary	3143	Failed to switch system photo library.
PHPhotosErrorUserCancelled	3072	The user cancelled.

146.36.24 Delegates

146.36.25 ChangeBlockMBS(tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that requests changes to be performed.
Notes: This delegate takes no parameters and has no return value.

146.36.26 ChangeCompletionHandlerMBS(success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls after the change block completes and Photos performs the requested changes.
Notes: success: True if Photos successfully applied the changes requested in the block; otherwise, false.
error: If an error occurs, an NSError object describing the error; otherwise, nil.

146.37 class PHPickerConfigurationMBS

146.37.1 class PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: An object that contains information about how to configure a picker view controller.

146.37.2 Methods

146.37.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a new configuration object.
Notes: This configuration doesn,Äôt return asset identifiers. To create configuration object with the system photo library use the other constructor.
See also:

- 146.37.4 Constructor(PhotoLibrary as Variant) 19328

146.37.4 Constructor(PhotoLibrary as Variant)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a new configuration object for a photo library.
Notes: photoLibrary: The library from which to pick photos and videos.

Please pass a PHPhotoLibraryMBS class.
See also:

- 146.37.3 Constructor 19328

146.37.5 copy as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a copy of the configuration object.

146.37.6 preselectedAssetIdentifiers as String()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: An array of asset identifiers to preselect in the picker.

146.37.7 setPreselectedAssetIdentifiers(Identifiers() as String)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Sets an array of asset identifiers to preselect in the picker.
Notes: Preselection works only when initializing a PHPickerConfigurationMBS object with a photo library. Otherwise, the system returns an error.

The number of preselected asset identifiers can exceed your selection limit. The system disables the done action until the selection count is lower than selectionLimit.
Additionally, when you configure a picker with preselected identifiers:
Results include all preselected identifiers when canceling the picker.
Results don,Äôt include item providers for preselected assets that remain selected.
When deselecting all assets, the system keeps the done action enabled.

146.37.8 Properties

146.37.9 DisabledCapabilities as Integer

MBS iOS Plugin, Plugin Version: 23.4, Platform: iOS, Targets: Desktop & iOS.

Function: Capabilities of the picker that should be disabled.
Notes: Default is CapabilitiesNone.
For macOS 14 and iOS 17 or newer.
(Read and Write property)

146.37.10 Filter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The filter you apply to restrict the asset types the picker displays.
Notes: By default, a configuration object displays all asset types: images, Live Photos, and videos.
(Read and Write property)

146.37.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.37.12 Mode as Integer

MBS iOS Plugin, Plugin Version: 23.4, Platform: iOS, Targets: Desktop & iOS.

Function: The mode of the picker.
Notes: Default is ModeDefault.
For macOS 14 and iOS 17 or newer.
(Read and Write property)

146.37.13 PreferredAssetRepresentationMode as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: A mode that determines which representation to use if an asset contains more than one.
Notes: An asset can contain many representations under the same uniform type identifier, or you can prefer a specific format. This mode determines which representation a result uses if many exist.

The system may perform additional transcoding to convert the asset you request to the compatable representation. Use PHPickerConfigurationMBS.AssetRepresentationModeCurrent to avoid transcoding, if possible.
(Read and Write property)

146.37.14 Selection as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The selection behavior for the picker.
Notes: (Read and Write property)

146.37.15 SelectionLimit as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The maximum number of selections the user can make.
Notes: The default value is 1. Setting the value to 0 sets the selection limit to the maximum that the system supports.
(Read and Write property)

146.37.16 Constants

Asset Representation Modes

Constant	Value	Description
AssetRepresentationModeAutomatic	0	A mode that indicates that the system chooses the appropriate asset repr tation.
AssetRepresentationModeCompatible	2	A mode that uses the most compatible asset representation.
AssetRepresentationModeCurrent	1	A mode that uses the current representation to avoid transcoding, if poss

Capabilities

Constant	Value	Description
CapabilitiesCollectionNavigation	4	The sidebar or the albums tab.
CapabilitiesNone	0	No specified capabilities.
CapabilitiesSearch	1	The search bar.
CapabilitiesSelectionActions	8	The "Cancel" and the "Add" (if possible) button.
CapabilitiesSensitivityAnalysisIntervention	16	Show intervention UI explaining potential risks for kids or teens if asset is selected. Analysis and intervention will only be performed if nications Safety" is enabled in ScreenTime.
CapabilitiesStagingArea	2	The staging area.

Modes

Constant	Value	Description
ModeCompact	1	Compact picker mode (single row).
ModeDefault	0	Default picker mode.

Selection Behavior

Constant	Value	Description
SelectionContinuous	2	Selection can be delivered continuously. For macOS 14 and iOS 17 or newer.
SelectionContinuousAndOrdered	3	Selection can be delivered continuously and uses the selection order made by the user. Selected assets are numbered. For macOS 14 and iOS 17 or newer.
SelectionDefault	0	Uses the default selection behavior.
SelectionOrdered	1	Uses the selection order made by the user, numbering the selected assets.

146.38 control PHPickerControlMBS

146.38.1 control PHPickerControlMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The Xojo control to host a PHPickerViewController on a Xojo window.
Notes: Please implement Configure event to provide the PHPickerConfigurationMBS object to use.

Since the PHPicker view is running in a different process and only shown inside your application, the events for contextual menus, focus and mouse events don't fire.

Xojo Developer Magazine

- 23.4, page 11: News
- 23.3, page 10: News

146.38.2 Properties

146.38.3 Controller as PHPickerViewControllerMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The reference to the underlaying PHPickerViewController.
Notes: (Read only property)

146.38.4 View as NSViewMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The view used.
Notes: Access properties of the view hosted in the control via this variable.
(Read only property)

146.38.5 Events

146.38.6 BoundsChanged

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the bounds, but not the frame, changed.

146.38.7 Close

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

146.38.8 Closing

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

146.38.9 Configure as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Queries the configuration to use.
Notes: Please return the PHPickerConfigurationMBS object to use for the control.
This is called before the open event.

146.38.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: This event is called when it is appropriate to display a contextual menu for the control.

146.38.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

146.38.12 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Did close contextual menu.
Notes: Allows you to restart any animation you may have stopped in the willShowContextualMenu event.

146.38.13 didFinishPicking(Result() as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Notifies the delegate that the user completed a selection or dismissed the picker using the cancel button.
Notes: picker: The currently presented picker view controller.
results: The results of the user,Äôs selections.

The system doesn,Äôt automatically dismiss the picker after calling this method, but the plugin does.

It may happen that the user manages to dismiss the dialog without this event running. Seems to be a bug in iOS. So you can catch the viewDidDisappear event and do any cleanup there, if the didFinishPicking event did not fire before.

146.38.14 EnableMenuItems

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

146.38.15 FocusLost

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.38.16 FocusReceived

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes:

This only fires if the control itself got focus and not a sub control.

146.38.17 FrameChanged

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

146.38.18 GotFocus

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes:

This only fires if the control itself got focus and not a sub control.

146.38.19 LostFocus

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes:

This only fires if the control itself lost focus and not a sub control.

146.38.20 MenuBarSelected

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

146.38.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
Notes: The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

146.38.22 MouseDrag(x as Integer, y as Integer)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: Mouse location is local to the control passed in to x, y.

As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

146.38.23 MouseUp(x As Integer, y As Integer)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

146.38.24 Open

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

146.38.25 Opening

Plugin Version: 25.1, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

146.38.26 ScaleFactorChanged(NewFactor as double)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

146.38.27 viewDidAppear

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: The view appeared.

146.38.28 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS iOS Plugin, Plugin Version: 25.1, Platform: macOS, Targets: Desktop only.

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

146.39 class PHPickerFilterMBS

146.39.1 class PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: A type that defines the filter to apply to the photo library.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Picking picture on macOS
- MBS Xojo Plugins, version 22.5pr1

146.39.2 Methods

146.39.3 anyFilterMatchingSubfilters(filters() as PHPickerFilterMBS) as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a new filter by combining the filters in the array.
Notes: filters: The list of filters to combine into a new filter.

146.39.4 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The private constructor.

146.39.5 copy as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Creates a copy of the filter object.

146.39.6 imagesFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: A filter that represents images, and includes Live Photos.
Notes: Use anyFilterMatchingSubfilters if you like to pick more than one type (image, live photos or photos)

146.39.7 livePhotosFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: A filter that represents Live Photos.

146.39.8 videosFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: A filter that represents video assets.

146.39.9 Properties

146.39.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.40 class PHPickerResultMBS

146.40.1 class PHPickerResultMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Types that represent a selected asset from the user,Äôs photo library.
Notes: When you get result objects in a real application and you like to allow more than a few pictures, you may need to manage the jobs to download:

- Have a queue for the result objects to be downloaded.
- Check what types are available on each.
- Download what you need, e.g. HEIC or JPEG representation.
- Have a timer to start downloads and make sure you have only a limited number of parallel downloads like e.g. 4.
- Monitor which downloads failed and keep the NSErrorMBS for logging them.
- Show progress dialog for the download, e.g. with our ProgressHUDMBS class.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- Picking picture on macOS
- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5
- MBS Xojo Plugins, version 22.5pr1

146.40.2 Methods

146.40.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The private constructor.

146.40.4 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The destructor.

146.40.5 hasItemConformingToTypeIdentifier(typeIdentifier as string) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether an item provider contains a data representation conforming to a specified uniform type identifier (UTI) and to specified open-in-place behavior.

146.40.6 loadFileRepresentationForTypeIdentifier(typeIdentifier as string, handler as LoadFileRepresentationCompletedMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Asynchronously loads the requested type to a temporary file.
Notes: You can show a progress dialog and use progressCurrent and progressTotal values.
Calls delegate later when download is finished.

146.40.7 TypeIdentifiers as String()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: Returns the array of type identifiers for the item provider, listed in the same order in which they were registered.

146.40.8 Properties

146.40.9 assetIdentifier as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The selected asset,Äôs local identifier.
Notes: (Read only property)

146.40.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.40.11 progressCurrent as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The number of bytes downloaded so far.
Notes: This allows you to periodically check how far a download is and show a progress dialog.
Only valid after calling loadFileRepresentationForTypeIdentifier method.
(Read only property)

146.40.12 progressTotal as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The total size of a download.
Notes: This allows you to periodically check how far a download is and show a progress dialog.
Only valid after calling loadFileRepresentationForTypeIdentifier method.
(Read only property)

146.40.13 Delegates

146.40.14 LoadFileRepresentationCompletedMBS(File as FolderItem, error as NSErrorMBS, result as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: Desktop & iOS.

Function: The delegate called when loadFileRepresentationForTypeIdentifier is finished.
Notes: Called on main thread.

146.41 class PHPickerViewControllerMBS

146.41.1 class PHPickerViewControllerMBS

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: A view controller that provides the user interface for choosing assets from the photo library.
Notes: The PHPickerViewController class is an alternative to UIImagePickerController.
PHPickerViewController improves stability and reliability, and includes several benefits to developers and users, such as the following:

- Deferred image loading and recovery UI
- Reliable handling of large and complex assets, like RAW and panoramic images
- User-selectable assets that aren,Äôt available for UIImagePickerController
- Configuration of the picker to display only Live Photos
- Availability of PHLivePhotoMBS objects without library access
- Stricter validations against invalid inputs

You can present a picker object only once; you can,Äôt reuse it across sessions.

146.41.2 Methods

146.41.3 Constructor(configuration as PHPickerConfigurationMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Creates a new picker view controller with the configuration you specify.
Notes: configuration: The configuration with which to initialize the view controller.

146.41.4 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The destructor.

146.41.5 Dismiss

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Dismisses the controller.

146.41.6 Present

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Presents the controller.

146.41.7 Properties

146.41.8 configuration as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The configuration you specify when creating the picker.
Notes: (Read only property)

146.41.9 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.41.10 popover as Variant

MBS iOS Plugin, Plugin Version: 23.2, Platform: macOS, Targets: Desktop only.

Function: The NSPopoverMBS object if used.
Notes: Allows access to the popover on macOS.
(Read only property)

146.41.11 PopOverHeight as Integer

MBS iOS Plugin, Plugin Version: 23.2, Platform: macOS, Targets: Desktop only.

Function: The desired height for the popover.
Notes: We use this size to initialize it. Default is 500.
(Read and Write property)

146.41.12 PopOverWidth as Integer

MBS iOS Plugin, Plugin Version: 23.2, Platform: macOS, Targets: Desktop only.

Function: The desired width for the popover.
Notes: We use this size to initialize it. Default is 600.
(Read and Write property)

146.41.13 View as NSViewMBS

MBS iOS Plugin, Plugin Version: 25.1, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The view of the picker.
Notes: (Read only property)

146.41.14 ViewController as Variant

MBS iOS Plugin, Plugin Version: 25.1, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The underlaying view controller.
Notes: Either a NSViewControllerMBS for macOS or an UIViewControllerMBS for iOS.

(Read only property)

146.41.15 Events

146.41.16 didFinishPicking(Result() as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: Notifies the delegate that the user completed a selection or dismissed the picker using the cancel button.
Notes: picker: The currently presented picker view controller.
results: The results of the user,Äôs selections.

The system doesn,Äôt automatically dismiss the picker after calling this method, but the plugin does.

It may happen that the user manages to dismiss the dialog without this event running. Seems to be a bug in iOS. So you can catch the viewDidDisappear event and do any cleanup there, if the didFinishPicking event did not fire before.

146.41.17 popoverDidClose

MBS iOS Plugin, Plugin Version: 24.2, Platform: macOS, Targets: Desktop & iOS.

Function: The popover did close.

146.41.18 popoverDidShow

MBS iOS Plugin, Plugin Version: 24.2, Platform: macOS, Targets: Desktop & iOS.

Function: The popover did show.

146.41.19 popoverWillClose

MBS iOS Plugin, Plugin Version: 24.2, Platform: macOS, Targets: Desktop & iOS.

Function: The popover will close.

146.41.20 popoverWillShow

MBS iOS Plugin, Plugin Version: 24.2, Platform: macOS, Targets: Desktop & iOS.

Function: The popover will show.

146.41.21 viewDidAppear

MBS iOS Plugin, Plugin Version: 24.2, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The view did appear.

146.41.22 viewDidDisappear

MBS iOS Plugin, Plugin Version: 24.2, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The view did disappear.

146.41.23 viewWillAppear

MBS iOS Plugin, Plugin Version: 24.2, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The view will appear.

146.41.24 viewWillDisappear

MBS iOS Plugin, Plugin Version: 24.2, Platforms: macOS, iOS, Targets: Desktop & iOS.

Function: The view will disappear.

146.42 class PHProjectChangeRequestMBS

146.42.1 class PHProjectChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A request to change asset data in a Photos project extension.
Notes: Make a project change request to alter a project's title or metadata. Respond to project change requests by updating your user interface as assets are added, modified, or removed.

Available in macOS 10.13 or newer.
Subclass of the PHChangeRequestMBS class.

146.42.2 Methods

146.42.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.42.4 Constructor(project as PHProjectMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Creates a change request around the specified project.
Notes: project: The project being changed in the request.

146.42.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.

146.42.6 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Removes the specified assets from the project.
Notes: assets: A collection of PHAssets to be removed from the project.

146.42.7 Properties

146.42.8 keyAsset as PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Sets the key asset representing the project.
Notes: Setting a key asset has been deprecated in macOS 10.14. Use ProjectPreviewImage to provide a rendered preview image instead of designating a key asset.
(Read and Write property)

146.42.9 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Compressed project-specific data to use in the change request.
Notes: The total size of stored data is limited to 1 MB; attempting to store more data will result in an error. Don't include rasterized images that can be locally cached. Limit stored data to compressed project-specific data.
(Read and Write property)

146.42.10 projectPreviewImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The project preview in Photos.
Notes: When setting, please pass a rendered project preview with dimensions of 1024 x 1024.

PhotoKit requires that you set a project preview in the following situations:

- Whenever the project changes in a way that requires a new preview.
- During or after execution of the beginProjectWithExtensionContext protocol method.
- During or after execution of the resumeProjectWithExtensionContext protocol method.

(Read and Write property)

146.42.11 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The title of the change request.
Notes: (Read and Write property)

146.43 class PHProjectMBS

146.43.1 class PHProjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A representation of a Photos app project extension.
Notes: This class represents the project when extended from macOS Photos. Projects can have the following types:

- Book
- Calendar
- Card
- Prints
- Slideshow
- Wall decor

Users create projects by selecting one or more assets, right-clicking the selection, and grouping the assets, much like an album collection. Your app treats the project as a separate entity, represented as a PHProject. Subclass of the PHAssetCollectionMBS class.

146.43.2 Methods

146.43.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

146.43.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The constructor.

146.43.5 Properties

146.43.6 hasProjectPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A property that indicates whether a project preview was previously set.
Notes: To set the preview, use ProjectPreviewImage property.
(Read only property)

146.43.7 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Data associated with the project extension.
Notes: (Read only property)

146.44 class PHVideoRequestOptionsMBS

146.44.1 class PHVideoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of video asset data that you request from an image manager.
Notes: Available on MacOS 10.15 or newer.

146.44.2 Methods

146.44.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

146.44.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

146.44.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

146.44.6 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the video.
Notes: If you request a video whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

146.44.7 Properties

146.44.8 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode specifying the requested video quality and delivery priority.
Notes: Use this property to tell Photos to provide a video quickly (possibly sacrificing image quality) or to provide a high-quality video (possibly sacrificing speed). This option applies only when requesting the current version of the video (that is, only when the version property is VersionCurrent).
The default option is DeliveryModeAutomatic. See DeliveryMode.
(Read and Write property)

146.44.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

146.44.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested video from iCloud.
Notes: If true, and the requested video is not stored on the local device, Photos downloads the video from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the video. If false (the default), and the video is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the video is not available unless you enable network access.
(Read and Write property)

146.44.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the video.
Notes: If you request a video whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

146.44.12 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the video to request.
Notes: If a video asset has been edited, use this property to request a video with or without adjustments. The default option is VersionCurrent. See Version constants.
(Read and Write property)

146.44.13 Constants

Delivery Modes

Constant	Value	Description
DeliveryModeAutomatic	0	Photos automatically determines which quality of video data to provide b on the request and current conditions.
DeliveryModeFastFormat	3	Photos provides whatever quality of video can be most quickly loaded.
DeliveryModeHighQualityFormat	1	Photos provides only the highest quality video available.
DeliveryModeMediumQualityFormat	2	Photos provides a video of moderate quality unless a higher quality versio locally cached.

Version Mode

Constant	Value	Description
VersionCurrent	0	Request the most recent version of the video asset, reflecting all edits. The resulting video is the rendered output from all previously made adjustments.
VersionOriginal	1	Request a version of the video asset without adjustments. The resulting video is the originally captured or imported version of the asset, regardless of any edits that have been made.

146.44.14 Delegates

146.44.15 ProgressHandlerMBS(progress as double, tag as Variant, error as NSErrorMBS, byref stop as Boolean, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud.
Notes: If you request a video asset whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.

The method takes the following parameters:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the video, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the video request. See Image Result Info Keys for possible keys and values.

If the event is dispatched asynchronously to main thread, the stop property will not work.

Chapter 147

Pictures Import and Export

147.1 Globals

147.1.1 BitRotateMBS(Degree as Integer, InputData as Ptr, OutputData as Ptr, Width as Integer, Height as Integer, InputRowBytes as Integer = -1, OutputRowBytes as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates 1bit image in memory.
Example:

```
Var InputTIFF As TiffPictureMBS // your input file
Var OutputTIFF as TiffPictureMBS // your output file

Var inMB As MemoryBlock = InputTIFF.Scanlines(0, InputTIFF.Height)
Var outMB As New MemoryBlock(OutputTIFF.BytesPerRow * (OutputTIFF.Height + 8))

Const PlateRotation = 90

Var b As Boolean = BitRotateMBS(PlateRotation, inMB, outMB, InputTIFF.Width, InputTIFF.Height,
InputTIFF.BytesPerRow, OutputTIFF.BytesPerRow)

Break
```

Notes: Degree can be -360, -270, -180, -90, 0, 90, 180 or 270 to rotate counter clockwise.
InputData points to an 1bit image with given width and height. InputRowBytes if defined tells how many bytes per row are used in the input image. If <= 0, we calculate it. OutputRowBytes defines row bytes for output image, which is different for 90/270 rotation.
Returns true on success or false on failure.
The function is optimized for 180 degree to be quicker if image size is multiply of 8.

For 90 and 270 degree, there is an optimization if width and height are a multiply of 8.

- 16.6, page 9: News

147.1.2 BMPStringtoPictureMBS(data as string) as picture

MBS Picture Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a BMP picture from a string.
Example:

```
Var p as Picture = LogoMBS(500)
Var s as string = p.BMPDataMBS
Var q as Picture = BMPStringtoPictureMBS(s)
window1.Backdrop = q
```

Notes: This function is endian safe and supports 1, 4, 8, 16, 24, 32 bit BMP images.
For 32bit images the alpha value is ignored.
Returns nil on any error.
Only uncompressed BMP files are supported.

Xojo Developer Magazine

- 21.5, page 74: Windows PDF, New MBS classes let you work with PDFS on Windows. by Stefanie Juchmes

147.1.3 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits a one bit CMYK file into different files.
Notes: Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

Errorcodes:

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

See also:

- 147.1.4 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as

folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 19362

147.1.4 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits a one bit CMYK file into different files.
Notes: Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

ReadLines and WriteLines define how many rows to read in one I/O operation.

Errorcodes:

147.2 class PNGOptimizerMBS

147.2.1 class PNGOptimizerMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class is a wrapper for the OptiPNG command line tool.
Example:

```
Var p as Picture = LogoMBS(500)

Var fi as FolderItem = SpecialFolder.Desktop.Child("test unoptimized.png")
if not fi.SaveAsPNGMBS(p,0) then
MsgBox "Failed to save PNG file."
```

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

```
Return
end if

Var fo as FolderItem = SpecialFolder.Desktop.Child("test optimized.png")
fo.Delete // delete if existed before

Var o as new PNGOptimizerMBS

o.YieldTicks=10 // give time for other threads
o.InputFile=fi
o.OutputFile=fo

if o.Optimize then
MsgBox "OK: Saved "+str(o.BytesSaved)
fo.Launch
else
MsgBox "failed"
end if
```

Notes: OptiPNG: Advanced PNG optimization program.
http://optipng.sourceforge.net/

Copyright (C) 2001-2008 Cosmin Truta.
OptiPNG is open-source software, and is distributed under the same licensing and warranty terms as libpng.

PNG optimization is described in detail in the PNG-Tech article "A guide to PNG optimization"
http://www.cs.toronto.edu/
textasciitilde cosmin/pngtech/optipng.html

The idea of running multiple compression trials with different PNG filters and zlib parameters is inspired from the pngcrush program by Glenn Randers-Pehrson.
The idea of performing lossless image reductions is inspired from the pngrewrite program by Jason Summers.

147.2.2 Methods

147.2.3 Optimize as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The main optimization function.
Notes: Returns true on success and false on failure.

147.2.4 Properties

147.2.5 BytesSaved as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: After the optimization this property shows how many bytes were saved.
Notes: (Read and Write property)

147.2.6 Debug as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables debug output.
Notes: (Read and Write property)

147.2.7 Fix as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable error recovery.
Notes: (Read and Write property)

147.2.8 Force as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enforce writing of a new output file.
Notes: If the input image has a digital signature, the library will not optimize the file unless force=true.
(Read and Write property)

147.2.9 full as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to produce a full report on IDAT (might reduce speed).
Notes: (Read and Write property)

147.2.10 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to process.
Notes: (Read and Write property)

147.2.11 interlace as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace type (0-1).
Notes: Set by default to -1 for undefined.
(Read and Write property)

147.2.12 KeepBackup as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep a backup of the modified files.
Notes: If the file exists and KeepBackup=false an error is reported. If you set KeepBackup=True the old file is renamed.
(Read and Write property)

147.2.13 NoBitDepthReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a bit depth reduction.
Notes: Reducing the bit depth of the image data can reduce the file size.
(Read and Write property)

147.2.14 NoColorTypeReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a color type reduction.
Notes: If your PNG file has only 256 colors in use, the optimizer can use a color palette to save space.
(Read and Write property)

147.2.15 NoIDATRecompression as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not recompress the image data.
Notes: (Read and Write property)

147.2.16 NoPaletteReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not reduce the palette.
Notes: If not all colors are used, the palette can be reduced in its size.
(Read and Write property)

147.2.17 OptimizationLevel as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The optimization level.
Notes: A value between 0 and 7.
Default is 2.
(Read and Write property)

147.2.18 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes: (Read and Write property)

147.2.19 Overwrite as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Overwrite existing files.
Notes: (Read and Write property)

147.2.20 Preserve as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to preserve file attributes if possible.
Notes: (Read and Write property)

147.2.21 Quiet as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in quiet mode.
Notes: (Read and Write property)

147.2.22 simulate as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the optimization runs only in simulation mode.
Notes: No file is written in simulation mode.
(Read and Write property)

147.2.23 Snip as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cut one image out of multi-image or animation files.
Notes: (Read and Write property)

147.2.24 StripAll as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strip metadata objects .
Notes: (Read and Write property)

147.2.25 Verbose as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in verbose mode / show copyright and version info.
Notes: (Read and Write property)

147.2.26 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
Var p as new PNGOptimizerMBS
p.YieldTicks=6 // only use 1/10th of a second
```

Notes: If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.

(Read and Write property)

147.2.27 Events

147.2.28 Log(message as string)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event to output a message to the log file.
Notes: You may want to show that to your advantaged users.

147.2.29 Panic(message as string)

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Called if something really bad happend and the app needs to quit.

147.2.30 Progress(index as Integer, count as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The event called for reporting ongoing process in the trials.
Notes: The library will try several PNG settings and report progress so you can update a progress bar.

147.2.31 ProgressBegin

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event is called before the library starts to optimize.
Notes: You may want to show a progress dialog here.

147.2.32 ProgressEnd

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This event is called after the library finished.
Notes: You may want to hide your progress dialog here.

Chapter 148

PNG

148.1 Globals

148.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes: If the picture has no mask, no alpha channel is written to the file.
Returns "" on any error.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 148.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19371
- 148.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19372
- 148.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19373

148.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file.
Notes: If the picture has no mask, no alpha channel is written to the file.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 148.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19371
- 148.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19372
- 148.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19373

148.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes: Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 148.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19371
- 148.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19371
- 148.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19373

148.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes: Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

- 148.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19371
- 148.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19371
- 148.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19372

148.1.5 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes: If the picture has an alpah channel the returned picture will have a mask.

Returns picture on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.
Blog Entries

- MBS Xojo Plugins, version 18.4pr1

148.1.6 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes: Returns PNGPictureMBS object on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

148.2 class PNGpictureMBS

148.2.1 class PNGpictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a PNG picture.
Notes: Based on LibPNG.
Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

148.2.2 Methods

148.2.3 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
Var t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

148.2.4 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.
Notes: Please ask if you need a newer version.

148.2.5 Properties

148.2.6 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

148.2.7 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes: May be nil.
(Read and Write property)

148.2.8 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture data of the picture.
Notes: If this image is all black, you may use a different gamma setting.
(Read and Write property)

148.2.9 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: (Read and Write property)

148.2.10 Constants

Constants

Constant	Value	Description
kDefaultGamma	0	The default gamma constant. Pass this value to get the default gamma.
kDefaultNoGamma	-1	The no gamma constant. Pass this value to not do any gamma correction.

148.3 class PNGReaderMBS

148.3.1 class PNGReaderMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reading PNG files.
Example:

```
Var Current as PictureMBS // global
Var f as FolderItem

f=GetopenFolderItem(FileTypes.Png)

if f<>Nil then
Current=nil

Var p as new PNGReaderMBS

if p.OpenFile(f) then
if p.ApplyOptions(0) then

Current=new PictureMBS(p.Width,p.Height,PictureMBS.ImageFormatRGB)

Var i,c as Integer

c=p.Height-1
for i=0 to c
Current.RowInFormat(i, PictureMBS.ImageFormatRGBA)=p.ReadRow
next

end if
end if
end if
```

Notes: Use this class to read PNG files row by row as memoryblock.

Based on LibPNG.

Xojo Developer Magazine

- 18.1, page 10: News
- 17.2, page 11: News

148.3.2 Methods

148.3.3 ApplyOptions(gamma as double = 0.0, ScreenGamma as double = -1.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies various options.
Notes: The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Added ScreenGamma parameter in plugin version 15.2. If you set both gamma and Screengamma to a value >0.0, the plugin will use those gamma values. If both are equal, no gamma correction is made.

16-bit images are always reduced to 8-bit images.

Returns true on success and false on failure. Calls ReadHeader method if needed.

148.3.4 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines the pict and the mask property to a picture with mask.

148.3.5 Open(file as folderitem, data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens either the data string or the file.
Notes: Returns true on success.

148.3.6 OpenData(data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a PNG file from the data string.
Notes: Returns true on success.

148.3.7 OpenFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Var p As New PNGReaderMBS
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")

If p.OpenFile(f) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 148.3.8 OpenFile(Path as String) as boolean 19379

148.3.8 OpenFile(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Var p As New PNGReaderMBS
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var path As String = f.NativePath

If p.OpenFile(path) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 148.3.7 OpenFile(file as folderitem) as boolean 19379

148.3.9 OpenSpecialData(data as string) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Same as OpenData but with special handling of the png data.
Example:

```
Var f as FolderItem = getfolderitem("mbs.png")
Var b as BinaryStream = f.OpenAsBinaryFile(false) // BinaryStream.Open(f) in newer RB versions
Var s as string = b.Read(B.Length)

Var p as new PNGReaderMBS
if p.OpenSpecialData(s) then
if p.ApplyOptions(0) then
if p.ReadPicture then
Backdrop = p.Pict
Title = "OK"
else
Title = "Failed to read picture."
end if
else
Title = "Failed to apply options."
end if
else
Title = "Failed to open picture."
end if
```

Notes: This function can be used to read PNG files made for the Apple iPhone. The PNG is converted

from the Apple format to the normal PNG format and passed to OpenData. In the SourceData property you can get the modified PNG data. Still this modified PNG data has the channels swapped, so you should read the image with the pict property.

On Mac OS X 10.8, the NSImage class also reads iOS optimized PNG files.

Deprecated as it does not read all files and we can't fix this old code. Please use a command line tool to convert instead.

148.3.10 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

148.3.11 ReadEXIF(byref exif as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the EXIF data block.
Notes: Returns true on success or false on failure.

148.3.12 ReadHeader as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads header of PNG.
Notes: This reads header and fill properties Width, Height, ColorType, OriginalColorType, InterlaceType and BitDepth.
Returns true on success and false on failure.

148.3.13 ReadICCProfile(byref name as string, byref compression as Integer, byref profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the ICC Profile from the PNG file.
Notes: Name is the profile name, compression the method used to compress the profile data and profile a string with the content of the profile as binary data.

Returns true on success.

148.3.14 ReadPicture as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the picture into the pict and mask properties.
Notes: Returns true on success.

148.3.15 ReadRow as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row as a memoryblock.
Example:

```
Var fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
Var oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

Var imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

Var nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes: Returns nil on any error.

Format is RGBA as in the example with 4 bytes per pixel.
See also:

- 148.3.16 ReadRow(mem as memoryblock) as boolean 19383

148.3.16 ReadRow(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes: Returns false on any error and true on success.
Format is RGBA as in the example with 4 bytes per pixel.
Make sure the memoryblock is big enough. Else you risk a crash.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.
See also:

- 148.3.15 ReadRow as memoryblock 19382

148.3.17 ReadRowAlphaOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes: Returns false on any error and true on success.
Format is alpha channel as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.

148.3.18 ReadRowMaskOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes: Returns false on any error and true on success.
Format is mask (inverse alpha) as in the example with one byte per pixel.

Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.
ReadRow with reusing memoryblock is faster than allocating a new one for each row.

148.3.19 ReadsRGBTag(byref file_srgb_intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the sRGB tag.
Notes: Returns true if the value was read into the given variable.

148.3.20 RowBytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of each row in bytes.

148.3.21 Properties

148.3.22 AllowDamaged as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to return picture for files with damaged content.
Notes: e.g. a half downloaded PNG file can still be processed and may give you a preview for the file.
(Read and Write property)

148.3.23 BitDepth as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bit depth of the PNG file.
Notes: The original value from file headers, not updated by ApplyOptions, even if we convert e.g. 1 bit to gray for you.
(Read and Write property)

148.3.24 ChunkCacheMax as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum cache size for caching chunks.
Notes: The PNG specification sets no limit on the number of ancillary chunks allowed in a PNG datastream. By default, libpng imposes a limit of a total of 1000 sPLT, tEXt, iTXt, zTXt, and unknown chunks to be stored.
You can change the limit on the total number of such hunks that will be stored, with this property, where &h7fffffff means unlimited.
(Read and Write property)

148.3.25 ChunkMallocMax as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum allocation size for one chunk.
Example:

```
Var png as new PNGReaderMBS
png.chunkMallocMax=32 * 1024 * 1024
```

Notes: Libpng imposes a limit of 8 Megabytes (8,000,000 bytes) on the amount of memory that a compressed chunk other than IDAT can occupy, when decompressed.
You can query or change this limit with with this property.
Any chunks that would cause either of these limits to be exceeded will be ignored.
(Read and Write property)

148.3.26 ColorType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type of the PNG file.
Notes: The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.

(Read and Write property)

148.3.27 CompressionBufferSize as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zlib compression buffer size.
Notes: You can change the zlib compression buffer size to be used while reading compressed data with this property where the default size is 8192 bytes. Note that the buffer size is changed immediately and the buffer is reallocated immediately, instead of setting a flag to be acted upon later.
(Read and Write property)

148.3.28 ExpandGrayToRGB as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether grayscale images are expanded to RGB.
Notes: Set before ApplyOptions if you need this option.
Default is true.

Shall set transformations such that the grayscale image is converted to 24-bit RGB.

see png_set_gray_to_rgb function in libpng documentation.
(Read and Write property)

148.3.29 HasTransparency as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a transparency block is included for palette images (tRNS).
Notes: Set by ReadHeader or ApplyOptions.
(Read only property)

148.3.30 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: (Read and Write property)

148.3.31 InterlaceType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace setting.
Notes: (Read and Write property)

148.3.32 Interlacing as Integer

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the png file is interlaced.
Notes: Value is 1 if not interlaced and 7 if interlaced.
(Read and Write property)

148.3.33 InvertAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether alpha values should be inverted.
Notes: Set before ApplyOptions if you need this option.
Default is false.

see png_set_invert_alpha function in libpng documentation.
(Read and Write property)

148.3.34 Mask as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes: (Read and Write property)

148.3.35 OriginalColorType as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original color type of the PNG file.
Notes: The value is a combination of this constants:

PNG_COLOR_MASK_PALETTE = 1
PNG_COLOR_MASK_COLOR = 2
PNG_COLOR_MASK_ALPHA = 4

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

148.3.36 Pict as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture read.
Notes: (Read and Write property)

148.3.37 RGBToGray as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to convert RGB to grayscale.
Example:

```
Var png as PNGReaderMBS

// ask for gray only
png.RGBToGray = True

// avoid extra filler bytes for missing alpha channel
png.UseFiller = false
```

Notes: Set before ApplyOptions if you need this option.
Default is false.

see png_set_rgb_to_gray function in libpng documentation.
(Read and Write property)

148.3.38 RGBToGrayErrorAction as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Error handling option for Reduce RGB to grayscale.
Notes: Can be 1 for none, 2 for warn or 3 for error.
Default is 1.
(Read and Write property)

148.3.39 RGBToGrayGreen as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes: Default is -1 for default coefficients.
(Read and Write property)

148.3.40 RGBToGrayRed as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes: Default is -1 for default coefficients.
(Read and Write property)

148.3.41 SourceData as String

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source data used in Open functions.
Example:

```
Var p as PNGReaderMBS // your reader

// write data to file
Var fo as FolderItem = SpecialFolder.Desktop.Child("mbsout.png")
Var bo as BinaryStream = fo.CreateBinaryFile("") // BinaryStream.Create(fo,true) in newer RB Versions

bo.Write p.SourceData
```

Notes: If you used OpenSpecialData, the data here is the PNG without the Apple modifications, but still with swapped colors.
This property is set by the OpenSpecialData, Open and OpenData functions.

(Read and Write property)

148.3.42 SourceFile as FolderItem

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem passed to the Open functions.
Notes: This property is set by the Open and OpenFile functions.
(Read and Write property)

148.3.43 SourcePath as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file path.
Notes: (Read and Write property)

148.3.44 StripAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to strip alpha.
Notes: Set before ApplyOptions if you need this option.
Default is false.

see png_set_strip_alpha function in libpng documentation.
(Read and Write property)

148.3.45 SwapRB as Boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to swap red and blue channels.
Example:

```
Var p as new PNGReaderMBS
p.SwapRB = true
```

Notes: The PNG files for the iPhone have swapped channels so the iPhone does not need to swap them for display. One of the tricks Apple uses for making the iPhone faster.

This flag is set to true by OpenSpecialData.
(Read and Write property)

148.3.46 UseFiller as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filler byte is used for RGB.
Notes: Set by ApplyOptions if needed.
Defines whether RGB is extended to 4 bytes with an extra filler byte if needed.

see png_set_filler function in libpng documentation.
(Read and Write property)

148.3.47 UserHeightMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height maximum.
Notes: The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

148.3.48 UserWidthMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width maximum.
Notes: The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

148.3.49 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Notes: (Read and Write property)

148.3.50 Events

148.3.51 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PNG library has an error message for you.
Notes: Processing will stop soon.

148.3.52 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PNG library has a warning for you.

148.4 class PNGWriterMBS

148.4.1 class PNGWriterMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to write a PNG file.
Example:

```
Var Current as PictureMBS // your picture
Var f as FolderItem

f=GetsaveFolderItem(FileTypes.Png,"test.png")

if f<>Nil then
const PNG_COLOR_MASK_PALETTE = 1
const PNG_COLOR_MASK_COLOR = 2
const PNG_COLOR_MASK_ALPHA = 4

Var p as new PNGWriterMBS

p.Width=Current.Width
p.Height=Current.Height
p.Type=PNG_COLOR_MASK_COLOR
p.bpc=3
p.Rowbytes=p.Width*p.bpc

if p.OpenWriteDestination(f) then
if p.SetHeader(false, -1) then
if p.SetGamma(0) then
if p.WriteInfo then
Var i,c as Integer

c=p.Height-1
for i=0 to c
p.WriteRow current.RowInFormat(i, Current.ImageFormatRGB)
next

if p.WriteEnd then
MsgBox "OK"
end if
end if
end if
end if
end if
end if
```

Notes: You can use this class to write PNG files by row.

Based on LibPNG.

148.4.2 Methods

148.4.3 CloseDestination

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file.

148.4.4 Finish as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the PNG file and returns the PNG file content as string.
Notes: Returns "" on any error.

148.4.5 OpenWriteDestination(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Var f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var p As New PNGWriterMBS
```

```
Var pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(f) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass nil for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 148.4.6 OpenWriteDestination(Path as String) as boolean 19395

148.4.6 OpenWriteDestination(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Var file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Var path As String = file.NativePath

Var p As New PNGWriterMBS
Var pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(path) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
```

```
End If
End If
End If
End If
End If
```

Notes: If you pass "" for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 148.4.5 OpenWriteDestination(file as folderitem) as boolean 19394

148.4.7 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

148.4.8 SetAlphaData(alphas() as Integer, colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the alpha data and the color palette.
Notes: The array can have up to 256 colors.
The color and the alpha arrays must have the same size.
Returns true on success.

148.4.9 SetAlphas as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the alpha data to the file.
Notes: You must call SetAlphaData before.
Returns true on success.

148.4.10 SetEXIF(EXIFData as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the EXIF data block.
Notes: Returns true on success or false on failure.

148.4.11 SetGamma(gamma as Double = 0.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the gamma value and other options for the PNG file.
Notes: Returns on success.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Default for Mac is 1.8 and for Windows 2.2.
If you use SRGB, the Gamma must be 2.2.

148.4.12 SetGrayPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers for writing a Grayscale image file.
Notes: This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

148.4.13 SetHeader(Interlace as boolean = false, Filter as Integer = -1, Compression as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the header options for the PNG file.
Notes: Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

Compression can be between 0 (none) to 9 (max). Default is 6. Value -1 means the plugin will not change from default of PNG library. Normally you have no better compression for setting higher than 6, but only burn more CPU power.

148.4.14 SetICCProfile(name as string, CompressionType as Integer, Profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a ICC Profile to the PNG.
Notes: Name is the profile name as an ASCII string.
CompressionType is always 0 (PNG_COMPRESSION_TYPE_BASE).

148.4.15 SetPalette as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the palette data.
Notes: Returns true on success.

148.4.16 SetPaletteData(colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color palette.
Notes: The array can have up to 256 colors.
Returns true on success.

148.4.17 SetPalettePicture(pict as picture) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Notes: You need to define the color palette before calling this method.

This method sets width, height, type and bpc properties.
Returns true on success.

148.4.18 SetResolution(ResolutionHorizontal as Integer, ResolutionVertical as Integer, Unit as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the resolution of the PNG.
Notes: Unit is ResolutionUnknown, ResolutionMeter or ResolutionDPI.
Internally the PNG saves only in dots per meter, so the plugin converts DPI to DPM for you.

148.4.19 SetRGBPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Example:

```
// Write a RGBA PNG file
Var current as Picture = LogoMBS(500)

// create a mask
Var g as Graphics = current.Mask.Graphics
g.ForeColor = &cFFFFFF
g.FillRect 0,0,500,500
g.ForeColor = &c000000
g.FillOval 0,0,500,500

// show in window
window1.Backdrop = current

// and write to file
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")

Var p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current, current.mask) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
```

```
end if
end if
end if
```

Notes: This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

148.4.20 SetRows(rows() as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uses the given memoryblocks for row data.
Notes: The memory is not copied, so keep the array alive!
This method sets height. You need to set width, bpc, type and rowbytes.
Returns true on success.

148.4.21 SetsRGB(intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the sRGB intent.
Notes: Possible values:

```
const PNG_sRGB_INTENT_PERCEPTUAL   = 0
const PNG_sRGB_INTENT_RELATIVE     = 1
const PNG_sRGB_INTENT_SATURATION   = 2
const PNG_sRGB_INTENT_ABSOLUTE     = 3
```

148.4.22 WriteEnd as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the writing.
Notes: Returns true on success.

Do not call if you use WriteRows.

148.4.23 WriteInfo as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the PNG file header.
Notes: Returns true on success.

Do not call if you use WriteRows.

148.4.24 WriteRow(row as memoryblock)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes one row of image data.
Notes: The data must be in the RGBA format with one byte per value.
(4 bytes per Pixel)

Returns true on success.

Do not call if you use WriteRows.

148.4.25 WriteRows as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the picture from memory to the file.
Example:

```
// Write a RGB PNG file
Var current as Picture = LogoMBS(500)
Var f as FolderItem = SpecialFolder.Desktop.Child("test.png")

Var p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
```

```
end if
end if
end if
end if
end if
end if
end if
```

Notes: If you call this method, you need to call SetRGBPicture or SetPalettePicture before and you can't call WriteInfo, WriteRow and WriteEnd.

148.4.26 Properties

148.4.27 bpc as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per pixel.
Notes: Should be 3 for RGB, 1 for palette pictures and 4 for RGB with Alpha.
(Read and Write property)

148.4.28 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture to write.
Notes: (Read and Write property)

148.4.29 Rowbytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per row.
Notes: (Read and Write property)

148.4.30 Type as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type.

Notes: The value is a combination of this constants:

PNG_COLOR_MASK_PALETTE	= 1
PNG_COLOR_MASK_COLOR	= 2
PNG_COLOR_MASK_ALPHA	= 4

(Read and Write property)

148.4.31 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture to write.
Notes: (Read and Write property)

148.4.32 Events

148.4.33 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PNG library has an error message for you.
Notes: Processing will stop soon.

148.4.34 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PNG library has a warning for you.

148.4.35 Constants

Constants

Constant	Value	Description
ResolutionDPI	2	One of the resolution unit type constants. The unit for points per inch.
ResolutionMeter	1	One of the resolution unit type constants. The unit for points per meter.
ResolutionUnknown	0	One of the resolution unit type constants.

Type Constants

Constant	Value	Description
TypeGray	0	Gray
TypeGrayA	4	Gray with Alpha
TypePalette	1	Palette
TypeRGB	2	RGB
TypeRGBA	6	RGB with Alpha.

Chapter 149

Power

149.1 class IOPMAssertionMBS

149.1.1 class IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for PowerManagement assertions.
Notes: You use this class to block a Mac from sleeping display, disk or whole machine.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

149.1.2 Methods

149.1.3 AssertionsByProcess as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary listing all assertions, grouped by their owning process.
Notes: Notes: One process may have multiple assertions. Several processes may have asserted the same assertion to different levels.

On success, this returns a dictionary of assertions per process. At the top level, keys to the Dictionary are pids stored as Integer. The value associated with each pid is an array of active assertions. Each entry in the array is an assertion represented as a Dictionary. See the keys kIOPMAssertionTypeKey and kIOPMAssertionLevelKey.

149.1.4 AssertionsStatus as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list of available assertions and their system-wide levels.
Notes: The system-wide level is the maximum of all individual assertions' levels.

On success, this returns a Dictionary of all assertions currently available.
The keys in the dictionary are the assertion types, and the value of each is a CFNumber that represents the aggregate level for that assertion.

149.1.5 Constructor(type as string, level as Integer, name as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calls internally CreateWithName function.

149.1.6 CreateWithDescription(AssertionType as string, Name as string, Details as string = "", HumanReadableReason as string = "", LocalizationBundlePath as string = "", Timeout as Double = 0, TimeoutAction as string = "") as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion.
Notes: This is the preferred API to call to create an assertion. It allows the caller to specify the Name, Details, and HumanReadableReason at creation time. There are other keys that can further describe an assertion, but most developers don't need to use them. Use SetProperty or CreateWithProperties if you need to specify properties that aren't available here.

AssertionType: An assertion type constant. Caller must specify this argument.
Name: A String value to correspond to key kIOPMAssertionNameKey. Caller must specify this argument.
Details: A String value to correspond to key kIOPMAssertionDetailsKey. Caller my pass "", but it helps power users and administrators identify the reasons for this assertion.
HumanReadableReason: A String value to correspond to key kIOPMAssertionHumanReadableReasonKey. Caller may pass "", but if it's specified OS X may display it to users to describe the active assertions on their system.
LocalizationBundlePath: A String value to correspond to key kIOPMAssertionLocalizationBundlePathKey. This bundle path should include a localization for the string HumanReadableReason. Caller may pass "", but this argument is required if caller specifies HumanReadableReason.
Timeout: Specifies a timeout for this assertion. Pass 0 for no timeout.
TimeoutAction: Specifies a timeout action. Caller my pass "". If a timeout is specified but a TimeoutAction is not, the default timeout action is kIOPMAssertionTimeoutActionTurnOff.

On success this function returns a new assertion.

149.1.7 CreateWithHandle(Handle as Integer) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object with retaining given handle.

149.1.8 CreateWithName(type as string, level as Integer, name as string) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Dynamically requests a system behavior from the power management system.
Notes: Create is deprecated in favor of CreateWithProperties. Please use that version of this API instead.

No special privileges are necessary to make this call - any process may activate a power assertion. Caller must specify an AssertionName - "" is not a valid input.

Type	The String assertion type to request from the PM system.
Level	Pass kIOPMAssertionLevelOn or kIOPMAssertionLevelOff.
Name	A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.

On success, returns an IOPMAssertionMBS object.

149.1.9 CreateWithProperties(AssertionProperties as Dictionary) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion with more flexibility than CreateWithDescription.
Notes: AssertionProperties: Dictionary providing the properties of the assertion that need to be created.
On successful return, returns the assertion.

Create a new PM assertion - the caller must specify the type of assertion, initial level, and its properties as IOPMAssertionDictionaryKeys keys in the AssertionProperties dictionary. The following keys are recommend and/or required to be specified in the AssertionProperties dictionary argument.

- Required kIOPMAssertionTypeKey define the assertion type.
- Required kIOPMAssertionValueKey define an inital value.
- Required kIOPMAssertionNameKey Caller must describe the name for the activity that requires the change in behavior provided by the assertion.
- Optional kIOPMAssertionDetailsKey Caller may describe context-specific data about the assertion.
- Optional kIOPMAssertionHumanReadableReasonKey Caller may describe the reason for creating the assertion in a localizable String. This should be a human readable phrase that describes the actions the calling process is taking while the assertion is held, like "Downloading TV episodes", or "Compiling Projects"
- Optional kIOPMAssertionLocalizationBundlePathKey Caller may provide its bundle's path, where OS X can localize for GUI display the String specified by kIOPMAssertionHumanReadableReasonKey.
- Optional kIOPMAssertionPlugInIDKey if the caller is a plugin with a different identity than the process it's loaded in.
- Optional kIOPMAssertionFrameworkIDKey if the caller is a framework acting on behalf of a process.
- Optional The caller may specify a timeout.

149.1.10 DeclareUserActivity(AssertionName as string, userType as Integer, byref AssertionID as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Declares that the user is active on the system.
Notes: This causes the display to power on and postpone display sleep up to the user's display sleep Energy Saver settings. If you prefer to hold the display awake for a longer period and you know how long you'd like to hold it, consider taking assertion kIOPMAssertionTypePreventUserIdleDisplaySleep using CreateWithDescription instead.

No special privileges are necessary to make this call - any process may call this API. Caller must specify an AssertionName.

AssertionName: A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.
userType: This parameter specifies if the active user is located locally in front of the system or connected to the system over the network. Various components of the system are maintained at different power levels depending on user location.

On Success, unique id will be returned in this parameter. Caller may call this function again with the unique id retured previously to report continous user activity. The unique id returned by this function may change on each call depending on how frequently this function call is repeated and the current display sleep timer value. If you make this call more than once, track the returned value for assertionID, and pass it in as an argument on each call.

Returns kIOReturnSuccess (0) on success, any other return indicates PM could not successfully activate the specified assertion.

149.1.11 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Copies details about an IOPMAssertion.
Notes: Returns a dictionary describing an IOPMAssertion's specifications and current state.

149.1.12 SetProperty(key as string, value as Variant) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a property in the assertion.
Example:

```
Var t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
Var l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
Var a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
if a.SetProperty(IOPMAssertionMBS.kIOPMAssertionNameKey, "test") then
MsgBox a.name
end if
```

Notes: Only the process that created an assertion may change its properties.
key: The string key to modify.
Value: The property to set. It must be a number or string, as specified by the property key named in key.
Returns false on any error and true on success.

149.1.13 Properties

149.1.14 Details as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The details for this assertion.

Notes: You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

149.1.15 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the assertion.
Notes: Zero is not a valid ID.
(Read only property)

149.1.16 HumanReadableReason as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Optional valie that provides a localizable string for OS X to display PM Assertions in the GUI.
Notes: The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.
(Read and Write property)

149.1.17 Level as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion level.
Notes: (Read and Write property)

149.1.18 LocalizationBundlePath as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Refers to a string, identifying the path to the caller's bundle, which contains localization info.
Notes: (Read and Write property)

149.1.19 Name as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the assertion.
Example:

```
Var t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
Var l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
Var a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

Notes: kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

149.1.20 RetainCount as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The retain count of the object.
Notes: (Read only property)

149.1.21 Timeout as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies an outer bound, in seconds, that this assertion should be asserted.
Notes: If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.

Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.
(Read and Write property)

149.1.22 TimeoutAction as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the action to take upon timeout expiration.
Notes: Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey. If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff.
(Read and Write property)

149.1.23 Type as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion type.
Notes: The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time.
Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.
(Read and Write property)

149.1.24 Constants

Constants

Constant	Value	Description
kIOPMAssertionDetailsKey	"Details"	One of the keys for the properties You may provide extra, contextual and for debugging in this key. Se optional. Please name your assertion someth first. If you have more data to describe t Example: OS X creates an asserti to prevent sleep for remote-logged assertions, OS X sets kIOPMAsser the active remote session(s), e.g. " The String you associate with this will not attempt to localize it.) Describe your assertion as thoroug can you can set to add explanation * Optional kIOPMAssertionNameI * Optional kIOPMAssertionHuman * Optional kIOPMAssertionLocaliz
kIOPMAssertionFrameworkIDKey	"FrameworkBundleID"	One of the keys for the properties
kIOPMAssertionHumanReadableReasonKey	"HumanReadableReason"	One of the keys for the properties Optional key that provides a locali tions in the GUI. The caller should specify this strin If present, OS X may display this explain changes in system behavior If set, the caller must also specify a LocalizationBundlePathKey. The bundle at that path should con This key may be specified in the di This key may be present in the dic Describe your assertion as thoroug can you can set to add explanation * Required kIOPMAssertionNameI * Optional kIOPMAssertionDetails
kIOPMAssertionLevelKey	"AssertLevel"	One of the keys for the properties The Dictionary key for assertion le The value for this key will be an i or kIOPMAssertionLevelOn. The level reflects the assertion's l MAssertionSetLevel.
kIOPMAssertionLevelOff	0	Level for a disabled assertion, pass
kIOPMAssertionLevelOn	255	Level for an enabled assertion, pass
kIOPMAssertionLocalizationBundlePathKey	"BundlePath"	One of the keys for the properties Refers to a string, identifying the localization info.
kIOPMAssertionNameKey	"AssertName"	One of the keys for the properties The Dictionary key for assertion na creating an assertion. kIOPMAssertionNameKey describe The creator should specify a String to CreateWithProperties. The assertion name is separate fro String like "Checking mail" or "C assertion protects. The String you associate with this will not attempt to localize it.) Describe your assertion as thoroug can you can also set to add explana

User Activity Constants

Constant	Value	Description
kIOPMUserActiveLocal	0	User is local on the system
kIOPMUserActiveRemote	1	Remote User connected to the system.

149.2 class IOPMMBS

149.2.1 class IOPMMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The Mac OS X class which can control the energy settings.
Example:

```
Var p as new IOPMMBS

Listbox1.AddRow "EthernetWakeOnLANSettings: "+str(p.EthernetWakeOnLANSettings)
Listbox1.AddRow "GeneralAggressiveness: "+str(p.GeneralAggressiveness)
Listbox1.AddRow "MinutesToDim: "+str(p.MinutesToDim)
Listbox1.AddRow "MinutesToSleep: "+str(p.MinutesToSleep)
Listbox1.AddRow "MinutesToSpinDown: "+str(p.MinutesToSpinDown)
Listbox1.AddRow "MotionSensor: "+str(p.MotionSensor)
Listbox1.AddRow "PowerSource: "+str(p.PowerSource)
Listbox1.AddRow "SetProcessorSpeed: "+str(p.SetProcessorSpeed)
```

Notes: The functions and properties are not described from Apple.

149.2.2 Properties

149.2.3 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference for the power manager.
Notes: If this value is zero, the properties will not work.
(Read and Write property)

149.2.4 EthernetWakeOnLANSettings as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for whether ethernet wake on LAN.
Notes: Value is 1 if you enable this option in the energy system control panel and 0 if you disable it.
(Read and Write computed property)

149.2.5 GeneralAggressiveness as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The general aggressiveness.
Notes: (Read and Write computed property)

149.2.6 MinutesToDim as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The minutes until the display is dimmed.
Example:

```
Var p as new IOPMMBS
p.MinutesToDim=10 // dim display in 10 minutes
```

Notes: This value is the same as in the energy system control panel.
(Read and Write computed property)

149.2.7 MinutesToSleep as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time in minutes until the Mac goes to sleep.
Example:

```
Var p as new IOPMMBS
p.MinutesToSleep=10 // sleep display in 10 minutes
```

Notes: (Read and Write computed property)

149.2.8 MinutesToSpinDown as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time in minutes until the hard discs spin down.
Notes: If you enable the spin down option in the energy system control panel, this value is 10 and if you disable it, it is 180.
(Read and Write computed property)

149.2.9 MotionSensor as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for the motion sensor.
Notes: (Read and Write computed property)

149.2.10 PowerSource as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The power source settings.
Notes: Constants for this property:

const kIOPMInternalPower = 1
const kIOPMExternalPower = 2
(Read and Write computed property)

149.2.11 SetProcessorSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for the processor speed.
Notes: (Read and Write computed property)

149.3 class IOPowerSourcesMBS

149.3.1 class IOPowerSourcesMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to look on all the power sources on a Mac OS X based computer.
Example:

```
Var i as IOPowerSourcesMBS
Var j,n as Integer

i=new IOPowerSourcesMBS

n=i.Count-1
for j=0 to n
CFShowMBS i.Item(j) // Print battery info to console.
next
```

Notes: Requires Mac OS X.
Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr9

149.3.2 Methods

149.3.3 ExternalPowerAdapterDetails as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a CFDictionary that describes the attached (AC) external power adapter (if any external power adapter is attached.
Example:

```
Var d as CFDictionaryMBS = IOPowerSourcesMBS.ExternalPowerAdapterDetails
Var dic as Dictionary = d.Dictionary

Var lines() as string
lines.Append "AdapterRevision: "+dic.Lookup("AdapterRevision", "")
lines.Append "AdapterID: "+dic.Lookup("AdapterID", "")
lines.Append "FamilyCode: "+dic.Lookup("FamilyCode", "")
lines.Append "SerialNumber: "+dic.Lookup("SerialNumber", "")
lines.Append "Watts: "+dic.Lookup("Watts", "")
```

MsgBox Join(lines, EndOfLine)

Notes: Returns a CFDictionary on success.
If no adapter is attached, or if there's an error, returns nil.

149.3.4 Item(index as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Ask for the power source description with the given index.
Example:

```
Var i as new IOPowerSourcesMBS
i.Update
MsgBox i.Item(0).XML.Str // shows dictionary for first power source
```

Notes: Indes is from 0 to count-1.

149.3.5 Update

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries for new power sources and updates the item array.
Example:

```
Var i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

149.3.6 Properties

149.3.7 Count as Integer

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of registered power sources.
Example:

```
Var i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

Notes: (Read only property)

149.3.8 Events

149.3.9 Changed

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The state of one power source changed.
Notes: Whenever something changes around the power sources, you are notified with this event.

149.4 class SleepNotificationMBS

149.4.1 class SleepNotificationMBS

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class to listen for sleep notifications on Mac OS X .
Notes: Uses IOKit.

Your application can use the sleep event to deny idle sleep, i.e. sleep after a period of inactivity. Applications should not deny idle sleep unless absolutely necessary.

The kIOMessage* constants in this class are declared in the Mac OS X headers, but they are not all used by the system.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

149.4.2 Properties

149.4.3 running as Boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this notification class is working.
Notes: Value is true on MachO targets.
(Read and Write property)

149.4.4 Events

149.4.5 Sleep(message as int64) as boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A message was received.
Notes: Use the constants to check what message you got.

Return true to deny or false to allow.

On the Can Messages the plugin informs the system about Deny or Allow, but on the Will messages, it will not answer if you return true, so the system will wait for an answer and delay sleep. There seems to be no way to delay more than 30 seconds when the user selects the sleep menu command.

The message parameter is an int64 in Plugin version 9.7 so the integer comparison to the constants works better.

149.4.6 Constants

Constants

Constant	Value	Description
kIOMessageCanSystemPowerOff	&he0000240	One of the message constants.
kIOMessageCanSystemSleep	&he0000270	One of the message constants. Idle sleep is about to kick in. Applications have a chance to prevent sleep by returning true in the sl Most applications should not prevent idle sleep. Power Management waits up to 30 seconds for you to either allow or sleep. If you don't acknowledge this power change by returning tru the system will wait 30 seconds then go to sleep.
kIOMessageSystemHasPoweredOn	&he0000300	One of the message constants.
kIOMessageSystemWillNotPowerOff	&he0000260	One of the message constants.
kIOMessageSystemWillNotSleep	&he0000290	One of the message constants.
kIOMessageSystemWillPowerOff	&he0000250	One of the message constants.
kIOMessageSystemWillPowerOn	&he0000320	One of the message constants.
kIOMessageSystemWillRestart	&he0000310	One of the message constants.
kIOMessageSystemWillSleep	&he0000280	One of the message constants.

149.5 class WakeNotifierMBS

149.5.1 class WakeNotifierMBS

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Notification and statistics about sleeping off a Mac.
Notes: For Mac OS X 10.5.6 you see the SleepDemand and the WakeUp events when your Mac sleeps and wakes up.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

149.5.2 Properties

149.5.3 CallEvents as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: whether or not to call the events of this class.
Notes: Default is false.
(Read and Write property)

149.5.4 DisableSleep as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disabled sleep if a sleep request comes?
Notes: Not used if you have code in the SleepRequest event handler.
(Read and Write property)

149.5.5 HadSleeped as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sleeped since last reset?
Notes: You can set this value to false to reset it.
(Read and Write property)

149.5.6 LastSleepTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last time in absolute seconds when falled asleep.
Notes: Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

149.5.7 LastWakeTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last time in absolute seconds when waken up.
Notes: Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

149.5.8 SleepCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of sleep demands.
Notes: (Read only property)

149.5.9 SleepEventCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Counts how often the Power Manager calls the sleep notification function.
Notes: For debugging so you know that sleep requests are handled.
(Read and Write property)

149.5.10 Valid as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns True if the sleep event handler could be installed.
Notes: False, if no Power Manager is installed.
(Read only property)

149.5.11 WakeCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Count of waking up.
Notes: (Read only property)

149.5.12 Events

149.5.13 SleepDemand

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called just before falling asleep.

149.5.14 SleepRequest as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Can be go sleeping?
Notes: Return true to deny sleeping.
Returning nothing or false will put the Mac to sleep.

149.5.15 SleepRevoke

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called when a sleep request was denied by an application or a device driver.

149.5.16 WakeUp

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Called when the Mac wakes up.

149.6 class WindowsPowerStateMBS

149.6.1 class WindowsPowerStateMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to watch for power changes on a computer using Microsoft Windows as operation system.
Notes: Not all Windows versions call the same/all events.
Your application needs to run the event loop, so events get delivered.

This function listens for WM_POWERBROADCAST sent to all applications.

see
https://msdn.microsoft.com/en-us/library/windows/desktop/aa373247(v=vs.85).aspx

You need to run ListenForSuspendResumeNotification to receive suspend/resume events.

See also WindowsPowerManagerMBS class.

149.6.2 Methods

149.6.3 ListenForBatteryCapacityChanged

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers for battery capacity change events.
Notes: Triggers BatteryCapacityChanged event later.

149.6.4 ListenForLidSwitchStateChanged

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers for lid switch state change events.
Notes: Triggers LidSwitchStateChanged event later.

149.6.5 ListenForPowerSourceChanged

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers for power source events.
Notes: Triggers PowerSourceChanged event later.

149.6.6 ListenForSuspendResumeNotification

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers for suspend and resume events.

149.6.7 Events

149.6.8 BatteryCapacityChanged(Percentage as Integer)

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The remaining battery capacity has changed.
Notes: The granularity varies from system to system but the finest granularity is 1 percent. The Percentage parameter that indicates the current battery capacity remaining as a percentage from 0 through 100.

149.6.9 BatteryLow

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The BatteryLow event is broadcast to notify applications that battery power is low.
Notes: Support for this event was removed in Windows Vista bei Microsoft.

149.6.10 LidSwitchStateChanged(LidState as Integer)

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the lid has changed (open or closed).
Notes: The event won't be called until a lid device is found and its current state is known.

0 - The lid is closed.
1 - The lid is opened.

149.6.11 OEMEvent(eventcode as Integer)

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The OEMEvent event is broadcast when an APM BIOS signals an APM OEM event.
Notes: eventcode: A DWORD value that specifies the OEM-defined event code that was signaled by the system's APM BIOS. OEM event codes are in the range &h0200 - &h02FF.

Because not all APM BIOS implementations provide OEM event notifications, this event may never be broadcast on some computers.

Support for this event was removed in Windows Vista bei Microsoft.

149.6.12 PowerSettingChange(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A power setting change event has been received.
Notes: This is the raw event with data.
We also call BatteryCapacityChanged, PowerSourceChanged and LidSwitchStateChanged events if their GUIDs are happening.

The data memoryblock contains POWERBROADCAST_SETTING data, where first 16 bytes are the GUID for the type of change. Then follows the 32-bit integer for data length and the data specific to the event.

see
https://learn.microsoft.com/en-us/windows/win32/api/winuser/ns-winuser-powerbroadcast_setting

149.6.13 PowerSourceChanged(power as Integer)

MBS Win Plugin, Plugin Version: 23.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The system power source has changed.
Notes: PowerSourceAC (0) - The computer is powered by an AC power source (or similar, such as a laptop powered by a 12V automotive adapter).
PowerSourceDC (1) - The computer is powered by an onboard battery power source.
PowerSourceUPS (2) - The computer is powered by a short-term power source such as a UPS device.

Only called if you called ListenForPowerSourceChanged once.

149.6.14 PowerStatusChange

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The PowerStatusChange event is broadcast when a change in the power status of the computer is detected, such as a switch from battery power to A/C.
Notes: The system also broadcasts this event when remaining battery power slips below the threshold specified by the user or if the battery power changes by a specified percentage.

149.6.15 QueryStandby(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryStandby event is broadcast to request permission to set the computer into standby mode.
Notes: An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to go to standby mode can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QueryStandby event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during standby processing.

149.6.16 QueryStandbyFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryStandbyFailed event is broadcast as a notification that permission to go to standby mode was denied.

Notes: This event is broadcast if any application or driver returned false to a previous QueryStandby event.

149.6.17 QuerySuspend(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QuerySuspend event is broadcast to request permission to suspend the computer.
Notes: An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to suspend can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QuerySuspend event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during Suspend processing.

Support for this event was removed in Windows Vista bei Microsoft.

149.6.18 QuerySuspendFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QuerySuspendFailed event is broadcast as a notification that permission to suspend the computer was denied.
Notes: This event is broadcast if any application or driver returned false to a previous QuerySuspend event.

Support for this event was removed in Windows Vista bei Microsoft.

149.6.19 ResumeAutomatic

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ResumeAutomatic event is broadcast when the computer wakes up automatically to handle an event.
Notes: An application will not generally respond unless it is handling the event, because the user is not present.

149.6.20 ResumeCritical

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ResumeCritical event is broadcast as a notification that the system has resumed operation.
Notes: This event can indicate that some or all applications did not receive a Suspend event. For example, this event can be broadcast after a critical suspension caused by a failing battery.

Support for this event was removed in Windows Vista bei Microsoft.

149.6.21 ResumeStandby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ResumeStandby event is broadcast as a notification that the system has resumed operation after being put to standby.

149.6.22 ResumeSuspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ResumeSuspend event is broadcast as a notification that the system has resumed operation after being suspended.

149.6.23 Standby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Standby event is broadcast immediately before the computer enters a standby state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QueryStandby event.

149.6.24 Suspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Suspend event is broadcast immediately before the computer enters a suspended state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QuerySuspend event.

149.6.25 Constants

Lid States

Constant	Value	Description
LidClosed	0	The lid is closed.
LidOpened	1	The lid is opened.

Power Source States

Constant	Value	Description
PowerSourceAC	0	The computer is powered by an AC power source (or similar, such as a laptop powered by a 12V automotive adapter).
PowerSourceDC	1	The computer is powered by an onboard battery power source.
PowerSourceUPS	2	The computer is powered by a short-term power source such as a UPS device.

Chapter 150

Printing iOS

150.1 class UIPrinterMBS

150.1.1 class UIPrinterMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A printer on the network.
Notes: You use a printer object to obtain information about a printer so that you can display that information in your app,Äôs interface. You do not use printer objects to communicate with the printer directly.

Most of the time, you use a UIPrinterPickerControllerMBS object to retrieve a printer object representing the printer selected by the user. If you already have a URL containing the address of a printer—perhaps one that was previously selected by the user—you can use that URL to create a printer object directly. When creating your own printer objects, you must connect to the printer using the contactPrinter method before retrieving any of the printer,Äôs attributes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Xojo Developer Magazine

- 22.5, page 10: News
- 22.4, page 9: News

150.1.2 Methods

150.1.3 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The private constructor.

150.1.4 contactPrinter

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Connects to the printer and gathers information about its capabilities.
Notes: Runs contactPrinterCompleted event later with result.

For printers you create yourself using the printerWithURL: method, you must call this method prior to accessing properties containing printer-related information. This method runs asynchronously, returning immediately while the system continues to try and gather information about the printer,Äôs name, location, capabilities, and so on. When the printer,Äôs availability is determined, the results are delivered to the event.

Calling this method can take a significantly long time (up to 30 seconds), so after calling this method you should continue with other tasks. Use your event to update your app as appropriate.

150.1.5 printerWithURL(URL as String) as UIPrinterMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Creates and returns a printer with the specified location.
Notes: url: A URL that identifies the location of the printer on your network.

Returns a printer object representing the specified printer or nil if there was a problem initializing the object.

Use this method to create printer objects for printers whose address you already know. The printer does not need to be online or available when you call this method. The URL you specify is stored in the returned object so that you can contact the printer later using the contactPrinter method.

150.1.6 Properties

150.1.7 displayLocation as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The human-readable text that describes the location of the printer.
Notes: Many printers can be configured with a location string to reflect the printer,Äôs physical location in an office. This property contains that location string or nil if no such string is available.

For printers you create yourself using the printerWithURL method, the value of this property is nil until you successfully connect to the printer using the contactPrinter method.
(Read only property)

150.1.8 displayName as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The human-readable printer name.
Notes: This property contains a printer name that is suitable for display in your app,Äôs user interface. For printers you create yourself using the printerWithURL method, the value of this property is nil until you successfully connect to the printer using the contactPrinter method.
(Read only property)

150.1.9 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

150.1.10 makeAndModel as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A string that contains the manufacturer,Äôs name and the model name of the printer.
Notes: The string in this property is provided by the printer and usually consists of the manufacturer,Äôs name, the model name of the printer, and the model number of the printer.

For printers you create yourself using the printerWithURL method, the value of this property is nil until you successfully connect to the printer using the contactPrinter method.

(Read only property)

150.1.11 supportedJobTypes as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The capabilities of the printer.
Notes: Job types indicate the types of operations you can perform with the printer. You might use this information when deciding whether or not to use a printer for a particular task. For example, a photo app might prevent a printer picker interface from displaying printers that do not support the UIPrinterJobTypePhoto job type.

For printers you create yourself using the printerWithURL method, the value of this property is JobTypeUnknown until you successfully connect to the printer using the contactPrinter method.
(Read only property)

150.1.12 supportsColor as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the printer supports color printing.
Notes: The value of this property is true if the printer supports color printing or NO if it does not. For printers you create yourself using the printerWithURL method, the value of this property is false until you successfully connect to the printer using the contactPrinter method.
(Read only property)

150.1.13 supportsDuplex as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the printer supports printing on both sides of a sheet of paper.
Notes: The value of this property is true if the printer supports double-sided printing or false if it does not. For printers you create yourself using the printerWithURL method, the value of this property is NO until you successfully connect to the printer using the contactPrinter method.
(Read only property)

150.1.14 URL as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The full address of the printer.
Notes: Use this property to retrieve the address of a printer on the network. You can also save the value in this property to disk and use it later to initialize a new printer object that points to the same printer.

e.g. "ipp://Laserdrucker.local.:631/ipp/print"
(Read only property)

150.1.15 Events

150.1.16 contactPrinterCompleted(available as Boolean)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The event called from contactPrinter method.
Notes: available: True if the printer was available and its information was retrieved or false if the printer could not be found or was unavailable.

150.1.17 Constants

Job Types

Constant	Value	Description
JobTypeDocument	1	The printer supports standard document printing.
JobTypeEnvelope	2	The printer supports printing on envelopes.
JobTypeLabel	4	The printer supports printing on cut labels.
JobTypeLargeFormat	64	The printer supports printing larger than the ISO A3 size.
JobTypePhoto	8	The printer supports printing with photographic print quality.
JobTypePostcard	128	The printer supports printing on postcards.
JobTypeReceipt	16	The printer supports printing receipts on a continuous roll of paper.
JobTypeRoll	32	The printer supports printing documents or photos on a continuous roll of paper.
JobTypeUnknown	0	The printer support is unknown.

150.2 class UIPrinterPickerControllerMBS

150.2.1 class UIPrinterPickerControllerMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A view controller that displays the standard interface for selecting a printer.
Example:

```
Sub PickPrinter()
// your subclass to catch event
picker = New MyUIPrinterPickerControllerMBS
picker.Present
End Sub
```

Notes: You can use a printer picker controller to display a list of printers to the user prior to printing a document, photo, or other content. Printer pickers display all pickers normally but you can filter out printers by assigning an appropriate delegate object to the picker before displaying it.

- 22.4, page 9: News

150.2.2 Methods

150.2.3 Constructor(printer as UIPrinterMBS = nil)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Creates and returns a printer picker with an initially selected printer object.
Notes: printer: A printer object to select initially. Specify nil if you do not want to display a selected printer initially.

After creating a printer picker controller, present the controller.

150.2.4 Destructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The destructor.

150.2.5 Dismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Dismisses the picker.
Notes: This method dismisses a picker that you previously presented. When using this method to dismiss a picker, the picker does not call theWillDismiss or DidDismiss events.

User interactions with the picker can also dismiss the picker automatically. For example, if the user selects a printer or cancels the picker, the picker dismisses itself automatically. Use this method to dismiss a picker programmatically in response to other events in your app.

150.2.6 Present

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Presents the picker from a view controller of your app.
Example:

```
Sub PickPrinter()
picker = New MyUIPrinterPickerControllerMBS
picker.Present
End Sub
```

Notes: This method presents the picker from one of your app,Äôs view controllers and returns immediately.

After presenting the picker, the picker interface runs until the user or your app dismisses it. The picker interface provides ways for the user to cancel printing directly, all of which dismiss the picker. You can also dismiss the printer picker programmatically by calling the dismiss method.

150.2.7 Properties

150.2.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

150.2.9 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether the controller is currently presented.
Notes: (Read only property)

150.2.10 selectedPrinter as UIPrinterMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The selected printer.
Notes: The value of this property is set to the picker you specified at creation time initially. When the picker is dismissed, the value is updated to reflect the printer that the user selected, if any. If the user cancels the picker without selecting a printer, the value of this property does not change.
(Read only property)

150.2.11 Events

150.2.12 Completed(userDidSelect as Boolean, error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The event to execute when the picker is dismissed.
Example:

```
Class MyUIPrinterPickerControllerMBS Inherits UIPrinterPickerControllerMBS
Sub Completed(userDidSelect as Boolean, error as NSErrorMBS)
System.DebugLog CurrentMethodName+" "+userDidSelect.ToString

If error <>Nil Then
MessageBox error.LocalizedDescription
End If

If userDidSelect Then
Var p As UIPrinterMBS = Me.selectedPrinter

If p <>Nil Then

MainScreen.printer = p
```

```
MessageBox "You picked "+p.displayName+EndOfLine+p.printerID

End If
End If
End Sub
End Class
```

Notes: Use this block to receive information about the selected printer or information about any errors that occurred.

150.2.13 DidDismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The printer picker was dismissed.
Notes: Use this method to perform any tasks associated with displaying the printer picker controller.

This method is called when the user dismisses the picker, either by selecting a printer or by canceling the picker interface. This method is not called when you dismiss the picker programmatically using the dismiss method.

150.2.14 DidPresent

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The printer picker was displayed and is now visible.
Notes: Use this method to perform any tasks associated with displaying the printer picker controller.

150.2.15 DidSelectPrinter

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A printer was selected.
Notes: Implement this event if you want to be notified of the selected printer. The selected printer can be either one that the user selected or the initially selected printer that you specified when creating your UIPrinterPickerControllerMBS object.

150.2.16 shouldShowPrinter(printer as UIPrinterMBS) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether the specified printer should be included in the picker.
Notes: printer: The printer object to consider.

Return true if the printer should be displayed or false if it should not.

Implement this event if you want to filter the list of printers displayed by the printer picker interface. You might use this method to display only printers with specific capabilities. The printer picker interface calls this method once for each printer it is preparing to display, so your implementation should perform any required checks and return as quickly as possible. Do not perform any lengthy operations in this method.
If you do not implement this method, the picker interface displays all of the printers that it finds.

150.2.17 WillDismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The printer picker is about to be dismissed.
Notes: Use this method to perform any tasks associated with displaying the printer picker controller.

This method is called when the user dismisses the picker, either by selecting a printer or by canceling the picker interface. This method is not called when you dismiss the picker programmatically using the dismiss method.

150.2.18 WillPresent

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The printer picker is about to be displayed.
Notes: Use this method to perform any tasks associated with displaying the printer picker controller.

150.3 class UIPrintInfoMBS

150.3.1 class UIPrintInfoMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: One of the output types.
Example:

```
Var info As New UIPrintInfoMBS

info.outputType = info.OutputGrayscale
info.duplex = info.DuplexLongEdge
info.jobName = "testing"
```

Blog Entries

Xojo Developer Magazine

- 22.5, page 10: News
- 22.4, page 9: News

150.3.2 Methods

150.3.3 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a print-information object initialized with default values.

150.3.4 copy as UIPrintInfoMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Creates a clone of the object.

150.3.5 printInfo as UIPrintInfoMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a print-information object initialized with default values.
Notes: An instance of UIPrintInfo or nil if the object could not be created.

150.3.6 printInfoWithDictionary(Dic as Dictionary) as UIPrintInfoMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a print-information object that is initialized with the data in the passed-in dictionary.
Notes: Dic: A dictionary that contains data to initialize the UIPrintInfo object with.

Returns an instance of UIPrintInfo or nil if the object could not be created.

You use the dictionary parameter to initialize a UIPrintInfoMBS object with stored print-job information. Some applications might archive a previous UIPrintInfoMBS object and use that for a future print job with this method.

You can later access the dictionary by calling the dictionaryRepresentation method on the UIPrintInfoMBS object.

150.3.7 Properties

150.3.8 dictionaryRepresentation as Dictionary

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A dictionary representation of a print-information object.
Example:

```
Var info As New UIPrintInfoMBS

info.outputType = info.OutputGrayscale
info.duplex = info.DuplexLongEdge
info.jobName = "testing"

Var dic As Dictionary = info.dictionaryRepresentation

Break
```

Notes: A dictionary representation of a UIPrintInfoMBS object that can be archived and used to create a

new UIPrintInfoMBS object. Returns nil if no dictionary can be created.
(Read only property)

150.3.9 duplex as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The duplex mode to use for the print job.
Example:

```
Var info As New UIPrintInfoMBS
info.duplex = info.DuplexLongEdge
```

Notes: Some printers can print either duplex (double-sided) or single-sided. If double-sided is selected, a printer can either print flipping the back page along the long edge of the paper or along the short edge. The default option for duplex-capable printers is based on document type: single-sided (none) for photos, double-sided and long edge for other documents. If a printer is capable of duplex printing, a switch in the printing options allows users to toggle between single-side and double-sided printing.
(Read and Write property)

150.3.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

150.3.11 jobName as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The name of the print job.
Notes: The name of the print job appears in the Print Center when the job is printing. An app should set this property to a name appropriate to the content that,Äôs printing. The default job name is the app name.
(Read and Write property)

150.3.12 outputType as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The kind of printable content.
Example:

```
Var info As New UIPrintInfoMBS
info.outputType = info.OutputGrayscale
```

Notes: The output type can be general, photo, or grayscale. An application can set this property to a value thats appropriate to the printable content. The default is OutputGeneral.

The output type controls the quality and default paper size used in printing. For example, if your application only prints black text, setting this property to OutputGrayscale can result in better performance in many cases.
(Read and Write property)

150.3.13 printerID as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: An identifier of the printer to use for the print job.
Notes: This property is set through user selection in the printing user interface. You may provide a printer ID as a hint (for example, the last printer used from a particular print job). The default value is "".

e.g. "Laserdrucker._ipp._tcp.local."
(Read and Write property)

150.3.14 Constants

Duplex

Constant	Value	Description
DuplexLongEdge	1	Duplex printing that flips the back page along the long edge of the paper.
DuplexNone	0	No double-sided (duplex) printing; single-sided printing only.
DuplexShortEdge	2	Duplex print that flips the back page along the short edge of the paper.

Output Types

Constant	Value	Description
OutputGeneral	0	Specifies that the printed content consists of mixed text, graphics, and images. The default paper is Letter, A4, or similar locale-specific designation. Output is normal quality, duplex.
OutputGrayscale	2	Specifies that the printed content is a grayscale image. Set the output type to this value when your printable content contains no color—for example, it,Äôs black text only. The default paper is Letter/A4. Output is high quality grayscale, duplex.
OutputPhoto	1	Specifies that the printed content consists of black-and-white or color images. The default paper is 4x6, A6, or similar locale-specific designation. Output is high quality, simplex.
OutputPhotoGrayscale	3	Specifies that the printed content is grayscale. Set the output type to this value when your printable content contains no color—for example, it,Äôs black text only. The default paper is Letter/A4. Output is grayscale quality, duplex. This content type can produce a performance improvement in some cases.

150.4 class UIPrintInteractionControllerMBS

150.4.1 class UIPrintInteractionControllerMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A user interface that manages the printing of documents, images, and other printable content in iOS.
Example:

```
Sub Pressed()
printController = New MyUIPrintInteractionControllerMBS

Var printinfo As New UIPrintInfoMBS
printinfo.outputType = printinfo.OutputGrayscale
printinfo.duplex = printinfo.DuplexLongEdge
printinfo.jobName = "testing"
printinfo.printerID = "Laserdrucker._ipp._tcp.local."

printController.showsNumberOfCopies = True
printController.printInfo = printinfo
printController.printingItem = LogoImageData

printController.Present
End Sub
```

Notes: UIPrintInteractionController is the central class for printing in iOS. The shared instance of it represents a print job. A print job includes the content to print and information and options related to its printing, such as output type, job name, paper size, and orientation.

If the showsPageRange property is true, the number of pages is more than 1, and you assign an object to any of these properties except for the printingItems property, the printing options include a control that allows users to select a page range.

When users tap a print button on the app,Äôs user interface, a controller object of the app should respond to the action message by obtaining the shared instance of UIPrintInteractionController and preparing it for the print job. When the app calls one of the present methods, UIPrintInteractionController displays a view containing printing options. This interface is simple, allowing users to select a printer, specify the number of copies and possibly a range of pages, and choose single-sided or double-sided printing (if the printer supports duplex printing). When users make their selections and tap Print, the print job begins.

150.4.2 Methods

150.4.3 canPrintData(data as MemoryBlock) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether UIKit can print the contents of a data object.
Example:

```
Var pic As Picture = LogoMBS(500)
Var data As MemoryBlock = pic.ToData(picture.Formats.JPEG)

If UIPrintInteractionControllerMBS.canPrintData(data) Then
MessageBox "Can print it"
Else
MessageBox "Can't print it"
End If
```

Notes: data: The memoryblock that contains PDF data or an image in a format supported by the Image I/O framework.

Returns true if UIKit can print the contents of the data object, otherwise false. The method returns false if data is PDF data that specifies that printing is not allowed.

You should call this method to test a data object prior to assigning it to printingItem or printingItems.

150.4.4 canPrintFile(File as FolderItem) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether UIKit can print the file that the specified URL references.
Example:

```
Var file As FolderItem = SpecialFolder.Resource("test.pdf")

If UIPrintInteractionControllerMBS.canPrintFile(file) Then
MessageBox "Can print it"
Else
```

```
MessageBox "Can't print it"
End If
```

Notes: url: An object representing a URL. Valid folderitem must use the file: or any scheme that can return an NSData object with a registered protocol. The file referenced by the URL must contain PDF data or an image in a format supported by the Image I/O framework. See View Programming Guide for iOS in View Programming Guide for iOS for a list of the supported image formats.

Return true if UIKit can print the contents of the referenced file, otherwise false. The method returns false if url references PDF data that specifies that printing is not allowed.

You should call this method to test the data referenced by a URL prior to assigning that URL to printingItem or printingItems.

150.4.5 canPrintURL(URL as string) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a Boolean value that indicates whether UIKit can print the file that the specified URL references.
Notes: URL: An object representing a URL. Valid URLs must use the file: or any scheme that can return an NSData object with a registered protocol. The file referenced by the URL must contain PDF data or an image in a format supported by the Image I/O framework.

Returns ture if UIKit can print the contents of the referenced file, otherwise false. The method returns false if url references PDF data that specifies that printing is not allowed.

You should call this method to test the data referenced by a URL prior to assigning that URL to printingItem or printingItems.

150.4.6 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The constructor.

150.4.7 Destructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The destructor.

150.4.8 Dismiss

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Dismisses the printing-options sheet or popover.
Notes: You should dismiss the printing options when they are presented in a sheet or animated from a rectangle and the user changes the orientation of the device. (This, of course, assumes your application responds to orientation changes.) You should then present the printing options again once the new orientation takes effect. You can observe the UIApplicationWillChangeStatusBarOrientationNotification notification to find out when the device orientation is about to change.

150.4.9 Present

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Presents the iPhone printing user interface in a sheet, optionally animating it to slide up from the bottom of the screen.
Notes: Calls Completed events later.

150.4.10 printableUTIs as String()

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns a set of the Uniform Type Identifiers for the types of data that UIKit can print.
Notes: An array object that contains, as strings, the UTIs identifying data types that UIKit knows how to print natively.

150.4.11 printingItems as Variant()

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Queries the printing items.

150.4.12 printToPrinter(printer as UIPrinterMBS) as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Prints directly to the specified printer.
Notes: printer: The printer to use for printing. You can obtain a list of available printers using a UIPrinterPickerControllerMBS object.

Calls Completed event later.

Returns true if printing was successful or false if there was a problem.

This method starts the print job and displays the printing progress indicator to the user. This method associates the current printing information (available in the printInfo property) with the job but disables duplex printing. Upon completion of the print job, the print interaction controller executes the block in the completion parameter.

150.4.13 setPrintingItems(items() as Variant)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Set the printing items.
Notes: You can pass an array of ready-to-print objects containing:

- NSURLMBS objects
- FolderItems
- MemoryBlocks
- Pictures
- NSImageMBS objects

Items are printed in array-index order. The array is released at the end of the print job. The default value is nil.

If you set this property, UIPrintInteractionController sets the printingItem, printPageRenderer, and printFormatter properties to nil. (Only one of these properties can be set for a print job.)

If this property is set, the printing options do not include the control for selecting a page range, even if the showsPageRange property is set to false. If you want page-range selection, you should use the printingItem property instead.

150.4.14 UIPrintErrorDomain as String

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The error domain used in the NSErrorMBS objects.

150.4.15 Properties

150.4.16 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

150.4.17 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Whether the controller is currently presented.
Notes: (Read only property)

150.4.18 printInfo as UIPrintInfoMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: Returns an object that encapsulates information about the print job.
Notes: An instance of UIPrintInfo includes properties such as the print-job name, the printer identifier, the orientation of the printed content, the duplex mode, and the kind of content (general, photo, or grayscale). If you do not assign an instance of UIPrintInfo to this property, the UIKit printing system assumes defaults for many of these properties. Users can modify the selected printer and the duplex mode (if available on the printer). Once the printing options are presented, any changes to the UIPrintInfo object referenced by this property are ignored. The object is released when printing completes.
(Read and Write property)

150.4.19 printingAvailable as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the device supports printing.
Notes: This value is true if the device supports printing, otherwise false. An application can show or hide

any print buttons based on this value.
(Read only property)

150.4.20 printingItem as Variant

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A single ready-to-print object.
Notes: You can assign:

- an NSURLMBS object
- a FolderItem
- a MemoryBlock
- a Picture
- a NSImageMBS object

The object must be an instance of (or convertible to) the NSURL, NSData, or UIImage class. An object of the first two types must reference or contain image data or PDF data. NSURL objects must use the file: or any scheme that can return an NSData object with a registered protocol. Image data (including that encapsulated by UIImage) must be in a format supported by the Image I/O framework;

The object is released at the end of the print job. The default value is nil.
If you set this property, UIPrintInteractionController sets the printingItems to nil. (You can only set one of these properties for a print job).

If this property is set and the showsPageRange property is set to truej—and the printing item is a PDF document of more than one page—the printing options include the control for selecting a page range.
(Read and Write property)

150.4.21 printPaper as UIPrintPaperMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: An object that represents the paper size and printing area for the print job.
Notes: UIPrintInteractionControllerMBS sets this property immediately after the user selects a printer and before it calls the WillStartJob event.
(Read only property)

150.4.22 showsNumberOfCopies as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether the printing options include the number of copies.
Notes: The default value is true.
(Read and Write property)

150.4.23 showsPaperOrientation as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that indicates whether the printing options include the paper-orientation control.
Notes: The default value is true.
(Read and Write property)

150.4.24 showsPaperSelectionForLoadedPapers as Boolean

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether the paper selection menu displays.
Notes: The default value of this property is false. Setting the value to true enables a paper selection menu on printers that support different types of paper and have more than one paper type loaded. On printers where only one paper type is available, no paper selection menu is displayed, regardless of the value of this property.
(Read and Write property)

150.4.25 Events

150.4.26 Completed(completed as Boolean, error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The print operation completed.
Example:

```
Class MyUIPrintInteractionControllerMBS Inherits UIPrintInteractionControllerMBS
Sub Completed(completed as Boolean, error as NSErrorMBS)
System.DebugLog CurrentMethodName+" "+completed.ToString

If error <>Nil Then
MessageBox error.LocalizedDescription
```

```
End If

Var printInfo As UIPrintInfoMBS = Self.printInfo

If printInfo <>Nil Then
System.DebugLog printInfo.printerID
End If
End Sub
End Class
```

Notes: When a print job concludes, you can reset any state set up for printing and do related housekeeping tasks. If the print job encountered an error, it is likely to be a programming error, so you might want to log the error for debugging purposes.

completed: A Boolean value that indicates whether the print job completed successfully.
error: An instance of the NSErrorMBS that contains information about the printing error. The printing domain is UIPrintErrorDomain. If the print job completes successfully, this parameter is nil.

150.4.27 DidDismissPrinterOptions

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The device is dismissing the printing-options user interface.
Notes: This message is sent both when the user taps Print on the printing-options view and when the user dismisses the view by tapping outside it.

150.4.28 DidFinishJob

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The print job has ended.
Notes: You can implement this method to do clean-up tasks related to the print job. This method is called after the last page of the print job is generated but before the Completed event is called.

150.4.29 DidPresentPrinterOptions

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The device has presented the printing-options user interface.

150.4.30 WillDismissPrinterOptions

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The device is about to dismiss the printing-options user interface.

150.4.31 WillPresentPrinterOptions

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The device is about to display the printing-options user interface.

150.4.32 WillStartJob

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The print job is about to start.
Notes: You can implement this method to do set-up tasks related to the print job. For example, an application that needs to do intensive rendering could implement this method to pause animations. This method is called before drawing begins but after the printing user interface is dismissed.

150.4.33 Constants

Print Errors

Constant	Value	Description
PrintingNotAvailableError	1	An image is in a format that UIKit doesn,Äôt recognize for printing.
PrintJobFailedError	4	An internal error occurred with the print job.
PrintNoContentError	2	UIKit hasn,Äôt assigned a print formatter, page renderer, or printing item to print.
PrintUnknownImageFormatError	3	Unknown image format.

150.5 class UIPrintPaperMBS

150.5.1 class UIPrintPaperMBS

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The size of paper for a print job and the rectangular area that the content prints within.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.
Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 24.2
- MBS Xojo Plugins, version 24.2pr1

150.5.2 Methods

150.5.3 Constructor

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The private constructor.

150.5.4 Properties

150.5.5 Handle as Integer

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The internal object reference.
Notes: (Read and Write property)

150.5.6 paperHeight as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The size of the sheet to use for printing.
Notes: The paper size is often associated with a standard designation, such as ,ÄúLetter,Äù and ,ÄúA4,Äù. For example, the paper size for a Letter sheet of paper is 612 points wide and 792 points high.
(Read only property)

150.5.7 paperWidth as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The size of the sheet to use for printing.
Notes: The paper size is often associated with a standard designation, such as ,ÄúLetter,Äù and ,ÄúA4,Äù. For example, the paper size for a Letter sheet of paper is 612 points wide and 792 points high.
(Read only property)

150.5.8 printableRectHeight as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The rectangle that represents the portion of the paper that can be imaged upon.
Notes: (Read only property)

150.5.9 printableRectLeft as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The rectangle that represents the portion of the paper that can be imaged upon.
Notes: (Read only property)

150.5.10 printableRectTop as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The rectangle that represents the portion of the paper that can be imaged upon.
Notes: (Read only property)

150.5.11 printableRectWidth as Double

MBS iOS Plugin, Plugin Version: 24.2, Platform: iOS, Targets: iOS only.

Function: The rectangle that represents the portion of the paper that can be imaged upon.
Notes: (Read only property)

Chapter 151

Printing Mac

151.1 Globals

151.1.1 NewCPMPageFormatMBS as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new page format object.
Notes: Returns nil on any error.

151.1.2 NewCPMPrintSessionMBS as CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new print session object.
Example:

```
'get a print session

// print this PDF
Var pathPrinted as FolderItem=GetFolderItem("test.pdf")

Var thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
Var thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
Var thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings
```

```
'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
Var thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
Var LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
Var PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
Var CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
Var thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes: Returns nil on any error.

151.1.3 NewCPMPrintSettingsMBS as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new print settings object.
Notes: Returns nil on any error.

151.2 class CPMLanguageInfoMBS

151.2.1 class CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a language info.
Notes: Only a data class.

151.2.2 Properties

151.2.3 Level as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The level string of the printer.
Notes: (Read and Write property)

151.2.4 Release as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The release string of the printer.
Notes: (Read and Write property)

151.2.5 Version as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The version string of the printer.
Notes: (Read and Write property)

151.3 class CPMPageFormatMBS

151.3.1 class CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a page format.

151.3.2 Methods

151.3.3 AdjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The adjusted page size.
Notes: Lasterror is set.

151.3.4 AdjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The adjusted page size.
Notes: Lasterror is set.

151.3.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new page format object.

151.3.6 CopySettings(Destination as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Copies the settings to another pageformat object.

151.3.7 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Returns a data representation of a PMPageFormat object as a data string.
Example:

```
Var p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
Var d as string = p.CreateDataRepresentation
break // check in debugger
```

Notes: Use CreateWithDataRepresentation to create a CPMPageFormatMBS from a string created by this call.
Format can be kPMDataFormatXMLDefault, kPMDataFormatXMLMinimal or kPMDataFormatXMLCompressed.

151.3.8 CreateWithDataRepresentation(Data as String) as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.
Example:

```
Var p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
Var d as string = p.CreateDataRepresentation

Var other as CPMPageFormatMBS = CPMPageFormatMBS.CreateWithDataRepresentation(d)
MsgBox str(other.Orientation)
```

Notes: Returns nil in case of error.

151.3.9 PrinterID as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Obtains the formatting printer for the pageformat.
Notes: Will either return the formatting printer for the pageformat or will return nil if the pageformat doesn't have that information.

151.3.10 UnadjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The unadjusted page size.
Notes: Lasterror is set.

151.3.11 UnadjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The unadjusted page size.
Notes: Lasterror is set.

151.3.12 Properties

151.3.13 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the page format.
Notes: It's a PMPageFormat which you find in CMTypes.h in the Toolbox.
(Read and Write property)

151.3.14 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes: 0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

151.3.15 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

151.3.16 Orientation as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The page orientation.
Example:

```
Var p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
```

Notes: Lasterror is set.

Possible values:

kPMPortrait	1	
kPMLandscape	2	
kPMReversePortrait	3	will revert to kPortrait for current drivers
kPMReverseLandscape	4	will revert to kLandscape for current drivers

(Read and Write computed property)

151.3.17 Scale as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The page scaling.
Notes: Lasterror is set.
Value is 100 for 100%.
(Read and Write computed property)

151.3.18 Constants

Data Formats

Constant	Value	Description
kPMDataFormatXMLCompressed	2	kPMDataFormatXMLCompressed is only compatible and usable with Mac O X version 10.5 and later. Data in this format can be only be reconsistuted int the equivalent printing manager object with the appropriate PMXXXCreat WithDataRepresentation function. The data representation produced when u ing kPMDataFormatXMLCompressed is approximately 20 times smaller tha kPMDataFormatXMLDefault. This format is a good choice when executio on versions of Mac OS X prior to 10.5 is not necessary and the minimum dat size is important.
kPMDataFormatXMLDefault	0	Specifies a data format that is compatible with all Mac OS X versions. Dat in this format can be used with the PMUnflattenXXX routines present in a versions of Mac OS X prior to 10.5. However, this data representation is muc larger than the more modern data representations described below.
kPMDataFormatXMLMinimal	1	XMLMinimal is only compatible and usable with Mac OS X version 10.5 an later. Data in this format can be only be reconsistuted into the equivalent prin ing manager object with the appropriate CreateWithDataRepresentation fun tion. The data representation produced when using kPMDataFormatXMLMi imal is approximately 3-5 times smaller than kPMDataFormatXMLDefaul This format is a good choice when execution on versions of Mac OS X prior t 10.5 is not necessary and an uncompressed XML representation of the data needed.

Orientation Constants

Constant	Value	Description
kPMLandscape	2	Landscape
kPMPortrait	1	Portrait
kPMReverseLandscape	4	Reverse Landscape
kPMReversePortrait	3	Reverse Portrait

151.4 class CPMPrinterMBS

151.4.1 class CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a printer.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr5
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

151.4.2 Methods

151.4.3 Constructor(name as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Initializes a new printer object given the printer name.
Notes: Raises exception if lookup fails.
This accepts both CUPS names and the Mac GUI names in printing control panel.

151.4.4 CreateFromPrinterID(PrinterID as String) as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Create a PMPrinter instance from the supplied printerID.
Example:

```
Var p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox p.name
```

151.4.5 CreateGenericPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a generic PMPrinter.

151.4.6 CreateLocalPrinterList as CPMPrinterMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries list of local printers.
Example:

```
Var a() as CPMPrinterMBS = CPMPrinterMBS.CreateLocalPrinterList
for each p as CPMPrinterMBS in a
MsgBox p.Name
next
```

151.4.7 DescriptionURL as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the description URL for this printer.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DescriptionURL
```

Notes: Should be the path to a PPD file for a laser printer.
Lasterror is set.

151.4.8 DeviceURI as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Hand back the URI of the printer's device.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DeviceURI
```

Notes: On success returns a CFURLMBS object describing the printer's device.
Lasterror is set.

151.4.9 DriverCreator as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns a 4 letter code for the creator of the printer.

Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "DriverCreator: "+str(printer.DriverCreator)
```

Notes: Lasterror is set.

151.4.10 DriverReleaseInfo as CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries printer driver version.

151.4.11 HostName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Hand back the host name of the print server hosting the printer's print queue.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "HostName: "+str(printer.HostName)
```

Notes: Lasterror is set.

151.4.12 ID as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the ID of the string.

151.4.13 IndexedPrinterResolution(index as Integer) as CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns a printer resolution.
Notes: Lasterror is set.

Index is from 1 to ResolutionCount.

151.4.14 IsDefault as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Whether this printer is the default printer.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsDefault: "+str(printer.IsDefault)
```

151.4.15 IsFavorite as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Return true if the printer is in the user's favorite printer list.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsFavorite: "+str(printer.IsFavorite)
```

151.4.16 IsPostScriptCapable as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Can this printer do postscript?
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptCapable: "+str(printer.IsPostScriptCapable)
```

Notes: Lasterror is set.

151.4.17 IsPostScriptPrinter as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the result is true if the printer is a PostScript printer.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptPrinter: "+str(printer.IsPostScriptPrinter)
```

Notes: A PostScript printer is one whose driver takes PostScript directly.

151.4.18 IsRemote as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Hand back a boolean indicating whether the printer is hosted by remote print server.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsRemote: "+str(printer.IsRemote)
```

Notes: If result is true, the print queue represents a printer hosted and managed by a remote print server.

If result is false, the print queue represents a directly connected printer, a network printer, or a remote printer that is locally managed. Consult the queue's device URI to determine the type of connection that is used to communicate with the printer.

Whether a printer is remote is derived from the CUPS printer-type attribute for the print queue.

151.4.19 LanguageInfo as CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns language information about the printer.
Notes: Lasterror is set.

151.4.20 Location as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the location of the printer.

151.4.21 MakeAndModelName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: A string with the name for the model and the maker.
Notes: Lasterror is set.
Returns "" on any error.

151.4.22 Name as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the name of the string.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
Var printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.name
```

151.4.23 ResolutionCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns how much resolutions are supported by the printer.
Notes: Lasterror is set.

151.4.24 SetDefault

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Set the default printer for the current user.
Notes: It is not typical for an application to set the current default printer for the user; the printing system itself takes care of managing the default printer.
This function should be used only in rare circumstances.

Requires Mac OS X 10.5.

151.4.25 State as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries printer state.
Example:

```
Var p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox str(p.State)
```

Notes: Can be kPMPrinterIdle, kPMPrinterProcessing or kPMPrinterStopped.

151.4.26 Properties

151.4.27 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the printer.
Notes: It's a PMPrinter which you find in CMTypes.h in the Toolbox.
(Read and Write property)

151.4.28 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes: 0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

151.4.29 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

151.4.30 Constants

Printer States

Constant	Value	Description
kPMPrinterIdle	3	Printer is idle.
kPMPrinterProcessing	4	Printer is processing.
kPMPrinterStopped	5	Printer is stopped.

151.5 class CPMPrintSessionMBS

151.5.1 class CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a print session.
Notes: Works only in Carbon Stuff and can only be used with CGContext which works only on Mac OS X.
Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

151.5.2 Methods

151.5.3 BeginDocument(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new document with the given settings.
Notes: Lasterror is set.

151.5.4 BeginDocumentNoDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new document with the given settings.
Notes: Doesn't use the print progress dialog.
Lasterror is set.

151.5.5 BeginPage(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new page.
Notes: Lasterror is set.

151.5.6 BeginPageNoDialog(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Begins a new page.
Notes: Doesn't use the print progress dialog.
Lasterror is set.

151.5.7 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new print session object.

151.5.8 CreatePrinterList(list() as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a list of all printers.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

Var list() as string
session.CreatePrinterList(list)

MsgBox join(list, EndOfLine)
```

Notes: List is an array of strings with the names of the printers.
Lasterror is set.
See also:

- 151.5.9 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS) 19479

151.5.9 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Creates a list of all printers.
Example:

```
Var session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

Var list() as string
Var currentprinter as CPMPrinterMBS
Var index as Integer
session.CreatePrinterList(list, index, currentprinter)

MsgBox join(list, EndOfLine)
```

Notes: List is an array of strings with the names of the printers.
Index is the index of the current printer inside this list.
CurrentPrinter is the current printer selected.
Lasterror is set.
See also:

- 151.5.8 CreatePrinterList(list() as string) 19479

151.5.10 DefaultPageFormat(pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Sets the page format object to the default settings.
Notes: Lasterror is set.

151.5.11 DefaultPrintSettings(printsettings as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Sets the settings object to the default settings.
Notes: Lasterror is set.

151.5.12 EndDocument

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current document.
Notes: Lasterror is set.

151.5.13 EndDocumentNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current document.
Notes: Doesn't use the print progress dialog.
Lasterror is set.

151.5.14 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current page.
Notes: Lasterror is set.

151.5.15 EndPageNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Ends the current page.
Notes: Doesn't use the print progress dialog.
Lasterror is set.

151.5.16 GetDestinationFormat(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination format value.
Notes: Lasterror is set.

151.5.17 GetDestinationLocation(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination location value.
Notes: Lasterror is set.

151.5.18 GetDestinationType(printsettings as CPMPrintSettingsMBS) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Returns the destination type value.
Notes: Lasterror is set.

151.5.19 kPMDocumentFormatDefault as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

151.5.20 kPMDocumentFormatPDF as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

151.5.21 kPMDocumentFormatPostScript as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the document format.

151.5.22 kPMGraphicsContextCoreGraphics as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the graphics context.

151.5.23 kPMGraphicsContextDefault as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: One of the constants for the graphics context.

151.5.24 PageContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContext object for the current page.
Notes: Lasterror is set.

151.5.25 PageSetupDialog(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Shows the page setup dialog.
Notes: Lasterror is set.

151.5.26 PrintDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Shows the print dialog.
Notes: Lasterror is set.

151.5.27 SetDestination(printsettings as CPMPrintSettingsMBS, desttype as Integer, destformat as String, desturl as String)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Sets a new destination.
Notes: Some destinations so you may need to specify a format, else you can pass "" for the default format. Some destinations require a URL to a file.

Destination type codes:

kPMDestinationInvalid	0
kPMDestinationPrinter	1
kPMDestinationFile	2
kPMDestinationFax	3
kPMDestinationPreview	4

Destformat strings:

Lasterror is set.

kPMDocumentFormatPDF	application/pdf
kPMDocumentFormatPICT	application/vnd.apple.printing-pict
kPMDocumentFormatPICTPS	application/vnd.apple.printing-pict-ps
kPMDocumentFormatPostScript	application/postscript

151.5.28 UseSheets(docWindow as window)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Specifies that a printing dialog should be displayed as a sheet.
Notes: docWindow: The window to which the sheet dialog should be attached.
Lasterror is set. (-1 for the docWindow parameter being nil)

151.5.29 ValidatePageFormat(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Validates the page format.
Notes: Lasterror is set.

151.5.30 ValidatePrintSettings(printsettings as CPMPrintSettingsMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Validates the print settings.
Notes: Lasterror is set.

151.5.31 Properties

151.5.32 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the print session.
Notes: It's a PMPrintSession which you find in CMTypes.h in the Toolbox.
(Read and Write property)

151.5.33 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes: 0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

151.5.34 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

151.5.35 SheetTarget as Window

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: The window set by UseSheets.
Notes: This property is to reference the window used for the sheets so Xojo does not destroy the window too early.
(Read and Write property)

151.5.36 CurrentPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The current printer for this session.
Notes: Lasterror is set.
Setting this can only be done on Mac OS X.
(Read and Write computed property)

151.5.37 CurrentPrinterName as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: The current printer for this session by name.
Notes: Lasterror is set.
(Read and Write computed property)

151.5.38 Events

151.5.39 SheetDone(WindowHandle as Integer, accepted as boolean)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: This event is called for a finished print sheet.
Notes: Accepted is false if the cancel button was used. True if OK was clicked.

151.5.40 Constants

Destination Types

Constant	Value	Description
kPMDestinationFax	3	Fax
kPMDestinationFile	2	File
kPMDestinationInvalid	0	Invalid
kPMDestinationPreview	4	Preview
kPMDestinationPrinter	1	Printer
kPMDestinationProcessPDF	5	Process to PDF
kPMDestinationTypeDefault	1	Default is printer.

151.6 class CPMPrintSettingsMBS

151.6.1 class CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a print session.

151.6.2 Methods

151.6.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new print settings object.

151.6.4 CopyPrintSettings(dest as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Copes the settings to the other settings.

151.6.5 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Returns a data representation of a PMPageFormat object as a data string.
Example:

```
Var p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
Var data as string = p.CreateDataRepresentation
Break // check in debugger
```

151.6.6 CreateWithDataRepresentation(Data as String) as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.

151.6.7 Dictionary as Dictionary

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Represent these print settings as a dictionary.

151.6.8 GetPageRange(byref minPage as UInt32, byref maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries the page range to print.
Notes: Obtains the valid range of pages that can be printed.
The default page range is 1 - (all pages). The page range is something that is set by the application. It is NOT the first and last page to print. It serves as limits for setting the first and last page.

151.6.9 Keys as String()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Queries list of keys.
Example:

```
Var p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
Var keys() as string = p.keys
Break // check in debugger
```

151.6.10 SetPageRange(minPage as UInt32, maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets the page range to print.

151.6.11 Properties

151.6.12 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The handle for the print settings.
Notes: It's a PMPrintSettings which you find in CMTypes.h in the Toolbox.
(Read and Write property)

151.6.13 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The error code from the last command.
Notes: 0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

151.6.14 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: whether the destructor will release the handle.
Notes: (Read and Write property)

151.6.15 Collate as boolean

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The collate setting.
Notes: (Read and Write computed property)

151.6.16 Copies as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of copies that the user requests to be printed.
Notes: Lasterror is set.
(Read and Write computed property)

151.6.17 Duplex as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The duplex setting.
Notes: (Read and Write computed property)

151.6.18 FirstPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of the first page to print.
Notes: Lasterror is set.
(Read and Write computed property)

151.6.19 JobName as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the name of a print job.
Notes: Lasterror is set.
(Read and Write computed property)

151.6.20 LastPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The number of the last page to print.
Example:

```
'get a print session

// print this PDF
Var pathPrinted as FolderItem=GetFolderItem("test.pdf")

Var thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
Var thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
Var thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return
```

```
'open the file which will be printed
Var thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
Var LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
Var PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
Var CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
Var thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes: Lasterror is set.
(Read and Write computed property)

151.6.21 Value(key as String) as Variant

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The value in settings.
Example:

```
Var p as new CPMPrintSettingsMBS
p.Collate = true
Var value as Variant = p.value("com.apple.print.PrintSettings.PMCopyCollate")
Break // check in debugger
```

Notes: (Read and Write computed property)

151.6.22 Constants

Duplex Modes

Constant	Value	Description
kPMDuplexNone	1	Duplex off.
kPMDuplexNoTumble	2	Duplex with no tumble.
kPMDuplexTumble	3	Duplex with tumble.
kPMSimplexTumble	4	No duplex.

151.7 class CPMRectMBS

151.7.1 class CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a rectangle.
Notes: Only a data class.

151.7.2 Properties

151.7.3 Bottom as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The bottom distance to the border.
Notes: (Read and Write property)

151.7.4 Height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The height of the rectangle.
Notes: Setting the height changes the bottom property.
(Read and Write property)

151.7.5 Left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The left distance to the border.
Notes: (Read and Write property)

151.7.6 Right as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The right distance to the border.
Notes: (Read and Write property)

151.7.7 Top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The top distance to the border.
Notes: (Read and Write property)

151.7.8 Width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The width of the rectangle.
Notes: Setting the height changes the right property.
(Read and Write property)

151.8 class CPMResolutionMBS

151.8.1 class CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a resolution.
Notes: Only a data class.

151.8.2 Properties

151.8.3 Horizontal as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The horizontal resolution.
Notes: (Read and Write property)

151.8.4 Vertical as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: The vertical resolution.
Notes: (Read and Write property)

151.9 class CPMVersionMBS

151.9.1 class CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for version information.

151.9.2 Properties

151.9.3 CountryCode as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The country code.
Notes: (Read and Write property)

151.9.4 LongVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The long version string.
Notes: (Read and Write property)

151.9.5 ShortVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The short version string.
Notes: (Read and Write property)

151.9.6 VersionMajor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The major version number.
Notes: (Read and Write property)

151.9.7 VersionMinor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The minor version number.
Notes: (Read and Write property)

151.9.8 VersionRevision as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The reversion number.
Notes: (Read and Write property)

151.9.9 VersionStage as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: The version stage.
Notes: (Read and Write property)

Chapter 152

Printing Windows

152.1 class WindowsAddPrintJobMBS

152.1.1 class WindowsAddPrintJobMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to send raw data to a printer.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

Var w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

Var PostScript as string = "%!PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
```

```
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

Var BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes: Perfect for printing postscript data to a postscript printer.
You can use this class in several ways:

1. OpenPrinter, AddJob, WriteJob and ScheduleJob.
2. OpenPrinter, StartDocPrinter, StartPagePrinter, WritePrinter, EndPagePrinter, EndDocPrinter and ClosePrinter.
3. OpenPrinter, StartDocPrinter, WritePrinter, EndDocPrinter and ClosePrinter.

Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr1
- More on printing on Windows
- MBS Plugins 10.3 Release Notes

152.1.2 Methods

152.1.3 AddJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new print job.
Notes: Returns true on success and false on failure.

152.1.4 ClosePrinter

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes printer connection.

152.1.5 EndDocPrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EndDocPrinter function ends a print job for the specified printer.
Notes: If the function succeeds, the return value is a true.

The EndDocPrinter function returns an error if the print job was not started by calling the StartDocPrinter function.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

152.1.6 EndPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EndPagePrinter function notifies the print spooler that the application is at the end of a page in a print job.
Notes: If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error

message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

152.1.7 OpenPrinter(PrinterName as string) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer for printing.
Notes: Returns true on success and false on failure.
PrinterName can be "" for the default printer.

152.1.8 ScheduleJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Schedules the printing.
Notes: Returns true on success and false on failure.

152.1.9 StartDocPrinter(DocName as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

Var w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if
```

```
MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

Var PostScript as string = "%!PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

Var BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes: DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 152.1.10 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean 19504

- 152.1.11 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean 19505

152.1.10 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

Var w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

// output to a file
Var file as FolderItem = SpecialFolder.Desktop.Child("test.ps")

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

Var PostScript as string = "%!PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

Var BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes: DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.

Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

152.1.11 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

Var w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"
```

```
// output to a file
Var file as string = "C:\test.ps"

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

Var PostScript as string = "%!PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

Var BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes: DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.
See also:

- 152.1.9 StartDocPrinter(DocName as string, Datatype as string) as boolean 19502
- 152.1.10 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean 19504

152.1.12 StartPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartPagePrinter function notifies the spooler that a page is about to be printed on the specified printer.
Notes: If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

152.1.13 WriteJob(data as string) as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds data to the spool file.
Notes: You need to pass raw data for the printer, e.g. postscript data.
Returns the number of bytes written.
So lenb(data) should be equal to the result.
Only available between a call to AddJob and ScheduleJob.

152.1.14 WritePrinter(data as string) as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WritePrinter function notifies the print spooler that data should be written to the specified printer.

Notes: data: The data that should be written to the printer.

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a high-level document (such as an Adobe PDF or Microsoft Word file) or other printer data (such PCL, PS, or HPGL) is sent directly to a printer, the print settings defined in the document take precedent over Windows print settings.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

152.1.15 Properties

152.1.16 JobID as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The JobID of this print.
Notes: For information only.
Maybe be useful for the user to find this print job later.
(Read and Write property)

152.1.17 JobPath as String

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file name of the temporary file used.
Notes: Just for information and only available between a call to AddJob and ScheduleJob.
(Read and Write property)

152.1.18 lastError as Integer

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: Zero for no error.
-1 if the plugin has a problem like invalid parameter or called on Mac/Linux.
others are Windows error codes.
(Read and Write property)

152.1.19 lastErrorMessage as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized text message for LastError property.
Notes: (Read and Write property)

152.1.20 PrinterHandle as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the printer.
Notes: (Read and Write property)

152.1.21 Constants

Constants

Constant	Value	Description
kDataFormatRAW	"RAW"	One of the data format constants. Use this constant if you send to both local and networked printers that us GDI-based printer drivers.
kDataFormatXPS_PASS	"XPS_PASS"	One of the data format constants. Use this constant to send printer control data directly to printers that us XPSDrv printer drivers.

152.2 class WindowsDeviceModeMBS

152.2.1 class WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for device modue information for a Windows printer.
Example:

```
Var d as new WindowsDeviceModeMBS
Var name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

Var w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Basicly this class wraps the Windows DEVMODE structure.

For more information on the DEVMODE structure, visit this website:
http://msdn.microsoft.com/en-us/library/dd183565(VS.85).aspx

152.2.2 Methods

152.2.3 ApplyToSetupString(SetupString as String) as string

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies current device mode to the given setup string.
Example:

```
Var p as new PrinterSetup

if p.PageSetupDialog then

Var w as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(s)

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)

Var s as string = w.SetupString
Var t as string = w.ApplyToSetupString(s)

Break // check

end if
```

Notes: The setup string contains a device mode and we replace the one from Xojo with our own. The other information is kept the same.

152.2.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new empty device mode.
Notes: Size is set for you to default name of the data structure.

152.2.5 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WindowsDeviceModeMBS object with given data.
Notes: The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 152.2.6 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS 19512

152.2.6 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new WindowsDeviceModeMBS object with given data.
Notes: The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 152.2.5 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS 19512

152.2.7 FromSetupString(SetupString as String) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initialized DevMode object from setup string.
Example:

```
Var p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
Var ss as string = p.SetupString

// parse it in device mode
Var d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)
```

```
// change printer
d.DeviceName = "Deskjet 2540 series#:2"

// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
Var da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
Var g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes: You can pass string from PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.

152.2.8 RawData(Unicode as boolean = true) as memoryblock

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies the raw data of the WindowsDeviceModeMBS class.
Notes: Returns nil on any error.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.

152.2.9 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a setup string from devmode.
Notes: This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Please pass reasonable flags.
Check existing SetupStrings from Xojo for possible values.
Resolution parameters can e.g. bei 72.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 152.2.10 SetupString(Margin as Integer = 2500) as string 19514

152.2.10 SetupString(Margin as Integer = 2500) as string

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a setup string from devmode.
Example:

```
Var p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
Var ss as string = p.SetupString

// parse it in device mode
Var d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// change printer
d.DeviceName = "Deskjet 2540 series#:2"
```

```
// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
Var da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
Var g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes: This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 152.2.9 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string 19514

152.2.11 Properties

152.2.12 Collate as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether collation should be used when printing multiple copies.
Notes: This member is ignored unless the printer driver indicates support for collation by setting the dmFields member to DM_COLLATE.
This member can be one of the following values:

Value	Meaning
DMCOLLATE_TRUE	Collate when printing multiple copies.
DMCOLLATE_FALSE	Do not collate when printing multiple copies.

(Read and Write property)

152.2.13 Color as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Switches between color and monochrome on color printers.
Notes: The following are the possible values:
DMCOLOR_COLOR
DMCOLOR_MONOCHROME
(Read and Write property)

152.2.14 Copies as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects the number of copies printed if the device supports multiple-page copies.
Example:

```
Var w as WindowsDeviceModeMBS // your device mode object

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)
```

Notes: (Read and Write property)

152.2.15 Data as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw data pointer to the DEVMODEW structure.
Notes: (Read only property)

152.2.16 DefaultSource as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the paper source.
Notes: Use the DMBIN_* constants.
(Read and Write property)

152.2.17 DeviceName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the "friendly" name of the printer or display; for example, "PCL/HP LaserJet" in the case of PCL/HP LaserJet.
Notes: This string is unique among device drivers. Note that this name may be truncated to fit in the dmDeviceName field.
(Read and Write property)

152.2.18 DitherType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how dithering is to be done.
Notes: The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMDITHER_USER.

Value	Meaning
DMDITHER_NONE	No dithering.
DMDITHER_COARSE	Dithering with a coarse brush.
DMDITHER_FINE	Dithering with a fine brush.
DMDITHER_LINEART	Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.
DMDITHER_GRAYSCALE	Device does gray scaling.

(Read and Write property)

152.2.19 DriverExtra as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains the number of bytes of private driver-data that follow this structure. If a device driver does not use device-specific information, set this member to zero.
Notes: (Read and Write property)

152.2.20 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The driver version number assigned by the driver developer.
Notes: (Read and Write property)

152.2.21 Duplex as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects duplex or double-sided printing for printers capable of duplex printing.
Notes: Following are the possible values.

Value	Meaning
DMDUP_SIMPLEX	Normal (nonduplex) printing.
DMDUP_HORIZONTAL	Short-edge binding, that is, the long edge of the page is horizontal.
DMDUP_VERTICAL	Long-edge binding, that is, the long edge of the page is vertical.

(Read and Write property)

152.2.22 Fields as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether certain properties have been initialized.
Notes: If a property is initialized, its corresponding bit is set, otherwise the bit is clear. A driver supports only those properties that are appropriate for the printer or display technology.

Use the DM_* constants which match by name their property. So the DM_ORIENTATION bit value is related to the Orientation property.
(Read and Write property)

152.2.23 FormName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string array that specifies the name of the form to use; for example, "Letter" or "Legal".
Notes: A complete set of names can be retrieved by using the GetPrinterFormats function on the WindowsPrinterListMBS class.
(Read and Write property)

152.2.24 ICMIntent as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies which color matching method, or intent, should be used by default.
Notes: This member is primarily for non-ICM applications. ICM applications can establish intents by using the ICM functions. This member can be one of the following predefined values, or a driver defined value greater than or equal to the value of DMICM_USER.

Value	Meaning
DMICM_ABS_COLORIMETRIC	Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.
DMICM_COLORIMETRIC	Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.
DMICM_CONTRAST	Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.
DMICM_SATURATE	Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

(Read and Write property)

152.2.25 ICMMethod as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how ICM is handled.
Notes: For a non-ICM application, this member determines if ICM is enabled or disabled. For ICM applications, the system examines this member to determine how to handle ICM support. This member can

be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMICMMETHOD_USER.

Value	Meaning
DMICMMETHOD_NONE	Specifies that ICM is disabled.
DMICMMETHOD_SYSTEM	Specifies that ICM is handled by Windows.
DMICMMETHOD_DRIVER	Specifies that ICM is handled by the device driver.
DMICMMETHOD_DEVICE	Specifies that ICM is handled by the destination device.

The printer driver must provide a user interface for setting this member. Most printer drivers support only the DMICMMETHOD_SYSTEM or DMICMMETHOD_NONE value. Drivers for PostScript printers support all values.
(Read and Write property)

152.2.26 LogPixels as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pixels per logical inch.
Notes: Printer drivers do not use this member.
(Read and Write property)

152.2.27 MediaType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the type of media being printed on.
Notes: The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMMEDIA_USER.

Value	Meaning
DMMEDIA_STANDARD	Plain paper.
DMMEDIA_GLOSSY	Glossy paper.
DMMEDIA_TRANSPARENCY	Transparent film.

(Read and Write property)

152.2.28 Nup as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies where the NUP is done.
Notes: It can be one of the following.

Value	Meaning
DMNUP_SYSTEM	The print spooler does the NUP.
DMNUP_ONEUP	The application does the NUP.

(Read and Write property)

152.2.29 Orientation as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, selects the orientation of the paper.
Example:

```
Var d as new WindowsDeviceModeMBS
Var name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

Var w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: This member can be either DMORIENT_PORTRAIT (1) or DMORIENT_LANDSCAPE (2).
(Read and Write property)

152.2.30 PaperLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, overrides the length of the paper specified by the PaperSize member, either for custom paper sizes or for devices such as dot-matrix printers that can print on a page of arbitrary length.
Notes: These values, along with all other values in this structure that specify a physical length, are in

tenths of a millimeter.
(Read and Write property)

152.2.31 PaperSize as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, selects the size of the paper to print on.
Notes: This member can be set to zero if the length and width of the paper are both set by the PaperLength and PaperWidth members. Otherwise, the PaperSize member can be set to a device specific value greater than or equal to DMPAPER_USER or to one of the following predefined values with DMPAPER_* constants.
(Read and Write property)

152.2.32 PaperWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printer devices only, overrides the width of the paper specified by the PaperSize member.
Notes: Unit is tenths of a millimeter.
(Read and Write property)

152.2.33 PrintQuality as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer resolution.
Notes: There are four predefined device-independent values:

DMRES_HIGH
DMRES_MEDIUM
DMRES_LOW
DMRES_DRAFT

If a positive value is specified, it specifies the number of dots per inch (DPI) and is therefore device dependent.
(Read and Write property)

152.2.34 Scale as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the factor by which the printed output is to be scaled.
Notes: The apparent page size is scaled from the physical page size by a factor of Scale /100. For example, a letter-sized page with a dmScale value of 50 would contain as much data as a page of 17- by 22-inches because the output text and graphics would be half their original height and width.
(Read and Write property)

152.2.35 Size as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the size, in bytes, of the DEVMODE structure, not including any private driver-specific data that might follow the structure's public members.
Notes: You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

152.2.36 SpecVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The version number of the initialization data specification on which the structure is based.
Notes: You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

152.2.37 TTOption as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how TrueType fonts should be printed.
Notes: This member can be one of the following values:

Value	Meaning
DMTT_BITMAP	Prints TrueType fonts as graphics. This is the default action for dot-matrix printers.
DMTT_DOWNLOAD	Downloads TrueType fonts as soft fonts. This is the default action for Hewlett-Packard printers that use Printer Control Language (PCL).
DMTT_DOWNLOAD_OUTLINE	Downloads TrueType fonts as outline soft fonts.
DMTT_SUBDEV	Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers.

(Read and Write property)

152.2.38 YResolution as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the y-resolution, in dots per inch, of the printer.
Notes: If the printer initializes this member, the PrintQuality member specifies the x-resolution, in dots per inch, of the printer.
(Read and Write property)

152.2.39 Constants

Constants

Constant	Value	Description
DMBIN_AUTO	7	One of the source bin constants. Auto
DMBIN_CASSETTE	14	One of the source bin constants. Cassette
DMBIN_ENVELOPE	5	One of the source bin constants. Envelope
DMBIN_ENVMANUAL	6	One of the source bin constants. Envelope Manual.
DMBIN_FORMSOURCE	15	One of the source bin constants. Form Source.
DMBIN_LARGECAPACITY	11	One of the source bin constants. Large Capacity
DMBIN_LARGEFMT	10	One of the source bin constants. Large Format
DMBIN_LOWER	2	One of the source bin constants. Lower
DMBIN_MANUAL	4	One of the source bin constants. Manual
DMBIN_MIDDLE	3	One of the source bin constants. Middle
DMBIN_ONLYONE	1	One of the source bin constants. Only One.
DMBIN_SMALLFMT	9	One of the source bin constants. Small Format
DMBIN_TRACTOR	8	One of the source bin constants. Tractor
DMBIN_UPPER	1	One of the source bin constants. Upper
DMBIN_USER	256	One of the source bin constants. User
DMCOLLATE_FALSE	0	One of the collate mode constants. Do not collate when printing multiple copies
DMCOLLATE_TRUE	1	One of the collate mode constants. Collate when printing multiple copies.
DMCOLOR_COLOR	2	One of the color mode constants. Color
DMCOLOR_MONOCHROME	1	One of the color mode constants. Monochrome.
DMDITHER_COARSE	2	One of the dither constants. Dithering with a coarse brush.
DMDITHER_ERRORDIFFUSION	5	One of the dither constants.
DMDITHER_FINE	3	One of the dither constants. Dithering with a fine brush.
DMDITHER_GRAYSCALE	10	One of the dither constants. Device does gray scaling.
DMDITHER_LINEART	4	One of the dither constants. Line art dithering, a special dithering metho ders between black, white, and gray scalin that include continuous graduations in intens tographs.
DMDITHER_NONE	1	One of the dither constants. No dithering.
DMDITHER_RESERVED6	6	One of the dither constants.
DMDITHER_RESERVED7	7	One of the dither constants.
DMDITHER_RESERVED8	8	One of the dither constants.
DMDITHER_RESERVED9	9	One of the dither constants.
DMDITHER_USER	256	One of the dither constants.
DMDUP_HORIZONTAL	3	One of the duplex mode constants.

152.3 class WindowsGraphicsInfoMBS

152.3.1 class WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class gives information for Windows Device contexts.
Example:

```
Var g as Graphics = OpenPrinter
Var info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox _
"Printer physical page size: "+str(info.PhysicalWidth)+" "+str(info.PhysicalHeight)+_
EndOfLine+_
"Useable paper size: "+str(info.ResolutionX)+ " x "+str(info.ResolutionY)+_
EndOfLine+_
"Paper size: "+str(info.SizeX)+" x "+str(info.Sizey)+" mm"
```

Notes: Main use currently is to learn about native resolution of a printer graphics object.

152.3.2 Methods

152.3.3 Constructor

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes properties for main screen.
See also:

- 152.3.4 Constructor(c as control) 19527
- 152.3.5 Constructor(c as DesktopControl) 19527
- 152.3.6 Constructor(g as graphics) 19527

- 152.3.7 Constructor(p as Picture) 19528
- 152.3.8 Constructor(w as DesktopWindow) 19528
- 152.3.9 Constructor(w as window) 19529

152.3.4 Constructor(c as control)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this control object.
See also:

- 152.3.3 Constructor 19526
- 152.3.5 Constructor(c as DesktopControl) 19527
- 152.3.6 Constructor(g as graphics) 19527
- 152.3.7 Constructor(p as Picture) 19528
- 152.3.8 Constructor(w as DesktopWindow) 19528
- 152.3.9 Constructor(w as window) 19529

152.3.5 Constructor(c as DesktopControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Initializes properties for this control object.
See also:

- 152.3.3 Constructor 19526
- 152.3.4 Constructor(c as control) 19527

152.3.10 Properties

152.3.11 AspectX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Relative width of a device pixel used for line drawing.
Notes: (Read and Write property)

152.3.12 AspectXY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Diagonal width of the device pixel used for line drawing.
Notes: (Read and Write property)

152.3.13 AspectY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Relative height of a device pixel used for line drawing.
Notes: (Read and Write property)

152.3.14 BitsPerPixel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of adjacent color bits for each pixel.
Example:

```
Var p as new Picture(200, 200, 32)
Var info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Color Depth: "+str(info.BitsPerPixel)
```

Notes: As example gives a display device context, the bits per pixel is the screen depth.
(Read and Write property)

152.3.15 BrushesCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific brushes.
Notes: (Read and Write property)

152.3.16 ColorCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of entries in the device's color table, if the device has a color depth of no more than 8 bits per pixel.
Notes: For devices with greater color depths, 1 is returned.
(Read and Write property)

152.3.17 DesktopResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal width of entire desktop in pixels.
Example:

```
Var p as new Picture(200, 200, 32)
Var info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

152.3.18 DesktopResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical height of entire desktop in pixels.
Example:

```
Var p as new Picture(200, 200, 32)
Var info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

152.3.19 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device driver version.
Notes: (Read and Write property)

152.3.20 FontCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific fonts.
Notes: (Read and Write property)

152.3.21 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen width.
Example:

```
Var g as Graphics = OpenPrinter
Var info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes: In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

152.3.22 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen height.
Example:

```
Var g as Graphics = OpenPrinter
Var info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes: In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

152.3.23 MakersCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of markers the device has.
Notes: (Read and Write property)

152.3.24 PenCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of device-specific pens.
Notes: (Read and Write property)

152.3.25 PhysicalHeight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the height of the physical page, in device units.
Notes: For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper has a physical height value of 6600 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.

(Read and Write property)

152.3.26 PhysicalOffsetX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the distance from the left edge of the physical page to the left edge of the printable area, in device units.
Notes: For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the leftmost 0.25-inch of paper, has a horizontal physical offset of 150 device units.
(Read and Write property)

152.3.27 PhysicalOffsetY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the distance from the top edge of the physical page to the top edge of the printable area, in device units.
Notes: For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the topmost 0.5-inch of paper, has a vertical physical offset of 300 device units.
(Read and Write property)

152.3.28 PhysicalWidth as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For printing devices: the width of the physical page, in device units.
Notes: For example, a printer set to print at 600 dpi on 8.5-x11-inch paper has a physical width value of 5100 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

152.3.29 Planes as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of color planes.
Notes: (Read and Write property)

152.3.30 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Width, in pixels, of the screen; or for printers, the width, in pixels, of the printable area of the page.
Notes: (Read and Write property)

152.3.31 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Height, in raster lines, of the screen; or for printers, the height, in pixels, of the printable area of the page.
Notes: (Read and Write property)

152.3.32 ScalingFactorX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scaling factor for the x-axis of the printer.
Notes: (Read and Write property)

152.3.33 ScalingFactorY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scaling factor for the y-axis of the printer.
Notes: (Read and Write property)

152.3.34 SizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Width, in millimeters, of the physical screen.
Notes: (Read and Write property)

152.3.35 SizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Height, in millimeters, of the physical screen.
Notes: (Read and Write property)

152.3.36 Technology as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Device technology. It can be any one of the kTechnology* constants.
Notes: (Read and Write property)

152.3.37 VRefresh as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For display devices: the current vertical refresh rate of the device, in cycles per second (Hz).
Notes: (Read and Write property)

152.3.38 Constants

Technology Constants

Constant	Value	Description
kTechnologyCharStream	4	Character stream
kTechnologyDisplayFile	6	Display file
kTechnologyMetaFile	5	Metafile
kTechnologyPlotter	0	Vector plotter
kTechnologyRasterCamera	3	Raster camera
kTechnologyRasterDisplay	1	Raster display
kTechnologyRasterPrinter	2	Raster printer

152.4 class WindowsPageFormatMBS

152.4.1 class WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a page format.
Example:

```
// change the printer name to your printer's name
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
Var formats(-1) as WindowsPageFormatMBS = w.GetPrinterFormats

for each p as WindowsPageFormatMBS in formats
MsgBox p.Name
next
```

Notes: This class wraps the FORM_INFO_1 structure. You can find more information here:
http://msdn.microsoft.com/en-us/library/dd144836(v=VS.85).aspx
Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

152.4.2 Properties

152.4.3 DisplayName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The form's display name in the language specified by LangId.
Notes: Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.4 Flags as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags for this page format.
Notes: The following values are defined.

(Read and Write property)

Value	Meaning
FORM_USER	If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.
FORM_BUILTIN	If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.
FORM_PRINTER	If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

152.4.5 ImageableAreaBottom as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.6 ImageableAreaHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.7 ImageableAreaLeft as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.8 ImageableAreaRight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.9 ImageableAreaTop as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.10 ImageableAreaWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.11 Keyword as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A non-localizable string identifier of the form.
Notes: When passed to AddForm or SetForm, this gives the caller a means of identifying the form in all locales.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.12 LangId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language of the DisplayName.
Notes: Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.13 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes: Value can be 1 (Windows 2000 and newer) or 2 (Windows Vista and newer).
(Read and Write property)

152.4.14 MuiDll as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Multilingual User Interface localized resource DLL that contains the localized display name.
Notes: Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.15 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the form.
Notes: (Read and Write property)

152.4.16 ResourceId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The resource ID of the form's display name in MuiDll.
Notes: Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.17 SizeHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.18 SizeWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

152.4.19 StringType as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies how a localized display name for the form is obtained at runtime.
Notes: The following values are defined. Only one can be set in any given call to AddForm or SetForm. Both STRING_MUIDLL and STRING_LANGPAIR can be set in the WindowsPageFormatMBS (s) returned by

GetForm or GetPrinterFormats.

Can be STRING_LANGPAIR, STRING_MUIDLL or STRING_NONE.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

152.4.20 Constants

Constants

Constant	Value	Description
FORM_BUILTIN	1	One of the flag constants. If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.
FORM_PRINTER	2	One of the flag constants. If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.
FORM_USER	0	One of the flag constants. If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.

String Type Constants

Constant	Value	Description
STRING_LANGPAIR	4	The display name and language ID are provided directly by DisplayName and the language is specified by LangId.
STRING_MUIDLL	2	The display name is extracted from the Multilingual User Interface localized resources DLL specified in MuiDll. The ID is in the ResourceId member.
STRING_NONE	1	There is no localized display name.

152.5 class WindowsPageSetupDialogMBS

152.5.1 class WindowsPageSetupDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The class to run the Windows Page Setup dialog.

152.5.2 Methods

152.5.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

152.5.4 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries the strings that identify the driver, device, and output port names for a printer.
Notes: Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

152.5.5 PageSetupDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Creates a Page Setup dialog box that enables the user to specify the attributes of a printed page.
Notes: These attributes include the paper size and source, the page orientation (portrait or landscape), and the width of the page margins.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.
If the user cancels or closes the Page Setup dialog box or an error occurs, the return value is false. To get extended error information, use the lasterror property.

Starting with Windows Vista, the PageSetupDialog does not contain the Printer button. To switch printer selection other functions.

152.5.6 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets the strings that identify the driver, device, and output port names for a printer.
Notes: Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

152.5.7 Properties

152.5.8 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device mode object.
Notes: On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.

(Read and Write property)

152.5.9 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that you can use to initialize the Page Setup dialog box.
Notes: When the dialog box returns, it sets these flags to indicate the user's input.
See the PSD_* constants for possible values.
(Read and Write property)

152.5.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

152.5.11 MarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the bottom margin.
Notes: If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

152.5.12 MarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the left margin.
Notes: If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

152.5.13 MarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the right margin.
Notes: If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

152.5.14 MarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The widths of the top margin.
Notes: If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

152.5.15 MinMarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the bottom margin.
Notes: The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.16 MinMarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the left margin.
Notes: The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.17 MinMarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the right margin.
Notes: The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.18 MinMarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum allowable widths for the top margin.
Notes: The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.19 PaperSizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The dimensions of the paper selected by the user.
Notes: The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.20 PaperSizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The dimensions of the paper selected by the user.
Notes: The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

152.5.21 Parent as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window that owns the dialog box.
Notes: This member can be any valid window, or it can be nil if the dialog box has no owner.
Can reference a Window or DesktopWindow object.
(Read and Write property)

152.5.22 Constants

Constants

Constant	Value	Description
DN_DEFAULTPRN	1	The flag for default printer on the SetDevNames/GetDevNames flag parameter.

Flags

Constant	Value	Description
PSD_DEFAULTMINMARGINS	&h00000000	Sets the minimum values that the user can specify for th be the minimum margins allowed by the printer. This is flag is ignored if the PSD_MARGINS and PSD_MINMAR specified.
PSD_DISABLEMARGINS	&h00000010	Disables the margin controls, preventing the user from sett
PSD_DISABLEORIENTATION	&h00000100	Disables the orientation controls, preventing the user fro orientation.
PSD_DISABLEPAPER	&h00000200	Disables the paper controls, preventing the user from settin such as the paper size and source.
PSD_DISABLEPRINTER	&h00000020	Obsolete. Windows XP/2000: Disables the Printer button, preven invoking a dialog box that contains additional printer setu
PSD_INHUNDREDTHSOFMILLIMETERS	&h00000008	Indicates that hundredths of millimeters are the unit of me gins and paper size. The values in the Margin, MinMarg members are in hundredths of millimeters. You can set to override the default unit of measurement for the user's function returns, the dialog box sets this flag to indicate th
PSD_INTHOUSANDTHSOFINCHES	&h00000004	Indicates that thousandths of inches are the unit of measu and paper size. The values in the Margin, MinMargin, and are in thousandths of inches. You can set this flag on in default unit of measurement for the user's locale. When th the dialog box sets this flag to indicate the units used.
PSD_MARGINS	&h00000002	Causes the system to use the values specified in the Marg initial widths for the left, top, right, and bottom margins. is not set, the system sets the initial widths to one inch for
PSD_MINMARGINS	&h00000001	Causes the system to use the values specified in the MinM the minimum allowable widths for the left, top, right, an The system prevents the user from entering a width that is ified minimum. If PSD_MINMARGINS is not specified, t minimum allowable widths to those allowed by the printer.
PSD_NONETWORKBUTTON	&h00200000	Hides and disables the Network button.
PSD_NOWARNING	&h00000080	Prevents the system from displaying a warning message whe printer.
PSD_RETURNDEFAULT	&h00000400	PageSetupDialog does not display the dialog box. Instea Names and DevMode members to objects that are initiali default printer. PageSetupDlg returns an error if either Dev is not nil.
PSD_SHOWHELP	&h00000800	Causes the dialog box to display the Help button. The hw must specify the window to receive the HELPMSGSTRING that the dialog box sends when the user clicks the Help bu

152.6 class WindowsPrintDialogMBS

152.6.1 class WindowsPrintDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The class for showing the windows print dialog.
Blog Entries

- MBS Xojo Plugins, version 21.6pr3
- MBS Xojo Plugins, version 21.3pr2
- MBS Real Studio Plugins, version 12.1pr7

152.6.2 Methods

152.6.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

152.6.4 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries the strings that identify the driver, device, and output port names for a printer.
Notes: Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

152.6.5 getPageRange(index as Integer, byref fromPage as Integer, byref toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Queries a page range entry.

152.6.6 PrintDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a Print Dialog Box or a Print Setup dialog box.
Notes: The Print dialog box enables the user to specify the properties of a particular print job.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.

If the user canceled or closed the Print or Printer Setup dialog box or an error occurred, the return value is zero. To get extended error information, use the lasterror property. If the user canceled or closed the dialog box, lasterror returns zero.

This is the older function. PrintDialogEx is the newer function.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms646940(v=vs.85).aspx

152.6.7 PrintDialogEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a Print property sheet that enables the user to specify the properties of a particular print job.
Notes: Changed from Boolean to Integer in v21.3 to allow you to distinguish between different different results. Result is either 0 for OK or an COM error code.

A Print property sheet has a General page that contains controls similar to the Print dialog box. The property sheet can also have additional application-specific and driver-specific property pages as well as the General page.
If the function succeeds, the return value is S_OK (0) and the ResultAction member contains one of the following values.

Lasterror is set.
The values of DevMode and DevNames in WindowsPrintDialogMBS may change when they are passed into

Constant	Value	Description
PD_RESULT_APPLY	2	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	0	The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.
PD_RESULT_PRINT	1	The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

PrintDialog. This is because these members are filled on both input and output.
If PD_RETURNDC is set but PD_USEDEVMODECOPIESANDCOLLATE flag is not set, the PrintDialog functions return incorrect number of copies. To get the correct number of copies, ensure that the calling application always uses PD_USEDEVMODECOPIESANDCOLLATE with PD_RETURNDC.

152.6.8 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets the strings that identify the driver, device, and output port names for a printer.
Notes: Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

152.6.9 setPageRange(index as Integer, fromPage as Integer, toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Sets a page range entry.
Notes: Index from 0 to 19.

152.6.10 Properties

152.6.11 Copies as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Contains the initial number of copies for the Copies edit control if DevMode is nil; otherwise, the Copies member of the DEVMODE contains the initial value.
Notes: When PrintDlgEx returns, nCopies contains the actual number of copies the application must print. This value depends on whether the application or the printer driver is responsible for printing multiple copies. If the PD_USEDEVMODECOPIESANDCOLLATE flag is set in the Flags member, nCopies is always 1 on return, and the printer driver is responsible for printing multiple copies. If the flag is not set, the application is responsible for printing the number of copies specified by nCopies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
(Read and Write property)

152.6.12 DC as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device context or an information context, depending on whether the Flags member specifies the PD_RETURNDC or PC_RETURNIC flag.
Notes: If neither flag is specified, the value of this member is undefined. If both flags are specified, PD_RETURNDC has priority.
(Read and Write property)

152.6.13 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The device mode object.
Notes: On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

152.6.14 ExclusionFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that can exclude items from the printer driver property pages in the Print property sheet.
Notes: This value is used only if the PD_EXCLUSIONFLAGS flag is set in the Flags member. Exclusion flags should be used only if the item to be excluded will be included on either the General page or on an application-defined page in the Print property sheet. This member can specify the following flag.
PD_EXCL_COPIESANDCOLLATE: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.
(Read and Write property)

152.6.15 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: A set of bit flags that you can use to initialize the Print property sheet.
Notes: When the PrintDialog function returns, it sets these flags to indicate the user's input. This member can be one or more of the following values.

To ensure that PrintDialog returns the correct values in the Copies and Collate members of the DeviceMode, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = TRUE. In so doing, the Copies member of the PRINTDLG structure is always 1 and PD_COLLATE is always false.

To ensure that PrintDialog returns the correct values in nCopies and PD_COLLATE, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = FALSE. In so doing, dmCopies is always 1 and dmCollate is always FALSE.
Starting with Windows Vista, when you call PrintDlg or PrintDlgEx with PD_RETURNDC set to TRUE and PD_USEDEVMODECOPIESANDCOLLATE set to FALSE, the PrintDlg or PrintDlgEx function sets the number of copies in the nCopies member of the PRINTDLG structure, and it sets the number of copies in the structure represented by the hDC member of the PRINTDLG structure.
When making calls to GDI, you must ignore the value of nCopies, consider the value as 1, and use the returned hDC to avoid printing duplicate copies.
(Read and Write property)

152.6.16 FromPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The initial value for the starting page edit control.
Notes: When PrintDialog returns, nFromPage is the starting page specified by the user. If the Pages radio button is selected when the user clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters a starting page value that is within the minimum to maximum page range.

If the input value for either FromPage or nToPage is outside the minimum/maximum range, PrintDlg returns an error only if the PD_PAGENUMS flag is specified; otherwise, it displays the dialog box but changes the out-of-range value to the minimum or maximum value.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

152.6.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: Typical errors:
E_OUTOFMEMORY = &h8007000E // Insufficient memory.
E_INVALIDARG = &h80070057 // One or more arguments are invalid.
E_POINTER = &h80000005 // Invalid pointer.
E_HANDLE = &h80000006 // Invalid handle.
E_FAIL = &h80000008 // Unspecified error.
(Read and Write property)

152.6.18 MaxPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The maximum value for the page ranges specified in the Pages edit control.
Notes: If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

152.6.19 MaxPageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The size, in array elements, of the PageRanges buffer.
Notes: This value indicates the maximum number of page ranges that can be stored in the array. If the PD_NOPAGENUMS flag is specified, this value is not valid. If the PD_NOPAGENUMS flag is not specified, this value must be greater than zero.
The plugin supports up to 20 page ranges.
(Read and Write property)

152.6.20 MinPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The minimum value for the page ranges specified in the Pages edit control.
Notes: If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

152.6.21 PageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: On input, set this member to the initial number of page ranges specified.
Notes: When the PrintDialog function returns, PageRanges indicates the number of user-specified page ranges. If the PD_NOPAGENUMS flag is specified, this value is not valid. Use getPageRange to query page ranges or setPageRange to set them.
(Read and Write property)

152.6.22 Parent as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window that owns the dialog box.
Notes: The window that owns the property sheet. This member must be a valid window handle; it cannot be nil.
Can reference a Window or DesktopWindow object.
(Read and Write property)

152.6.23 ResultAction as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: If the PrintDlgEx function returns S_OK (0), ResultAction contains the outcome of the dialog.
Notes: If PrintDialog returns an error, this member should be ignored. The ResultAction member can be one of the following values:

PD_RESULT_APPLY	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not want to print yet. The PRINTDLGEX structure contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	The user clicked the Cancel button. The information in the PRINTDLGEX structure is unchanged.
PD_RESULT_PRINT	The user clicked the Print button. The PRINTDLGEX structure contains the information specified by the user.

(Read and Write property)

152.6.24 StartPanel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The property page that is initially displayed.
Notes: To display the General page, specify START_PAGE_GENERAL. For consistency, it is recommended that the property sheet always be started on the General page.
The plugin sets START_PAGE_GENERAL for default value.
(Read and Write property)

152.6.25 ToPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The initial value for the ending page edit control.
Notes: When PrintDialog returns, ToPage is the ending page specified by the user. If the Pages radio button is selected when the use clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters an ending page value that is within the minimum to maximum page range. This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

152.6.26 Constants

Constants

Constant	Value	Description
START_PANEL_GENERAL	&hffffffff	Special value for StartPanel property to select general panel.

Flag Constants

Constant	Value	Description
PD_ALLPAGES	0	The default flag that indicates that the All radio button i This flag is used as a placeholder to indicate that the PD_SELECTION, and PD_CURRENTPAGE flags are n
PD_COLLATE	&h00000010	If this flag is set, the Collate check box is selected. If this flag is set when the PrintDlgEx function returns, t simulate collation of multiple copies. For more informatio of the PD_USEDEVMODECOPIESANDCOLLATE flag See PD_NOPAGENUMS.
PD_CURRENTPAGE	&h00400000	If this flag is set, the Current Page radio button is sele PD_PAGENUMS, PD_SELECTION, or PD_CURREN the All radio button is selected.
PD_DISABLEPRINTTOFILE	&h00080000	Disables the Print to File check box.
PD_EXCLUSIONFLAGS	&h01000000	Indicates that the ExclusionFlags member identifies items the printer driver property pages. If this flag is not set, items will be excluded by default fro property pages. The exclusions prevent the duplication General page, any application-specified pages, and the pri
PD_EXCL_COPIESANDCOLLATE	&h00008100	Excludes the Copies and Collate controls from the printer c in a Print property sheet. This flag should always be set w uses the default Copies and Collate controls provided by the General page of the Print property sheet.
PD_HIDEPRINTTOFILE	&h00100000	Hides the Print to File check box.
PD_NOCURRENTPAGE	&h00800000	Disables the Current Page radio button.
PD_NONETWORKBUTTON	&h00200000	Hides and disables the Network button.
PD_NOPAGENUMS	8	Disables the Pages radio button and the associated edit c Also, it causes the Collate check box to appear in the dia
PD_NOSELECTION	4	Disables the Selection radio button.
PD_NOWARNING	&h00000080	Prevents the warning message from being displayed when
PD_PAGENUMS	2	If this flag is set, the Pages radio button is selected. If n GENUMS, PD_SELECTION, or PD_CURRENTPAGE radio button is selected. If this flag is set when the Prin turns, the PageRanges member indicates the page ranges s
PD_PRINTSETUP	&h00000040	Causes the system to display the Print Setup dialog box r dialog box.
PD_PRINTTOFILE	&h00000020	If this flag is set, the Print to File check box is selected. If this flag is set when PrintDialog returns, the Output contains the string "FILE:". When you call the StartD the printing operation, specify this "FILE:" string in th member of the DOCINFO structure. Specifying this str subsystem to query the user for the name of the output fi StartDoc is available in our plugins through StartDocPri dPrintJobMBS class.
PD_RETURNDC	&h00000100	Causes PrintDialog to return a device context matching th made in the property sheet. The device context is returned in DC property.
PD_RETURNDEFAULT	&h00000400	If this flag is set, the PrintDialog function does not displa Instead, it sets the DevNames and DevMode members t system default printer. Both DevNames and DevMode PrintDialog returns an error.
PD_RETURNIC	&h00000200	Similar to the PD_RETURNDC flag, except this flag ret context rather than a device context. If neither PD_RETURNDC nor PD_RETURNIC is spe fined on output.
PD_SELECTION	1	If this flag is set, the Selection radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD flags is set, the All radio button is selected.
PD_SHOWHELP	&h00000800	Causes the dialog box to display the Help button.
PD_USEDEVMODECOPIES	&h00040000	Same as PD_USEDEVMODECOPIESANDCOLLATE.

Result Constants

Constant	Value	Description
PD_RESULT_APPLY	2	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	0	The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.
PD_RESULT_PRINT	1	The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

152.7 class WindowsPrinterInfoMBS

152.7.1 class WindowsPrinterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for details on printer information.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes: This class wraps the PRINTER_INFO_2 structure on windows which you find documented here: http://msdn.microsoft.com/en-us/library/dd162845(VS.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

152.7.2 Methods

152.7.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

152.7.4 LocalPrinters as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the printers as an array.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
```

next

Notes: On any error the array will be empty.

152.7.5 OpenPrinter(admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.
Example:

```
Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes: Admin: whether you want to get permissions to administrate.
Returns nil on any error.

152.7.6 Printers(flags as Integer, Name as Variant = nil) as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Printers function enumerates available printers, print servers, domains, or print providers.
Notes: If you call this with flags = kPrinterFlagsLocal + kPrinterFlagsConnections and name = nil, you get same as LocalPrinters function.

see also
https://msdn.microsoft.com/en-us/library/windows/desktop/dd162692(v=vs.85).aspx

152.7.7 Properties

152.7.8 AttributeFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer attributes.
Notes: This member can be one of the following values:

Renamed Attributes parameter to AttributeFlags in plugin version 8.2.

PRINTER_ATTRIBUTE_QUEUED	&h00000001	
PRINTER_ATTRIBUTE_DIRECT	&h00000002	
PRINTER_ATTRIBUTE_DEFAULT	&h00000004	(Windows 95)
PRINTER_ATTRIBUTE_SHARED	&h00000008	
PRINTER_ATTRIBUTE_NETWORK	&h00000010	
PRINTER_ATTRIBUTE_HIDDEN	&h00000020	
PRINTER_ATTRIBUTE_LOCAL	&h00000040	
PRINTER_ATTRIBUTE_ENABLE_DEVQ	&h00000080	
PRINTER_ATTRIBUTE_KEEPPRINTEDJOBS	&h00000100	
PRINTER_ATTRIBUTE_DO_COMPLETE_FIRST	&h00000200	
PRINTER_ATTRIBUTE_WORK_OFFLINE	&h00000400	(Windows 95)
PRINTER_ATTRIBUTE_ENABLE_BIDI	&h00000800	(Windows 95)
PRINTER_ATTRIBUTE_RAW_ONLY	&h00001000	
PRINTER_ATTRIBUTE_PUBLISHED	&h00002000	(Windows 2000) Indicates whether the printer is published in the directory service.

(Read and Write property)

152.7.9 AveragePPM as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the average number of pages per minute that have been printed on the printer.
Notes: (Read and Write property)

152.7.10 Comment as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that provides a brief description of the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.Comment
next
```

Notes: (Read and Write property)

152.7.11 CountJobs as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the number of print jobs that have been queued for the printer.
Notes: (Read and Write property)

152.7.12 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the data type used to record the print job.
Notes: (Read and Write property)

152.7.13 DefaultPriority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the default priority value assigned to each print job.
Notes: (Read and Write property)

152.7.14 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDeviceModeMBS object that defines default printer data such as the paper orientation and the resolution.
Notes: (Read and Write property)

152.7.15 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the printer driver.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.DriverName
next
```

Notes: (Read and Write property)

152.7.16 Location as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the physical location of the printer.
Notes: for example, "Bldg. 38, Room 1164".
(Read and Write property)

152.7.17 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the default print-processor parameters.
Notes: (Read and Write property)

152.7.18 PortName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the port(s) used to transmit data to the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.PortName
next
```

Notes: If a printer is connected to more than one port, the names of each port must be separated by commas (for example, "LPT1:,LPT2:,LPT3:").
(Read and Write property)

152.7.19 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
```

next

Notes: (Read and Write property)

152.7.20 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the print processor used by the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrintProcessor
next
```

Notes: (Read and Write property)

152.7.21 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies a priority value that the spooler uses to route print jobs.
Notes: Possible values:

NO_PRIORITY	0
MAX_PRIORITY	99
MIN_PRIORITY	1
DEF_PRIORITY	1

(Read and Write property)

152.7.22 SeparatorPageFile as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the name of the file used to create the separator page.
Notes: This page is used to separate print jobs sent to the printer.

(Read and Write property)

152.7.23 ServerName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string identifying the server that controls the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ServerName
next
```

Notes: If this string is "", the printer is controlled locally.
(Read and Write property)

152.7.24 ShareName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the sharepoint for the printer.
Example:

```
Var printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ShareName
next
```

Notes: This string is used only if the PRINTER_ATTRIBUTE_SHARED constant was set for the Attributes member.
(Read and Write property)

152.7.25 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the earliest time at which the printer will print a job.
Notes: This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
(Read and Write property)

152.7.26 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the printer status.
Notes: This member can be one of the following values:

PRINTER_STATUS_PAUSED	&h00000001
PRINTER_STATUS_ERROR	&h00000002
PRINTER_STATUS_PENDING_DELETION	&h00000004
PRINTER_STATUS_PAPER_JAM	&h00000008
PRINTER_STATUS_PAPER_OUT	&h00000010
PRINTER_STATUS_MANUAL_FEED	&h00000020
PRINTER_STATUS_PAPER_PROBLEM	&h00000040
PRINTER_STATUS_OFFLINE	&h00000080
PRINTER_STATUS_IO_ACTIVE	&h00000100
PRINTER_STATUS_BUSY	&h00000200
PRINTER_STATUS_PRINTING	&h00000400
PRINTER_STATUS_OUTPUT_BIN_FULL	&h00000800
PRINTER_STATUS_NOT_AVAILABLE	&h00001000
PRINTER_STATUS_WAITING	&h00002000
PRINTER_STATUS_PROCESSING	&h00004000
PRINTER_STATUS_INITIALIZING	&h00008000
PRINTER_STATUS_WARMING_UP	&h00010000
PRINTER_STATUS_TONER_LOW	&h00020000
PRINTER_STATUS_NO_TONER	&h00040000
PRINTER_STATUS_PAGE_PUNT	&h00080000
PRINTER_STATUS_USER_INTERVENTION	&h00100000
PRINTER_STATUS_OUT_OF_MEMORY	&h00200000
PRINTER_STATUS_DOOR_OPEN	&h00400000
PRINTER_STATUS_SERVER_UNKNOWN	&h00800000
PRINTER_STATUS_POWER_SAVE	&h01000000

Windows 95: The PRINTER_STATUS_PAGE_PUNT value specifies that the page is being "punted" (that is, not printed) because it is too complex for the printer to print.
(Read and Write property)

152.7.27 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the latest time at which the printer will print a job.
Notes: This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
Status
(Read and Write property)

152.7.28 Constants

Printer Enumeration Flags

Constant	Value	Description
kPrinterFlagsConnections	4	The function enumerates the list of printers to which the user has made previous connections.
kPrinterFlagsDefault	1	Default printer.
kPrinterFlagsLocal	2	If the kPrinterFlagsName flag is not also passed, the function ignores the Name parameter, and enumerates the locally installed printers. If kPrinterFlagsName is also passed, the function enumerates the local printers on Name.
kPrinterFlagsName	8	The function enumerates the printer identified by Name. This can be a server, a domain, or a print provider. If Name is nil, the function enumerates available print providers.
kPrinterFlagsNetwork	64	Network printers?
kPrinterFlagsRemote	16	Remote (non Local) printers?
kPrinterFlagsShared	32	The function enumerates printers that have the shared attribute. Cannot be used in isolation; use an OR operation to combine with another constants.

152.8 class WindowsPrinterJobMBS

152.8.1 class WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Windows print job information.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

152.8.2 Properties

152.8.3 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The type of data used to record the print job.
Notes: (Read and Write property)

152.8.4 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device-initialization and environment data for the printer driver.
Notes: (Read and Write property)

152.8.5 Document as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who owns the print job.
Notes: (Read and Write property)

152.8.6 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the printer driver that should be used to process the print job.
Notes: (Read and Write property)

152.8.7 JobID as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: A job identifier value.
Notes: (Read and Write property)

152.8.8 MachineName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the machine that created the print job.
Notes: (Read and Write property)

152.8.9 NotifyName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who should be notified when the job has been printed or when an error occurs while printing the job.
Notes: (Read and Write property)

152.8.10 PagesPrinted as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pages that have printed.
Notes: This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

152.8.11 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Print-processor parameters.
Notes: (Read and Write property)

152.8.12 Position as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job's position in the print queue.
Notes: (Read and Write property)

152.8.13 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the printer for which the job is spooled.
Notes: (Read and Write property)

152.8.14 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the print processor that should be used to print the job.
Notes: (Read and Write property)

152.8.15 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job priority.
Notes: This member can be one of the following values or in the range between 1 through 99 (kPriorityMin through kPriorityMax).
(Read and Write property)

152.8.16 Size as Int64

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size, in bytes, of the job.
Notes: (Read and Write property)

152.8.17 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The earliest time that the job can be printed.
Notes: (Read and Write property)

152.8.18 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The job status.
Notes: Check kJobStatus* constants for possible values.
(Read and Write property)

152.8.19 StatusString as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The status of the print job.
Notes: This member should be checked prior to Status and, if StatusString is "", the status is defined by the contents of the Status member.
(Read and Write property)

152.8.20 Submitted as Date

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time when the job was submitted.
Notes: This time value is in Universal Time Coordinate (UTC) format.
(Read and Write property)

152.8.21 Time as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The total time, in milliseconds, that has elapsed since the job began printing.
Notes: (Read and Write property)

152.8.22 TotalPages as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of pages required for the job.
Notes: This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

152.8.23 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The latest time that the job can be printed.
Notes: (Read and Write property)

152.8.24 UserName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the user who owns the print job.
Notes: (Read and Write property)

152.8.25 Constants

Job Status Constants

Constant	Value	Description
kJobStatusBlockedDeviceQueue	&h200	The driver cannot print the job.
kJobStatusComplete	&h1000	The job is sent to the printer, but may not be printed yet. (Windows XP and later)
kJobStatusDeleted	&h100	Job has been deleted.
kJobStatusDeleting	4	Job is being deleted.
kJobStatusError	2	An error is associated with the job.
kJobStatusOffline	&h20	Printer is offline.
kJobStatusPaperOut	&h40	Printer is out of paper.
kJobStatusPaused	1	Job is paused.
kJobStatusPrinted	&h80	Job has printed.
kJobStatusPrinting	&h10	Job is printing.
kJobStatusRenderingLocally	&h4000	Rendering.
kJobStatusRestart	&h800	Job has been restarted.
kJobStatusRetained	&h2000	The job has been retained in the print queue following printing. (Windows XP and later)
kJobStatusSpooling	8	Job is spooling.
kJobStatusUserIntervention	&h400	Printer has an error that requires the user to do something.

Priority Constants

Constant	Value	Description
kPriorityDefault	1	Default priority.
kPriorityMax	99	Maximum priority.
kPriorityMin	1	Minimum priority.
kPriorityNo	0	No priority.

152.9 class WindowsPrinterMBS

152.9.1 class WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an open connection to a windows printer.
Notes: Objects of this class can operate on printers.
Some operations need administrative permissions. If you don't have them, lasterror is set to 5.

152.9.2 Methods

152.9.3 AddForm(form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AddForm function adds a form to the list of available forms that can be selected for the specified printer.
Example:

```
// query default printer
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

Var form as new WindowsPageFormatMBS

form.Mode = 1
form.Name = "MyTest"
form.DisplayName = "MyTest"
form.Flags = 0
form.SizeHeight = 100000
form.SizeWidth = 100000
form.ImageableAreaLeft = 0
```

```
form.ImageableAreaTop = 0
form.ImageableAreaRight = 100000
form.ImageableAreaBottom = 100000

if w.AddForm(form) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Form.Mode gives level of the data. Must be either 1 (old version) or 2 (newer version).

Form: The form details.

Returns true if the function succeeds and false if the function fails.

Note: This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

An application can determine which forms are available for a printer by calling the GetPrinterFormats function.
If form points to a Mode 2 form, then AddForm will fail if either a form with the specified name already exists or the Keyword value already exists.

152.9.4 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as DesktopWindow) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
Notes: This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user.
InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.

- 152.9.5 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer 19574

152.9.5 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
Notes: This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user.
InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.

See also:

- 152.9.4 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as DesktopWindow) as integer 19573

152.9.6 AllJobs as WindowsPrinterJobMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all jobs for the printer.
Example:

```
Var w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter)
Var jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"
```

Notes: PrinterName property must be set, so the function knows which printer.

152.9.7 CanPrinterPassThroughPostScript as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this printer can pass through postscript data.
Notes: Returns true for Postscript printers and false for other printers.

For more information on this function, visit this website:
http://msdn.microsoft.com/en-us/library/dd162831(v=VS.85).aspx

152.9.8 ChangePrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Changes printer settings.
Notes: This function opens the printer, queries current settings using GetPrinter, applies all your changes, calls DocumentProperties to verify those settings are valid for the printer and uses SetPrinter to apply the changes.
To indicate which fiels in the WindowsDeviceModeMBS object are set by you, use the fields integer value with a combination of the DM_* constants.
Returns true on success and false on failure.

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

For more information on the SetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(VS.85).aspx

For more information on the DocumentProperties function, check this website:
http://msdn.microsoft.com/en-us/library/dd183576(VS.85).aspx

Even if you change printer settings, other parts of the application, e.g. Xojo framework may not care.

152.9.9 ConfigurePort(name as string = """, parent as window = nil, PortName as string = """) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays the port-configuration dialog box for a port on the specified server.
Notes: Name: The name of the server on which the specified port exists. If this parameter is "", the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.
See also:

- 152.9.10 ConfigurePort(name as string, parent as DesktopWindow, PortName as string) as boolean 19576

152.9.10 ConfigurePort(name as string, parent as DesktopWindow, PortName as string) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays the port-configuration dialog box for a port on the specified server.

Notes: Name: The name of the server on which the specified port exists. If this parameter is "", the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.
See also:

- 152.9.9 ConfigurePort(name as string = "", parent as window = nil, PortName as string = "") as boolean 19576

152.9.11 ConnectToPrinterDialog(parent as DesktopWindow) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that lets users browse and connect to printers on a network.
Notes: If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinter-Connection to delete a connection to a printer.
See also:

- 152.9.12 ConnectToPrinterDialog(parent as window = nil) as boolean 19578

152.9.12 ConnectToPrinterDialog(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: Displays a dialog box that lets users browse and connect to printers on a network.
Notes: If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinter-Connection to delete a connection to a printer.
See also:

- 152.9.11 ConnectToPrinterDialog(parent as DesktopWindow) as boolean 19577

152.9.13 Constructor(PrinterName as string, admin as boolean = false)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.
Notes: Admin: whether you want to get permissions to administrate.
Raises exception if printer can't be opened. Use OpenPrinter function to avoid exception.

152.9.14 DeleteForm(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DeleteForm function removes a form name from the list of supported forms.
Notes: name: The form name to be removed.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

DeleteForm can only delete form names that were added by using the AddForm function.

152.9.15 DeleteJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Delete the print job.
Notes: Returns true on success and false on failure.

152.9.16 DeletePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes the specified printer object.
Notes: Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If there are print jobs remaining to be processed for the specified printer, DeletePrinter marks the printer for pending deletion, and then deletes it when all the print jobs have been printed. No print jobs can be added to a printer that is marked for pending deletion.
A printer marked for pending deletion cannot be held, but its print jobs can be held, resumed, and restarted.
If the printer is held and there are jobs for the printer, DeletePrinter fails with ERROR_ACCESS_DENIED.

Lasterror is set.

152.9.17 DeletePrinterConnection(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes a connection to a printer that was established by a call to AddPrinterConnection or ConnectToPrinterDialog.
Notes: name: The name of the printer connection to delete.
Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The DeletePrinterConnection function does not delete any printer driver files that were copied to the server to which the printer is attached.

152.9.18 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean = false, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
Example:

```
// get default printer
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
Var s as new WindowsDeviceModeMBS
Var n as Integer = p.DocumentProperties(nil, s, true, window1)
```

Notes: Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.

InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.
If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

152.9.19 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean, parent as DesktopWindow) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
Example:

```
// get default printer
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
Var s as new WindowsDeviceModeMBS
Var n as Integer = p.DocumentProperties(nil, s, true, window1)
```

Notes: Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.
InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.
If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

152.9.20 GetDefaultPrinter as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetDefaultPrinter function retrieves the printer name of the default printer for the current user on the local computer.
Example:

msgbox WindowsPrinterMBS.GetDefaultPrinter

Notes: For more details on the GetDefaultPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144876(VS.85).aspx

Returns an empty string on any error.

152.9.21 GetForm(name as string) as WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetForm function retrieves information about a specified form.
Example:

```
// query default printer
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// get a page format
Var f as WindowsPageFormatMBS = w.GetForm("Letter")

// and show details
MsgBox f.DisplayName+" "+str(F.SizeWidth/10000,"0.0")+" x "+str(f.SizeHeight/10000,"0.0")
```

Notes: name: The string that specifies the name of the form. To get the names of the forms supported by the printer, call the GetPrinterFormats function.

On failure returns nil, on success the form details.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If the caller is remote, and the Form Mode is 2, the StringType value of the returned WindowsPageFormatMBS will always be STRING_LANGPAIR.

152.9.22 GetJob(JobID as Integer) as WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Query job with given ID from printer.
Notes: Returns nil on any error.
PrinterName property must be set, so the function knows which printer.

152.9.23 GetPrinterFormats as WindowsPageFormatMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the page formats supported by this printer.
Notes: On failure the array is empty.

This function uses the EnumForms for which you can find more information on this website:
http://msdn.microsoft.com/en-us/library/dd162624(v=VS.85).aspx

152.9.24 GetPrinterSettings(Mode as Integer=2) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries printer settings.
Example:

```
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
Var dm as WindowsDeviceModeMBS = w.GetPrinterSettings
```

Notes: Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

152.9.25 GetPrinterTechnology as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the printer technology.
Example:

```
Var w as new WindowsPrinterMBS("my printer")
msgbox w.GetPrinterTechnology
```

Notes: Opens the printer, queries the print technology and returns that string.
For postscript printers the string should contain the word "postscript".
Returns an empty string on any error.

For details on this function, check the following website:
http://msdn.microsoft.com/en-us/library/dd144931(VS.85).aspx

152.9.26 OpenPrinter(PrinterName as string, admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens the printer so you can operate on it.
Notes: Admin: whether you want to get permissions to administrate.
Returns nil on any error.

152.9.27 PauseJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pause the print job.
Notes: Returns true on success and false on failure.

152.9.28 PausePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses the printer.
Example:

```
Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PausePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes: Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

152.9.29 PrinterProperties(parent as DesktopWindow) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The PrinterProperties function displays a printer-properties property sheet for the specified printer.
Example:

```
// get default printer
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.
See also:

- 152.9.30 PrinterProperties(parent as window = nil) as boolean 19586

152.9.30 PrinterProperties(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The PrinterProperties function displays a printer-properties property sheet for the specified printer.
Example:

```
// get default printer
Var w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.
See also:

- 152.9.29 PrinterProperties(parent as DesktopWindow) as boolean 19585

152.9.31 PurgePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Purges the printer.
Example:

```
Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PurgePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes: Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

152.9.32 ResumeJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resume a paused print job.
Notes: Returns true on success and false on failure.

152.9.33 ResumePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resumes the printer.
Example:

```
Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.ResumePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes: Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

152.9.34 SetDefaultPrinter(PrinterName as string) as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Changes the default printer to the given one.
Example:

```
call WindowsPrinterMBS.SetDefaultPrinter("My Printer")
```

Notes: Returns a Windows error code. (0 for success)

For details on the Windows SetDefaultPrinter method, check here:
http://msdn.microsoft.com/en-us/library/dd162971(VS.85).aspx

152.9.35 SetForm(name as string, form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetForm function sets the form information for the specified printer.
Notes: name: The string that specifies the form name for which the form information is set.
Form: The form data. Mode property must be either 1 (older format) or 2 (newer format).

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

SetForm can be called multiple times for an existing WindowsPageFormatMBS, each call adding additional pairs of DisplayName and LangId values. All languages versions of the form will get the Size and ImageableArea values of the WindowsPageFormatMBS in the most recent call to SetForm.
If the caller is remote and the form's Mode is 2, the StringType value of the WindowsPageFormatMBS cannot be STRING_MUIDLL.

152.9.36 SetJob(JobID as Integer, job as WindowsPrinterJobMBS) as boolean

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets job parameters.
Example:

```
Var w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter, true)
```

```
Var jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"

// pick first
Var j as WindowsPrinterJobMBS = jobs(0)
j.Document = "Hello World"

// write back values
call w.SetJob(j.JobID, j)

// error?
if w.Lasterror<>0 then
MsgBox w.LasterrorMessage
end if
```

Notes: see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd162978(v=vs.85).aspx

152.9.37 SetPrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets printer settings.
Example:

```
// switch default printer to A5 landscape paper

Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, false)
Var d as WindowsDeviceModeMBS = p.GetPrinterSettings(9)

if d = nil then
MsgBox p.LasterrorMessage
else
d.PaperSize = d.DMPAPER_A5
d.Fields = BitwiseOr(d.Fields, d.DM_PAPERSIZE)
d.Orientation = d.DMORIENT_LANDSCAPE
d.Fields = BitwiseOr(d.Fields, d.DM_ORIENTATION)

if p.SetPrinterSettings(d, 9) then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage
end if
end if
```

Notes: Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(v=vs.85).aspx

152.9.38 Properties

152.9.39 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the printer.
Notes: (Read and Write property)

152.9.40 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error code.
Notes: (Read and Write property)

152.9.41 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text message for the last error code.
Notes: (Read and Write property)

152.9.42 PrinterName as String

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the open printer in this object.
Example:

```
Var name as string = WindowsPrinterMBS.GetDefaultPrinter
Var p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes: (Read and Write property)

Chapter 153

Process

153.1 class Application

153.1.1 class Application

Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends the Application class inside Xojo.

153.1.2 Methods

153.1.3 ApplicationCreatorCodeMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns the Creator Code of the application.
Example:

msgbox "Hi. This application has the creator code "+app.ApplicationCreatorCodeMBS

Notes: Only useful on Mac OS.
If you run your app inside the Xojo IDE it will return "RBv2" which is Xojo's Creator code sind Xojo 2.0.
Blog Entries

- MBS Xojo Plugins, version 19.4pr1

153.1.4 ApplicationFileMBS as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Deprecated: This item is deprecated and should no longer be used. You can use ExecutableFile instead.
Function: Gives a folderitem to the applications file.
Example:

msgbox "Hi. The file of this application is named "+app.ApplicationFileMBS.name

Notes: Inside Xojo points to the Xojo application.

This item may go in the future. Please use app.executablefile in new Xojo versions.
Blog Entries

Xojo Developer Magazine

- 3.1, page 42: Register Document File Types, Fill and Query the Registry by Christian Schmitz

153.1.5 ApplicationNameMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the name of the application.
Example:

msgbox "Hi. This application is named "+app.ApplicationNameMBS

Notes: This may not be the exact same name than the filename.

153.1.6 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries arguments of process.
Notes: Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

153.1.7 BundleFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the bundle's mail folder.

153.1.8 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key from the default table.
Notes: A short version for BundleLocalizedString which uses the default table.
See also:

- 153.1.9 BundleLocalizedStringMBS(key as string,fromtable as string) as string 19595

153.1.9 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key and table.
Example:

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
Var s as string

s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
end if

return s
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

Notes: The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 153.1.8 BundleLocalizedStringMBS(key as string) as string 19595

153.1.10 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Searches inside the application bundle for a file.
Example:

```
Var f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

Notes: ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

153.1.11 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the resource file inside the bundle.
Example:

```
Var f As FolderItem = App.BundleResourceFolderMBS

If f = Nil Then
MsgBox "Failed?"
Else
MsgBox f.NativePath
End If
```

153.1.12 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Hides the current application.
Notes: Returns true if the current application was hidden.

153.1.13 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Hides all applications except the current one.
Notes: Returns true if the other applications were hidden.

153.1.14 LaunchTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the the ticks value at launch time.
Example:

```
Var d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes: This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

153.1.15 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop only.

Function: If your application is a bundle, this function returns your own bundle.
Notes: Returns nil on any error.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.1.16 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns the shared NSApplication object.
Notes: This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time. Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.1.17 OverlayApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Adds a picture on top of the application dock title.
Example:

```
static n as Integer // global property
Var p as picture
Var m as picture
Var g as graphics
Var s as string
Var w,h,x as Integer

n=n+1 // add one
s=str(n)
m=New Picture(128,128,32)
p=New Picture(128,128,32)

g=p.graphics
g.textsize=24
w=g.stringwidth(s)
h=g.stringheight(s,0)
x=125-w-10
g.foreColor=rgb(255,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20
g.foreColor=rgb(0,0,0)
g.drawstring s,x+5,15+g.textascent

g=m.graphics
g.foreColor=rgb(0,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20

if app.OverlayApplicationDockTileImageMBS(CGCreateImageMBS(p,m)) then
end if
```

Notes: Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

153.1.18 ProcessTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the current CPU time for the process.
Example:

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

Notes: On Mac OS X, the OS counts how much CPU time in given to the current process.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
Var s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

153.1.19 RestoreApplicationDockTileImageMBS as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Restores the application dock tile image.
Example:

```
if app.RestoreApplicationDockTileImageMBS then
// ok
end if
```

Notes: Added support for 64-bit in plugin version 16.0.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

153.1.20 SetApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

Function: Sets the application dock tile image.
Example:

```
Var p as CGImageMBS = CGImageMBS.CreateImage(LogoMBS(500))

if app.SetApplicationDockTileImageMBS(p) then
// ok
end if
```

Notes: Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.
Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

153.1.21 Properties

153.1.22 FrontmostMBS as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the application is frontmost.
Example:

```
app.frontmostmbs=True 'bring app to front
```

Notes: This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows in version 19.2. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

153.2 module CallDelegateCrashSafeMBS

153.2.1 module CallDelegateCrashSafeMBS

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The module to call a delegate and catch a crash.
Example:

```
Try

System.DebugLog "Try the call..."

CallDelegateCrashSafeMBS AddressOf TestMethod

System.DebugLog "Call succeeded!"

Catch c As DelegateCrashExceptionMBS

System.DebugLog "Caught exception!"
System.DebugLog c.Message

End Try
```

Notes: We can catch the following conditions:

- Invalid pointer access
- Invalid instruction
- Floating point exception
- Wrong system call
- Broken pipe
- Bus error

We may crash ourselves on stack corruption and we print the stack trace to stderr for macOS and Linux for debugging.

If a crash is caught, there may be memory leaked as objects allocated in the called method are not freed. The call function can not be used recursively and only on one thread at the time.

153.2.2 Methods

153.2.3 CallDelegateCrashSafeMBS(m as DelegateCrashSafeMBS)

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls a method that may crash.
Example:

```
Try

System.DebugLog "Try the call..."

CallDelegateCrashSafeMBS AddressOf TestMethod

System.DebugLog "Call succeeded!"

Catch c As DelegateCrashExceptionMBS

System.DebugLog "Caught exception!"
System.DebugLog c.Message

End Try
```

Notes: Raises DelegateCrashExceptionMBS if a crash happens.

The call function can not be used recursively and only on one thread at the time.

153.2.4 PrintBacktraceMBS

MBS Util Plugin, Plugin Version: 25.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Prints the stack trace.
Notes: Utility function to help debugging.

153.2.5 Properties

153.2.6 CallCounter as Integer

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of calls made.
Notes: (Read only property)

153.2.7 CrashCounter as Integer

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of crashes caught.
Notes: (Read only property)

153.2.8 Delegates

153.2.9 DelegateCrashSafeMBS()

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The delegate definition for a simple method to call.

153.3.2 Methods

153.3.3 CallDelegateOnMainThreadMBS(m as _delegateMBS)

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a delegate on the main thread.
Example:

```
CallDelegateOnMainThreadMBS AddressOf testString, "Hello"
CallDelegateOnMainThreadMBS AddressOf testNumbers, 5, 6
CallDelegateOnMainThreadMBS AddressOf TestNoParameters
CallDelegateOnMainThreadMBS AddressOf Test, "4th call", 4
```

Notes: We call the delegate on the main thread later with passing a parameter
Our plugin supports various combinations of up to 2 parameters of type string, variant, boolean, double, integer and object.
If you need more, please contact us.
Only supported on Xojo 2013r1 and newer.

If the method you call has optional parameters, you must pass all values or Xojo will throw a compile error.

153.3.4 CallDelegateOnPreemptiveThreadMBS(m as _delegateMBS) as Boolean

MBS Util Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Calls a delegate on a preemptive thread.
Notes: Experimental function to play with preemptive-threads in Xojo apps.

Some rules:

- No objects, no strings, no arrays
- Use Ptr, not Memoryblocks
- Crashes in debugger, so only use in built app
- Use #Pragma BackgroundTasks False
- Use #Pragma BreakOnExceptions False
- Use #Pragma StackOverflowChecking False
- Use #Pragma NilObjectChecking False
- No exceptions
- Delegate must be stored in global variable to avoid it getting freed early.
- You can pass up to one ptr as data parameter.
- Declares may work, but should be pre-used to make sure they don't raise an exception and are loaded.

uses thread pool on iOS, macOS and Windows. Otherwise regular threads.
See also:

- 153.3.5 CallDelegateOnPreemptiveThreadMBS(m as _delegatePtrMBS, data as Ptr) as Boolean 19605

153.3.5 CallDelegateOnPreemptiveThreadMBS(m as _delegatePtrMBS, data as Ptr) as Boolean

MBS Util Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a delegate on a preemptive thread and passes a ptr.
Notes: Experimental function to play with preemptive-threads in Xojo apps.

Some rules:

- No objects, no strings, no arrays
- Use Ptr, not Memoryblocks
- Crashes in debugger, so only use in built app

- Use #Pragma BackgroundTasks False
- Use #Pragma BreakOnExceptions False
- Use #Pragma StackOverflowChecking False
- Use #Pragma NilObjectChecking False
- No exceptions
- Delegate must be stored in global variable to avoid it getting freed early.
- You can pass up to one ptr as data parameter.
- Declares may work, but should be pre-used to make sure they don't raise an exception and are loaded.

uses thread pool on iOS, macOS and Windows. Otherwise regular threads.

153.4 Globals

153.4.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 5.0) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes: The method must be declared on the given class for the target object with no parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 153.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean 19607
- 153.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 19608
- 153.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19609

153.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 4.0, "Hello") then
msgbox "OK"
```

```
else
msgbox "Failed"
end if
```

Notes: The method must be declared on the given class for the target object with one variant parameter and no return values.

The method will be called later (Asyncronously) on the main thread after the given delay in seconds. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.

- 153.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19609

153.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes: The method must be declared on the given class for the target object with two variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your

application is.

- 153.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19609

153.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes: The method must be declared on the given class for the target object with three variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.

153.4.13 GetDarwinVMStatisticsMBS as DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: Returns information about the current memory status on Mac OS X.
Example:

```
Var d as DarwinVMStatisticsMBS

d=GetDarwinVMStatisticsMBS

if d=nil then
msgBox "No Darwin running :-("
quit
else
Var lines(-1) as string

lines.Append format(d.pageins,"0")+" pageins"
lines.Append format(d.pageouts,"0")+" pageouts"
lines.Append format(d.pagesize,"0")+" pagesize"
lines.Append format(d.freepages,"0")+" freepages"
```

```
lines.Append format(d.activepages,"0")+" activepages"
lines.Append format(d.inactivepages,"0")+" inactivepages"
lines.Append format(d.wiredpages,"0")+" wiredpages"
lines.Append format(d.zerofillpages,"0")+" zerofillpages"
lines.Append format(d.reactivations,"0")+" reactivations"
lines.Append format(d.faults,"0")+" faults"
lines.Append format(d.cowfaults,"0")+" cowfaults"
lines.Append format(d.lookups,"0")+" lookups"
lines.Append format(d.hits,"0")+" hits"

MsgBox Join(lines,EndOfLine)
end if
```

153.4.14 GetDarwinResourceUsageMBS as DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Get information about resource utilization.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

Notes: Returns nil on any error.
For more information type "man getrusage" in the Mac OS X Terminal.

153.4.15 SetThreadNameMBS(name as string)

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the name of current thread.
Example:

```
SetThreadNameMBS "SQL Query Thread"
```

Notes: This is useful to see thread name in crash reports or sample reports.
Blog Entries

- MBS Xojo plug-ins in version 16.0
- Thread Names
- MBS Xojo / Real Studio Plugins, version 15.5pr2

153.4.16 CountProcessesMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Counts how many processes are running.
Notes: Short for this function:

```
function CountProcesses as Integer
Var n as Integer
Var p as ProcessMBS

p=new ProcessMBS
p.getfirstProcess
n=1
while p.getnextProcess
n=n+1
wend

return n
end if
```

153.4.17 GetWindowsVMStatisticsMBS as WindowsVMStatisticsMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns information about the current memory status on Windows.
Example:

```
Var w as WindowsVMStatisticsMBS

w=GetWindowsVMStatisticsMBS
if w<>nil then

list.AddRow format(w.pagesize,"0")
list.AddRow format(w.memoryLoad,"0")
list.AddRow format(w.availablePageFileMemory,"0")
list.AddRow format(w.availablePhysicalMemory,"0")
list.AddRow format(w.availableVirtualMemory,"0")
list.AddRow format(w.totalPageFileMemory,"0")
list.AddRow format(w.totalPhysicalMemory,"0")
list.AddRow format(w.totalVirtualMemory,"0")

else

msgBox "No Windows memory statistics..."
quit
```

```
end if
```

Notes: See also WindowsProcessStatisticsMBS for the application.

153.5 class ConsoleApplication

153.5.1 class ConsoleApplication

Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

Function: Extends the ConsoleApplication class inside Xojo.

153.5.2 Methods

153.5.3 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

Function: Queries arguments of process.
Notes: Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.5.4 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the the ticks value at launch time.
Example:

```
Var d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes: This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.5.5 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: If your application is a bundle, this function returns your own bundle.
Notes: Returns nil on any error.
For console application, returns the bundle referencing the console app file.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.5.6 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the shared NSApplication object.
Notes: This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.5.7 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

Function: Returns the current CPU time for the process.
Example:

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

Notes: On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.

Returns -1 in case of an error.

You can do this function yourself if you like:

```
Var s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

153.6 class DarwinGroupListMBS

153.6.1 class DarwinGroupListMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The list of Groups on a Mac OS X system.
Example:

```
Var l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

153.6.2 Methods

153.6.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
Var l as new DarwinGroupListMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.6.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
Var l as new DarwinGroupListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

153.6.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
Var l as new DarwinGroupListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.6.6 Group(index as Integer) as DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Returns the Group with the given index.
Example:

```
Var l as new DarwinGroupListMBS
Var c as Integer = l.Count-1
Var names(-1) as string
for i as Integer = 0 to c
Var g as DarwinGroupMBS = l.Group(i)
names.Append g.Name
next
MsgBox Join(names,EndOfLine)
```

153.6.7 Properties

153.6.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The number of Groups on this Mac OS X system.
Example:

```
Var l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

Notes: (Read only property)

153.7 class DarwinGroupMBS

153.7.1 class DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class with information about a Group on Mac OS X.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

Blog Entries

- MBS Xojo Plugins, version 19.4pr1

153.7.2 Methods

153.7.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
Var g as new DarwinGroupMBS
MsgBox "CurrentEffectiveUserID: "+str(G.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.7.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
Var g as new DarwinGroupMBS
MsgBox "CurrentGroupID: "+str(G.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

153.7.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
Var g as new DarwinGroupMBS
MsgBox "CurrentUserID: "+str(G.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.7.6 LoadGroupByID(Groupid as Integer)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the Group with the given ID.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

153.7.7 LoadGroupByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the given Group.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByName "staff"
MsgBox g.Name
```

153.7.8 UserName(index as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Group ID of this Group.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID

Var c as Integer = g.UserCount-1
for i as Integer = 0 to c
MsgBox g.UserName(i)
next
```

153.7.9 Properties

153.7.10 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The group ID of the Group.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "GroupID: "+str(G.GroupID)
```

Notes: (Read only property)

153.7.11 Name as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The name of the Group.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "Name: "+g.Name
```

Notes: (Read only property)

153.7.12 Password as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The password for this group.
Notes: (Read only property)

153.7.13 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the values in this class were filled correctly.
Notes: (Read only property)

153.7.14 UserCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The number of users in this group.
Example:

```
Var g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "UserCount: "+str(G.UserCount)
```

Notes: (Read only property)

153.8 class DarwinHostVMStatisticsMBS

153.8.1 class DarwinHostVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Queries memory host statistics for macOS and iOS.
Example:

```
Var d As New DarwinHostVMStatisticsMBS

Var FreeMB As Integer = d.FreeCount * d.Pagesize / 1024 / 1024
Var ActiveMB As Integer = d.ActiveCount * d.Pagesize / 1024 / 1024
Var InactiveMB As Integer = d.InactiveCount * d.Pagesize / 1024 / 1024
Var WiredMB As Integer = d.WireCount * d.Pagesize / 1024 / 1024
Var CompressedMB As Integer = d.CompressorPageCount * d.Pagesize / 1024 / 1024

Var Sum As Integer = FreeMB + ActiveMB + WiredMB + InactiveMB + CompressedMB

MessageBox _
"Free: " + FreeMB.ToString+EndOfLine+_
"Active: " + ActiveMB.ToString+EndOfLine+_
"Inactive: " + InactiveMB.ToString+EndOfLine+_
"Wired: " + WiredMB.ToString+EndOfLine+_
"Compressed: " + CompressedMB.ToString+EndOfLine+_
"Total: "+Sum.ToString
```

- MBS Xojo Plugins, version 24.3pr2

153.8.2 Methods

153.8.3 Constructor

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: The constructor.
Notes: Fills in the values or raises an exception.

153.8.4 Properties

153.8.5 ActiveCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages active
Notes: (Read only property)

153.8.6 Compressions as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages compressed
Notes: (Read only property)

153.8.7 CompressorPageCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages used by the compressed pager to hold all the compressed data
Notes: (Read only property)

153.8.8 CopyOnWriteFaults as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of copy-on-writes.
Notes: If you allocate memory, e.g. for a memoryblock, you get zero fill pages. Which means you get virtual memory, not physical. As soon as you touch a zero fill memory page, it triggers a copy on write to make a private copy for you.
(Read only property)

153.8.9 Decompressions as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages decompressed
Notes: (Read only property)

153.8.10 ExternalPageCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages that are file-backed (non-swap)
Notes: For example application code is paged in.
(Read only property)

153.8.11 Faults as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of faults
Notes: (Read only property)

153.8.12 FreeCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages free.
Example:

```
Var d As New DarwinHostVMStatisticsMBS

MessageBox str(d.FreeCount * d.Pagesize, "0")+" bytes free"
```

Notes: (Read only property)

153.8.13 Hits as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: object cache hits
Notes: (Read only property)

153.8.14 InactiveCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages inactive.
Notes: (Read only property)

153.8.15 InternalPageCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages that are anonymous.
Notes: (Read only property)

153.8.16 Lookups as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: object cache lookups
Notes: (Read only property)

153.8.17 PageIns as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pageins
Notes: (Read only property)

153.8.18 PageOuts as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pageouts
Notes: (Read only property)

153.8.19 Pagesize as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: The size of a page in bytes.
Notes: Page size is different for Intel vs. Apple Silicon.
(Read only property)

153.8.20 PurgeableCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages purgeable.
Notes: (Read only property)

153.8.21 Purges as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages purged.
Notes: (Read only property)

153.8.22 Reactivations as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages reactivated
Notes: (Read only property)

153.8.23 SpeculativeCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages speculative read.
Notes: Speculative pages are already accounted for in FreeCount, so SpeculativeCount is the number of "free" pages that are used to hold data that was read speculatively from disk but haven't actually been used by anyone so far.
(Read only property)

153.8.24 SwapIns as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages swapped in (via compression segments)
Notes: (Read only property)

153.8.25 SwapOuts as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages swapped out (via compression segments)
Notes: (Read only property)

153.8.26 ThrottledCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages throttled
Notes: (Read only property)

153.8.27 TotalUncompressedPagesInCompressor as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages (uncompressed) held within the compressor.
Notes: (Read only property)

153.8.28 WireCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of pages wired down.
Notes: (Read only property)

153.8.29 ZeroFillCount as Integer

MBS MacCF Plugin, Plugin Version: 24.3, Platforms: macOS, iOS, Targets: All.

Function: Number of zero fill pages
Notes: (Read only property)

153.9 class DarwinResourceUsageMBS

153.9.1 class DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: A class for information about resource utilization.
Example:

Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)

Notes: For more information type "man getrusage" in the Mac OS X Terminal.
Blog Entries

- MBS Xojo Plugins, version 17.1pr2
- MBS Xojo / Real Studio Plugins, version 15.3pr4
- MBS REALbasic Plugins, version 10.6pr9
- MBS REALbasic Plugins, version 10.6pr2

153.9.2 Properties

153.9.3 BlockInputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of block input operations.
Example:

Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockInputOperations)

Notes: (Read only property)

153.9.4 BlockOutputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of block output operations.
Example:

Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockOutputOperations)

Notes: (Read only property)

153.9.5 IntegralMaxResidentSetSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral max resident set size.
Example:

```
Var u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
Var t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

Notes: Maximum memory usage of this app.
(Read only property)

153.9.6 IntegralSharedTextMemorySize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral shared text memory size.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralSharedTextMemorySize)
```

Notes: (Read only property)

153.9.7 IntegralUnsharedDataSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral unshared data size.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedDataSize)
```

Notes: (Read only property)

153.9.8 IntegralUnsharedStackSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Integral unshared stack size.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedStackSize)
```

Notes: (Read only property)

153.9.9 InvoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of involuntary context switches.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.InvoluntaryContextSwitches)
```

Notes: (Read only property)

153.9.10 MessagesReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of messages received.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read only property)

153.9.11 MessagesSent as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of messages sent.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read only property)

153.9.12 PageFaults as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of page faults.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageFaults)
```

Notes: (Read only property)

153.9.13 PageReclaims as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of page reclaims.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageReclaims)
```

Notes: (Read only property)

153.9.14 SignalsReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of signals received.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SignalsReceived)
```

Notes: (Read only property)

153.9.15 Swaps as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of swaps.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.Swaps)
```

Notes: (Read only property)

153.9.16 SystemTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Seconds of system time used.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SystemTimeUsed)
```

Notes: (Read only property)

153.9.17 UserTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Seconds of user time used.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.UserTimeUsed)
```

Notes: (Read only property)

153.9.18 VoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: Number of voluntary context switches.
Example:

```
Var d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.VoluntaryContextSwitches)
```

Notes: (Read only property)

153.10 class DarwinTaskInfoMBS

153.10.1 class DarwinTaskInfoMBS

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: A class for your applications memory/resource usage.
Example:

```
Var u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
Var t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

Xojo Developer Magazine

- 3.6, page 6: News

153.10.2 Methods

153.10.3 Update as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Updates the values and returns true on success.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.UserTime)
call d.Update
MsgBox str(d.UserTime)
```

Notes: The constructor updates the values on creation of the object.

153.10.4 Properties

153.10.5 ContextSwitches as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of context switches.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.ContextSwitches)
```

Notes: (Read and Write property)

153.10.6 COWFaults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of copy-on-write faults.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.COWFaults)
```

Notes: (Read and Write property)

153.10.7 Faults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of page faults.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.Faults)
```

Notes: (Read and Write property)

153.10.8 MessagesReceived as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of messages received.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read and Write property)

153.10.9 MessagesSent as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of messages sent.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read and Write property)

153.10.10 PageIns as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of actual pageins.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.PageIns)
```

Notes: (Read and Write property)

153.10.11 ResidentSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of resident pages.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.ResidentSize,"0")+" Bytes of physical memory."
```

Notes: (Read and Write property)

153.10.12 SuspendCount as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Suspend count for task.
Example:

```
Var d as new DarwinTaskInfoMBS
MsgBox str(d.SuspendCount)
```

Notes: (Read and Write property)

153.10.13 SystemCallsMach as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of mach system calls.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsMach,"0")+" system calls using the Mach Interface."
```

Notes: (Read and Write property)

153.10.14 SystemCallsUnix as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of unix system calls.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsUnix,"0")+" system calls using the Unix Interface."
```

Notes: (Read and Write property)

153.10.15 SystemTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Total system run time.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.SystemTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

153.10.16 UserTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Total user run time.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.UserTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

153.10.17 VirtualSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

Function: Number of virtual pages.
Example:

```
Var d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.VirtualSize,"0")+" Bytes of the 4 GB address space."
```

Notes: (Read and Write property)

153.11 class DarwinUserListMBS

153.11.1 class DarwinUserListMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The list of users on a Mac OS X system.
Example:

```
// find the short user name
Var d as DarwinUserListMBS
Var u as string
Var p as DarwinUserMBS
Var uid,i,c as Integer

// requires MachO target
declare function getuid lib "System" () as Integer

uid=getuid

d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.UserID=uid then
MsgBox p.Name
end if
next
```

153.11.2 Methods

153.11.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
Var l as new DarwinUserListMBS
MsgBox "CurrentEffectiveUserID: "+str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.11.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
Var l as new DarwinUserListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

153.11.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
Var l as new DarwinUserListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.11.6 User(index as Integer) as DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the user with the given index.
Example:

```
// find short user name
Var d as DarwinUserListMBS
Var u as string
Var p as DarwinUserMBS
Var uid,i,c as Integer

u=SystemInformationMBS.Username
d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
```

```
if p.LongName=u then
MsgBox p.Name
end if
next
```

153.11.7 Properties

153.11.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The number of users on this Mac OS X system.
Example:

```
Var l as new DarwinUserListMBS
MsgBox "Number of users: "+str(l.Count)
```

Notes: (Read only property)

153.12 class DarwinUserMBS

153.12.1 class DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class with information about a user on Mac OS X.
Example:

```
Var l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox l.Name+": "+l.LongName
```

153.12.2 Methods

153.12.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The effective user ID of the calling process.
Example:

```
Var l as new DarwinUserMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.12.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real group ID of the calling process.
Example:

```
Var l as new DarwinUserMBS
MsgBox str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

153.12.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

Function: The real user ID of the calling process.
Example:

```
Var l as new DarwinUserMBS
MsgBox str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

153.12.6 LoadUserByID(userid as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the user with the given ID.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Name
```

153.12.7 LoadUserByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Fills the properties of this class with the values for the given user.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

153.12.8 Properties

153.12.9 AccountExpireTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The time when the account will expire.
Notes: (Read only property)

153.12.10 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The group ID of the user.
Example:

```
Var l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox str(l.GroupID)
```

Notes: (Read only property)

153.12.11 HomePath as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The home path of the user.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.HomePath
```

Notes: (Read only property)

153.12.12 LastPasswordChangeTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The last time when the user changed the password.

Notes: (Read only property)

153.12.13 LongName as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The long name of the user.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

Notes: (Read only property)

153.12.14 Name as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The short name of the user.
Example:

```
Var l as new DarwinUserListMBS

Var c as Integer = l.Count-1
for i as Integer = 0 to c
Var u as DarwinUserMBS = l.User(i)
if u.UserID = l.CurrentUserID then
MsgBox "our user name: "+u.Name
end if
next
```

Notes: (Read only property)

153.12.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: whether the values in this class were filled correctly.
Notes: (Read only property)

153.12.16 Shell as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The path to the default shell for this user.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Shell
```

Notes: (Read only property)

153.12.17 UserID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The user ID of this user.
Example:

```
Var l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox str(l.UserID)
```

Notes: (Read only property)

153.13 class DarwinVMStatisticsMBS

153.13.1 class DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: Holds information about the current Mac OS X memory status.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)+" page ins"
```

Notes: See newer class DarwinHostVMStatisticsMBS.

153.13.2 Properties

153.13.3 ActivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages currently in use and pageable.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ActivePages)
```

Notes: (Read only property)

153.13.4 CowFaults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of faults that caused a page to be copied (generally caused by copy-on-write faults).
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CowFaults)
```

Notes: (Read only property)

153.13.5 CPUTicksIdle as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the Idle process.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksIdle)
```

Notes: Calculate deltas like in the example to see usage of CPU time.
(Read only property)

153.13.6 CPUTicksNice as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the task switcher process.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksNice)
```

Notes: Calculate deltas like in the example to see usage of CPU time.
(Read only property)

153.13.7 CPUTicksSystem as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the system processes.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksSystem)
```

Notes: Calculate deltas like in the example to see usage of CPU time.
(Read only property)

153.13.8 CPUTicksUser as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

Function: The number of time slices used by the user application processes.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksUser)
```

Notes: Calculate deltas like in the example to see usage of CPU time.
(Read only property)

153.13.9 Faults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of times the "vm_fault" routine has been called.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Faults)
```

Notes: (Read only property)

153.13.10 FreePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of free pages in the system.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.FreePages)
```

Notes: (Read only property)

153.13.11 Hits as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The hit count.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Hits)
```

Notes: (Read only property)

153.13.12 InactivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages on the inactive list.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.InactivePages)
```

Notes: (Read only property)

153.13.13 Lookups as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The count of lookups.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Lookups)
```

Notes: (Read only property)

153.13.14 PageIns as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of requests for pages from a pager (such as the inode pager).
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)
```

Notes: (Read only property)

153.13.15 PageOuts as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The number of pages that have been paged out.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.PageOuts)
```

Notes: (Read only property)

153.13.16 Pagesize as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The size of one memory page in memory.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Pagesize)
```

Notes: On PowerPC CPUs, it should be 4096 Bytes.
(Read only property)

153.13.17 Reactivations as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: the total number of pages that have been moved from the inactive list to the active list (reactivated).
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Reactivations)
```

Notes: (Read only property)

153.13.18 WiredPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages wired down. That is, pages that cannot be paged out.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.WiredPages)
```

Notes: (Read only property)

153.13.19 ZeroFillPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

Function: The total number of pages that have been zero-filled on demand.
Example:

```
Var d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ZeroFillPages)
```

Notes: (Read only property)

153.14 class DelegateCrashExceptionMBS

153.14.1 class DelegateCrashExceptionMBS

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The exception raised when a delegate call crashes.
Notes: Raised in CallDelegateCrashSafeMBS function.
Message defines what caused the crash and ErrorNumber is the signal number (platform dependent!).

Message contains the reason, e.g.

- Delegate crashed with invalid pointer access.
- Delegate crashed with illegal instruction.
- Delegate crashed with floating point error.
- Delegate crashed with wrong system call.
- Delegate crashed with broken pipe.
- Delegate crashed with memory bus error.

Subclass of the RuntimeException class.

153.15 class DesktopApplication

153.15.1 class DesktopApplication

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends the Application class inside Xojo.

153.15.2 Methods

153.15.3 ApplicationNameMBS as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the name of the application.
Example:

msgbox "Hi. This application is named "+app.ApplicationNameMBS

Notes: This may not be the exact same name than the filename.

153.15.4 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries arguments of process.
Notes: Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

Xojo Developer Magazine

- 13.5, page 8: News

153.15.5 BundleFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the bundle's mail folder.
Blog Entries

- MBS Real Studio Plugins, version 13.0pr9

153.15.6 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key from the default table.
Notes: A short version for BundleLocalizedString which uses the default table.
See also:

- 153.15.7 BundleLocalizedStringMBS(key as string,fromtable as string) as string 19660

153.15.7 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the localized string for the given key and table.
Example:

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
Var s as string

s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
end if

return s
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

Notes: The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

• 153.15.6 BundleLocalizedStringMBS(key as string) as string 19660

153.15.8 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Searches inside the application bundle for a file.
Example:

```
Var f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

Notes: ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

153.15.9 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns a folderitem to the resource file inside the bundle.
Example:

```
Var f As FolderItem = App.BundleResourceFolderMBS

If f = Nil Then
MsgBox "Failed?"
Else
MsgBox f.NativePath
End If
```

Blog Entries

- MBS Real Studio Plugins, version 13.0pr9

153.15.10 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Hides the current application.
Notes: Returns true if the current application was hidden.

153.15.11 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Hides all applications except the current one.
Notes: Returns true if the other applications were hidden.

153.15.12 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the the ticks value at launch time.
Example:

```
Var d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes: This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

153.15.13 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: If your application is a bundle, this function returns your own bundle.
Notes: Returns nil on any error.

Works for Console, Desktop and Web projects.

153.15.14 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the shared NSApplication object.
Notes: This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects.

153.15.15 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the current CPU time for the process.
Example:

msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."

Notes: On Mac OS X, the OS counts how much CPU time in given to the current process.
Returns -1 in case of an error.

153.15.16 Properties

153.15.17 FrontmostMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns true if the application is frontmost.
Example:

app.frontmostmbs=True 'bring app to front

Notes: This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows, too. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

153.16 class EnvironmentMBS

153.16.1 class EnvironmentMBS

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Allows you to access system wide environment properties.
Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

153.16.2 Methods

153.16.3 Add(name as string,value as string) as boolean

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Add a property to the list.
Example:

```
Var e as EnvironmentMBS

e=new EnvironmentMBS
if e.add("authorname","Christian") then
msgbox "ok"
else
msgbox "fail"
end if
```

Notes: Setting this value to some new value will currently only change this value for your application and all child applications.

153.16.4 Get(name as string) as string

MBS Util Plugin, Platform: Windows, Targets: All.

Function: Returns the value for a named property.
Example:

```
Var e as EnvironmentMBS

e=new EnvironmentMBS
msgbox e.get("windir") // normally c:\windows
```

153.16.5 Lines as string()

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: All.

Function: Returns array of definition lines of environment variables.
Example:

```
Var e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```
